He said Iranian naval operations have not changed in any significant way since Bush announced the extra carrier deployment, and Winstanley said at-sea contacts with the Iranian navy have been "extremely cordial."

On his second overseas trip since replacing Donald H. Rumsfeld as Pentagon chief, Gates visited the headquarters of Central Command's naval staff, which is located here with the U.S. Navy's 5th Fleet. Then he flew to Qatar for a meeting with that tiny Gulf state's top leader, Sheikh Hamad bin Khalifa al-Thani.

Afterward, he visited an air base from which Central Command's air staff plans, runs and monitors air operations throughout the Middle East and Central Asia. Under ground rules imposed by U.S. officials, reporters traveling with Gates were prohibited from identifying the base or the country in which it is located.

Gates also met with Gen. John Abizaid, the head of Central Command, whose forward headquarters is in Qatar. Abizaid is due to retire in March; Adm. William Fallon has been nominated to replace him.

Gates Sees Tehran As Overly Ambitious (WT)

By David R. Sands

The Washington Times, January 19, 2007

MANAMA, Bahrain -- Defense Secretary Robert M. Gates warned yesterday that Iran is "overplaying their hand" in trying to exploit U.S. difficulties in the war in Iraq.

Following private meetings for the past two days with Saudi King Abdullah and Qatar Emir Sheik Hamad bin Khalifa al-Thani, Mr. Gates said he found deep concern about Iran's ambitions in Iraq and the wider Middle East.

"I think the Iranians are overplaying their hand. They have raised real concerns in the region and beyond about their intentions," said the Pentagon chief said in a briefing last night with reporters.

But Mr. Gates also said he found no appetite in the region for another conflict and said recent U.S. moves to bolster its military presence in the region and increase troops levels in Iraq were not a prelude to action against Tehran.

DOJ_NMG_0118977

"Our difficulties have given them a tactical opportunity in the short term, but the United States remains a very powerful country," Mr. Gates said.

The dispatch of a second naval carrier strike group to the Persian Gulf by President Bush last week was a clear sign "we are going to remain [in the region for a long time]," Mr. Gates said.

The defense chief, who finishes his regional tour with a stop in Iraq today, said he found support from U.S. allies for the strategy behind Mr. Bush's increase in troops and aid to Iraq as a means to control the violence and aid the beleaguered government of Prime Minister Nouri al-Maliki.

But he said many Arab regimes are still not convinced that Mr. Bush's plan can achieve his goals.

"I would say they expressed hope" that the plan will work, he said.

Although he co-authored a 2004 Council on Foreign Relations study urging engagement with Tehran to solve the region's security problems, Mr. Gates said yesterday Tehran's assertive new stance and its unwillingness to halt its suspect nuclear programs meant direct engagement now would not be wise for the United States.

"Frankly, right at this moment, there's really nothing the Iranians want from us," he said. "In any negotiation, we would be the supplicant."

"We need some leverage, it seems to me, before we engage with the Iranians," Mr. Gates said. "And I think at some point engagement probably makes sense."

Nearly four years ago, Iran offered to cut off aid and support for the Lebanese Shi'ite militia Hezbollah and the Palestinian group Hamas, and promised full transparency on its nuclear program, in a secret letter to the United States soon after the 2003 invasion of Iraq, the British Broadcasting Corp. reported on Wednesday.

According to the BBC, the letter, which it obtained, was unsigned, but the State Department understood that it came with the approval of the highest Iranian authorities.

The Islamic republic also offered to use its influence to support stabilization in Iraq, and in return asked for a halt in U.S. hostility, an abolition of all sanctions, and the pursuit and repatriation of members of the Mujahedeen Khalq (People's Mujahedeen).

The People's Mujahedeen is an exiled Iranian opposition group that fought alongside Saddam Hussein's army in the eight-year war with Iran, and is currently based in Iraq.

Initially, the State Department was receptive to the offer, according to Lawrence Wilkerson, former Secretary of State Colin L. Powell's chief of staff, who spoke to the BBC.

"As soon as it got to the White House, and as soon as it got to the vice president's office, the old mantra of 'we don't talk to evil' ... reasserted itself," Mr. Wilkerson told the broadcast company.

Tough Talk Raises Fears Of Iran Clash (FT)

By Guy Dinmore

Financial Times, January 19, 2007

Increasingly tough talk on Iran from the Bush administration – with vice-president Dick Cheney warning of the “growing threat” from the Islamic republic – has rattled politicians and diplomats in Washington worried that the war in Iraq is set to widen.

While few lay claim to understanding what George W. Bush has in mind, there is a widespread sense that the likelihood of some kind of military clash or conflict with Iran – directly or through proxies – has risen since the US president accused Tehran last week of “providing material support for attacks on American troops” in Iraq.

“The air is filled with the possibility of action against Iran’s nuclear capability,” was how a former senator described the atmosphere to Saudi Arabia’s departing ambassador, Prince Turki al-Faisal, over dinner on Wednesday night.

The consequences would be “catastrophic”, the envoy and former head of Saudi intelligence replied.

However, over a long evening hosted by the New America Foundation think-tank, the ambassador conveyed the impression that the Bush administration’s rhetoric and sabre-rattling – including the dispatch of a second aircraft carrier group and Patriot air defence missiles to the Gulf, and a raid on an Iranian office in Iraq – was intended more as a loud demonstration that the US was not retreating from the region.

Prince Turki said there was concern “in the region” that Mr Bush’s authority had been eroded by the Republicans’ loss of Congress in November’s elections. Attempts by the new Democratic-controlled Congress to limit US troop numbers in Iraq would be a serious mistake, he said.

Analysts say the US-Saudi relationship, previously under great strain in the wake of al-Qaeda’s attacks on the US in 2001, has become the key to the US strategy of containment and deterrence towards Iran.

DOJ_NMG_0118978

Condoleezza Rice, secretary of state, who has just completed a tour of Sunni Arab allies and Israel to reassure them of a beefed-up US presence in the Gulf, speaks repeatedly of a "new alignment" in the Middle East – where the "responsible" leaders of the Gulf Arab regimes, plus Jordan and Egypt, are aligned with the US [and Israel] against the "extremist" forces of Iran, Syria, Lebanon's Hizbollah, and the Palestinian group Hamas.

She has singled out Iran's Revolutionary Guards as responsible for helping Shia death squads in Iraq and providing explosives used against US forces.

"It's not new at all; it is back to the 1980s," commented Ray Takeyh, analyst with the Council on Foreign Relations, recalling the Sunni Arab funding and US support for Iraq's Saddam Hussein in his 1980-88 war with Iran.

"You might see a sort of proxy war inside Iraq," he added. But he noted that Iran's response to the US seizure of five of its officials in Arbil had been "judicious".

Although Prince Turki evaded questions about the "new alignment" and criticised the US refusal to speak to Iran, his remarks confirmed the deterioration in relations between Saudi Arabia and Tehran. He spoke of an argument over Iran's alleged interference in Iraq at a meeting between King Abdullah and Ali Larijani, a senior Iranian security official, this week.

He said the king told Mr Larijani in Riyadh that Iran was not playing a constructive role in Iraq. The king said Iraq risked becoming "a danger to its neighbours" – a clear reference to Saudi fears that the growing Sunni-Shia conflict will infect the region and stir up unrest among Saudi Arabia's substantial Shia minority.

Asked about the support Iraq's Sunni insurgents received from inside Saudi Arabia, Prince Turki said they were backed from all over the Sunni world. But he denied the kingdom was interfering in Iraq and said it was trying to stop cross-border infiltration.

Diplomats in Washington anxious about possible US-Iranian hostilities say the Bush administration has concluded that UN Security Council sanctions against Iran will not work because of opposition from Russia and China.

Mohamed ElBaradei, head of the International Atomic Energy Agency, on Thursday expressed similar concerns. "I don't think sanctions will resolve the issue. I think sanctions, in my view, could lead to escalation on both sides."

Rebuke In Iran To Its President On Nuclear Role (NYT)

By Nazila Fathi And Michael Slackman

The New York Times, January 19, 2007

TEHRAN, Jan. 18 — Iran's outspoken president, Mahmoud Ahmadinejad, appears to be under pressure from the highest authorities in Iran to end his involvement in its nuclear program, a sign that his political capital is declining as his country comes under increasing international pressure.

Just one month after the United Nations Security Council imposed sanctions on Iran to curb its nuclear program, two hard-line newspapers, including one owned by the supreme leader, Ayatollah Ali Khamenei, called on the president to stay out of all matters nuclear.

In the hazy world of Iranian politics, such a public rebuke was seen as a sign that the supreme leader — who has final say on all matters of state — might no longer support the president as the public face of defiance to the West.

It is the first sign that Mr. Ahmadinejad has lost any degree of Ayatollah Khamenei's confidence, a potentially damaging development for a president who has rallied his nation and defined his administration by declaring nuclear power Iran's "inalienable right."

It was unclear, however, whether this was merely an effort to improve Iran's public image by lowering Mr. Ahmadinejad's profile or was signaling a change in policy.

The presidency is a relatively weak position with no official authority over foreign policy, the domain of the supreme leader. But Mr. Ahmadinejad has used his post as a bully pulpit to insert himself into the nuclear debate, and as long as he appeared to enjoy Ayatollah Khamenei's support, he could continue.

While Iran remains publicly defiant, insisting that it will move ahead with its nuclear ambitions, it is under increasing strain as political and economic pressures grow. And the message that Iran's most senior officials seem to be sending is that Mr. Ahmadinejad, with his harsh approach and caustic comments, is undermining Iran's cause and its standing.

The Security Council passed a resolution on Dec. 23 with sanctions intended to curb Iran's uranium enrichment program, which Iran says is for peaceful purposes but the United States and some European nations contend is for the purpose of creating nuclear weapons. The measure bars the trade of goods or technology related to Iran's nuclear program. Enriched uranium can be used for making nuclear fuel but also for making nuclear weapons.

The president dismissed the Security Council resolution as "a piece of torn paper."

But the daily Jomhouri-Eslami, which reflects the views of Ayatollah Khamenei, said, "The resolution is certainly harmful for the country," adding that it was "too much to call it 'a piece of torn paper.' "

DOJ_NMG_0118979

The newspaper added that the nuclear program required its own diplomacy, “sometimes toughness and sometimes flexibility.”

In another sign of pressure on the president to distance himself from the nuclear issue, a second newspaper, run by an aide to the country’s chief nuclear negotiator, Ali Larijani, also pressed Mr. Ahmadinejad to end his involvement in the nuclear program. Mr. Larijani also ran for president and was selected for his post by the supreme leader.

“They want to minimize the consequences of sanctions now that they have been imposed,” said Mohammad Atrianfar, an executive at the daily Shargh, which was closed last fall, and a reformist politician. “But they don’t have clear strategy, and they are taking one step at a time.”

Mr. Ahmadinejad took office more than a year ago as an outsider, the mayor of Tehran who promised to challenge the status quo, to equally distribute Iran’s oil wealth and to restore what he saw as the lost values of the Islamic revolution. His was a populist message, centered on a socialist economic model and Islamic values. He found opposition from the right and the left, in Parliament and among so-called pragmatists.

That pressure has continued, and the criticism now seems to have gained more credibility in the face of the sanctions and Iran’s troubled economic standing. The United States increased pressure on Iran over its role in Iraq has also raised concerns in Tehran and may be behind efforts to restrain the president, political analysts in Tehran said.

“The resolution has decreased Iran’s political credibility in the international community, and so other countries cannot defend Iran,” said Ahmad Shirzad, a reformist politician and a former legislator.

Although the Security Council sanctions were limited to Iran’s nuclear program, they have started to cause economic disruptions.

About 50 legislators signed a letter this week calling on the president to appear before Parliament to answer questions about the nuclear program. They need at least 22 more signatures.

In another letter, 150 lawmakers criticized the president for his economic policies, which have led to a surge in inflation, and for his failure to submit his annual budget on time.

The Iranian stock market, which was already in a slump, continued to decline — falling more rapidly in the past month — as buyers stayed away from the market. The daily Kargozaran reported last week that the number of traders had decreased by 46 percent since the Security Council resolution was passed.

“The resolution has had a psychological effect on people,” said Ali Hagh, an economist in Tehran. “It does not make sense for investors not to consider political events when they want to invest their money.”

Kargozaran reported that a group of powerful businessmen, the Islamic Coalition Party, met with Mohammad Nahavandian, a senior official at the Supreme National Security Council, and called for moderation in the country’s nuclear policies to prevent further damage to the economy.

In the past year, several major European banks have severed their business ties with Iran. Economists say the banks’ actions will also lead to an increase in inflation because importers must turn to complicated ways to finance purchases.

“The nuclear issue has paved the way for other forms of pressures on Iran,” Mr. Shirzad said.

Despite Mr. Ahmadinejad’s harsh language since the resolution was passed, Ayatollah Khamenei has not referred to it directly and only once said that Iran would not give up its right to pursue its nuclear program.

Mr. Larijani has said that Iran will not quit the Nuclear Nonproliferation Treaty or bar international inspectors despite earlier threats to do so.

US Lawmakers Demand Bush Ask Congress Before Invading Iran (AFP)

AFP, January 19, 2007

A resolution introduced in the US House of Representatives calls on President George W. Bush to obtain approval from Congress before using military force against Iran.

The bill, introduced by longtime Iraq war critic Walter Jones, a Republican, and five other US lawmakers calls on the president obtain authorization for an attack on Iran, unless the United States or US interests are attacked first.

Supporters said the legislation would prevent the United States from becoming embroiled in another intractable war like the one raging in Iraq.

"Congress will not stand by idly -- it won't be railroaded into another war that will only make America and the world less safe," Democratic Representative Martin Meehan said at a press conference Thursday.

He said recent administration statements and military maneuvers point to an imminent attack on Iran.

"The indications of the initial saber-rattling are everywhere," Meehan said.

"I'm not here to tell you that I trust Iran, but I am here to say that I don't trust the administration," Meehan said.

DOJ_NMG_0118980

Bush announced last week he had ordered a second US aircraft carrier battle group to the Gulf and announced the deployment of a Patriot missile defense battalion to the region to protect allies against potential Iranian missile strikes.

And in a speech unveiling his new strategy for Iraq, the US president also vowed to "seek out and destroy" any networks funneling weapons or fighters from Syria or Iran into Iraq.

Those moves have fed speculation that a US attack might be imminent, despite the administration's repeated denials.

"There is a growing concern -- justified or not -- that some US officials are contemplating military action against Iran," Jones said, adding that an invasion of Iran would flout the US Constitution.

"If the President is contemplating committing our blood and treasure in another war, then he and his administration must make the case to Congress and the American people why it would be in the national security interests of the United States to engage militarily in Iran," Jones said.

Germany Proposes Wider Iran Sanctions (FT)

By Fidelius Schmid And Daniel Dombey

Financial Times, January 19, 2007

The European Union could expand the range of sanctions against Iran beyond United Nations-mandated measures, according to a document seen by the Financial Times.

A proposal by Germany, holder of the EU's revolving presidency, would ban individuals linked to Iran's nuclear and missile programmes from visiting the EU and reaffirm the EU's opposition to selling arms to Tehran.

Last month the Security Council passed a resolution requiring UN member states to prevent the transfer of nuclear and missile technology to Tehran and to stop all financing for a number of companies linked to the nuclear and missile programmes. The resolution also requires UN states to freeze the assets of 12 people connected with the programmes.

The EU proposals, put forward ahead of a foreign ministers meeting on Monday, would also ban travel to the EU of the individuals on the UN list and take steps to restrict Iranians studying proliferation-sensitive subjects within the EU."

However, at a meeting on Thursday night EU diplomats watered down an earlier initiative to declare a formal arms embargo on Tehran, which would have grouped Iran with pariah states such as Sudan and Zimbabwe.

The proposals will need to be backed by all 27 EU member states, some of which, such as Italy, have close commercial ties with Iran.

Diplomats: Iran May Start Enrichment (AP)

By George Jahn

AP, January 19, 2007

Iran is ready to start assembling thousands of centrifuges to produce enriched uranium — a possible pathway to nuclear arms — after finishing most preliminary work on an underground facility housing such machines, a diplomat and a U.N. official said Thursday.

The two — who requested anonymity because they were not authorized to discuss confidential information — said much, but not all, of the hardware needed for the installation of the centrifuges was now in place at the Natanz facility designated to house Tehran's industrial-scale enrichment program.

Both men emphasized that the facility had been ready for some time, and there was no sign that actual work on putting in the centrifuges would begin at any particular date.

Still, there has been speculation that the hardline leadership might start doing so next month, to celebrate the 28th anniversary of the Islamic Revolution that brought the clerical leadership to power.

The revelations — based on reports by inspectors of the International Atomic Energy Agency visiting Natanz this week — appeared to strengthen claims from Tehran that it is moving toward large-scale enrichment involving 3,000 centrifuges, which spin uranium gas into enriched material.

Low-enriched uranium can be used to generate power, while highly enriched levels serve as the fissile core of nuclear warheads

"We are moving toward the production of nuclear fuel, which requires 3,000 centrifuges and more than this figure," government spokesman Gholamhossein Elham told reporters Monday. "This program is being carried out and moving toward completion."

Iran's leaders have suggested those machines would be in place by March 20, the end of the Iranian year. But the diplomat and official said quick completion of such a large-scale project was unlikely, saying the complicated process takes months.

The United States and some of its allies accuse Iran of trying to produce nuclear weapons. Tehran denies this, saying its program is only for generating electricity.

DOJ_NMG_0118981

The IAEA has said it has found no evidence that Iran is trying to build nuclear weapons, but it has criticized the country for concealing certain nuclear activities, conducting experiments that seem to have no peaceful nuclear applications and failing to answer questions about the program.

Iran plans to ultimately expand its enrichment program to 54,000 centrifuges. That would give it the capacity to produce dozens of nuclear warheads a year, if it chose to develop weapons.

North Korea: Nuclear 'Agreement' Reached (AP)

By Burt Herman

AP, January 19, 2007

North Korea said Friday that it had reached an agreement with the U.S. during direct talks with Washington's main nuclear envoy this week in Germany, but the top American envoy said it had yet to be seen whether progress could be made at six-nation disarmament negotiations.

North Korea's Foreign Ministry said the talks between U.S. envoy Christopher Hill and North Korea's main nuclear negotiator Kim Kye Gwan had been held "in a positive and sincere atmosphere and a certain agreement was reached there." No further details were given.

But Hill, who arrived Friday in Seoul, said he wasn't sure what agreement the statement was referring to. He called the talks in Berlin "very useful discussions" and added he was pleased that it appeared the North was also positive about them.

Hill and Kim met for three days and were believed to be discussing when to convene the next session of international talks on the North's nuclear programs, among other issues. The last round in Beijing in December — held after the North conducted its first-ever nuclear test in October — ended without any breakthroughs.

"We paid attention to the direct dialogue held by the (North) and the U.S. in a bid to settle knotty problems in resolving the nuclear issue," the North's ministry said Friday in a statement released by the country's official Korean Central News Agency.

Hill emphasized the focus of denuclearization talks still was the main six-nation talks — which also include China, Japan, Russia and South Korea — and time would tell how this week's meetings with North Korea would help move things forward there.

"What we now have to do is to see how those discussions can be folded into the six-party process, whether those discussions can help lead to some progress in Beijing," he said.

The U.S. diplomat was heading to Tokyo and Beijing after his meetings with South Korean officials Friday.

A news report Friday said the arms talks could resume early next month due to progress made at the Germany meetings.

South Korea's Yonhap news agency, citing an unnamed diplomat in Seoul, reported that the discussions in Berlin "progressed toward a very positive direction."

Another unnamed diplomat said there is a high possibility the nuclear talks would resume in Beijing the week of Feb. 5, Yonhap reported late Thursday.

But Chun Yung-woo, South Korea's main envoy to the six-nation nuclear talks, told The Associated Press that "nothing has been decided yet" on the date of further talks.

At the December talks, the North refused to engage in any discussion of its nuclear program and repeated a demand for the U.S. to lift its blacklisting of a Macau bank for its complicity in the communist country's alleged counterfeiting and money laundering. The U.S. move led the bank to freeze North Korean assets worth about $24 million.

The U.S. is holding separate financial talks with North Korea, but the last session that met alongside the nuclear talks in December made no progress and another meeting is expected this month.

N. Korea Interested In Deal To Halt Nukes (WT)

By Nicholas Kralev

The Washington Times, January 19, 2007

LONDON -- North Korea has expressed interest in a U.S.-backed proposal that it suspend its nuclear program and allow U.N. inspectors to verify the suspension as an initial step toward dismantling its nuclear capabilities, diplomats said yesterday.

During three days of talks in Berlin that ended yesterday, North Korea's chief negotiator, Kim Gye-gwan, asked his U.S. counterpart, Christopher R. Hill, what the United States would be willing to do if the North turned off its nuclear reactor. A U.S. response, if any, was not made public.

North Korea's foreign ministry today called the Hill-Kim talks "sincere and positive."

In the upbeat assessment, the communist state said the talks yielded "a certain agreement," but it declined to elaborate on the nature of the dialogue.

DOJ_NMG_0118982

The ministry said the talks were held in a "sincere atmosphere." Its comments appeared in a statement released by the country's official Korean Central News Agency.

Mr. Hill flew to South Korea to begin briefing other governments involved in talks with the North. He also plans to visit China and Japan.

Secretary of State Condoleezza Rice said the United States had not changed its policy of refusing to negotiate directly with North Korea over nuclear weapons, but was trying to prepare for the next round of talks.

"We are not going outside the six-party framework to bilateralize our discussions with the North Koreans," Miss Rice said.

The plan was first presented during six-nation talks in Beijing last month, which ended in deadlock.

In Berlin this week, the North Koreans offered their own ideas about how it could be implemented, said diplomats who asked not to be named because they were not authorized to speak about the closed-door sessions.

They also declined to share Mr. Hill's response.

However, Mr Hill discussed the process of normalizing relations with the North in a speech on Wednesday.

Full normalization of U.S.-North Korean ties was envisioned in a Sept. 19, 2005, joint statement by the six nations, once the North scrapped its nuclear programs.

Other participants in the talks -- Japan, China, South Korea and Russia -- also offered political and economic benefits.

"We look forward really to establishing, consistent with our obligations under the September '05 agreement, a normal relationship with North Korea," Mr. Hill told the American Academy in Berlin.

"Obviously, this is via a bilateral process, which will take some time," he said. "But we are prepared to go on that road and to really offer North Korea a hand as it moves along that road."

After the December talks, South Korean news outlets reported that a proposal had been made by the United States that included an offer of written security guarantees.

U.S. officials said yesterday that most of the ideas came from China, which hosted the negotiations.

"The Chinese really are the ones who put forward ideas in the last round of the six-party talks, and part of what the North Koreans are responding to [in Berlin] is that," Miss Rice told reporters traveling with her to London after a five-day Middle East tour.

When the proposal was first made late last month, Mr. Kim refused to respond because he did not have instructions from Pyongyang. Once he received them, he requested a meeting with Mr. Hill, a U.S. official said.

In Berlin, Mr. Hill and Mr. Kim discussed "certain steps toward dismantling," although the official insisted they would not amount to a "freeze," a term used in a failed 1994 nuclear deal known as the Agreed Framework.

In 2002, the Bush administration accused North Korea of having a secret uranium-enrichment program while its single nuclear reactor, which makes plutonium, was shut down.

Since then, the North has restarted the reactor and it has tested a nuclear weapon, thought to be powered by plutonium from the reactor.

US Denies Rare Meetings With North Koreans Signal Policy Shift (AFP)

By David Millikin

AFP, January 19, 2007

US officials denied that a rare series of meetings between senior US and North Korean diplomats marked a break with the Bush administration's long-standing refusal to negotiate directly with the Stalinist regime.

"This is not an instance of bilateral negotiations," Tony Snow, President George W. Bush's spokesman, said of the three days of talks on North Korea's nuclear program this week between chief US negotiator Christopher Hill and his North Korean counterpart, Kim Kye-gwan.

Hill and Kim met in Berlin for several hours between Wednesday and Thursday in their first one-on-one sessions held outside of a multi-party format in Beijing since Bush came to office in 2001.

Hill, the assistant secretary of state for East Asia and the Pacific, described the talks aimed at getting North Korea to give up its nuclear weapons as "substantive" and "useful".

The meetings fueled speculation that Bush, mired in the Iraq crisis and in dire need of a foreign policy success, had loosened the reins on his diplomats so they could deal more directly with formerly taboo regimes.

But Snow and other officials insisted the Berlin contacts broke no new ground and were part of an ongoing set of six-party negotiations launched in 2003 and resurrected in December after a year-long boycott by the North Koreans.

Hill met with Kim in hopes of organizing another round of the broader talks later this month or early next month in the Chinese capital, State Department deputy spokesman Tom Casey said.

Their talks "certainly don't represent anything particularly new or different from what we've done before," Casey said.

DOJ_NMG_0118983

The six-party talks -- involving China, Japan, the two Koreas, Russia and the United States -- are aimed at convincing North Korea to abandon its nuclear weapons program in exchange for security guarantees, economic aid and a normalization of relations with Washington.

North Korea returned to the talks after being hit with international sanctions in October for having carried out its first nuclear test explosion.

Five days of negotiations ended in deadlock, with the North Koreans refusing to broach the subject of nuclear weapons unless Washington backed off financial sanctions imposed a year earlier on a Macau bank accused of money-laundering for Pyongyang.

The US has agreed to discuss the sanctions in parallel with the nuclear disarmament talks.

North Korea has long sought direct bilateral dealings with the United States as a way to boost its status internationally and avoid linkages with other issues involving Washington's regional allies.

Bush and Secretary of State Condoleezza Rice have refused, pointing to failed denuclearization negotiations carried out with Pyongyang by the previous administration of President Bill Clinton as proof that two-way talks with the erratic North Koreans cannot work.

They argue that the combined pressure of the multi-party format, notably including North Korea's primary benefactor, China, is needed to ensure Pyongyang honors any future agreements.

Bush and Rice similarly have refused calls to engage directly with Iran and Syria as part of the administration's latest push to stabilize Iraq and resolve crises in Lebanon and between Israel and the Palestinians.

Their stance has been widely criticized by the opposition Democrats who gained control of Congress in November as well as by leaders of Bush's won Republican party and former officials from both political camps.

The State Department's Casey on Thursday reaffirmed the administration's refusal to deal with Iran unless it complies with UN resolutions demanding it halt uranium enrichment activities many believe are part of a program to develop nuclear weapons.

Rice told Congress last week that she would meet "any time, anywhere" with the Iranians once they meet the UN demands.

"It's pretty clear that if the Iranians want to have a dialogue with the United States, there's an avenue open to them and we'd very much like them to take us up on it," Casey said.

United Nations Dictators Program (WSJ)

By Melanie Kirkpatrick

The Wall Street Journal, January 19, 2007

Saddam Hussein managed to pull off the $100 billion Oil for Food scam right under the noses of the United Nations officials charged with administering it. Now another dictator with nuclear ambitions has succeeded in a similar trick, this time manipulating the United Nations Development Program in North Korea.

The story of the UNDP's lack of oversight of its operations in North Korea is revealed in previously undisclosed documents and an exchange of letters between U.S. and U.N. officials. American officials have been pushing for months for more transparency in UNDP operations in North Korea, while the UNDP has resisted.

In a Jan. 16 letter to UNDP Associate Administrator Ad Melkert, Ambassador Mark Wallace of the U.S. Mission to the U.N. lays out what American digging has found so far: The UNDP's program in the Democratic People's Republic "has for years operated in blatant violation of U.N. rules, served as a steady and large source of hard currency and other resources for the DPRK government with minimal or no assurance that UNDP funds and resources are utilized for legitimate development activities." Mr. Wallace declined to speak with me, but Richard Grenell, spokesman for the U.S. Mission, said yesterday: "We have raised serious concerns with UNDP regarding their oversight of the programs in North Korea . . . We want to ensure that U.S. tax dollars are not used to fund illicit activities."

While the precise amount of hard currency supplied through UNDP isn't known, the documents suggest it has run at least to the tens of millions of dollars since 1998 and one source says it could be upward of $100 million. An internal 1999 audit notes a budget of $27.9 million for 29 projects. David Morrison, a UNDP spokesman, says "the overall size of the program" in North Korea has been reduced in recent years. While $22.2 million was budgeted for 2005-2006, the agency spent only $3.2 million last year and $2.1 million in 2005, he says. Programs fall into four areas: humanitarian assistance, public health, environment and agriculture, and the economy.

The stakes are nonetheless very high because, unlike Saddam's Iraq, North Korea has already succeeded in testing its nuclear bomb. The hard currency supplied by the UNDP almost certainly goes into one big pot marked "Dear Leader," which Kim can use for whatever he wants, including his weapons programs. This may not violate the letter of Security Council Resolution

DOJ_NMG_0118984

1718, which restricts trade in anything having to do with North Korea's nuclear or missile programs, but it certainly violates its spirit.

Unlike Oil for Food, there's no evidence to date that corrupt UNDP officials are in on the game -- though given the U.N.'s record of late, it would be unwise to rule that out before a full investigation. There is, however, plenty of evidence of willful blindness on the part of the UNDP, which let myriad rules be broken and allowed itself to become a large source of hard currency for the regime. Nor did it bring these irregularities to the attention of its governing body, the 36-member executive board.

Consider staffing. The UNDP's Pyongyang office is dominated by government employees selected by North Korea. According to a redacted version of a 2004 internal audit, "The government provides only one candidate for each post and does not provide detailed qualifications, work experience or personal details to the office." The auditors recommended that the UNDP recruit its own staff. A status update, dated Dec. 15, 2006, dryly notes that "the Government is not yet ready to consider such a shift at present."

In addition to appointing the UNDP's staff, the North Korean government requires that UNDP pay their salaries to the government, which presumably takes its cut. That's the way it works for North Korean workers who labor abroad or who work for South Korean companies in the Kaesong Industrial Complex north of the DMZ. In yet another violation of the rules, UNDP gives local staff a cash "meal stipend" of $120 a month, which is another hard currency contribution.

Speaking of cash, the UNDP also accedes to Pyongyang's demands that it pay cash to local government vendors. That's another violation of U.N. rules, as is placing North Korean staffers in jobs that give them control of financial records, personnel actions, and equipment and supplies. To cite just one example of abuse, the 1999 internal audit found that the UNDP checkbook was not kept in a secure location and no check register was maintained reflecting checks written.

But who needs a checkbook? According to the same audit, cash is the only means of payment that the government accepts. The UNDP does not use purchase orders in North Korea and local purchases -- including those over $1,000 -- are made in cash. That includes local office costs, which are typically provided in kind by the host country. North Korea even charges rent, to the tune of $2 million a year, according to one source who has looked at the program.

Meanwhile, there is little if any oversight of the UNDP's projects in North Korea, which, according to a U.N. document, numbered 30 last year. UNDP regulations require one official, on-site visit a year but since Pyongyang prohibits foreigners from visiting some of the project sites, that's another rule that's out the window. Audits of individual projects are spotty at best and in the case of "nationally executed" or "NEX" projects -- that is, those run by the North Korean government with funds provided by the UNDP -- they are often done by the government itself, giving new meaning to the adage about the fox running the henhouse.

It's anyone's guess as to whether the UNDP work in North Korea is benefiting the people for whom it is intended. According to Mr. Wallace's letter, "In the absence of real audits and site visits it is impossible for UNDP to verify whether or not any of the funds paid to the DPRK for supposed use in UNDP programs have actually been used for bona fide development purposes or if the DPRK has converted such funds for its own illicit purposes."

The U.S. sits on the agency's executive board, and in 2005 contributed $105 million, 11.4% of UNDP's core budget (plus an additional $142 million for specified projects). Yet American officials have had to fight for even the most basic information on the UNDP's activities in North Korea. When the U.S. Mission asked for copies of the internal audits of the North Korean operations, it was rebuffed. "Internal audit reports are important management tools for Executive Heads and, therefore, confidential," wrote Kemal Dervis, UNDP's head, on Jan. 5. After protests, American officials were finally permitted to review three internal audits -- 1999, 2001, 2004 -- but were not allowed to retain copies.

Meanwhile, as the U.S. was pressing for answers about North Korean shenanigans involving the UNDP, three North Korean officials were traveling to New York, courtesy of the U.N., for, among other things, next week's meeting of the UNDP executive board. The U.N. picked up their business-class, trans-Pacific tickets at $11,959 each. When U.S. officials objected, the UNDP, in a rare flash of insight, changed its policy.

"Starting immediately after the forthcoming Board meeting, UNDP will not reimburse government officials' travel or other costs for attending Board meetings," writes Mr. Melkert, the associate administrator, in a Jan. 12 letter to Mr. Wallace. It apparently occurred to Mr. Melkert and his boss, Mr. Dervis, that it might not be appropriate for the U.N. to pay for officials of a country that is abusing the U.N. to come to U.N. headquarters to lobby for re-funding its operations.

Also under U.S. pressure, the UNDP now says it will stop transferring hard currency to the Kim Jong Il regime. "We have instructed the DPRK Country Office that all payments in hard currency to government, national partners, local staff and local vendors should end at the latest by 1 March 2007," writes Mr. Melkert, in the Jan. 12 letter.

UNDP spokesman Mr. Morrison says his agency's operations in North Korea "fully comply" with the decisions of the executive board and with the board-approved financial regulations. UNDP is taking "all necessary measures to avoid misperceptions or unintended consequences," he says, and will institute "any additional measures the board may deem

DOJ_NMG_0118985

necessary." Since Mr. Wallace's letter presents a very different assessment of UNDP actions in North Korea, that should make for an animated board meeting next week.

At that meeting, the U.S., along with Canada, Japan, Belgium and Serbia, plan to request a "deferral" of the agency's programs in North Korea until a full accounting of its operations can be made. An independent, outside audit is an essential first step. A full-scale investigation along the lines of the Volcker Commission's Oil for Food probe would be even better. And don't stop at the UNDP. The North Korean operations of other U.N. agencies -- Unicef, the World Food Program, the Population Fund -- also deserve scrutiny. It's crucial to determine whether, like Saddam Hussein's manipulation of the Oil for Food program, Kim Jong Il has been busy using the resources of the United Nations for his own illicit purposes.

Ms. Kirkpatrick is a deputy editor of the Journal's editorial page.

U.N. Cash For Kim (WSJ)

The Wall Street Journal, January 19, 2007

The U.N.'s Oil for Food disgrace rolls on, with this week's indictment by a federal prosecutor in New York of the program's former administrator Benon Sevan. But now a new dollars-for-dictators scandal is breaking into the open, this one involving the U.N. Development Program (UNDP) and North Korea's Kim Jong Il.

Our Melanie Kirkpatrick lays out many of the gory details nearby, based on documents reluctantly produced by the U.N. after prodding by American officials. The tale is similar to Oil for Food in that money for programs designed to benefit North Korea's poor appears to have been used instead to sustain the government. While the total amount of cash spent by the UNDP in North Korea isn't clear thanks to the opacity of U.N. record-keeping, any hard currency is manna from Turtle Bay for the isolated Kim regime. If dollar amounts into the tens of millions over nine years are accurate, that's money that would have helped Kim stay in power and continue his nuclear weapons program.

The documents we've seen follow the program back to 1998 and the era of detente between Kim and the Clinton Administration. But what's especially alarming is that the UNDP's programs have persisted in North Korea even as Kim has banished U.N. weapons inspectors, raised the volume on his threats, tested long-range missiles and even tested a nuclear weapon -- all in defiance of the U.N.'s own stated positions and Security Council sanctions.

A defense that the UNDP merely does humanitarian work -- for the people of North Korea and not the government -- isn't credible given the details exposed by Ms. Kirkpatrick. U.N. officials can't even say with confidence that all of the "development" projects exist because they haven't been allowed to visit their sites. Pyongyang officials insist on payments in cash that become fungible hard currency for the regime. Every U.N. dollar is one more that Kim doesn't have to raise from other (and often illegal) sources to pay off his generals or to buy a nuclear centrifuge.

The desire in some circles, including parts of the U.S. State Department, will be to dismiss all of this as no big deal because the bigger game is getting Kim to end his nuclear program. So why let a little more U.N. corruption, or incompetence, interfere with serious diplomacy?

Well, one reason is because we still don't know how wide or deep this scandal is, especially if it extends to other U.N. programs operating in North Korea. Another is that any cash to Kim contradicts U.N. and U.S. policy and helps ease pressure on the dictator to give up his nukes. And then there is the matter of the U.N.'s own credibility and failure to reform. In the wake of Oil for Food especially, why would U.N. officials allow this program to continue?

The generous explanation is incompetence, or perhaps the kind of feckless idealism that really believes such a program helps poor Koreans apart from Kim's regime. But given the U.N.'s recent track record of indictments for corruption, more venal motives need to be investigated. And it is also worth asking whether outright hostility to the U.S. policy of trying to isolate Kim has also played a role.

Whatever the motive, the Cash for Kim scandal is one more blot on the record of former Secretary General Kofi Annan. It also raises questions about the role played in North Korea by Maurice Strong, the Canadian who was Mr. Annan's envoy to Pyongyang.

We'd feel a lot better if the U.N. had quickly responded to U.S. queries and tried to get to the bottom of the mess at UNDP. But the exchange of letters between U.S. Ambassador Mark Wallace and UNDP officials described by Ms. Kirkpatrick is certainly reminiscent of the early U.N. stonewalling on Oil for Food.

Mr. Wallace and his colleagues from other nations on the UNDP executive board are right to demand a stop to the program and an independent investigation. The U.N.'s new Secretary General, Ban Ki-Moon, could make his own early mark by calling for a probe as part of a new era of U.N. transparency. Democrats in Congress could also be constructive by insisting on accountability, especially given how much stock they put in a competent U.N. to promote American security. * * *

One lesson of Oil for Food, and its failure to lead to any serious reform, is that to some foreign policy elites there can be no such thing as a U.N. "scandal." That's because for them the U.N. is all about good intentions, and the hopes and dreams for

peace, rather than about actual results. But it is precisely that forbearance that has allowed too many dictators to exploit the U.N. for their own purposes, and has brought Turtle Bay to its current low ebb. Getting to the bottom of Cash for Kim is one more chance to make the U.N. shape up, and to stop financing a global menace in the bargain.

U.S. Criticizes China Over Missile Test (AP)

AP, January 19, 2007

The United States criticized China on Thursday for conducting an anti-satellite weapons test in which an old Chinese weather satellite was destroyed by a ballistic missile.

"The United States believes China's development and testing of such weapons is inconsistent with the spirit of cooperation that both countries aspire to in the civil space area," National Security Council spokesman Gordon Johndroe said. "We and other countries have expressed our concern to the Chinese."

U.S. intelligence agencies believe China conducted the test on Jan. 11.

Flexing Muscle, China Destroys Satellite In Test (NYT)

By William J. Broad And David E. Sanger

The New York Times, January 19, 2007

China successfully carried out its first test of an antisatellite weapon last week, signaling its resolve to play a major role in military space activities and bringing expressions of concern from Washington and other capitals, the Bush administration said yesterday.

Only two nations — the Soviet Union and the United States — have previously destroyed spacecraft in antisatellite tests, most recently the United States in the mid-1980s.

Arms control experts called the test, in which the weapon destroyed an aging Chinese weather satellite, a troubling development that could foreshadow an antisatellite arms race. Alternatively, however, some experts speculated that it could precede a diplomatic effort by China to prod the Bush administration into negotiations on a weapons ban.

“This is the first real escalation in the weaponization of space that we’ve seen in 20 years,” said Jonathan McDowell, a Harvard astronomer who tracks rocket launchings and space activity. “It ends a long period of restraint.”

White House officials said the United States and other nations, which they did not identify, had “expressed our concern regarding this action to the Chinese.” Despite its protest, the Bush administration has long resisted a global treaty banning such tests because it says it needs freedom of action in space.

Jianhua Li, a spokesman at the Chinese Embassy in Washington, said that he had heard about the antisatellite story but that he had no statement or information.

At a time when China is modernizing its nuclear weapons, expanding the reach of its navy and sending astronauts into orbit for the first time, the test appears to mark a new sphere of technical and military competition. American officials complained yesterday that China had made no public or private announcements about its test, despite repeated requests by American officials for more openness about its actions.

The weather satellite hit by the weapon had circled the globe at an altitude of roughly 500 miles. In theory, the test means that China can now hit American spy satellites, which orbit closer to Earth. The satellites presumably in range of the Chinese missile include most of the imagery satellites used for basic military reconnaissance, which are essentially the eyes of the American intelligence community for military movements, potential nuclear tests and even some counterterrorism, and commercial satellites.

Experts said the weather satellite’s speeding remnants could pose a threat to other satellites for years or even decades.

In late August, President Bush authorized a new national space policy that ignored calls for a global prohibition on such tests. The policy said the United States would “preserve its rights, capabilities, and freedom of action in space” and “dissuade or deter others from either impeding those rights or developing capabilities intended to do so.” It declared the United States would “deny, if necessary, adversaries the use of space capabilities hostile to U.S. national interests.”

The Chinese test “could be a shot across the bow,” said Theresa Hitchens, director of the Center for Defense Information, a private group in Washington that tracks military programs. “For several years, the Russians and Chinese have been trying to push a treaty to ban space weapons. The concept of exhibiting a hard-power capability to bring somebody to the negotiating table is a classic cold war technique.”

Gary Samore, the director of studies at the Council on Foreign Relations, said in an interview: “I think it makes perfect sense for the Chinese to do this both for deterrence and to hedge their bets. It puts pressure on the U.S. to negotiate agreements not to weaponize space.”

DOJ_NMG_0118987

Ms. Hitchens and other critics have accused the administration of conducting secret research on advanced antisatellite weapons using lasers, which are considered a far speedier and more powerful way of destroying satellites than the weapons of two decades ago.

The White House statement, issued by the National Security Council, said China's "development and testing of such weapons is inconsistent with the spirit of cooperation that both countries aspire to in the civil space area."

An administration official who had reviewed the intelligence about China's test said the launching was detected by the United States in the early evening of Jan. 11, which would have been early morning on Jan. 12 in China. American satellites tracked the launching of the medium-range ballistic missile, and later space radars saw the debris.

The antisatellite test was first reported late Wednesday on the Web site of Aviation Week and Space Technology, an industry magazine. It said intelligence agencies had yet to "complete confirmation of the test."

The test, the magazine said, appeared to employ a ground-based interceptor that used the sheer force of impact rather than an exploding warhead to shatter the satellite.

Dr. McDowell of Harvard said the satellite was known as Feng Yun, or "wind and cloud." Launched in 1999, it was the third in a series. He said that it was a cube measuring 4.6 feet on each side, and that its solar panels extended about 28 feet. He added that it was due for retirement but that it still appeared to be electronically alive, making it an ideal target.

"If it stops working," he said, "you know you have a successful hit."

David C. Wright, a senior scientist at the Union of Concerned Scientists, a private group in Cambridge, Mass., said he calculated that the Chinese satellite had shattered into 800 fragments four inches wide or larger, and millions of smaller pieces.

The Soviet Union conducted roughly a dozen antisatellite tests from 1968 to 1982, Dr. McDowell said, adding that the Reagan administration carried out its experiments in 1985 and 1986.

The Bush administration has conducted research that critics say could produce a powerful ground-based laser weapon that would be used against enemy satellites.

The largely secret project, parts of which were made public through Air Force budget documents submitted to Congress last year, appears to be part of a wide-ranging administration effort to develop space weapons, both defensive and offensive.

The administration's laser research is far more ambitious than a previous effort by the Clinton administration to develop an antisatellite laser, though the administration denies that it is an attempt to build a laser weapon.

The current research takes advantage of an optical technique that uses sensors, computers and flexible mirrors to counteract the atmospheric turbulence that seems to make stars twinkle. The weapon would essentially reverse that process, shooting focused beams of light upward with great clarity and force.

Michael Krepon, co-founder of the Henry L. Stimson Center, a group that studies national security, called the Chinese test very un-Chinese.

"There's nothing subtle about this," he said. "They've created a huge debris cloud that will last a quarter century or more. It's at a higher elevation than the test we did in 1985, and for that one the last trackable debris took 17 years to clear out."

Mr. Krepon added that the administration had long argued that the world needed no space-weapons treaty because no such arms existed and because the last tests were two decades ago. "It seems," he said, "that argument is no longer operative."

China Criticized For Anti-Satellite Missile Test (WP)

By Marc Kaufman And Dafna Linzer

The Washington Post, January 19, 2007

The Chinese military used a ground-based missile to hit and destroy one of its aging satellites orbiting more than 500 miles in space last week -- a high-stakes test demonstrating China's ability to target regions of space that are home to U.S. spy satellites and space-based missile defense systems.

The test of anti-satellite technology is believed to be the first of its kind in two decades by any nation and raised concerns about the vulnerability of U.S. satellites and a possible arms race in space.

China's action drew sharp protests from other nations with satellite programs -- a predictable response that experts said dramatically illustrates Chinese willingness to face broad international criticism when it comes to space, which Beijing considers a key part of the push to modernize its military and increase its ability to compete in high-tech warfare.

"The U.S. believes China's development and testing of such weapons is inconsistent with the spirit of cooperation that both countries aspire to in the civil space area," National Security Council spokesman Gordon Johndroe said yesterday. "We and other countries have expressed our concern regarding this action to the Chinese."

A spokesman at the Chinese Embassy said that he had no information about the anti-satellite test. The Chinese military did not mention the test either. But a Chinese newspaper that concentrates on foreign affairs, Global Times, relayed the reports from

DOJ_NMG_0118988

Washington in today's editions. The newspaper quoted Maj. Gen. Peng Guangquin as saying that the U.S. government was making too much of the test.

In addition to introducing a renewed military dimension to space, the destruction of the Chinese satellite created a large "debris cloud" that can seriously damage other satellites in nearby orbit, and possibly even spacecraft on their way to the moon or beyond. Analysts said that based on computer models, as many as 300,000 pieces of debris may have been created. While many would be very small, they said, hundreds would be large enough to create potentially serious problems.

The United States and the Soviet Union tested anti-satellite technology in the 1980s, and the United States shot down one of its orbiting satellites in 1985. Partially as a result of the debris problem, both sides stopped the programs.

The Chinese test, first reported online by the magazine Aviation Week and Space Technology, comes at a time of heightened tensions between the United States and China over space. China is leading an effort in the United Nations to set up an international conference to address what many consider to be an imminent space arms race. The United States has opposed the idea, arguing that it is not needed because there is no arms race in space. The Bush administration nevertheless released an updated national space policy last fall that strongly asserted an American right to defend itself in space against any actions it considers hostile.

The U.S. military is especially dependent on satellites for navigation, communications and missile guidance, while the American economy could also be broadly damaged by disruptions of communications, weather and other satellites. Some in the administration believe that this has left the nation especially vulnerable to attack and have proposed efforts to develop ways to defend its assets in space.

The day the test was conducted, the chiefs of major U.S. intelligence agencies presented their annual threat assessments to Congress. Neither China's anti-satellite program nor its general push toward space weapons was mentioned during the public hearing or anywhere in the written testimonies of the director of national intelligence, the director of the Pentagon's intelligence agency or the CIA director.

The United States retains the ability to destroy low-orbit satellites and has been conducting research on more advanced systems for years.

Officials who have been briefed on the test said that the Chinese ballistic missile reached as high as some U.S. spy satellites are positioned. Other satellites positioned at the same altitude are part of the missile defense network that the U.S. military is assembling. Sources said a hit-to-destroy ballistic missile could knock out any satellites at that low orbit. Many sensitive communications satellites are much higher, at about 22,000 miles above Earth, and officials said yesterday that the recent test does not prove that China has the capability to disrupt those systems. Still, U.S. intelligence officers and administration officials fretted.

"It's unfortunate that China is going down this path," said one administration official. "No one has done this in over 20 years, and in that time, international cooperation in space has come so far. It is a bustling commercial, scientific and research arena. This sort of thing is such a throwback to the Cold War."

The issue of possible hostilities in space became more real in August when National Reconnaissance Office Director Donald M. Kerr told reporters that a U.S. satellite had recently been "painted," or illuminated, by a ground-based laser in China. The United States did not make any formal protest then, but it did yesterday.

Johndroe of the NSC said that Australia and Canada have lodged protests, and Britain, South Korea and Japan are expected to follow suit.

He said the Chinese satellite was shot down using a ground-based medium-range ballistic missile, which slammed into its target 537 miles above earth on Jan. 11.

"In my view, the Chinese are sending a strong signal here," said Jeffrey Kueter, president of the George C. Marshall Institute, a nonprofit space and defense think tank in Washington. "They're saying they can hold our space-based, war-fighting capability at risk, and are putting into doubt our ability to challenge them. They're a rising space competitor."

Kueter said the test makes it essential for the United States to get more serious about developing technology to defend its satellites.

Michael Krepon, president emeritus of the Henry L. Stimson Center, another nonprofit involved with security issues in Washington, called the Chinese test a predictable -- and unfortunate -- response to U.S. space policies.

"The Chinese are telling the Pentagon that they don't own space," he said. "We can play this game, too, and we can play it dirtier than you."

Krepon said the Chinese test "blows a whole through the Bush administration reasoning behind not talking to anybody about space arms control -- that there is no space arms race. It looks like there is one at this point."

Rep. Edward J. Markey (D-Mass.) said the Chinese action makes it essential that the administration begin negotiations to stop any possible space arms race. "The Chinese anti-satellite test is terrible news for international stability and security, and

DOJ_NMG_0118989

could presage the dawn of a new arms race -- this time in space," Markey said. "American satellites are the soft underbelly of our national security, and it is urgent that President Bush move to guarantee their protection by initiating an international agreement to ban the development, testing, and deployment of space weapons and anti-satellite systems."

Chinese Missile Strikes Satellite (LAT)

By Peter Spiegel And James Gerstenzang

The Los Angeles Times, January 19, 2007

The Chinese military shot down one of its own aging satellites with a ground-based ballistic missile last week, demonstrating a new technological capability at a time of growing Bush administration concern over Beijing's military modernization and its intentions in space.

The shoot-down, which U.S. officials said occurred on the evening of Jan. 11, prompted a formal protest from Washington that was joined by allies including Canada and Australia, U.S. officials said Thursday. Japan has demanded an explanation, and Britain and South Korea are also expected to file formal objections.

"The United States believes China's development and testing of such weapons is inconsistent with the spirit of cooperation that both countries aspire to in the civil space area," said Gordon D. Johndroe, spokesman for the National Security Council. "We and other countries have expressed our concern to the Chinese."

A spokesman for China's Foreign Ministry said today that he could not comment on the anti-satellite test.

The U.S. and the Soviet Union each conducted similar tests of anti-satellite weapons in the 1980s, but abandoned the practice when the strikes led to widespread debris fields in space that threatened other satellites. The last U.S. test was in 1985.

According to U.S. officials, Beijing used a medium-range missile to shoot at its weather satellite, which was 537 miles above Earth when it was hit. The altitude is considered to be a low Earth orbit, but represents the band where most satellites and manned space missions travel.

The successful exercise was expected to send tremors through the U.S. satellite industry, which is part of a $90-billion global business involving hundreds of orbiting craft that are essential to routine daily communications and commerce. Many ATM and pay-at-the-pump transactions rely on satellites, as do television and digital radio signal distribution.

The shoot-down has rattled U.S. defense officials, who are concerned both about the commercial crafts and government spy and military satellites that operate at that height.

Larger telecommunications satellites and certain military satellites that provide early warning of missile launches travel in much higher orbits — up to 23,000 miles above Earth.

The Chinese strike on the satellite launched in 1999 was first reported by the aerospace trade magazine Aviation Week & Space Technology.

Concerns about rising threats to U.S. satellites led the Bush administration to issue a new national space policy in August, which held that the U.S. viewed freedom of action in space as important as air or sea power.

The administration was widely criticized for its aggressive attitude toward defense activities in space. But a White House official, speaking on condition of anonymity, said Thursday that satellites and access to space were considered vital to U.S. national and economic security and that any event "that can hinder passage through space" was of concern.

News of the Chinese achievement came as John D. Negroponte, the head of U.S. intelligence agencies, testified before the House Intelligence Committee on a range of international threats, including what he said were the potential dangers of China's military buildup.

"The Chinese are developing more capable long-range conventional strike systems, and short and medium-range ballistic missiles with terminally guided maneuverable warheads able to attack U.S. carriers and air bases," Negroponte said in his testimony.

China has stepped up both its civilian and military space program in recent years. In October 2003, it became only the third nation, after Russia and the U.S., to launch its own manned space mission.

U.S. intelligence and military officials have become increasingly vocal over Chinese ambitions in space and over Beijing's military modernization program, begun in 1999. Senior Pentagon officials have urged the Chinese to explain the motives behind their buildup, saying the lack of clarity has fueled concerns that their new weapons might be used against the U.S.

Officials also have voiced concerns that, because the U.S. is so dependent on satellites, militarily and commercially, an inability to protect its space assets would represent a vulnerability that adversaries could exploit.

"We must be very concerned about the emerging threats to our space assets and about the possibility that others will take advantage of our dependence on and vulnerability in space to seek asymmetrical advantages over us," Robert G. Joseph, the State Department's top arms control official, said in a speech last week.

DOJ_NMG_0118990

China's leaders are intent on modernizing their military capabilities, and the development of more sophisticated weaponry, including anti-satellite missile capabilities, is part of that effort, said Shi Yinhong, a professor of international relations at People's University in Beijing.

But he said China was still at least a decade behind several other countries.

"Generally speaking, China's military capability in these advanced areas, whether it's space weaponry or naval capabilities, is still far behind the United States and Japan," he said. "What you are seeing is new momentum to try and catch up, but the distance is still quite wide."

Shi said he understood why leaders in the U.S. and elsewhere might view China's anti-satellite test with alarm, but that the move represented a natural development and was not intended to provoke an arms race in space.

The new American space policy holds that the U.S. retains the right to take any action necessary to protect its space assets and to prevent adversaries from using "space capabilities hostile to U.S. national interests."

China's space modernization effort is part of a campaign to defend itself against the U.S. government's missile defense program, which officials in Beijing view as a militarization of outer space, said Wenran Jiang, head of the China studies program at Canada's University of Alberta.

He said Chinese military leaders were paying particular attention to Washington's information warfare efforts, including the development of sophisticated weaponry to "destabilize the enemy's communications and control systems."

Pentagon officials rebutted allegations that the new policy attempted to militarize space, saying that the ability of U.S. adversaries to cripple military and commercial satellites posed a serious threat for which the military was not yet prepared.

"I'm not talking about weapons of mass destruction" in space, said a senior Pentagon official, who spoke on condition of anonymity when discussing internal debates over military space policy. "I'm talking about what's the next step if somebody whacks a satellite? Do we just go out with a bullhorn and express our outrage?"

Despite objections to putting weapons in space, American military officials are concerned that they will be blamed for inaction if they fail to prevent an attack on U.S. satellites.

"We need to be able to know who's messing with our satellites — not just our military ones, but our commercial ones," said another senior Pentagon official. "If something's affected, they're going to call [and ask], 'What are you going to do about it?' "

China provoked widespread concern in September after it used a ground-based laser to illuminate at least one U.S. satellite. The action was confirmed by the U.S. National Reconnaissance Office, the intelligence agency that oversees spy satellites. The Pentagon has warned of intelligence that shows China is developing a laser system to blind or damage imaging satellites.

Among U.S. satellite operators, word of China's latest anti-satellite test was greeted warily.

"We're concerned, but we haven't gotten a lot of calls from our customers so far," said Arnold Friedman, senior vice president for Space Systems Loral of Palo Alto, which operates 53 satellites in orbit. "We're always concerned whenever anything of that sort happens."

Most of Loral's satellites would be out of reach to the type of missile used by the Chinese because they orbit about 23,000 miles above the Earth.

Other satellite executives declined to comment or referred questions to the Pentagon.

Somalia Seeks U.S. Aid To Revive Nation (AP)

By George Gedda

AP, January 19, 2007

Somalia is asking the U.S. government for help in building efficient police, military and intelligence organizations as it attempts to overcome years of strife and impoverishment.

The requests were contained in a three-page memo submitted to the State Department by Dahir Mirreh Jibreel, a U.S. representative of the Transition Federal Government in Somalia that took power recently after the ouster of radical Islamists by Ethiopian troops.

The government was established in 2004 with U.N. backing but had been too weak until the turn of the year to establish a presence in Mogadishu, the capital.

Heading the list of Somali requests was the appointment of a U.S. ambassador to Somalia. The United States has not had a functioning embassy in Somalia for years. There was no immediate comment Thursday from the State Department on the request but security issues for any U.S. personnel sent there are believed to be a major concern.

Large-scale assistance seems unlikely until Somali authorities are able to create a stable environment in the country.

The requests also call for congressional approval of Somalia stabilization and reconstruction legislation as well as encouragement of private U.S. investment in Somalia.

DOJ_NMG_0118991

The country has not had a government able to control the national territory since 1991. The transitional government lacks funds to pay civil servants and the list submitted to the State Department includes a request to fill that need until the country is able to generate its own revenue.

Shortly after the transitional government was installed in Mogadishu, United States made an initial down payment of $40 million in revitalization assistance for Somalia. About $16 million was earmarked for humanitarian assistance, $14 million to fund a multinational force whose deployment is still pending and $10 million in development aid.

Jibreel distributed copies of the requests during a meeting Thursday with a small group of reporters that was hosted by the American Enterprise Institute, a conservative public policy research group.

Amid Chaos, Young Somalis Struggle To Get By (NYT)

By Jeffrey Gettleman

The New York Times, January 19, 2007

MOGADISHU, Somalia, Jan. 18 — A week ago, Yoonis Issay Alin was riding around in the back of a pickup, part of a squad of tough-looking guys with big trucks and big guns.

Now he is drooling on a metal cot, shot in the head over a parking spot.

All around him at Medina Hospital in Mogadishu, Somalia's capital, young men writhe in steamy beds, their arms and legs trapped in traction ropes, their gunshot wounds the latest proof of a society out of control. It is hard to imagine there is enough gauze in this broken-down country to keep up.

Somalia may be at a turning point, with a potentially viable government for the first time since 1991. But senseless violence is still the norm, as ubiquitous as qat, the plant people here chew and chew as a drug until the ugliness of life fades away, even if just for a moment.

Mr. Alin, 22, was one of the thousands of young militiamen who prowl this city. Now his family is on a death watch, with his sisters squeezed around his hospital bed, peering into his open, unregistering eyes, and his creased-faced mother leaning over him, shooing away flies.

"In this country," said his mother, Halima, "nobody cares if you live or die."

His skull is encased in a helmet of white medical tape. He has been drifting in and out of consciousness, and doctors say they have no way to gauge the amount of brain damage.

"There are no neurosurgeons here, no M.R.I.'s, no CAT scans, no psychiatrists," said Sheikhdon Salad Elmi, director of Medina Hospital. "Can you imagine that? In a city where everyone needs therapy, not a single psychiatrist?"

Mr. Alin's journey from a tin shack where he slept on a dirt floor with four brothers and five sisters to the employ of a warlord was typical of so many young Somali men. It was not planned; it just happened, like the bullet that was fired at someone else last Friday but tumbled instead through Mr. Alin's brain.

His father, Issay, an off-again-on-again brick mason, was killed in a robbery in 1993 — two years after Somalia's central government collapsed and the country spun into anarchy — leaving behind no money, just a crusty trowel that none of his sons knew how to use.

His mother supported the family by selling qat in a neighborhood called the Black Sea, bringing in the equivalent of a few dollars a day. It was enough to buy two jerry cans of water from the donkey carts that jangled by every morning and the occasional meal of spaghetti and camel meat, Mr. Alin's favorite.

But it was not enough for school. So Mr. Alin and his brothers spent their days combing the city's bullet-scarred streets for odd jobs, like pushing a wheelbarrow or hauling fish. In the afternoons they worked out in their yard, curling a 25-pound tank shell found nearby, which by a quick, delicate inspection looked as though it could go off at any time.

"I think it's safe," said Didi, his 17-year-old brother.

Last summer things changed. A grass-roots Islamist movement took over Mogadishu after running the city's warlords out of town. The young Islamist soldiers wore green skullcaps, eschewed qat and cigarettes and vowed to unite Somalia's warring clans under the banner of Islam. Many people, including Mr. Alin, were impressed.

His friends said he was religious, never missing prayer. A green flag hangs over his sleeping spot — there are no beds in his shack — with the message "There is no god but God, and Muhammad is his Prophet."

But when Mr. Alin tried to join the Islamists he was rejected. They took one look at his teeth, stained brown from qat, and told him to go away. So he went to Baidoa, a city 150 miles away, to find Botan Issay, the warlord of his subclan, the Duduble.

Somalia's warlord issue is complicated. Some people call them thugs, and Mr. Alin's militia buddies readily admitted that their income came from stickups.

"We make what we make from the barrel of the gun," said Ahmed Muhammad Siad, 25. "That's how it is. Yoonis usually told us to go easy on people. He was always too nice."

DOJ_NMG_0118992

But in a world with no police and no security, the clan warlord was sometimes the only protection.

"When it comes down to it," said Ali Mahdi Muhammad, a clan leader, "you can only count on your clan."

Fearful of the dangers of militia work, Mr. Alin's family tried to keep him from going to Baidoa. But Baidoa had an irresistible pull. It was the seat of the internationally recognized transitional government of Somalia and the one big town in south central Somalia that the Islamists did not control. For Mr. Alin, that meant all the qat he could chew.

"Yoonis was chasing the green grass," said Muhammad, Mr. Alin's 25-year-old brother, with a sad shake of the head.

But in late December, Somalia was turned upside down again. The Islamists attacked Baidoa, provoking Ethiopia, which labeled the Islamists a regional threat. Within a week Ethiopian-led troops crushed the Islamist army, and American forces helped hunt down its leaders. Mogadishu's graying warlords rushed back to town, with their militias and their firepower.

The clan militias instantly returned to their old ways, setting up checkpoints and shaking down residents. The transitional government pleaded with them to disarm. They refused. On Friday, a disarmament meeting was called at the presidential palace for all of Mogadishu's top warlords. While Mr. Issay, the Duduble warlord, went inside, Mr. Alin and other Duduble militiamen waited by the palace gates.

All of a sudden, witnesses said, soldiers for another warlord, Muhammad Qanyare Afrah, started arguing with palace guards about where to park their armed pickup truck. Someone pulled out a gun. The palace guards opened fire. Several of the Duduble militiamen standing nearby were hit. Eight men were killed and five seriously wounded.

Somalia is definitely the wrong place to get a bullet in the brain. It took a half-hour to organize a car to take Mr. Alin to Medina Hospital, and when he arrived the two operating rooms were occupied.

Osman Abdullahi, a burly man with a stained smock who performed the surgery on Mr. Alin hours later, called himself "an assistant doctor."

He unwrapped a crumple of white butcher-like paper smeared with blood and showed the bone fragments that he had tweezed from Mr. Alin's frontal lobe.

Mr. Alin is now in the intensive care unit, which looks like every other room in the hospital, with tiles peeling and mosquitoes swarming, except that most of the ceiling fans there still spin.

Mr. Abdullahi said that Mr. Alin would probably live but that it was not clear if he would be able to talk.

On Thursday, his family got a positive sign. Mr. Alin briefly sat up in bed, looked around and giggled.

European Court Finds Two Chechens Were Tortured (WP)

By Peter Finn

The Washington Post, January 19, 2007

MOSCOW, Jan. 18 -- The European Court of Human Rights ruled Thursday that two Chechen brothers were tortured in their strife-torn Russian republic and that authorities there failed to investigate their allegations of abuse. It was the first decision on torture in Chechnya issued by the court, based in Strasbourg, France.

"The applicants were indisputably kept in a permanent state of physical pain and anxiety owing to their uncertainty about their fate and to the level of violence to which they were subjected throughout the period of their detention," according to a panel of seven judges, who reached a unanimous decision.

"The Court considers that such treatment was intentionally inflicted on the applicants by agents of the State acting in the course of their duties," the judgment stated, "with the aim of extracting from them a confession or information about the offences of which they were suspected."

Human rights groups have long contended that torture is widespread in Chechnya, where Russian troops have fought separatists off and on since 1994. Thursday's ruling follows a series of judgments against Russia concerning disappearances and the indiscriminate use of force by the Russian military and its proxies in the southern republic.

The court receives more complaints from Russia than from any other country. Some Russian politicians, weary of a seemingly endless string of negative judgments, have become highly critical of the court, charging that it is anti-Russian and politicized.

In December, the State Duma, Russia's lower house of parliament, refused to ratify a court reform designed to speed up decision-making in Strasbourg. Of the 46 member states of the Council of Europe, the body responsible for the human rights convention that the court enforces, only Russia has refused to agree to the change.

"It's not acceptable that this organization is used for attacks on the Russian Federation," Sergei Baburin, a member of parliament, said at the time of the vote.

The government supported ratification, but some supporters of the measure said that was a charade.

DOJ_NMG_0118993

President Vladimir Putin "can now say that he wanted the document ratified -- but we have democracy in Russia and parliament saw fit to turn it down," Vladimir Ryzhkov, an independent legislator, told Russian reporters. "However, the whole world knows that our parliament is like a dog at its master's feet -- it would never bark without an order from the Kremlin."

On April 12, 2000, Adam and Arbi Chitayev were detained at their family home in Chechnya by the Russian military. They were later transferred to the Chernokozovo detention center, a facility that human rights groups charge has a notorious history of abuse.

The two men said in court filings that, among other forms of abuse, they were subject to electric shock; suffocated with adhesive tape, a cellophane bag and a gas mask; had dogs set on them; and had parts of their skin torn away with pliers.

"Unfortunately, torture is not a thing of the past in Chechnya," said Jan ter Laak, chairman of the board of the Russian Justice Initiative, a legal aid group based in the Netherlands, which brought the case before the court. "The Russian and Chechen authorities must now take this problem and this judgment seriously and bring an end to this terrible practice."

The two brothers were released on Oct. 5, 2000, six months after their arrest. The case against them was dropped.

"I am satisfied with the judgment," said Arbi Chitayev, who currently lives in Germany, according to a statement released by the Russian Justice Initiative. "At the same time I am worried that what happened to me could happen to my relatives who still live in Russia."

Venezuela Wants Trade Group To Embrace Anti-Imperialism (NYT)

By Larry Rohter

The New York Times, January 19, 2007

RIO DE JANEIRO, Jan. 18 — South American leaders began gathering here on Thursday for discussions focused on a single, contentious issue: should the Mercosur trade group continue to emphasize economic integration, as Brazil and Argentina prefer, or transform itself into a political alliance with an “anti-imperialist” tint, the path President Hugo Chávez of Venezuela favors?

The conference’s Brazilian hosts tried to minimize the prospect of tensions, with Foreign Minister Celso Amorim talking of a “reinforced Mercosur” that he said “belongs to everybody.” But Mr. Chávez declined to play along with diplomatic niceties, bluntly staking out his position the instant he got off the plane on Thursday morning.

“The press says that Chávez is coming to ideologize Mercosur, to poison and contaminate it,” he said. In reality, he continued, his goal is “to contribute with something we consider to be absolutely necessary: the reformatting of Mercosur” and “decontaminating the contamination of neoliberalism.”

With memories of a murderous outburst of gang violence here still fresh and heads of state or foreign ministers from at least 10 countries expected to attend, security for the event was unusually heavy.

Mercosur, sometimes called the South American Common Market, was founded in 1991 with Argentina, Brazil, Paraguay and Uruguay as original members with full voting rights. Bolivia, Chile, Colombia, Ecuador and Peru are associate members. Venezuela’s application to become a full member was hurriedly accepted last year, even though the details have yet to be negotiated and Mr. Chávez’s commitment to what he calls “21st-century socialism” clashes with Mercosur’s support for open markets and free trade.

“In one word, it’s a mess,” said Rubens Barbosa, a former Brazilian ambassador to the United States and Britain. “In the European Union, they negotiate the terms of entry, and then the country joins. Here we’re doing it the other way around, which is craziness because Venezuela now does not want to accept the conditions it has to accept for membership.”

In private, the four original members have also expressed concerns about Venezuela’s ability to adhere in the future to the group’s requirements that members follow democratic practices, which was important in Paraguay’s transition out of a military dictatorship. As they see it, recent moves by Mr. Chávez raise the specter of a one-party state, perpetual re-election, a controlled press and doubts about respect for private property.

In Caracas on Thursday, the National Assembly voted unanimously in a preliminary vote to grant Mr. Chávez the power to enact laws by decree for a period of 18 months. A final vote on the measure is expected next week.

His supporters already control the legislature, the Supreme Court and most state governments, but the president sought the decree powers to speed changes to Venezuela’s political and economic structures. Critics say the new powers would move Venezuela toward authoritarianism.

“It was a tremendous error to allow Chávez into Mercosur, not only because he wants to control it, but also because he is Lula’s biggest rival,” said Felipe Lampreia, who was Brazil’s foreign minister from 1995 to 2001, referring to President Luiz Inácio Lula da Silva. “Lula is moderate and pragmatic, while Chávez is a revolutionary, socialist and international agitator who sees himself as the leader of Latin America.”

DOJ_NMG_0118994

With Mr. Chávez's enthusiastic support, Bolivia, led by his ally Evo Morales, is expected to apply formally for full membership in Mercosur. But that has created divergences within the group, because Bolivia wants a special exemption on tariff and other issues that has not been granted to the group's other smaller members.

Uruguay, in fact, has been so unhappy with its status in Mercosur that, though led by a Socialist president, it has been seeking closer ties with the United States. Next week, the two countries are to sign a Trade and Investment Framework Agreement in Montevideo, which some experts see as the prelude to a free trade agreement that would require Uruguay's exit from Mercosur.

"At this moment, there are two Mercosurs, with the old one obviously dying," said Gilberto Dupas, director of the Institute of Economic and International Affairs, at the University of São Paulo. "Chávez wants to bring his anti-American discourse into the group, but that is not desirable for Brazil, and the little partners will never accept it, especially Uruguay."

Among the proposals Mr. Chávez brought with him was one to create a Mercosur development bank, which he envisions as an alternative to the World Bank. But Brazil's minister of finance, Guido Mantega, reacted warily to the idea, saying it was "complicated" because it would require "a new structure" that might compete with existing regional financial mechanisms.

Mr. Lampreia, referring to his former colleagues, said, "They're starting to realize they've fallen into a trap." He added: "They thought they could influence Chávez, but he can't be influenced. He's the owner of the ball, rich and all-powerful, and says and does what he wants."

TERRORISM NEWS:

Greece, U.S. Probe Attack (WT)

By Andrew Borowiec

The Washington Times, January 22, 2007

NICOSIA, Cyprus -- U.S. and Greek security services report close cooperation in the investigation of a grenade attack on the U.S. embassy in Athens, offsetting months of diplomatic squabbling and negative Greek opinion polls about the United States and its policies.

"We have discovered that there is excellent cooperation between Greece and the United States in combating violence and terrorism," said Giorgios Koumoutsakos, a spokesman for the Greek Foreign Ministry.

DOJ_NMG_0118999

Although the perpetrators of the embassy attack are not known, FBI agents have joined a Greek police team in conducting extensive searches in the capital and vicinity, coordinated by the Ministry of Public Order. More than 20,000 cars had been checked by the weekend.

Initial comments by the Greek press ranged from warnings of more attacks to assurances that neither Greek prestige nor relations with the United States had been damaged by the incident.

Although no one was injured in the Jan. 12 attack with a rocket-propelled grenade, it sparked a wave of speculation about security in Greece, a longstanding American concern before the dismantling in 2002 of the terrorist "November 17" organization.

The Greek press is divided on the strength and objectives of the latest attackers, who are thought to belong to a leftist group that calls itself "Revolutionary Struggle."

Mary Bossis, a Greek analyst on terrorism, described the group as potentially highly dangerous because "it doesn't have a specific program but has ties to crime syndicates."

Investigators trace the origins of Revolutionary Struggle to 2003, when a wave of seven attacks with explosive devices caused material damage but no casualties. No member of the organization has been arrested.

The influential Vima daily in Athens said the attack on the embassy was "powerful, audacious and highly symbolic."

"Unfortunately terrorism is returning, ready to put its dark and damaging stamp on political developments," the newspaper wrote. But Nikos Konstandaras, a commentator for the Kathimerini daily, dismissed the attack as the work of "certain groups trying to make themselves appear heroic.

There has been little change in opinion polls, which for the past six months have shown persistent opposition to the United States and mistrust of U.S. policies -- including its handling of internal issues such as poverty.

"Anti-American sentiment in Greece exists on all social levels and across different age groups, irrespective of ideological and political convictions," wrote Kathimerini. As reasons it cited U.S. support for the former military junta, the war in Iraq and American support for Turkey, Greece's historical foe.

Nevertheless, Americans are generally welcomed in Greece and U.S. tourism has been growing the past two years, according to government data.

Editorial: A Case Of Whiplash (FWST)

The Fort Worth Star-Telegram, January 22, 2007

Leave it to the Bush administration to bend the law to the breaking point -- and then couch its return to reason as merely a voluntary fine-tuning of policy.

It happened when the administration finally gave up on language that accommodated what bordered on torture of detainees captured in Afghanistan and Iraq. It happened when the administration relented on its resistance to extending protections of the Geneva Conventions to terrorism suspects.

And it happened again when the administration agreed to let the Foreign Intelligence Surveillance Court authorize wiretaps to spy on phone calls involving suspected foreign terrorists.

Not long after the 9-11 terror attacks, Bush allowed the National Security Agency to monitor calls between people in the United States and international sources suspected of connections to al Qaeda or other terrorist groups. But the program operated outside the Foreign Intelligence Surveillance Act system that was set up to prevent surveillance abuses in gathering foreign intelligence within U.S. borders.

When The New York Times in December 2005 revealed the existence of the warrantless eavesdropping program, administration officials insisted that the Constitution and congressional authorization gave Bush power to bypass the FISA Court, which Bush portrayed as too slow and cumbersome to accommodate national security needs in battling terrorism.

But now Attorney General Alberto Gonzales insists that the Justice Department was working to put the spying program under FISA Court oversight long before the warrantless wiretapping came to public light.

If that's so, why didn't he say so long before now? Why continue to feed the disturbing impression that this administration is determined to make itself more equal than the other two branches?

DOJ_NMG_0119000

Notably, administration officials haven't backed down on their claims of executive authority. Stepping under the FISA Court umbrella appears to be a pragmatic act: Democrats who have been skeptical of Bush's overreaching now control Congress, and an appeals court later this month will consider whether a federal judge in Detroit properly held the wiretapping program unconstitutional.

Gonzales called orders from the FISA Court authorizing the monitoring "innovative" and "complex." But he doesn't want to reveal details -- even though, according to several news reports, FISA Court President Judge Colleen Kollar-Kotelly doesn't object to releasing the court's orders (which include classified material) if the Justice Department agrees.

The American public doesn't need to know sensitive operational details about programs legitimately operating to protect our security. It does need to stop getting whiplash from an administration that repeatedly tests our trust and damages its own credibility.

Editorial: Wiretap Backtrack (BANGORN)

Bangor (ME) Daily News, January 22, 2007

Facing congressional investigations and legal challenges, the Bush administration last week reversed course and said it would seek the approval of a secret court before monitoring Americans' international communications as part of its terrorism surveillance work. Bringing the eavesdropping program back under the Foreign Intelligence Surveillance Court is the right thing to do, but it does not negate the need for continued scrutiny from Congress, which the Senate Judiciary Committee reiterated Thursday with tough questions for Attorney General Alberto Gonzales.

Unfortunately, Mr. Gonzales did not answer most questions. Particularly troublesome, the attorney general is refusing to allow the court to reveal details of the arrangement worked out with the administration. The court's presiding judge said she would detail its orders to lawmakers if allowed to do so by the Bush administration. Mr. Gonzales said the administration wanted to keep details of the wiretapping operation confidential.

The committee is right not to take the administration's word that the program, even under court review, is within the president's authority and meets constitutional requirements. It heard the same assurances about the torture of suspected terrorists and detaining such suspects without access to judicial proceedings. The administration has since backed off both these stances due to adverse court rulings and belated intervention from Congress.

In December 2005, it was revealed that the National Security Agency was eavesdropping on phone calls and e-mails between the United States and other countries without warrants. The Bush administration said Congress told the president to use "all necessary and appropriate force" to stop terrorists when it passed the Authorization for Use of Military Force after the Sept. 11 terrorist attacks. Several senators, including Maine Sens. Olympia Snowe and Susan Collins, say it wasn't their intention in voting for the resolution to give the president the authority to bypass the Foreign Intelligence Surveillance Act. The administration said the FISA process was too slow and cumbersome.

With the Democratic takeover of Congress, it has changed its mind. The Justice Department this week said it had recently received several warrants from the court allowing it to monitor communications where there was probable cause to believe one of the participants had terrorist links. With the orders in hand, future eavesdropping would be conducted with the approval of the FISA court, Attorney General Gonzales said.

Without knowing details, such as whether warrants are issued on a blanket basis, lawmakers must continue to scrutinize the program to ensure American's privacy is protected.

Bush Tries To Dodge Accountability Again (ROT)

Roanoke (VA) Times, January 22, 2007

The administration backtracks on warrantless wiretaps just in time.

Last week, the Bush administration backtracked on its program of warrantless wiretapping. Attorney General Alberto Gonzales said officials will no longer listen in on Americans' international phone calls and e-mails without first getting court approval. It's a promising victory for civil liberties and the Constitution.

DOJ_NMG_0119001

However, before Democrats start crowing that the party's control of Congress led to the change, they should look at the administration's history in cases like this. The reversal reflects less a fear of Congress and more the White House's tactics to avoid legal rebuke.

The administration had said its eavesdropping program did not require court oversight. Now it has worked out a deal with the Foreign Intelligence Surveillance Court for warrants. The details of the program remain dismayingly vague, but it is certainly a move toward what the administration should have been doing in the first place.

So why, after more than a year of insisting everything was proper, has the administration reversed course? No doubt the threat of congressional investigations was a factor, but coming federal trials that could have declared the whole program illegal seem the more likely cause.

This isn't the first time the administration has employed this dodge.

Recall the case of Jose Padilla, an American citizen detained by the administration as an enemy combatant. When the Supreme Court was about to review his detention, the administration suddenly dropped allegations that he was a terrorist and moved his case to the criminal justice system, rendering the appeal moot.

Likewise, in the case of Yaser Hamdi, another American held incommunicado by the military, the White House released him to Saudi Arabia before the courts could rule.

Engage in illegal activities. Continue them while challenges wind their way through the courts. When a final decision is near, pull the carpet out from under the case to avoid legal reckoning. The administration can cling to its illusion that it still has the right to ignore the Constitution.

The courts should not allow the president to circumvent justice again. The Bush administration says it will get a warrant for now, but the challenges to government intrusion should go forward to remind the executive that his power has limits.

Wiretap Shift Raises Questions (SPT)

St. Petersburg (FL) Times, January 22, 2007

The public has known about the warrantless domestic wiretapping program of the Bush administration since the New York Times broke the story in December 2005. It took from then until the day before Attorney General Alberto Gonzales was scheduled to appear before the new Democratic-controlled Senate for the administration to finally bring its intelligence-gathering into compliance with the law. We appreciate the action but are left to wonder what took so long and whether there is less here than meets the eye.

It was a shocking revelation when the newspaper reported that the National Security Agency had been authorized by President Bush to monitor the international phone calls and e-mails of people inside this country suspected of terrorist links. Congress, under the Foreign Intelligence Surveillance Act, established a process for warrants to be issued by a secret court when counterterrorism or counterintelligence was at issue. Yet Bush's order ignored the jurisdiction of this court and approved spying on Americans without any court oversight.

After the program came to light, Bush refused to acknowledge its extralegal nature, declaring instead that he had the inherent authority as commander in chief to order warrantless eavesdropping. This stunning position was reiterated by Gonzales on Thursday during questioning by members of the Senate Judiciary Committee.

The administration's ongoing claim of supreme executive authority adds a measure of discomfort to its overdue concession to the rule of law. The attorney general informed Congress in a letter on Wednesday that the administration will shut down its warrantless eavesdropping program in favor of one that respects the FISA court's jurisdiction. But in his testimony before the Senate committee, Gonzales gave no assurances that the administration would not revert to its old ways in the future.

Maybe that is why lawmakers from both parties were left wondering what the administration is really up to. Questions were raised about why it took five years to bring the NSA eavesdropping program into compliance with FISA. Some senators wanted to know whether the administration was making individual showings to the FISA court, as is constitutionally required, or requesting broad warrants that could be used to spy on many people at once. Gonzales was not forthcoming.

DOJ_NMG_0119002

The purpose of the sudden change in policy appears to be an attempt by the administration to avoid having its authority questioned, investigated and potentially curtailed by Congress. The demise of warrantless spying is a desirable policy reversal, even if it is not clear that there has been a change of attitude in the White House.

EDITORIAL Bush Administration Backs Off Of Secretive, Dangerous Policy (AAS)

Austin (TX) American-Statesman, January 22, 2007

Elections have consequences. Just ask U.S. Attorney General Alberto Gonzales, who announced last week that President Bush will no longer order wiretaps without the approval of a special federal court.

In the aftermath of the Sept. 11, 2001, terrorist attacks on the United States, the president had allowed the National Security Administration to wiretap — without a warrant — telephone conversations and electronic mail between a party in the United States and one outside the country. The program was not disclosed to the public until The New York Times reported it in December 2005.

Until last week, the president had defended the program as a constitutional use of his authority to defend the nation. He and his supporters also argued that it was not legally necessary, and not practical, to first get court approval.

But critics in Congress and elsewhere, including this newspaper, argued that not only was court approval necessary, the procedure itself was already in place, had been for years and posed no obstacle to the government when it needed to move quickly.

The Foreign Intelligence Surveillance Court was created in 1978 to handle such sensitive situations, is highly secretive and has rarely denied approval of a wiretap request. The law even provides for situations in which, in emergencies, the wiretap can be placed first and the warrant sought shortly thereafter.

The issue is not whether to wiretap — of course persons suspected by the government of terrorist activities ought to be investigated. And to date, we know of no instance in which the Bush administration wiretapped political enemies or critics.

But no president, regardless of party, should have the power to order a wiretap on the private conversations and messages of someone in the United States without the constitutional check of court approval. It's far too tempting for those given such unlimited power to apply it ever more widely and eventually threaten the privacy of all.

The Bush administration complained of shortcomings in the 1978 law, but it never asked Congress to change it, and few in the Republican majorities in the House and Senate challenged the administration's assertion of wiretapping authority.

But the Nov. 7 election installed Democratic majorities much more willing to take on the president on the wiretap issue and other matters touching on national security and Americans' civil rights. And so on Wednesday, Gonzales suddenly announced that the administration had worked out its problems with the special court and that wiretaps would be submitted to it for approval.

Some in Congress suspect the administration is playing word games, and Gonzales fed that suspicion by refusing to give details about the new policy during an appearance before a Senate committee on Thursday. On the other hand, conservative voices that had stoutly defended the presidential refusal to get warrants for the wiretaps were outraged by the administration's sudden about-face.

Whatever its motive, the Bush administration was right to start going to the court to get the warrants, and we hope the court itself will not be a rubber stamp for this or any other administration.

Financing Terrorists Is Not About Speech (LAT)

The Los Angeles Times, January 22, 2007

THE SUPREME COURT has rightly refused to block the trial of seven Los Angeles residents accused of contributing funds to an Iranian opposition movement that the State Department has branded a terrorist group.

The high court let stand a ruling by the U.S. 9th Circuit Court of Appeals that prosecuting the defendants — who are innocent until proved guilty — posed no 1st Amendment problem. As Judge Andrew J. Kleinfeld pithily put it: "Sometimes money serves as a proxy for speech, and sometimes it buys goods and services that are not speech. Guns and bombs are not speech."

In 1997, then-Secretary of State Madeleine Albright designated the Marxist group Mujahedin Khalq, or MEK, as a "foreign terrorist organization," a designation reaffirmed in 1999. Formed in the 1960s to oppose the rule of the shah of Iran, MEK now

DOJ_NMG_0119003

opposes the Islamic regime in Tehran and, according to the State Department, engaged in terrorism against Iran between 1997 and 2001.

Under the 1996 Antiterrorism and Effective Death Penalty Act, it's a crime to knowingly provide material support to an organization that appears on the State Department's list. The defendants in the Los Angeles case are accused of soliciting donations for MEK in Los Angeles and of wiring at least several hundred thousand dollars to an MEK bank account in Turkey.

The truth of those allegations is a matter for a jury. What the defendants sought from the 9th Circuit was a ruling that their prosecution violated the 1st Amendment because of flaws in the way MEK was designated a terrorist organization.

Yet, as Kleinfeld noted, MEK's own description of its activities supported the terrorist designation. The designation was on the books when the defendants allegedly contributed to the group. More to the point, as the Supreme Court has recognized in upholding restrictions on contributions to election campaigns, money cannot always simplistically be equated with speech even in a domestic context. The "money is speech" mantra makes even less sense when the money buys guns.

Of course, the State Department should use care in designating a group as a terrorist organization. Such designations can be challenged though not ignored. Individuals accused of providing such a group with material support shouldn't be able to substitute their judgment for the department's any more than consumers should be able to substitute their judgment about a dangerous drug for that of the Food and Drug Administration. Neither case is a free-speech issue.

HOMELAND RESPONSE:

TSA To Track Rail Shipments With Toxic Cargo (USAT)

By Thomas Frank, Usa Today

USA Today, January 22, 2007

WASHINGTON — The government for the first time will monitor rail shipments of potentially deadly cargo passing through cities to make sure cars vulnerable to attack don't sit unguarded for too long.

The Transportation Security Administration (TSA) will start a nationwide tracking system in about a month to determine how long rail cars filled with lethal materials are stopped on tracks or sit in unsecured storage yards in urban areas.

Unguarded rail cars filled with toxic chemicals such as chlorine in cities are the single biggest terrorist threat related to the nation's railroads, the TSA says.

The U.S. Naval Research Lab has said an attack on such a rail car could kill 100,000 people. Railroads carry 105,000 carloads of toxic chemicals a year, and 1.6 million carloads of other hazardous materials such as explosives and radioactive items, the government says.

The new tracking system lets the TSA enforce an agreement it reached with railroads to cut the amount of time hazardous rail shipments spend unguarded in cities. The agreement, signed by the 257 railroads that transport toxic chemicals, aims to reduce by 25% this year the number of hours hazardous rail shipments sit unguarded in each of 46 major urban areas. "This immediately reduces the risk of a terrorist attack," TSA chief Kip Hawley said. "These cars will not be sitting ducks."

The TSA plans to send inspectors soon to areas where it finds toxic shipments unguarded for long periods and work on safety improvements. Railroads can give toxic cargo priority so it doesn't sit on tracks waiting for other trains to pass, or store it in guarded yards.

The tracking comes as cities consider banning or restricting hazardous rail shipments. Local officials fear attacks and accidents like the fiery train derailment Tuesday near Louisville that spewed toxic smoke and forced people from homes, businesses and a school.

"Rerouting is by far the most important way to reduce risk," said Fred Millar, a rail-safety advocate who helped enact a ban in Washington, D.C., in 2005, the nation's first. "If you don't reroute hazardous shipments, it's not a serious program."

Rail companies fear such laws would force them to send hazardous cargo hundreds of miles around cities. CSX Transportation blocked the Washington ordinance with a lawsuit that is pending.

Hawley said barring hazardous rail cargo from cities could force it onto trucks, which are more easily attacked and accident-prone. "You want to keep it on rail," Hawley said.

DOJ_NMG_0119004

Matthew Zone, a Cleveland city councilman who proposed barring hazardous cargo from one of that city's four rail lines, called the TSA monitoring "a move in the right direction."

Railroads carry two-thirds of shipped toxic chemicals, most of it chlorine and anhydrous ammonia, a fertilizer.

Should US Track Each Foreigner's Exit? (CSM)

By Alexandra Marks

The Christian Science Monitor, January 22, 2007

A program to record visa-holders' departures via land is being suspended because of technology issues, say security officials.

The United States knows when visitors carrying visas enter the country, but it has no idea when, or if, most of those people leave.

Congress ordered that key flaw in the immigration system to be fixed as far back as 1996 – in part because as many as 100,000 people overstay their visas annually and join the ranks of undocumented workers. But the 9/11 attacks gave the request new impetus: The 9/11 commission in 2004 recommended that the loophole be closed, and the 2004 Intelligence Reform and Terrorism Prevention Act mandated that it be done "as expeditiously as possible."

By the end of this year, the Department of Homeland Security (DHS) expects to have a system in place to track people who leave by air or by sea. But it has decided to abandon its efforts to track the exits of foreigners who depart through the nation's border checkpoints on land.

Tuesday, top DHS officials will go before the Senate Judiciary Committee to explain the department's rationale.

"Land presents somewhat of a challenge," says the DHS official who confirmed that the land exit program was being suspended. "We're still looking into doing it at some point in time; it might be a number of years."

The problem, according to DHS, is that the technology doesn't yet exist to create an entry/exit program for people who cross by land – at least not without causing huge traffic delays that would disrupt commerce and daily life in border towns.

Critics say the real problem is a lack of political will and confused priorities. They charge that DHS has set the technical bar too high – for instance, requiring the system to be able to check people's exit from the country while they're driving by at 50 miles per hour.

The controversy over the entry/exit program, which is called US Visit, illustrates not only the difficulty of securing US borders physically, but also the larger question of how best to use limited resources to improve security in a post-9/11 world. Advocates of a comprehensive exit and entry program say it is crucial to security, because the nation must know who's leaving as well as who's coming into the US. Indeed, two of the 9/11 hijackers had overstayed their visas.

"We have to recognize that there are very real threats and it still is an international border – people who've become used to quick and easy crossings have to understand that there are very compelling reasons now to change the way they do business," says Jessica Vaughan, a senior policy analyst at the Center for Immigration Studies in Washington. "Maybe just-in-time manufacturing was fine in 2000 when you could get a truckload of stuff across the border very quickly and easily, but things are different now."

Critics of US Visit say it's a waste of valuable resources to focus on the 309 million people who cross the nation's land borders annually. More than 70 percent of those who cross regularly are truck drivers, workers, or people going to visit family across the border. The vast majority of the rest are vacationers.

"I understand the politics as to why we'd like to target temporary visitors, students, and others, but I haven't seen ... a really cogent analysis about why [it] would be better to put billions of dollars into that as opposed to training people to speak foreign languages and infiltrating groups that are suspicious," says Allan Wernick, a professor at Baruch College in New York and chairman of the Citizenship and Immigration Project.

DHS is testing its exit-verification program at 12 airports and two seaports. It has set up kiosks where visitors swipe their travel documents as well as have two fingerprints and a picture recorded to ensure they are indeed the person who came in on that visa. By the end of the year, DHS plans to have that system operating at the 80 US airports that accommodate international travelers.

DOJ_NMG_0119005

DHS also had a pilot program at five land ports. That system used radio frequency technology to scan a chip in people's visas when they drove out of the country into Canada or Mexico. The goal was for it to work if cars were driving as fast as 50 miles an hour.

"That's unrealistic. Even with E-ZPass you have to slow down to five miles per hour," says Ms. Vaughan, in a reference to a toll-tracking card used by commuters.

A DHS spokesperson said the radio frequency technology failed in part because it couldn't prove that the people carrying the visas with the microchip were the same ones who came into the country – a congressional requirement. A recent General Accountability Office study found that to meet the mandate that the exit program be biometric, DHS would have to spend billions to expand border crossings and hire new staff to prevent huge traffic back-ups at the border.

A DHS spokeswoman defends delaying the implementation at land ports until the technology is available to make it viable to use the biometric visa identifiers – such as fingerprints – at the land ports of entry.

"We've had success by incrementally phasing the program in at airports, and that's what's resulted in no traffic buildup. And we will be phasing it in sometime in the future at land ports," says Anna Hinken, a US Visit spokeswoman. "Biometrics is the future. "These types of systems require resources and planning. It's not something that happens overnight."

U.S. Watches For Cultivation Sites Of 'Pepsi Jihad' (WT)

By Shaun Waterman

The Washington Times, January 22, 2007

U.S. law-enforcement and intelligence officials say they are taking steps to monitor and combat the spread of Islamist extremism and support for a violent holy war against the West among a "Pepsi jihad" generation of young Muslims in the United States.

At a hearing last week, officials from the CIA, FBI and Department of Homeland Security told lawmakers that the United States had less of a problem with "homegrown" Islamist terrorists than Europe did because of its history as a nation of immigrants.

"I think the American historical experience ... with bringing in various groups and giving them, frankly, more opportunity than they might have enjoyed elsewhere has helped us immeasurably in this regard," CIA Director Michael V. Hayden told the House Permanent Select Committee on Intelligence.

Despite that, Phillip Mudd from the FBI's National Security Branch said, the ideology of extremist Islam -- and its attendant support for violence against the West in general and the United States in particular -- was spreading in the United States.

"The commonality we have [with Europe] is people who are using the Internet or talking among friends who are part of what I would characterize as a Pepsi jihad. ... It's become popular among youth, and we have this phenomenon in the United States."

Charlie Allen, the head of intelligence for the Department of Homeland Security, said the department reorganized its intelligence analysts late last year and "created a branch focused exclusively on radicalization in the homeland [that] is studying the dynamics of individual and organizational radicalization."

He said the United States did not have "the alienation and the de facto segregation that we see in some places in Europe," but that nonetheless there were "pockets of extremism" in the country.

He said the branch would create state-by-state and regional assessments this year "of the means and mechanism through which radicalization manifests throughout the United States."

He added that another factor present in many of the successful "homegrown" Islamist attacks in Europe -- the Madrid and London transit bombings being the classic examples -- was a leader directing would-be terrorists to training facilities.

"Frequently, we see a charismatic leader ... who selects people for further education, perhaps overseas, particularly into South Asia."

The question of the role played by al Qaeda's central command in Pakistan in providing support and direction for so-called "homegrown" plots in Europe has vexed analysts since the Madrid rail bombings in March 2004.

DOJ_NMG_0119006

"While the incidents might be homegrown and the recruitment base, if you will, can often be second-generation immigrants who have a Muslim background, we've always found some kind of linkage back to" al Qaeda's leadership, said Director of National Intelligence John D. Negroponte.

Mr. Allen noted that the Homeland Security Department had a unit dedicated to demographic analysis of immigrant communities in the United States, which might, wittingly or not, harbor networks of criminals or human smugglers that terrorists could exploit.

The unit will fuse intelligence and law-enforcement reporting to "assess patterns in which migrant communities -- and likely associated extremists -- may or could travel to and establish themselves within the homeland." The unit aims to "provide strategic warning of mass migration to the United States and likely exploitation by illicit actors."

WAR NEWS:

Senators Seek Support Against Iraq Surge (AP)

By Hope Yen

AP, January 22, 2007

Two leading Senate Democrats sought to build support Sunday for a bipartisan resolution opposing President Bush's war strategy in Iraq, cautioning that division over whether it goes far enough could spell defeat.

"The worst thing we can do is to vote on something critical of the current policy and lose it," said Sen. Carl Levin, D-Mich., who chairs the Senate Armed Services Committee. "The public doesn't support his policy, a majority of Congress doesn't support his policy."

"If we lose it, the president will use the defeat of a resolution as support of his public policy," Levin said.

The new Democratic-led Congress heads this week toward its first vote on the war, with the Senate Foreign Relations Committee beginning debate Wednesday on a resolution condemning Bush's proposal to send 21,500 more troops to Baghdad and Anbar province. A vote could come as early as that same day.

The proposed nonbinding resolution, which is largely symbolic and would have no affect on money for troops, states that "it is not in the national interest of the United States to deepen its military involvement in Iraq, particularly by escalating the United States military force presence in Iraq."

It has generated some division among Democrats who want to go farther by cutting funding for new troops, moderates in both parties who want softer language and Republican leaders who have vowed to filibuster.

On Sunday, Levin and Sen. Joseph Biden, D-Del., who sponsored the resolution along with Republicans Chuck Hagel of Nebraska and Olympia Snowe of Maine, called their proposal a first step that would send a "powerful message" that Bush must change course.

Other congressional steps, such as limiting federal appropriations for the war, could come later if Bush were to continue pushing forward with additional troops in defiance of the resolution, they said.

Biden, who chairs the Senate Foreign Relations Committee, downplayed the notion that support could splinter over how far lawmakers should go to restrain the president's power to wage war. He said he expected the half-dozen competing proposals to oppose the war each would get an airing.

"I don't think there's any muddled message here," Biden said. "They'll all get a chance to be voted on, with some discussion."

The proposals to limit the war vary.

Rep. John Murtha, D-Pa., and Sen. Edward Kennedy, D-Mass., say they want to cut funding for new troops to prevent the deployments. Sen. Christopher Dodd, D-Conn., has a proposal that would cap troops at existing levels.

Republican Sen. Gordon Smith of Oregon said he was wary of the term "escalating" in the resolution and was working with Sens. Susan Collins, R-Maine, and Ben Nelson, D-Neb., on a "constructive, nonpartisan resolution that expresses the opposition of the Senate to the surge."

Collins and Nelson, alongside Sen. John Warner, R-Va., were expected to announce the details Monday.

DOJ_NMG_0119007

And the fiscally conservative Blue Dog Democrats say they would introduce legislation this week calling for greater accountability on how Iraq war funds are spent.

Bush, meanwhile, was expected to address the Iraq war in his State of the Union address Tuesday and renew his calls to work together with Democrats on a bipartisan way forward.

Earlier that day, the Senate Armed Services Committee will also hear from Lt. Gen. David Petraeus, a former division commander in Iraq, who was tapped by Bush to replace Gen. George Casey as the top American commander in Iraq.

On Sunday, Biden said despite the competing proposals, there was overwhelming bipartisan support in Congress against the war. He said Vice President Dick Cheney was absolutely wrong in suggesting that a resolution against the war would "embolden our enemy."

"Every single person out there that is of any consequence knows the vice president doesn't know what he's talking about. I can't be more blunt than that," Biden said. "He is yet to be right one single time on Iraq."

Hagel suggested there may be more Republican support than is generally known for seeking a vote in Congress toward ending the war in Iraq.

"It is wrong to put American troops in the middle of a sectarian civil war," he said. "Are we not to register our sense of where we are going in this country?"

"Let every member of the Senate express themselves," he said, saying they owe that to the American public.

"We have anarchy in Iraq," he said. "It's getting worse."

Biden and Levin spoke on "Fox News Sunday," and Hagel was on CBS' "Face the Nation."

McCain Hits Resolution On Surge (WT)

By Stephen Dinan

The Washington Times, January 22, 2007

Sen. John McCain yesterday said voting for a resolution disapproving of President Bush's troop-surge idea would be a slap at the 21,000 new troops that would be sent to Iraq under the plan, putting the upcoming congressional debate on the Iraq war in stark terms.

Mr. McCain and other Republicans also signaled their worry over Gen. George Casey's nomination to become Army chief of staff, signaling another possible congressional fight for Mr. Bush with his own party as he tries to move forward on his new Iraq strategy.

"I have very serious concerns about General Casey's nomination," Mr. McCain said on NBC's "Meet the Press," arguing Gen. Casey's record in Iraq may not merit the new post and would send a wrong message to the troops.

Mr. Bush has announced he will commit more than 17,000 more soldiers to Baghdad to try to help Iraqi national police and military units quell Sunni-Shi'ite violence, and said he will send 4,000 Marines to go after al Qaeda fighters in Anbar province.

Top Senate Democrats, joined by a leading dissident Republican, last week announced a resolution opposing Mr. Bush's plan. Senate Democratic leaders have promised to force a floor vote, and House Democratic leaders said they are working on their own similar resolution. The resolution is not binding on Mr. Bush, but the lawmakers hope the signal it would send would cause him to change course.

Both Republicans and Democrats used yesterday's round of talk shows to try to build support for their positions heading into what is shaping up as a major showdown.

Sen. Carl Levin, Michigan Democrat and chairman of the Senate Armed Services Committee, said Democrats must unify behind the resolution, though, or risk a fracture that could deliver a public victory to Mr. Bush.

"The worst thing we can do is to vote on something which is critical of the current policy and lose it," Mr. Levin, one of the authors of the resolution, said on "Fox News Sunday."

Pulling further to the left are those such as Sen. Edward M. Kennedy, Massachusetts Democrat. He said troop escalations have failed in other parts of Iraq in the past, and said the one idea that hasn't been tried is "de-escalation."

DOJ_NMG_0119008

"That's a policy, which I believe, then, will require the Iraqi government to assume responsibility for their security, rather than now sending additional troops, which will be an additional crutch for the Iraqi government in delaying their judgment decision in order to take the security," he said.

Mr. Kennedy has his own bill that would force the president to come back to Congress for permission to broaden the war. He said if Mr. Bush ignores the will of Congress as expressed in upcoming votes, lawmakers should then defund the war.

"If we have a president that is going to effectively defy the American people, are going to defy the generals, defy the majority of a Congress of the United States in Republicans and Democrats, then we, I think, have a responsibility to end the funding for the war," he said on NBC. "Are we really being more loyal to our troops, putting them in the midst of a civil war?"

Mr. McCain, who is exploring a run for president, is now closely tied to the troop-surge idea, even though he said that his choice would be to send still more troops to make sure they get the job done.

"I promise you, if we fail here, there will be plenty enough blame to go around to everyone, including to me," Mr. McCain said, acknowledging that he is so tied to the plan that Democrats now call it the "Bush-McCain increase."

He said the Democrats' resolution would be a slap at the troops Mr. Bush is preparing to send.

"This resolution is basically a vote of no confidence in the men and women we are sending over there," he said. "We're saying, 'We're sending you -- we're not going to stop you from going there, but we don't believe you can succeed, and we're not willing to support that.' I don't think the troops would find that an expression of support."

Webb Would Defund Rebuilding Iraq (USAT)

By Kathy Kiely

USA Today, January 22, 2007

WASHINGTON — The Democratic senator who will deliver his party's formal response to President Bush's State of the Union address Tuesday says he favors cutting off funding for Iraq reconstruction in order to pay for Hurricane Katrina recovery instead.

"How can we keep sending billions of dollars over to Iraq and not fund a really energetic effort to help places like New Orleans?" Sen. Jim Webb, D-Va., asked in an interview Friday. Webb said that Iraq and what he sees as the precarious state of the nation's economy and infrastructure are two of the topics he'll tackle in his speech.

Senate Majority Leader Harry Reid, D-Nev., chose Webb, an iconoclastic freshman, to deliver the prime-time rebuttal to the president. Reid said Webb personifies the "spirit of bipartisanship," and the call for "a new direction for working families and an end to the war in Iraq."

Webb also highlights the Democrats' effort to move beyond their traditional political base. A senator for less than a month, Webb is a combat veteran who says, "I can still justify the war in Vietnam." His eldest son is a Marine stationed in Iraq.

Webb is a former Republican who won election in a state Bush carried by 9 percentage points in 2004. This marks the second year in a row that a Democrat from Virginia will deliver the State of the Union response. Last year, the honor went to Gov. Tim Kaine.

A pugnacious former boxer, Webb made headlines by rebuffing Bush's attempt to ask about Webb's son at a White House reception with a call to bring the troops home from Iraq. The White House wouldn't comment, but Webb confirmed the incident.

"I didn't start it," said Webb, who insists he harbors no hard feelings. "I wouldn't mind having lunch with George W. Bush."

Webb, who has written novels, screenplays and magazine articles, said that he's working with Reid about the general themes of his speech but that he has "enough independence" to say it his way.

"I'm really careful with words," Webb said.

In his speech, which the senator said he's trying to keep to about five minutes, he plans to address:

•Iraq and national security. Webb, who called the administration's decision to invade Iraq "reckless," said he won't support cutting funds for the military effort, but he wants Congress to create pressure for a diplomatic solution. "There will never be political stability in Iraq as long as there are American combat troops on the streets of Iraq," he said. "We need to get them out."

•Economics and globalization. Webb said he believes that the "internationalization of corporate America" is widening the gap between rich and poor.

DOJ_NMG_0119009

•Government accountability. Webb said he will discuss ethics reform and efforts to expand congressional oversight of the executive branch.

Webb, who served as secretary of the Navy in the Reagan administration, intends to do some horn-tooting for his new party: "I think the Democratic leadership really deserves some kudos."

Congress's Challenge On Iraq (NYT)

The New York Times, January 22, 2007

President Bush's refusal to come up with a serious policy on Iraq means that the Democrats will have to goad him toward one. Congress needs to do more than just oppose the latest ill-conceived military escalation. It needs to insist that American troops are not captive to the destructive policies of an Iraqi government for which sectarian revenge counts for more than national unity and civil peace.

To do that, it needs to demand that Mr. Bush impose firm, enforceable benchmarks on Prime Minister Nuri Kamal al-Maliki — if any American troops are going to remain in Iraq.

In the Senate a nonbinding, bipartisan resolution seems headed toward early passage. Sponsored by Joseph Biden, Chuck Hagel and Carl Levin, it expresses strong opposition to sending more troops, citing the failure of the Iraqi government to keep its past promises on national reconciliation.

Passing this resolution by the widest possible bipartisan margin would be a good first step. It would make clear to the American people (who called for a change last November), to President Bush (who didn't listen) and to Mr. Maliki (who didn't seem to notice) that the days of uncritical American support for Shiite misrule are over.

Already, the newly questioning tone in Congress has pushed Mr. Maliki to distance himself — at least publicly — from his ally Moktada al-Sadr, whose Mahdi Army has been responsible for some of the worst outrages against Baghdad's Sunni population. It is too early to say whether this is a public relations ploy, or whether Mr. Maliki will now allow the Americans and his own army to move against Mahdi Army strongholds. The Senate resolution should make clear that that is the first prerequisite for continued American support.

Hortatory statements are unlikely to change Mr. Bush's mind or Mr. Maliki's behavior, so the Congress will likely have to go further. Both houses will need to find ways to use their power — including the power of the purse — to do what Mr. Bush refuses to do: set and enforce deadlines for the Iraqi government to disarm militias, share oil revenues and reintegrate the Sunni middle class into Iraqi life.

Funding limits that simply freeze the number of troops, like the one Senator Edward Kennedy now proposes, are inadequate. The much more difficult challenge is to figure out ways to compel Mr. Bush to come up with a policy that has at least some chance of letting American troops come home without leaving total chaos behind.

Even if the Congress could stop Mr. Bush from sending an additional 20,000 troops, there will still be 130,000 caught in Iraq's maelstrom.

Congress Plays Bad Cop On Iraq (LAT)

The Los Angeles Times, January 22, 2007

AS SOON AS this week, the Senate could adopt a nonbinding resolution that reads in part: "It is not in the national interest of the United States to deepen its military involvement in Iraq." The House is likely to follow suit.

Whether the final wording of the resolution refers to President Bush's planned movement of 21,500 more U.S. troops to Iraq as an "escalation" or something else (the language may be softened to attract more Republican votes), it would represent a dissent from the surge, the centerpiece of Bush's revised Iraq policy. The resolution would have no effect on the conduct of the war — and any attempt by Congress to meddle in military strategy should be rejected — but it would be seen as a blow to the president.

Maybe it shouldn't be. Congress actually could be doing Bush a favor by disagreeing with him. Ideally, passage of the resolution would create a diplomatic version of the "good cop/bad cop" routine, with Congress playing the role of the bad cop and Bush using its stubbornness as leverage in dealing with Iraqi Prime Minister Nouri Maliki.

DOJ_NMG_0119010

Such a strategy is possible because there is not as much daylight between Bush and his congressional critics as the resolution indicates. In addition to opposing the surge, the resolution — drafted by Sens. Joseph R. Biden Jr. (D-Del.), Chuck Hagel (R-Neb.) and Carl Levin (D-Mich.) — calls for the United States to "transfer, under an appropriately expedited timeline, responsibility for internal security and halting sectarian violence in Iraq to the government of Iraq and Iraqi security forces."

Bush's plan disdains timetables, but it also involves pressuring Maliki to come down hard on his fellow Shiites in the Al Mahdi militia headed by Muqtada Sadr. That pressure seems to be having an effect. Two commanders of that militia complained last week that Maliki, under U.S. pressure, was no longer protecting them. On Friday, U.S. and Iraqi forces arrested one of Sadr's lieutenants.

There is no guarantee that Maliki won't backslide or that the surge will stabilize Baghdad and Al Anbar province as Bush hopes. In going on record against the surge, however, Congress won't — and probably can't — stop it. But the nonbinding resolution could still serve Bush's other objective if the Iraqis take it not literally but seriously as reaffirmation of Bush's pledge that the U.S. commitment in Iraq is not open-ended.

In June, a Senate that was only marginally more Republican than the current body soundly rejected a resolution calling for a withdrawal of U.S. forces to begin by the end of 2006, with no timetable for complete withdrawal. That the current resolution probably will prevail is a reflection not just of the passage of time and the changeover of Congress but also of growing and bipartisan fatigue with the war.

If he is smart, Bush will use that impatience to his advantage in pursuing both aspects of his "new way forward" — a surge in U.S. troops and a message to the Iraqis that the surge is their last, best and temporary hope of U.S. assistance in keeping their country together.

McCain, Graham May Oppose General Casey As Army Chief (Correct) (BLOOM)

By Nadine Elsibai

Bloomberg, January 22, 2007

(Corrects spelling of Lindsey Graham in first paragraph)

Jan. 21 (Bloomberg) -- Senators John McCain and Lindsey Graham, who have strongly backed sending more U.S. troops to Iraq, indicated they may not support a promotion for the current military commander there because of past U.S. mistakes.

McCain, senior Republican on the Armed Services Committee, said on NBC's ``Meet the Press" program that he likely won't support General George Casey's nomination as Army chief of staff because of the ``failed leadership" of the U.S. forces in Iraq. Graham, another Republican member of the panel, said on CNN that Casey will face ``hard questions" during confirmation hearings.

President George W. Bush announced earlier this month he is replacing Casey as commanding general of multinational forces in Iraq and nominating him to the Pentagon post. Casey has been the top commander in Iraq since July 2004, and sectarian violence there has worsened over the past year. McCain is a leading Republican voice on military matters and, along with Graham, has been pushing the president to commit more forces to the fight. Bush announced Jan. 10 he will send 21,500 more soldiers and Marines into Iraq.

``I have very serious concerns about General Casey's nomination," McCain, of Arizona, said. ``I'm concerned about failed leadership, the message that sends to the rest of the military."

The strategy advocated by Casey and General John Abizaid, head of the U.S. Central Command, ``has not produced the outcomes we all desire in Iraq," Graham, of South Carolina, said on CNN's ``Late Edition" program. ``And General Casey will be held to account for the advice he's given in the past."

Changes

Abizaid is retiring. Bush picked Admiral William Fallon to replace Abizaid as head of military operations in the Middle East and Lieutenant General David Petraeus to replace Casey in Iraq.

Before Bush's announcement, the U.S. had about 132,000 troops in Iraq. Casey said last week that the additional troops will be in Iraq until ``late summer." More than 3,000 U.S. military personnel have died since the March 2003 invasion of Iraq,

DOJ_NMG_0119011

including 12 who were killed in a helicopter crash yesterday, according to the Defense Department. At least 10 more were killed in insurgent attacks or by roadside bombs.

Democratic and Republican lawmakers continued to voice opposition to Bush's strategy. Democratic Senators Carl Levin of Michigan and Joseph Biden of Delaware and Republican Senator Chuck Hagel of Nebraska are sponsoring a nonbinding resolution opposing the addition of more troops to Iraq.

``I want every member of the United States Senate to have to take a position on this," Hagel said on CBS's ``Face the Nation" program. ``We have kids dying every day. It is wrong to put American troops in the middle of a sectarian civil war."

Levin, chairman of the Senate Armed Services Committee, said on the ``Fox News Sunday" program that the U.S. should ``keep the pressure on the Iraqis to reach a political settlement and not deepen our military involvement, which adds targets but doesn't add much in the way of pressure."

Levin has called for the U.S. to set a timetable of four to six months for withdrawing most of its forces from the country and is planning hearings on Bush's strategy.

`Wrong Way'

Biden, chairman of the Foreign Relations Committee, said today that Bush is trying to fix the Iraq problem ``the exact wrong way" as he and Vice President Dick Cheney maintain that withdrawing from Iraq would only embolden the enemy.

Bush isn't ``listening to his military," Biden said on the Fox program. ``He's not listening to his old secretaries of state. He's not listening to his old friends. He's not listening to anybody but Cheney, and Cheney is dead-wrong."

Congressional Democrats opposed to the plan, along with some Republicans, are exploring options to block Bush's strategy by attaching conditions to future military spending measures or passing legislation that requires the president to ask Congress to authorize a troop increase.

In a recent Newsweek magazine poll, 68 percent of the U.S. public opposed Bush's deployment of more troops to Iraq, including 45 percent who said they were strongly opposed. Twenty-six percent favored the approach.

The poll found that more people had confidence in the new Democratic congressional leaders to make decisions on Iraq, with 55 percent saying they trusted the Democrats more than the Republican president. Thirty-two percent said they had more faith in Bush.

The poll, released yesterday, has a margin of error of plus or minus four percentage points. It is based on interviews of 1,003 adults on Jan. 17 and 18.

McCain May Oppose Pick For Army Staff Chief (WP)

By R. Jeffrey Smith And Walter Pincus

The Washington Post, January 22, 2007

Sen. John McCain (R-Ariz.) said yesterday that he is inclined to oppose President Bush's appointment of Gen. George W. Casey Jr. as the new Army chief of staff, on the grounds that Casey's 2 1/2 -year tenure as U.S. military leader in Iraq was marked by "failed leadership."

McCain, the senior Republican on the Armed Services Committee, which must confirm Casey's appointment, and a likely presidential candidate in 2008, accused Casey of presiding over "a failed policy" in Iraq, in which McCain said Iraqi forces were expected too quickly to assume growing responsibility for security matters there.

Reiterating his support for the troop "surge" to Iraq announced recently by President Bush, McCain said on NBC's "Meet the Press" that U.S. policy had produced Iraqi turmoil so bad that, if no change were made, "within months we would see a total breakdown in Iraq." The result, he said, would be ethnic cleansing between rival religious groups in the capital on the scale of that in Srebrenica, where Serbian military forces slaughtered 8,000 Bosnian Muslims in 1995.

"We can't expect Americans to sit outside Baghdad or outside the borders and watch such a thing go on," McCain said.

While he said he preferred a larger troop buildup than the new 21,500-person deployment proposed by Bush, McCain said the new U.S. military commander in Iraq, Lt. Gen. David H. Petraeus, had assured him that if Petraeus "needed more, he would receive them."

DOJ_NMG_0119012

The Senate Foreign Relations Committee is expected to take up resolutions on Iraq on Wednesday, some nonbinding and others that would cap the number of U.S. troops there or reduce future funding for American or Iraqi security forces.

Sen. Joseph R. Biden Jr. (D-Del.), chairman of the committee and co-sponsor of a bipartisan, nonbinding resolution that would put senators on record as opposing Bush's plan, said votes on other approaches would not deliver a muddled message.

"There's an overwhelming . . . consensus that we should deescalate the war," he added during an appearance on "Fox News Sunday."

Sen. Carl M. Levin (D-Mich.), chairman of the Armed Services Committee, said on the same program, "It will be a very powerful message if a bipartisan majority of the Congress say that they disagree with the increased military involvement in Iraq." He added that could only be a first step: "If the president does not take heed to that step, at that point, you then consider another step."

Levin warned, however, "The worst thing we can do is to vote on something which is critical of the current policy and lose it, because if we lose that vote, the president will use the defeat of a resolution as support for his policy."

Unlike Petraeus, Casey has been privately skeptical about the wisdom of deploying five new divisions now. He argued last year that the presence of U.S. troops was fostering an unhealthy Iraqi dependency on foreign assistance. After publicly embracing Bush's plan, however, Casey said that it could make Baghdad residents begin to feel safe in their neighborhoods by the end of the summer.

McCain retorted yesterday: "It's taken us nearly four years to get to this desperate situation we're in today. So to think that within three or four months or a short period of time that we could retrieve the situation, I think, is just foolishness."

McCain has previously sought to deny military promotions to officers whose work in Iraq displeased him, including several associated with policies that he said had led to the abuse of U.S. military detainees there. While not promising outright to oppose Casey's appointment, he said, "I have hard questions to ask him, and I'm very skeptical about it."

Levin has said he is inclined to back Casey.

Meanwhile, McCain faces opposition from some Republican lawmakers who disagree with his endorsement of the troop buildup.

Among the members of the Foreign Relations Committee, according to Sen. Chuck Hagel (R-Neb.), "I don't believe there was one Republican senator who came forward with any kind of enthusiasm or any kind of strong support of the president's plan."

"The party that I first voted for on top of a tank in the Mekong Delta in 1968 is not the party I see today," Hagel said on CBS's "Face the Nation" yesterday.

As for the nonbinding resolution, McCain called it "basically a vote of no confidence in the men and women we are sending over there."

McCain, whom polls have shown running neck and neck among potential voters with newly announced Democratic presidential candidate Hillary Rodham Clinton, said yesterday that the senator from New York would make a "serious president." He did not reiterate his February 2005 comment that she would make a "good president."

U.S. Troops' Deadly Weekend (LAT)

By Borzou Daragahi

The Los Angeles Times, January 22, 2007

BAGHDAD — Two Marines were killed Sunday in Al Anbar province west of the capital, bringing the weekend U.S. death toll to at least 27, a dramatic increase in fatalities that comes as President Bush is trying to convince a wary public of his plan to escalate the military presence in Iraq.

The U.S. military also reported that at least five more U.S. soldiers and one Marine had died in separate combat incidents in Baghdad and Al Anbar on Saturday, the third-deadliest day for American forces since the March 2003 invasion of Iraq.

Another 44 Iraqis were killed or found dead in political and sectarian violence, including the bombing of a bus in a middle-class Shiite Muslim neighborhood of Baghdad that left seven dead and 15 injured.

A British soldier was killed Sunday when his vehicle struck a roadside bomb in the southern city of Basra. Four British soldiers were injured in the blast.

DOJ_NMG_0119013

The deaths come as the U.S. begins to deploy thousands of additional troops into Iraq, the first of 21,500 meant to bolster forces that must confront Shiite and Sunni Arab gunmen in a complex peacekeeping and counterinsurgency mission.

The bulk of the U.S. deaths Saturday came in the crash of a Black Hawk helicopter northeast of Baghdad. Twelve soldiers were killed.

U.S. officials have not announced the cause of the crash.

A witness and an insurgent group said that hostile fire had struck the aircraft. CNN, reporting from Washington, quoted an anonymous Pentagon official saying that the crash was probably caused by insurgent fire.

In Saturday's most audacious guerrilla attack, gunmen in sport utility vehicles and uniforms stormed a provincial security building in Karbala as U.S. and Iraqi officials discussed plans to protect pilgrims during an upcoming Shiite religious festival. The gunmen made their way past checkpoints and burst into the building, guns blazing.

Five U.S. soldiers were killed and three injured in the attack.

Karbala is a Shiite stronghold that abuts the Sunni Arab heartland. U.S. and Iraqi officials would not disclose whether they suspected Shiite militants or Sunni insurgents in the attack.

"The mystery that accompanied this operation was so deep that we can't accuse any side," Aqil Khazali, the governor of Karbala province, told reporters.

The city of Karbala has fallen under the sway of radical Shiite cleric Muqtada Sadr and his Al Mahdi army. But officials loyal to Sadr's movement, which on Sunday ended a largely symbolic boycott of the Iraqi government, denied that the Al Mahdi army had staged the assault.

"There is an extremist side that wants to pretend that this act is done by the Sadr movement, but everybody knows that the Al Mahdi army doesn't have such abilities," said Haidar Tarfi, a Sadr representative in Najaf.

The Sadr movement's decision to again embrace the political process may help bolster Iraq's weak central government, which attempts to administer the country from behind the walls of the heavily fortified Green Zone.

U.S. officials have described Sadr's movement as the single greatest threat to the stability of Iraq and the primary instigator of sectarian violence.

White House officials, over the objections of many in Congress and a majority of Americans, have launched their plan to increase the number of troops in Iraq in hopes of stabilizing the country.

"I think that this is our chance now, our last chance, to have a new strategy which will give us a chance to prevail," Sen. John McCain (R-Ariz.), a supporter of Bush's plan, said in an interview on NBC's "Meet the Press."

The plan's stiffest congressional opponents include some Republicans, including Sen. Chuck Hagel of Nebraska, who said in an interview on CBS' "Face the Nation" that lawmakers should vote up or down on a resolution to stop the president's troop increase.

"I want every member of the U.S. Senate to have to take a position on this," Hagel said. "We have kids dying every day. It is wrong to put American troops in the middle of a sectarian civil war."

Analysts say Bush's plan may or may not work, but it will surely entail higher U.S. casualties, which will deepen the war's unpopularity.

"The bind Bush is in is that most Americans have pretty much had it with this whole venture," said Wayne White, a former State Department intelligence analyst who is now at the Middle East Institute, a Washington think tank.

"Throwing even more men into Iraq is seen as throwing good money after bad," he said. "The strategy he's embarking on will cause more U.S. casualties. There's no way around it."

Some U.S. military commanders in Iraq say the sacrifices will prove worthwhile.

"We're winning in places that don't make the news," Marine Col. William Crowe, commander of the 7th Marine Regiment, said at a ceremony Saturday in which the 2nd Marine Regiment assumed responsibility for part of the Sunni-dominated Al Anbar province.

Times staff writer Tony Perry in Al Asad and special correspondents in Baghdad, Hillah, Kirkuk and Najaf contributed to this report.

DOJ_NMG_0119014

At Least 27 U.S. Troops Killed In Iraq Over Weekend (CHIT)

By Borzou Daragahi

Chicago Tribune, January 22, 2007

BAGHDAD -- At least 27 U.S. troops were killed in a helicopter crash and insurgent attacks across Iraq over the weekend in one of the deadliest stretches for the American military here in nearly two years.

The surge in fatalities comes just days before President Bush's State of the Union address , which is likely to inject a note of urgency into the debate over his Iraq policy.

The weekend's deadliest episode was the crash of a Black Hawk helicopter northeast of Baghdad on Saturday afternoon, killing all 12 U.S. soldiers aboard. The military initially had said 13 were killed but revised it to 12 early today.

South of the capital in the Shiite Muslim city of Karbala, men armed with grenades, mortars and assault rifles swarmed a provincial security building manned by U.S. and Iraqi forces, the military said. At least five U.S. soldiers were killed and three wounded.

Today, the U.S. military reported the deaths of five more troops, four soldiers and a Marine assigned to Regimental Combat Team 5 in Anbar province.

Five more U.S. troops and at least 59 Iraqis were also reported killed or found dead Saturday and today in politically motivated violence as Iraqi and American forces stepped up an effort to target Shiite militiamen and Sunni Arab insurgents.

A British soldier was also killed today when a roadside bomb struck his vehicle in Basra. Four British soldiers were also injured in the blast.

U.S. military officials said the cause of Saturday's helicopter crash had yet to be determined, but Iraqi sources said it was shot down. A witness said he saw ground fire bring down the aircraft, and an insurgent group claimed responsibility for the attack in an Internet posting that could not be authenticated.

Iraqi officials and witnesses said the crash took place near the town of Buhriz in the region of Tarefiya, a rural Sunni enclave of canals and wheat fields about six miles south of Baqubah, the capital of Diyala province. The area is known as an insurgent stronghold. A recent joint U.S.-Iraqi military offensive focused on Diyala.

A message posted on the Web by the Mujahedin Army, an insurgent group that operates out of Baghdad and Diyala provinces, claimed responsibility for the attack.

"The helicopter was downed by [an] antiaircraft [rocket] that belongs to the Mujahedin Army in Buhriz," said the statement, posted to a Web site where insurgent claims are frequently trumpeted.

An Iraqi witness, who spoke on condition of anonymity, said the helicopter was felled by ground fire, but the U.S. military could not confirm the account. Lt. Col. Josslyn Aberle, a military spokeswoman in Baghdad, said that the crash took place northeast of Baghdad about 3 p.m.

"All passengers and crew were military service members," she wrote in response to an e-mailed query, adding that more information was expected today. So far no additional information has been released. The military withheld names of the victims pending notification of family members.

Saturday's crash was the first since a U.S. Marine CH-53 transport chopper went down in an accident in Al Anbar province Dec. 11, killing one Marine.

Insurgents last shot down a helicopter on May 14, near the village of Yousifiya south of the capital; two soldiers died in that attack.

At least 25 soldiers were killed Saturday. The deadliest day for American service members in Iraq was Jan. 26, 2005, when 37 U.S. troops were killed, 31 of them in the accidental crash of a CH-53E Super Stallion helicopter in Al Anbar.

The Karbala clash erupted as U.S. and Iraqi officials planned security for the Ashura festival, an annual Shiite pilgrimage. Karbala has come under the sway of Shiite militiamen loyal to radical cleric Muqtada Sadr, but it also is adjacent to Sunni areas. A statement released by the military Saturday did not clarify whether the attackers were suspected Sunni or Shiite gunmen.

Iraqi officials said the audacious attack began when a half-dozen vehicles filled with men wearing official-looking uniforms made their way past a checkpoint and burst into the provincial security building, guns blazing.

DOJ_NMG_0119015

Americans view Sadr's movement as the country's biggest threat. Today lawmakers close to Sadr, the Shiite cleric, announced they were ending a largely symbolic boycott of the government.

The sharp rise in American military deaths comes as the U.S. intensifies its efforts to curb violence in Baghdad, with Pentagon planners and White House officials pushing forward with a plan to increase the number of U.S. soldiers in Iraq by 21,500.

The first of the additional troops, the 3,200 soldiers of the 2nd Brigade of the 82nd Airborne Division, have arrived in Baghdad and will be "fully operational" within two weeks, the U.S. military said today in a statement.

Their mission will be to help Iraqi security forces "clear, control and retain key areas" of Baghdad "to reduce violence and to set the conditions for a transition to full Iraqi control of security in the city," the military said.

Bush and other supporters of the plan say it is an essential move to give the Iraqi government breathing space to crack down on violent groups and heal political wounds.

Opponents, including Democratic Party leaders in Congress and some skeptical Republicans, consider it a risky escalation that could bolster anti-American sentiment in Iraq and across the Middle East, and lead to more U.S. casualties. Since the 2003 invasion of Iraq, 3,047 U.S. troops have died in Iraq, according to icasualties.org.

Weekend Violence Includes One Of U.S. Troops' Deadliest Days In Iraq (USAT)

By Rick Jervis And Jim Michaels, Usa Today

USA Today, January 22, 2007

BAGHDAD — The U.S. military on Sunday added six to the number of American servicemembers killed a day earlier, bringing Saturday's death toll to 25 and making it one of the deadliest days of the war for U.S. troops.

Two Marines also were killed Sunday in separate incidents in western Anbar province, according to a military statement today.

The spike in deaths came as U.S. reinforcements streamed into Baghdad as part of the White House's new strategy to pacify the capital and western Iraq.

The U.S. military said Sunday that four soldiers and a Marine died Saturday from wounds suffered in separate clashes in Anbar province, center of Iraq's Sunni insurgency. Separately, a soldier was killed by a roadside bomb northeast of Baghdad, the military said.

The military said it is continuing to investigate the cause of a helicopter crash on Saturday that killed 12 soldiers northeast of Baghdad. Investigators are looking into the possibility the helicopter was brought down by enemy fire.

The military is also investigating an attack on a government center in Karbala, a Shiite holy city. Five U.S. soldiers died and three were wounded Saturday in that clash. Two other soldiers also died Saturday in separate incidents.

The 25 U.S. fatalities on Saturday made it the third-deadliest day of the war. The bloodiest day was Jan. 26, 2005, when 37 U.S. troops died, 31 in a helicopter crash. Twenty-eight U.S. service personnel died on the third day of the U.S.-led invasion in March 2003.

In Karbala, the provisional governor said U.S. troops battled militia members who attacked his office ahead of a 10-day Shiite religious festival. Akeel al-Khazaali said the gunmen wore military uniforms and drove black SUVs similar to those used in official convoys.

Renewed violence over the weekend coincided with the arrival in Baghdad of the first U.S. reinforcements who are part of a plan to boost troop levels in Iraq by 21,500 American servicemembers. The additional troops will be placedin Baghdad and Anbar province.

A brigade of the 82nd Airborne Division, about 3,200 soldiers, arrived in Baghdad and will be operating in the capital by early next month, the U.S. military said. "The brigade adds operational flexibility that will assist in securing the population," Lt. Gen. Ray Odierno, the second-ranking U.S. commander in Iraq, said in a statement.

Iraqi officials have pushed to quicken the transfer of full control of Iraq's military to the government. On Sunday, members of the parliamentary bloc led by rebel Shiite cleric Muqtada al-Sadr said they were ending their nearly two-month government boycott, saying they have won an agreement to speed up the turnover of command to the Iraqi government.

DOJ_NMG_0119016

The lawmakers said they reached a compromise with the government of Prime Minister Nouri al-Maliki involving a timetable for Iraqi forces to take over security and the withdrawal of U.S. forces. They did not release details. Al-Sadr's loyalists withdrew from parliament and the Cabinet in November to protest al-Maliki's decision to meet with President Bush in Amman. Thirty of the 275 lawmakers and six of the 38 Cabinet members are in al-Sadr's bloc.

"We announce our return to parliament, we will attend today's session," Bahaa al-Araji, one of the 30 lawmakers loyal to al-Sadr, said during a news conference Sunday.

U.S. Ambassador Zalmay Khalilzad and top U.S. commanders have called for al-Sadr's Mahdi Army militia to be disarmed, accusing it of operating Shiite death squads.

U.S. Toll In Iraq Is 27 For Deadly Weekend (NYT)

By Damien Cave

The New York Times, January 22, 2007

BAGHDAD, Jan. 21 — The United States military said that two marines died Sunday in western Iraq and that an additional seven service members died Saturday. The deaths brought the weekend toll to 27 and made Saturday the third-deadliest day for United States forces since the war here began.

Seven of the deaths announced Sunday, including those of three marines, were caused by "enemy action" in Anbar Province, a restive stronghold of the Sunni insurgency, while another soldier was killed Saturday in Baghdad by a roadside bomb, the military statements said.

New details also emerged about clashes on Saturday in the Shiite holy city of Karbala, which left five Americans dead. Lt. Col. Scott R. Bleichwehl, an American military spokesman, said the gunmen who stormed the provincial governor's office during a meeting between American and local officials were wearing what appeared to be American military uniforms in an effort to impersonate United States soldiers.

The sophisticated attack hinted at what could be a new threat for American troops as they start a fresh security plan centered on small bases in Baghdad's bloodiest neighborhoods, where soldiers will live and work with Iraqi forces. Military officials have said that one of their greatest concerns is that troops will be vulnerable to attack from killers who appear to be colleagues.

It is not uncommon for gunmen to impersonate Iraqi security forces, but this seems to be the first time that attackers have tried to disguise themselves as Americans.

Colonel Bleichwehl declined to provide further details about the Karbala attackers, emphasizing that the attack was still being investigated. But Iraqi officials said the gunmen disguised their intent with uniforms, American flak jackets, guns and a convoy of at least seven GMC sport utility vehicles, which are usually used by American officials in Iraq.

Karbala's provincial governor, Akeel al-Khazaali, said at a news conference that the local police at a checkpoint on the city's edge waved the vehicles through because they believed the convoy held important Americans. At other checkpoints, the police said, the vehicles sped through without stopping. In one case, some of the impersonators fired their weapons, and when they reached the provincial offices, they simply attacked.

The police in Babil said the disguises were imperfect — officers at checkpoints saw that the men were bearded, they said — but sufficient to get the gunmen through a crowded, heavily patrolled city without being searched.

After the attack, which was repelled by American forces, the police said, the gunmen fled north into Babil Province, where several sport utility vehicles matching the description of those used in the attack were found Sunday.

Mr. Khazaali said the identities of the gunmen were unknown. Other Iraqi officials said the clues pointed to Sunni groups based in Elbu Alwan, a Sunni stronghold about 25 miles north of Karbala in Babil Province. Four of the vehicles were found there early Sunday morning, the police said.

They said American and Iraqi troops immediately surrounded the town and were still searching the area on Sunday.

Some police commanders in Babil Province and Mr. Khazaali said one of the recovered vehicles in Elbu Alwan held three American bodies and a fourth soldier who was critically wounded. Mr. Khazaali also said that at least one additional American

DOJ_NMG_0119017

had been kidnapped. But American military officials said they were not missing anyone, and other police commanders in Babil said the men found in the vehicle were gunmen.

The sport utility vehicles also held clues of the attackers' elaborate efforts to pass as American. One had a sign on its back window warning drivers to stay back, in English and Arabic, the authorities said, a close copy of those used on some official American vehicles. They also said a bag of civilian American clothing, guns and body armor had been found in the vehicles.

The police said two other empty vehicles were found in Sadda, about 15 miles north of Hilla, the major city in the province.

Uncertainties also lingered Sunday about Saturday's deadliest incident, the crash of a Black Hawk helicopter north of Baghdad that left 12 service members dead. Though local authorities said the helicopter was shot down, the military said once again on Sunday that the crash was still under investigation. It provided no information about the cause of the crash.

The deadliest day for American service members in Iraq also involved a helicopter crash. On Jan. 26, 2005, 37 uniformed Americans died, including 31 when a Marine helicopter crashed in a sandstorm. The second-deadliest day was March 23, 2003, when 28 Americans were killed and Pfc. Jessica Lynch, among others, was captured.

In Baghdad, lawmakers loyal to the militant cleric Moktada al-Sadr ended their nearly two-month boycott of Parliament and ferociously lashed out at American officials for their recent arrest of a cleric and senior adviser to Mr. Sadr, Abdel Hadi al-Daraji.

Falah Shashal, one of 30 members in the bloc supporting Mr. Sadr, said the American raid, in which one of Mr. Daraji's guards was killed, "was inhuman and against human rights."

Two separate car bombs in the capital killed at least seven people and wounded 20 more, an Interior Ministry official said. A roadside bomb killed a British soldier north of Basra in southern Iraq, according to the British military.

In Mosul, the Iraqi police detained three Iranians on Saturday, said Wathiq al-Hamdani, the police chief for Nineveh Province. He said the men were found without passports and claimed that they had permission to travel in an adjacent Kurd-controlled area and were lost. American forces detained six Iranians on Jan. 11 after raiding an office in Erbil, a major city in Iraqi Kurdistan.

In Dibis, in Kirkuk Province, gunmen fired on guards protecting local oil facilities on Sunday, setting one oil well on fire. Iraq's oil minister, Hussein al-Sharistani, said that such attacks appeared to be on the rise. He said at a news conference that 289 Iraqi oil workers had been killed in 2006, and an additional 179 wounded. He called on Iraqis to inform the authorities if they saw anyone "target the interests of Iraq and those who kidnap ministry staff from the work sites to stop Iraq from exporting its oil."

Disguises Used In Attack On Troops (WP)

By Ernesto Londoã±o

The Washington Post, January 22, 2007

BAGHDAD, Jan. 21 -- The armored sport-utility vehicles whisked into a government compound in the city of Karbala with speed and urgency, the way most Americans and foreign dignitaries travel along Iraq's treacherous roads these days.

Iraqi guards at checkpoints waved them through Saturday afternoon because the men wore what appeared to be legitimate U.S. military uniforms and badges, and drove cars commonly used by foreigners, the provincial governor said.

Once inside, however, the men unleashed one of the deadliest and most brazen attacks on U.S. forces in a secure area. Five American service members were killed in a hail of grenades and gunfire in a breach of security that Iraqi officials called unprecedented.

The attack, which lasted roughly 20 minutes, came on a day when the United States lost at least 20 other troops, including a dozen in a helicopter crash, making it the third most lethal day for American forces in Iraq.

Meanwhile, the military announced the arrival of 3,200 troops of the 82nd Airborne Division's 2nd Brigade Combat Team, the first unit to reach Baghdad as part of a 21,500-troop increase that the Bush administration hopes will restore order in the violent capital.

"Soldiers from the 82nd come to us ready to engage in a wide variety of operations in support of the Iraqi Baghdad Security Plan," Lt. Gen. Raymond T. Odierno, the second-ranking U.S. commander in Iraq, said in a statement. "The brigade adds operational flexibility that will assist in securing the population."

DOJ_NMG_0119018

U.S. military officials said Sunday that they could not discuss the attack in Karbala in detail because it remained under investigation. But they said the version of events provided by the governor's office was consistent with their preliminary findings.

After arriving at the Provincial Joint Coordination Center in Karbala, 60 miles southwest of Baghdad, the attackers detonated sound bombs, Iraqi officials said. "They wanted to create a panic situation," said an aide to Karbala Gov. Akeel al-Khazaali, who described the events with the governor's permission but on condition of anonymity because he fears reprisals.

The men then stormed into a room where Americans and Iraqis were making plans to ensure the safety of thousands of people expected to visit the holy city for an upcoming holiday.

"They didn't target anyone but the American soldiers," the governor's aide said.

After the attack, the assailants returned to their vehicles and drove away. It was unclear how many people participated, and the men's identities and motive remained unclear, but the attack was particularly striking because of the resources and sophistication involved, Iraqi officials said.

The men drove off toward the city of Babil, north of Karbala, where they shot at guards at a checkpoint, said Capt. Muthana Ahmad, a police spokesman. Vehicles later recovered contained three bodies and one injured individual. The U.S. military took possession of the vehicles, the spokesman said.

In December 2004, a U.S. base in Mosul was penetrated by a suicide bomber who killed 22 people, including 14 U.S. service members. But Saturday's attack appeared to present a new danger to authorities in Iraq: assailants who disguise themselves as officials and travel in convoys.

"The way it happened and the new style, the province has not seen before," said Abdul al-Yasri, head of the provincial council in Karbala. "And this will make us insist on carrying on the security procedures even on official delegates and diplomats when they are coming to Karbala province."

Military officials said Sunday that the cause of the helicopter crash, which killed 12 soldiers northeast of Baghdad on Saturday, also remained under investigation. They said they could not confirm accounts by Iraqi officials and civilians who said it was shot down by insurgents in a Sunni Muslim-dominated area of Diyala province. U.S. officials initially reported that 13 soldiers died in the crash.

The military also announced that two Marines were killed in separate combat incidents Sunday in Anbar province in western Iraq. The military said four soldiers and one Marine were killed in combat Saturday in Anbar. The service members' names were withheld pending notification of their relatives, officials said.

The British military said that a roadside bomb in the southern city of Basra killed one British soldier and wounded four, [a] news agency reported.

Reports of carnage targeting Iraqis also continued Sunday. A passenger stepped off of a public minivan in central Baghdad, leaving behind a bomb that exploded, killing four police officers and three civilians, said Gen. Sadoun Qasim of the Iraqi Interior Ministry.

Elsewhere in Baghdad, at least five people were killed by two improvised explosive devices.

Four Iraqis, including a 1-year-old and a 5-year-old, were killed Friday by an improvised explosive device in the city of Yusufiyah, south of Baghdad, the U.S. military said in a statement. An ambulance transporting one of the wounded struck another roadside bomb en route to the hospital. The second blast caused no injuries.

In Ramadi, 60 miles west of Baghdad, a hospital official said the body of a fighter from the insurgent group al-Qaeda in Iraq was taken to the hospital after being discovered in a house. The 31-year-old man had been carrying a fake Iraqi passport and a real Saudi one, according to Muhammad Ismail, a doctor at the hospital.

Sadr Bloc Ends Boycott Of Iraqi National Assembly

The parliamentary bloc of radical Shiite cleric Moqtada al-Sadr announced an end to a boycott that has kept Iraq's young National Assembly semi-paralyzed for two months.

The Sadr bloc returned to the assembly after a parliamentary committee and the speaker, Mahmoud al-Mashhadani, agreed to a series of demands, said Falah Hasan Shenshel, a member of the Sadr bloc.

DOJ_NMG_0119019

The demands included establishing a timetable for the buildup of Iraqi troops and the withdrawal of U.S. troops, and a condition that the presence of foreign troops would not be extended without a vote by the assembly, Shenshel said. U.S. troops should retreat from Iraqi cities and return to their bases by the end of August, he said.

"By doing so, America would confirm that it came to Iraq as a liberator and not as an occupier," Shenshel said.

Sadr's movement has 30 seats in the 275-member parliament, and his political loyalists have called for a prompt withdrawal of U.S. troops. He is widely regarded as a focal instigator of the sectarian violence that has ravaged the country in recent months.

Also Sunday, two officials said that Prime Minister Nouri al-Maliki had ended his protection of Sadr's militia, the Mahdi Army, after U.S. intelligence convinced him that the group was infiltrated by death squads, the Associated Press reported. The officials spoke on condition of anonymity because the information was confidential.

"Al-Maliki realized he couldn't keep defending the Mahdi Army because of the information and evidence that the armed group was taking part in the killings, displacing people and violating the state's sovereignty," one official said.

U.S. Forces Look To Iraqi City For Progress (LAT)

By Alexandra Zavis

The Los Angeles Times, January 22, 2007

MOSUL, IRAQ — The date 11/11 is so ingrained in the memory of residents of this ancient citadel that it requires no further explanation than 9/11 would in the United States.

On Nov. 11, 2004, the city that had been heralded as an American success story fell to Sunni Arab insurgents and the local police melted away.

It took U.S.-led troops months of hard fighting to reclaim Mosul, a diverse city of about 2 million people wedged between the Kurdish north and Arab south, about 60 miles from the Syrian border.

More than two years later, U.S. officials are again touting the city as an example of progress in an intensified effort to train Iraqi forces to take over security so American troops can begin heading home.

Thousands of new police officers and soldiers have been recruited here and across northern Iraq. Their U.S. handlers say they are better trained, better equipped and more motivated than their predecessors, allowing American forces to reduce their presence in the six northern provinces by more than a third over the last year, to about 19,500.

The 2nd Iraqi Army Division assumed security control over Mosul on Dec. 22 and is expected to fall under the command of Iraqi ground forces today, completing a hand-over that is a cornerstone of the U.S. exit strategy in Iraq.

Still a violent place

Yet the city where former Iraqi leader Saddam Hussein's feared sons, Uday and Qusai, died in a gunfight with U.S. forces in 2003 is far from subdued. Bombings and mortar barrages rattle residents almost daily, and neighborhoods remain hotbeds of the Sunni Arab insurgency. Assassins have killed police officers, journalists, university professors, even a popular singer.

Senna Ahmed, a 27-year-old primary school teacher, said she had not taken her three children for a walk in more than a year. She lives in a predominantly Sunni neighborhood of drab concrete homes that is a focus of violence.

Every day, she said, the streets are clogged with checkpoints — some run by the police, others by Americans, and some by insurgents. Fighters pull up at high speed, set up weapons and start firing at the security forces, sending residents scurrying indoors to escape the inevitable riposte.

"We are caught between the hammer of the insurgents and the anvil of the troops," she said.

U.S. military officials think insurgents inspired by Al Qaeda and funded by exiled members of Hussein's Baath Party are trying to regain a foothold in the city. Last month, the U.S. military announced the capture of a senior Al Qaeda in Iraq leader who they said had returned to Mosul to reorganize the insurgency after spending months directing operations in west Baghdad.

With the U.S. planning to deploy about 17,000 additional troops in Baghdad, officials predict that insurgents will soon redirect many of their activities to cities such as Mosul and nearby Tall Afar. But the province's governor and police and army chiefs say that Mosul will not fall again.

DOJ_NMG_0119020

"We sacrificed our blood for this country," said Duraid Kashmoula, who succeeded his slain brother as governor of Nineveh province and has survived more assassination attempts than he can count. "We are not going to let it go now."

Yet he and others blanch at the possibility of American troops leaving the region, which receives little support from Baghdad.

"It is not a good idea for them to leave right now," said Mosul's police chief, Gen. Mohammed Wathiq.

Nobody wants a repeat of 11/11, they said.

No match for insurgency

In the year after the U.S.-led invasion in 2003, the United States spent millions in Mosul refurbishing schools and factories, setting up a police force and fire department, and forming one of the first city councils to draw in members of all the major ethnic and religious groups. At the time, the councils were heralded as a model of representative government.

But when U.S. forces reduced their presence, the police force proved no match for the insurgency, leaving Kashmoula to defend the governor's palace with a handful of bodyguards.

U.S. and Iraqi officials think they have again turned the city around. This time, they say, they have trained and equipped two divisions of soldiers, about 8,000 troops each, and more than 18,000 police officers for the province, of which Mosul is the capital.

Police officers and soldiers who before rarely left their bases are guarding checkpoints, cruising bustling shopping streets, collecting intelligence, conducting raids and breaking up insurgent cells, with U.S. forces taking an increasingly secondary role, American officials said.

When insurgents attack, the local security forces swarm to the fight, said Army Col. Steve Townsend, commander of the 3rd Stryker Brigade Combat Team, 2nd Infantry Division, based in Ft. Lewis, Wash.

"Sometimes they will say to us, 'Why don't you stay on the [base] today? We'll take care of you,' " said Lt. Col. Fred Johnson, Townsend's deputy. "That's pretty powerful."

The U.S. effort in Mosul, they said, has benefited from close ties with a group of strong Iraqi leaders, including Kashmoula and Wathiq, who meet regularly over endless rounds of sweet tea to coordinate security in the city.

Wathiq regularly goes on patrols with his forces and never misses an opportunity to promote their successes on television.

He strode into his office one Friday morning, normally a day off, for an early morning security meeting with U.S. commanders. He told them he had been out on patrol until 5 a.m., and stopped at home only long enough to change clothes.

"In 2004, there was no security, no peace. Now we are maybe 75% secure," he said, as glasses of tea were passed around the room, which was barricaded behind layers of concrete walls and concertina wire.

As if on cue, a loud explosion rocked the building. Wathiq reached for the phone and barked questions. A suicide car bomber had just plowed into an army convoy, he informed his visitors. There were injuries, but no one was killed.

The main problem, he continued, is the justice system. Police and soldiers are making arrests, but judges are afraid to dispense harsh sentences.

"The terrorists know where they live, and they are afraid," he said, before tucking a pistol into his waist and racing off in a heavily armed convoy to watch a police team play an army squad in a soccer match.

Lack of trust all around

In a bid to counter the problem, the Nineveh criminal court has recently started bringing judges up from Baghdad to try terrorism cases, securing death sentences against at least five defendants, according to local news reports.

Sports matches aside, there remains deep distrust between Wathiq's locally recruited police officers, most of them Sunni Arabs, and the city's predominantly Kurdish soldiers, who were brought in from the north by the U.S. military to help fill the security vacuum in 2004.

Army commanders accuse the police rank-and-file of ties to the insurgency. The police and some residents treat the soldiers like outsiders.

Corruption and inefficiency plague both forces. Residents grumble that police officers are as likely to commit crimes as to solve them. And it can take months for ammunition, spare parts and other crucial supplies to reach the units.

DOJ_NMG_0119021

Chronic electricity and fuel shortages compound the misery. Residents say they get only a few hours of power a day and can find no diesel to run generators or gas to heat their homes.

Iraqi officials worry that if services don't improve, public support could swing back to the insurgency.

"The locals are becoming our enemies because of the bad services they are getting," said Brig. Gen. Aziz Abdal Hussein, a former army commander who heads Mosul's Joint Coordination Center, the Iraqi equivalent of a 911 system.

His biggest concern is the legions of young men with no jobs. They are easy prey for insurgents willing to pay $100 to plant a bomb.

"If we don't find them jobs," he said, "the terrorists will."

Hawkish Gates Sees More Force As Leverage (NYT)

By David S. Cloud

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Less than a month after Defense Secretary Robert M. Gates took office, his imprint on American military strategy is beginning to show.

Mr. Gates, it turns out, is a hawk.

In just the last two weeks, he has supported deepening the American military commitment in Iraq, spoken approvingly of sending more troops to Afghanistan and, after dispatching a second American aircraft carrier to the Persian Gulf, declared that negotiations with Iran right now would be futile.

But a hawk may not be all he is. His favorite quotation from history, he told reporters traveling with him this week for meetings with allies and commanders in Europe and the Middle East, is from Frederick the Great, the 18th century Prussian monarch and gifted musician: “Negotiations without arms are like music books without instruments.”

Or, put another way, it takes military power to create the leverage necessary to make negotiations fruitful.

Mr. Gates seems to be hoping that a short-term application of military might can shift the balance of power in the region sufficiently to make eventual political settlements — between Shiites and Sunnis in Iraq, with Taliban insurgents in Afghanistan and even with the ayatollahs in Iran — more plausible for the United States than they appear right now.

It is too early to say whether this new approach will work, or even whether Mr. Gates’s views will ultimately drive decisions in an administration where President Bush himself has rarely shown interest in that sort of strategic thinking.

But there is no mistaking the course change at the Pentagon.

Already there are signs, some large and some small, that Mr. Gates would like to discard assumptions that have dictated how the Bush administration has fought in Iraq.

The most far-reaching of those has been the idea, promoted by his predecessor, Donald H. Rumsfeld, that the American military should be deployed with the fewest number of forces necessary to do the job.

In practice, many critics inside and outside the military say, that has meant that the Army and Marine Corps have never had adequate force levels to do the job in Iraq.

Mr. Bush’s plan to send more than 20,000 additional troops to Iraq was not Mr. Gates’s idea, but he quickly supported it after joining the administration last month, even overruling military commanders who asked initially for only about 7,000 more troops.

Mr. Gates does seem to share Mr. Rumsfeld’s concern that sending more American troops will only delay the day when Iraq’s government will assume greater responsibility for security.

But rather than withhold additional troops altogether, Mr. Gates has insisted that the additional forces are a source of leverage over the Iraqi prime minister, Nuri Kamal al-Maliki.

He has emphasized repeatedly that the American troop buildup, which is happening over a period of months, could be halted if Iraq’s Shiite-dominated government does not deliver on promises to send its own troops to Baghdad and not to interfere with operations against Shiite death squads in Baghdad.

DOJ_NMG_0119022

Perhaps the biggest test of Mr. Gates's influence will be whether the United States follows through on this threat if Mr. Maliki does not comply with those promises.

Mr. Gates's formative experience in government came over a three-decade career as a Soviet specialist in the Central Intelligence Agency.

He argued in a 1999 speech, almost a decade after he stepped down as C.I.A. director, that billions of dollars in covert aid, including Stinger missiles, to the Afghan rebels fighting the Soviet occupation in the 1980s enabled them to "fight the vaunted Soviet Army to a standoff and eventually force a political decision to withdraw."

At its height, the Soviet deployment to Afghanistan was over 100,000 troops, more than double the current American and NATO force level in Afghanistan, and yet the Soviets still retreated in defeat.

In some ways, the United States, as an occupying army in both Afghanistan and Iraq, is dealing with the same difficulties the Soviets faced then.

How can it avoid the same fate? Mr. Gates seems to think it can be done by, in addition to pressuring Mr. Maliki, bringing pressure to bear on other countries to help stabilize the region.

Hopscotching around the Persian Gulf last week, Mr. Gates met with leaders from Saudi Arabia, Qatar and Bahrain, appealing to those Sunni governments to urge their fellow Sunnis in Iraq to reach a political accommodation with the Mr. Maliki's Shiite-dominated government.

His warning to the Persian Gulf kingdoms was blunt: If Iraq falls apart, the Iranian Shiites will gain power in the region, to the Sunnis' disadvantage.

Mr. Gates also seems to think there might be a way to restrain Iran's nuclear ambitions and its meddling in Iraq, short of going to war against Iran. He mused publicly last week that negotiations between the United States and Iran might one day make sense, if the United States could regain "leverage" over the Iranians.

How to do that? As Frederick the Great might have said, send in more troops and another aircraft carrier first.

Al-Maliki Turns On Shi'ite Militia (WT/AP)

By Steven R. Hurst, Associated Press

The Washington Times, January 22, 2007

BAGHDAD -- Iraq's prime minister has stopped protecting Shi'ite cleric Muqtada al-Sadr's militia because U.S. intelligence convinced him that the group was infiltrated by death squads whose actions were leaving him isolated, two officials said yesterday.

In a desperate bid to fend off an all-out U.S. offensive, the radical anti-American cleric on Friday ordered the 30 lawmakers and six Cabinet ministers under his control to end their nearly two-month boycott of parliament. They were back at their jobs yesterday.

Sheik al-Sadr already had ordered his militia fighters not to display their weapons. They have not, however, ceded control of the formerly mixed neighborhoods that they captured by killing Sunnis or forcing them to abandon their homes and businesses.

The U.S. death toll from Saturday climbed to 25, as the military reported yesterday that six more troops had died that day, the deadliest in two years.

The latest military reports said that four soldiers and a Marine had died during combat Saturday in Anbar province and that one soldier was killed in a roadside bombing northeast of Baghdad.

Nineteen of the deaths were reported Saturday: 12 in a Black Hawk helicopter crash, five in an attack on a security meeting in the Shi'ite holy city of Karbala and two in roadside bomb attacks elsewhere. It was the third highest one-day toll of the war.

Prime Minister Nouri al-Maliki's turnaround on the Mahdi Army was surprising. As recently as Oct. 31, he had intervened to end a U.S. blockade of Sadr City, the Shi'ite enclave in Baghdad that is the militia's headquarters. The group has been held responsible for much of the sectarian bloodshed that has turned the capital into a battle zone in the past year.

Sometime between Oct. 31 and Nov. 30, when the prime minister met President Bush in Amman, Jordan, Mr. al-Maliki began to believe the U.S. intelligence reports and other evidence about the militia, the two government officials said.

DOJ_NMG_0119023

"Al-Maliki realized he couldn't keep defending the Mahdi Army because of the information and evidence that the armed group was taking part in the killings, displacing people and violating the state's sovereignty," said one official.

Both he and a second government official who confirmed the account refused to be identified by name.

"The Americans don't act on rumors but on accurate intelligence. There are many intelligence agencies acting on the ground, and they know what's going on," said the second official, confirming the Americans had given Mr. al-Maliki overwhelming evidence about the Mahdi Army's deep involvement in the sectarian slaughter.

Earlier this month, Mr. Bush and Mr. al-Maliki separately announced a new security drive to cut off the sectarian violence in the capital and surrounding regions.

Mr. Bush announced that an additional 21,500 U.S. troops would be sent to Iraq, and Mr. al-Maliki promised a similar number of forces, who will take the lead in the overall operation.

Iraq's Special Forces Command division has teamed with the Americans since late last year for a series of pinpoint attacks in which at least five top Mahdi Army figures have been killed or captured.

The neighborhood-by-neighborhood sweep, expected to begin in earnest by next month, will target Sunni insurgents, al Qaeda in Iraq and its allied militant bands as well as Shi'ite militias, such as the Mahdi Army and the Badr Brigade.

The latter is the Iranian-trained military wing of Iraq's most power Shi'ite political group, the Supreme Council for the Islamic Revolution in Iraq.

The first government official said Mr. al-Maliki's message was blunt.

"He told the sheik that the activities of both the Sadrist politicians and the militia have inflamed hatred among neighboring Sunni Arab states that have been complaining bitterly to the Americans," the official said.

Sunni Muslims are the majority sect in the key Arab countries, including Saudi Arabia, Jordan and Egypt.

Bush And Maliki: With Friends Like These… (NSWK)

By Michael Hirsh And Richard Wolffe

Newsweek, January 29, 2007

It may have been the last time George W. Bush felt really good about Iraq. Last June, as the president flew back from a surprise visit to Baghdad—and his first sitdown with the new Iraqi prime minister, Nuri al-Maliki—he was visibly excited. Bush was savoring a rare moment in his presidency: an unbroken string of great news out of Iraq. The U.S. Air Force had just knocked off Abu Mussab al-Zarqawi at his hideout north of Baghdad. The tough, plain-spoken Maliki had replaced Ibrahim Jaafari, Iraq's disastrously wishy-washy interim prime minister. And Bush had brazenly ordered Air Force One into a war zone in broad daylight so that he could shake hands with Iraq's first democratically elected leader under the new Constitution. The president wasn't disappointed. "I wanted to hear whether or not he was stuck in the past or willing to think about the future," a relaxed Bush later told reporters onboard Air Force One. "And I came away with a very positive impression." Maliki, Bush said back then, "is a no-nonsense guy that talks about priorities and how he's going to achieve the priorities. And that's comforting."

The White House doesn't seem to be taking much comfort in Maliki now. Late last week Bush gathered a group of his dwindling Republican supporters in the third-floor solarium at the White House to discuss his latest plan to salvage the war in Iraq—the deployment of 21,000 more U.S. troops to pacify Baghdad and Anbar province. According to one participant, conservative Sen. Craig Thomas of Wyoming, many of the GOP senators expressed doubts that America could depend on Maliki. They cited the Shiite leader's failure to quell the sectarian violence that contributed to the deaths of more than 34,000 Iraqis in 2006, according to the United Nations, as well as nearly 600 U.S. soldiers since he took over in May. "The president expressed doubts, too," says Thomas. With Vice President Dick Cheney sitting silently beside him, Bush "also indicated he was going to make pretty clear what he expects from the prime minister." Echoing Secretary of State Condoleezza Rice, who recently told Congress that Maliki was living on "borrowed time," Bush added ominously that "if [Maliki's effort] doesn't work very well there's a good chance those people over there will replace him," says Thomas.

Rarely have so many American hopes depended on a single foreign leader—and one of dubious loyalties at that. The president will walk into the well of the House for his seventh State of the Union speech this week, knowing that his fate is inextricably tied to Maliki's. While Bush will get the customary ovation, he knows the war has emboldened Democrats and

DOJ_NMG_0119024

silenced Republicans in Congress. In the new NEWSWEEK Poll, the president's approval rating matched his record low of 31 percent. Seventy percent of Americans disapprove of his handling of Iraq, and more than half trust the Democrats in Congress to make better decisions about the war. Two thirds oppose his plan to inject more troops into the fight. Among Republicans, however, there is still broad support for both the war and the president, which creates a dilemma for nervous GOP candidates looking to the next election.

Not surprisingly, the president has retooled his State of the Union address to focus on Iraq. And the key audience will not be Democrats, who are planning to vote on a nonbinding Senate resolution opposing Bush's "surge" plan next week. Instead it will be Republicans, at least a dozen of whom are expected to join Sen. Chuck Hagel voting in favor.

Much of their skepticism can be traced back to mistrust of Maliki, who admittedly has not given them much reason for confidence. The Iraqi prime minister was put into power with the support of Shiite radical Moqtada al-Sadr's political bloc, and has stymied previous U.S. attempts to target Sadr's Mahdi Army militia. During the most recent U.S. attempt to stabilize Baghdad, just last fall, he could not or would not provide enough Iraqi troops to make the plan work. His handling of Saddam Hussein's execution, an unsavory affair marred by Shiite taunts of the former dictator, again raised questions of whether he was biased against Sunnis. "So much of our future in that place is in the hands of Maliki," says one Republican doubter, Sen. George Voinovich of Ohio, who doesn't think the Iraqi prime minister is up to the challenge. He also worries that Maliki wants to turn Iraq into "a Shiite theocracy like they have in Iran."

True, like many Shiite opponents of Saddam, Maliki spent almost a decade in exile—in Syria and Iran—in the 1980s. During that time he developed ties to the Sadr family, and his Dawa Party is seen by many Iraqi Sunnis as part of Tehran's sphere of influence. Yet unlike Sadr or other Iraqi politicians like Abdelaziz al-Hakim, leader of the Iranian-backed Supreme Council for Islamic Revolution in Iraq (SCIRI), he is not a cleric himself. He also has a reputation as a pragmatist, earned while helping to negotiate Iraq's Constitution in 2005. Asked about Sadr last week, Maliki said that if the cleric works with the Baghdad government, then "he is my friend and he is my ally. If he does the opposite, he would be someone who is rebellious, someone who is acting against the law. To assure you ... in the last four years, I only talked to [Sadr] twice."

Bush's new public coolness toward Maliki is at least partly an attempt to show skeptical Republicans that he's not going into this blindly. For his part, Maliki cannot afford to look as though he's kowtowing to Washington when Sunni insurgents continue to massacre his fellow Shiites. He hasn't publicly supported Bush's "surge" plan, and responded to questions about Rice's "borrowed time" remark by saying the secretary had given a "morale boost" to terrorists.

On the other hand, to establish his bona fides with Bush, Maliki emphasized to reporters in Baghdad last week that Iraqi forces had detained some 400 members of Sadr's militia in recent months. Still, U.S. officials were unnerved two weeks ago when Maliki named an obscure Shiite general from Iraq's south, Lt. Gen. Aboud Qanbar, as the new commander of Iraqi forces in Baghdad. A U.S. official who is privy to Iraq intelligence but would discuss sensitive material only anonymously noted that there were many other officers whom Maliki could have chosen for the job who would have been less polarizing to Sunnis.

The U.S. military is now so suspicious of Maliki that on Friday, when U.S. forces arrested Sadr's media director in Baghdad, Sheik Abdul Hadi Darraji, the prime minister's office wasn't even informed of the raid. Darraji has been linked to death-squad killings of Sunnis in Baghdad. Some Iraqi politicians who are also leery of Maliki say it was wise of the Americans to keep him out of the loop. "If Maliki had been told, [the arrest] wouldn't have happened," says Mahmoud Othman, a Kurdish member of Parliament. "Maliki would not agree to this." Indeed Maliki has intervened several times in recent months to secure the release of Sadr supporters.

Why has Bush seemingly staked his legacy on this contradictory figure? At one time the bond seemed deeply personal. At their last face-to-face meeting, in Jordan in November, Bush called the Iraqi prime minister "the right guy for Iraq." His judgment was based partly on Bush's respect for Maliki's courage under fire. "He's been in power for six months, and I've been able to watch a leader emerge," the president told reporters. At the same time, White House officials also revealed they had eavesdropped on Maliki's private conversations to make sure the Iraqi prime minister was telling his supporters the same thing he was telling U.S. officials. They were reassured that he was, for the most part—a marked contrast to Jaafari.

According to sources knowledgeable about the discussions, departing U.S. ambassador Zalmay Khalilzad has also supported Maliki's line on Sadr—that his ties to the cleric give him a better chance than anyone of persuading Sadr to work within

DOJ_NMG_0119025

the political system. But the biggest reason to trust Maliki may simply be that Washington has no other choice. Hakim's SCIRI is the single largest party in Parliament and would likely provide the next prime minister if Maliki were voted out. But U.S. officials note that the first Shiite death squads to appear on the scene in 2005 had shadowy links to the Ministry of Interior, which is dominated by Hakim's party. There is no talk of replacing Maliki with a military strongman—something that would be virulently opposed not only by Iraqis but also, according to the NEWSWEEK Poll, by 83 percent of Americans. Maliki "is a reasonably bad choice among a set of really bad options," says one former senior U.S. official who spoke anonymously because he maintains close ties to the White House.

Ironically, American generals may be more willing to give Maliki time than the politicians back in Washington. Lt. Gen. David Petraeus, the incoming commander of multinational forces in Iraq, understands that the main point of the surge is to provide just enough security on the streets of Baghdad. Then, say Defense officials speaking anonymously because they are not authorized to discuss Petraeus's thinking, Maliki can theoretically persuade Sadr to stand down his militia. If that succeeds, then the frightened Sunni population might just be persuaded to part ways with insurgents. While Mahdi militia commanders warn they will retaliate if attacked by the Americans, for now the movement's political leaders are urging patience. "We have instructions from Sayeed Moqtada to stay calm so that the Sadr followers aren't dragged into this confrontation," Baha al-Araji, a senior Sadr leader and member of the National Assembly, told NEWSWEEK.

The question is whether Bush or Maliki will get all the time they need. Sen. Gordon Smith of Oregon, another Republican who has come out as a strong critic of the surge plan, says many of his GOP colleagues who still publicly support the war effort have told him they're giving the president until the end of 2007. "Patience is not inexhaustible, and it is likely to run out this year," Smith said. The problem: the better part of the "surge" troops won't get there until the middle of 2007, leaving Maliki little time to produce.

And so Bush and Maliki are engaged in an awkward minuet with one another: each needs a partner, but they can't afford to dance too closely. As Maliki himself puts it rather clinically: "A relationship of interconnected interests has been formed between me and President Bush." While administration officials deny there is any "Plan B" if Maliki fails—if he prevents U.S. troops from going after Shia militias and Sunni insurgents equally, for instance—this is mostly to try to pump up public confidence. "Of course the administration has thought about it," says Philip Zelikow, who served as Rice's senior counselor until January. "They don't want to talk about it. They're trying to create a climate of positive expectations to replace the vicious cycle of negative expectations last year." Expectations are fine—for a time. But reality ultimately matters more, and the shape of that reality is now in the hands of Nuri al-Maliki.

History's Verdict (USNEWS)

By Kenneth T. Walsh

U.S. News and World Report, January 22, 2007

Only 32 percent of Americans approve of his job performance. Forty-three percent say that his war was a mistake. Critics deride him as too stubborn and inflexible. Others dismiss him as an intellectual lightweight. But the president sticks to his guns. "I wonder how far Moses would have gone if he'd taken a poll in Egypt?" he writes. "It isn't polls or public opinion of the moment that counts. It's right and wrong."

Sounds like President Bush, defending his policies in Iraq and the war on terrorism. Actually, it was Harry Truman in 1952, defending his conduct of the Cold War and the war in Korea.

As Bush struggles to salvage victory in Iraq and regain some political traction with his State of the Union address, the 43rd president increasingly sees himself—rightly or wrongly—in the mold of the 33rd. Bush recently told congressional leaders his own policies would be vindicated by history, just as Truman's were. Others aren't so sure.

"Both men happened to be in office when a new international challenge took place, and each dealt with it in a different way," says Boston University historian Julian Zelizer. Adds presidential scholar Doug Brinkley: "What they have in common is that both are presidents who operate out of certitude" and stayed the course despite opposition from their adversaries in Congress and doubts among the American people.

DOJ_NMG_0119026

In a commencement address at West Point last May, Bush praised Truman for restructuring both government institutions and the armed forces to deal with the communist threat, and for showing bold decisiveness by ordering an airlift to break a Soviet blockade of Berlin. "By the actions he took, the institutions he built, the alliances he forged, and the doctrines he set down, President Truman laid the foundations for America's victory in the Cold War," Bush told the cadets. He added that America's adversaries today are similar to those Truman faced—enemies who pursue a "murderous ideology that despises freedom, crushes all dissent, has territorial ambitions, and pursues totalitarian aims."

The problem is that at least some presidential scholars believe Bush may be exaggerating the parallels. They wonder whether his response in Iraq or his approach to terrorism measures up to the sort of hard-eyed realism or long-term vision displayed by Truman. "A little knowledge is a dangerous thing," says Rutgers political scientist Ross Baker. "President Bush can draw a lot of false analogies."

Adds presidential scholar Robert Dallek: "Everybody who gets into serious trouble in the presidency invokes the Truman history and the Truman experience. But there's only one Harry Truman."

These historians also tend to draw a distinction between the magnitude of the decisions thrust on Truman and those facing Bush. While Bush and his allies say he is "trying to reposition America for a new world order" in the wake of 9/11, Brinkley observes, "the Bush argument is a huge stretch. It dishonors the legacy of Truman to make the comparison."

Truman, who took over the presidency following the death of Franklin Roosevelt in April 1945, presided over the end of World War II. He ushered in the atomic age by ordering the bomb dropped on Japan. He and his aides devised a series of pathbreaking institutions to contain communism during the Cold War. Among Truman's innovations: the founding of the United Nations, the World Bank, and the International Monetary Fund in 1945; the creation of the CIA, the National Security Council, and the Joint Chiefs of Staff, and the promotion of the Truman Doctrine, which declared America's intention to help nations combat communist insurgencies around the world, all in 1947; starting the Marshall Plan to provide massive economic aid to Europe in 1948; the Berlin airlift in 1948-49; and the NATO treaty in 1949, which placed Europe under an umbrella of U.S. security.

White House Press Secretary Tony Snow told U.S. News that Truman "laid the foundation for presidents later. President Bush wants to lay foundations for future presidents on the central point of our national security for many years to come."

Still, the critics are skeptical. Bush's creation of the Department of Homeland Security, which he initially opposed, and his other steps to fight terrorism—like reorganizing the nation's intelligence capabilities—may not measure up to Truman's achievements, according to some historians. "He's really reaching," Dallek argues. "Where is his containment doctrine, as Truman had? What is his doctrine for ending the war on terrorism?"

Yet there is one big unknown: The scholars admit that if there are no more major terrorist attacks on the United States by the end of his presidency, Bush can argue that he accomplished his most vital mission—keeping America safe. That would be an accomplishment that historians couldn't ignore. Both Bush and Vice President Dick Cheney have always linked the war in Iraq to the global war on terrorism. They say fighting in Iraq is keeping the "evildoers" at bay and preventing them from taking their battle into the United States.

BIG DOINGS

Truman and Bush governed during historic times. "Each period of our national history has had its special challenges," Truman said in his inaugural address on Jan. 20, 1949. "Those that confront us now are as momentous as any in the past. Today marks the beginning not only of a new administration but of a period that will be eventful, perhaps decisive, for us and for the world."

In his State of the Union address on Jan. 31, 2006, Bush made a similar point. "We've been called to leadership in a period of consequence. We've entered a great ideological conflict we did nothing to invite," he said. "[T]he destination of history is determined by human action, and every great movement of history comes to a point of choosing."

Both presidents sought to spread democracy around the world—Truman in opposition to communism, Bush in opposition to Islamic jihadism. "Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors but also against their ancient enemies—hunger, misery, and despair," Truman proclaimed in his 1949 inaugural. Bush has echoed those themes many times.

DOJ_NMG_0119027

In a statement that startled many in Washington, Bush declared in his inaugural speech on Jan. 20, 2005: "The survival of liberty in our land increasingly depends on the success of liberty in other lands. The best hope for peace in our world is the expansion of freedom in all the world. ... So it is the policy of the United States to seek and support the growth of democratic movements and institutions in every nation and culture, with the ultimate goal of ending tyranny in our world."

COMPARING KOREA AND IRAQ

It was after his surge of far-reaching Cold War initiatives in the late 1940s that Truman experienced his most bitter dilemma. In November 1950, as American and allied forces pushed North Korean invaders out of South Korea, disaster struck. China flooded the peninsula with several hundred thousand troops and pushed the United States, the South Koreans, and other coalition forces back 300 miles. Gen. Douglas MacArthur urged the administration to recognize that the United States was in a state of war with China and to drop 30 to 50 atomic bombs on Manchuria and the cities of China. Truman, fearing a world conflagration, refused to seriously consider those options. MacArthur, however, continued to promote his plan on Capitol Hill, until April 11, 1951, when Truman announced that he had fired the popular general. At the time, it was a much-criticized decision; Truman was accused of refusing to take the blame for a war gone bad. But the firing was later lauded by historians. They said the commander in chief could never allow a military officer to defy him.

Bush sees parallels in his steadfast pursuit of victory in Iraq, despite many setbacks. And Bush's removal of his top generals in early January seemed based on a Truman-like conviction that the top brass need to be on the same page as the president, this time regarding a "surge" of troops into Iraq. Gen. John Abizaid is being replaced by Adm. William Fallon as the top U.S. commander in the Mideast, and Gen. George Casey is being replaced by Lt. Gen. David Petraeus as U.S. commander in Iraq.

But Rutgers political scientist Ross Baker points out that the Korean War was a broad international operation, conducted under United Nations auspices. "It really was a multinational force," Baker says, in contrast to the Iraq war, which started as a mostly unilateral intervention, with some help from Britain, and remains largely a U.S. enterprise. Casualties in Korea, though, were far heavier. The United States has lost about 3,000 soldiers and marines in Iraq so far. The Korean War claimed more than 54,000 Americans.

THE COLD WAR AND THE WAR ON TERRORISM

"President Bush makes an explicit comparison between the beginning of the war on terror and the beginning of the Cold War," says a former senior Bush adviser who was at the president's side for most of his first term. "Truman had massive historical challenges with a nation that had grown tired. But Truman very consciously tried to put in institutional frameworks to deal with these challenges."

In his farewell address to the nation, given from the Oval Office on Jan. 15, 1953, Truman said, "I suppose that history will remember my term in office as the years when the Cold War began to overshadow our lives. I have had hardly a day in office that has not been dominated by this all-embracing struggle. ... And always in the background there has been the atomic bomb. But when history says that my term of office saw the beginning of the Cold War, it will also say that in those eight years we have set the course that can win it."

Bush takes a different tack. "You never know what your history is going to be until long after you're gone," he says. "So presidents shouldn't worry about history. You just can't. You do what you think is right, and if you're thinking big enough, that history will eventually prove you right or wrong."

Dallek has reached his own controversial conclusion, and Bush would not be pleased. "Bush will be remembered more for the war in Iraq than the war on terrorism," the historian told U.S. News. "The war in Iraq is a disaster. And there is no grand strategy for the war on terrorism." Unless Bush can turn Iraq around or somehow elevate the war on terrorism to a historic level, "he will be seen as a failed president," Dallek contends.

Yet Bush appears to believe he is destined to win the war on terrorism, according to friends. "He believes he is there for a reason," says a confidant, "and he should try as hard as he can—and leave the rest to God."

Truman was less moralistic, emphasizing the importance of "luck and personality, forces quite beyond effort or determination," writes biographer David McCullough. "And though few presidents had ever worked so hard or taken their responsibilities so to heart in time of crisis as Truman had since the start of the war in Korea, it was luck, good and bad, and the

DOJ_NMG_0119028

large influence of personality that determined the course of events time and again, and never more so than in late December 1950 [shortly after China entered the Korean War], in the midst of his darkest passage."

Truman believed a president's first job was to make the tough choices. "The greatest part of the president's job is to make decisions—big ones and small ones, dozens of them almost every day," Truman said in that January 15 farewell address. "The papers may circulate around the government for a while, but they finally reach this desk. And then, there's no place else for them to go. The president—whoever he is—has to decide. He can't pass the buck to anybody. No one else can do the deciding for him. That's his job."

Bush made a similar point to reporters last April. "I hear the voices," he declared, "and I read the front page, and I know the speculation. But I'm the decider, and I decide what is best."

When he talks privately to friends and aides, Bush says the central question for history will be not whether he did too much in the war on terrorism but whether he did enough. "No one's going to accuse this president of not being tough enough in trying to prevent it," says a key White House adviser.

There is another parallel. In 1946, the besieged president's party lost control of both houses of Congress to the GOP, partly as a referendum on Truman and his policies. The same thing happened to the Republicans under Bush in last November's elections. Led by Truman, the Democrats made a comeback in 1948 and recaptured Congress, but four years later, in 1952, they not only lost Congress but also were ousted from the White House by Republican Dwight Eisenhower.

That can't be heartening for Bush as he ponders the next two years.

Iraq Study Group: The Forgotten Men (NSWK)

By Dan Ephron

Newsweek, January 22, 2007

Jan. 29, 2007 issue - For Leon Panetta, the gesture of respect failed to disguise the rebuff. Two hours before George W. Bush announced plans to send more troops to Iraq earlier this month, the president had his national-security adviser, Stephen Hadley, brief members of the Iraq Study Group by phone on the "surge" plan. Nine of the bipartisan panel's 10 members were on the line, including co-chairs James Baker and Lee Hamilton.

Panetta, one of the Democrats on the commission and President Bill Clinton's former chief of staff, says Hadley began by listing those recommendations Bush had chosen to incorporate into his plan. Most were minor, according to Panetta. "I interrupted him and said that while we made 79 recommendations, three were the heart and soul of the report," Panetta told NEWSWEEK, citing the drawdown of U.S. troops by next year, the need to penalize the Iraqi government if benchmarks were not met and the call for diplomacy with Iran and Syria. Hadley's response—the three were not part of the Bush plan—left Panetta feeling hoodwinked. "Mainly I'm offended by the way they created the impression they gave it consideration but really didn't." (A National Security Council official confirmed the exchange.)

A month ago, members of the graybeard Iraq Study Group were rock stars in Washington. Their report appeared to herald a return to pragmatism in Iraq, and the published version whizzed to the top of The New York Times best-seller list (fifth, as of last week, in the nonfiction paperback category). Now Hamilton, Baker and the rest are back running academic institutes or consulting firms, gone and maybe forgotten.

Or are they? Baker and Hamilton are returning to Congress this month to testify before key committees and argue for a wider diplomatic push in the Middle East. "I think you may be seeing our coming out more publicly," says Edward Djerejian, Baker's top adviser. (His boss is known to think that while the troop surge can be squared with the panel's recommendations, Bush's refusal to engage Iran and especially Syria diplomatically is the real mistake.) With opponents on both sides of the aisle predicting that Bush's surge will fail, some Capitol Hill insiders are talking about the ISG report as a kind of Plan B, to be revisited a few months down the road. "Even if it's not the star people thought it would become, the north star, it's still there, and a lot of what's in it will probably happen anyway," says a senior Democratic staffer in the Senate who did not have his boss's permission to speak on record.

If other panelists are disappointed, they're not letting on. Democrat Vernon Jordan says he knew from the start Bush would pick and choose: "I'm not walking around wounded." Ditto Alan Simpson, the Republican former senator from Wyoming: "We're

DOJ_NMG_0119029

all grown-up boys and girls. We didn't stick our thumbs in our mouths and pout." Edwin Meese, the Republican who served as Ronald Reagan's attorney general, thought Bush actually incorporated most of the panel's recommendations. And Hamilton says the panel "changed the debate" on Iraq, affecting the language Bush used in his speech.

If that sounds like cold comfort, there's always the report's financial success to savor. Publisher Vintage Books says 280,000 copies have already been shipped to stores, not bad for a policy manual. No, Baker et al. don't get a windfall. After commission expenses are paid, a portion of the money goes to the National Military Family Association, which supports the spouses and children of soldiers in service. With more troops heading to Iraq, it's money well spent.

Zakaria: Has Bush Soured The World On Democracy? (NSWK)

By Fareed Zakaria

Newsweek, January 22, 2007

Jan. 29, 2007 issue - No president has attached his name more completely to the promotion of democracy than George W. Bush. He speaks of it with genuine passion and devoted virtually his entire second Inaugural to the subject. His administration talks constantly about its "freedom agenda" and interprets global events largely in such terms. Last summer, for example, as missiles, car bombs and IEDs exploded across Lebanon, Gaza and Iraq, Condoleezza Rice described the violence as the "birth pangs" of a new, democratic Middle East. So it is striking to read this year's annual survey of "freedom in the world," released last week by Freedom House, a nonprofit that is engaged in promoting democracy around the globe. The report points out that 2006 was a bad year for liberty, under attack from creeping authoritarianism in Venezuela and Russia, a coup in Thailand, massive corruption in Africa and a host of more subtle reversals.

"The percentage of countries designated as free has failed to increase for nearly a decade and suggests that these trends may be contributing to a developing freedom stagnation," writes Freedom House director of research Arch Puddington in an essay released with the rankings. Puddington also calls attention to the "pushback" against democracy. Regimes across the world are closing down nongovernmental organizations, newspapers and other groups that advocate for human rights. And, I would add, what is most striking is that these efforts are not being met with enormous criticism. Democracy proponents are on the defensive in many places.

What explains this paradox—of freedom's retreat, even with a U.S. administration vociferous in promoting democracy? Some part of the explanation lies in the global antipathy to the U.S. president. "We have all been hurt by the association with the Bush administration," Saad Eddin Ibrahim, the Egyptian activist, told me last month. "Bush's arrogance has turned people off the idea of democracy," says Larry Diamond, co-editor of the Journal of Democracy.

But he goes on: "There's a lot more to it than that. We need to face up to the fact that in many developing countries democracy is not working very well." Diamond points to several countries where elections have been followed by governmental paralysis, corruption and ethnic warfare. The poster child for this decline has to be Nigeria, a country often lauded for its democracy. In fact, the place is in free fall—an oil-rich country with per capita GDP down to $390 (from $1,000 20 years ago), a ranking below Bangladesh on the United Nations Human Development Index, and with a third of the country having placed itself under Sharia. The new Freedom House survey rates Haiti higher now because it held elections last year. But does anyone believe that those polls will change the essential reality in Haiti—that it is a failed state?

The basic problem confronting the developing world today is not an absence of democracy but an absence of governance. From Iraq to the Palestinian territories to Nigeria to Haiti, this is the cancer that is eating away at the lives of people across the globe, plunging countries into chaos, putting citizens' lives and livelihoods at risk. It is what American foreign policy should be focused on. But the president's freedom agenda sees the entire complex process of political and economic development through one simple lens, which produces bad analysis and bad outcomes.

Consider Iraq. The administration has constantly argued that Iraq has witnessed amazing political progress over the last four years only to be undermined by violence. In fact, Iraq has seen its politics and institutions fall apart since the American invasion. Its state was dismantled, its economy disrupted, its social order overturned and its civic institutions and community corroded by sectarianism. Its three communities were never brought together to hammer out a basic deal on how they could live together. The only things that did take place in Iraq were elections (and the writing of a Constitution that is widely ignored). Those

DOJ_NMG_0119030

elections had wondrous aspects, but they also divided the country into three communities and hardened these splits. To describe the last four years as a period of political progress requires a strange definition of political development.

The administration now rewards democracies with aid. But why not have a more meaningful measure? Why not reward countries when they protect human rights, reduce corruption and increase the quality of governance? "Our aid should be conditional on absolute standards," says Diamond. "The European Union has forced change on countries that want to join it by demanding real progress on tough issues."

An administration that thinks of itself as tough has been almost romantic in its views of the world. There is good and evil out there. But there is also competence and incompetence, and that makes a crucial difference around the globe—in fact, even in the United States.

War's Arab Supporters Bitter Over Its Results (WP)

By Anthony Shadid

The Washington Post, January 22, 2007

DUBAI, United Arab Emirates -- With a certain satisfaction, Lebanese journalist Michael Young watched a local station broadcast images seen across the world on April 9, 2003: the toppling of Saddam Hussein's statue in Firdaus Square, its reverberations rumbling across a stunned Middle East. Out of curiosity, he switched to a satellite station from Syria. It was showing a documentary on a venerable Damascene mosque. He flipped to another channel, where a former Egyptian general was dismissing the idea that day that the Iraqi capital had even fallen.

"If they were scared of what was happening in Baghdad, there was more power in this moment than might have been expected. The regimes were truly scared of this moment, truly scared," recalled Young, the opinion editor of the Daily Star in Beirut.

"The problem is," he added, "the Americans failed."

The coterie of Arabs who supported the U.S.-led invasion were never the target of expensive American propaganda efforts. Their unpopular stands in the Arab world earned them inboxes full of angry e-mails; a few claimed they got death threats. And nearly four years after the invasion they backed, their sense of frustration, resentment and even betrayal speaks volumes about how withered American standing is in the Middle East today and how far the region itself has deteriorated, riven as it is by escalating conflicts, worsening sectarian tension and a simmering struggle with an ascendant Iran.

"It's a success story for al-Qaeda, a success story for autocratic Arab regimes that made democracy look ugly in their people's eyes. They can say to their people: 'Look at the democracy that the Americans want to bring to you. Democracy is trouble. You may as well forget about what the Americans promise you. They promise you death,' " said Salameh Nematt, a Jordanian analyst and the former Washington bureau chief for the Arabic-language daily newspaper al-Hayat.

Added Magdi Khalil, an Egyptian writer and proponent of the invasion, "Everything, everything is very gloomy."

The Israeli-Palestinian conflict has long festered, cultivating indelible resentment toward the United States, Israel's strategic ally. Now it is joined by growing crises and wars in Lebanon, Iraq and, on the Arab world's borders, Iran and Somalia. The Bush administration is moving to arm perceived allies: Nearly $100 million is proposed for Palestinian security forces pitted against the Islamic movement Hamas and potentially hundreds of millions more for the Lebanese army, seen as a bulwark against the ambitions of the Shiite Muslim movement Hezbollah. Across the region, political affiliations are being pared to the raw bone of sectarianism, often accompanied by emotional expressions of Sunni and Shiite identity.

From the Persian Gulf to Egypt, the arc of the administration's avowed aim of promoting democracy in a region still largely run by autocrats and monarchs has come full circle. In the latest sign of shifting priorities, Secretary of State Condoleezza Rice eschewed public criticism of Egypt's authoritarian government during a visit last week, declaring it instead part of "an important strategic relationship, one that we value greatly." Some critics see a reversion to past U.S. policy, forging an alliance of what Washington considers mainstream, albeit autocratic, states against Iran, Syria and groups such as Hamas and Hezbollah.

Implicit, critics say, is the prospect of greater confrontation in a region already racked by it.

"What's coming is worse than what is now," columnist and editor Ghassan Tueni wrote in Beirut's an-Nahar newspaper.

DOJ_NMG_0119031

"If the future and coming two to three years are negative, and what is sought after fails, the legacy will be a disaster, one of the first major disasters of the 21st century," said Shafeeq Ghabra, a political science professor at Kuwait University.

In March 2003, most of the Arab world saw the imminent invasion as American revenge for the attacks of Sept. 11, 2001, a grab for Iraq's oil, a play for unquestioned supremacy in the region, a way to protect Israel or, often, a convergence of all of them. Like Young and Khalil, Ghabra was one of the very few in the Arab world who saw the invasion as opportunity. Hussein was a malignant current in the Middle East, he thought, and only force, American force, could remove him and initiate a transformation in a sclerotic region.

He expected the United States to have had an effective plan for postwar Iraq. Soon after, he expected a renewed and serious U.S. attempt to broker an end to the Israeli-Palestinian conflict, still seen by most here as the axis of tension in the Middle East. Like Young, he was most optimistic the day Baghdad fell. But even then, and in ensuing weeks, he remembered fearing what was being unleashed, as looting and chaos ravaged the Iraqi capital. Then the Americans -- to him and others, inexplicably -- dissolved the Iraqi army.

"You saw the maximum of power and success and the moment of failure, side by side," he said.

In the fall of Hussein's government, some still see a redeeming moment. They cite Lebanon's 15-year civil war as a hopeful analogy: In time, after breathtaking carnage, the war ended there, and Lebanon remained a troubled but recognizable country.

"Nobody can prove the situation would be better if there was no invasion of Iraq. Nobody can argue that if Saddam were in power now, things would be better," said Ahmed Alrabe, a former Kuwaiti lawmaker and education minister.

More often heard are the words of Khalil. "Now," he said, with a bitter laugh, "there is only conflict and hatred."

The landscape of the Middle East today is vastly different than it was in 2003. Governments in countries such as Egypt and Syria felt insecure then, buffeted by budding reform and protest movements or international pressure. These days they appear emboldened, even confident. Iran is developing a more assertive foreign policy in the region, from Lebanon and the Palestinian territories to the Gulf.

Proponents of the invasion often point to those governments, more than the mistakes of the United States, as the culprits in Iraq's unraveling. They had the most to lose if President Bush's vision, however impractical or overly optimistic, led to more accountability in the region.

"The reason Iraq failed is partly because of American miscalculations, but partly also because everyone in the region wanted them to fail," Nematt said. "Everyone took an active role in undermining the democracy project in Iraq."

But those who most fervently supported the American action bestow much of the blame on the United States itself, in a critique all the more bitter because it comes from admirers: There was no plan for the postwar period and too few troops; Iraqis played too small a role in the early days; and the Americans fumbled about as Iran, Syria and other countries outdueled them in Iraq. Fundamentally, some say, U.S. officials knew too little about the country they inherited, imagining a blank slate for their vision.

"The United States has a remarkable capacity to screw things up bureaucratically," Young said. "Maybe I should have anticipated the same thing would happen in Iraq, I admit."

"Everything is gray, and the Americans never figure it out until it's too late," he added.

In the studios of al-Arabiya in Dubai, Abdul Rahman al-Rashed sat in his sleek office, from where he heads the newsgathering operation for one of the Arab world's largest news channels. On television sets that adorned the walls, a recitation of today's Middle East scrolled across the screens: simmering civil strife in the Palestinian territories, deadlock in Lebanon, more carnage in Iraq.

"From bad to worse," the Saudi journalist said of the region, waving his hand. "It's the worst I've ever seen. Definitely."

He recalled a word and an image that he believes charted the American experience in Iraq. The word was occupation, the American decision to run Iraq for more than a year like postwar Japan instead of installing some sort of nominally independent Iraqi government after Hussein's fall. "This is colonialism; no one uses this word at all," he said. The image was the scene in Fallujah in March 2004, when angry residents killed four American contractors working for the U.S. military, mutilated their bodies and strung up two of the corpses from a bridge. "They were easily dragged into a confrontation," Rashed said of American leaders.

DOJ_NMG_0119032

"They would get into some kind of shifting sand, and it would be difficult for them to win the war," he remembered thinking. "I knew at that moment they have the force, but they don't have the brains to manage the Iraqi situation."

Many who supported overthrowing Hussein dismissed the question of whether they would still back the invasion. The question itself is impossible or unfair, some said. But Rashed -- who said he sees as the best-case scenario a contained civil war within Iraq and the worst case a regional conflagration -- is blunt. "Of course, I would take the status quo at that time over change," he said.

At a fashionable cafe in Beirut, Young talked about a region where "the sectarian genie has been let out of the bottle." American policy, he said, reminded him of past decades: engaging despots for the sake of stability. Words such as "disaster" and "civil war" peppered his conversation. And he hinted at a sense of bitter frustration, even betrayal, in his views.

"The American agenda has completely changed," Young said. "What Iraq was set out to be has been supplanted by a completely different agenda -- containing Iran and containing Iran's allies."

"The democracy debate has ended today," he added, "and I regret that."

Iraq's Refugees (WP)

The Washington Post, January 22, 2007

ONE OF THE few postwar problems the Bush administration prepared for before the invasion of Iraq was a refugee crisis. It didn't occur in the spring of 2003, and for months afterward administration officials pointed to that fact as a sign of the war's success. Now, four years later, a refugee crisis is exploding -- and, as is so often the case with Iraq, the administration has been slow to recognize the problem and even slower to respond.

The crisis essentially began last February, when the bombing of a Shiite mosque touched off sectarian war across Iraq. Since then, according to the United Nations, some 500,000 Iraqis have been displaced from their homes, and 40,000 to 50,000 more are leaving every month. As many as 2 million Iraqis are abroad, including many who left during the regime of Saddam Hussein. The majority are in Jordan and Syria.

The negative consequences of this exodus could go well beyond a humanitarian tragedy. Jordan could be politically destabilized by the influx of Iraqis. Most of the refugees in Jordan and Syria are Sunni; as the history of the Palestinians vividly demonstrates, these communities could easily become bases and breeding grounds for the Iraqi insurgency.

The U.S. response has been shockingly small. Though it is spending $8 billion a month on the war, the Bush administration has budgeted only $20 million for refugee assistance this year. Only 466 Iraqis have been allowed to immigrate to the United States as refugees since 2003, including 202 last year. Most shameful has been U.S. treatment of translators and drivers who have risked their own and their families' lives to work for military units in Iraq: Just a handful have been granted asylum, and a special visa program has a six-year waiting list.

At a Senate hearing last week, State Department official Ellen R. Sauerbrey suggested that the number of Iraqi refugees accepted in the United States could be expanded, using most of the 20,000 emergency slots set aside annually, if funding were provided. Pressed by Sen. Edward M. Kennedy (D-Mass.), she also indicated that State would consider a special parole program to expedite the admission of Iraqis. Congress should make sure the necessary funding is included in an upcoming administration supplemental budget request for the war.

More steps are needed. The United States ought to greatly increase funding for U.N. refugee programs; it should allow Iraqis to request U.S. asylum at the embassy in Baghdad and consular offices around the country and not just outside of Iraq. It should begin working with Jordan on ways to ensure that Iraqi refugees there are provided with adequate services and jobs.

The best way to help Iraqi refugees, of course, is to secure their country so that they can return home safely. Since that won't be possible anytime soon, the United States is bound by both practical and moral considerations to address a crisis that it helped to create.

Embassy Row (WT)

By James Morrison

The Washington Times, January 22, 2007

Starring Indonesia

DOJ_NMG_0119033

The Indonesian ambassador thinks too many Washingtonians know too little about his country, so his embassy has produced a series of television shows to promote the sprawling, culturally rich and ecologically unique nation of more than 17,500 islands in Southeast Asia.

Indonesia, the world's most populous Muslim nation, makes news in the West when Islamist terrorists attack tourist resorts in Bali or hotels in the capital, Jakarta.

However, Ambassador Sudjadnan Parnohadiningrat says his country deserves better press.

"We would like to present the diversity of our country to the American people," he said. "We would like to show the face of modern-day Indonesia."

The debut film, "Gado-Gado Indonesia," will be aired tomorrow at 9 a.m. on Fairfax Public Access Channels 10, 33 and 37, Arlington Independent Media Channel 69 and on the MHz Network, which is carried on several cable TV channels in the region.

The show will be repeated on Jan. 27 at 6 a.m., Jan. 28 at 5:30 p.m. and Jan. 29 at 8:30 p.m.

New ambassador

President Bush has nominated William B. Wood to replace Ronald E. Neumann as ambassador to Afghanistan.

Mr. Wood is currently ambassador to Colombia. The White House did not announce why Mr. Neumann is leaving the post after about a year and a half.

The appointment is the latest in a diplomatic shuffle that included Zalmay Khalilzad, former ambassador to Afghanistan and Iraq, replacing John R. Bolton as ambassador to the United Nations, and Ryan C. Crocker, currently ambassador to Pakistan, replacing Mr. Khalilzad in Iraq.

The Senate must approve the nominations.

Diplomatic traffic

Foreign visitors in Washington this week include:

Today

•Deputy Prime Minister Gianfranco Fini of Italy, who addresses the Center for Strategic and International Studies. Mr. Fini, also the former foreign minister, is now leader of the National Alliance, the main opposition party in parliament.

•Wen-cheng Lin of the Taiwan Foundation for Democracy and Jiunn-Rong Yeh of the National Taiwan University. They participate in a panel discussion on democracy in Taiwan at the American Enterprise Institute.

•Elliot Morley, a member of the British Parliament, adviser to Prime Minister Tony Blair on climate change and president of the London-based Global Legislators Organization for a Balanced Environment (GLOBE) International; Adam C.T. Matthews, secretary-general of GLOBE; and Michael Jay, former director of the British Foreign Office. They hold a noon press conference at the National Press Club to discuss a summit of Group of Eight and developing nations on climate change scheduled for Feb. 14 and 15 in Washington.

Tomorrow

•Ali Afhsari, an Iranian student leader for civil rights, who addresses the Middle East Institute on the political future of Iran.

Wednesday

•AIDS Ambassadors Paul Bekkers of the Netherlands, Lennarth Hjelmaker of Sweden, Michel Kazatchkine of France, Michel Lastschenko of Belgium and Sigrun Mogedal of Norway. They meet with Mark Dybul, the U.S. global AIDS coordinator, other administration officials, members of Congress and think tank analysts.

•Kay Axhausen, a professor at the Institute for Transport Planning and Systems in Zurich. He participates in a panel discussion on transportation issues with U.S. analysts at the Swedish Embassy.

Friday

•Ioannis Eliades of the Byzantine Museum in Nicosia, Cyprus, and Charalambos Chotzakoglou of the Hellenic Open University in Athens. They discuss threats to Cyprus' cultural heritage in a forum at the Cyprus Embassy.

Harsh Winter Has Afghans Struggling For Survival (WP)

By Pamela Constable

DOJ_NMG_0119034

The Washington Post, January 22, 2007

KABUL -- It was well below freezing in Raza Khan's tiny concrete apartment late one recent night. Half a dozen children huddled under blankets on the floor, coughing in their sleep. The fire in the rusty stove had faded to ashes, and there was no more wood to stoke it. Sometime before dawn, Khan's 3-month-old granddaughter, breathing raggedly from pneumonia, grew still and died.

"There are 18 of us, and we only have three blankets. It is not enough," said Khan, a gray-bearded man of 75 who earns about $2 a day pulling handcart loads in city streets. The baby had been treated at a city hospital and sent home, but she was not strong enough to recover. "It was just too cold," the old man said.

Winter across Afghanistan is a season of majestic beauty, with distant snowcapped mountains rising in all directions, icicles forming on orchard branches and midday sunlight sparkling on iced-over irrigation streams that meander across a thousand fields.

But in the capital, it is a season of unrelenting harshness for tens of thousands of poor families, focused on the struggle to survive. People spend their days scrounging to buy a few chunks of coal or firewood, and their nights huddled under common blankets around braziers called sandali, praying for dawn to come.

More than five years after the U.S.-led overthrow of Islamic Taliban rule and the advent of an internationally backed civilian government, the country is still so destitute and undeveloped that most inhabitants have no central heating, electricity or running water. Even in Kabul, some desperate families remain beyond the reach of foreign aid agencies that provide cold-weather assistance such as free coal and blankets in impoverished rural provinces.

Winter is the time that most starkly sets apart Kabul's nouveau riche from its permanent poor. The cozy, generator-heated homes and winking shop lights of central neighborhoods such as Wazir Akbar Khan and Shar-i-Nau, home to Afghan officials and international agency employees, seem far removed from the pitch-dark alleys and frigid rented rooms of suburban slums such as Chelsitoon and Char Qala.

Worst off are thousands of former refugees such as Khan and his family, unskilled people who returned to Kabul after years of wartime exile in Pakistan. Unable to find stable jobs or shelter, they survive on the margins of a chaotic, crowded capital that has quadrupled in population since the U.S.-led invasion. Some live in tents on vacant lots or squeeze into alleys, squatting on narrow bits of frozen land.

"All my children are sick. When I cook dinner, the room becomes a little warm and I put them under a blanket. But it gets cold soon, and they wake up and start crying," said Roya, 25, a laundress with four children who lives in a single cavelike room with patched tent cloth forming a flimsy fence around her tiny front yard outside.

Two winters ago, the Afghan Ministry of Migration offered to move several hundred refugee families from their tents into empty, rent-free apartment buildings on the southern outskirts of Kabul. Roya said she refused to move, because the location was too far from affluent homes where she can walk to wash and iron clothes. The customers also give her food, and earlier this month her tiny room was hung with strings of drying beef, special donations distributed to the poor during the Muslim holiday of Eid al-Adha.

Khan and many of his neighbors took up the government's offer and moved to Teknikom, a five-story concrete college dormitory built by the Soviet Union in the 1980s and later abandoned. Today it is home to about 3,000 people, but in many ways it is still a ghost building.

The corridors are windy and dark, with blankets hung across open doorways and plastic taped over gaping windows. Small children, many of them barefoot, play in the halls. The original heating and plumbing systems have not worked in years, so older boys collect sacks of scrap paper and donkey dung to use as fuel.

"This is worse than the tents," said Yar Mahmad, 25, an unemployed driver whose ailing 10-month-old son also died of cold this month. Neighbors had each lent him $2 for medicine for the boy and then helped bury him, lighting a fire to warm their hands while they dug in the frozen ground. "Now I owe $400, and I lost my son, too," Mahmad said glumly.

No one knows exactly how cold it gets here, because there is no national weather service. Afghan television stations report the local weather based on forecasts by faraway foreign meteorologists, conveyed via the Internet. But aid workers said the temperature had recently dipped to 5 degrees Fahrenheit at night.

DOJ_NMG_0119035

Even for residents with slightly better incomes than Mahmad's, a Kabul winter such as this one, which struck earlier than usual, brings hardships unimaginable in the West. The city's overloaded, war-damaged power system is still near collapse despite extensive repairs since 2001. Homes typically receive electricity only a few hours every other night, assuming that they're wired at all. Water must be heated in buckets, and bathing can be an excruciating ordeal.

Because much of the capital's commercial life takes place outdoors, in sidewalk stalls and workshops, winter weather shuts down much of the economy. Only a few kinds of business thrive in the cold weather: the used-clothing sellers who hang sweaters and jackets from roadside fences, and the coal and wood sellers who chop and stack their wares on frozen lots.

Rabbani, an elderly man who sells firewood in the Old City district, waits for customers by the stove in his toasty plywood hut, keeping an eye on a mountain of chopped logs. Often poor families send their sons to buy a few kilograms of wood at a time, and Rabbani sometimes adds a couple of sticks to the meager pile on his ancient scale.

"I think I am the only happy man in Kabul, because when it gets cold, everyone comes to me," he said. "It is so hard for people. They ask for three kilos, and I know it will only burn for an hour. If they earn $2 a day, they have to choose between buying bread and wood."

Cold-related deaths usually come one or two at a time, but occasionally poverty and bad weather conspire to produce large numbers in one place. Last month, 80 women and children perished in central Logar province when they were trapped in several remote hillside villages after a heavy snowfall.

Afghan and international aid officials said they began planning last summer to help people in the most vulnerable regions get through the coldest months. The U.N. World Food Program, working with the Ministry of Rural Development, trucked 21,000 tons of donated oil, wheat, lentils and salt to warehouses in more than a dozen provinces.

Nevertheless, they said, the deliveries were delayed by bad security and red tape at the Pakistani border. On top of that, winter arrived early, making it hard for trucks to reach some remote spots. In some cases, officials resorted to airdropping supplies by helicopter.

"This year has been very challenging, with millions of people at risk, but we have avoided a crisis," said Ebadullah Ebadi, a spokesman for the World Food Program here. "In some provinces with heavy snows, the roads are cut off for three to four months. Because of the drought, places that used to be breadbaskets are now asking us for food."

One wealthy private philanthropist, Ehsan Bayat, has also been delivering emergency food and supplies to families in many parts of the country. He sends fleets of private trucks to needy regions and then personally flies there in Afghan army helicopters to inspect and distribute the supplies.

Bayat, an Afghan American entrepreneur who owns one of two major cellphone companies and a private TV station in Kabul, has also been taking winter supplies to needy families in the capital. Residents at the Teknikom building said that he had brought them a load of blankets and coal but that what they really needed were permanent homes.

"There is nothing here for us: no jobs, no land. In the summer we can work as laborers, but in the winter all we do is wait in the cold," said Nader Mohammed, 38, the unofficial leader of the Teknikom families. "We thought we would be welcomed home when we left Pakistan. Now we just sit here by the stove, asking ourselves why we came back."

Decreased Military Role Leaves Gaps In Drug War (LAT)

By Josh Meyer

The Los Angeles Times, January 22, 2007

WASHINGTON — Stretched thin from fighting in Iraq and Afghanistan, the U.S. military has sharply reduced its role in the war on drugs, leaving significant gaps in the nation's narcotics interdiction efforts.

Since 1989, Congress has directed the Pentagon to be the lead federal agency in detecting and monitoring illegal narcotics shipments headed to the United States by air and sea and in supporting Coast Guard efforts to intercept them. In the early 1990s, at the height of the drug war, U.S. military planes and boats filled the Southern skies and waters in search of cocaine-laden drug vessels coming from Colombia and elsewhere in South America.

But since 2002, the military has withdrawn many of those resources, according to more than a dozen current and former counter-narcotics officials, as well as a review of congressional, military and Homeland Security documents.

DOJ_NMG_0119036

Internal records show that in the last four years the Pentagon has reduced by more than 62% its aerial surveillance flight hours over Caribbean and Pacific Ocean routes that are used to smuggle in cocaine, marijuana and, increasingly, Colombian-produced heroin. At the same time, the Navy is deploying one-third fewer patrol boats for detecting and catching smugglers.

The Defense Department also plans to withdraw as many as 10 Black Hawk helicopters that have been used by a multi-agency task force to move quickly to make drug seizures and arrests in the Caribbean, a major hub for drugs heading to the United States.

And the military has deactivated many of the high-tech surveillance "aerostats," or radar balloons, that once guarded the entire southern border, saying it lacks the funds to restore and maintain them.

The Department of Defense defended its policy shift in a budget document sent to Congress in October: "The DOD position is that detecting drug trafficking is a lower priority than supporting our service members on ongoing combat missions."

Members of Congress and drug-control officials have said the Pentagon's cuts and redeployments have hamstrung the U.S. drug interdiction effort at a time when an estimated 1,000 metric tons of inexpensive, high-quality cocaine are entering the country each year.

It's hard to gauge the precise impact of the pullback because authorities say they only know how much narcotics they are seizing, not how much is getting through — especially with fewer surveillance planes and boats to gather intelligence.

In the budget report to Congress, the Pentagon estimated recently that it detected only 22% of the "actionable maritime events" in fiscal 2006 because it "lacks the optimal number of assets."

Even when they detected suspected smuggling vessels, U.S. authorities had to let one in every five go because they lacked the resources to chase them, Pentagon officials conceded in their report.

"We have not stopped trying to fix that gap. We're very much concerned about it, and working very hard to try and fix these problems," Edward Frothingham III, acting deputy assistant Defense secretary for counter-narcotics, said in an interview. "DOD is in no way lessening our support" for the war on drugs, he said. "But in the post-9/11 world, some of these assets are needed elsewhere."

With Pentagon support dropping, the Coast Guard and other Homeland Security agencies such as U.S. Customs and Border Protection are trying to play a greater role in the interdiction effort. But current and former officials within those agencies say they do not have the resources to do the job because they, too, have had to dramatically redeploy assets since the sweeping post-Sept. 11 reorganization that made Homeland Security the front line in keeping terrorists out of the United States.

"I can't stand here and tell you drugs aren't coming into the U.S. by sea. It happens," said Cmdr. Jeff Carter, a Coast Guard spokesman. "There are huge challenges, but we are making a dent."

(The Justice Department, through the FBI and Drug Enforcement Administration, also has a central role in the drug war, but it is more focused on arresting narcotics traffickers in the U.S. than on interdiction.)

The cutbacks continue at a time when the Pentagon has officially reclassified the drug interdiction effort as part of the broader war on terrorism, citing intelligence showing growing ties among terrorists, drug dealers and organized-crime syndicates.

"In the post-9/11 world, where both securing and detecting threats to our nation's borders have become critical national security objectives, we cannot continue to neglect the fact that narco-traffickers are breaching our borders on a daily basis," according to a report that was quietly issued last month by the House Subcommittee on Criminal Justice, Drug Policy and Human Resources.

At a November 2005 hearing before another House subcommittee, Rep. Dan Burton (R-Ind.) said the lack of available military assets and the amount of drugs getting through "just boggled my mind."

"The spike in narcotics shipments via Central America we ignore at our own peril," said Burton, who at the time was chairman of the international relations subcommittee on the Western Hemisphere. "They could be carrying weapons, terrorists and other things that could destroy not only the youth of America, but American cities."

The weakening of the U.S. drug interdiction effort comes just as U.S. authorities have had some major successes in the drug war, led by the Pentagon's Joint Interagency Task Force-South, based in Key West, Fla. Authorities have seized increasing

DOJ_NMG_0119037

amounts of cocaine since 2001, including a record 300,000 pounds in 2005, although records show that seizures dropped off sharply in 2006, when authorities seized 230,000 pounds.

Counter-narcotics officials, including some in the Pentagon, acknowledge that the large recent seizures are only masking more fundamental problems caused by the sharp decline in drug interdiction assets.

The recent successes were due in part to improved inter-agency cooperation and U.S. efforts to bolster the Colombian government's counter-narcotics program. They were also aided by a windfall of intelligence gained from a program known as Operation Panama Express, which allowed authorities to pinpoint major shipments of drugs, documents show. That intelligence has largely dried up as Colombian drug lords tightened their operational security, making the Pentagon's detection and monitoring assets in the so-called transit zones ever more critical, according to U.S. documents and officials.

"What you've had is a significant downsizing of the counter-narcotics effort in the transit zones, and that has very direct national security implications," said Robert B. Charles, assistant secretary of State for international narcotics and law enforcement affairs from 2003 to 2005. He said the loss of resources threatened to "consign future generations of young Americans to a deluge of cocaine and heroin."

Perhaps the most important link in the drug interdiction chain is the Pentagon's aerial patrols. Without them, a U.S. military ship can detect only about one out of every 10 suspected drug vessels (one out of five if the ship has a helicopter on board), according to statistics from the Joint Interagency Task Force-South.

With the planes, whose radars can cover hundreds of miles, the military's odds improve to seven out of 10.

Department of Defense aerial patrol hours in the transit zones declined from 6,062 hours in fiscal 2002 to a low of 1,432 in 2005. They rose to 2,296 in the most recent fiscal year, which ended in October, but since then, the Pentagon has grounded much of its fleet of P-3s for long stretches, due to lack of pilots, money for flying time or maintenance issues, documents show.

Military officials concede the aerial surveillance situation is dire, and likely to get much worse. That's because most of the Pentagon's drug planes are Vietnam-era P-3s that were mothballed for years before being brought back into service for the drug war. Many of them have been redeployed to war zones or for use in counter-terrorism operations, Frothingham said. Those remaining suffer from wing corrosion so serious that they're in the shop much of the time, U.S. documents and officials say. Many of them have no working radar, but their replacements won't be ready until at least 2012.

The Pentagon has also redirected other planes used to spot smugglers — including fighter jets and high-flying reconnaissance planes — toward other missions, and turned down requests to use unmanned drones in the drug war.

Things aren't much better at sea, where there is a continuing lack of Navy resources to intercept drug runners who are using "go fast" multi-engine boats that are often 40 feet long, travel at up to 40 knots and capable of carrying several tons of cocaine.

In the Eastern Pacific transit area, four U.S. ships are dedicated to patrolling an area larger than the continental United States.

Two years ago, U.S. authorities discovered that smugglers were easily avoiding military boats by navigating far into the eastern Pacific Ocean with the help of at-sea refueling vessels. In comparison, for every four days of patrol, U.S. military ships spend an average of eight days traveling to and from the transit zone to refuel, said Rear Adm. Jeffrey J. Hathaway, director of the JIATF-South.

Frothingham's tiny counter-narcotics office at the Pentagon is still looking for a solution because the department's leadership won't commit military tankers for the task. A senior Pentagon budget official said the British government recently pledged to provide a tanker in the Pacific, but only temporarily.

Homeland Security agencies, the Coast Guard in particular, have moved boats and planes to the region to intercept smugglers, but documents show that in most cases, the U.S. presence remains far below what it was before Sept. 11, 2001.

In May, the Pentagon decided to withdraw its Caribbean-based Black Hawk helicopters for use elsewhere. The Justice Department protested, calling the helicopters a linchpin in the U.S. counter-drug effort because they ferried law enforcement agents among the thousands of islands that cocaine traffickers use as transshipment points.

That opposition has pushed back the withdrawal of the Black Hawks until October, but counter-narcotics officials say the larger problem is that no other agency has received funding to keep them operating.

DOJ_NMG_0119038

As the U.S. fortifies its border with Mexico, counter-narcotics officials warn that smugglers could simply move east and penetrate the vast border along the Gulf Coast. In response to such threats, various U.S. agencies had for years been using radar-equipped tethered aerostats to provide continuous and long-range monitoring of smugglers by land, air and sea.

The Pentagon took over the Tethered Aerostat Radar System, or TARS, in 1992 and shut down three of the balloons in the Bahamas in 1994. Then, in 2001 and 2002, it shut down three others in Texas, Louisiana and Florida, leaving virtually the entire Gulf Coast uncovered — from Florida to east Texas, and part of the Caribbean as well.

The Pentagon won't put the radar balloons back up because it believes the money is better spent elsewhere, Frothingham said.

In November 2005, the Government Accountability Office raised serious concerns about the shortcomings in the interdiction effort, and said it was particularly troubled by the lack of strategic planning by the Pentagon and Homeland Security to deal with a major redeployment of drug war assets that it believed would only get worse, not better.

The GAO, the independent investigative arm of Congress, requested that the Pentagon and Homeland Security Department devise comprehensive plans on how to maintain the drug interdiction effort with dramatically fewer resources.

More than a year later, the GAO's Jess T. Ford said in an interview that he had seen few signs of progress.

"If that trend continues," he said, "it just means we are going to miss more and more opportunities."

Bigger Force Unnecessary (USAT)

By Gordon Adams

USA Today, January 22, 2007

Expand the American ground forces? That puts the manpower cart before the strategic horse. Just what is the mission? If we buy that, we can buy a larger Army.

Reduce force stress? That's about Iraq — this larger ground force arrives after Iraq has been decided. Leaving Iraq removes force stress; what's the mission for the bigger force?

Other big, unilateral invasion and long occupation missions are sheer fantasy, given our experience in Iraq. The American people have had enough of that. But where would they be?

•Iran? A country that rejects our "liberation," has hostile terrain, is four times as large as Iraq in area and three times larger in population, with a million-man military?

•Korea? We are shrinking in Korea because the North is so weak and the South has a superbly trained, active force of 650,000 (and 4.5 million in reserves).

•Pakistan? Our invasion would galvanize 169 million people in an Islamic country with a 1.1-million man military and nuclear weapons. Should we need to prevent Pakistan's nuclear weapons from falling into the wrong hands, the mission would be targeted and fast, with heavy use of air power to avoid a land invasion and occupation.

•China? Let's stipulate that the United States is not going to mount a land invasion of China.

•Afghanistan? A serious candidate, but our allies support us there, unlike in Iraq. Leaving Iraq allows us to beef up in Afghanistan, but the real need there is not only the military, but counter-narcotics programs, foreign assistance and tough diplomacy with Pakistan.

None of these missions makes sense, and only they would justify growing the Army. What about the "long war" against terrorism? While the military (particularly the smaller Special Forces) has its role in this struggle, terror is a tactic that demands the other elements of statecraft — diplomats, lawyers, spies, special forces, homeland defenders, foreign assistance providers.

Instead of adding troops we don't need, maybe it is time to beef up these other tools — our diplomacy, civilian reconstruction, foreign assistance, intelligence and public diplomacy. The military has a key role in this effort, but we don't need a larger one. We need one more sharply trained to its specific combat mission in the framework of a workable strategy of international engagement. We ought to answer the strategy, mission and toolkit questions, before we throw another $150 billion at the military knowing we are not doing another Iraq anytime soon.

Gordon Adams is a Fellow at the Woodrow Wilson International Center for Scholars. From 1993 to 1997, he was the senior White House national security budget official.

DOJ_NMG_0119039

Strains On U.S. Forces Justify Increasing Troop Strength (USAT)

USA Today, January 22, 2007

Growth won't help in Iraq but is prudent way to meet new threats.

A little-noticed story last week about a U.S. Army battalion in Afghanistan highlighted a critical problem for the U.S. military. The 1,200-soldier battalion is due to rotate out this spring, then to deploy later this year to Iraq, where U.S. commanders could use its help. But the top general in Afghanistan, anxious for more troops to fight resurgent Taliban forces, told reporters he wants to keep those 1,200 soldiers in Afghanistan through the end of the year.

The tug-of-war over a single battalion is the latest evidence that the military — particularly the Army — is too small for the jobs it's doing, or may have to do.

Aggressively (and rightly) downsized after the Cold War, U.S. forces were kept that way by former Defense secretary Donald Rumsfeld after 9/11 even as the stresses of fighting simultaneously in Iraq and Afghanistan began to show. With Rumsfeld out of the picture, President Bush and new Defense Secretary Robert Gates have endorsed a plan to add 92,000 troops to the Army and the Marines.

That's a modest increase — barely 7% of the roughly 1.4 million active-duty U.S. military — and even that will take several years. The schedule isn't likely to be of great help in Iraq, but it's a prudent way to prepare U.S. forces for the unpredictable challenges of the war on terrorism.

Most importantly, the U.S. military would have staying power it now lacks. The fighting in Iraq and Afghanistan has been a test of whether the current military is large enough to support long deployments of large numbers of troops. It obviously is not.

In an emergency, U.S. commanders could muster many more than the 150,000 to 170,000 troops in Iraq and Afghanistan, but sustaining them for years is much harder. Repeated deployments since 9/11 have put severe strain on the Army. About a quarter of Army troops have served more than once in Iraq or Afghanistan, and some are headed for their third tours. The Pentagon has had to shrink the time between combat deployments, and the stress on people and equipment has reached disturbing levels.

That leaves the United States ill-prepared to cope with potential threats in Korea, where some 30,000 troops are stationed, or elsewhere.

It would be dangerously unwise to seek a war with Iran, for instance, but ground forces are stretched so thin now that it's not a viable threat, which weakens diplomatic leverage aimed at resolving Iran's nuclear weapons program.

Strategists also worry about a nightmare scenario in which U.S. forces might have to fight in Pakistan. One fear is that radical Islamists could assassinate President Pervez Musharraf and threaten to get control of Pakistan's nuclear weapons. Pakistan's population of 169 million dwarfs those of Afghanistan, Iran and Iraq.

The goal of a wise foreign policy should be to avoid conflicts, but it is unwise not to prepare for them. Having an obviously strained military sends a dangerous signal to U.S. enemies around the world.

Now that the secretary of Defense supports enlarging the Army and Marine Corps, the more challenging question may be how to pay for more troops — and it certainly should be the Pentagon's burden to come up with the money.

Adding 92,000 troops would cost roughly $15 billion a year — not insignificant, but also not a huge new expense in a defense budget that tops $400 billion a year. The Pentagon needs to decide which of its many weapons programs are essential and which are just convenient.

Cost cutters have already trimmed some programs aimed at giving ground troops futuristic weapons such as robot vehicles. An ambitious program to build a next-generation fighter jet, even though today's are the best in the skies, is another potential target. So are Cold War systems such as submarines and tanks that have less utility today.

Better yet, as Congress reviews the troop-increase plan, it could restrain its members who regularly force the Pentagon to squander money on military bases and weapons systems that it doesn't want.

Iraq has shown at least two things: The United States should not provoke ill-conceived wars of choice. And if U.S. forces are called on for lengthy peacekeeping or counterinsurgency missions, all the high-tech weapons in the U.S. arsenal are no substitute for boots on the ground.

DOJ_NMG_0119040

DOJ:

Editorial: You're Fired (SACBEE)

The Sacramento Bee, January 22, 2007

Furtive Justice Department boots attorneys

Since the November elections, the Justice Department has asked an unknown number of U.S. attorneys around the country, including two in California, to resign before the end of their terms. As Sen. Dianne Feinstein, D-Calif., has said, these are forced resignations in districts that have major ongoing cases.

Last week at the Senate Judiciary Committee hearing, Feinstein asked Attorney General Alberto Gonzales how many U.S. attorneys were being fired, but he would not give a number.

One Californian departing is Carol Lam, the U.S. attorney in San Diego who is pursuing corruption related to the prosecution of Rep. Randy "Duke" Cunningham, now in prison, thanks to her. The other is Kevin Ryan, the U.S. attorney in San Francisco who is in the middle of investigating whether 25 companies illegally withheld information about lucrative stock options for top executives.

It is customary that U.S. attorneys are prepared to leave office when a new president is elected. At the beginning of their terms, presidents have the discretion to name the 93 U.S. attorneys, who then must be confirmed by the Senate. They typically serve until the president leaves office. These midterm U.S. attorney firings are unusual, particularly because there are no allegations of misconduct.

Feinstein is alarmed that a little-known, last-minute change to the USA Patriot Act Reauthorization in March 2006 allows the attorney general to replace U.S. attorneys without Senate confirmation. The change was not in the original bills approved by the House and Senate, and thus never got a hearing. At the request of the Justice Department, Sen. Arlen Specter, R-Pa., added the provision during a House-Senate conference committee, which reconciles House and Senate bills for a final vote.

Under the old law, the attorney general could name an interim U.S. attorney for 120 days and when that term expired, the U.S. District Court would name a replacement until a presidential nominee was confirmed by the Senate. Feinstein has introduced a bill to restore the old law.

Presidential appointment with Senate confirmation remains an important check and balance in our system of government. The Senate and the House should approve Feinstein's bill immediately to prevent an unwarranted tilt toward presidential power.

CORPORATE SCANDALS:

Apple Prosecutor Quits Team For Private Sector (FT)

By Kevin Allison In San Francisco

Financial Times, January 22, 2007

A federal prosecutor on the team investigating options backdating at Apple, the computer maker, is leaving government service for a job with a private white-collar law firm.

The departure of Chris Steskal, a member of the federal task force that brought the first charges in options backdating in August, comes days after his boss, Kevin Ryan, the US attorney for northern California, became one of several top federal prosecutors to announce that they would be leaving office.

The twin losses may interrupt the US government's effort to crack down on backdating. The justice department and the Securities and Exchange Commission are already struggling to keep up with hundreds of backdating cases.

A spokesman from the US attorney's office in northern California said the investigations into options backdating would continue in spite of the departures.

"US Attorney Ryan is taking care to ensure a smooth transition in the office's cases," the spokesman said. "There continue to be many assistant US attorneys with strong investigative skills and substantial trial experience on the stock options backdating task force and throughout the office, who are fully capable of carrying on the work of the task force."

More than 160 companies are under scrutiny for improper options backdating, in which companies use hindsight to fudge options grant dates in order to inflate their value. Although backdating itself is not illegal, it can fall foul of securities laws if not properly disclosed. It also creates accounting problems.

Federal prosecutors and the SEC are actively investigating a backdated options grant to Steve Jobs, Apple's co-founder and chief executive. Apple, which has turned the results of its own internal investigation into the matter over to federal authorities, has cleared Mr Jobs of any wrongdoing.

Meanwhile, dozens of top executives at other companies who knew about or engaged in improper dating of stock options grants have been sacked. Many companies have been forced to restate past earnings – some to the tune of hundreds of millions or even billions of dollars.

Mr Steskal is to join the law firm Fenwick & West. News of Mr Steskal's departure was first reported on Friday by The Recorder, a publication covering the legal industry.

Federal Prosecutor Leading Apple Probe To Leave For Fenwick (LAW)

By Justin Scheck, The Recorder

California Recorder, January 22, 2007

It was a move Christopher Steskal couldn't resist -- but what does it mean for the Apple probe and impending Brocade trial?

Christopher Steskal, the federal prosecutor who indicted the country's first stock option backdating prosecution in June -- and the leader of a criminal probe into Apple Inc.'s options grants -- will leave the San Francisco U.S. Attorney's Office next month to lead the white-collar practice at Fenwick & West.

Steskal has been busy with options prosecutions in recent weeks -- Apple CEO Steve Jobs was interviewed by prosecutors and SEC lawyers earlier this week, according to people familiar with the case. But the offer from Fenwick was too enticing, Steskal said.

"I didn't spread my resume around the Valley," he said Friday, referring to Silicon Valley, saying that leaving a prosecutor's post is never easy.

"You're always going to be leaving cases on the table," he said.

Steskal comes to Fenwick as perhaps the pre-eminent prosecutorial expert in options backdating, the white-collar bar's biggest source of business these days.

"He's got the respect of his colleagues, the judges and the defense bar," said Fenwick's Chairman Gordon Davidson.

Steskal leaves behind the impending trial of two executives from Brocade Communications -- the first people to be indicted for backdating -- as well as the Apple probe, which has so far zeroed in on the tech company's legal department.

Steskal said Friday that he was well into negotiations with Fenwick -- which the firm initiated in November -- before learning that Fenwick partner Dennis DeBroeck was married to Nancy Heinen, who had been Apple's GC until last year. Sources have said investigators are interested in Heinen's role in Apple's options grants, and she has been represented by Cristina Arguedas, of Arguedas, Cassman & Headley and by Miles Ehrlich of Ramsey & Ehrlich since shortly after Apple's internal probe into backdating was launched.

That added a wrinkle to the standard conflict issues that arise when a prosecutor moves to the defense bar.

"I learned that bit of information a little bit later," he said, and immediately contacted the ethics officer of the San Francisco U.S. Attorney's Office.

"What we did was contact D.C. and got a written opinion from them, and I'm transitioning the case," he said. "I'm not making any substantive decisions regarding that case."

Fenwick does intellectual property work for Apple, a client touted on the firm's site.

Steskal's departure is a major blow to the U.S. Attorney's Office. He's been the lone prosecutor in the hard-fought Brocade case, and the main driver of at least a dozen other probes in addition to Apple.

"It would be hard to understand how this couldn't have an effect on that investigation, when the lead prosecutor, or co-prosecutor, is going to leave in the middle of the investigation," said Thomas Carlucci, a partner at Foley & Lardner who represents former Apple in-house lawyer Wendy Howell, a potential target of the probe.

With U.S. Attorney Kevin Ryan on his way out and his top deputy -- and Apple co-prosecutor -- Eumi Choi also shopping herself to white-collar defense firms, the move leaves dozens of options cases in limbo.

Ryan spokesman Luke Macaulay said there are plenty of experienced prosecutors to absorb Steskal's caseload, and that the office is close to hiring two new prosecutors to handle securities cases.

FENWICK'S COUP

When Steskal settles into Fenwick's San Francisco office, he'll bring a high-profile white-collar name to a firm that has been missing one since its former top criminal defender, Brad Lewis, decamped last summer for a Fenwick client.

The new recruit could mean big business: Fenwick's robust corporate and securities litigation practices should feed white-collar work to Steskal.

Speaking over coffee on Friday, Steskal said he hadn't planned to leave the prosecutors' office anytime soon, but was drawn by the opportunity to lead a practice that has a ready source of clients.

"They're one of the few firms left that have all the pieces in place except for someone to carry the white-collar load," he said.

"With such strong ties with board members in the Valley, they're in a great position to do the internal investigations," he added.

Davidson agreed.

"Our securities litigation practice has been inundated with special investigations," he said. "Special investigations seem to be just a part of good corporate governance."

Steskal said Fenwick is also an attractive place because it has big Valley presence but hasn't been associated with sketchy options practices.

"They probably represent a third of the companies in the Valley, and relatively few of those companies have had the same stock options issues that other firms' clients have had," he said. "In part, I think that speaks a lot to their attention to corporate governance issues and conflict issues."

Still, potential conflicts are a major question when a prosecutor with pending investigations goes to the defense side.

"That was a concern of mine," Steskal said, one that he, the U.S. Attorney's Office and Fenwick worked carefully to address.

"He can't tell us what he's working on and never will, but we gave him a list of the investigations we're involved in," Davidson said.

"What I did was, any investigation where Fenwick represented parties or witnesses, I withdrew from," Steskal added.

BACK ON TRACK

While he's made his name in government, Steskal said he'd been planning to be a defense lawyer since he graduated from Harvard Law School in 1992.

But after working as an associate, first at Cravath, Swaine & Moore, then at Howard, Rice, Nemerovski, Canady, Falk & Rabkin, Steskal said, he decided he needed more trial experience and went to the U.S. Attorney's Office.

In 2001, then-San Francisco U.S. Attorney Robert Mueller was seeking to stock the office with bright young lawyers.

"Bob Mueller hired me because he liked my resume," Steskal said. "I was never going to be a career prosecutor," he added. "I would be a career prosecutor if I was independently wealthy or had won the lottery, but I'm not and I haven't."

Current and former prosecutors who've worked with Steskal say he's known for being smart, aggressive and relentless. His courtroom reputation was sealed by the conviction last year of real estate developer John Hickey in a case he handled with Assistant U.S. Attorney Timothy Crudo.

Steskal inherited the old -- some would say stale -- case years after it was indicted, and more than a decade after Hickey committed the acts that allegedly defrauded investors of $17 million. The new lead counsel had to dig through a pile of dusty files.

"It was a huge task to marshal that case," he said last week. "I mean, the evidence was way over 10 years old, and a lot of the witnesses hadn't been interviewed in 10 years. A lot of them hadn't been interviewed at all."

Steskal and Crudo secured a conviction on counts of securities and mail fraud.

DOJ_NMG_0119043

"He earned a great deal of respect in the office for resuscitating a very old prosecution and winnowing it down to a very successful case," said Berkeley-based defense lawyer Miles Ehrlich, who, as a supervisor in the U.S. Attorney's Office, had assigned the case to Steskal.

But even while that trial was going on, Steskal had a probe of Brocade Communications simmering on the back burner.

PAPER TRAILS

Steskal said Friday that his interest in Brocade was first piqued by a New York Times column in early 2005 -- long before anyone was paying attention to options backdating -- that discussed the company's financial restatement.

"I was thinking like a securities class action lawyer, and there was a mention in the press release about document irregularities, and that's a red flag," he said. "You've got to think like Bill Lerach a little bit, and it's actually a lot of fun."

He investigated it for more than a year before realizing that backdating would be bigger than his investigation of a single company.

"Like most people, I started reading the Wall Street Journal piece" early last year on studies indicating that options backdating was widespread.

Steskal's investigation, conducted jointly with the SEC, continued another several months, and in June, former Brocade CEO Gregory Reyes and ex-HR manager Stephanie Jensen were charged. While the investigation was lengthy, Steskal said, "it didn't take an unusually long time for a securities case."

But it did generate an unusual amount of publicity, rancor from the defense team and skepticism from U.S. District Judge Charles Breyer, who is presiding over both the criminal prosecution and the SEC's civil suit against former executives.

Breyer, though, had only good things to say Friday about the outgoing prosecutor.

"I think he's a very competent lawyer," Breyer said. "He's extremely professional. He's industrious, and I have a great deal of respect for his integrity."

Richard Marmaro, a partner at Skadden, Arps, Slate, Meagher & Flom defending Reyes, wasn't as quick with praise for the lead prosecutor on a case he's publicly denounced.

"I wish him the best in private practice," he said.

Sunrise Bogged Down In Accounting (WP)

By Cecilia Kang

The Washington Post, January 22, 2007

Theirs was a classic entrepreneurial story. In 1981, Paul and Terry Klaassen, in their 20s, bought and renovated an old nursing home in Oakton with $16,000 in savings.

Terry was motivated by personal experience: When her mother became ill, she found the level of care available at the time to be inadequate and undignified. Paul saw the business potential in developing a warmer and more personalized European model of senior care, like that in his family's native Netherlands.

The couple moved into the home and eventually turned the business, Sunrise Senior Living, into one of the nation's largest senior residential services providers, operating 436 retirement communities in the United States, Canada and Europe. The Klaassens had landed smack in the middle of a sweeping demographic shift as America's growing aging population was looking for better retirement options and willing to pay for better services.

Yet as analysts touted Sunrise's business outlook, that rosy picture began to fray.

Last week, the McLean-based company said it would again delay the filing of its financial results for all four quarters of 2006, which it had previously promised to deliver on March 1. Sunrise blamed the postponement on the complexity of an ongoing internal accounting review and a Securities and Exchange Commission inquiry into its accounting practices and allegations of insider stock sales.

"We share the disappointment of our investors and stakeholders regarding this delay," Bradley B. Rush, Sunrise's chief financial officer, said in the company's statement. "Rather than continue to predict the date of the ultimate end of the process, which depends on third parties, we will continue to provide interim updates as we proceed, as fast as possible, toward completion." Rush's office said he was unable to schedule an interview.

DOJ_NMG_0119044

The troubles for Sunrise began last May, when executives announced they would implement a new way of accounting for profits and losses from certain joint ventures. The move resulted in an accounting review of past earnings reports and the reduction of $100 million in profits between 1999 and 2005.

The company's share price dropped 34 percent after the announcement, reaching the year's lowest point in late July 2006. Last week, pension funds for the United Food and Commercial Workers Union filed lawsuits against Sunrise charging the company with accounting fraud and insider stock trading. Another union pension fund, the SEIU Master Trust, has pressed the company in letters about insider stock sales and the questionable timing of stock options grants.

Sunrise has said that the SEC inquiry was prompted by the SEIU's letters. In its release last week, it accused the SEIU of writing the letters to generate media attention as part of an attempt to organize Sunrise workers. Steve Abrecht, executive director of the SEIU Master Trust, said the SEIU has no members at Sunrise and has no plans to organize a union at the company.

"We're very disappointed. They've had plenty of time to do an investigation, and why they can blame it on us is hard to imagine," Abrecht said.

The pension fund also has urged Sunrise to review the composition of the review committee the company created last December. Sunrise has not disclosed who is on the committee, and the SEIU said it suspects that it might include company directors.

"It's not appropriate to have a special committee made up of board members. It would be too conflicted; they would be investigating themselves," Abrecht said.

One question raised is the $32 million in stock sales by Sunrise executives from December 2005 to May 2006, when the new accounting system was announced. The Klaassens sold about $20 million in Sunrise shares during that period, in 12 separate transactions.

Some shareholders have alleged that company executives, including the Klaassens, knew about the accounting changes months before they were made public and unloaded their shares ahead of the news. These shareholders cite a comment made during a May 11 conference call with analysts, when a Sunrise executive said the new accounting method "came into consideration late in 2005."

The company has maintained that the board members and executives did not have prior knowledge of the financial restatement at the time of their stock sales.

Another shareholder, LongView Small Cap Index Fund of Amalgamated Bank in New York, wants a review of bonuses and awards given to senior executives during the periods when earnings were restated. In a request to be voted on by shareholders at the company's annual meeting this spring, LongView argues that executives who did not meet performance targets based on the new financial results between 1999 and 2005 should return the money, the fund said.

Even with a cloud hovering above Sunrise, many analysts who follow the industry maintain that the underlying health of the company is strong. The firm has not filed a financial report since last March.

"Fundamentals for this business are terrific," said Jerry L. Doctrow, a research analyst with Stifel Nicolaus. "Sunrise really founded the assisted-living industry in America and has the brand and reputation of a high-quality provider."

Sunrise grew quickly with the help of some savvy acquisitions, including the $150 million purchase of Marriott International's senior living operation in 2003. The company's hallmark is building communities with tony architectural details, such as French doors and vaulted ceilings, and complementing those surroundings with a broad array of concierge and health services.

The company has also experienced setbacks. In the late 1990s, Sunrise found itself competing against at least a dozen other major senior living providers, and the supply of senior housing outstripped demand. Since then, the industry has consolidated and demand has caught up with the number of residential units available. In September 2005, as the company sought to evacuate residents from areas hit by Hurricane Rita, a bus Sunrise chartered for its residents exploded and 23 people were killed.

Analysts have expressed disappointment with the latest delay in financial reporting. But they also have given the company high marks for its operations. Sunrise has said that occupancy rates at the communities it operates has risen to about 94 percent.

DOJ_NMG_0119045

On Jan. 11, Sunrise and Prudential Real Estate Investors announced a joint venture to develop 18 senior communities in Britain valued at $1 billion.

"We view this announcement as a reminder that the company's core strategy of developing and operating high-quality senior living properties in attractive locations is clearly on track," Ryan Daniels, an analyst at William Blair wrote in a report.

Doctrow said the company has said repeatedly that its accounting problems have not affected its operations. "The important thing for us is cash flow, and they say none of this has affected their cash flow," he said.

Hedge Funds And Insider Trading (NYT)

The New York Times, January 22, 2007

A truism of investing is that to beat the market consistently, an investor must either take above-average risk or trade on inside information. That inevitably casts a cloud over hedge funds, which exist to beat the market. Many fail, sometimes spectacularly so. But many succeed. The question is, How?

The Wall Street Journal reported that Eliot Spitzer was asking just that question. Shortly before he resigned as New York's attorney general to become the governor, Mr. Spitzer opened investigations into whether employees at companies including Best Buy and Circuit City had improperly given nonpublic information to hedge fund managers.

Two research firms, the Gerson Lehrman Group and Vista Research, a unit of McGraw Hill, are also under investigation. They specialize in matching up people who have information — say, middle managers — with clients who crave information, like hedge funds managers. The firms collect fees from hedge fund clients and pay sources as consultants. Business for these firms has boomed since 2000, when federal regulators enacted disclosure rules that made executives at public companies wary of speaking privately with big investors.

It will be up to the prosecutors to determine if the matchmaking firms merely appear to be conduits for nonpublic information, or if they indeed are. The firms say they follow procedures to guard against any inappropriate disclosures.

But the safeguards seem weak. Gerson Lehrman told The Journal that it reminds its consultants not to divulge confidential or restricted information. A Vista spokesman said consultants must sign an ethics code that says they're "never expected" to comment on their employer.

New York's new attorney general, Andrew Cuomo, should pursue any wrongdoing. And the new Congress should move forward with hedge fund regulation. The possibility of a destabilizing meltdown only grows the longer the funds escape oversight.

CRIMINAL LAW:

Gambling Subpoenas On Wall St. (NYT)

By ANDREW ROSS SORKIN And STEPHANIE SAUL

The New York Times, January 22, 2007

The Justice Department has issued subpoenas to at least four Wall Street investment banks as part of a widening investigation into the multibillion-dollar online gambling industry, according to people briefed on the investigation.

The subpoenas were issued to firms that had underwritten the initial public offerings of some of the most popular online gambling sites that operate abroad. The banks involved in the inquiry include HSBC, Credit Suisse, Deutsche Bank and Dresdner Kleinwort, these people said.

While online gaming sites like PartyGaming and 888 Holdings operate from Gibraltar and their initial public offerings were held on the London Stock Exchange, companies that do business with them and have large bases in United States have come under scrutiny by regulators in Washington.

None of the biggest United States banks like Goldman Sachs or Citigroup underwrote the initial public offerings in London, in part because of the legal ambiguity of the sites; they are illegal in the United States, but still accessible to residents.

The subpoenas, earlier reported by The Sunday Times of London, appeared to be part of an indirect but aggressive and far-reaching attack by federal prosecutors on the Internet gambling industry just two weeks before one of its biggest days of the year, the Super Bowl.

DOJ_NMG_0119046

Unable to go directly after the casinos, which are based overseas, they have sought to prosecute the operations' American partners, marketing arms and now, possibly, investors.

The prosecutors may be emboldened by a law signed by President Bush last October that explicitly defined the illegality of running an Internet casino. Even before that law, the Unlawful Internet Gambling Enforcement Act, was adopted, the government said that Internet gambling was illegal under a 1961 provision.

These offshore casinos, typically based in Costa Rica or Antigua, allow American bettors to use their home and office computers to place wagers on a range of contests.

Millions of Americans participate; more than half of all bets placed to major offshore casinos are from residents of the United States.

The prosecutors' efforts have already taken a toll in the last two years on offshore casinos, most notably with the arrest last year of David Carruthers, the chief executive of an Internet sports book, BetonSports. The company is based in Britain and has operations in Costa Rica, but Mr. Carruthers was detained at the Dallas airport while traveling through the United States.

The arrest led to BetonSports' decision to stop taking bets from the United States, crippling its business.

Several weeks later, agents of the Port Authority of New York arrested Peter Dicks, the chairman of Sport-ingbet, which offers online sports betting and, like Mr. Carruthers's company, trades on the London Stock Exchange. Mr. Dicks was arrested at Kennedy Airport.

Last week, a British online money transfer business, Neteller, said it would cease handling gambling transactions from United States customers because of regulatory uncertainty.

"It appears that the Department of Justice is waging a war of intimidation against Internet gambling," said I. Nelson Rose, a professor of law at Whittier Law School in Costa Mesa, Calif., who is an expert on Internet gambling law.

Another lawyer, Lawrence G. Walters of Altamonte Springs, Fla., said the development was disconcerting because the prevailing wisdom had been that investment in a company that is legal and licensed in its jurisdiction was not grounds for prosecution.

"It would be the first time that that kind of liability has been imposed," Mr. Walters said.

But he cautioned that the subpoenas could be part of a government fact-finding effort and might not signal a plan to prosecute banks

Libby Trial To Display Changed Reporter-Source Relations (NYT)

By Neil A. Lewis

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — As the perjury and obstruction of justice trial of I. Lewis Libby Jr. unfolds over the next few weeks, the ways in which the case has vastly reshaped relations between reporters and high government officials will be on vivid display.

Most striking, a handful of reporters for major news organizations will testify for the prosecution. They will be asked to recount conversations they had in 2003 with Mr. Libby, then Vice President Dick Cheney's chief of staff, that were undertaken with some understanding that they were confidential.

The highly unusual spectacle of journalists giving testimony at a criminal trial about their reporting is a result of the intense investigation into the disclosure of the identity of a Central Intelligence Agency operative. Previous leak investigations typically ended in failure as reporters were able to fend off prosecutors' efforts to delve into what they learned from government sources.

But in trying to determine how Valerie Wilson, who was known by her maiden name, Valerie Plame, came to be identified as a C.I.A. operative in a newspaper column in July 2003, the prosecutor, Patrick J. Fitzgerald, successfully pressed reporters to testify before a grand jury, threatening jail if they refused. In the case of one, Judith Miller, formerly of The New York Times, Mr. Fitzgerald, with the backing of the courts, succeeded in having her jailed for 85 days until she relented.

Rodney A. Smolla, the dean of the University of Richmond Law School and an authority on the First Amendment, said the Libby investigation had made clear that any promise of confidentiality from a reporter now comes with an asterisk.

"This has undercut the assumptions that existed for several decades that a reporter's promise of confidentiality is not only sacrosanct as a matter of journalistic ethics but relatively secure as a matter of law," Dr. Smolla said. "Now it's clear that the legal

system will try to break that promise, and the sources and reporter appear much more vulnerable, at least in the federal system, than was thought to be just a short time ago."

There is no formal code that describes the rules of engagement for officials and reporters in Washington, but a less-than-neat system evolved over decades that allowed government sources to impart information to journalists without having their identities revealed publicly. Editors, hoping to be more accountable to the public, have tried in recent years to change those practices.

Nothing may have shaken those ways of doing business and the underlying relationships as much as the Libby case.

The impact in the workaday world is difficult to measure, as it is impossible to know of articles never written because officials decided not to risk becoming sources. Eve Burton, vice president of the Hearst Corporation, said her company had refrained from publishing or broadcasting stories in recent months to avoid the risk of becoming embroiled in a subpoena battle that could lead to fines and jail terms for reporters.

Another effect has been on how news organizations reconsider the pledges their journalists may make.

Bill Keller, the executive editor of The Times, has suggested that reporters may sometimes wish to negotiate the conditions of confidentiality with a source.

In a speech in October, Mr. Keller said such negotiations could go something like this: "I will keep your name out of the paper, and if I am subpoenaed as part of a leak investigation my paper will fight it. But if we lose in the courts I do not plan to go to jail or allow the paper to be fined into bankruptcy."

Mr. Libby, who is known as Scooter, is charged with lying to both a grand jury and F.B.I. agents who were investigating the leak of Ms. Wilson's identity to journalists. The case began with a July 14, 2003, column by Robert D. Novak, saying that Ms. Wilson worked at the C.I.A. and was married to Joseph C. Wilson IV, a former ambassador who had days before accused the administration of distorting intelligence to help the case for going to war in Iraq.

Mr. Libby had nothing to do with the leak to Mr. Novak, but he testified under oath that he had not disclosed information about Ms. Wilson to other journalists. Ms. Miller and Matthew Cooper of Time magazine told the grand jury that he did, in fact, talk about Ms. Wilson with them. Mr. Libby also testified that he learned of Ms. Wilson's identity from a third journalist, Tim Russert of NBC News, but Mr. Russert is expected to testify that that is false.

Mr. Libby's lawyers are expected to argue that he did not tell those reporters about Ms. Wilson and that, even if he did, he remembered incorrectly what had happened.

Many people experienced in the capital game of source and reporter will understand the thesis Mr. Fitzgerald has put forward — that Mr. Libby expected that reporters would successfully resist cooperating with law enforcement officials and that his conversations with them would never be revealed.

Mr. Fitzgerald has also said he may try to explore at trial the issue of whether waivers of confidentiality given by Mr. Libby to reporters in order to allow them to testify were genuine. Mr. Fitzgerald's goal would be to demonstrate that Mr. Libby was actually trying to hide information rather than have it disclosed.

To that end, the trial may try to solve one of the case's mysteries: whether there was any hidden meaning to a note Mr. Libby wrote to Ms. Miller giving her permission to testify before the grand jury. In September 2005, Mr. Libby wrote to Ms. Miller saying he had not spoken to reporters about Ms. Wilson and then relieving her of any journalistic obligation to keep their conversations confidential.

Mr. Libby told Ms. Miller, who was in jail at the time for refusing to cooperate with the prosecutor, that she should testify, get out of jail and experience the autumnal delight of Colorado's aspens changing color. "Out West, where you vacation, the aspens will already be turning," Mr. Libby wrote. "They turn in clusters because their roots connect them."

Was that phrase a simple attempt at a literary turn? Or was it a veiled plea for Ms. Miller to "turn" with him and back up Mr. Libby's account that he had not disclosed Ms. Wilson's identity to her?

Before Ms. Miller went to jail, she dismissed the validity of an earlier waiver Mr. Libby had offered to all journalists. She asserted that such waivers from sitting government officials were inherently coerced.

DOJ_NMG_0119048

Ms. Miller wrote in The Times that after two months in jail she "owed it to herself" to clarify whether Mr. Libby's waiver was genuine. She authorized her lawyers to seek an explicit waiver from Mr. Libby, which he granted in a telephone conversation and in the letter about aspens.

To challenge the sincerity of that waiver, Mr. Fitzgerald would probably note that, when Ms. Miller eventually testified before the grand jury, she provided information that was used against Mr. Libby in the indictment. If Ms. Miller testified truthfully to Mr. Libby's detriment, Mr. Fitzgerald may argue, then Mr. Libby must not have intended to encourage her to testify at all.

Official Backed Plans Of Business Connections (WP)

By David S. Fallis And Michael Laris, Washington Post Staff Writers

The Washington Post, January 22, 2007

Former Planning Chief Had Ties to Companies

In 2004, Peter J. Knop, a wealthy Loudoun landowner, asked the county to allow his family company to build a vast entertainment complex with a theater and studios on his 1,000-acre property near Dulles Airport.

Lawrence S. Beerman II, then chairman of Loudoun's Planning Commission and a venture capitalist, had business plans of his own. He was raising money for the purchase of an Alabama-based trucking fleet known as Evergreen Transportation Inc., according to records and interviews. He brought that deal to the Knops, and they invested, Knop said.

Two weeks after the sale was completed, Beerman voted favorably on the Knops' entertainment center, helping it clear its first regulatory hurdle.

Beerman, who held sway over land decisions in Loudoun County for nearly a decade, voted multiple times in favor of companies with which he had business ties, according to records and interviews.

His actions took place in a county where major land-use decisions have been dominated by a small group of public officials and their close allies in the development industry, The Washington Post found in a year-long investigation.

Beerman resigned abruptly from the Planning Commission in July after reporters conducted interviews about his ties to Knop and others doing business in Loudoun.

Beerman was part of a small group of public officials who assumed power in Loudoun in 2004 with the backing of a well-funded network of developers, a building industry group and others in the real estate industry. In the years since, some of those officials have worked closely with their backers, coordinating privately to ensure votes favorable to major projects, according to thousands of e-mails and other documents obtained under public records laws.

Beerman's relationships have drawn the interest of the FBI, according to two individuals who said they have been interviewed in recent months and asked to remain anonymous because of the sensitivity of the inquiry. An agent asked questions about Beerman's business activities and his actions on the Planning Commission, said one of those interviewed.

Debbie Weierman, spokeswoman for the FBI's Washington Field Office, would not say whether agents are conducting an investigation in Loudoun but said her office "is looking into reports of possible public corruption, unfair business practices and the like . . . in the Washington metropolitan area."

Beerman did not respond to written questions about his relationship with Knop.

Knop viewed Beerman as crucial to the family's development plans, according to e-mails.

In preparation for a meeting with Beerman to discuss possible Planning Commission concerns over the terms of the proposed entertainment complex, Knop wrote, "we need a script DETAILED as to EXACTLY what we want to say, give and get, and BEFOREHAND, reseaerch what he wants, so we have something to offer him." The 2004 e-mail was written to Kristen Kalina, a lobbyist Knop had hired to help promote his projects.

"Good, I agree," Kalina responded in an e-mail, which went on to discuss the size of the project and its potential impact on traffic. She suggested that she and Knop ask Beerman "to give us some insight as to what he has heard privately" from other planning commission members about Knop's proposed entertainment center. "Based on the fact that you just helped him out on the Alabama deal, he owes us this information. . . . I dont think he'll balk. Do you?"

DOJ_NMG_0119049

Knop's company made a payment to Beerman for thousands of dollars while he was a planning commissioner, according to an interview with Knop's former accountant, Angela Kelleher. The money was connected to Beerman's efforts to resolve a land dispute between Knop and Greenvest L.C., a major developer, she recalled.

Kalina also remembered payments to Beerman, which she described in a deposition, although her statements were inconsistent about when the payments were made.

Knop, who said there was nothing improper about their dealings, denied paying Beerman while he was on the commission -- "not a penny," he said in an interview.Political Forays

Beerman and Knop have known each other for years, a period during which Beerman helped shape Loudoun's development as a rapidly growing suburb.

In 1992, Beerman was appointed to a citizens committee advising on development plans near Dulles Airport. In 1995, he was elected to the Board of Supervisors, where he positioned himself as the board's go-to person on financial matters.

"I was a step ahead of most people because I knew what they were talking about," Beerman said in an interview this summer. He later declined to answer additional questions from reporters.

Beerman lost his bid for reelection in 1999 and was defeated again when he ran for board chairman in 2003. But he still had a voice in development decisions: He served two years on the county's Sanitation Authority, which controls water and sewage lines, and in 2004 was appointed to the Planning Commission, a nine-member board that helps decide which projects can be built in the county. The commission elected Beerman its chairman.

Under Beerman's leadership, the commission abandoned its practice of publicly disclosing contacts with people who had business before the board. He said in an interview that he also encouraged fellow commissioners to "do our work independently" by talking outside of meetings individually to county staff and developers with pending proposals. He regularly backed major developments across the county, including large communities near Dulles Airport proposed by Toll Brothers Inc. and Van Metre Cos.

The work came naturally to him, he said. "If you're doing this for 15 years, you kind of get a feel for it," Beerman said.

Beerman, 46, lives with his family in Ashburn. He has a passion for golf and running, and he previously worked as an investment banker. During his years in local politics, he repeatedly met with developers and their advocates to discuss proposals, building strong ties in that world. His business colleagues say he is an affable dealmaker with a sensitive radar for opportunities.

"I've had my hand in a whole bunch of different businesses," said Beerman, who said he has been involved in projects including a cell tower in Leesburg and a technology startup in Limerick, Ireland. He said he has helped finance Blockbuster franchises, cable TV companies and a medical imaging venture.Work as a Loan Officer

In February 2003, Beerman took a job as a residential loan officer with George Mason Mortgage LLC, a major lender in Northern Virginia. He asked to be assigned to the company's account with Greenvest, saying he had a contact there, according to George Mason chief executive D. Gene Merrill.

Greenvest, led by co-owner Jeff Sneider, had joined forces with former supervisor Dale Polen Myers to back a slate of candidates in 2003 who were sympathetic to the building industry. Myers backed Beerman, who lost. He was nominated to the Planning Commission by another Myers protege, Supervisor Stephen J. Snow (R-Dulles).

George Mason had a preexisting relationship as a "preferred lender" with Greenvest's home-building arm, Cambridge, according to records and interviews. That meant customers in Maryland and West Virginia who purchased homes from Cambridge were promised discounts of $4,000 to $10,000 if they used a mortgage company from the list of two or three preferred lenders.

Beerman was a point of contact at George Mason for these loans and received commissions on the mortgages he handled, records show. While Beerman benefited, other Greenvest companies had proposals pending before the Planning Commission for billions of dollars in new homes. Greenvest companies make up the county's largest private landowner.

At some point, Merrill said, Greenvest executives became concerned about a potential conflict and canceled the arrangement until it was cleared by the commonwealth's attorney in October 2004.

In a four-page advisory opinion written at Beerman's request, Loudoun Commonwealth's Attorney James E. Plowman concluded that because Beerman's work was with Cambridge, he did not have a "personal interest" in Greenvest matters before

DOJ_NMG_0119050

the Planning Commission. In Virginia, conflict-of-interest laws generally prohibit officials from voting on matters if they have a personal interest in the outcome.

"One thing I tell people is just because something might smell bad, it doesn't mean it's a statutory violation," Plowman said in an interview, noting that home buyers were not forced to use George Mason.

But Plowman also encouraged Beerman to be mindful of potential conflicts -- if, for example, Beerman knew the Planning Commission was taking up a Greenvest project in which Cambridge would be one of the builders. In that case, Plowman said Beerman would be required to disqualify himself.

Beerman had told Plowman that from 10 to 25 percent of his loan business was from Cambridge. "His annual compensation from this would be expected to exceed $10,000 annually," according to the opinion.

Two other commonwealth's attorneys, when asked about Plowman's opinion, said they would have advised Beerman not to vote on any Greenvest matters, either because his actions could be a conflict or appear to be a conflict.

"It's easy to use your imagination and come up with all sorts of scenarios where Beerman, through his company, has a stake in Greenvest's overall success, which would have to be affected by getting the green light for new development," noted one commonwealth's attorney, who spoke on condition that he not be identified because of the sensitivity of the matter.

Three weeks after Plowman's ruling, Beerman began casting a string of votes favorable to Greenvest, including four that sharply increased the value of the company's land by allowing more than 1,800 additional homes to be built on almost 1,000 acres. That gave Greenvest companies the right to build seven times the number of homes allowed before Beerman's commission and the Board of Supervisors acted.

In a written response on behalf of Greenvest, attorney Francis A. McDermott said the company had no financial relationship with Beerman and had never paid him. There was, McDermott said, no "attempt to link" the preferred-lender arrangement "to favorable results" before county officials. "In short, Greenvest has never done anything improper, or attempted in any way to exercise improper influence" over Beerman's votes or opinions, McDermott said.

Beerman said in an interview this summer that he saw nothing improper about his work as both public official and mortgage lender.

"I don't have any conflicts," Beerman said. "If someone calls me for a mortgage, they call me out of the blue. . . . I can't stop somebody from calling me. They are not calling me because, 'Oh my gosh, he voted for it.' They call me because they got a referral, or they know me, or whatever."

Late last year, Beerman left his job at George Mason and became vice president for land acquisition at Van Metre, a major home builder in the county.Business Ventures

When Beerman was on the Board of Supervisors in the late 1990s, he went to Peter J. Knop and described a cell tower venture.

"It's a great investment. What do you think?" Knop recalled Beerman saying.

Knop said he invested, one of three times he has put his money into businesses brought to him by Beerman. Two -- the cell tower venture and the trucking company -- occurred while Beerman was a public official, records and interviews show.

Knop said he also invested in a medical imaging business at Beerman's invitation.

"He puts together venture capital deals, and we participate in those deals," Knop said. "When he does a good deal, he gets a fee."

In the case of the Evergreen trucking company, the deal was a winner: The company's revenue and profits have grown substantially since 2004, according to company Chairman Sean Kish.

Knop is best known in Loudoun for his construction waste dump, an imposing mountain of rock, dirt and other material. Although it dominates the landscape on his property, known as Ticonderoga Farms, Knop has nevertheless crafted other ambitious plans for the land, including his vision of a "world cultural center" with an agricultural tourist attraction. The plans were later downsized to a corporate retreat and picnic pavilions.

His vision, however, did not include a plan by Greenvest to build hundreds of homes next door. Knop opposed the project, hoping to keep a buffer of undeveloped land next to his property.

DOJ_NMG_0119051

Beerman, who was on the Planning Commission and later voted in favor of the project, stepped in and attempted to mediate in 2004, records show. In 2005, Beerman came out to the Knop property for two meetings, one of which included a Greenvest representative, according to an account by a Ticonderoga employee filed in court.

"We had floated various ideas because we know that he's close to people in Greenvest," Knop said in an interview. Knop is in business with his son, Peter R.Q. Knop.

Knop and his son considered a solution that would have paid Beerman handsomely: Greenvest would sell the Knops some of the property, and the county would allow Greenvest to build the same number of houses on less land, according to e-mails.

Under that scenario, "Larry gets 25k," Peter R.Q. Knop wrote in a 2005 e-mail that began "Beerman proposal."

Greenvest had rebuffed Knop's attempt to purchase the property the year before. And Knop said no payment was made to Beerman, noting that it would have been inappropriate. Knop said in an e-mail to his lawyer that he did not believe the ideas from the e-mail were presented to Beerman, calling them "internal thoughts."

In a lawsuit against the county, Knop challenged the development, saying it was incongruous in that area and should not have been approved. Attorneys in the suit took depositions from Knop's employees and others and obtained their e-mails, including the message from Knop to his lawyer.

Kelleher, Knop's former accountant, who described in an interview a Knop payment to Beerman, remembers it being for $5,000 and said she thought it was connected to the Greenvest dispute. She said she was certain it coincided with his time on the Planning Commission.

"I remember writing the check, because it was one of those, 'Hmmmm, should we really be writing this check to this man?' " Kelleher said. She worked for Knop until mid-2005.

In July 2004, Knop sent Kalina, his lobbyist, an e-mail demanding an "up to date list of ALL contributions made to ALL politicians and other groups" from 2002 through 2004.Knop was frustrated at a county official's skepticism about his entertainment center.

"This should include the 'consulting fee' of 7,000. paid to Beerman. . . . Also any other fees or retainers or other sums paid to people not in their official capacity (I would include . . . other fees paid to people on the inside," Knop wrote. "If we are ever to operate efficiently, AND win, this is something which better be done ASAP," he wrote, referring to the accounting of contributions.

Kalina, a tobacco and oil company lobbyist before she began working for Knop in early 2004, was asked in a deposition about that e-mail and the $7,000 fee.

"And he was a member of the Planning Commission at the time that this $7,000 consulting fee was paid. Isn't that right?" asked the attorney questioning her.

"Yes," she answered.

Later in the deposition, after answering further questions about the payment, she said she was uncertain if it was ultimately paid to Beerman. "Maybe there was, maybe there wasn't" a payment, she said. She ended the deposition saying, "We had paid Mr. Beerman consulting fees related to other business activities for things that he did."

During the time Kalina worked for Knop, Beerman was on the Planning Commission.

Knop and his son said in an interview that the $7,000 was payment for Beerman's consulting work on a cell tower venture sometime between 2000 and 2002. Peter J. Knop said he used quotation marks around the words "consulting fee" because he believed Beerman had overcharged. As evidence of the consulting work, Knop's son later produced a copy of a canceled check to Beerman for $7,500 dated June 19, 2002.

Kelleher said the payment to Beerman that she recalled was more than 18 months later, when he was on the Planning Commission. The Knops did not respond to written questions about that discrepancy.

Knop said he has continued to work with Beerman over the years because he is good at what he does.

"His business is knowing, both in politics as well as in business, knowing where the deals are. And how do you find out where the deals are? You know -- and are on good terms with -- everybody. Larry is a very likable guy."

Staff researchers Madonna Lebling, Bobbye Pratt, and Julie Tate contributed to this report.

Influence Of Developers, Allies Runs Deep (WP)

By Michael Laris And David S. Fallis, Washington Post Staff Writers

The Washington Post, January 22, 2007

Six months after they took office in 2004, members of the Loudoun Board of Supervisors demonstrated in a single afternoon their ability to help a friend.

First, they voted 6 to 3 to boost the number of homes that could be built on the family farm of Dale Polen Myers, a former supervisor who had been instrumental in getting many of them elected. The next month, a builder bought the property from Myers's family for $12.2 million -- four times its assessed value before the zoning decision, records show.

Next, the board agreed unanimously to authorize the county to purchase a different parcel for $13.5 million, once again helping Myers, who was acting as the real estate agent. That earned Myers and her boss a commission that by industry standards would range from $270,000 to $675,000.

Such coziness has become routine among some Loudoun officials and a group of politically connected developers, landowners and others in the real estate industry, The Washington Post found in a year-long investigation.

An examination of thousands of e-mails, telephone records and county land databases and scores of interviews shows the extent to which this network of development advocates was able to influence land-use decisions in one of the country's fastest-growing and richest counties.

Supervisors sometimes followed step-by-step direction from those in the development industry on how to vote and what to say in public, according to e-mails and other county records. One planning commissioner who resigned last year voted favorably on projects by companies with which he had business ties.

In their three years in office, a majority of the current board members have voted at least two dozen times in favor of projects benefiting people or companies who helped the officials get elected. Many of those political backers were enriched, including developers and landowners who made millions when their home-building and commercial projects were approved by the county board, as well as development lawyers who netted large legal fees and real estate agents who made commissions on the deals.

Voting for friends or political allies is not, in itself, improper under Virginia conflict-of-interest laws. Those laws prohibit officials from accepting items of value, including business opportunities, that could influence their actions and from voting on matters in which they have a "personal interest."

Experts caution that in many cases it is difficult to determine whether a public official has a personal interest because the legal definition is complex and open to interpretation.

The county's supervisors and planning officials have served as gatekeepers to a wave of suburban development. Since 1990, Loudoun's population has tripled to more than a quarter-million, transforming a landscape of open fields to a series of expanding construction sites. That growth has brought thriving new communities and jobs, as well as worsening traffic and the financial burden of building new schools and providing other services.

Loudoun officials defended their efforts to work closely with developers and others.

"This is local citizen government, and these are complicated issues, and you have to reach out to somebody," said Supervisor Stephen J. Snow (R-Dulles). He said supervisors must tap the expertise and resources of the private sector to solve the county's transportation and other challenges, and that means working proactively with development companies and approving more houses to help generate additional funds.

Snow and other officials also said that their votes were based on the projects' merits and their view of what is best for the county.

Myers declined repeated requests to be interviewed.

In recent months, FBI agents have interviewed several people in the county about development decisions, according to three who said they have been contacted. One person, who declined to be named because of the sensitivity of the inquiry, was interviewed at length and said the agents probed for information about whether local officials may have development interests that would conflict with their duties on a public body.

Debbie Weierman, spokeswoman for the FBI's Washington Field Office, would not say whether agents are conducting an investigation in Loudoun but said her office "is looking into reports of possible public corruption, unfair business practices and the like . . . in the Washington metropolitan area."

Until late last year, the board votes helped spur the county's swift growth. But as voters have shown signs of displeasure, supervisors seeking reelection in November have backed off from their general enthusiasm for rapid development, voting down a major building project known by advocates as Dulles South and limiting construction in western Loudoun.

At the same time, new construction has slowed with a sagging market. Nevertheless, tens of thousands of homes that have been approved are yet to be built.Myers's Many Roles

Myers, 50, likes to say that her family has owned land in Loudoun "only" since 1779. She is a regular presence at public meetings, where she lobbies officials in the hallway and from the podium on causes that have included youth baseball and rights of property owners.

In eight years in public office, first as an appointed planner in 1992 and then as chairman of Loudoun's Board of Supervisors in the late 1990s, Myers was a dogged advocate for speeding up development.

But in 1999, voters threw her out of office and swept in eight politicians to the nine-member Board of Supervisors who promised to limit growth. The county's population had doubled in a decade to 169,000, and voters -- many of them newcomers themselves -- were attracted to the message of protecting Loudoun's quality of life.

Myers was able to turn that painful defeat into a string of business opportunities. She was looking for work just as developers and home builders were looking for people to help them block the limits on development they expected from the new board.

Myers started a consulting firm and began working with Carter Braxton Real Estate in Leesburg. She also joined with a group of builders, landowners, lawyers and Tysons Corner-based developer Greenvest L.C. to mount a well-funded, years-long campaign to regain political clout after the surprise defeat at the polls by the anti-growth forces.

After supervisors passed the strict development limits they had promised, Greenvest companies filed more than 20 lawsuits against the county, part of a coordinated barrage of about 200 such suits by developers seeking to overturn building restrictions. Greenvest companies own more land in Loudoun than any other private landowner -- more than 5,000 acres, much of it undeveloped.

Myers became a key organizer of Citizens for Property Rights, a lobbying group that assailed county supervisors who supported building limits, targeting them with attack ads and sharply criticizing them at public meetings.

Greenvest, counseled by Myers, pushed to replace the county supervisors with officials sympathetic to development. The goal, Chief Executive Jim Duszynski said in a 2003 interview, was "regime change."

In the run-up to the 2003 election, Greenvest companies and executives contributed $18,000 to the campaigns of six pro-growth board candidates and thousands more indirectly through state and local GOP organizations. Overall, companies and individuals tied to the development industry poured more than $490,000 into supervisor campaigns in Loudoun, more than seven times the figure four years earlier, according to data from the nonprofit Virginia Public Access Project.

Myers and others in the real estate development industry took key jobs in Loudoun's Republican Party and backed candidates who would provide reliable votes for development. Myers became a top strategist for three candidates: Bruce E. Tulloch, whom she had first encouraged to run in 1999; Snow, a former Army helicopter pilot whose district includes many of Greenvest's planned developments; and Lawrence S. Beerman II, a former county supervisor.

The campaign succeeded, and when the votes were counted Nov. 4, 2003, candidates supported by Myers, Greenvest or their allies had won six of the nine seats on the Board of Supervisors. They made up the new majority: Tulloch (Potomac), Snow, Lori Waters (Broad Run), Jim Clem (Leesburg), Mick Staton Jr. (Sugarland Run) and Eugene A. Delgaudio (Sterling), all Republicans.

Beerman didn't make it to the general election, losing in the Republican convention. But Snow later nominated Beerman to the Planning Commission.

When Snow was sworn into office just before Christmas 2003, Myers stood beside him. At a party meeting after the election, GOP Chairman J. Randall Minchew, a prominent development attorney, congratulated Myers for her role in helping elect a new majority and spoke of having her mentor the freshman supervisors.The New Regime

DOJ_NMG_0119054

The new supervisors met for the first time in January 2004, and Tulloch took effective command. Voters had elected another supervisor, Scott K. York, an Independent, as chairman, but Tulloch, a burly, aggressive figure, marshaled the six votes needed to give him control of the board's agenda.

Tulloch and his majority went to work. The board took an initial vote to allow central sewer and water lines throughout a 23,000-acre swath stretching from Leesburg to south of Dulles Airport. It was a key step in an effort to open up a vast area to builders. Greenvest had purchased thousands of acres there.

Myers was now at the center of a powerful political network largely built on a common interest in seeing Loudoun expand. In 2004, she was appointed to the county's Board of Equalization, whose role in valuing property kept her involved in land-use questions.

Myers retained her role as a key adviser to Greenvest. "Dale was in and out of the office all the time," said a former Greenvest executive who asked to remain anonymous so he could speak freely about the company. "She was advising [Greenvest officials] a lot about land use and what to be doing."

She was also counseling county officials. Snow said Myers and Beerman brought him their detailed plans for how sections of his district should be developed. "Those two were invaluable about the process of where things should go and why they should go," Snow said.

Behind the scenes, some supervisors kept in close contact with Myers. Cellphone records obtained under public records laws showed more than 150 calls between her and Tulloch or Snow from September 2005 through mid-January 2006.

Snow shared e-mails with Myers that he received from constituents on matters before the board. In October 2005, Supervisor Sarah R. "Sally" Kurtz (D-Catoctin) sent an e-mail to the rest of the board and other county officials asking for an investigation into possible favoritism by the Board of Equalization, on which Myers sat. About an hour later, Snow forwarded the e-mail to Myers, records show.

Tom Jewell, Myers's boss at Carter Braxton, said Myers has been unfairly "vilified" over political issues. Jewell, a prominent county Democrat and the firm's owner, described Myers as a hardworking person of integrity who devotes her free time to charity, including fundraising for Inova Loudoun Hospital.

"I just see the amount of good that she has done for this community. She loves this place," Jewell said, adding that her expertise in government land-use policies is invaluable. "Where Dale truly makes her money and gets her clients is her knowledge. . . . She has a mind like a steel trap."The July '04 Meeting

At a pivotal meeting in July 2004, the board approved the two proposals that were lucrative for Myers. In both cases, Myers's name went unmentioned in the public debate.

The vote rezoning her family's farm gave U.S. Home Corp. permission to build 500 homes on the property near Ashburn, beside a meandering waterway called Goose Creek. That was three times the 163 homes that could have been built with no board action, although within the limits of what was allowed under the county's plans.

Myers's second victory at that meeting came when Tulloch urged the county to purchase a parcel of land from the Islamic Saudi Academy Inc., a company affiliated with a conservative religious school in Fairfax County funded by the Saudi government. The school had intended to relocate to Loudoun but changed its plans.

Tulloch brought the deal to the board and urged supervisors to buy the land to build schools. Such an acquisition normally would take months as the county hashed out budget and planning issues, according to county officials. But Tulloch insisted that the supervisors move quickly, saying at the board meeting that he knew "for a fact" that the school had buyers willing to pay more than the county would pay. When asked later, Tulloch said developer Robert Buchanan was planning to pay more than the $13.5 million the county paid.

Buchanan said in a recent interview that he was going to pay considerably less -- "in the range" of $11 million. Buchanan had a contract to buy the land, records show, but agreed to step aside so the county could purchase it.

After the county completed its purchase, Myers and Carter Braxton received the sales commission, Jewell said. The Saudis had asked Myers to list the property, Jewell said, because as a supervisor in the late 1990s she had supported their plan to build the school in the face of virulent opposition ."They knew what she had gone through."

DOJ_NMG_0119055

Tulloch said in an interview that he did not learn that Myers was the agent until "well, well, well after the vote," saying, "in fact, a month probably went by" between the vote and his learning of Myers's role.

Two Loudoun officials, however, recalled Tulloch telling county staff in discussions days before that vote that Myers was handling the sale. "We clearly learned at that time that Dale was the broker for the transaction," said County Administrator Kirby M. Bowers, who was briefed by his staff.

Tulloch defended the purchase, saying the land has gained in value. It was assessed at $15.5 million in 2006. Nothing has been built on the property since the county bought it.

The sale netted the Saudis $10 million more than they had paid six years earlier.Talking Points Prepared

As the pro-growth supervisors settled into office in 2004, they appeared to be taking cues from people with a financial stake in board decisions.

Jeffery Cowart, president of Delta Strategies, Inc., a Leesburg public relations company that has advocated for Greenvest and others, coached Snow, another of the new pro-growth majority, on how to answer critics of growth, records show. In one set of " talking points," Cowart included advice on how Snow should respond if he was asked about political contributions from Greenvest. The company gave $2,000 to his campaign.

"Steve Snow's vote cannot be bought and sold," Cowart wrote in a 2004 e-mail, providing language for the supervisor. "I served my country in the military for 25 years to protect and preserve democracy and the buying and selling of votes was not among those values."

Cowart also wrote statements for Snow supporting Cowart's causes, including a local hospital he represented, e-mails show. And Cowart helped prepare a PowerPoint presentation that Snow could use in meetings to represent his thoughts on why more development in his district was good for the county, records show.

Snow, 61, who refers often to his experience as a military planner, said his work with developers simply reflected his political beliefs.

"I did what I said I was going to do," he said in a recent interview. "There's a supposition, I think, built in now to the psyche of the American people, that if you're in politics that you . . . inherently must be corrupt, that you must be on the take," he said. "They just assume you're there for self-interest, as opposed to . . . public service." Snow said he is in office to protect property rights and solve problems for residents in his district.

Once, in a moment of frustration, Snow became discouraged with his party and entertained thoughts of resignation. He dashed off an e-mail in 2005 to county GOP chairman Minchew, who had joined with Myers, Greenvest and others to help elect the new board.

"I will resign . . . as Supervisor if you wish," Snow wrote.

Minchew pressed Snow to stay.

"You are too valuable."The Ritz-Carlton Project

In the summer of 2005, the board was scheduled to vote on an enclave of resort homes managed by the Ritz-Carlton. The development, including a Jack Nicklaus-designed golf course, is across the street from Oak Hill, the still-pristine estate where President James Monroe retired in 1825.

On the eve of the vote, Tulloch and Snow received a detailed e-mail from Minchew, who represented the Ritz developer and had urged them to support his proposal. The vote was also important to Myers: She had been hired as a consultant for the project, according to Jim Brown, one of the developers.

Minchew wanted two entrances to the development so that service workers could enter separately from wealthy residents. The owners of Monroe's estate opposed the plan, saying it would disturb their historic property, a case also made by Supervisor James Burton (I-Blue Ridge).

"Dear Bruce and Steve . . . You have one heck of an agenda tomorrow," read the e-mail from Minchew dated July 18.

"I would suggest that Steve simply make the motion (we will e-mail over to you today a draft motion) and let the application be approved over Mr. Burton's objections, probably on a 5-4 vote," wrote Minchew, who copied the e-mail to Myers.

"I think that as little discussion as possible is best course of action."

DOJ_NMG_0119056

The two supervisors followed Minchew's script, with Snow making the motion and Tulloch seconding it. After heated debate, the vote came out better than Minchew predicted: 6 to 3.

Minchew declined to be interviewed.

Tulloch had taken a keen interest in the Ritz project, which he said would be an attractive, high-end addition to the county. He traveled to a similar Ritz-Carlton resort in Jupiter, Fla., at his own expense, he said, and lunched with Nicklaus to discuss golf courses. Later, he offered to use his office budget to fly Zoning Administrator Melinda Artman there to demonstrate the benefits of such a development, Artman said.

Artman said she declined the trip, saying that she would base her zoning decision solely "on what the ordinance says."This Year's Race

In its first two years, Loudoun's board of supervisors, driven by its pro-growth majority, approved more than 9,000 new homes brought forward by a host of building firms, according to county records.

Greenvest gained permission in four key votes to build more than 1,800 homes in addition to the roughly 300 that would have been allowed under the previous zoning. The total value of those additional homes could reach $1 billion, based on current sale prices.

The recent defeat by supervisors of the Dulles South plan, in which they rejected Greenvest's proposal to build 15,000 homes there, does not end the company's plans to build in the area. Greenvest is pursuing four major applications to build the same number of homes there. If the county rejects those plans, the company calculates that it could build about 2,000 homes without new approvals by the board.

Those who helped elect the pro-growth board in 2003 are gearing up for this year's race, and at least some of their efforts have been aimed at removing one supervisor: Waters, who fell out of line with some of her Republican colleagues.

Waters, the former executive director of the conservative Eagle Forum who had been elected with Myers's help, began balking in 2004 at Myers's calls for swifter home building in rural Loudoun and near Dulles.

"We need to ostracize her," Snow wrote in a 2004 e-mail. "She is anti-growth and anti-property."

Snow's e-mail went to Patricia Shockey, a Myers confidante. "Later when the opportunity presents itself, go for the jugular," Shockey told Snow. "Dale Myers will get her."

Suspected San Rafael Kidnapper Arrested Man Who Posed As FBI Agent Demanded $5K 'Bail' (SFC)

By Demian Bulwa, Chronicle Staff Writer

San Francisco Chronicle, January 22, 2007

(01-21) 16:38 PST SAN RAFAEL -- A 40-year-old San Rafael man's Sunday morning coffee run with his girlfriend turned into a terrifying ride when a young man posing as an FBI agent took him into custody for questioning, police said.

The couple had just bought coffee at a 7-11 store on Medway Road when a cream colored Lincoln Town Car pulled behind them on Canal Street, flashed a light at them, said Margo Rohrbacher, a San Rafael police spokeswoman. They pulled over.

David Charles Moon, 26, also a San Rafael resident, emerged in a crisp coat, a tie and a knit cap that said "FBI," Rohrbacher said.

Moon convinced the man to get into his Town Car and drove off. The girlfriend soon received a call at home from her boyfriend asking her to deliver $5,000 "bail" at a nearby home renovation store.

"Needless to say," Rohrbacher said, "that's not how we do business. That didn't sound right to her, so she called 911."

Moon saw police waiting for him and tried to flee. After leading police onto Highway 101, Moon took the central San Rafael exit and "vanished," Rohrbacher said. When police spotted Moon and the Town Car again, he again tried to drive away but crashed instead, suffering minor injuries.

The victim had escaped along the way and, minutes after Moon's crash, rang a San Rafael resident's door bell seeking help, and she called 911, Rohrbacher said.

Once officers put together the two incidents, they arrested Moon on suspicion of kidnapping and other charges. His bail was set at $1 million, and he faces the possibility of spending the rest of his life in prison, Rohrbacher said.

San Rafael police are looking into whether Moon pulled anyone else over posing as an agent.

"It's certainly very possible," Rohrbacher said.

Fake FBI Agent Kidnaps San Rafael Resident, Asks For $5k Bail (AP)

AP, January 22, 2007

San Rafael, Calif. (AP) -- David Charles Moon donned a knit cap that said FBI when he steered his car behind a San Rafael couple, flashed a light and told them to pull over, police said.

Moon, 26, emerged from his cream-colored Lincoln Town Car wearing a crisp coat and tie, and convinced the man he had just pulled over to come with him for FBI questioning.

The victim's girlfriend soon received a call from her boyfriend, who asked herr to deliver $5,000 "bail" at a nearby home renovation store.

"Needless to say," said San Rafael police spokeswoman Margo Rohrbacher, "that's not how we do business. That didn't sound right to her, so she called 911."

When Moon went to retrieve the money, he saw police waiting for him and led police onto Highway 101 before he "vanished" after taking the San Rafael exit, Rohrbacker said.

Police spotted Moon again later, but when Moon tried to drive away he crashed, suffering minor injuries.

Meanwhile the victim managed to escape and rang a San Rafael's resident's door bell. The resident called 911, Rohrbacher said.

Police arrested Moon on suspicion of kidnapping and other charges and set bail at $1 million.

San Rafael police are looking into whether Moon pulled anyone else over posing as an agent.

San Rafael PD Chases & Arrests Suspected Kidnapper (BCN)

Bay City News Wire, January 22, 2007

(BCN) SAN RAFAEL San Rafael police arrested a man Sunday morning suspected of posing as a police officer to kidnap a man and then holding him for ransom, San Rafael police spokeswoman Margo Rohrbacher said Sunday.

A man and a woman were leaving a 7-Eleven store in San Rafael between 5:30 a.m. and 6 a.m. when a man in what looked like an unmarked police vehicle pulled them over, Rohrbacher said.

The suspect, who was wearing an FBI baseball cap and had a spotlight and what looked like a police light the dashboard of his vehicle, then “arrested” the man, handcuffed him, put him in his car and drove away.

When the woman called the San Rafael Police Department to ask where she should go to pay his bail, police said they didn’t have any record of an arrest.

A short time later, the suspect called the woman from the victim’s cell phone and told her to meet him at a Home Depot store with $800 cash.

The woman called the police, who headed over to the Home Depot to meet the suspect.

A sergeant who was first on the scene saw a car matching the description of the vehicle the woman had given.

Two people could be seen inside the car.

When the suspect saw the sergeant, he sped away and entered northbound U.S. Highway 101 at the Bellam Boulevard onramp.

Once on the highway, police and the suspect reached speeds up to 100 mph, Rohrbacher said.

The suspect then took the central San Rafael exit and the car disappeared, Rohrbacher said.

Police put out a countywide all points bulletin on the suspect vehicle and discovered that it was an overdue rental car.

A short time later, officers spotted the vehicle near San Rafael High School on Mission Avenue.

This time there was only one person in the vehicle, Rohrbacher said.

The suspect fled from police again, but took a turn in the 400 block of East Francisco Boulevard too fast, lost control of his vehicle and slammed into a tree and a pole, Rohrbacher said.

Meanwhile, the San Rafael Fire Department received a call for medical help in the Peacock Gap area of Point San Pedro Road.

A man, who turned out to be the victim of the kidnapping, had knocked on a door in the neighborhood and asked for help.

He was bleeding from the head, Rohrbacher said.

The victim was taken to a nearby hospital for treatment.

The suspect, who has been identified as 26-year-old David Charles Moon, a San Rafael resident, was also taken to a nearby hospital where he will be treated and then arrested, Rohrbacher said.

Writers' Sources Sought In Pellicano Case (LAT)

By Chuck Philips, Times Staff Writer

The Los Angeles Times, January 22, 2007

A co-defendant accuses federal authorities of giving two reporters secret information.

Defense attorneys for a codefendant of indicted private investigator Anthony Pellicano have accused federal agents pursuing a wiretapping case against the pair of leaking confidential information.

In a motion filed Friday in U.S. District Court in Los Angeles, lawyers for entertainment attorney Terry Christensen call on the court to force New York Times reporters David Halbfinger and Allison Hope Weiner to reveal the names of their sources for a report published Jan. 11 in the newspaper.

The motion contends that the article slanted the evidence against Christensen, an entertainment lawyer who is accused of ordering an illegal wiretap of billionaire Kirk Kerkorian's former wife.

At the time, the couple were embroiled in a contentious child-support battle, and Christensen hired Pellicano as his private investigator.

The motion said the article presented confidential recordings "out of context" with the intent to "pillory [Christensen] in public." Christensen's legal team accused the government of leaking material that their client could not rebut because he was bound by a gag order imposed by the court.

In the article, the New York Times printed excerpts of 33 recordings Pellicano made of his own conversations with Christensen — unbeknownst to the entertainment lawyer.

The story quotes from several of those conversations, which appear to indicate that Christensen and Kerkorian knew that the billionaire's ex-wife, Lisa Bonder Kerkorian, was being wiretapped by Pellicano.

The story also quotes Christensen as saying that Kerkorian would likely hire Pellicano again.

In the motion, Christensen's lawyer, Terree A. Bowers, says prosecutors have done nothing to prevent or ameliorate repeated breaches of the court's April 3 order not to release documents and audio recordings related to the case.

Three weeks after the court issued the gag order, the New York Times ran an article by Halbfinger and Weiner that cited selective portions of raw FBI interviews — classified reports that reflect the personal views of an interviewing agent, not verbatim quotes of what a witness actually said, the motion states.

Shortly after the article ran, the U.S. attorney's office in San Diego launched an investigation to determine the sources of the leaks.

The motion says that Christensen and his legal team immediately volunteered to participate in interviews with FBI agents and the San Diego prosecutor. (Assistant U.S. Atty. Robert Ciaffa holds that job but is not named personally in the document.)

In addition, the motion says, Christensen's lawyers provided the U.S. attorney's office with "crucial witnesses and information" to aid FBI agents in their investigation.

One of those witnesses, an unnamed Los Angeles businessman, told Ciaffa and his investigators that the New York Times reporters had revealed to him that they obtained court-sealed documents from the government before they were released to the defendants as discovery materials in April, the motion says.

In the motion, Bowers appeared to express frustration with the pace of the investigation into the leaks.

"This [leak investigation] is going nowhere," Bowers wrote. "Approximately nine months have passed since the San Diego U.S. attorney's office initiated its investigation. There is no justification to delay the subpoenas of the two reporters."

On Sunday, the U.S. attorney's office in San Diego did not return calls; neither did the New York Times nor the FBI.

Broward Exec Facing 20 Years In Prison (MH)

By Patrick Danner

The Miami Herald, January 22, 2007

Peter Lombardi, the former president of Mutual Benefits Corp., was sentenced to 20 years in federal prison Friday for his role in defrauding some 30,000 investors out of nearly $1 billion.

Lombardi had pleaded guilty in October to one count of securities fraud in the massive investment scheme, which was shut down in 2004.

Lombardi, 56, could have faced additional charges that carried a potential life sentence, but he has agreed to cooperate with the FBI and the U.S. Attorney's Office in their ongoing investigation into Mutual Benefits -- a viatical and lifesettlement company that was based in Fort Lauderdale.

Lombardi's assistance could lead to the indictment of other individuals, said Jon May, Lombardi's Fort Lauderdale lawyer.

Joel Steinger, described by authorities as Mutual Benefits' "de facto chief executive," has not been charged. His brother, Leslie Steinger, who authorities say also had a role at the company, hasn't been charged either. Their lawyers couldn't be reached Friday.

"There were a lot of people who worked there who are potentially targets of the government's investigation," May said.

Mutual Benefits purchased the life insurance policies of the sick and elderly and then sold them to investors, who paid less than the policies' face values. Such investments are often referred to as ''death futures" because investors stand to earn a better profit the quicker the death.

PONZI SCHEME

Authorities alleged the company defrauded investors by using bogus life expectancies in figuring when the insured would die. When the insured outlived their life expectancies, authorities said Mutual Benefits used money from new investors to pay premiums on those insurance policies -- making it a modern-day Ponzi scheme.

The 20-year sentence imposed by U.S. District Judge Paul Huck was the maximum Lombardi could have received on the securities-fraud charge. May said he hopes Lombardi will receive a reduction based on his assistance. Lombardi doesn't have to report to prison until April 9 so he can continue to assist prosecutors.

"Mr. Lombardi said . . . he was very sorry for his conduct," May said of Lombardi's court appearance Friday.

A March 30 hearing has been set to determine the restitution to be made by Lombardi. He previously paid $6 million to settle a civil action brought by the Securities and Exchange Commission.

As part of the same settlement, the Steingers each agreed to pay $9.5 million. But more than a year later, the Steingers have yet to pay in full, according to Alise Johnson, a lawyer with the SEC in Miami.

BALANCE DUE

Joel Steinger has paid about $3.5 million, Johnson said. The balance hasn't been paid yet because of a claim to the money made by his estranged wife, who filed for divorce in 2005.

Leslie Steinger has paid about $5 million. The balance was due last month, but Johnson said he failed to make the payment. He has been given until the end of this month to pay the rest.

The SEC maintained the insurance investments Mutual Benefits sold to investors were securities subject to the agency's regulation. A federal judge later agreed. Lombardi and the Steingers agreed to the $25 million settlement with the SEC without admitting or denying the allegations.

Last month, Clark Mitchell, a one-time Miami Beach doctor, pleaded guilty to one count of healthcare fraud for calculating fraudulently low life expectancies for the insured who sold their policies to Mutual Benefits. His sentencing is set for March 7.

FEMA Swindler Gets 14 Months (BSH)

Biloxi Sun Herald, January 22, 2007

JACKSON - A New Orleans man has been sentenced to 14 months in federal prison after he used a FEMA registration number to get multiple rooms at Jackson hotels after Hurricane Katrina, then rented out the rooms for cash.

Derrick Shane Miller was also sentenced to three years of supervised release after his prison term and was ordered to pay $27,811 in restitution to FEMA, U.S. Attorney Dunn Lampton said in a Friday statement.

Miller pleaded guilty to the charges in October.

Federal prosecutors said Miller used the FEMA number to secure the rooms from Oct. 28, 2005, to March 31, 2006. He admitted his actions were part of a scheme to defraud the agency.

Miller was indicted June 6 after an investigation by the FBI, the Mississippi Bureau of Narcotics and the Hinds County Sheriff's Department.

As Thieves Go Online To Sell Loot, Their Victims Follow (USAT)

By Brad Heath

USA Today, January 22, 2007

Popular online marketplaces that have made it easier for thieves to sell stolen property also are making it easier than ever for victims to track what was taken from them.

Before the emergence of marketplaces such as eBay, petty thieves turned regularly to pawnshops to unload stolen gadgets, jewelry and other items. That left their victims no easy way to find and recover their property. Now, by using search engines, victims are often able to locate what was stolen and take steps to get it back.

"It's kind of evolved with the Internet," says Larry Abrahamson, district attorney in Colorado's Larimer County. "Basically, if a victim (in the past) wanted to find something that was stolen, they'd go and search the local pawnshops. Now all you've got to do is sit down at your computer. It's made it easier for victims."

Abrahamson's office is pursing a case in which security officers at a Fort Collins high school found 32 stolen computers for sale on eBay. The computers were taken in a break-in during the school's winter recess. Police were able to use the online listing to find and arrest two 17-year-old students, he says.

"It literally took a minute, a minute and a half to find them," says Norm Bastian, security manager of the Poudre School District in Fort Collins.

No one keeps track of how often victims or authorities recover stolen property online. Abrahamson says police still check with pawnbrokers as part of theft investigations more often than they search for items online. The largest online marketplace, eBay, cooperates daily with law enforcement but will not disclose the number of cases in which it is asked for assistance, spokeswoman Catherine England says.

Such searches are not without obstacles. EBay alone adds about 6 million items a day, and even if stolen property shows up on the site, picking it out from among dozens of similar items isn't always easy.

Even so, "We've actually heard from law enforcement that eBay is probably one of the dumbest places criminals can go to try to sell stolen property," England says. That's because sellers need to provide detailed personal information so they can be paid.

Tammy Schroden spent the better part of a day tracking down her son's possessions on eBay after they were stolen from a Northwestern University fraternity house in Evanston, Ill., in June. She located his Nintendo game system and tipped off campus police, who bid on it but lost out to another bidder at the last minute, school spokesman Charles Loebbaka says.

Schroden's own bid — $35 for two of her son's video games — was a winner, though. When the games arrived in the mail, they had "Schroden" written on the back, she says. Eventually, Loebbaka says, campus police identified a 17-year-old from Evanston as the seller, and persuaded the boy's father to give back a stolen laptop and printer and to pay $2,600 restitution. "If I didn't pursue this," Schroden says, "I know it wouldn't have gotten as far as it did."

State Inmates Outlive Those On Outside, Report Says (CHIT/AP)

DOJ_NMG_0119061

Associated Press

Chicago Tribune, January 22, 2007

WASHINGTON -- State prison inmates, particularly blacks, are living longer on average than people on the outside, the government said Sunday.

Inmates in state prisons are dying at an average yearly rate of 250 per 100,000, according to the latest figures reported to the Justice Department by state prison officials. By comparison, the overall population of people ages 15 to 64 is dying at a rate of 308 a year.

For black inmates, the rate was 57 percent lower than the overall black population--206 versus 484. White and Hispanic prisoners both had death rates slightly above their counterparts in the overall population.

The Justice Department's Bureau of Justice Statistics said 12,129 state prisoners died from 2001 through 2004.

Eight percent were murdered or killed themselves, 2 percent died of alcohol, drugs or accidental injuries, and 1 percent of the deaths could not be explained, the report said.

The rest of the deaths--89 percent--were due to medical reasons. Of those, two-thirds of inmates had the medical problem they died of before they were admitted to prison.

Medical problems that were most common among both men and women in state prisons were heart disease, lung and liver cancer, liver diseases and AIDS-related ailments.

But the death rate among men was 72 percent higher than among women. Nearly one-quarter of the women who died had breast, ovarian, cervical or uterine cancer.

Four percent of the men who died had prostate or testicular cancer.

More than half the inmates 65 or older who died in state prisons were at least 55 when they were admitted to prison.

State prison officials reported that 94 percent of their inmates who died from an illness had been evaluated by a medical professional for that illness, and 93 percent got medication for it.

With Kids Dead, L.A. Vows Gang Crackdown (WP/AP)

By Jeremiah Marquez, The Associated Press

The Washington Post, January 22, 2007

LOS ANGELES -- A 14-year-old girl was killed by Hispanic gang members who police say were targeting blacks. A 9-year-old girl died after being hit by a stray bullet as gang members exchanged shots near her home. A cop was wounded in a gunbattle with a suspected gangster.

The soaring violence is prompting police and politicians to promise one of the toughest crackdowns against gangs in city history.

"This is the monster, this is what drives people's fears," said Deputy Chief Charles Beck, who oversees a South Los Angeles district where gang-related crime jumped 24 percent during the year ending in November.

However, the effort has met skepticism in the city that has an estimated 700 gangs with 40,000 members _ about four for every police officer _ and that gave birth to some of the nation's most notorious gangs, including the Crips, Bloods and Mara Salvatrucha, or MS-13.

"It's too big, it's too entrenched, it's too intimately connected with the urban setup here," Malcolm Klein, a gang expert at the University of Southern California, said of the gang problem. "You can reduce it. But the idea you can somehow eliminate it is ridiculous."

Gangs have thrived for generations in Los Angeles, but the especially violent past year caught police brass off guard. Citywide crime rates fell in 2006 but gang-related offenses increased 14 percent _ the first hike in four years. In the San Fernando Valley, gang murders, assaults, robberies and other crimes jumped 42 percent.

Mayor Antonio Villaraigosa has appealed to U.S. Attorney General Alberto Gonzalez for millions of dollars in anti-gang funds and for more federal prosecutors to pursue racketeering and other charges mostly used in the past against organized crime.

FBI Director Robert Mueller has assigned agents to an anti-gang task force in the San Fernando Valley to work alongside police deputized as federal officers.

DOJ_NMG_0119062

Authorities promise to increase enforcement in afflicted neighborhoods. The officers will be armed with injunctions forbidding gang members from assembling in certain areas, lawsuits aimed at shutting down gang hangouts as nuisances and probation orders barring gang members from returning to their neighborhoods after their release from prison.

In some ways, the approach mirrors a multi-agency Boston campaign in the 1990s, known as the Boston Miracle, that resulted in a dramatic decline in gun violence and murder rates.

Past efforts in Los Angeles, however, have produced mixed results.

"We've seen this movie before," said Mario Corona, a former member of the Pacoima Criminals gang in the San Fernando Valley who now works to rehabilitate gang members.

The city has been hampered in the past by a lack of resources and changing department priorities, according to a city-funded report by civil rights attorney Connie Rice.

And a 1980s anti-gang unit known as Community Resources Against Street Hoodlums, or CRASH, was disbanded after allegations of police corruption. Few of the thousands of suspected gang members in South Los Angeles were ever charged.

Residents are demanding renewed action while trying to stay out of the line of fire.

Esteban Martinez, 41, hears gunshots at night in the San Fernando Valley, where he lives with his wife and four small children.

"Everybody is afraid, but they don't speak (to police) because they are afraid to get into trouble with the gang members," Martinez said. "I'm worried about my family."

Two weeks ago, an officer searching a house in the area for wanted gang members was wounded in the leg when a gang-banger fired through a closed bedroom door.

Nothing has outraged the city more than the gang slayings of children. Last month, 9-year-old Charupha Wongwisetsiri was standing in her family's kitchen when she was struck by a stray round from gang crossfire in Angelino Heights near downtown.

That came just five days after the shooting death of Cheryl Green, a 14-year-old black girl, who was talking to friends in the Harbor Gateway area. Two Hispanic gang members, who police said were intent on killing blacks, were arrested.

Alex Sanchez, a former MS-13 member who now runs a gang intervention program, said police moves to identify the worst gangs could instead lead to more crime.

"It's feeding the egos of gang members," Sanchez said. "They're all going to want to be on the top 10."

Others said nothing will change without more jobs and better education.

"Until we get those gangsters into real jobs, we are going to have a lethal ongoing problem, pure and simple," said Jorja Leap, a social welfare professor and gang expert at the University of California, Los Angeles, who advises the mayor. "It will never change."

Racial Attacks By Gangs Rising, L.A. Officials Fear (LAT)

By Megan Garvey And Patrick Mcgreevy, Times Staff Writers

The Los Angeles Times, January 22, 2007

Statistics give only a partial picture, because determining motivation can be difficult.

The headlines are among the most stark documenting gang violence. A Latino gang member, without saying a word, guns down a 14-year-old black girl standing on a sidewalk. A black gang member shoots a Latino toddler point-blank in the chest.

For the most part, though, the role racial animosity has played in gang crime has gone unexamined, largely undocumented in crime statistics and often tamped down by politicians and law enforcement officials anxious about inflaming tensions.

That changed this month when Los Angeles Mayor Antonio Villaraigosa, Police Chief William J. Bratton and L.A. County Sheriff Lee Baca all spoke with unusual candor of their concern that an increasing number of gang crimes appear to be born out of racial hatred. In a few instances, the Los Angeles Police Department has identified Latino gangs they say are indiscriminately targeting African American residents in what appear to be campaigns to drive blacks from some neighborhoods.

The acknowledgment by top officials, some activists say, has been a long time coming.

"What is happening is similar to small earthquakes taking place along a major fault line," said Khalid Shah, executive director of Stop the Violence Increase the Peace Foundation, who said he has heard from numerous communities across the

DOJ_NMG_0119063

region reporting rises in racially motivated gang attacks. "Ultimately the danger is that there will be an explosion, particularly, I think, if we put our heads in the sand and try to act like this issue isn't real."

But getting a handle on how much gang violence is rooted in racism is difficult.

A Times analysis of Los Angeles Police Department statistics gives a partial picture, with numbers available only in cases in which a suspect's race is known.

The tracking shows that the vast majority of the most serious gang crime remains intra-racial: Latinos attacking Latinos, blacks attacking blacks.

Last year there were more than 2,700 black-on-black or Latino-on-Latino incidents compared with slightly more than 500 interracial attacks.

Intent is often unknown

Harder to determine is intent. Without an admission of motivation, and often without even a suspect to question, knowing why a victim was targeted by a gang member is difficult: Was it skin color? Did they or family members have direct ties to gangs? Was it just bad luck? Mistaken identity?

In cases where gang-related homicide, aggravated assault or robbery crossed racial lines, LAPD tracking shows an 11% jump in incidents from 2002 to 2006; from 213 to 240 black-on-Latino attacks; and from 247 to 269 Latino-on-black attacks. As those interracial crimes rose, intra-racial gang attacks fell by 23%, from 3,577 to 2,780.

In a city where blacks and Latinos make up 96% of known street gang members and often live in proximity, it would not be unexpected that the two groups account for the vast majority of interracial gang crime.

"It should be no surprise to anyone that gang members have racist tendencies," Bratton said. "Both street and prison gangs are constituted on race. But the reality is, most gang crime is motivated by greed and territory. Nevertheless, it is right that penalties are enhanced for hate crimes, and the LAPD will continue to aggressively investigate them."

While citywide statistics show small bumps in interracial attacks, some neighborhoods are seeing troubling increases.

Of the 13 attempted murders involving gang members in the west San Fernando Valley since July, 10 involved black victims and Latino suspects, Lt. Tom Smart said. In many cases, the black victims were not affiliated with gangs, he said.

Still, Lt. Paul Vernon, an LAPD gang expert, said the citywide figures should be looked at in context.

Latinos and blacks are not equally represented in either the city's population or documented gang membership. About 49% of Los Angeles residents are Latino and about 10% are black, according to the most recent Census Bureau estimates.

Of the city's estimated 39,000 street gang members, the LAPD reports about 56% are in Latino gangs and about 40% in black gangs.

Of homicides, aggravated assaults and robberies committed by black gang members, about 2 in 10 are against Latinos. About 1 in 10 of the crimes committed by Latino gang members are against blacks.

Even with an uptick last year, gang crimes remain far below the historic highs of more than a decade ago.

Geography, identity and money remain driving forces in gang crime far more than race, law enforcement officials said.

"The vast majority of gang crimes are not based on hate, as in 'I'm going to get you because of your race.' They are based on 'You are an outsider,' " Vernon said. "Now, certainly, race is one thing that can distinguish an outsider, but that doesn't mean it is based on hatred of the race."

Where violent crime takes place plays a major role in the relatively comparable number of interracial crimes committed by Latino and black gang members, despite blacks making up a much smaller portion of the population. A significant number of gang crimes occur in the Newton, Southwest, Southeast, and 77th Street divisions — an area of the city that generated 37% of violent crime citywide last year and still has a large black population.

Those who follow gang crime caution that statistics currently kept by law enforcement make it difficult to determine specific motivations for most crimes. In hundreds of cases even the race of the suspect is unknown.

In some neighborhoods, however, racism is clearly a factor.

One recent case to draw national attention was the shooting death last month of Cheryl Green, 14. Green, who was black, was allegedly targeted by 204th Street Latino gang members because of her race.

DOJ_NMG_0119064

Her shooting was one in a recent series of racially charged incidents in that neighborhood, where a decade ago the LAPD had won awards for cracking down on the 204th Street gang and a rival black gang.

Assistant Chief Earl Paysinger said the 204th Street gang isn't like most other gangs in the city. "They have taken it to the extreme with utter hate. And they have become more extreme. Spraying 'No N's here' on the walls," he said.

Racial conflict is not new in Los Angeles, where long-simmering racial tensions and anger over police treatment of blacks fueled major riots in 1965 and 1992.

By the time Los Angeles erupted over the not-guilty verdicts in the Rodney G. King police beating trial, issues between white and black Los Angeles were already being overtaken by a massive demographic shift of Latinos into the region.

By the early 1990s, many South Los Angeles neighborhoods had become majority Latino, a population that has continued to grow in recent years.

Coexistence is strained

With that shift came changing gang boundaries. Alex Alonso, who studies gang territories in Los Angeles and runs the website streetgangs.com, said that though rival black gangs have traditionally had well-defined territories that do not overlap, Latino and black gangs had long coexisted on the same streets with little trouble.

As more and more areas changed from majority black to majority Latino — and conversely as blacks moved into traditionally Latino areas such as Harbor Gateway and parts of the Valley — open conflict broke out in some cases.

At the same time, Alonso said the underlying tensions were not openly talked about, with some politicians worrying that such dialogue might inflame racial divisions.

Gang violence in general, he said, has been a difficult topic for leaders hoping to promote their areas as good places to live.

He pointed to the situation in Highland Park, where the Avenues, a notorious Latino gang, in 1995 unleashed a six-year campaign to drive African Americans out of their predominantly Latino neighborhood.

Last summer, four of the gang's leaders were found guilty in federal court of hate crimes. Three were sentenced to life in prison, and the fourth is scheduled to be sentenced Monday.

"In Highland Park no one wanted to discuss what was really going on," Alonso said. "Who knows what would have happened if they had? Maybe something would have been done sooner."

In the absence of admissions from suspects, local leaders have been quick to downplay race as motivation. Last summer, when three Latinos, including a 12-year old boy, were killed execution-style by black suspects in South Los Angeles, Villaraigosa urged residents not to jump to conclusions, although police said the victims had no gang ties and no known enemies.

"There is no information to believe that this is racially motivated," he said at the time. The case is still under investigation.

Racism often downplayed

Fernando Guerra, a Loyola Marymount professor and director of the Center for the Study of L.A., said there has been little upside for politicians in talking about the racial overtones of gang violence. The instinct, he said, is to downplay racism as a cause, in part because "it's not clear what the policy will be or even if there is a public policy that would work."

One factor in racial street violence may be long-standing racial divisions in jails and prisons. Early last year , thousands of Latino and black inmates in Los Angeles County jails engaged in a series of fights over more than a week, leaving scores injured and two black inmates dead.

As felons go in and out of jails and prisons in the state with increasing frequency, some observers worry that the strict racial divisions learned behind bars are becoming internalized.

"Given the racial dynamics of violence in prison, it would be very scary if that got transferred onto the street," said Cheryl Maxson, a UC Irvine professor who studies crime and street gangs.

Robin Toma, executive director of the Los Angeles County Human Relations Commission, called gangs a "serious problem" when it comes to hate-based crimes.

Last year, the county reported the first increase in hate crimes since 2001. But even with the jump, hate crime reports in 2005 were at their second-lowest level in the county since 1990.

DOJ_NMG_0119065

And the raw numbers are still tiny in comparison with overall crime — 69 incidents of documented gang hate crimes compared to tens of thousands of crimes reported countywide.

One step to better understanding the role of racism would be for law enforcement agencies to track and make available to researchers information about specific motivations in gang crimes when known.

"When you're talking about gang-on-gang violence, you ask, 'How much of that is part of normal gang conflicts over drugs and territory?' " Maxson said. "The question is: 'What is the role of racial conflict when you think of gang conflict?' "

On the streets, though, Alonso said both black and Latino residents in the gang neighborhoods he regularly visits have little doubt. From their perspective, he said racially motivated gang attacks have "absolutely gone up."

Times staff writers Richard Winton and Evelyn Larrubia contributed to this report.

Kidnap Suspect Dreads Facing His Parents (WP/AP)

The Washington Post/AP, January 22, 2007

NEW YORK, Jan. 21 -- The man accused of kidnapping two Missouri boys and holding one of them for four years told a newspaper that life was good for him during that period.

Michael J. Devlin, 41, said his own parents, who live nearby, have not visited him since his arrest earlier this month, the New York Post reported Sunday.

"I don't know how I'm going to explain myself to my parents. It's much easier talking to a stranger about these things than your own parents," Devlin told the Post in two 15-minute interviews at the Franklin County Jail in Union, Mo. They were his first public comments, aside from a brief court appearance, since his arrest.

The pizzeria manager is accused of taking William "Ben" Ownby, 13, just after the boy got off a school bus Jan. 8 in Beaufort, Mo., about 50 miles southwest of St. Louis. A schoolmate's tip about a white pickup truck led authorities to Devlin's apartment in Kirkwood, Mo., a St. Louis suburb, where they found Ben and Shawn Hornbeck, 15, on Jan. 12. Shawn had been missing since 2002.

"I guess I was relatively happy" during those four years, Devlin said.

Devlin pleaded not guilty Thursday to charges of kidnapping Ben. He also is charged with kidnapping Shawn but has not entered a plea in that case.

Devlin, who refused to discuss anything related to the case, said he "was never really interested in" romantic relationships. He would not say whether he is attracted to women.

"I can't talk about that because it has to do with the case," he said.

The Post said Devlin appeared downcast and red-eyed during the first interview Friday but was smiling and more upbeat during an interview Saturday.

"I feel nothing," he said in the first interview. "I hide my emotions from other people. I hide the way I feel."

Around 2002, he started losing contact with close friends, most of whom he knew from the pizza parlor he managed in Kirkwood.

"I guess you could say I was lonely. All my friends starting getting married and having kids," he said. "Hanging out with friends just becomes a lower priority" for them.

Devlin's attorneys, Michael Kielty and Ethan Corlija, criticized jail security Sunday and said they had previously advised their client against talking to the media.

They said they had a verbal agreement with jail officials that only family and Devlin's attorneys would see him. The lawyers said the reporter who got in to see Devlin presented herself as a "family friend" to jail officials, not as a reporter.

Kielty also said the woman told Devlin she was writing for a university publication.

Post spokesman Howard Rubenstein said, "The response of the New York Post is that they stand by their published report."

Kielty and Corlija said they planned to ask a judge Monday to move Devlin to a "more secure" facility.

"I don't care if she's a reporter for the New York Post or the milkman -- the fact that she can get in is a big deal," Corlija said.

DOJ_NMG_0119066

Franklin County officials plan to investigate how the reporter, Susannah Cahalan, got access to Devlin, the St. Louis Post-Dispatch reported.

Nightclub Shooting May Beget Legislation (WP)

By Susan Levine And Theresa Vargas

The Washington Post, January 22, 2007

In the wake of a teenager's death this weekend in a packed District nightspot, D.C. Council member Jim Graham plans a meeting within days of police, regulators, industry officials and parents to craft emergency legislation barring minors from clubs that serve liquor.

"There's something wrong here," Graham (D-Ward 1) said yesterday as he weighed his options as chairman of the committee overseeing liquor control. "It's pretty amazing that the only prohibition in D.C. law in terms of a minor being in an establishment where alcohol is available [deals with] a minor being in a liquor store during school hours."

Taleshia Ford, 17, was killed early Saturday morning at Smarta/Broadway, at 1919 Ninth St. NW, when another patron's gun fired during an altercation with a bouncer. Police have made no arrests in the case.

Despite catering to teenagers, the business had a license allowing it to serve alcohol to anyone 21 and older, and the dance floor was crowded with a combination of ages. The club's owner, Smart E. Aziken, did not respond to calls seeking comment yesterday.

Graham said he was greatly concerned by the dangerous potential of "mixing alcohol and adults and teens" in a nightclub, not only because of the possibility of adults buying drinks for minors but also because of the chance teenagers could be induced into risky behavior. In the absence of city law, bars and nightclubs that exclude underage patrons do so at their discretion.

"This has got to stop," Graham said, adding that he hopes to have a bill ready for the council's Feb. 6 session. Through a spokesman, Mayor Adrian M. Fenty (D) said he would support strengthened legislation to protect youths from such situations.

Smarta/Broadway, also known as Club 1919, was temporarily shut down by police after the shooting. Its black wrought-iron doors were secured yesterday by a thick rusted chain held together by two locks. Taped outside were three "Notice of Closure" signs.

"The Chief of Police finds that continued operation of this establishment would present an imminent danger to the health, safety and welfare of the public," the signs read. Police have the authority to keep the business closed for 96 hours.

The club, near the U Street corridor, opened in September 2004. According to Jeff Coudriet, director of operations for the city's Alcoholic Beverage Regulation Administration, its application specified it would have seating for 50.

During its first year, the club was cited for selling and serving alcohol after hours, and Aziken, 44, was given a $2,000 fine and a five-day suspension. The city cited the club for additional violations last May, including a noise complaint and an allegation that patrons were allowed to leave with liquor in hand. Aziken was due to appear Wednesday for a hearing on those matters.

"In layman's terms, he's sort of racking things up here," Coudriet said.

Because of this weekend's violence, Aziken is expected tomorrow at a "summary suspension hearing" by the agency's Alcoholic Beverage Control Board, which can indefinitely withhold the club's license or revoke it. "It's firmly in our hands at that point," Coudriet said.

Meanwhile, Ford's family continued making funeral arrangements, and police pursued their investigation of the shooting. The girl, a senior at Booker T. Washington Public Charter School, had persuaded her mother to let her go to the club with older relatives.

"It's rough," said an uncle, Richard Bynum. "They're taking this real hard."

Police said the gun was taken into Smarta/Broadway by a male friend of a woman ejected earlier in the evening, allegedly for smoking marijuana. A half-dozen security guards might have been on duty, but the club had no metal detector. Officers say they believe the gun discharged accidentally.

The department, which had no leads yesterday on the pair's identity, is offering up to $25,000 to anyone who provides information leading to an arrest and conviction in Ford's killing. Authorities asked people with information to call detectives at 202-727-9099.

DOJ_NMG_0119067

Cmdr. Larry McCoy, who heads the 3rd Police District, said neighbors had complained to officers about noise disturbances at the club but not about more serious problems.

"It wasn't on my radar" before, McCoy said. "It is now."

CIVIL LAW:

Unabomber Wages Legal Battle To Halt The Sale Of Papers (NYT)

By Serge F. Kovaleski

The New York Times, January 22, 2007

Nine years after he began serving a life sentence for the Unabomber crimes, Theodore J. Kaczynski is fighting to reclaim more than 40,000 pages of his writings and correspondence so he can preserve them in their rawest form for the public to read.

Mr. Kaczynski, 64, is in a legal battle with the federal government and a group of his victims over the future of the handwritten papers, which include journals, diaries and drafts of his anti-technology manifesto.

The journals contain blunt assessments of 16 mail bombings from 1978 to 1995 that killed 3 people and injured 28, as well as his musings on the suffering of victims and their families. The government wants to auction sanitized versions of the materials on the Internet to raise money for four of Mr. Kaczynski's victims.

But, citing the First Amendment, Mr. Kaczynski has argued in court filings that the government is not entitled to his writings and has no right to alter them. The writings were among the items taken from his remote Montana cabin after his arrest in April 1996. In a motion drafted in pen, he said he planned to argue that the government had too much discretion under a federal restitution law to confiscate writings.

The four victims pursuing restitution from Mr. Kaczynski were initially reluctant to agree to the auction, fearing it could ghoulishly generate more notoriety for him and further publicize their pain. But some were equally horrified by the prospect of Mr. Kaczynski reclaiming his writings.

One of the victims, Gary Wright, a computer-store employee seriously injured in an attack 20 years ago next month, said it was difficult for the four to reach a consensus.

"How do you take four people and try to come to an agreement when they have been wronged in different ways and are in different stages of healing with different types of losses?" said Mr. Wright, now a businessman in Salt Lake City. "I'm sure that emotions were running rampant and that people were reliving it."

Mr. Kaczynski came to be known as the Unabomber after the Federal Bureau of Investigation's code name for the case, Unabom, coined because the targets included universities and airlines. In his 18-year bombing campaign Mr. Kaczynski seemed bent on thwarting the advance of technology, and his victims included university professors, scientists and business executives.

One victim who is not seeking restitution, David Gelernter, a professor of computer science at Yale, said in a letter to the court that he hoped "the criminal's property will be destroyed, or (if need be) sealed for a century at least and then made available at no charge to scholars of depravity."

A federal judge in Sacramento approved the government's auction proposal last August as a way for the group seeking restitution to collect some of the $15 million it is owed by court order. But the judge ordered that any references to Mr. Kaczynski's victims be deleted.

Mr. Kaczynski challenged the deletions, asserting that they would violate his right to freedom of expression, and that his writings should remain intact.

A lawyer for Mr. Kaczynski, John P. Balazs, said his client wanted to donate the originals to a library.

The Labadie Collection at the University of Michigan, which houses materials on anarchism and other protest movements, already has a sizable collection of Mr. Kaczynski's more recent writings and of correspondence since his arrest. Kelly Cunningham, a spokeswoman for the university, said that if Mr. Kaczynski offered to turn over additional writings, the university would examine them to determine whether they were suitable for the collection.

Among the documents that would be auctioned are letters that Mr. Kaczynski received over 25 years at his Montana cabin from his brother, David, and his mother, Wanda.

DOJ_NMG_0119068

It was David Kaczynski who led the F.B.I. to his older sibling. And while he expressed support for the victims, he said he was distressed that private family correspondence might fall into the hands of strangers and that the government had not asked him if he wanted the letters.

"I'm in favor of anything that would help the victims," David Kaczynski said in an interview. "But in a personal sense, having these letters treated as murderabilia is appalling to us. How do you balance the need for human decency and dignity with doing the best thing?"

David Kaczynski said this would not be the first time that he had felt let down by the federal government. The F.B.I. had promised to keep his role in the case a secret and to give the family at least one day's warning before they arrested his brother. They did neither.

"I feel our family has a stake in preserving our privacy and dignity," he said, "but certainly our dignity is compromised by having our letters to Ted transformed into letters of curiosity for some collector of celebrity murder cases."

In the latest twist in a three-year legal battle over the writings, Theodore Kaczynski is adopting a new strategy that could, one of the prosecutors said, mire the case in the federal courts for at least another year or two.

Also known as Inmate 04475-046 at the federal maximum-security prison in Florence, Colo., Mr. Kaczynski has asked an appeals court to assign him a new lawyer who is an expert in First Amendment litigation. Otherwise, he has told the court, he wants to represent himself in an appeal of the ruling that authorized auctioning the papers.

In approving the auction, Judge Garland E. Burrell Jr. rejected Mr. Kaczynski's argument that the sale and altering of the original writings would violate the First Amendment.

Because of the pending appeal of Judge Burrell's ruling, the four victims cannot receive, for the time being, the $7,025 the government collected towards restitution from the sale of Mr. Kaczynski's interest in his Montana land, according to Ana Maria Martel, an assistant United States attorney.

Susan Mosser, whose husband, Thomas J. Mosser, was killed 12 years ago after opening a package containing a bomb that had been sent to their North Caldwell, N.J., home by Mr. Kaczynski, expressed indignation.

"Did he worry about the rights of Hugh Scrutton, Tom Mosser or Gil Murray, from whom he took the right to live?" she wrote in an e-mail message sent through her lawyer.

"Or the rights of the other fathers, sons, brothers, sisters or husbands who were recipients of his bombs, and who suffered real, painful and genuine irreparable harm? Or the rights of those who loved them?" asked Ms. Mosser, who is one of the parties seeking restitution.

Mr. Kaczynski wrote prolifically. He was the author of a 35,000-word manifesto that was published in The Washington Post seven months before his capture. The New York Times jointly financed publication of the tract. Soon after his arrest, Mr. Kaczynski appealed unsuccessfully to the Supreme Court, arguing that his prosecution had been so tainted by news reports that the government had forfeited its right to prosecute him. In January 1998, he pleaded guilty to the federal charges against him.

In addition to Mr. Kaczynski's writings, the government's auction inventory includes an assortment of more than 250 books from his cabin. The titles include "The Brothers Karamazov," "Roman Political Ideas and Practices" and "Fundamentals of Analytical Chemistry." Among the other items cataloged for auction are bowstrings and arrows in a quiver, two axes, a scabbard and a Montana driver's license.

In a July 2005 opinion that led the prosecution to propose an auction, the United States Court of Appeals for the Ninth Circuit said the government's original plan for the sale of Mr. Kaczynski's possessions "plainly fails to serve the victims and their families."

"Though the government purported to represent these individuals, we see nowhere in the record their viewpoints and desires regarding the enforcement of the restitution order," the opinion said.

The court said its understanding of the restitution plan was that the government would assign a value to Mr. Kaczynski's items, deposit that amount of taxpayer money into an account for the victims and keep the property indefinitely. The ruling sent the matter back to the district court and stipulated that if the government did not produce a reasonable plan to maximize the monetary return to the victims, Mr. Kaczynski would get his property back.

DOJ_NMG_0119069

Ms. Martel, the assistant United States attorney, said the group of four victims pressing for restitution initially had been unequivocal about not wanting any of Mr. Kaczynski's possessions sold.

"Every time there was a discussion about what we should do with the goods, it was like opening a scab for them," Ms. Martel said. "They were very anguished that Kaczynski would receive more publicity, and that someone was going to be buying his writings about taking pleasure in their suffering. But it was clear that if they didn't agree to an auction, it would all go back to Kaczynski."

The prospect of an auction also did not sit well with Mr. Gelernter, the Yale professor who was severely injured by one of the mail bombs in 1993. He filed a letter with the court in late 2005 in which he asked that the proposed sale not happen.

"My wife and I are outraged that the court has decided to turn the sale of this criminal's property into a circus — or (more accurately) into a P.R. bonanza, starring the criminal himself," Mr. Gelernter wrote. "Why have you decided to help vicious misfits with cash to burn lionize this evil murderer?"

In a recent e-mail message to The New York Times, Mr. Gelernter said he had nothing but pity and contempt for anyone who would bid on Mr. Kaczynski's items unless "they're acting for a police agency or some serious research project that seeks to rid the world of (not 'understand') such vicious cowardly thugs."

But he emphasized that the other victims had the right to "call their own moral shots" and that he hoped that they received everything they wanted .

"God knows they deserve it," Mr. Gelernter said.

Cuyahoga Comeuppance (WSJ)

The Wall Street Journal, January 22, 2007

The judicial hammer finally came down last week on the California law firm of Brayton Purcell, one of the giants of the asbestos bar. All the firm had done was file a false claim, lie in court and obstruct discovery. But hey, everyone has a bad day once in a while.

The ruling came from Ohio Judge Harry Hanna of the Cuyahoga County Court of Common Pleas, as he barred Brayton Purcell from practicing in his court. In the process, the judge exposed one of the darker corners of tort abuse: asbestos trusts, or funds set up by bankrupt companies to pay legal claims.

The judge is overseeing a suit brought by Brayton Purcell, which claimed Lorillard Tobacco's cigarettes had caused the late Harry Kananian's mesothelioma. What emerged in court, however, is that Brayton Purcell and other firms had previously filed numerous claims to other asbestos trusts claiming that Kananian had developed his asbestos cancer for different reasons.

This is called "double dipping," and because trust payouts are confidential the public rarely learns of these abuses. Our Kimberley Strassel exposed the Kananian scam last year on these pages, reporting on court records showing that Brayton Purcell and its lead attorney, Christopher Andreas, had gone to extraordinary lengths to hide these facts.

In his opinion, Judge Hanna found that Brayton Purcell disobeyed court orders and lied to the court about it; that it had filed a false claim to an asbestos trust, because "this fiction, of course, improved chances of recovery from the trust"; that Mr. Andreas had lied to the court about what he knew about the claim forms and when and had encouraged trusts to resist discovery; and that the lead counsel had shown a "shocking" lack of "respect" during his deposition.

"The record before this court indicates that Brayton Purcell institutionally and Christopher Andreas individually have failed to abide by our rules. They have not conducted themselves with dignity. They have not honestly discharged the duties of an attorney in this case. Therefore, they have forfeited their privileges to practice before this court," the judge wrote.

Cuyahoga County has long been a mecca for asbestos lawsuits, and tens of thousands are still pending. Judge Hanna and two of his colleagues are charged with overseeing that docket, which means that Brayton Purcell's banishment is a serious sanction that hurts its pocketbook. Even better would be if his ruling inspires the Ohio State Bar Association and local or federal prosecutors to look at his findings, in particular the description of how Brayton Purcell filed a fraudulent claim with the express aim of getting a payout.

Judge Hanna is also setting an example for the judiciary, which has to take a harder line if litigation fraud is going to be reined in. Texas federal Judge Janis Graham Jack blew the whistle on silicosis fraud in 2005, while the Michigan Supreme

DOJ_NMG_0119070

Court recently outlawed the "bundling" of asbestos suits, a practice that had clogged courts and pressured companies into unfair settlements. Bankruptcy judges have also been exposing "prepackaged" bankruptcies, which often let trial lawyers and asbestos companies bilk insurers with bogus claims.

Judge Hanna has now opened the door to more scrutiny of "double dipping" and the rampant fraud inherent in asbestos trusts. The goal should be for more judges to allow for the discovery and admissibility of trust forms in ongoing litigation. His opinion is required reading for other judges, who can start asking whether similar dishonesty is destroying the integrity of their own courts.

CIVIL RIGHTS:

Roe's 34th Year Sees A New Washington (WT)

By Amy Fagan

The Washington Times, January 22, 2007

Today marks the 34th anniversary of the Supreme Court's Roe v. Wade decision, and as thousands descend on the District to protest abortion, some new twists have emerged on the political landscape, including a Democrat-controlled Congress, an upcoming Supreme Court decision and a burgeoning presidential race.

With Democrats in charge of the House and Senate, some pro-choice leaders see an opportunity to affirm and protect the landmark 1973 ruling that made abortion a constitutional right.

"I do believe that there are some opportunities for affirmative legislation that would protect women's lives and health," said Vicki Saporta, president of the National Abortion Federation. "We don't expect further abortion restrictions to move through Congress."

Still, it remains to be seen how Democratic leaders will handle the abortion issue.

The pro-life community -- participating in the annual March for Life today -- is readying itself for Democrats seeking more funding for groups that support abortion and perhaps lifting restrictions on federal funding for abortion.

But pro-life leaders note the House will still take a pro-life stance on many issues and that President Bush will likely veto objectionable legislation.

"We just need to do all we can to make the case that abortion exploits women and destroys children," said Rep. Christopher H. Smith, New Jersey Republican and chairman of the Bipartisan Congressional Pro-Life Caucus.

Mr. Smith also expects some Democrats -- especially those with their eyes on the White House -- to strike a moderate, seemingly pro-life tone on abortion.

"There may be a bogus attempt to claim common ground while money is being given to Planned Parenthood," he said, warning pro-lifers to be skeptical.

Meanwhile, activists on both sides are awaiting a decision by the Supreme Court, expected before June, on whether to uphold a federal law banning an abortion procedure sometimes called partial-birth abortion.

The pro-life community argued the law bans a procedure in which a half-born baby is killed, while the pro-choice community argued it's too broad and would ban a range of abortions.

The high court overturned a similar Nebraska law in 2000, but the Republican-controlled Congress approved a new federal ban in 2003. It was challenged in three separate lawsuits and overturned by federal courts.

But in the meantime, the pro-life movement scored a key victory with the confirmation of two new conservative Supreme Court justices -- Chief Justice John G. Roberts Jr. in 2005 and Justice Samuel A. Alito Jr. last year.

More pressing is who will control the White House in 2008.

EMILY'S List, a group that aims to elect pro-choice Democratic women, quickly endorsed Sen. Hillary Rodham Clinton, New York Democrat, who announced her presidential candidacy Saturday.

At the same time, the pro-life Susan B. Anthony List invited several likely presidential candidates to a breakfast this morning, including Sen. Sam Brownback, a Kansas Republican and pro-life leader.

DOJ_NMG_0119071

"We have to establish upfront that a presidential candidate's stance on life will be a deciding factor for a large number of voters," said the group's president, Marjorie Dannenfelser

Mrs. Clinton is sponsoring legislation that's billed as a way to reduce unintended pregnancies -- and therefore, abortions -- with initiatives, such as more federal funding for family planning.

Nonetheless, much of the action on the abortion issue will continue to take place at the state level. Last year, the South Dakota Legislature passed an abortion ban, but it was overturned by state voters in a November ballot initiative.

Ms. Saporta said this was a key victory for the pro-choice side. She also touted other victories, including a new California law seeking to protect abortion providers from anti-abortion crimes.

But Tom McClusky, vice president of government affairs at the Family Research Council, said the South Dakota situation "is not stopping other states," five of which are considering some sort of abortion ban.

And the fight continues.

Ms. Saporta said she thinks states will continue to try to restrict abortion, but she doesn't expect the courts to take "any action that would result in Roe being overturned."

Mr. Smith said he and others will continue to work to restrict and ultimately stop abortion.

"We think of ourselves as the modern-day abolition movement," Mr. Smith said. "Slavery was not abolished overnight."

ANTITRUST:

Senators To Explore Airline Merger (USAT)

By Marilyn Adams, Usa Today

USA Today, January 22, 2007

US Airways' (LCC) hostile bid for Delta Air Lines moves into the political realm this week when a U.S. Senate panel explores the potential effect of industry consolidation on fares, air service and jobs.

US Airways CEO Doug Parker and Delta CEO Gerald Grinstein will testify at Wednesday's hearing before the Senate Committee on Commerce, Science and Transportation, chaired by Sen. Daniel Inouye, D-Hawaii.

Federal regulators, consumer advocates and economists are also on the witness list.

"We're looking forward to it," said C.A. Howlett, US Airways' top lobbyist. "The instinctive reaction … is to be naturally skeptical. But the market is driving what's occurring."

Delta executives declined interview requests. US Airways — itself a merged airline formed by the 2005 takeover of the old US Airways by America West — wants to buy Delta out of bankruptcy reorganization.

The deal would create the nation's largest domestic carrier. Delta, already the USA's third-biggest carrier, wants to remain independent.

Some lawmakers and other critics of the deal say it could reduce competition and raise ticket prices, especially in cities along the East Coast where both are strong. At Reagan Washington National Airport, for example, US Airways and Delta combined control a majority of the gates and landing slots.

But US Airways argues the merger would cut costs and improve service nationwide.

Sen. Olympia Snowe, R-Maine, who serves on the Commerce Committee, met with Grinstein last week and will meet this week with Parker. Delta and US Airways together control 60% of flights from Portland, Maine's largest city.

"Our state and the traveling public should not be put at a disadvantage because of airline consolidation," she said in a statement.

Last week, Sen. Charles Schumer, D-N.Y., sent a letter to Parker, demanding to know his plans for air service to upstate New York airports if the merger occurs.

In a press release, Schumer noted Delta and US Airways together operate more than 60% of the flights from Binghamton, N.Y.

"We could see fares begin to rise and flights disappear," he said.

US Airways says it has lowered fares across New York since the 2005 merger with America West.

DOJ_NMG_0119072

On Jan. 10, US Airways raised its original mid-November bid for Delta by 20%, to $10.2 billion. US Airways has given Delta's creditor committee a Feb. 1 deadline to respond.

United Airlines, the USA's No. 2 carrier, has held preliminary merger talks with Continental Airlines. And Northwest Airlines, which filed for bankruptcy protection the same day in the same New York courthouse as Delta in 2005, hired an investment banker to explore a deal, possibly one with Delta.

Any such merger would have to be approved by the Justice Department and the Department of Transportation.

Congress has no official role to intervene. But vocal opposition from lawmakers could make a deal politically harder to get done.

Sun Nears Deal To Buy Intel Chips For Servers In Likely Hit To AMD (WSJ)

By Don Clark

The Wall Street Journal, January 22, 2007

Sun Microsystems Inc. and Intel Corp., two Silicon Valley powers that have frequently taken opposing sides in technology battles, appear ready to work together.

The companies have been negotiating an agreement under which Sun would buy Intel chips for use in server systems, according to people briefed about Sun's plans. A deal, which could be announced as soon as today, may include an endorsement by Intel of Sun's Solaris operating system, these people said.

Sun's use of Intel chips, while not unprecedented, would be a blow to Advanced Micro Devices Inc., which is now Sun's exclusive source for chips based on the popular x86 design used in most personal computers and servers. It also would be a sign of the renewed competitiveness of Intel's chips, which outsell those of AMD but whose performance levels had fallen behind that of AMD's products until recently.

Sun, of Santa Clara, Calif., also would keep making computers based on AMD chips, these people said. That dual-supplier strategy is already used by competitors Hewlett-Packard Co., International Business Machines Corp. and Dell Inc. Adding Intel-based servers would help Sun match the breadth of those rival offerings.

A Sun spokesman declined to comment, as did a spokesman for Intel.

Sumit Dhanda, an analyst with Banc of America Securities, wrote a research note Friday predicting Sun would begin using Intel chips in servers that would hit the market in late 2007. He based the prediction on unspecified "channel checks," a phrase that often refers to information from companies that supply components to computer makers.

A relationship with Intel would be the latest in a series of steps by Sun to become more flexible about technology. The company has an internally developed line of chips called Sparc that was seen in the mid-1990s as a competitive threat to Intel's chips. Scott McNealy, Sun's former chief executive officer, for years criticized rivals for relying too heavily on Intel's x86 line, and was even more derisive about a separate product family, known as Itanium, that H-P and others use for high-end servers.

Intel, meanwhile, has been a major proponent of Microsoft Corp. and its Windows operating system, which Sun battled for years with its Solaris and Java software. But Mr. McNealy and Jonathan Schwartz, who was promoted to succeed him as CEO in April, have had to shift strategies as x86 servers became a mainstay in the computer rooms of most companies.

In 2000, Sun bought Cobalt Networks Inc., a maker of smaller servers that used Intel chips; Sun eventually stopped selling those systems. In November 2003, Sun forged a deal to begin making servers with AMD's Opteron chips. Those machines are now one of the fastest-growing parts of Sun's business, though it still gets more revenue from Sparc-based systems.

Servers that use x86 chips often run the open-source Linux operating system or Microsoft's Windows. Sun became more receptive to the latter option after an April 2004 settlement of antitrust claims it filed against Microsoft. But Mr. Schwartz also pushed the company to aggressively market Solaris for x86 systems, an initiative that could be aided by Intel's endorsement.

For Intel, landing Sun would be Chief Executive Paul Otellini's biggest customer win since the June 2005 adoption of its chips by Apple Inc., another frequent critic of Intel technology in the past. Though neither Sun nor Apple buys huge volumes of microprocessors, they are both known as technically savvy and their opinions carry weight among customers.

Sun is likely to remain a close partner with AMD, whose assistance helped make Sun a major x86 server vendor. Mr. Dhanda, with Banc of America Securities, estimated that in 2008 Intel's sales to Sun might amount to $25 million to $50 million --

assuming Intel can grab 25% to 50% of the shipments that now come from AMD. That would lower AMD's annual per-share profit by about one or two cents, he estimated. AMD is expected to post a profit for 2006 of 91 cents a share, according to the average of analysts tallied by Thomson Financial.

John Taylor, an AMD spokesman, declined to comment on the possibility of a Sun-Intel relationship. But he added that competition between the chip makers is good, driving innovation and serving "the market demand for choice."

Write to Don Clark at don.clark@wsj.com1

Ford, Toyota See Alliance Potential (WSJ)

By Norihiko Shirouzu And Jeffrey Mccracken

The Wall Street Journal, January 22, 2007

Toyota Motor Corp. and Ford Motor Co. are sending more signals that they may want to establish deeper ties. But the cautious courtship between the two auto giants suggests a more modest, and less painful, approach than the megamergers of the late 1990s or the three-way alliance proposed last year among General Motors Corp., Nissan Motor Co. and Renault SA.

Speculation that Toyota and Ford might be edging toward some form of alliance has heated up since a meeting in mid-December between Ford Chief Executive Alan Mulally and Toyota Chairman Fujio Cho. Both companies scrambled to play down the significance of that encounter, calling it a mere "courtesy." They stressed the talks produced no specific deals.

• The Situation: Following a December meeting between Ford CEO Alan Mulally and Toyota Chairman Fujio Cho, the auto makers are separately considering the pros and cons of an alliance.

• What's at Stake: Toyota fears political pressure in the U.S. as Detroit swoons. Ford may see potential in Toyota's hybrid engines.

• The Bottom Line: An equity deal isn't considered likely, but people familiar with the matter say both are open to a partnership.

People familiar with the matter say the meeting was prompted by an invitation from Toyota, sent from Toyota's top brass to Mr. Mulally via a visitor to Dearborn, Mich., where Ford is based, in mid-October. That messenger, a friend of former Toyota Chairman Hiroshi Okuda, met with Mark Fields, president of Ford's Americas operations, and gave him Mr. Okuda's invitation to the new Ford CEO.

Part of Toyota's aim in courting Ford is diplomacy -- an effort to win what people familiar with management's thinking describe as political peace from the U.S.'s second-biggest automobile producer. Though protectionist rhetoric has abated significantly, Toyota officials remain concerned about a possible backlash as they continue to gain market share in the U.S. while Detroit's Big Three shut factories and ax jobs. Analysts expect Toyota to outsell Ford in the U.S. on an annual basis as early as this year.

Toyota also could benefit in a practical way if Ford agreed to use its gasoline-electric hybrid technology. That is in part because Toyota's momentum in establishing its hybrid design as an industry standard has slowed. GM has lured German auto makers DaimlerChrysler AG and BMW AG into a powerful alliance to develop a hybrid system of their own that they say is simpler than Toyota's. Other companies, including Honda Motor Co., are trying to go it alone.

Messrs. Mulally and Cho, after talking for more than two hours, ended the meeting by agreeing to meet again soon, a person familiar with the situation said. A Toyota spokesman said no further meeting has been scheduled between the two but stressed that Toyota remains open to the idea of forming a tie-up to share costs of developing new technology or joining hands in popularizing new technology. Toyota also has shared operations with GM, including an automobile assembly plant in Fremont, Calif., that it has run jointly with the U.S. car maker since the late 1980s.

"So long as it is a win-win for both parties and there is a reason for partnering...we're open to the idea of forming a partnership. I think anyone among major auto makers around the world could potentially be our alliance partner," Toyota President Katsuaki Watanabe said in an October interview.

Analysts say it is unlikely Toyota would seek to buy a stake in Ford, even though Toyota's market capitalization far exceeds Ford's. A primary obstacle is the 40% voting stock controlled by the descendants of Ford founder Henry Ford. Also, Toyota has

DOJ_NMG_0119074

generally avoided large -scale acquisitions and alliances with rival auto makers. Ford, meanwhile, has too many financial troubles to buy a significant stake in Toyota.

Even the most efficient auto makers are worried about a glut around the world of auto-making capacity and surging costs to pack cars with new technologies in part to meet increasingly stringent safety and emissions regulations. Those concerns tend to spur interest in alliances that can help bring down component or raw-material costs, or those for developing new technology, to give them an edge.

Ford, according to a person familiar with its thinking, could be interested in a joint venture or partnership with Toyota that could focus on powertrain technology such as gasoline-electric hybrid engines or on smaller, four-cylinder engines.

The December meeting, in Tokyo, was broad-based, and senior executives at Toyota said Mr. Mulally discussed his experience at Boeing Co., where he led its commercial-aircraft division before joining Ford in September. He said he studied Toyota's lean-manufacturing process and transplanted some of the Toyota-devised production and inventory-control techniques like just-in-time parts delivery to Boeing's overall aircraft-assembly operations.

Being a lean-manufacturing expert himself, those executives say, Mr. Cho was impressed by Mr. Mulally's knowledge. One of them said Messrs. Mulally and Cho "really hit it off" and predicted that their instant rapport may provide the springboard for a technical relationship of some kind.

"I don't know if Mr. Mulally realizes this," said one senior Toyota executive, "but if he asked for help or suggested a way to collaborate, knowing Mr. Cho, he would go out of his way to be responsive."

Ford, which has forecast substantial losses this year, has struggled to keep its engines competitive with other auto makers and in 2006 had to back off a much-hyped goal of building 250,000 hybrid vehicles annually because it realized it didn't have the capability to do so.

"Ford came out of that [Tokyo] meeting feeling Toyota was worried that politically there could be problems for it in the United States if Ford continued to struggle, so Toyota might want to do something that publicly looked like they were helping Ford, while it also marginally helped Toyota," said one of the people familiar with the matter.

This person said there would be more talks in the future between Ford and Toyota about pursuing some sort of technology-sharing venture.

Cracking Down On Mixtape CDs (NYT)

By Jeff Leeds

The New York Times, January 22, 2007

Not long before Christmas, Jeff Baker, the chief of police of Morrow, Ga., a small town just south of Atlanta, and one of his officers were walking through a local shopping mall when they happened to pass a kiosk hawking rap music CDs. One in particular caught their attention.

The CD was “Tha Streets Iz Watchin,” with songs performed by the rapper Young Jeezy and, as Chief Baker recalled, it did not carry the name or address of the owner of the music copyrights, as Georgia law requires. Rather than arrest the kiosk vendor immediately, Chief Baker said, “We’d rather go after the source of the material. And at that point we had no idea what the source was.”

Any rap music aficionado would; the creator of the album is DJ Drama, whose real name is Tyree Simmons, arguably the nation’s most prominent producer of mixtapes, the name given to popular but largely unlicensed CDs stocked with yet-to-be released rap hits and free-style rhymes.

And many more people now know: last week, local authorities, working with the recording industry’s trade association, stunned fans and music executives alike by raiding DJ Drama’s studio in Atlanta and arresting him and a fellow D.J., Don Cannon, on racketeering charges. Investigators seized more than 81,000 allegedly pirated CDs and say the pair were producing unlicensed recordings and selling them without permission.

DOJ_NMG_0119075

The raid sparked an outcry among many rap fans. But it also threatens to throw into public view the recording industry's awkward relationship with mixtapes, long an integral element of rap culture and now commonly for sale on street corners, Web sites, many independent record shops and occasionally big chains.

Even as industry-financed antipiracy squads hunt for unauthorized recordings, senior executives at the major record labels privately say that they have courted — and often paid — top D.J.'s to create and distribute mixtapes featuring the labels' rappers as part of efforts to generate buzz.

"It might not necessarily have the label's logo on it, but they're the ones cutting the checks for the recording and production" of many mixtapes, said Ian Steaman, a longtime talent and marketing executive who writes for the hip-hop Web site Different Kitchen. "It's just kind of understood you need that channel of exposure for any kind of real, credible artist. I don't think this industry's ready to deal with that conversation."

The raid also exposes a schism that is taking shape as the industry tries to stanch a slide in album sales, for which many blame piracy. On one side, many label executives and officials at the Recording Industry Association of America, which represents the major music companies, say the mixtape is contributing to the problem. They argue that sales are ultimately undermined when the mixtape leaps from promotional giveaway item to replacement for an artist's official label-distributed album.

On the other side are a separate faction of label executives and a variety of artists, many of whom privately say they are worried that the chill cast on the mixtape world would handicap labels' efforts to promote hip-hop sales, which declined roughly 20 percent last year, more than any other major genre, according to Nielsen SoundScan data.

Label executives remained puzzled over the sudden arrest of DJ Drama, whose ascent through the unregulated world of compilations has largely taken place in plain sight during the last couple of years. There has been speculation that the police inquiry into his business affairs was further spurred by tips from a competitor or unhappy customer. Chief Baker of the Morrow police declined to comment on the participation of any informants.

Mixtapes have been part of rap since the genre's earliest days in the 1970s — back then, D.J.'s who spun records at clubs or parties committed their playlists to cassettes. But the proliferation of CD burners in the last several years has made the production and wide circulation — or sale — of mixtapes easier than ever.

It has also enhanced their role in tastemaking. Particularly since formerly underground mixtape hero 50 Cent broke out as a mainstream rap superstar in 2003, the top producers of unlicensed CDs have been embraced by the industry's biggest corporations, who wager that the D.J.'s reputations as renegades will translate into the sale of legitimate, licensed compilations, too.

Atlantic Records, for one, hired the mixtape D.J. known as Sickamore as a talent scout and had signed DJ Drama, to its artist roster with plans to release an authorized mixtape-style album this year. Def Jam, Columbia and other big labels have released such CDs in the past.

The labels' reliance on the D.J.'s is complicated further by the fact that many of the top mixtape creators also double as radio D.J.'s on major rap stations. Many label executives acknowledge that when they write checks to certain D.J.'s to produce a mix CD for an artist, there is often an expectation that the D.J. will play the artist's music on the air — an arrangement that recalls the industry's recent radio corruption scandals involving illicit pay-for-play, or payola.

Brad Buckles, the recording association's executive vice president for antipiracy, said authorities seized about two million unlicensed hip-hop mix CDs last year, and speculated that sales of the recordings through Web sites and other channels could be running to the tens of millions of units annually.

Public performance of certain mixtape material "is probably good promotion," Mr. Buckles said. "When you start selling them by the tens and hundreds of thousands, I don't know that anyone is saying that's of great promotional value."

Even in the case of DJ Drama, whose mixtapes have been credited with stoking the careers of artists like Young Jeezy, Lil Wayne and last year's best selling rap artist, T.I., it appears not everyone applauded inclusion on his recordings. The police said lawyers representing an array of artists sent cease-and-desist demands protesting the unauthorized use of their music, though they declined to identify the artists.

DOJ_NMG_0119076

Nonetheless, the arrests instantly sent a shiver through hip-hop circles. One prominent Web site, mixunit.com, halted the sale of its usual wares and instead refocused on rap posters and T-shirts. Under a logo that read "Free Drama & Cannon," the site said only that it was reorganizing with features that are "positive to the artists, D.J.'s and fans of this special element of hip-hop."

Fans and music executives say the raid will most likely push the production and sale of mixtapes further underground — and encourage more efforts to skirt the edge of laws against the sale of unauthorized songs. At one major mixtape Web site, fans can choose from an array of current mix CDs on display. To get one, though, they must pay $7 for a sticker bearing the Web site's name. Each sticker comes with a free mixtape.

The business can be tricky for the D.J.'s themselves too, said Mr. Buckles of the recording industry association. D.J.'s creating mixtapes with the intent of offering them free sometimes find that bootleggers then replicate the music and sell it.

"This is a world," he added, "where everything just careens out of control once it's created."

ENVIRONMENT:

Climate Policy's Odd Man Out (WP)

By Sebastian Mallaby

Washington Post, January 22, 2007

Debate Is Fast Passing Bush By

Last week the administration embarrassed itself on climate change, and today will be excruciating. A confluence of forces -- the Democratic takeover of Congress, freak winter weather, Al Gore's documentary on global warming -- has conspired to create an exciting moment in the climate debate. But the Bush team seems determined to be a wallflower, and to step on its own toes as it watches.

The embarrassment began when James Connaughton, the head of the White House's Council on Environmental Quality, told me that he accepts the case for a cap-and-trade system, at least as a concept. After I quoted him last week, Tony Snow, the White House spokesman, issued a denial: "Let me just walk you back from the carbon caps story," he said firmly. That sounded clear enough, but on Thursday the New York Times quoted Connaughton reiterating his openness to the cap-and-trade concept.

While the White House was sorting out its message, the rest of Washington was busy. Over at the Reagan building, a conference on carbon trading sold 600 tickets at $595 a pop and turned away 150 executives hungry to study the intricacies of permit allocation. Meanwhile, multiple climate bills were floating around Congress, and the House leadership promised to create a special climate committee to force legislation past the auto lobby.

All of which was a warm-up for today's excitement. This morning, on the eve of the president's State of the Union speech, an all-star team of chief executives is descending on Washington to make the case for a comprehensive climate approach built around a cap-and-trade system. The team includes four large power utilities as well as the chemical company DuPont; the aluminum giant Alcoa and the oil major BP. Naturally it features General Electric, the leading industrial cheerleader for climate regulation.

The CEOs' visit raises awkward questions for the Bush administration. Team Bush appears to believe that a cap-and-trade system would burden business, but business leaders are saying they want cap-and-trade enacted. When he spoke to me earlier this month, Connaughton argued that the spread of state requirements on renewable fuels made aggressive federal carbon regulation less urgent. Yet business leaders evidently prefer a federal solution to a complex patchwork of state initiatives.

But the biggest embarrassment in the CEOs' visit concerns the extraordinary timing. Ordinarily, lobbyists aiming to influence the president's agenda do not seek to upstage him the day before his State of the Union address. They lay down a marker in advance so the White House has time to feed their ideas into its speechwriting machinery.

So what happened on this occasion? The chief executives are in Washington today because they aren't even trying to influence the White House. As they planned their visit over the past weeks, they were barely in touch with the Bush team because they assumed Bush to be irrelevant. Just a few days ago, the planners of the visit realized that they were inadvertently trampling on

DOJ_NMG_0119077

the State of the Union. But by then it was too late. Would 10 chief executives rearrange their schedules to accommodate a lame-duck president? Forget it.

Eight months ago, when Gore's climate documentary was released, this state of affairs was inconceivable. Not only was Bush still a player, the case for climate change was widely doubted. Chortling climate-deniers, expecting an easy propaganda victory over the man whose energy-tax proposal they killed in 1993, greeted Gore's movie with glee. A group called the Competitive Enterprise Institute put out two TV commercials asserting that climate science is inconclusive. A House Republican hearing ridiculed a graph that features prominently in Gore's movie showing the world's temperature puttering along in a steady state before shooting upward like the handle of a hockey stick.

But this time around, Gore has proved a tougher adversary. His movie has grossed an astonishing $24 million, not counting foreign sales; the accompanying book has spent 29 weeks on the New York Times bestseller list. His Republican opponents have lost control of Congress. And the Competitive Enterprise Institute has lost the patronage of Exxon Mobil, which decided to stop financing climate lies and start discussing carbon regulation.

All of which makes for a surreal situation. Al Gore, the man who lost the agonizing 2000 election, has emerged as a force in the debate of the moment. George Bush, his nemesis, is so completely marginal that business guys ignore him. Meanwhile, John McCain and Barack Obama, two leading presidential contenders, are co-sponsoring a cap-and-trade bill in the Senate. To anyone who watched climate politics these past few days, the post-Bush era seemed to be beginning.

Thinking Strategically (WSJ)

By Andy Grove

The Wall Street Journal, January 22, 2007

As a connoisseur of strategy -- student, practitioner (in business) and teacher -- I have long been intrigued with the relationship between strategic principles applied to nations and strategies pursued by businesses. Strategy had its origin in military use, but over time it migrated into the business setting. The linkage is still there: Most contemporary business students, for example, will have read Sun Tzu's "Art of War" in their Business Strategy course. But it is a different relationship that preoccupies me.

Just as medical research tests biological processes in large populations of fruit flies or rodents before human application, I am intrigued by the prospect of applying -- to nations -- the strategic practices that have been formulated and evaluated in the "laboratory" of the world's businesses. As in medical applications, we must be careful in extrapolating from one to the other. Nevertheless, I believe there are benefits to such comparative analysis.

The first question that needs to be examined is this: If business's task is to generate revenue and profits for its owners, what is the equivalent task for a nation and its government? The principal measure is the Gross Domestic Product of the country. Changes in this number are commonly used yardsticks of economic health. Moreover, when one compares two national economies, say the economies of the U.S. and China, the first measure we use in this comparison is GDP. But when we talk of GDP, we must consider not just the GDP of today, but the long-term stability of the productive capacity of our economy. This is how factors like national security enter into the objectives of a government.

What about governance? Corporations are run by senior management, with power concentrated in the hands of the chief executive. The equivalent to this in our country is the institution of the executive branch headed by the president. It is important to stress that even as individual presidents come and go, we expect the institution to be durable, with a view and a constancy of purpose that is appropriately long-range.

A successful business strategist must understand cognitively and instinctively the structure of the industry in which the business operates, and must know that as the structure changes, so must the winning strategy. By way of historical example, IBM, a huge, vertically integrated company, dominated the computer industry before the advent of the personal computer. All computer companies had to be cognizant of IBM's influence on the entire industry, and had to construct strategies which allowed them to prosper in coexistence with this monolith. The arrival of the personal computer changed all this. New rules replaced old ones governing vertical integration, development of standards, and many other factors.

DOJ_NMG_0119078

After the Cold War, a similar change took place in the world of nations. Monolithic and vertically integrated military powers gave way to numerous sources of power, each following independent strategies, sometimes in partnership, sometimes embroiled in friction. That changed the rules governing international relations. If national strategy in the days of the Cold War was dominated by the presence and size of nuclear weapons capabilities, what are the critical dominant factors today, when these weapons are increasingly widespread? What takes their place? Religious beliefs? Historical relationships or enmities? How does one set strategies when these factors are unknown? As in the case of the computer industry, it takes many years to figure out how the new rules work.

An important task of strategic analysis is to determine the sources of power that affect our business. If competitors, customers or suppliers have undue influence over the behavior of our business, we lose control of our destiny, to our long-term detriment. As an example, if the control of a scarce ingredient that we need in our business is tightly held by other players, can we afford to be indifferent?

Oil is just such a scarce resource. Its availability determines the growth of a national economy. This has concerned every U.S. president since Richard Nixon, who emphatically devoted a major part of his State of the Union message in 1974 to the necessity of regaining control over our destiny by achieving independence from foreign oil suppliers.

What has happened since is illustrated in the nearby chart.

Such charts, sometimes referred to as "stagger charts," are often used in business to gauge performance against plan. They are an important way in which accountability is evaluated. A stagger chart shows a goal set in a given year for the years to follow. The actual result obtained, along with the new plan, is then shown in the next horizontal line. Looking up and down in a vertical column, one can see the consistency, or lack of it, between the various plans. Looking at the asterisked numbers along the diagonal shows how our actual energy dependence deteriorated as time went on, despite repeated commitments to reverse this trend.

The most recent addition to this thread of commitments was when President Bush, in his 2006 State of the Union address, set a new goal to replace more than 75% of our oil imports from the Middle East by 2025. Even if we somehow achieved 100% replacement of all imports by that time, when we compare this goal with the one set by President Nixon in 1974, we see a 45-year slippage in the course of 32 years. Even though the importance of the energy independence issue has been recognized and emphasized by every president since 1974, our vital national objective is vanishing like a mirage in the distance.

This kind of dependence gives great power to other nations over our destiny. It is not inconceivable that our foreign policy could be determined by them, using energy availability as a lever. If this possibility seemed far-fetched a few weeks ago, the events involving Belarus have brought home its plausibility.

In a well-publicized study of a large number of corporations, Jim Collins has found that longevity of success in the marketplace is associated with a certain leadership style. I was particularly impressed by the finding that successful leaders are able to face what Mr. Collins calls the "brutal facts" of the competitive positions of their companies. As I observe our political leaders today, I have a hard time finding many examples of a willingness to do this. In fact, I find an alarming tendency to skirt the critical issues by not even pronouncing the words that describe them, rendering them "non-words." Examples: Who among our national leaders spells out that the likely consequence of the heightened global competition is to suppress domestic wage rates? Or addresses the need to allocate the increasingly complex and expensive medical procedures being developed today? Or admits that our emergency medical system is heading toward catastrophe as it becomes the last-resort access to medical care for the growing millions of uninsured? Non-words lead to non-solutions, in energy dependence and in other key issues.

Our nation's corporations have been under severe criticism for a variety of shortcomings. Even so, the capitalist/free-market system of corporations consistently produces results. When corporations do not produce, they become irrelevant and often perish. In other words, if the brutal facts are not faced by the leaders, the brutal reality sets in. By contrast, our national strategy-setting and -execution machinery often seem broken. Consider this: Could we pull off the Manhattan Project today? With its complexities of planning and execution, under extreme time pressure? I doubt it.

Fruit flies can teach us how to cure diseases in human beings. Why not study how businesses set strategies and execute them, and adopt the best methods to address the overwhelmingly important issues facing our society?

Mr. Grove is retired chairman of Intel Corp.

DOJ_NMG_0119079

Coastal Homeowners Can't Find Insurance (NSWK)

By Karen Breslau

Newsweek, January 22, 2007

Jan. 29, 2007 issue - During the nine years she's lived in her historic sea captain's house on Cape Cod, Mass., Paula Aschettino never filed a claim against her homeowner's insurance policy. But last year she received a letter from her insurer, Hingham Mutual Group, canceling coverage on her nine-room, $600,000 oceanfront home, which has withstood its share of hurricanes since 1840. She and her husband, Michael, scrambled to find other insurance but were repeatedly denied. "They just said we are in a high-risk area," she says. A spokesman for Hingham, which canceled 9,000 Cape Cod policies, says that the company's own coverage—known as "reinsurance"—had doubled in the past year, making it necessary to withdraw from the coastal market.

The Aschettinos finally found other insurance, but only for nearly double their old premium of $1,800, and with a sky-high deductible of $12,000 against wind damage. Incensed, Aschettino circulated a petition among her neighbors demanding price reform from industry regulators. "People feel they are being totally ripped off," she says. "People are afraid to even make claims, because they are afraid they're going to be dropped."

Up and down the Eastern Seaboard, hundreds of thousands of policyholders like the Aschettinos are being dropped by their insurers; many more have had to swallow double-, even triple-digit increases in premiums and deductibles. While discontinued policies and rate hikes are nothing new in hurricane-battered Florida and the Gulf Coast, insurers are now dinging homeowners in the Northeast and mid-Atlantic states. Allstate Insurance recently announced it wouldn't take new homeowner policies in New Jersey, Connecticut and Delaware—or the five boroughs of New York City. The company also won't renew 30,000 of more than 600,000 policies it carries in and around New York City. A host of other firms are refusing to insure properties along the Atlantic coast from Maine to the Carolinas.

Why the sudden rash of cancellations? An increase in "extreme weather events" that many scientists—and now insurers—believe are linked to climate change. It's not just Category 4 hurricanes that have insurers worried. Around the country, companies have been racking up record property losses from freakish weather, such as the ice storms last week that paralyzed much of the Great Plains and froze California's citrus crops. In recent years, wildfires in the Northwest, drought and hail in the Midwest, windstorms, lightning strikes on power grids, soil subsidence and other calamities of nature have led to cumulative property losses that exceed those caused by hurricanes. "There's a shift going on to more frequent, extreme weather events," says Evan Mills, an environmental scientist at the U.S. Department of Energy's Lawrence Berkeley National Laboratory. "It's as much an issue in the heartland as on the coast."

Global warming is the culprit, claim many—including several insurers who are canceling policies. While scientists cannot determine whether a single weather event is caused by a natural cycle, or is evidence of more permanent, malignant climate change, the pattern of mounting losses is clear. According to Mills, weather-related catastrophe losses have increased from about $1 billion a year in the 1970s to an average of $17 billion a year over the past decade. In 2005, the year of Katrina, that figure reached $71 billion.

Even before Hurricane Katrina—an event that has yet to be conclusively linked to climate change—catastrophe modelers had begun to look at the probability of a Category 3 or higher storm hitting the Eastern Seaboard. What they found was terrifying: because of increasing temperatures in the Atlantic, along with changes in air and sea currents, a major storm in the densely populated and highly priced Northeast would dwarf the $45 billion in insured losses wrought by Katrina. One study found that a repeat of the "Long Island Express," the Category 3 storm that plowed through New England in 1938, killing 600 people, would cause $200 billion in damage today. (For the record, the Aschettinos want it known that their house survived the Long Island Express.) The damage from a Category 5 storm directly hitting a major city, could, researchers say, "exceed the total capacity" of the U.S. insurance industry. Before he retired earlier this year, National Hurricane Center director Max Mayfield issued a final warning: "We're setting ourselves up for a major disaster."

For many homeowners, the disaster has been financial. Stanley Dutton, a retiree from Ft. Walton Beach in Florida's panhandle, saw premiums on his 1968 ranch-style house increase from $394 in 2000 to $5,479 this past November. "I just can't put up with this anymore," says Dutton, who is selling his home and moving to Alabama. Consumer advocates, and more than a

DOJ_NMG_0119080

few politicians, suspect that insurers are using the fear of global-warming-related catastrophe to shuck risk onto policyholders and the taxpayers who fund the government insurers of last resort. Despite huge Katrina-related losses in 2005, the Consumer Federation of America estimates that in 2006, the insurance industry cleared profits of nearly $60 billion, its highest ever. (The figure includes not just property but life and auto lines combined.) Industry representatives say that although 2006 was a light storm year in the United States, they have to incorporate climate risk in their rates to remain stable—and profitable—in the future. "We believe what the scientists are telling us," says Michael Treviño, a spokesman for Allstate, which paid $5.7 billion in catastrophic losses in 2005 and has sharply cut back its coverage. "The country is in the beginning of period where we've sustained more frequent and more intense hurricanes," he says. "We believe it would be bad business to continue to add to our risk."

Whether companies are price gouging in the name of global warming will become clear only in retrospect. Regardless of who pays for the damages, climate change means tough economic choices for all Americans, 54 percent of whom now live within 50 miles of a coastline. Industry experts interviewed by NEWSWEEK were unanimous in their insistence that land-use policies and lax building standards must be reformed. "As a society we have to decide: do we want to pay for people to have that ocean view?" asks Tim Wagner, director of the National Association of Insurance Commissioners. Rather than pulling back, some insurance companies are creating incentives for customers who build with climate change in mind. Fireman's Fund Insurance offers discounts to commercial owners who rebuild damaged property using "green" building practices, which tend also to improve building safety.

Still, denial persists. In Florida last week, the legislature convened a special session to tackle the state's home-insurance crisis. One lawmaker tried to persuade his colleagues to exempt the state's panhandle from stricter—and more expensive—building codes by arguing the region's ubiquitous pine trees were "strong enough" to shield buildings against hurricane-force winds. There were guffaws on the Senate floor as another senator invoked the "Three Little Pigs" before rejecting the measure. Little is certain in the insurance world, except for this: no one will be laughing when the Big Bad Wolf blows the house down.

FBI/DEA/ATF/USMS:

Mexico: No U.S. Pressure In Extraditions (AP)

By Mark Stevenson

AP, January 22, 2007

Mexico's attorney general said Sunday four alleged drug lords were extradited to the United States to stop them from communicating with their cartels from behind bars and to reduce the risk of violence and escape, not because of U.S. pressure.

Mexico sent Osiel Cardenas, the alleged Gulf cartel leader who was believed to be running his gang from prison, to the U.S. on Friday along with Palma Salazar, the alleged former leader of the Sinaloa cartel, and brothers Ismael and Gilberto Higuera Guerrero, former chiefs in the Arellano-Felix cartel in Tijuana.

"This decision was a unilateral and sovereign one by the Mexican government," Attorney General Eduardo Medina Mora told a news conference. The aim was to break any "physical and geographical" contact they might have had with their gangs while in Mexican prisons. He also said Mexico plans to extradite other criminals and suspects who have exhausted their legal appeals.

Mexico has recently shown more willingness to extradite drug lords, even those facing life in prison. A record 63 alleged criminals were sent to the U.S. in 2006 alone. However, it refuses to extradite anyone who would face the death penalty, which is illegal in Mexico

Along with the four drug lords, Mexico also extradited 11 alleged criminals wanted in the U.S. on charges including murder, drug trafficking, kidnapping and sex crimes.

U.S. Attorney General Alberto Gonzales called the extraditions "unprecedented in their scope and importance."

DOJ_NMG_0119081

In an interview with the Spanish newspaper El Pais published Sunday, President Felipe Calderon acknowledged that "organized crime was getting out of control ... there was a risk in Latin America that Mexico could become a country dominated by insecurity and violence."

The attorney general's comments appear to be a public admission that Mexico was struggling to keep traffickers like Cardenas from running their gangs, or staging escapes and assassinations, from behind bars.

The Mexican attorney general's office has also said the extraditions were aimed in part at cracking down on turf battles between Mexican drug cartels, which have cost hundreds of lives in recent months in states like Michoacan, Guerrero, Baja California and Sinaloa. The government has recently sent thousands of soldiers and police to try to stem the drug-fueled violence.

Medina Mora acknowledged that while Mexico could suffer some backlash, he did not believe it would face anything like the war Colombian drug traffickers fought in the 1980s to avoid extradition.

In the 1980s, a group of Colombian traffickers known as "los extraditables" began a campaign of bombings and assassinations to pressure the Colombian government not to send them to the United States to face justice.

Editorial: New Offices A Weapon To Combat Drug Cartels (SAEN)

San Antonio Express-News, January 22, 2007

The Texas-Mexico border separates sovereign nations, but social problems do not respect sovereignty.

And, because checkpoints represent such ineffective barriers when it comes to these problems, cooperation between Mexico the United States is crucial.

The U.S. government realizes partnership is necessary, according to recent reports, and that should encourage border residents growing increasingly anxious over the violence plaguing the area.

The Drug Enforcement Administration has asked the Mexican government to approve new DEA offices in Nogales, Matamoros and Nuevo Laredo, although officials refuse to provide any details, the Houston Chronicle reported.

"DEA has a very strong relationship with Mexican authorities, but any talk of new offices is premature," agency spokesman Steve Robertson said. "No decision has been made yet."

By targeting the three cities for possible offices, the agency has picked the strongholds of the drug cartels. The drug lords covet the same things — smuggling routes into the United States. And their struggle for supremacy has endangered the lives of ordinary citizens, including Americans who cross the border as tourists.

"Clearly, Mexico and the United States have a shared responsibility to make our communities safer from the drug traffickers and criminals who are threatening our way of life," Attorney General Alberto Gonzales said after meeting with his Mexican counterpart recently.

Gonzales was not referring to the DEA offices specifically, but such offices would go a long way toward enhancing the cooperation necessary to combat the pernicious drug trafficking.

U.S. Feds: Thai Wiretap Helps Bust International Heroin Crew (AP)

AP, January 19, 2007

NEW YORK (AP) — A heroin trafficking organization that processed drugs from Pakistan and Afghanistan through a storefront in Thailand has been busted with help from the first wiretap recordings to be authorized by Thai judicial authorities in a U.S. investigation, prosecutors say.

Three men from Thailand extradited to the United States to face drug charges made initial appearances in U.S. District Court in Manhattan, where they were ordered held without bail Thursday in a case authorities said processed more than $30 million in drug money.

If convicted as leaders of the drug organization, which was headquartered in Bangkok, the men each could face at least 10 years in prison and up to life in prison.

An indictment in the case said government evidence against the men included recordings captured by the first wiretap judicially authorized by the Supreme Court of Thailand as part of a U.S. investigation. U.S. Attorney Michael Garcia credited the Royal Thai Police law enforcement officers as playing a key role in the probe.

DOJ_NMG_0119082

In September, Thailand's prime minister was ousted in a bloodless coup by the military, and an interim government was set up to rule the country. Garcia's spokeswoman Rebekah Carmichael said prosecutors could not comment on the extent of help from Thailand authorities in the probe and whether the cooperation was enhanced or harmed by the coup.

The U.S. government has tried over the past decade to broaden the number of countries through which it can investigate problems like drugs and terrorism in cooperation with foreign governments.

The extraditions, as prosecutors said in court papers and a release, resulted from Operation Ivory Triangle, an investigation of drug networks in Bangkok, Lagos, Nigeria, and New York.

Prosecutors said the networks distributed heroin received from Pakistan, Afghanistan, Myanmar (formerly Burma) and northern Thailand throughout the world, including the United States, Europe, Hong Kong, China, Japan, Malaysia and Indonesia.

In an indictment, prosecutors said that a heroin business operating out of a Thai storefront provided packages of drugs that human couriers swallowed or hid inside secret compartments in suitcases as they carried them through complex distribution routes.

To get to New York, the drugs sometimes went through Pakistan, Europe, Cuba, Mexico and Miami, prosecutors said.

The route was expensive: Heroin bought for $3,500 to $6,000 per kilogram in Thailand eventually was resold in the United States for as much as $100,000 per kilogram, the U.S. government said.

Around The Nation (WT)

The Washington Times, January 22, 2007

U.S. extradites drug suspects

The U.S. government has extradited three men from Thailand to stand trial on charges of operating an international heroin-trafficking organization that routed the drug from Pakistan, Afghanistan, Burma and northern Thailand throughout the world, including the United States.

Yaya Yahayai, Henry Sichone and Andrew Sarpong, who are accused of conspiracy in a scheme to distribute heroin globally, were charged as part of "Operation Ivory Triangle," said John P. Gilbride, U.S. Drug Enforcement Administration special agent in charge.

According to indictments handed up in U.S. District Court in New York, Mr. Yahayai headed the drug trafficking organization from August 2004 until December 2005, assisted by Mr. Sichone, operating mainly out of a storefront in Bangkok.

The indictments said members of the organization transported the heroin through human couriers, mail, cargo shipments and other means.

Richardson plans presidential run

New Mexico Gov. Bill Richardson intends to take the initial step toward the Democratic nomination, hoping his extensive resume will fuel an insurgent campaign to become the first Hispanic president.

Mr. Richardson plans to announce tomorrow that he will soon file the papers to create a presidential exploratory committee, several officials with knowledge of his plans said yesterday. The governor is scheduled to appear on ABC's "This Week."

Mr. Richardson, 59, is a former congressman, U.N. ambassador and Energy Department secretary.

Border shooting images not clear

BISBEE, Ariz. -- A deadly Border Patrol shooting that drew criticism from Mexico's president was recorded by surveillance cameras, but the images are not clear, authorities said.

The Border Patrol is trying to have the tape digitally enhanced to show more detail of the Jan. 12 confrontation east of Bisbee, said Michael Nicley, chief of the agency's Tucson Sector.

Francisco Javier Dominguez Rivera, 22, of Puebla, Mexico, was fatally shot by an agent who had responded to a call about a group of seven persons crossing the desert.

Mondale criticizes vice president

ATHENS, Ga. -- Vice President Dick Cheney has bullied federal agencies and given absurd advice about the nation's risk and Iraq, Walter Mondale said yesterday.

DOJ_NMG_0119083

"I think that Cheney has stepped way over the line," the former vice president said at the opening of a three-day conference about former President Jimmy Carter at the University of Georgia.

"I think Cheney's been at the center of cooking up farcical estimates of national risks, weapons of mass destruction and the 9/11 connection to Iraq," Mr. Mondale said.

Responding to Mr. Mondale's comments, Lea Anne McBride, a spokeswoman for Mr. Cheney, said: "Twice elected to serve with President Bush, the vice president is committed to protecting Americans from those who wish to do us harm."

Navy relieves sub commander

The Navy said yesterday it had relieved the commander of a nuclear submarine that was involved in an incident that killed two sailors.

On Dec. 29, rough seas swept four American sailors from the deck of the submarine off the coast of southwestern England. The USS Minneapolis-St. Paul was leaving Plymouth harbor when the sailors were knocked into the water by surging waves. The four men were taken to a hospital in Plymouth, where two were pronounced dead.

According to officials, an initial review determined the incident was avoidable and due in part to a poor decision by the commander. A formal investigation is still under way. He was identified by the Navy as Cmdr. Edwin Ruff.

According to the Navy, Cmdr. Ruff was reassigned to a shore-based post in Norfolk.

Teen fatally stabs classmate in fight

FRAMINGHAM, Mass. -- A 15-year-old boy was fatally stabbed yesterday in a hallway at his high school in this affluent Boston suburb, and a classmate was charged with murder after blurting out, "I did it, I did it," authorities said.

Investigators would not comment on a motive for the attack.

John Odgren, 16, pleaded not guilty in the killing of 15-year-old James Alenson and was jailed without bail. He was to be tried as an adult.

The teen's attorney, Jonathan Shapiro, said his client has Asperger's syndrome, a form of autism, and has been taking medications for many years.

From wire dispatches and staff reports

Feds: Heroin Traffickers Busted, Headed To N.Y. (WNBC)

WNBC-TV, January 22, 2007

Three men have been extradited from Thailand to face federal charges in New York in connection with two international heroin-trafficking organizations, say law enforcement authorities.

Federal indictments name Yaya Yahayai, Henry Sichone and Andrew Sarpong, charging they participated in conspiracies to distribute heroin from Pakistan, Afghanistan, Burma and northern Thailand throughout the world, including the United States, Europe, Hong Kong, China, Japan, Malaysia and Indonesia.

DEA Special Agent in Charge John Gilbride said, "Operation Ivory Triangle led us on a trail throughout the world from the Bronx to West Africa to Bangkok, Thailand. Today, this world-wide heroin trafficking enterprise is out of business."

Court papers say Yahayai and Sichone operated a heroin business primarily from a storefront in Thailand from August 2004 to December 2005. Members of the organization transported the heroin through human couriers, mail and cargo shipments. The human couriers either swallowed the heroin or carried it in concealed compartments inside suitcases. They paid $3,500 to $6,000 a kilogram and then sold the heroin around the world for $100,000 a kilogram.

Sarpong is said to have recruited a courier to travel with the heroin to the U.S. from Thailand. In May 2006, a co-conspirator of Sarpong was arrested in Manhattan as she attempted to deliver 640 grams of heroin to a customer in the Bronx. The court papers say Sarpong supplied 10 passports, including U.S. passports, to a confidential informant, intending they be used by couriers to illegally bring the heroin into the country.

The three men will appear in federal court in Manhattan later today. They face up to life in prison if convicted. The indictments also seek forfeiture of more than $30 million in narcotics proceeds produced by the drug trafficking operations.

Cocaine Charge Lands Ex-cops In Prison (AP)

AP, January 19, 2007

DOJ_NMG_0119084

WASHINGTON (AP) — Guatemala's former top anti-drug investigator and his one-time deputy were sentenced Friday to 10 years in a U.S. prison for conspiring to distribute cocaine.

Adan Castillo, the former chief of Guatemala's special anti-drug police force, and Jorge Aguilar Garcia, Castillo's one-time deputy, were arrested in 2005.

The men were lured to the United States for what they thought was training on fighting drug traffickers. In reality, the U.S. Drug Enforcement Administration had been investigating the men for four months with the help of the Guatemalan government.

The two men pleaded guilty last year.

U.S. officials estimate about 75 percent of the cocaine that reaches American soil passes through Guatemala, in part because its government long did little to stop it.

Potholes & Heroin (NYDN)

By Alison Gendar, Daily News Police Bureau Chief

New York Daily News, January 22, 2007

A city pothole repairman lived a secret life as a drug courier, selling high-quality heroin smuggled into the city by a Colombian crew.

Ricardo Calderon, a city Department of Transportation employee, was paid to fill potholes and pave streets in Queens. But cops arrested him, months after watching him pick up dirty drug money - $57,000 in cash - while on the job, authorities told the Daily News.

Federal Drug Enforcement Administration agents, NYPD detectives and state police dismantled the final pieces of the drug cartel that had employed him during a series of raids last week.

"You can't make this stuff up," said New York City narcotics prosecutor Bridget Brennan. "Imagine the surprise of agents conducting surveillance when a DOT truck pulls up and a worker gets out to pick up a bag of cash. ... You never know when an investigation may lead you to the highest level of an international distribution network."

Calderon, a Colombian native, played a crucial role in trafficking heroin from Pereira, Colombia, to drug distributors in the city, authorities said.

He delivered heroin that had been smuggled into the U.S. aboard cruise ships to three suppliers - Norbero Yepes, Gustavo Cardona and Ruben Acosta - in the Bronx, authorities said.

The men allegedly ran the Moacho-Mare drug ring in Woodlawn, selling the smack to dealers in New York, several other Northeast cities and as far west as Ohio.

Before the sting operation, Calderon was caught on cell phone wiretaps setting up the drug deal while he and other DOT workers were fixing streets in Queens.

"I'm working. I'm in Maspeth. Call me, and I'll tell you at what address we'll meet," Calderon told Yepes on the wiretaps, authorities said.

On June 16, 2004, Calderon had his street repair crew drive him to Joey's Pizza on Grand Ave. in Maspeth.

He jumped off the truck and, wearing his yellow Local 983 T-shirt, sauntered into the pizza parlor. Yepes came out a few minutes later, got into a car parked nearby and blew his horn several times to signal Calderon to come to the car, authorities said.

Calderon trotted over and took a plastic bag stuffed with bundles of cash out of Yepes' trunk. The money was advance payment for a kilo of high-quality heroin, authorities said.

Yepes had told Calderon to bring the heroin to the pizza parlor, but the pothole man balked at carrying drugs in the city truck. Calderon was heard on wiretaps setting up another meeting to deliver the drugs, authorities said.

Agents kept Calderon under surveillance for the next seven months as they built their case and traced his supply lines to Colombia. He was arrested on Feb. 14, 2005.

Five months later, he was fired from the DOT - not because of the drug allegations but because he had lost his license and couldn't drive a truck anymore, authorities said.

Calderon and his relatives own five apartments in Flushing, Jackson Heights and Woodside, as well as a vacant lot in Rockaway, law enforcement sources said.

DOJ_NMG_0119085

He also bought a Washington condo from former city DOT Commissioner Christopher Lynn for $60,000, Lynn confirmed. The property, sold in January 2005, has a value of about $230,000.

"His sister was an engineer at DOT and was a dear friend of mine. If you look at his status when he bought it, he wasn't accused of doing so much as throwing a gum wrapper on the ground," said Lynn, who headed the DOT from 1996-97.

Calderon was convicted of drug crimes and sentenced last month to nine years in prison. He was one of 89 people, in the United States and Colombia, arrested during the three-year investigation, authorities said.

The Colombian smugglers stashed the heroin in double-sided suitcases and inside small packets sewn into running shorts, and then boarded cruise ships bound for Florida.

Other drug couriers swallowed balloons filled with heroin, carrying a pound or more of smack inside their lower intestines.

Authorities said Acosta, 29, was caught on wiretaps joking with Yepes about how they might have to cut open the drug couriers if any of them had trouble "excreting" the heroin pellets.

Acosta's suggestion, according to authorities who heard the wiretap: Go to Home Depot and buy a saw.

Federal Investigators Target Two N.C. Internet Pharmacies (AP)

AP, January 22, 2007

Two North Carolina-based Internet pharmacies are under investigation for distributing controlled substances, according to a federal indictment unsealed last week.

Wilmington-based United Care Pharmacy and a sister business, Kwik Fill in Fayetteville, distributed several controlled drugs without requiring customers to consult with a physician, according to the indictment. The Drug Enforcement Administration says United Care distributed several types of drugs, including erectile dysfunction drug Viagra, painkiller Vicodin and anti-anxiety drug Xanax.

United Care only required customers to fill out an online questionnaire, "which allegedly received little or no consideration by a physician before being approved," according to the indictment.

Four people have been charged in what the DEA described as a "rogue Internet pharmacy." Wilmington residents Andrew Thomas Russo and Denis Leborgne, along with David John of Nashville, Tenn., and pharmacist John F. Tuite of Myrtle Beach, S.C., made their first court appearances last week.

Jay Campbell, executive director of the North Carolina Board of Pharmacy, described operations such as United Care as a "significant threat to the public health and safety."

"The board is pleased to see that federal law enforcement is seeking to hold United Care's operators criminally liable for their conduct," he said.

Businessman's Plea Ends Pot-factory Case (YOUNGVIN)

By Patricia Meade, VINDICATOR CRIME REPORTER

Youngstown Vindicator, January 22, 2007

This is the case in which three judges wrote letters in support of a drug peddler.

YOUNGSTOWN — It came as somewhat of a surprise to federal drug agents that a lawman and legitimate businessmen were linked to a massive pot factory concealed in a warehouse.

Roger S. Bamberger, assistant U.S. attorney and 23-year veteran of the Organized Crime Drug Enforcement Task Force, reflected on the case that ended Tuesday with the guilty plea of Edwin J. Stupka, 49.

Stupka, the 11th defendant in the case, moved to Tucson, Ariz., from Youngstown around the time the first marijuana trafficking arrests were made in 2003.

He was indicted in May 2006, charged with money laundering (nearly $2 million) and conspiracy to distribute more than a ton of marijuana. He will be sentenced April 3 by U.S. District Judge Peter C. Economus in Youngstown federal court.

The advisory sentencing guideline range is nine to 15 years. As part of a plea agreement, Stupka must forfeit his ill-gotten gains — including a plane and hilltop mansion in Arizona.

Stupka has acknowledged that he attempted to launder $1.7 million through a scheme to buy a chain of Arabica Coffee Houses in Cleveland.

Bamberger said "lady luck appeared on the side of law enforcement" with the discovery of the marijuana farm inside a warehouse at 814 Marshall St. in early 2004. A Youngstown police officer and special agent with the federal bureau of Alcohol, Tobacco, Firearms and Explosives were taking photos near the warehouse in preparation for an upcoming trial when they smelled marijuana.

He said it was not only one of the largest seizures for the Drug Enforcement Administration — 3,500 plants in seven rooms — but some of the participants' backgrounds surprised investigators:

Robert Arroyo had operated Frontier Woodworking and the B&O Station Brewery and Restaurant.

Joseph Pedaline, the warehouse owner, also had Pedaline Iron Works and a heating/air conditioning company. Arroyo and Pedaline had done work on the Poland Library.

Kevin Rouan had the Pyatt Street Produce Co.

William Umbel operated the popular Pyatt Street Diner. Before sentencing in 2005, character/reference letters on his behalf were written to Judge Economus by three local judges — R. Scott Krichbaum, Robert A. Douglas Jr. and Charles J. Bannon. Judge Economus called the letters self-serving and did not consider them.

Frank Carbon had been the No. 2 man at the Mahoning County Sheriff's Department. He allowed marijuana to be stored in his office space underneath the police academy building on Southern Boulevard in Boardman.

In June 2002, Pedaline was featured with his then-partner, Arroyo, in The Vindicator as co-owners of the B&O. The remodeled train station opened then in its second attempt as a restaurant.

Investigators

Bamberger said the marijuana case was investigated by the Youngstown DEA Task Force, which includes the IRS Criminal Investigation Unit; Bureau of Criminal Identification and Investigation; police from Boardman, Youngstown, Salem, Warren, Poland Village and Beaver Township; and deputies from the Mahoning County Sheriff's Department.

He credited the "investigative acumen" of task force members Kim Nusser, a BCI special agent, Mike Hughes, a Boardman sergeant, and Gary Gruver, an IRS agent, for the airtight case.

"The citizens of the Mahoning Valley were well served by their collaborative efforts," Bamberger said.

The federal prosecutor said the marijuana distribution began as early as 1992 and continued through the summer of 2003. Stupka invested thousands of dollars in the indoor marijuana factory on Marshall Street in 2001.

Investigators learned that the high-grade pot was selling for $3,200 a pound, Bamberger said.

Guilty Pleas From 3 Heroin Kingpins (JJ)

By Michaelangelo Conte, Journal Staff Writer

Jersey Journal (NJ), January 22, 2007

Three leaders of a Hoboken-based drug ring that moved up to 20,000 bags of heroin through Hudson County each week were living the high life on drug profits, officials said. But yesterday all three pleaded guilty to federal drug crimes carrying sentences of up to 25 years in prison, officials said.

Jose "Nutty" Gonzalez, 25, of Third Street in Union City, Rory Praylow, 28, of Jackson Street in Hoboken, and Manuel "Murder" Suarez, 31, of Palisade Avenue in Jersey City, pleaded guilty in federal court in Manhattan yesterday morning, officials said.

They were among eight people busted after the six-month investigation that came to a head last March 6, Hudson County Prosecutor Edward DeFazio said.

Just after midnight that day, Hoboken police, working with the federal Drug Enforcement Agency and the Hudson County Prosecutor's Office, spotted leaders of the cartel meeting at the Hess Station on 14th Street in Hoboken, reports said.

"We are very gratified with the successful prosecution of these major drug dealers," Hudson County Prosecutor Edward DeFazio said of the pleas entered in federal court in Manhattan. "It's an outstanding example of the cooperation of law enforcement and prosecutorial agencies."

DOJ_NMG_0119087

During the six-month investigation numerous searches of locations and vehicles were conducted, resulting in seizure of 27,000 bags of heroin, four loaded semiautomatic handguns and a bulletproof vest, officials said. One of the guns recovered was later connected to a shooting in Hoboken on Super Bowl Sunday last year, DeFazio said.

Also arrested and facing charges as a result of the drug probe are Philip "Spud" Pasquale, 22, and Darryl Oliver, 35, both in Hoboken; Jason "Jay" Santos, 25, and Alex Gonzalez, 21, both of Jersey City; and Mary Gama, 27, of Union City, officials said.

Cyclist Tammy Thomas Pleads Not Guilty (WP/AP)

By David Kravets, The Associated Press

The Washington Post, January 22, 2007

SAN FRANCISCO -- Former elite cyclist Tammy Thomas pleaded not guilty in federal court Friday to charges of lying to a grand jury investigating steroid use in sports.

Thomas, the first athlete charged in a probe that has implicated some of the biggest stars in baseball and track and field, is charged with three counts of perjury and one count of obstruction of justice.

Thomas, who appeared much slimmer than during her racing days, declined comment after being released on $50,000 bond.

Thomas was banned from cycling for life in August 2002 after the performance-enhancing drug Norbolethone was detected in her urine.

The drug, once an obscure steroid used in human tests in the 1960s, was rediscovered by chemist Patrick Arnold, who supplied the Bay Area Laboratory Co-Operative with undetectable performance-enhancing drugs and is among five people who have pleaded guilty in the investigation.

Defense attorney Tony Tamburello said outside court that Thomas is innocent of any crimes because she did not knowingly lie to the grand jury when she testified in October 2003.

"She did not know at the time that she was taking that substance," Tamburello said. Nobody told her "this was Norbolethone."

Thomas was a silver medalist in the individual sprint at the 2001 World Track Cycling Championships. She has maintained her innocence and said the positive results might have been triggered by contraceptives she was using.

The indictment accuses Thomas of lying when she testified to a grand jury that she never used performance-enhancing drugs. She also is said to have lied when she testified that she did not get illegal drugs from Arnold, who pleaded guilty last year and was sentenced to three months in prison.

"She never met Patrick Arnold," Tamburello said.

Each count against Thomas carries a maximum five-year prison term and $250,000 fine. She was ordered to appear March 23 in federal court, when a trial date is likely to be set.

The probe has netted guilty pleas from BALCO founder Victor Conte, BALCO vice president James Valente and track coach Remi Korchemny as well as Greg Anderson, Barry Bonds' personal trainer, who served three months and is back in prison for refusing to testify against the Giants slugger.

Authorities suspect Bonds, like Thomas, lied to the 2003 grand jury when he said he never knowingly used steroids. A probe of Bonds for perjury and possible tax-evasion charges is ongoing.

Trevor Graham, who coached track stars Marion Jones, Justin Gatlin and Tim Montgomery, has pleaded not guilty to charges of lying when he said he did not distribute steroids to his athletes or tell them where they could be obtained.

Colombian Government Is Ensnared In A Paramilitary Scandal (NYT)

By Simon Romero

The New York Times, January 21, 2007

BOGOTÁ, Colombia, Jan. 20 — The government of President Álvaro Uribe, the largest recipient of American aid outside the Middle East, has found itself ensnared in a widening scandal as revelations surface of a secret alliance between some of the president's most prominent political supporters and paramilitary death squads.

DOJ_NMG_0119088

Testimony this week from Salvatore Mancuso, a former paramilitary commander who admitted to orchestrating the killing of more than 300 people, as well as a document made public on Friday implicating more than a dozen politicians in the pact with paramilitaries, have injected fresh detail into a slow-burning scandal that has caused Colombia's elite political class to shudder in recent weeks.

Senior members of Mr. Uribe's government and Mr. Uribe himself have said that anyone shown to have had illegal ties to the paramilitaries, which terrorized Colombian cities and the countryside in the nation's internal war, which has gone on for decades, and made fortunes in cocaine trafficking, should be prosecuted in courts of law.

The scandal has already touched Mr. Uribe's cabinet, with Senator Álvaro Araújo, the brother of Foreign Minister Maria Consuelo Araújo, under investigation for collaborating with militias.

"If there's someone involved at the highest level, they will be fired," Francisco Santos, Colombia's vice president, said in an interview. "Scrutiny is fine for us," Mr. Santos said. "This country needs to know the whole truth."

Some of the details coming to light about the breadth of paramilitary activities are the result of a process set in motion by Mr. Uribe's own government, which has allowed paramilitary leaders to confess their crimes and pay reparations in exchange for reduced sentences of no more than eight years in prison.

Though some militia leaders have balked at the deal, much of Colombia has been gripped by the first such confession, that of Mr. Mancuso, a cattleman who helped found the paramilitary movement in the 1980s in an effort to combat leftist guerrillas.

Mr. Mancuso, 48, who studied English at the University of Pittsburgh, wept during the first days of his testimony at a special hearing in Medellín last month. This week, however, he simply read from a statement describing how he oversaw the assassinations of hundreds of people, with some operations made possible with information from military intelligence.

Mr. Mancuso also put Mr. Uribe in the spotlight by saying that militias pressured people to vote for the president in 2002, when Mr. Uribe was first elected. Mr. Uribe responded quickly by going on a national radio network to say he had never sent any emissaries to strike deals with the paramilitaries.

On the heels of Mr. Mancuso's testimony, a document rumored to exist in recent weeks was published in the daily newspaper El Tiempo on Friday. It describes a secret pact in 2001 between Mr. Mancuso, other paramilitary leaders and 11 congressmen, two governors and five mayors, in which those present agreed to work together to forge "a new social contract," largely in order to protect private property rights.

Senator Miguel de la Espriella, one of the signatories to the pact, helped bring the scandal to light last year by disclosing the ties between politicians and paramilitaries. Like other officials implicated in the pact, he said he was forced to sign, raising doubts as what type of legal punishment, if any, they might receive.

"At first we declined to sign, but when they put a man with a rifle next to the document we understood we had no choice," Mr. de la Espriella, a member of the Democratic Colombia party, said in an e-mail interview.

Asked why he was the only politician to come forward with details of the secret agreement, Mr. de la Espriella, alluding to widespread suspicions that legislators and government officials had for years worked in tandem with the paramilitaries, responded, "I told myself that a half-truth doesn't serve anybody, and we should all contribute to the enlightenment of the truth during so many years of war."

Those who signed the document included not only supporters of Mr. Uribe but also high-ranking officials in the political opposition, pointing to how a growing portion of the political establishment could be tarnished by the scandal.

Some 30,000 paramilitary members have been demobilized during Mr. Uribe's government in recent years. Colombia's military still receives more than $700 million a year in aid from the United States to combat drug trafficking and armed insurgencies.

Two guerrilla groups, the Revolutionary Armed Forces of Colombia and the National Liberation Army, still operate in the country. A truck carrying more than 600 pounds of explosives this week destroyed a dairy plant in southern Colombia owned by Nestlé, the Swiss food company, an act that the police attributed to the rebels.

DOJ_NMG_0119089

Although the scandal has emerged as the most pressing political challenge to Mr. Uribe's presidency, his approval ratings remain high, at above 60 percent, after five years of rule and a re-election victory last year. Many Colombians credit Mr. Uribe for declining levels of murders and kidnappings and robust economic growth.

However, political analysts here say a steady stream of disclosures related to the paramilitary scandal could diminish Mr. Uribe's credibility, particularly if implicated officials are perceived to have close ties to the president. The scandal has already entangled a former ambassador to Chile and a former head of the intelligence service.

Equally pressing for Mr. Uribe's government could be the scandal's influence on discussions in the United States Congress of aid to Colombia and a trade agreement awaiting Congressional approval that has been signed by Mr. Uribe and President Bush. Political analysts say the Democratic-led Congress is expected to add greater scrutiny of human rights issues in Colombia.

CONGRESS-ADMINISTRATION:

Bush Draws Up Ambitious Domestic Agenda (USAT)

By David Jackson

USA Today, January 22, 2007

WASHINGTON — President Bush vowed that the Iraq war would not deter him from engaging the Democratic-controlled Congress on a sweeping domestic agenda, including helping states tailor their own plans for health insurance.

In an interview with USA TODAY, Bush pointed to the health care initiatives of California Gov. Arnold Schwarzenegger and former governors Mitt Romney of Massachusetts and Jeb Bush of Florida as reasons to support state-specific plans. However, he said state plans should not lead to universal health care run by the federal government.

"There's a lot of people in Washington that say the federal government ought to run health care. I'm not one," he said in a wide-ranging and occasionally testy conversation Friday.

Bush said he will use Tuesday's State of the Union speech to highlight a new health care plan. The plan calls for a health care tax deduction of $7,500 for individuals and $15,000 for families. The tax break would apply whether people buy their own insurance or receive coverage through their jobs.

Under Bush's plan, health insurance benefits from employers would be considered taxable income. That means people with generous health coverage would pay taxes on the amount that exceeds the tax deduction.

Bush's speech also will include more about a new energy initiative, flexibility on meeting education standards, and renewed calls to work with Democrats on immigration and other issues. "I'm going to remind Congress that we've got to show the American people that we're capable of accomplishing some big things," he said.

Sen. Edward Kennedy, D-Mass., said there are opportunities to work with Bush on issues such as immigration and health care, but "the most important issue facing us today is Iraq."

"If the president is serious about strengthening relations with Congress he should begin by seeking authority from Congress for any escalation of the war," Kennedy said Sunday in an e-mail statement.

Kennedy, chairman of the Senate panel that oversees health care, said he's concerned Bush's plan "only deals with the tax code" and may undermine the health coverage many Americans now have.

Among the domestic issues highlighted by Bush in the interview:

•Social Security. Bush said he would support new talks with Democrats on the retirement program's future with "no preconditions." He declined to rule out discussion of a tax increase to address the program's long-term solvency. "The spirit is, 'Bring your best idea how to solve the problem; we'll see if we can find common ground,' " he said.

However, Bush, who supports creating individual investment accounts in the system, indicated he remains opposed to raising taxes. "I've showed that you can solve Social Security without raising taxes."

•Energy. Bush repeated a call made last year for more alternative energy sources but declined to outline specifics. He said he would push "a bold initiative that really encourages America to become less dependent on oil."

The administration has long linked its energy programs to efforts to address global warming. "The new technologies I'll be outlining will help us deal with the issue of 'greenhouse gases,' " he said.

DOJ_NMG_0119090

•Immigration. Bush said he will continue to push for a bill that would expand opportunities for foreign "guest workers," even though conservatives in his party such as Rep. Duncan Hunter, R-Calif., say such programs amount to amnesty for illegal immigrants.

•Balanced budget. He said he will submit a budget to be balanced by 2012 without raising taxes, but did not say whether it would depend on major cuts to existing programs, future economic growth or some combination of both.

•Education. In calling for an extension of his No Child Left Behind education law, Bush said he wants "flexibility" to help struggling schools "without backsliding on standards." The law, passed with bipartisan support in 2001, expires this year. He also wants to make it easier for parents to move their children from failing schools.

•Terrorist surveillance. Bush said the program of monitoring international calls of terrorism suspects "has not been weakened" now that it is under a secret court's supervision.

•Diseases. Bush will ask Congress to help curb the spread of diseases such as malaria and AIDS worldwide. He said it means his foreign policy "is more than just spreading freedom."

Bush To Offer Health Insurance Reforms (FT)

By Eoin Callan

Financial Times, January 22, 2007

Healthcare reform will on Tuesday be thrust to the forefront of the policy issues facing candidates for the White House in 2008 when President George W. Bush uses his State of the Union speech to propose a new tax regime for health insurance benefits.

The president will appeal for support for proposals in next month's budget to cap the amount of health premiums Americans can deduct from taxable income and use the savings to offer greater tax relief for those with less generous plans.

The White House has also pledged to complement trail-blazing initiatives in California and Massachusetts to address the problem of the uninsured.

The initiatives come as opinion polls show increasing public anxiety while the costs of healthcare outstrip inflation and US employers pare back on the health benefits they provide to their workforces.

The White House said its plan would include a "standard deduction for health insurance", while families with insurance would not pay taxes on the first $15,000 (£7,600) in compensation and single people would not pay taxes on the first $7,500.

The healthcare issue will prove divisive for the Democratic party, which is more united in its opposition to Mr Bush's conduct of the war and of climate change policy.

But it is seen by Republican strategists as a particular handicap for Hillary Clinton, who holds a commanding opinion poll lead over her Democratic rivals for the presidential candidacy after taking at the weekend the first legal steps towards launching her 2008 campaign. The New York senator and former first lady has yet to address decisively her association with failed healthcare reforms during her husband's presidency.

However, she moved quickly to toughen her stance over the war in Iraq as she sought to sharpen her differences with Mr Bush and fend off a challenge from Barack Obama, the first-term senator for Illinois. In a Washington Post poll on Sunday, Mrs Clinton was backed by 41 per cent of Democrats questioned.

The former first lady is expected to lead the crucial early rounds of fundraising by the crowded field of Democratic aspirants – joined on Sunday by Bill Richardson, the New Mexico governor – in spite of a problematic record on both foreign and domestic policy. She called for the withdrawal of US troops from Baghdad and an eventual end to the occupation of Iraq. In 2002 she voted in favour of a resolution authorising an invasion.

Mrs Clinton said she did not have "faith" in Nouri al-Maliki, the Iraqi prime minister, as she stayed ahead of her Senate colleagues by backing a binding resolution aimed at stemming the flow of funds to Baghdad.

Bush Bids To Increase Focus On Health Care With Plan On Tax-Based Aid For Consumers (WSJ)

By John D. McKinnon, John Harwood

DOJ_NMG_0119091

The Wall Street Journal, January 22, 2007

WASHINGTON -- As a new Wall Street Journal/NBC News poll1 indicates health-care costs are the nation's top economic concern, President Bush joined the debate with a sweeping insurance initiative -- one that threatens a possible tax increase for many upper-income people.

White House officials said Mr. Bush will seek to extend tax deductibility of health coverage to everyone who buys it outside the workplace. But under Mr. Bush's plan, employer-provided health insurance benefits would be counted as part of income for the first time, and thus made taxable.

Historically, the government hasn't taxed employer-provided health insurance benefits but gives smaller tax breaks, or none at all, to many people who buy insurance themselves outside the workplace. The tax system is especially unfair to employees who work without traditional benefits, experts say. Effectively, Mr. Bush is proposing to eliminate the imbalance by giving everyone the same deduction -- $15,000 for families, $7,500 for singles.

Cracking the problem of health-care inflation is emerging as a major political issue for the foreseeable future, due to the persistent rise in costs, employer efforts to shift more of the burden to workers and the aging of the baby boomer generation. Still, the odds of major legislation in the current Congress appear long, and health care is likely to be a point of contention in the 2008 presidential race.

Hopes for a Large Effect

The Treasury Department estimates that the change would prompt a net increase of five million in the number of Americans with health insurance, and administration officials are hopeful the effect will be even larger. In his weekly radio address, Mr. Bush said his plan is "designed to help make basic private health insurance more affordable -- whether you get it through your job or on your own." Over 10 years, the plan would have no cost to the government, according to a person close to the administration. But details weren't available over the weekend.

With the average premium for an employer-provided family policy at $11,500, 80% of employees with health benefits would see their overall tax go down, a person close to the administration estimated. But many executives and professionals, as well as some rank-and-file union workers, could see their taxes increase.

The change also would mean a tax break for most, if not all, of the 17 million people who obtain coverage themselves, administration officials estimate. The deduction also could be used to reduce income subject to the payroll taxes that support Social Security and Medicare. That is intended to provide a benefit to lower-income workers who often don't owe any income tax.

A family without insurance earning $60,000 could get a total tax savings of about $4,500 under the plan, the person close to the administration said. That includes $2,250 of income-tax savings and an equal amount of savings from payroll taxes. Families can buy high-deductible coverage for themselves in the insurance market for an average of $5,200 -- little more than the amount a typical family could save on taxes under the administration plan.

Suits the Public Mood

At a time when the president is bucking political head winds on his Iraq policy, Mr. Bush's emphasis on health care well suits the public mood. In the new Wall Street Journal/NBC News poll, a 33% plurality of Americans calls the cost of health care the economic issue that concerns them the most -- outpacing problems such as jobs going overseas (identified by 24%), the federal budget deficit (13%) and lack of jobs that pay well (12%).

Some advocates praised Mr. Bush's plan as unexpectedly bold and predicted it would help turn the focus of the health-care debate further toward reform of the private-insurance market and away from creating or expanding government-run health-care programs.

"This really changes the conversation," said Grace-Marie Turner, president of the conservative Galen Institute. "People understand tax deductions."

But several said the administration will have to do more to help the poorest of the uninsured. Mr. Bush hinted in his Saturday radio address that he will have another initiative aimed at encouraging states to create insurance pools for lower-income people.

Despite the tax plan's appeal, the effective cap on deductibility of employer-provided coverage will be controversial with many congressional Democrats, who are focused on shoring up the workplace system of insurance and worry the White House

DOJ_NMG_0119092

proposal would undermine it. Unions and many large employers will worry about the long-term effect, particularly if it encourages younger, healthier workers to drop out of workplace plans and buy cheaper insurance themselves.

Part of the Problem

If Mr. Bush's plan isn't dead on arrival to Congress, "I think it's going to be wounded on arrival," said Ron Pollack, executive director of Families USA, a liberal advocacy group.

Many Republicans counter that the traditional unlimited tax break available for employer-provided care is actually part of the problem with the U.S. system and contributes to overspending and inflation in the sector.

Conservative economists say the change would touch off intense competition in the insurance marketplace and thereby help hold down prices, while also giving consumers more incentive to buy high-deductible coverage and become smarter shoppers.

Universal Health Coverage Attracts New Support (WP)

By Christopher Lee

The Washington Post, January 22, 2007

Harry and Louise have had a change of heart.

Thirteen years after television ads from the insurance industry featuring the fictional middle-class couple helped kill the Clinton health-care plan and make universal coverage politically radioactive, comprehensive proposals for expanding coverage to millions of uninsured Americans are flowering again inside the Beltway and around the country.

And this time, advocates hope, the political climate is right for the best ideas to grow, in large part because many business groups that opposed earlier efforts now agree that rising health-care costs and increasingly tougher access to insurance are unsustainable trends.

Whether Washington will do more than talk about the problem, however, remains to be seen. Money is tight, and some experts say major shifts in federal policy are unlikely until after the 2008 presidential election, in which health care is expected to be a major focus.

Many are not willing to wait. Karen Ignagni, president of America's Health Insurance Plans -- the same industry association that once funded the "Harry and Louise" ads -- was among representatives of 16 business, medical and consumer groups that last week called for Congress to spend $45 billion over five years to extend health coverage to most of the nation's uninsured children. After that, the groups said, lawmakers should direct billions more toward covering uninsured adults, mostly through a mixture of tax breaks and expanded federal programs.

"On this issue, the polls show that Democrats, Republicans and independents want progress," Ignagni said. "The most expensive course is to do nothing."

John J. Castellani, president of the Business Roundtable, an association of chief executives of 160 U.S. companies, issued a similar call at a separate news conference last week with leaders of AARP, the politically powerful seniors organization, and the Service Employees International Union (SEIU). "Our soaring health-care costs put American goods and services at a significant competitive disadvantage, and they slow economic growth," Castellani said. "Policymakers must act."

In recent weeks, proposals for dramatically expanding coverage have been floated by Ignagni's industry group, the Children's Defense Fund and Sen. Ron Wyden (D-Ore.). Sen. Edward M. Kennedy (D-Mass.) and Rep. John D. Dingell (D-Mich.), who lead important congressional committees, plan to pursue legislation to allow Americans under 65 to enroll in Medicare or in the health coverage enjoyed by Congress. And a bipartisan group of two senators and three House members introduced legislation last week to help states fund innovative ways to cover more people.

"Health care has been poked and prodded for years," said Wyden, who wants to replace employer coverage with a centrally financed system of private insurance for all Americans. "I believe it is time for diagnosis and treatment."

Much of the activity in Washington is being spurred by a wave of experiments at the state level, particularly Massachusetts's decision last year to require all residents to obtain health insurance, through state-subsidized policies if necessary. This month, California Gov. Arnold Schwarzenegger (R) proposed a similar plan for all 36 million Californians, funding its $12 billion cost partly through fees on employers, hospitals and doctors.

DOJ_NMG_0119093

In Pennsylvania, Gov. Edward G. Rendell (D) last week proposed creating a program of state-subsidized private insurance to help many of the 767,000 uninsured people in his state. The plan would impose taxes on tobacco and on businesses that do not offer coverage, and it would phase in a requirement that people earning more than 300 percent of the poverty level (about $60,000 for a family of four) obtain insurance.

"It is no longer a question of whether we can afford to act," Rendell said, noting that treating Pennsylvania's uninsured costs $1.4 billion annually. "The cost of inaction is far greater in terms of individual health consequences and from the increasing burden on taxpayers."

Vermont enacted legislation last year that seeks to expand coverage so that at least 96 percent of residents will have insurance by 2010. Illinois began a major expansion of coverage for children in 2005. That same year, Maine began implementing a plan whose goal is to cover all of the state's 130,000 uninsured residents by 2009.

Other states considering expanding coverage include Connecticut, Indiana, Iowa, Louisiana, Minnesota, Missouri, New Hampshire, New Jersey, New Mexico, North Carolina and Wisconsin, according to the National Conference of State Legislatures.

All the state activity is adding pressure on politicians in Washington to act on a problem that grows worse year by year. Recent census figures show that a record 46.6 million Americans, including 8.3 million children, had no health insurance in 2005, up from 39.7 million in 1994. Employer coverage is more expensive and less available.

"As usual, Washington is behind the rest of the country," said Andy Stern, president of the SEIU. "We're ready to have a very bipartisan solution. What you are seeing now that you didn't see in 1994 is that everyone is on the same side saying, 'We want universal coverage.' The only question is, 'How?' "

Ah, yes, "how" -- and how to pay for it.

Expanding coverage is a costly proposition, and Democrats, in control of Congress for the first time since 1994, have pledged not to pass major new spending proposals unless other programs are cut to avoid increasing the federal deficit.

While there is bipartisan support for reauthorizing the decade-old state-federal Children's Health Insurance Program, which covers more than 4 million children at a cost of $5 billion a year, experts say at least $12.7 billion more is needed over the next five years just to keep covering the same number of kids.

Moreover, President Bush has given no sign of departing from his advocacy of special tax-favored savings accounts and changes in the tax code as the best ways to make health insurance more affordable. In his State of the Union speech this week, Bush plans to propose more such changes and to announce a new initiative to help states get more residents into private insurance.

"We must address these rising costs so that more Americans can afford basic health insurance," the president said Saturday in his weekly radio address. "And we need to do it without creating a new federal entitlement program or raising taxes."

Despite the new enthusiasm, in the short run, most attempts to expand coverage will probably continue to happen at the state level, some lawmakers said. Federal efforts will be largely incremental and devoted to helping the states find their way.

"The states become laboratories," said Rep. Frank Pallone Jr. (D-N.J.), chairman of the House Energy and Commerce subcommittee on health. "Politically that's necessary. If we tried to adopt a universal health-care plan on the federal level, we probably wouldn't have the votes."

Sen. George V. Voinovich (R-Ohio), a member of a bipartisan group that wants to steer new grants to states, called health care "the greatest domestic problem" but also said that "the truth of the matter is that dealing with this problem between now and the election is not realistic."

"Congress is not going to act in a major way to deal with this access problem in the next couple of years," said Sen. Jeff Bingaman (D-N.M.), another member. "That's the unfortunate reality that we're facing. And so we're saying most of the effort that is possible is at the state level and at the local level. And we want to encourage it and we want to provide assistance."

But ultimately, Washington will have to do more, said Charles N. Kahn III, president of the Federation of American Hospitals.

"At the end of the day, I think the federal government and the federal taxpayers have a responsibility," said Kahn, whose organization was among those calling for $45 billion to cover children. "Clearly, there are states that are looking into this. They

DOJ_NMG_0119094

can come up with some resources. But we feel that in order to get the ball rolling from where we are now, this is the role that the federal government needs to play."

Bush Expected To Make Call For Improved Fuel Economy (NYT)

By Matthew L. Wald

New York Times, January 22, 2007

WASHINGTON, Jan. 21 — There is widespread anticipation, inside government and outside, that President Bush will call for better fuel economy in his State of the Union address on Tuesday.

The White House has posed questions to the Transportation Department about various options. One idea under consideration, government officials and car company executives who have consulted with the White House say, is to do away with the existing system of fleet averages, as has already happened with light trucks, and set a standard for each vehicle, based on its "footprint," or distance between the wheels.

The president asked for the authority to do that last year, but Congressional Democrats rejected his request, saying the White House should use its existing power to simply raise the average. A standstill has resulted.

The federal official in charge of gasoline mileage rules, Nicole R. Nason, has been telling members of Congress that when the current rules for car mileage were set, in 1975, she was 5 years old. Ms. Nason, administrator of the National Highway Traffic Safety Administration, says she hopes that when her 5-year-old daughter starts driving, the standard will be higher. But that hope has not been enough to budge either side.

Raising the number from the current 27.5 miles per gallon would cause hundreds more highway deaths each year because automakers would meet the goal by moving to smaller cars, the administration argues. It also says that the system puts an undue burden on companies that specialize in large cars — that is to say, American automakers.

A problem for the Democrats is that, once there is no fleet average, the debate gets murkier because there is no single number to argue over. Simply reforming the system without setting specific goals is "a license for obfuscation," said Clarence M. Ditlow, director of the Center for Auto Safety, which monitors the auto industry and government safety regulators.

Critics are pushing hard. Representative Edward J. Markey, a Massachusetts Democrat who wants to increase fuel economy, said: "Our problem in dealing with the Bush administration is that when they want to send troops to fight for oil, they do that whether they have the authority or not. When you ask them to reduce the need for oil, suddenly they're concerned about authority."

Higher-mileage cars can be just as safe as gas-guzzlers, Mr. Markey said, and to argue otherwise would mean "that the Ford Escape hybrid is less safe than the regular Ford Escape." He plans to reintroduce a bill that would push the standard up by one mile per gallon per year for the first 10 years, and 4 percent per year thereafter.

The car portion of the Corporate Average Fuel Economy system, known as CAFE, has not changed since 1990, and the rule governing pickups, vans and sport utility vehicles is only slowly changing. Mr. Bush, however, is expected to take steps to encourage the development of batteries used to power hybrid-electric vehicles and further raise production of ethanol.

Established in 1975 after the Arab oil embargo, the system set a minimum standard for cars twice as high as the average at the time, pushing the standard to 27.5 miles per gallon in 1985. After minor adjustments from 1985 to 1990, the car standard has been frozen at 27.5 since 1990, first by Congressional order and now by a dispute over how the rules should be structured.

Over that 17-year period, domestic oil production has declined nearly a third, to 5.2 million barrels a day from 7.4 million. As demand has grown, imports have risen by more than two-thirds to fill the gap, to 10.1 million barrels a day from 5.9 million. Ethanol, liquids from coal and tar sands are all possible alternatives, but none will make major contributions in the near future; using less oil will require reducing driving or using vehicles with better gasoline mileage.

The rule has produced unintended consequences. For example, it led car makers to redefine many household vehicles as "trucks," because those had a more lenient standard. And automakers got credit under the system for building vehicles that could run on ethanol or other alternatives, even if the vehicles actually ran on gasoline.

And the window sticker has added a wry phrase to the American vocabulary: Your actual mileage may vary. Last year, in an effort to fix that, the E.P.A. reduced the mileage promised by the sticker.

DOJ_NMG_0119095

Last spring, under the “footprint” system for light trucks, Ms. Nason’s agency set rules for model years 2008 through 2011.

The rules will push a typical Ford Explorer to 25.2 miles per gallon in 2011, from 19.4 in the 2007 model year, as measured by the Environmental Protection Agency. A PT Cruiser (which Daimler-Chrysler has classified as a light truck, helping it meet the truck average) to 28.1 miles per gallon in 2011, up from 27.4 in 2007.

(Both Ford and Daimler-Chrysler have the option of complying with the old rules based on a fleet average rather than the new vehicle-by-vehicle rule, which takes effect between model years 2008 and 2011.)

The industry’s official position is that the decision should be left to the highway traffic safety administration. Gloria Bergquist, a spokeswoman for the Alliance of Automobile Manufacturers, which represents all the major companies except Honda, said, “They’re supposed to crunch the data and come up with a sweet spot, between affordability, safety concerns, jobs, and technology, and come up with the number.”

The technology to go farther on a gallon of gas is no secret, but it costs money that Detroit auto companies have been loath to spend, especially now that they all have financial problems. For years, the automakers have argued that fuel economy is not a priority for buyers, and they have built a product line that follows that assessment.

Robert Heavenrich Jr., who retired last year as a fuel economy researcher at the E.P.A.’s Ann Arbor laboratories, said there was lots of room for modernization. More modern technology would use less fuel to do the same work. For example, Mr. Heavenrich said, he drives a 1985 General Motors Sierra Cutlass with a 231-cubic-inch engine. “You can go down to a Buick dealer today and get that same engine-transmission combination,” he said.

Mr. Heavenrich said that many Japanese cars used a hardware-software combination that allowed some cylinders to shut down during periods of low demand, like highway cruising, to save fuel, but that American manufacturers had generally not incorporated that innovation because it would raise production costs.

The E.P.A. report on fuel economy trends that Mr. Heavenrich produced annually until last year said that mileage would be about 30 percent higher if buyers would settle for the vehicle size and performance characteristics that prevailed in the mid-1980s. But what sells is heavier, zippier cars.

To some extent, though, consumers have voted for higher standards. The actual average fuel economy for cars sold in the 2005 model year, the most recent one for which numbers are available, was just over 30 miles per gallon.

Bush Expected To Warn On Energy Security (AP)

By H. Josef Hebert

AP, January 21, 2007

A year after warning America of its addiction to oil, President Bush is expected to renew concerns about energy security in his State of the Union address. But will the rhetoric be followed by action? Up to now, the record has been mixed.

Aides hint of a major pronouncement on energy in the speech before Congress and the nation Tuesday night. Yet the president is expected to take a predictable path, urging expanded use of ethanol in gasoline, more research into cleaner burning coal and on gas-electric "hybrid" cars, and greater nuclear energy.

He may tweak his voluntary program on climate change. Aides, however, say the president remains opposed to mandatory cuts in carbon dioxide and other heat-trapping "greenhouse" gases as has been proposed in Congress.

A year ago, Bush declared "America is addicted to oil" and he set a goal of replacing three-fourths of today's oil imports from the Middle East by 2025. He pledged to press for alternatives to oil and for more efficient use of energy.

He has had some success in getting more domestic production.

The Bush administration has opened new federal lands for oil and gas drilling. Last month, Congress approved opening a large new area in the Gulf of Mexico to drilling. This month, Bush lifted a longtime ban on oil and gas drilling in Alaska's Bristol Bay.

But when it comes to weaning the country away from oil, the president's critics say his rhetoric has not been matched by action.

"President Bush actually cut funding for the key energy-saving technologies," says Joseph Romm, a former head of the renewable fuels and efficiency programs at the Energy Department during the Clinton administration.

DOJ_NMG_0119096

The department's requests for renewable fuel and conservation programs have stayed flat at about $1.18 billion annually over the past six years — really a decline if inflation is considered, energy efficiency advocates say.

"Since 2002, the energy efficiency programs at the Energy Department have dropped by a third in real dollars," says Kateri Callahan, president of the Alliance to Safe Energy, a private advocacy group.

When one program is increased, others have suffered, these critics maintain.

They acknowledge spending increases for research into solar and wind energy, but contend that came at the expense of two other renewable energy programs that were eliminated: research into geothermal energy deep within the earth and efforts to make hydroelectric dams more fish friendly.

Congress has not been all that helpful, either.

The energy law passed in 2005 authorized $3.8 billion worth of renewable energy and conservation programs. But a vast majority of those programs are without funds, neither requested by the administration nor approved by Congress.

Callahan points to a $450 million consumer education and outreach campaign on energy efficiency in that law, but says "not one penny has been appropriated" nor has the money been sought by the administration.

Energy Secretary Samuel Bodman says the administration over the years has spent nearly $12 billion in developing new energy technologies. He cited the president's $2.1 billion "advanced energy initiative" in the State of the Union a year ago.

But most of that program goes for nuclear research and clean coal technology that generally has little impact on the country's dependence on oil, 70 percent of which is used in transportation.

For that, Bush told a renewable fuels conference last year in St. Louis, "we need to change how we power our automobiles. ... I like the idea of promoting a fuel that relies upon our farmers."

Bush has supported lawmakers' push to use more corn-based ethanol as a gasoline blend and he is expected to call for a sharp escalation of ethanol use in his speech.

It is a political sure bet as ethanol has widespread bipartisan support.

Among the first bills introduced in the new Democratic-run Senate calls for using 60 billion gallons of ethanol, 10 times current production capacity, by 2030.

Two 2008 presidential hopefuls, Democratic Sens. Barack Obama of Illinois and Joe Biden of Delaware, are its leading co-sponsors.

Ethanol is "riding a big wave" this year, says Mark McMinimy, a policy analyst at the Stanford Group. "The renewable fuels-ethanol juggernaut enjoys one of the most prized commodities in Washington — broad-based support, bipartisan political momentum."

But even there, the administration has been criticized for not living up to the rhetoric.

In last year's State of the Union speech, Bush announced a goal to make a "new kind of ethanol practical and competitive within six years." His administration followed within days with a budget calling for only a modest increase — about $29 million — for research into cellulosic ethanol development.

Last week, the House passed legislation that would funnel $14 billion in money collected from oil companies into a renewable fuel fund. Ethanol lobbyist Bob Dinneen of the Renewable Fuels Association welcomed the action and urged that the fund finance loan guarantees — approved by Congress in 2005, but not funded — for cellulosic ethanol plants.

Yet the White House strongly opposed the House-passed bill in part because it said additional taxes on the oil companies should not be used to pay for such new programs.

A report last week by the General Accountability Office, the investigative arm of Congress, concluded "it is unlikely" that the government's current research and development programs will provide the alternative energy sources needed to "reverse our growing dependence on imported oil."

Bush Proposals Find Little Success (WT)

By Stephen Dinan

The Washington Times, January 22, 2007

DOJ_NMG_0119097

President Bush's record of getting his State of the Union proposals enacted, after successes in his early years in office, has dropped off substantially.

Of the 12 initiatives that he proposed or called on Congress to pass in 2006, the White House can claim complete success on just three: renewing the Patriot Act, expanding health savings accounts and expanding electronic medical records. That followed unfulfilled calls in 2005 to reform Social Security and the tax code and to pass a guest-worker program for illegal aliens and future immigrants.

That record is a far cry from the major policies Mr. Bush proposed in his 2002, 2003 and 2004 speeches, and later won from Congress, including a stimulus package to pull out of recession in 2002, a $15 billion fund to combat AIDS, a prescription-drug benefit in Medicare, passage of the authority to more freely negotiate trade agreements and the goal of cutting the deficit in half.

This year, Mr. Bush is dropping the laundry-list-style proposals and will instead focus on five major themes, on which he thinks he can find common ground with Democrats.

"I just think some of the old State of the Union formulas have kind of run their course," White House press secretary Tony Snow said last week, acknowledging that the new format is in part a reflection of the new political reality of Democrats controlling Congress.

Clark Judge, a speechwriter for President Reagan and Vice President George Bush, said the recent poor record of accomplishment is part of Mr. Bush's overall political problem -- falling approval ratings.

"That's part of why his numbers dropped -- that the achievements, what he set out to do, particularly in domestic policy, didn't happen, Social Security reform being the big one, but so too making the tax cuts permanent," Mr. Judge said.

Democrats said they just want to see action out of Mr. Bush.

"I wish the president would stop talking about things and just do something," said Senate Majority Leader Harry Reid, Nevada Democrat.

In 2002, Mr. Bush's first State of the Union -- as a new president he did not deliver such an address in 2001 -- came as Democrats controlled the Senate. Yet with split control, the president rang up a series of substantial successes. In addition to the stimulus package and trade authority, he also proposed the USA Freedom Corps and won a new package of post-Enron scandal corporate rules.

His 2005 speech was grand in its reach, proposing to overhaul both the tax code and Social Security, as well as the immigration system. But none of those came to fruition, and by last year, he aimed lower, calling for a commission to look at Social Security and for moderate changes to laws.

Even those, though, proved too much, despite Republican control of Congress.

Many of the changes fell victim to Republicans' failure to pass most of the annual spending bills that stymied many of his 2006 proposals, such as the Advanced Energy Initiative or training 70,000 high school teachers.

The White House blamed congressional Democrats, who instead of going back to work this year on those spending bills decided to continue 2006 funding levels through fiscal 2007.

"It's unfortunate that this new Congress chose to move forward in a way that they have a yearlong continuing resolution rather than completing the important work of those appropriations bills," said Scott Stanzel, a spokesman for the president.

Still, he said, the ball got rolling on many of their priorities.

"There was a lot of important work that went on last year both on the domestic and international front," he said.

Kathleen Hall Jamieson, director of the Annenberg Public Policy Center at the University of Pennsylvania, said that State of the Union addresses are the toughest speeches a president gives and that rarely do historians find them memorable. She said they are "time-bound" because they are usually tied to taking stock of last year's accomplishments and the upcoming year's legislative agenda.

That's not to say they have been without memorable rhetoric, such as his 2002 declaration of Iran, Saddam Hussein's Iraq and North Korea as an "axis of evil."

But this year's different style of speech gives Mr. Bush an opening, she said.

DOJ_NMG_0119098

And she said Mr. Bush's opening salvo last year on energy policy -- he declared the nation "addicted to oil" -- sets the table for this year's promised focus in part on energy policy. White House officials have told Republicans in Congress that they expect to make the most significant headlines on energy issues.

Mr. Judge said there's still plenty of time for Mr. Bush to establish a good legacy, beginning with tomorrow's speech and centering on Social Security and immigration and buying enough time for his Iraq policy to work.

"The pieces are in place, as bad as things look right now, for having had a very successful administration," Mr. Judge said.

Speechwriters For Bush Seek Perfect Pitch (NYT)

By Sheryl Gay Stolberg

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Most Americans think of President Bush as the commander in chief. His speechwriters have another name for him: the editor in chief.

"He always wants it to be logical and straightforward," William McGurn, the chief White House speechwriter, said in a hurried telephone interview on Friday, just four days before the State of the Union address. "That's his big obsession. I always say I've been edited by Bill Buckley at the National Review, Bob Bartley at The Wall Street Journal. And the president is the strictest editor, the most line by line."

Mr. McGurn, a former Journal editorial writer, and his team of about a half-dozen writers and researchers have had more than their usual exposure to presidential editing this winter. The address on Tuesday comes 13 days after Mr. Bush's prime-time speech on his new strategy in Iraq, one that even some Republicans have criticized as uninspiring, a rhetorical dud.

For the people who get paid to put words in the president's mouth, the pressure is on.

"My job is to explain the president's policy and put it forward, to state his priorities in his voice," Mr. McGurn said. "So we do what he wants, not what someone may say on the cable news."

But this is Washington, where punditry is practically an official sport, and the pundits disagree. "A mediocre speech that was flat," said David Gergen, a former Nixon speechwriter, echoing the sentiments of many. "It was solid, but they miss Gerson."

Mr. Gergen was referring to Michael J. Gerson, Mr. McGurn's predecessor, who left the administration last summer. He is credited with what many say was Mr. Bush's best speech, to a joint session of Congress nine days after the Sept. 11 attacks.

Of course, writing a speech is only half the equation; the other half is in the delivery. Veteran Bush-watchers say the president is never as good standing solo before a television camera, as he did in the White House library for the speech on Iraq, as he is before a live audience.

Mr. McGurn and his crew, which includes a onetime spokesman for former Senator Jesse Helms and a staff member who four years ago was editing the student newspaper at Yale, are described by Clark Judge, a former speechwriter for Mr. Reagan and for the first President Bush, as "a first-rate team."

They also have the task of writing for the president in very different times than Mr. Gerson did. The bipartisan support for Mr. Bush that swept over Congress and the nation after Sept. 11 is long gone, the war in Iraq is going badly, and the president is about to deliver his first State of the Union address to a Congress controlled entirely by Democrats.

Mr. Bush was determined to be prepared. Mr. McGurn said he and Christopher G. Michel, the Yale graduate, were in the Oval Office going over the Iraq speech in December when the president announced: "I need to get started on the State of the Union. We can't wait."

That called for reinforcements. Mr. McGurn's deputy, Marc A. Thiessen, the former Helms spokesman, was already working on the State of the Union. With Mr. McGurn and Mr. Michel still busy on Iraq, John McConnell, the lead speechwriter for Vice President Dick Cheney, was brought in. So, too, was Matthew Scully, a speechwriter who left in 2004. Mr. Scully now lives in Los Angeles; he has been camping out in a Washington hotel since Jan. 6.

Every White House speechwriter, current and former, knows the traditional State of the Union formula: a laundry list of ideas, many of them destined to die in the bowels of some Congressional committee room. (In 2004, Mr. Bush proposed sending humans to Mars, a plan that even Republican strategists mock today.)

DOJ_NMG_0119099

This year, the president told his speechwriters that he wanted a more thematic speech, one that would focus on a few core issues, like energy, immigration and health care, where Mr. Bush hopes to achieve compromise with the Democrats.

Mr. McGurn would not disclose details, and as for soaring rhetoric, he would not say. But he did say the president was not much interested in "flowery language."

At this point, Mr. Bush is well into rehearsing. By Friday, he had already had several run-throughs in the family theater of the White House, with officials including Stephen J. Hadley, the national security adviser, and Condoleezza Rice, the secretary of state, listening in.

For his part, Mr. McGurn is a bit tired after a month of 12-hour days and 6:45 a.m. phone calls, and in need of a decent meal. In one eight-day stretch after Christmas, he and fellow writers ate breakfast, lunch and dinner every day in the White House mess, except when it was closed, as it was for dinner on New Year's Day.

"We went to Fuddruckers," said the man who puts words in the president's mouth. "It was, like, 8 o'clock. Nothing else was open."

The Clinic Is Open (NYT)

The New York Times, January 22, 2007

Companies are proving that when it comes to health care, you can re-teach old dogs an old trick. On-site health clinics in the workplace, which had been disappearing since their peak in the 1970s, are staging a comeback. Corporations are waking up to the fact that healthy employees are more productive, while sick workers are a drag on the bottom line. And they're trying to do something about it.

The sky-high cost of health care in the United States isn't just a challenge for the families that struggle to pay rising premiums and co-payments. It's also a serious issue for American companies, whose competitors in other countries often benefit from national health insurance programs.

As Milt Freudenheim reported recently in The Times, some big American-based companies have rediscovered that it's cheaper in the long run to spend a little more on in-house health clinics. Companies from the Pepsi Bottling Group to Credit Suisse have opened or expanded their clinics. More than a quarter of the nation's 1,000 largest employers will likely offer some kind of on-site health services by the end of the year.

For employees, a clinic is a major time saver, convenient and cheap (or even free). For companies, spending a relatively small amount of money on early detection and basic preventive care can save on expensive hospital bills down the line. It's an interesting stopgap solution, provided companies do not abuse their knowledge of employee medical conditions and remain focused on the long-term health of their workers, instead of just steering them away from expensive procedures.

Innovative as they are, office and factory infirmaries will hardly solve the nation's entrenched health care crisis.

Total health spending reached nearly $2 trillion in 2005, accounting for 16 percent of the economy. It is a bit scary that the 6.9 percent increase in health spending that year — rather than a cause for alarm — is celebrated as the slowest pace of increase in six years. There are 47 million uninsured people in this country. State governments, like those in Massachusetts and California, are trying to chip away at the problem and business groups are lobbying in Washington for help with out-of-control costs.

While it is a welcome sign that businesses and states are trying to come up with answers, health care is a national issue that requires a comprehensive solution.

Gold-Plated Indifference (NYT)

By Paul Krugman

The New York Times, January 22, 2007

President Bush's Saturday radio address was devoted to health care, and officials have put out the word that the subject will be a major theme in tomorrow's State of the Union address. Mr. Bush's proposal won't go anywhere. But it's still worth looking at his remarks, because of what they say about him and his advisers.

DOJ_NMG_0119100

On the radio, Mr. Bush suggested that we should "treat health insurance more like home ownership." He went on to say that "the current tax code encourages home ownership by allowing you to deduct the interest on your mortgage from your taxes. We can reform the tax code, so that it provides a similar incentive for you to buy health insurance."

Wow. Those are the words of someone with no sense of what it's like to be uninsured.

Going without health insurance isn't like deciding to rent an apartment instead of buying a house. It's a terrifying experience, which most people endure only if they have no alternative. The uninsured don't need an "incentive" to buy insurance; they need something that makes getting insurance possible.

Most people without health insurance have low incomes, and just can't afford the premiums. And making premiums tax-deductible is almost worthless to workers whose income puts them in a low tax bracket.

Of those uninsured who aren't low-income, many can't get coverage because of pre-existing conditions — everything from diabetes to a long-ago case of jock itch. Again, tax deductions won't solve their problem.

The only people the Bush plan might move out of the ranks of the uninsured are the people we're least concerned about — affluent, healthy Americans who choose voluntarily not to be insured. At most, the Bush plan might induce some of those people to buy insurance, while in the process — whaddya know — giving many other high-income individuals yet another tax break.

While proposing this high-end tax break, Mr. Bush is also proposing a tax increase — not on the wealthy, but on workers who, he thinks, have too much health insurance. The tax code, he said, "unwisely encourages workers to choose overly expensive, gold-plated plans. The result is that insurance premiums rise, and many Americans cannot afford the coverage they need."

Again, wow. No economic analysis I'm aware of says that when Peter chooses a good health plan, he raises Paul's premiums. And look at the condescension. Will all those who think they have "gold plated" health coverage please raise their hands?

According to press reports, the actual plan is to penalize workers with relatively generous insurance coverage. Just to be clear, we're not talking about the wealthy; we're talking about ordinary workers who have managed to negotiate better-than-average health plans.

What's driving all this is the theory, popular in conservative circles but utterly at odds with the evidence, that the big problem with U.S. health care is that people have too much insurance — that there would be large cost savings if people were forced to pay more of their medical expenses out of pocket.

The administration also believes, for some reason, that people should be pushed out of employment-based health insurance — admittedly a deeply flawed system — into the individual insurance market, which is a disaster on all fronts. Insurance companies try to avoid selling policies to people who are likely to use them, so a large fraction of premiums in the individual market goes not to paying medical bills but to bureaucracies dedicated to weeding out "high risk" applicants — and keeping them uninsured.

I'm somewhat skeptical about health care plans, like that proposed by Gov. Arnold Schwarzenegger, that propose covering gaps in the health insurance market with a series of patches, such as requiring that insurers offer policies to everyone at the same rate. But at least the authors of these plans are trying to help those most in need, and recognize that the market needs fixing.

Mr. Bush, on the other hand, is still peddling the fantasy that the free market, with a little help from tax cuts, solves all problems.

What's really striking about Mr. Bush's remarks, however, is the tone. The stuff about providing "incentives" to buy insurance, the sneering description of good coverage as "gold plated," is right-wing think-tank jargon. In the past Mr. Bush's speechwriters might have found less offensive language; now, they're not even trying to hide his fundamental indifference to the plight of less-fortunate Americans.

Emerging Grievances Within Party Likely To Test Pelosi (WP)

By Jonathan Weisman

The Washington Post, January 22, 2007

DOJ_NMG_0119101

Beneath the resounding Democratic victories of the past two weeks, tensions have been growing between House Speaker Nancy Pelosi and many new committee chairmen and other members over her aggressive management style and her approach to the war, according to lawmakers and advisers.

Powerful committee chairmen have bridled at the California Democrat's decision to impose six-year term limits on them. Liberal Democrats say she is being too cautious in confronting President Bush on the war in Iraq. Rank-and-file Democrats say she erred in denying Republicans more say in the early legislation, making the speaker appear autocratic.

And many Democrats complain that Pelosi is relying too heavily on a coterie of liberal allies from her home state and Massachusetts to the exclusion of more conservative lawmakers from the Midwest and the South.

The friction will present a growing challenge as Democrats move from the poll-tested, popular items that breezed through the House this month to more difficult legislative ventures, such as efforts to stem global warming, overhaul the nation's immigration laws, shrink the budget deficit and resolve the war in Iraq. It could also hand Republicans a powerful political weapon as they seek to regain power in 2008 by challenging the crop of new Democrats hailing from Republican-leaning districts.

Rep. Marcy Kaptur (D-Ohio) praised Pelosi for guiding through so many popular legislative items so quickly but pleaded for her to develop a more inclusive leadership style.

"If I had any advice, it would be 'Don't isolate yourself inside the territory you're most familiar with,' " Kaptur said last week. "I guess I would say to her, 'Don't be isolated by your California experience.' "

Pelosi aides and allies say she is doing her best to be inclusive, and to consult with the strong-willed old bull chairmen, but she must also make room for the new voices that helped the Democrats win back the majority. They said that although that will not be easy, most Democrats will be patient as the new majority settles in.

"I think we suffered the last time the Democrats were in power from too much chairman autonomy," said Rep. Barney Frank (D-Mass.), a Pelosi ally and the chairman of the House Financial Services Committee. "Accusing the speaker of trying to manage public policy is like accusing the fire department of trying to fight fire."

Pelosi took over the speakership this month after a messy leadership fight in which she backed the losing candidate, Rep. John P. Murtha (D-Pa.), for House majority leader. She then threw herself into her "hundred-hour" blitz.

In 2 1/2 weeks, the House adopted new rules to curtail the influence of lobbyists and control deficit spending, then passed half a dozen bills to increase the minimum wage, bolster homeland security, fund stem cell research, order the federal government to negotiate lower drug prices for Medicare, cut some student-loan interest rates, and eliminate tax breaks for oil companies to finance alternative-energy research. On virtually every vote, Republicans joined united Democrats in droves.

But backstage, the firm -- some say heavy-handed -- style Pelosi used to ensure passage of those bills and deal with committee chairmen began to chafe.

Pelosi angered her chairmen and much of the Congressional Black Caucus with her decision to maintain a Republican rule limiting committee chairmanships to six years. Those chairmen and black members have waited years, even decades, to wield power as they patiently abided by the seniority system.

Now, some of the most powerful Democratic chairmen, such as Energy and Commerce's John D. Dingell (Mich.), Appropriations' David R. Obey (Wis.), and even ideological allies such as Oversight and Government Reform's Henry A. Waxman (Calif.), are openly questioning her decision.

They point to Republican experiences with term limits, when candidates for vacated chairmanships competed with one another to raise political cash for GOP candidates and offered legislative fealty to their leaders to win appointments.

That competition strengthened the hand of the leadership and introduced politics -- even the taint of corruption -- to a process that once ran on simple seniority, some Democrats note.

But Pelosi has stood her ground, arguing that fresh blood needs to circulate through the committees. Rep. Rahm Emanuel (Ill.), chairman of the House Democratic Caucus, said the excesses of those competitions were the products of the Republican Party, not the process.

"Tom DeLay created that culture," he said, referring to the Republican former House majority leader. "That's not us."

DOJ_NMG_0119102

Some Democrats were frustrated with her decision not to give Republicans a chance to offer even one amendment on the six bills that passed in the initial spate. Pelosi promised the Republicans that they will have more input on other matters, but some Democrats say she has unnecessarily ceded the moral high ground.

"As we try to move forward, we have to make sure transparency and cooperation is part of the legislative process," said Rep. Jim Costa (D-Calif.), an advocate of more comity in the House.

Some rank-and-file members see bias toward "bicoastal liberals" in Pelosi's inner circle -- particularly Reps. George Miller (D-Calif.) and Edward J. Markey (D-Mass.) -- and short shrift given to the views of Midwesterners and more conservative Southern Democrats.

On the war front, two Democratic camps have developed. Liberals and antiwar stalwarts such as Murtha, one of Pelosi's closest allies, want to aggressively use the power of the purse to affect policy, possibly by denying funds for increased troop strength in Iraq. But some senior Democrats and members of the leadership, such as Emanuel and House Majority Leader Steny H. Hoyer (D-Md.), counsel a go-slow approach, in which Democrats start with a nonbinding resolution against the president's policies, use hearings to build up public support for more dramatic action, and gauge voter feelings before legislative action to stop a military buildup in Iraq.

In the most public breach, Pelosi created a special committee dedicated to global warming, infuriating Dingell, whose committee would inevitably lose jurisdiction. Dingell fumed: "These kinds of committees are as useful in relevance as feathers on a fish."

The move crystallized fears among some moderate Democrats that Pelosi would "policy shop" to produce the legislative outcome she wants, even if that outcome goes against the grain of the moderates' constituents, several House members said.

At a rancorous closed-door meeting of the Energy and Commerce Committee last week, members of all political stripes backed Dingell and threatened to subject the proposed committee to a public execution on the House floor. One conservative Democrat said Friday that the issue could turn even nastier than the race between Hoyer and Murtha for majority leader.

"These are very major blunders on her part," said a senior Democratic adviser who served for years in the House and spoke on the condition of anonymity for fear of breaching his ongoing relationships. "The general feeling is that she keeps her own political counsel. She doesn't have any staff who are her eyes and ears and can tell her what's really going on in the caucus."

Emanuel conceded some missteps and miscommunication, but he said they are not indicative of larger issues. Committee chairmen can abide term limits, Emanuel said, but they should have been informed of her thinking on the subject. "Nobody likes being caught by surprise," he said.

The fears created by the new panel on global climate change stem largely from concerns that the committee will be permanent, amassing influence at the expense of other panels, Emanuel said. Pelosi will put in writing that it will be disbanded at the end of the 110th Congress.

Pelosi spokeswoman Jennifer Crider said that the speaker has confidence and trust in her committee chairmen but that Pelosi also wants to create new platforms from which fresh voices can be heard. New task forces have been created to get the pulse of members in their 30s, veterans and rural representatives. There is a new black working group to supplement the long-standing Congressional Black Caucus and a faith working group to give a voice to the religious.

Such groups may compete with traditional power centers, but Pelosi will stand by her efforts, aides to the speaker say.

Student Loan Scam (WP)

By Robert D. Novak

The Washington Post, January 22, 2007

House Democrats were extolling their student loan bill for opening college to Americans with moderate incomes on Wednesday when Rep. Tom Price, a second-term Republican from Georgia, took the floor. "If only this bill did what they say," Price declared. His admonition constituted more than the usual hyperbole of congressional debate.

The bill, passed by an overwhelming, bipartisan vote, was touted as reducing the interest on federally subsidized student loans, from the present 6.8 percent to 3.4 percent. Actually, it gradually reaches the 3.4 percent level on July 1, 2011. A student taking out a loan on July 1 of this year would pay 6.12 percent after graduation. Only 29 percent of all students getting loans would

DOJ_NMG_0119103

be eligible for this gradual reduction. Other student loan programs will be cut to help cover the $7 billion cost over five years. And contrary to what the Democrats suggest, the bill does nothing to slow skyrocketing college tuition.

Such details are obscured, however, by the brilliant success of Speaker Nancy Pelosi's "first 100 hours." The student loan bill is one of the politically popular measures rushed through the opening days of the first Democratic-controlled House session in 12 years -- without hearings, without committee authorization and without meaningful debate. While Democratic support has been unanimous, Republicans are divided and listless.

In contrast to the ideologically diverse Democrats who controlled Congress in the past, today's House majority members are like automatons. The hand of Rep. Rahm Emanuel, chairman of the House Democratic Caucus, was apparent as Democrats newly elected under his leadership took the floor to deliver nearly identical speeches of how this bill will help poor students.

Rep. Ed Perlmutter, who won a previously Republican-held district in Colorado, used the now common anonymous anecdote in his floor speech. He told of seeing "a woman whose kids have gone to school with mine" at a swim meet in Arvada, Colo. "She told me that one of her kids is in college now, and she has another that will be going in a couple of years. She is a single mom, and her kids have done well in school, but the cost of college has become prohibitive for their entire family. She said her kids have been excellent students, but she was fearful they could not get into college and be able to pay for it."

Perlmutter added that this "single mom" thanked him for this bill changing "the cost of higher education." In fact, the bill has nothing to do with the prohibitive cost of college. It will have no effect whatsoever on her child now in college. If her second child is literally enrolling in a couple of years (in January 2009), the interest rate would be 4.76 percent, to be paid after the student leaves college. The mom may have thanked Perlmutter too soon.

Because Democrats are now committed to "pay-go" (offsetting all spending increases), this bill means cutting $6 billion from other federally subsidized student loan programs, on top of a net $12 billion cut by the last Republican-controlled Congress.

On the eve of Wednesday's debate, the Consumer Bankers Association and the Financial Services Roundtable sent a joint letter to members of Congress. The offset cuts in loan funding, the organizations warned, "cannot be absorbed by the nation's loan providers without compromising the kinds of benefits and services now provided to college students and their families."

This warning was not expected to effect heady Democrats, but it should have promoted caution among Republicans. It did not. While Democrats were 232 to 0 for the bill, only 71 Republicans followed their leadership and voted against it. The 124 Republicans voting aye included such erstwhile conservative stalwarts as Todd Akin (Mo.), Virgil Goode (Va.), Chip Pickering (Miss.), Joe Pitts (Pa.), Dana Rohrabacher (Calif.), Ed Royce (Calif.) and Todd Tiahrt (Kan.).

The once militant, united House Republicans are demoralized and on the run. They were battered in the last campaign for cutting school loans in the previous Congress and are willing to go along with a sham bill, hoping for Senate gridlock or a presidential veto.

GOP Seizes On Dissent In Majority (WT)

By Christina Bellantoni

The Washington Times, January 22, 2007

House Republicans have been quoting some unlikely allies when complaining about the methods used by the new Democratic majority -- Democratic leaders.

As the House approved the final piece of Speaker Nancy Pelosi's initial "Six for '06" agenda, Republicans lamented that the bills in the package did not go through committees and that amendments were not allowed.

Backing up their point were Senate Majority Leader Harry Reid of Nevada; Rep. Charles B. Rangel of New York, House Ways and Means Committee chairman; and Rep. John D. Dingell of Michigan, the House's longest-serving member.

"They are shutting out not just Republicans but all of the talented members of this Congress," said Rep. Adam H. Putnam of Florida, chairman of the Republican Conference.

Mr. Putnam and other Republicans repeatedly trotted out last week an article about Mr. Reid in Time magazine that included an assertion: "In private, Senate sources say, Reid has been critical of the Speaker for what he believes was

DOJ_NMG_0119104

unnecessary roughness in ramming through her first-100-hours agenda, refusing to allow Republicans to propose amendments and breaking her campaign promise to open up the lawmaking process."

The article didn't quote the Nevada Democrat directly criticizing Mrs. Pelosi, but Republicans seized on it, saying she had achieved a "trifecta" of Democratic critics.

"Top House Tax Writer, Senate Majority Leader, and now the Dean of the House," Republicans blared in a press release citing Mr. Reid, Mr. Rangel and Mr. Dingell.

The New York Post reported that Mr. Rangel is "butting heads" with the speaker over the committee process, and that there is tension between the two over tax policy.

Mr. Rangel told The Washington Times that he is "uncomfortable" with Republicans' using him to support their own point and that he is confident Democratic leaders will return to regular order now that their opening agenda has been passed.

"That was part of the 100-hour agenda, and I'd like to believe that is behind us now," Mr. Rangel said.

Though Republicans for a dozen years largely shut Democrats out of the lawmaking process using many of the same tactics, they have justified their complaints this year by saying voters sent a message they want more bipartisanship.

"I understand the need for the majority party to make its move, to make its first impression," said Minority Leader John A. Boehner of Ohio. "I understand that the first couple of bills had to come flying right to the floor, but we are short-circuiting democracy here."

Mrs. Pelosi and Majority Leader Steny H. Hoyer say their agenda has been subjected to several committee hearings and point out that their 2006 campaign highlighted their six legislative priorities, which all passed this month with some Republican support.

They note that a minimum-wage increase passed the Appropriations Committee last year but never went to the floor for a clean vote and point out their bill to expand federal support from embryonic stem-cell research is identical to one passed by the previous Congress.

Republicans counter by saying the accelerated process this month led to at least two mistakes -- the exemption of American Samoa from a minimum-wage increase and failure to include in the initial ethics package a measure barring ex-lawmakers convicted of felonies from receiving government pensions. Democrats plan to fix both errors.

"The jamming of an agenda, relying only on a handful of people, is resulting in a bad product," Mr. Putnam said. "It's not just Republicans who are noticing. Majority Leader Reid is talking about the railroading of a process and [Chairman] Rangel is saying committees need to have a role, and we couldn't agree more."

Minority Whip Roy Blunt of Missouri said Mrs. Pelosi's "rush to judgment" has produced errors that even seasoned Democrats complain about.

"The chairmen -- they're being ignored as well by the way -- understand that," he said.

Mr. Hoyer, praising the Republicans who voted for the Democratic agenda, said last week he intends "to try to continue to work on a bipartisan basis" and "reach consensus as we move forward."

"In the future, it will be more difficult," the Maryland Democrat said. "That does not mean we will always be able to do that, but it does mean that we will always try."

Further exciting Republicans was Mrs. Pelosi's plans to establish a special committee on global warming that might take aim at U.S. automakers, whose cars are a leading source of carbon emissions. The move irritated Mr. Dingell, the chairman of the Energy and Commerce Committee who hails from Michigan, home to the auto industry.

A Democratic source said some of the leaders and more conservative members were frustrated that Mrs. Pelosi seems to be pushing her own agenda by going around them. Sources said Mrs. Pelosi did not collaborate with Mr. Hoyer when crafting the plan for the warming committee.

Republican Rep. Steve King of Iowa also noted that the freshmen from both parties "have really been shut out of this process," accusing a few Democrats of making all the decisions.

"I hope the freshmen finally have a voice. I hope it starts Monday morning," he said Friday.

When John Meets Al (NYT)

DOJ_NMG_0119105

The New York Times, January 22, 2007

Four major bills have recently been offered in the Senate calling for mandatory controls on carbon dioxide, the main global warming gas. And last week, 10 big companies, including General Electric, Alcoa and progressive utilities like PG&E of California, joined in an informal coalition to press Congress and President Bush for action.

All of this has been accompanied by considerable fanfare. But at least as important was a quiet little letter to the members of the House Committee on Energy and Commerce from its new chairman, John Dingell.

A Michigan Democrat who in recent years has opposed stronger fuel economy standards for automobiles, Mr. Dingell is, at best, agnostic on global warming. But he said he would put climate change at the top of the committee agenda this year and, for good measure, would invite Al Gore — whose documentary "An Inconvenient Truth" has raised public awareness of the issue — to testify first.

Mr. Gore should quickly accept. Mr. Dingell's support will be essential to any real progress on curbing emissions. In recent years, serious discussion of climate change has been largely confined to the Senate. But laws must be passed by both chambers, and if anything is to happen in the House, it will need Mr. Dingell's participation and consent.

That is the main reason House Speaker Nancy Pelosi established a select committee on global warming last week — not to end-run Mr. Dingell's powers, which she can't really do, but to elevate an issue she regards as important and to pressure Mr. Dingell to take a leadership role.

Mr. Dingell is 80 now, a formidable warrior who during 51 years in the House has played a pivotal role in pushing through nearly every cornerstone environmental law, including the Clean Air Act, the Clean Water Act and laws protecting wilderness and endangered species. But while he supported fuel economy standards years ago, his loyalties to Detroit have led him to oppose further restrictions. As for global warming, he has said that he needs to be convinced that the consequences are truly worth worrying about, and if they are, that the problem can be addressed without bankrupting the country.

Hardly a believer, in other words, but plainly open to persuasion. Which is why it's essential for Mr. Gore and others to become part of the conversation Mr. Dingell has invited. In the end, what is most likely to move him forward is not pressure from Ms. Pelosi or anyone else but appeals to his well-documented sense of environmental stewardship.

Big Business Has Plenty Of Allies In Democrats' Congress (LAT)

By Tom Hamburger And Janet Hook

Los Angeles Times, January 22, 2007

WASHINGTON — Incoming House Speaker Nancy Pelosi terrified the oil industry late last year when she outlined her priorities for the new Democratic majorities in Congress. Within the first 100 hours, she promised, they would "roll back the multibillion dollar subsidies for Big Oil."

Last week, however, when Pelosi (D-San Francisco) won House approval of the much-touted bill socking it to the oil companies, it turned out to be considerably less drastic than many in the industry originally feared. Out of an estimated $32 billion in subsidies and tax breaks that the oil companies are scheduled to receive over the next five years, the final House bill cut just $5.5 billion.

It's not just oil: From one end of the House Democrats' "first 100 hours" agenda to the other, businessmen and their K Street lobbyists have found success amid the fear in dealing with the new Congress.

Surprising as it might seem in view of the Democrats' public rhetoric, business groups are getting their telephone calls returned. And they're getting plenty of face time with the new House and Senate leaders.

Thanks to this access, the oil industry fended off many of what it considered the most objectionable features of the proposed energy bill, while the big pharmaceutical companies had success keeping some unwanted provisions out of the new House Medicare drug bill.

And, while the House was passing its minimum wage bill, small business lobbyists were working the Senate to win tax breaks for their clients in the Senate's version of the bill.

DOJ_NMG_0119106

"There was a lot more anxiety initially because of not knowing what was going to transpire," said Stuart Roy, a member of the DCI Group, a prominent Washington lobby shop, and a onetime aide to former GOP House Majority Leader Tom DeLay of Texas. Now, Roy said, "the anxiety level is down."

Democrats are quick to point out that even if the high-profile flurry of bills contained concessions to business, they still went further than anything passed by the old Republican majorities. Instead of trimming back oil subsidies, for example, the GOP and President Bush had expanded tax credits for oil companies, saying they were necessary to encourage domestic production.

Still, as the opening round came to an end, many business lobbyists said they were relieved.

In part, the business community's early impact reflects the fact that it is a constituency Democrats can't afford to ignore. As they prepare for the 2008 election season, in which they hope to hold and extend their congressional majorities and also take over the White House, Democratic candidates will need substantial business support in the form of campaign contributions.

In addition, business groups and their K Street lobbying firms have moved quickly to adapt to the new political equation on Capitol Hill, developing new tactics in Washington and at the grass roots, as well as dusting off some time-honored ways of dealing with the opposition.

Many lobby shops had already begun adding knowledgeable and well-connected Democrats to their rosters, turning away from the "K Street Project" in which DeLay and other GOP leaders had pressured such firms to hire conservatives and dump Democrats.

"One of the lessons is that good lobbying is always bipartisan," said Scott Segal of Bracewell & Giuliani, a lobbying firm that maintained its bipartisan credentials despite the GOP pressure.

On the oil bill, Segal represented a leading oil refinery and an industry trade association. His team included former Texas Democratic Rep. Jim Chapman, along with Mike Pate, who was legislative director to the late Democratic Sen. Lloyd Bentsen of Texas. All three reached out to moderate Democrats in the new Congress.

The moderates in turn had ready access to Pelosi and led the way in softening the impact of the final bill.

Two Texas representatives took the lead: Gene Green, who represents the Houston area, and Chet Edwards of Waco. Green said the process worked because Pelosi took the unusual step of calling on "energy state legislators to tell her what we could agree to." Green particularly was a point of contact for the industry and for staff. On Jan. 9, he hosted a private meeting of about a dozen members and 20 to 30 industry lobbyists — including those representing every major oil company — to go through the legislation.

The meeting followed a series of sessions discussing the bill hosted in Pelosi's office, often led by her top energy aide, Amy Fuerstenau. .

In late November, Pelosi's conference room was filled with a coalition of environmental and consumer groups who presented a list of subsidies the oil industry enjoyed, totaling $32 billion over five years.

The list, according to one participant, included subsidies that Democratic lawmakers had unsuccessfully proposed to get rid of in years past, including several that particularly alarmed the oil industry.

One conferred favorable tax treatment for U.S. refineries that expand and upgrade their plants. Another allowed industry accounting methods that reduced their taxes dramatically. A third included a tax credit that helped manufacturers compete with imports.

Charles Drevna, a top executive of the National Petrochemical & Refiners Assn., communicated separately with Pelosi's staff opposing all three of those changes. The concerns were also represented separately by other lobbyists, and by Green and other members of Congress.

In the end, the industry was able to preserve the first two tax breaks, but lost the right to use the manufacturers credit.

Drevna was not happy with the final bill, even though it preserved two of the tax breaks he fought to save.

He and other lobbyists said the environment on the Hill was clearly less favorable for business now that Democrats are in control.

But he acknowledged that his arguments were heard. "The speaker didn't lie to us. She told us what she was going to do and went ahead and did it."

DOJ_NMG_0119107

Steve Elmendorf, a lobbyist who was a top aide to the Kerry campaign, said, "The biggest change for the business community is that in dealing with Democrats, they are not the only people at the table. Labor unions, trial lawyers, consumer advocates are also part of the discussions. That wasn't true with the Republicans."

That was cause for celebration for some last week like Tyson Slocum, who handles energy issues for the left-leaning Public Citizen organization. "In the past, the oil industry had exclusive jurisdiction over the U.S. Congress, but that's not the case anymore. Now they have an equal seat with the rest of us."

Slocum said that "the House could have been far more aggressive," in the energy bill. Still, he called it "a fantastic start, especially in light of what recent Congresses have done."

The minimum wage hike debate two weeks ago was also a tribute to the continuing clout of the business lobby, particularly small business. As the House overwhelmingly voted to increase the minimum wage from $5.15 to $7.25 with the support of scores of Republicans, the lobbyists found success in the Senate, where the GOP still has tremendous leverage.

Democrats, including Senate Finance Committee Chairman Max Baucus of Montana, declared they could not pass the wage hike without including tax breaks for small businesses and restaurants that are seen as hardest hit.

Meantime, the pharmaceutical lobby, Washington's most potent lobbying force, successfully blocked what it considered the most extreme proposals for reducing drug costs.

At one point Pelosi considered advocating a new government-run drug program, but dropped the idea and went with a less ambitious plan.

Like other industries, drug companies are hiring Democrats as lobbyists and ramping up campaign contributions. For example, lobbyist attendance at fundraisers for Ways and Means Chairman Charles B. Rangel has skyrocketed. Organizers had to add tables at a breakfast fundraiser Jan. 18 at the Phoenix Park Hotel because twice as many people as expected showed up.

Rangel was not previously close to the drug industry, whose lobbyists had battled his efforts on Medicare benefits in the past. Last week, however, a source close to Rangel said the industry's leading trade group had offered to host a fundraiser for him; Rangel has not decided whether to accept.

"I've got so many new friends these days," he told one reporter.

U.S. Financial Sector Is Losing Its Edge, Report Says (NYT)

By Jenny Anderson

The New York Times, January 22, 2007

Adding to a chorus of concern that the United States is losing its edge as the leading financial center, Senator Charles E. Schumer and Mayor Michael R. Bloomberg will release a report today urging the country to take a series of steps to improve its legal and regulatory environment.

If not, the report warns, it could lose 4 to 7 percent of the global financial services market over the next five years.

“The last thing that New York and the country, for that matter, need is to wake up one morning and find we are no longer the financial capital of the world,” Senator Schumer, Democrat of New York, said. “This report shows that could happen not just for I.P.O.’s, but for all financial services, all too easily and all too soon.”

The committee’s primary recommendations echo those of a similar report released in November, focusing on easing or eliminating provisions of the Sarbanes-Oxley Act for small and foreign companies — some steps that the Securities and Exchange Commission is currently undertaking — and curbing securities-related litigation. The latest report is one in a series commissioned in the public and private sectors voicing concern that the United States is falling behind because of a burdensome legal and regulatory environment.

The report adds some new dimensions to the debate, however, making recommendations to ease immigration restrictions facing skilled professionals from other countries, urging convergence on international accounting standards and recommending the adoption of Basel II, an international accord on capital standards, without increasing capital requirements as some United States banking regulators have suggested.

DOJ_NMG_0119108

Taking pre-emptive steps to address concerns about regulation and litigation might halt the country's loss of market share and add $15 billion to $30 billion in revenue in 2011 alone, the study said. It would also allow for the creation of 30,000 to 60,000 jobs in the securities sector.

Like all reports focused on American competitiveness, the latest report, entitled "Sustaining New York's and the U.S.'s Global Financial Services Leadership" and conducted by McKinsey, addresses the fact that the United States now commands a significantly declining share of the global market for initial public offerings.

But it also examines the broader financial services arena, including the fast-growing derivatives and structured product markets, the gigantic loan market as well as the traditional markets in stocks and bonds.

The report shows foreign markets closing in on the United States in size and certain product offerings. For example, in 2005, American investment banking and sales and trading revenue totaled $109 billion ($69 billion in sales and trading and $40 billion in investment banking) compared with $98 billion in Europe and $37 billion in Asia.

The United States remains the largest financial market in the world, as measured by what is called "financial stock" — equities, private debt, government debt and bank deposits — with $51 trillion in 2005, but its pace of growth was significantly slower than in other markets, especially the Asia-Pacific (excluding Japan) and Britain.

Emerging markets will naturally grow faster than the more developed United States market. But administration officials for Mr. Bloomberg and Mr. Schumer said the report aimed to address factors particular to the United States, namely litigation and regulation, which might deter businesses from coming here.

Critics of easing regulatory standards and the ability to bring securities class-action lawsuits point out that litigation costs have been unusually high because of settlements related to the frauds that caused the collapse of Enron and WorldCom.

Europe has a larger share of some of the more innovative areas of finance, including derivatives, the report concludes. Europe has a 56 percent share of the $52 billion global revenue pool from derivatives and a 60 percent or greater share of revenue in interest rates, foreign exchange, equity and fund-linked derivatives. The United States leads only in commodity derivatives.

Short-term recommendations include improved guidance on Sarbanes-Oxley implementation, including the ability for small companies and foreign companies within certain "sophisticated" markets to opt out of some requirements as long as it is disclosed.

The report suggests that the S.E.C. use certain exemption powers to limit liability for foreign companies to securities-related damages and impose caps on auditors' damages. Like the Capital Markets Committee report in November, the latest study recommends that the S.E.C. allow companies to mediate conflicts through arbitration rather than litigation.

McKinsey interviewed 50 financial service chief executives and business leaders, received surveys from an additional 30 financial service chief executives and separately polled 275 other senior executives in the field.

The pace of job creation in London far outstripped that of New York City, the report says. From 2002 to 2005, London's financial services work force grew by 4.3 percent, to 318,000, while New York City's shrunk by 0.7 percent, or 2,000, to 328,400 jobs.

London has been gaining an edge in attracting the largest hedge funds. In 2002, London was home to only 3 of the largest 50 hedge funds, compared with 12 today. In that same period, New York had a decline: today 18 of the largest 50 hedge funds are based in New York, compared with 28 in 2002 (Connecticut has gained two over that period, from 6 to 8).

Reiterating oft-cited figures related to market share of global initial public offerings, the report highlighted that the United States controlled 16 percent of the global stock-offering volume, exceeding $1 billion, in 2006 (through the beginning of November) compared with 57 percent in 2001. Europe's share has leaped from 33 percent in 2001 to 63 percent through the beginning of November.

"Let's be clear: The financial services industry is one reason that the 20th century was the American century and that New York became the world's capital," Mr. Bloomberg said. "We've outlined a range of practical yet innovative steps to ensure the 21st century is just as bright."

A Busy Karl Rove Stays Out Of The Spotlight (NSWK)

DOJ_NMG_0119109

Newsweek, January 22, 2007

Jan. 29, 2007 issue - Don't write Karl Rove's political obituary just yet. After the GOP's midterm thumping, President Bush's top aide fell out of the spotlight. But behind the scenes, according to administration officials (anonymous in order to discuss White House matters), Rove has been laying the groundwork for Bush's State of the Union address and mulling how the GOP can regain momentum in 2008. Earlier this month Rove showed up at a weekly meeting of influential D.C. conservatives, surprising attendees with his bubbly demeanor after weeks of rumors that he might be headed out.

"I think some people had given him up for dead, but he was good old Karl, upbeat and enthusiastic," says GOP activist Grover Norquist, who hosts the weekly sit-down. At the meeting Rove previewed Bush's final two years in office, saying Social Security reform was likely off the table and that Iraq and the economy would be the biggest issues for 2008. Rove offered a $5 bet to anyone in the room that Bush would not raise taxes during his final years in office. According to Norquist, two attendees took the bet. Norquist admits he's also skeptical about Rove's taxes claim. "I personally think it's going to happen," he tells NEWSWEEK. Rove has been busy trying to find common ground with Dems, organizing two meetings between Bush and the Blue Dog Democrats, a coalition of conservative lawmakers who offer the White House its best chance at compromise with the new Congress. Rove also sat in on many of Bush's meetings with members of Congress in recent weeks about Iraq; he didn't say much, according to one attendee who requested anonymity because the meeting was private. Still, the Architect, as Bush dubbed him after his 2004 re-election win, was notably absent from last week's Republican National Committee meetings in Washington, where last year he delivered a blistering attack on "cut and run" Dems. "I don't know anyone who holds him personally responsible for what happened to us in the election," said a GOP national committee member, who declined to be named talking about the inner circle. "But his stature isn't quite the same." The big question in D.C. now: Will Rove testify at Lewis (Scooter) Libby's criminal trial over the leak of a CIA officer's identity? Prosecutor Patrick Fitzgerald, who ruled out charges against Rove in the case, has said he won't call the top Bush aide, but Libby, Dick Cheney's former chief of staff, hasn't ruled it out.

Showdown Looms In Congress Over Drug Advertising On TV (NYT)

By Milt Freudenheim

The New York Times, January 22, 2007

Drug advertising aimed at consumers, a fast-growing category that reached $4.5 billion last year, will face hard scrutiny in the new Congress, according to industry critics in both the House and Senate.

The consumer ads will be on the griddle early in this session at hearings on the user fees that manufacturers pay to speed the reviewing of new drugs by the Food and Drug Administration. The user fee law will die in the fall unless Congress acts to renew it.

The pharmaceutical industry, which often gets what it asks for from Congress and the executive branch, seeks to renew the law and add a new set of user fees that would be pay salaries for additional F.D.A. employees to evaluate all consumer drug ads, before they are shown on television.

Both the industry and its critics agree that there should be a pause before the advertising starts — to allow time for doctors to learn about a new drug. The companies want the delay to be left up to them, but critics say the F.D.A. should require a wait of up to two years. Criticism of direct-to-consumer advertising has intensified since 2004, after Merck withdrew Vioxx, a heavily advertised painkiller, after a clinical trial showed that it sharply increased the risk of heart attacks and strokes.

“From the beginning , everyone, including the company, agreed that not everybody ought to be getting Vioxx,” said Helen Darling, president of the National Business Group on Health, an organization of large employers. “But the ads implied there was a widespread need for it.”

Spending on consumer drug advertising, meanwhile, has been growing robustly, from $1.1 billion in 1997 to $4.2 billion in 2005, according to a recent report to Congress by the Government Accountability Office. In the first nine months of 2006, spending rose 8.4 percent to $3.29 billion, on track toward $4.5 billion for the year, according to TNS Media Intelligence, an advertising research firm.

DOJ_NMG_0119110

Spending on the ads faltered in 2005 after soaring 27 percent in 2004, before Vioxx was withdrawn, said David Kweskin, a senior executive at the firm. "Now they are in a catch-up phase."

Two independent government watchdog groups sharply criticized consumer drug advertising recently, and a separate survey Jan. 9 commissioned by the PricewaterhouseCoopers accounting and consulting firm indicated that skepticism is widespread among the public, too. Only 1 in 10 consumers said the direct-to-consumer, or D.T.C., ads could provide useful information to a large audience, the survey said. (Consumer drug advertising is not permitted in most of the world, except New Zealand and the United States.)

The pharmaceutical industry itself acknowledges having an image problem.

"It would be naïve to not acknowledge the fact that D.T.C. advertising is also a lightening-rod in the health care debate in this country," said Billy Tauzin, the former congressman who is now president and chief executive of the Pharmaceutical Research and Manufacturers of America, in a speech to venture capitalists last spring. There is "one great problem" that the manufacturers face, he said: "in a word, it is trust."

"While individual patients find the information useful in discussions with their physicians," he added in his speech, "patients, physicians and consumers generally express unhappiness with D.T.C. advertising."

Mr. Tauzin's organization issued voluntary guidelines for consumer ads, which took effect last year. Under the guidelines, the companies have promised to hold off on consumer advertising of a new medicine for an unspecified "appropriate" period. That would allow time to tell doctors about risks and benefits, before television and Web site viewers see an ad and demand a prescription.

Twenty-seven members of the pharmaceutical manufacturers organization have endorsed the guidelines, but it is hard to figure exactly how long the delays in advertising will run. Bristol-Myers Squibb has said that it would delay for 12 months. Johnson & Johnson and Pfizer said they would wait six months. The manufacturers group cannot say how other companies have interpreted the guidelines, a spokesman said.

But according to TNS Media Intelligence, the companies have actually been waiting 15 months, on average, since the Vioxx debacle.

Critics say that even after F.D.A. approval, the full safety profile of a new drug cannot be known until it has been widely used for a number of years.

But the manufacturers' guidelines have to be voluntary, said Daniel E. Troy, a former chief counsel of the F.D.A., because the Supreme Court has "struck down restrictions on advertising of tobacco, alcohol, gambling and unapproved compounded drugs."

The agency sent 15 warning letters to drug companies regarding ads in 2005 and a total of 22 complaints last year.

The F.D.A. told AstraZeneca, for example, to "immediately cease" a "misleading superiority claim" in a 2005 TV commercial. The ad said AstraZeneca's Crestor was "clearly the best" in a "head to head" test with the three largest-selling cholesterol drugs.

Emily Y. Denney, an AstraZeneca spokeswoman, said that by the time the letter was received, in March 2005, the ads were no longer running. The company defended its message in the advertising as "appropriate."

Another F.D.A. letter told Amgen, a biotechnology company, to stop running commercials for Enbrel, a treatment for the skin disease psoriasis, that the F.D.A. said minimized "serious risks" associated with the drug. Amgen immediately withdrew the commercial.

Last year, the company obtained F.D.A. approval of the contents of a new Enbrel television ad before showing it, David Polk, an Amgen spokesman said. Corporate lawyers say such advertising is protected by the First Amendment under a doctrine of commercial free speech. But some experts say the limits of the protection are murky.

The closest approach to clarity was in 2002 when the Supreme Court rejected, by a 5-to-4 vote, a federal restriction on advertising by pharmacists who make their own compounds.

"It is a giant game of chicken between the government and the industry," said R. Alta Charo, a law professor and bioethics specialist at the University of Wisconsin in Madison. "I don't believe either side really wants to see a definitive case go to the Supreme Court because neither side is willing to take the risk that they will lose."

DOJ_NMG_0119111

Professor Charo was a member of a committee of experts of the Institute of Medicine, which examined drug safety issues at the request of the F.D.A. Last fall, the committee called on Congress to give the F.D.A. new authority over advertising, including the power to require a two-year moratorium on advertising before approving a new drug.

"I think the Congress has clearly indicated its strong interest and concerns about the F.D.A. and drug safety for consumers," said Sheila P. Burke, a longtime Republican health policy expert who headed the Institute of Medicine committee. "Broad-scale advertising can sometimes lead to a rapid increase in the use of a drug" that raises the risk of harm for patients, she said.

F.D.A. regulators would be granted the power to require moratoriums under a bill sponsored by Senators Edward M. Kennedy and Michael B. Enzi, the chairman and ranking Republican member of the Senate Health, Labor, Education and Pensions Committee.

"Patients deserve the best and most accurate information about the medicines they take," Senator Kennedy said in a statement. "An essential part of any drug safety proposal must be to give the F.D.A. the authority and resources it needs to oversee direct-to-consumer advertising, and to allow the F.D.A. to impose conditions or limits on that advertising, where needed to protect the public health."

Testifying for the pharmaceutical industry last year, Dr. Adrian Thomas, a vice president of Johnson & Johnson, insisted that "the important First Amendment issues that arise from banning truthful speech, even for a period of time, must be carefully considered before legislating in this area."

The Government Accountability Office said last November that the F.D.A. should be doing a better job of overseeing consumer drug ads. Now, the F.D.A. reviews only a small fraction of the advertising, picking and choosing without proper priorities, the G.A.O. said.

The G.A.O. report had been requested by three influential senators: Bill Frist, a doctor, before he stepped down as Republican leader of the Senate; Charles E. Grassley, now the ranking Republican on the finance committee, and Herb Kohl, a Democrat who heads an appropriations subcommittee that oversees the F.D.A.

Representative Henry A. Waxman, a California Democrat who is chairman of the House Oversight and Reform Committee, added a further criticism: that the F.D.A. had been slow to crack down on drug ads that included "false and misleading" claims, he said in a telephone interview.

F.D.A. officials said they had to deal with 54,000 drug promotions each year, aimed at both doctors and consumers.

"We are seriously considering all of the recommendations" of the Institute of Medicine report, said Thomas Abrams, director of the F.D.A.'s division of drug marketing, advertising and communications.

Support Grows To Make English Official (WT)

By Eric Pfeiffer

The Washington Times, January 22, 2007

The push to make English the nation's official language is building momentum, with a congressional bill on the horizon and seven states pushing legislation to make English the official language or to strengthen laws already in place.

"There's been such strong support," said Rep. Steve King, Iowa Republican. "And it's gaining momentum."

Mr. King is expected next month to reintroduce the English Language Unity Act, which seeks to make English the nation's official language. However, he said that timetable had been postponed until House Speaker Nancy Pelosi could complete the Democrats' "first 100 hours" agenda. "Nancy Pelosi has us under martial law," he said.

"The states have been wonderful on this," said Jim Boulet Jr., executive director of English First, an organization that supports making English the official language. "The problem isn't getting bills passed, it's getting them enforced." Mr. Boulet described Mr. King's bill as "a good first step."

In the last session of Congress, Mr. King drafted similar legislation and counted 160 co-sponsors, placing the bill in the top 2 percent of co-sponsored legislation. Although control of Congress has switched hands, the bill's advocates say the issue has broad, bipartisan support. "We don't necessarily expect them to jump in and say they support this unanimously," said Rob Toonkel, spokesman for U.S. English Inc., a group that supports making English the official language.

DOJ_NMG_0119112

The legislation would not bar private businesses or individuals from using multilingual material, but it does seek to prevent federal funds from being spent on such efforts.

Mr. King has long been an advocate of English-language laws. In 2002, as a state senator, Mr. King authored a successful bill making English the official language in Iowa. The bill was signed by then-Gov. Tom Vilsack, who is now a candidate for the Democratic presidential nomination in 2008.

Mr. King on Jan. 10 filed a lawsuit in state district court against Gov. Chet Culver and Secretary of State Michael Mauro, both Democrats, for violating Iowa's English-language law. The lawsuit accuses Mr. Culver, who served as secretary of state before running for governor, and Mr. Mauro of illegally placing voter-registration forms and absentee-ballot request forms on Iowa's secretary of state Web site in foreign languages.

Meanwhile, English-language laws have been introduced by state legislators in Georgia, Kansas, Kentucky, Mississippi, Missouri, New Jersey and Oklahoma. Similar legislation is expected to be introduced in other states before the end of the month. Culpeper County in Virginia and Cabarrus County in North Carolina have introduced their own English-language proposals as well.

Last month, voters in Arizona passed legislation making English the state's official language by a margin of more than 2-to-1. "The people have been well-ahead of the politicians on this one for a long time," Mr. Boulet said.

Although immigration legislation remains stalled in the halls of Capitol Hill, some supporters of making English the official language say that ambiguity has had unforeseen benefits. "[Immigration and Naturalization Service] had a record number of people applying for citizenship last year," Mr. Toonkel said.

The Department of Homeland Security's Citizenship and Immigration Services said there was an 18 percent increase in requests for citizenship applications during the first half of last year compared with 2005. Similar surges have followed a tightening of illegal-alien laws passed in states such as Arizona and California. After California passed its Proposition 187 in 1996, a total of 378,014 persons were naturalized. That was more than double the previous year's figure, when 136,727 persons were naturalized.

"This is the strongest push for official English legislation that I have seen in the last 15 years," said U.S. English Chairman Mauro E. Mujica. "I hope the jump-start that this issue has received will pay dividends in the near future by making English the official language and knocking down the linguistic barriers that divide our society."

In Troubling Times, Conservatives Head Out To Sea (WP)

By Al Kamen

The Washington Post, January 22, 2007

These are obviously not the best of times for Republicans. The House is gone. Ditto the Senate. President Bush's approval ratings are around 37 percent, and ratings on his conduct of the war are closer to 30 percent. The war itself grinds on. What's a beleaguered conservative to do?

It's time to regroup! And what better way to do that than to join the folks at the Weekly Standard, one of the last great bastions of war boosters, on a fun-filled week-long cruise in Alaska?

Yes, it's a week of sightseeing, partying and deep reflection with publisher Terry Eastland and top editors William Kristol and Fred Barnes aboard Holland America Line's ms Oosterdam this June. Other featured speakers include former Bush speechwriter Michael Gerson and military historian Fred Kagan.

One of the true highlights is just the chance to be "traveling with like-minded conservatives," the promo material says, and not having to listen to we-told-you-so rants from the liberals and leftists that you might find on other cruises.

There'll be a morning "Kaffee Klatsch" most days and panel discussions galore explaining how democracy eventually will sweep through the Middle East like wildfire, how to balance the budget and various other issues.

The ship's show lounge "features Las Vegas-style productions," and while the invitation doesn't mention it, the luxury ship does indeed have a fine casino.

DOJ_NMG_0119113

There will probably be cakewalk contests on the Lido deck each night, and spectacular Alaska each day, including a close view of the Hubbard Glacier, which, contrary to what radical-environmentalist, global-warming types would say, is "marching to the beat of a different drum . . . advancing while the rest of Alaska's ice rivers are receding rapidly."

There's a day in Ketchikan "in the heart of the Tongass National Forest." Maybe there'll be time for an optional anti-earmark pilgrimage to the proposed site of the famed "Bridge to Nowhere"? Weather permitting, there might even be a hunt for weapons of mass destruction. (Okay, okay, that was cheap.)

All this in your "penthouse suite w/verandah" for only $6,300 per person, double occupancy, or $4,500 per person in the deluxe suite. Single rooms in the cheapo category are only $2,600.

Do not miss the "photo/autograph session," where you can have your picture taken with Kristol, Barnes and Eastland. "Photos will be available for purchase," we're told. Priceless!

But hurry! There are only two penthouse suites available.Eyes on the White House, Mouth Shut

It was long a given that the key sign of whether Sen. Ted Kennedy (D-Mass.) was running for reelection was whether he was dieting. The key sign of whether Sen. Joe Biden (D-Del.) is serious about running for president is whether he can just shut up.

We know there is a "good Biden" and a "bad Biden," as he's told reporters, adding that he understands he has the capacity to "self-destruct." But when he announced his candidacy, he promised NBC's Tim Russert that "I'm going to be Joe Biden, and I'm going to try to be the best Biden I can be. If I can, I got a shot. If I can't, I lose."

Seems he's making a concerted effort to cut the rambling. Biden, of course, is the holder of the world indoor bloviation record for his spectacular 1,100-word question during Supreme Court Justice Ruth Bader Ginsburg's confirmation hearing in 1993.

But during his questioning of Secretary of State Condoleezza Rice at a recent hearing, Biden asked seven questions. The total number of words was 573, an average of only 82 words per question. The total includes his recitation of a lengthy quotation from Bush. One question was: "Are you confident?"

Could be he's serious about that presidential bid.Speaking of Bloviating . . .

Didn't seem that morale at the Agency for International Development could get much lower. Word is that a recent survey of Foreign Service officers there found about half the FSOs ranked morale as low to poor and only 12 percent said morale was good.

Probably didn't get better when employees found out last week that the annual employee awards ceremony for meritorious effort in 2006, scheduled for Wednesday, was postponed.

AID Administrator Randall Tobias, the official announcement said, will be joining Rice as "the second-ranking member of the U.S. delegation" to a gathering in Paris for donors helping Lebanon. The meeting date was only recently set, we're told.

Back in mid-November, Tobias told reporters he "might well lead the delegation" to the meeting, which he said was coming up in late January. Turns out the secretary of state will be the lead. Tobias will then go on to the all-important World Economic Forum in Davos, Switzerland, a compulsory gathering for important and self-important bloviators.

The awards ceremony was put off until sometime in early spring.

House Members Fight For Pay Parity (WP)

By Stephen Barr

The Washington Post, January 22, 2007

The annual jousting over federal pay has begun.

Nine Washington area House members, led by Majority Leader Steny H. Hoyer (D-Md.), plan to send a letter to President Bush today urging him to recommend equal pay raises for the civil service and the military in his fiscal 2008 budget.

The House members ask the president to "embrace the principle of pay parity," which the letter describes as a bipartisan approach that has been followed nearly every year for the past two decades.

Hoyer, in a statement released with the letter, said he was "very disappointed" by this year's "inadequate raise of only 2.2 percent, the lowest increase in nearly 20 years," and suggested that Bush propose a more generous raise for next year.

DOJ_NMG_0119114

"I would hope the president plans to include in his fiscal year 2008 budget an increase that will make up for last year's unacceptably low pay adjustment," Hoyer said. "Not only do our federal employees deserve fair pay, but with an aging population and a looming human capital crisis, now is the time to deliver the message that this nation values its federal workforce and will commit to recruiting and retaining the best and the brightest."

The House members who joined Hoyer in signing the letter are Reps. James P. Moran Jr. (D-Va.), Thomas M. Davis III (R-Va.), Frank R. Wolf (R-Va.), John Sarbanes (D-Md.), C.A. Dutch Ruppersberger (D-Md.), Albert R. Wynn (D-Md.) and Chris Van Hollen (D-Md.) and Del. Eleanor Holmes Norton (D-D.C.).

That list of lawmakers underscores that the raise is an important ingredient in the local economy. The Washington-Baltimore region is home to about 11 percent of the 1.8 million civil service workforce. The federal payroll was about $19.8 billion in the region last year, or about $76 million per day.

The Bush administration has balked at providing equal pay adjustments to the civil service and the military, contending that across-the-board raises fail to properly reward high-performing employees and hinder agencies that need to pay more for difficult jobs and specialized skills.

But Congress has mostly adhered to its pay parity tradition for the two segments. Some members of Congress have indicated that they prefer to see how the new civilian pay-for-performance systems work out at the Defense and Homeland Security departments before giving more discretion to federal agencies.

Congressional committees considered giving the civil service a 2.7 percent raise this year, but the proposal faded in late 2006 when the Senate could not resolve numerous disputes over fiscal 2007 spending bills. At the urging of the Pentagon, Congress approved a 2.2 percent raise for the military with higher raises permitted for mid-career officers and enlisted personnel in certain occupations. Bush later issued an executive order providing the civil service with a 2.2 percent raise this year.

The president's recommendation for next year's raise will come in his fiscal 2008 budget, which is scheduled to go to Congress on Feb. 5.

Under a 1990 federal pay law, government employees would be in line for a 2.5 percent raise next year. But the formula, based on data from the Labor Department's employment cost index, which measures wage growth, is not always followed by Congress or the White House.

The size of the 2008 raise may hinge on efforts in Congress to hold down spending and reduce the federal deficit. Still, some members of Congress may recommend a bigger raise than usual for the armed forces to recognize the toll that the Iraq fighting has taken on the troops and their families.

The decision on the raise, which usually comes late in the year as Congress wraps up appropriations bills, also will ripple across the area's nonprofit organizations and companies that use the federal raise as a benchmark when setting salaries.

In their letter, the House members said they see pay parity raises as key to keeping federal compensation as competitive as possible with the private sector. In addition, they said, an equal pay raise will send the message that all government employees are highly valued.

"As we fight the war on terrorism at home and abroad, both the armed forces and the federal civilian workforce are integral to fulfilling the role of government for the American people," the letter said.

Stephen Barr's e-mail address isbarrs@washpost.com.

Both Sides On Offense (WP)

By David S. Hilzenrath

The Washington Post, January 22, 2007

The defense of Franklin D. Raines has begun.

Two years after falling from the height of corporate power and political possibility, the former Fannie Mae chairman and Clinton budget director is waging an all-out legal battle to save his fortune and repair his battered reputation.

Accused of complicity in earnings manipulation, Raines last week escalated a counterattack against the federal agency that drove him from power and seeks to strip him of tens if not hundreds of millions of dollars. In an unconventional legal maneuver, Raines sought to move the case to federal court from the jurisdiction of that agency.

DOJ_NMG_0119115

He has fielded a defense team that includes Kevin M. Downey of Williams & Connolly, the Washington law firm that represented such embattled figures as Oliver North and Bill Clinton, and Mark Fabiani, an advocate for Clinton during the Whitewater scandal.

Raines's camp had little to say publicly over the past two years during a series of drawn-out investigations of Fannie Mae's multibillion-dollar accounting misstatements. Raines has long declined requests for interviews from The Washington Post. But since regulators filed administrative charges against him in December, his advocates have filed a flurry of papers mapping out the beginnings of a strategy.

Part of it boils down to this: Turn the tables on the accuser.

The lead accuser is James B. Lockhart III, appointed last year by President Bush to head the small federal agency that oversees Fannie Mae. It is the Office of Federal Housing Enterprise Oversight, or OFHEO, that pushed Raines into premature retirement in December 2004, and it is the same agency that could decide whether he must give up a fortune in alleged ill-gotten gains plus penalties.

Attorneys for Raines have accused Lockhart of prejudging the facts and waging "an unrelenting campaign of disparagement" against him. Last week, Raines's attorneys filed a motion in U.S. District Court for the District of Columbia asking the court to bar Lockhart from making the final judgment in the administrative proceeding. To achieve that, Raines wants the dispute moved from the administrative law arena to federal court.

The motion said Lockhart has made a host of critical comments about Raines, including a statement on "The Newshour" with Jim Lehrer that much of Raines's income while chief executive was "basically fraudulently attained." OFHEO has alleged that at least $52 million of the more than $90 million Raines received from 1998 through 2003 was tied to the company's earnings.

The duel between Raines and Lockhart pits a prominent Democrat against a longtime friend of Bush. Before Fannie Mae's accounting problems came to light, Raines was widely mentioned as a potential high-level player in a future Democratic administration. Lockhart and Bush attended prep school together, were fraternity brothers at Yale and overlapped for a year at Harvard Business School. But OFHEO's initial findings against Fannie Mae were issued under Lockhart's predecessor, a Democrat.

Raines is also defending himself in separate litigation brought by Fannie Mae investors, who allege that they lost money when Fannie Mae's stock price fell.

In filings in the shareholder case, Raines has accused OFHEO of sealing evidence that would contradict or undermine its public case against him. He is pressing to get the records made public.

For example, he contends that interviews OFHEO conducted with former Fannie Mae personnel are at odds with allegations that management set out to smooth earnings in applying a particular accounting rule and that he helped set a tone at the company that improperly focused on earnings. Among the interviews Raines wants unsealed is one with Lawrence M. Small, secretary of the Smithsonian Institution and Fannie Mae's former chief operating officer.

Asked last week about Raines's allegations, Lockhart said he thinks the agency has done a "very thorough and professional job."

"We're in the process of giving them all of the documents that it makes sense to give to them," Lockhart said.

OFHEO has argued that searching all its records for the kinds of documents Raines wants would take years and cost millions of dollars that aren't in the agency's budget. Responding to the document requests could divert the agency from its mission of overseeing Fannie Mae and rival Freddie Mac, "potentially putting at risk the housing and financial systems of the United States unless and until Congress appropriates additional funds," David A. Felt, OFHEO's deputy general counsel, said in a recent court filing.

Raines's attempt to move his case to federal court is not the first time he has sought to circumvent OFHEO. When the agency challenged Fannie Mae's accounting in 2004, Raines said the Securities and Exchange Commission should be the judge. That strategy failed when the SEC sided with OFHEO.

Lockhart has declined to bow out of the latest battle. OFHEO still chafes at what it describes as a history of ill-treatment by Fannie Mae under Raines. The agency has alleged that Fannie Mae made it corporate policy to undermine OFHEO and that

DOJ_NMG_0119116

Fannie Mae's management sought to constrain the agency to such a degree that the company "would essentially be regulated only by itself," according to a court filing.

Raines's camp has argued that OFHEO's current view of Raines contrasts with its pre-scandal assessments. For example, in its recent notice of charges against Raines, OFHEO alleged that he "failed to ensure a proper tone at the top." In a 2003 report, OFHEO said Fannie Mae's management "effectively conveys an appropriate message of integrity and ethical values."

Aligned with Raines in the fight are two other Fannie Mae veterans, former chief financial officer J. Timothy Howard and former controller Leanne G. Spencer. Lockhart has expressed "unbridled hostility" toward the three executives charged by OFHEO, and the agency's conclusions "are premised on a full scale distortion of the witnesses and documents," David S. Krakoff, an attorney for Spencer, wrote in a recent letter calling for Lockhart to recuse himself.

Under the terms of their employment with Fannie Mae, the company has been paying millions of dollars for the former executives' legal defense.

For Raines, the battle has largely replaced life in the boardrooms of major corporations. Since leaving Fannie Mae, he participated in the effort to bring baseball to Washington as a member of one of the losing groups in the competition for the Nationals franchise. He has also become a director of Revolution Health Group, a firm started by former AOL chief executive Steve Case to develop businesses in the health field.

"Frank remains the same person he was, with the degree of intellect and experience and drive and forcefulness, and he will reemerge in the business community and in the civic community as a constructive force," said Washington investor Frederic V. Malek, a former Fannie Mae director.

Stem Cells, The White House And Rankled Researchers (WP)

The Washington Post, January 22, 2007

Harvard University researchers Kevin Eggan, Chad Cowan and Douglas A. Melton wrote members of Congress earlier this month to complain that the White House domestic policy office's report "Advancing Stem Cell Science Without Destroying Human Life" was a "misuse and misunderstanding" of their research. Excerpts:

"We are surprised to see our work on reprogramming adult stem cells used to support arguments that research involving human embryonic stem cells is unnecessary. On the contrary, we assert that human embryonic stem cells hold great promise to find new treatments and cures for diseases. . . .

"The work that we performed and that was cited in the White House policy report is precisely the type of research that is currently being harmed by the President's arbitrary limitation on federal funding for human embryonic stem cell research. . . .

"We feel that the President's restrictive policy has directly impeded research that provides a hope for cures for millions of Americans. . . .

"The White House has clearly gotten it wrong. The overwhelming consensus in the scientific and medical community is that embryonic stem cell research holds the greatest potential to cure diseases and end the suffering of millions."

The Truth About Clarence Thomas (WSJ)

By Jan Crawford Greenburg

The Wall Street Journal, January 22, 2007

Clarence Thomas has borne some of the most vitriolic personal attacks in Supreme Court history. But the persistent stereotypes about his views on the law and subordinate role on the court are equally offensive -- and demonstrably false. An extensive documentary record shows that Justice Thomas has been a significant force in shaping the direction and decisions of the court for the past 15 years.

That's not the standard storyline. Immediately upon his arrival at the court, Justice Thomas was savaged by court-watchers as Antonin Scalia's dutiful apprentice, blindly following his mentor's lead. It's a grossly inaccurate portrayal, imbued with politically incorrect innuendo, as documents and notes from Justice Thomas's very first days on the court conclusively show. Far from being a Scalia lackey, the rookie jurist made clear to the other justices that he was willing to be the solo dissenter, sending a strong signal that he would not moderate his opinions for the sake of comity. By his second week on the bench, he was staking

DOJ_NMG_0119117

out bold positions in the private conferences where justices vote on cases. If either justice changed his mind to side with the other that year, it was Justice Scalia joining Justice Thomas, not the other way around.

Much of the documentary evidence for this comes from the papers of Justice Harry Blackmun, who recorded the justices' votes and took detailed notes explaining their views. I came across vivid proof while reading the papers as part of my research for a book about how the Rehnquist Court -- a court with seven justices appointed by Republican presidents -- evolved into an ideological and legal disappointment for conservatives.

Justice Thomas's first term was especially interesting. He replaced legendary liberal icon Thurgood Marshall, and joined the court just a year after David Souter took William Brennan's seat. There appeared to be a solid conservative majority, with the court poised to finally dismember the liberal legacy of the Warren Court. But that year it instead lurched inexplicably to the left -- even putting Roe v. Wade on more solid ground.

Justice Thomas's first year on the job brought to life the adage that a new justice makes a new court. His entry didn't merely change the vote of the liberal justice he replaced. It turned the chessboard around entirely, rearranging ideological alliances. Justice Thomas acted as a catalyst in different ways, shoring up conservative positions in some cases and spurring others -- the moderate Justice Sandra Day O'Connor, in particular -- to realign themselves into new voting blocs.

Consider a criminal case argued during Justice Thomas's first week. It concerned a thief's effort to get out of a Louisiana mental institution and the state's desire to keep him there. Eight justices voted to side with the thief. Justice Thomas dissented, arguing that although it "may make eminent sense as a policy matter" to let the criminal out of the mental institution, nothing in the Constitution required "the states to conform to the policy preferences of federal judges."

After he sent his dissenting opinion to the other justices, as is custom, Justices Rehnquist, Scalia and Kennedy changed their votes. The case ended up 5-4.

Justice Thomas's dissents persuaded Justice Scalia to change his mind several times that year. Even in Hudson v. McMillan, the case that prompted the New York Times to infamously label Justice Thomas the "youngest, cruelest justice," he was again, initially, the lone dissenter. Justice Scalia changed his vote after he read Justice Thomas's dissent, which said a prison inmate beaten by guards had several options for redress -- but not under the Eighth Amendment's prohibition of "cruel and unusual punishment." * * *

From the beginning, Justice Thomas was an independent voice. His brutal confirmation hearings only enforced his autonomy, making him impervious to criticism from the media and liberal law professors. He'd told his story, and no one listened. From then on, he did not care what they said about him.

Clarence Thomas, for example, is the only justice who rarely asks questions at oral arguments. One reason is that he thinks his colleagues talk too much from the bench, and he prefers to let the lawyers explain their case with fewer interruptions. But his silence is sometimes interpreted as a lack of interest, and friends have begged him to ask a few questions to dispel those suggestions. He refuses to do it. "They have no credibility," he says of critics. "I am free to live up to my oath."

But the forcefulness and clarity of Justice Thomas's views, coupled with wrongheaded depictions of him doing Justice Scalia's bidding, created an internal dynamic that caused the court to make an unexpected turn in his first year. Justice O'Connor -- who sought ideological balance -- moved to the left. With the addition of Chief Justice John Roberts and Associate Justice Samuel Alito, the court now is poised to finally fulfill the hopes of the conservative movement. As George W. Bush told his legal advisers early in his presidency, he wanted justices in "the mold of Thomas and Scalia." Interestingly, on President Bush's marquee, Justice Thomas got top billing.

Ms. Crawford Greenburg, legal correspondent for ABC News, is the author of "Supreme Conflict: The Inside Story for Control of the United States Supreme Court," published tomorrow by Penguin Press.

War Immersion for New Defense Boss

DOJ_NMG_0119118

With a second trip to Iraq under his belt, new Defense Secretary Robert Gates has taken an immersion course in the war. Weeks after touring Iraq, he was in Afghanistan last week securing support for the U.S. mission from the allies he met with. But his was no luxury junket. Sure, he ate five-course dinners with heads of state, but mostly it was box lunches and warmed over meatloaf on military aircraft, says an aide. And the hours: One day lasted over 25 hours and included a stop at the Saudi king's hunting lodge outside Riyadh.

OTHER NEWS:

For Some Manufacturers, There Are Benefits To Keeping Production At Home (WSJ)

By Mark Whitehouse

The Wall Street Journal, January 22, 2007

NEW YORK -- It has long been an axiom that U.S.-made consumer goods such as TV sets and kitchen appliances can't compete in a world where cheaper labor can be found elsewhere. Like many axioms, though, it isn't entirely true.

Recent data from the Federal Reserve contained some surprises for anyone who thought U.S. companies don't make things for American consumers anymore. In its monthly update on factory output, the Fed reported that U.S. production of audio and video equipment surged about 2% in December and was up 23% for all of 2006.

That is a significant change from several years ago, when the numbers were negative as U.S. production moved overseas. Even output of appliances, though down for 2006, popped 5% in December.

The shift doesn't necessarily represent a renaissance. More likely, it reflects the fact that much of what can go abroad already has, leaving behind what can and should be made in the U.S. One area of strength: high-end goods like top-of-the-line $6,000 Sony Grand WEGA TV sets and $15,000 Sub-Zero PRO 48 refrigerators, which appeal to the affluent folks who have been driving much of the growth in U.S. consumer spending.

"It's the very high-end products," says Daniel Meckstroth, chief economist at Manufacturers Alliance, a trade group. "Manufacturers who have niche markets in high-end products have a very good outlook."

Such manufacturers account for only a tiny fraction of U.S. output and employment. Still, the numbers illustrate an important point about the physical and strategic limits of globalization: In just about any possible future, there will always be some business that is better done close to the customer. The obvious examples are home building and services such as restaurants, but the logic also can apply to certain types of manufacturing.

"If the thing being sold to the U.S. market is locally customized, delicate, or very large, chances are it'll continue to be produced in the U.S.," says Bruce Greenwald, professor of business and economics at Columbia University in New York. The same, he says, is true "if the manufacturing process itself involves almost no labor, like medical testing or like some very automated electronic-component manufacturing plants, chemical plants and metal-fabricating plants."

The dominant trend for the past couple decades, of course, has been the exodus of manufacturing from the U.S. to lower-cost locales such as China. Just about anything that can be mass-produced and shipped is made abroad and imported to the U.S., or soon will be. Imports account for about 90% of all the audio and video equipment sold in the U.S., 44% of household appliances and 38% of computers, according to Mr. Meckstroth, chief economist at Manufacturers Alliance, a trade group.

As a result, manufacturing has been declining as a share of the economy. In 2006, manufacturing accounted for about 12% of U.S. gross domestic product, a broad measure of economic activity. That is down from about 20% in 1980. More recently, slumps in the housing and auto sectors have sparked a drop in overall production as companies worked off unsold stockpiles of things such as furniture and auto parts. In the fourth quarter of 2006, U.S. industrial production fell at an annualized rate of 1.4%.

Many manufacturers, though, have managed to keep busy. Aside from producers of computers and business equipment, which logged double-digit growth in 2006 as companies made investments aimed at boosting efficiency, the fortunate ones include makers of consumer electronics and appliances that have set up shop in places typically associated with industrial decline.

DOJ_NMG_0119119

Take, for example, Sony Corp., of Japan, which makes its Grand WEGA high-definition TV sets at a factory near Pittsburgh, a city better known for mothballed steel mills. The TV sets employ cutting-edge technology and tend to be large, with screens ranging from 42 to 70 inches. Their size and the sensitivity of their electronics make proximity to the consumer a meaningful advantage, as does the ability to react quickly to changes in tastes for high-end equipment.

"It is important for us to produce these sets close to most of our customers," says Stan Glasgow, president and chief operating officer of Sony Electronics Inc., a Sony unit that also assembles customized VAIO computers in San Diego. Proximity "gives us a distinct advantage with our retail partners across the country, as we have the ability to quickly fill the channel with specific products."

Over in Madison, Wis., Sub-Zero Freezer Co. makes a different kind of large and expensive product: High-end refrigerators and Wolf brand stoves. Michele Bedard, vice president of marketing, says the closely held company posted double-digit growth in 2006 despite the slump in the U.S. housing market -- a fact she attributes to people choosing to invest in renovations rather than selling their homes in a soft market. Sub-Zero is in the process of expanding its production space almost 40% to about 1.4 million square feet.

Ms. Bedard says Sub-Zero prefers to manufacture locally because it can better manage the process and make changes to models on short notice. "The pros of being in Wisconsin outweigh the pros of moving overseas," she says. "We can be very nimble and just be master of our own destiny."

More U.S.-produced TV sets and refrigerators, though, probably won't translate into more jobs in the U.S. Audio and video manufacturing, for example, accounts for only about 31,000 American jobs, and the number hasn't grown along with production. Despite its plans to increase capacity, Sub-Zero isn't planning to add to its 1,700-person work force.

Across the manufacturing sector, the picture is similar: To stay competitive, companies are doing everything they can to boost productivity -- that is, make more stuff with fewer people. "Manufacturing in the U.S. is headed toward plants that have no people in them," Prof. Greenwald says.

That is bad news for factory workers who must retrain or be cast aside. It could be better for the U.S. economy as a whole. The more the U.S. can produce for each hour worked, the wealthier the average American becomes. If, for example, output per hour rises an annual rate of 3%, the average inflation-adjusted wage will more than triple over 40 years.

"Manufacturing is contributing to the welfare of the economy in terms of standard of living, but it's not generating net new jobs," says Mr. Meckstroth. "The electronics sector is one of the areas where that's most visible."

Rush Of Entries Gives '08 Race Early Intensity (NYT)

By John M. Broder, Patrick Healy

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Two years before the next president is inaugurated and a full year before the first vote is cast, the contest for the White House is off to a breathtakingly fast start, exposing an ever-growing field of candidates to longer, more intensive scrutiny and increasing the amount of money they need to remain viable.

On Sunday, Senator Hillary Rodham Clinton, Democrat of New York, held her first campaign event, highlighting her focus on health care a day after declaring her plans to run. Another Democrat, Gov. Bill Richardson of New Mexico, entered the fray, the eighth member of his party to do so. And the day was not terribly different in its pace of activity from many others in recent weeks.

The scale and swiftness of the action has the potential to upset the traditional timetables and conventions of presidential campaigning.

John Weaver, a senior adviser to Senator John McCain's presidential effort, said the intensified announcement season and compressed primary calendar would force campaigns to develop a strong national apparatus and well-organized field efforts state by state.

"It makes it nearly impossible for a dark horse candidate to break out of the pack and challenge the front-runner(s) and thus isn't healthy for the process," Mr. Weaver wrote in an e-mail message on Sunday. "All of these states, who are moving up early,

DOJ_NMG_0119120

want to play and have an impact. But oddly enough, it ultimately will limit the legitimate candidate choices for the nation at large in the primary process."

The candidates could be forced to move more quickly to take positions on big issues, stripping them of the chance to run on more gauzy platforms in the early stages and therefore exposing them to more direct criticism from rivals, interest groups and the news media. They will face earlier encounters with one another — New Hampshire and South Carolina are planning full-scale debates this spring — that will require them to display both policy expertise and a comfort level in front of the cameras.

They will be getting intensive scrutiny from opposition research operations, the news media and the public for that much longer, increasing the chances that a gaffe or position change could harm their campaigns. Deep into competition for experienced staff members, most candidates are already putting together operations in multiple states.

Kevin Madden, press secretary for the exploratory committee set up by former Gov. Mitt Romney of Massachusetts, a Republican, said his organization was already "beginning to put our teams together" for the early contests in New Hampshire, Iowa, South Carolina, Michigan and several states beyond. "It's happened at a very advanced pace," Mr. Madden said, "but you can't complain and wring your hands. You just have to work harder, faster."

Because they do not want competitors to be raising money unchallenged, more candidates are declaring their intentions earlier, which in turn means the entire field needs more money to sustain campaigns for a longer time.

There are now a dozen serious contenders from both parties competing in a presidential race that for the first time in more than half a century will not include an incumbent — either the president or the vice president — on the ballot or even a definitive front-runner.

"Crowded fields force early announcements," said Jennifer Palmieri, an adviser to John Edwards, the former senator from North Carolina who is seeking the Democratic nomination. "Candidates are concerned there will not be enough oxygen left for them if they wait too long. Having crowded fields in both parties has exacerbated this phenomenon."

Just hours after Mrs. Clinton made her candidacy official on Saturday, Senator Sam Brownback of Kansas joined the race for the Republican nomination. Last week, Senator Barack Obama, Democrat of Illinois, opened a presidential exploratory committee, emphasizing the wide-open nature of the race.

The early start of the presidential race may make it difficult for the new Democratic leaders in Congress to generate public support and media attention for their agenda. Seven sitting members of the House and Senate have declared their candidacies and several others are said to be considering it, distracting them from legislative business and drawing news coverage away from Congress and out onto the campaign trail.

John D. Podesta, a former chief of staff for President Bill Clinton and president of the Center for American Progress, said some of the early candidates surely recall the lesson of Gen. Wesley K. Clark, the Democrat who waited to jump into the last presidential race until the fall of 2003.

Given the lateness of his entry, and his limited resources, General Clark decided to skip the Iowa caucuses and focus on the New Hampshire primary. Iowa became an unexpectedly fierce contest, with John Kerry emerging as a winner and quickly rolling on to victories in New Hampshire and other early primary states.

"You need to get a foothold early and organize and get people to rally around you and your message," Mr. Podesta said, "and the need to build momentum is real."

The candidates and the early primary states are chasing each other in a mad circle, with two new states, Nevada and South Carolina, squeezing into the first weeks of the primary calendar. A number of other states, including California, New Jersey, Michigan and Illinois, are considering moving up their primaries so that they are not left out of the nominating process. With their expensive media markets, these states could quickly bankrupt candidates who have trouble raising money.

The intensity of the early action is fueled in part by President Bush's political weakness, brought on largely because of the unpopularity of the war in Iraq.

"If Bush were doing well and had a continuing ability to get things done and command the national stage, I think there would be far less focus on the campaign," said Robert Dallek, a presidential historian.

While presidential campaigns have been getting gradually longer over the past few decades, the acceleration in the 2008 cycle is particularly pronounced. The first President Bush announced his candidacy for the 1988 Republican nomination in

DOJ_NMG_0119121

October 1987; the eventual Democratic nominee in that election, Gov. Michael S. Dukakis of Massachusetts, had declared six months earlier.

Bill Clinton formally announced his candidacy for the 1992 Democratic presidential nomination on Oct. 3, 1991, about three and a half months before the Iowa caucuses. George W. Bush announced his exploratory committee for the 2000 presidential race in March 1999 and began his campaign in June 1999.

By comparison, Mr. Edwards of North Carolina, the 2004 vice-presidential nominee, has traveled to Iowa 16 times since the beginning of last year, building his organization there in hopes of scoring an early triumph that carries him into the next contests.

"The earlier process will reward candidates who truly have a succinct, credible, authentic and passionate message which can sustain itself over the long nature of the campaign," said Matthew Dowd, the chief strategist for Mr. Bush's re-election campaign in 2004.

He also said that in 2007 candidates would be rewarded by scoring points in "nonvoting events" such as media attention, their standings in the polls and the size and response of crowds, because those sorts of factors will help winnow the field more than the primaries still a year away.

Despite the intense focus by most candidates on showing that they can raise the money to run a long and expensive campaign, having a big bank account, Mr. Dowd argued, may actually not be as important in the early stages of this presidential cycle as it was in previous ones.

"It's for two reasons: the early process will not involve paid media as much, and new technology allows little cost to talk directly to voters," he said. "And the early process will make it more important for a campaign to know how to respond to knowable and unknowable events in next 12 months."

Steve Elmendorf, a Democratic strategist who worked on the presidential campaigns of Representative Richard A. Gephardt in 2003 and Senator John Kerry in 2004, warned that candidates and their aides, no matter how tired they become, would have to stay on their toes because any misstep might be captured on tape and circulated on the Internet.

"Every move they make in Iowa and New Hampshire will be on YouTube," Mr. Elmendorf said. "The only certainty by January '08 is that people will be pretty tired."

Besides taking a toll on the declared candidates, the length and cost of current campaigns also deters potential entrants. Senator Evan Bayh of Indiana and former Gov. Mark Warner of Virginia were considered among the brightest Democratic prospects, but both declined to run. They cited the crowded field, the endless burden of fund-raising and the brutal personal cost of today's presidential campaigns.

Hillary Clinton Is "In" For '08, But Crowd Grows (CSM)

By Linda Feldmann

The Christian Science Monitor, January 22, 2007

Sen. Hillary Rodham Clinton enters the 2008 presidential race uniquely positioned to make a top-flight run at be-coming America's first woman president.

The Democrat from New York brings to the table 14 years of experience at Washington's highest political levels, as both a two-term first lady and now six years as a US senator. She appears set to raise all the funds she needs, enjoys near-universal name recognition, and has at her side one of the nation's most astute political operatives, her husband, former President Clinton.

But Senator Clinton, who launched her exploratory committee on Saturday with the declaration of "I'm in," faces serious hurdles to reaching her goal. Last week's entry of Sen. Barack Obama (D) of Illinois into the contest adds a charismatic, fresh persona to the mix, and makes Clinton's nomination far from a foregone conclusion. While Clinton has already withstood intense public scrutiny of her life and record, she will face questions again, in addition to charges that she is humorless and calculating. And as a Democratic woman seeking to become commander in chief at a time of war, she must prove her bona fides on defense as she seeks to distance herself from an unpopular war that she initially supported.

A crowded race to the White House

The field for both major parties has been growing almost daily, of late. This weekend alone, two other candidates announced: New Mexico Gov. Bill Richardson (D) and Sen. Sam Brownback (R) of Kansas. For the Democrats, a field that

DOJ_NMG_0119122

includes a woman, an African- American (Senator Obama), and a Hispanic (Governor Richardson) as contenders sends the message of diversity that the party has long cultivated.

Most noteworthy, perhaps, is that the Democrats can boast a woman and an African-American as their top two candidates. A Washington Post-ABC News poll taken Friday night showed Clinton with the support of 41 percent of Democrats and Obama with 17 percent. But with the first nominating contests still a year away, those numbers remain fluid. Political analysts note that the third candidate in the Post-ABC poll (with 11 percent), former Sen. John Edwards (D) of North Carolina, is well organized in the early states, and could upset the race with a strong finish in the first contest, the Iowa caucuses.

In Clinton's announcement video, posted Saturday morning on her campaign website, www.HillaryClinton.com, the senator deployed a technique she used successfully in her first Senate campaign – a pledge to begin by listening. She did not roll out a series of policy prescriptions, but rather stated that she was "beginning a conversation." Starting Monday evening, for three nights in a row, Clinton will conduct live video Web discussions with voters.

Of the many issues she raised on her written Web statement, two will present particular challenges to her: "How do we bring the war in Iraq to the right end?" she asked. "How can we make sure every American has access to adequate health care?"

Iraq is the No. 1 issue for voters, and the liberal, activist base of the Democratic Party has long been frustrated by Clinton's centrist approach, beginning with her to decision in October 2002 to vote in favor of a congressional resolution authorizing US military action in Iraq. She has stepped away from that position, and last month said if she knew then what she knows now, she would not have voted yes. But she has not pushed her opposition to the Iraq war as far as other Democratic candidates, including Mr. Edwards and Rep. Dennis Kucinich of Ohio, who is also running again.

Last June, at a convention of liberal activists, Clinton was booed. In contrast, Obama was cheered by the same crowd, even though he has also hewed to the center on Iraq. Clinton's apparent status as a lightning rod of criticism may speak to her long tenure on the national stage and careful positioning on a range of issues that makes some progressives skeptical (though not unwilling to vote for her in the general election, many say, if she wins the nomination).

"Clinton fatigue?"

One of the many hurdles Clinton must face on the road to the White House has been dubbed "Clinton fatigue." Wrapped into that is her husband's turbulent eight years as president, including his marital infidelity and various investigations. In the White House, Hillary Clinton quickly established herself as the most powerful and controversial first lady in history, setting up shop in the West Wing and taking on the assignment of crafting a plan for national healthcare reform that failed to get off the ground.

Adding to the sense of fatigue is the years of speculation that Clinton may run for president herself some day. Now that she has jumped in, the political world can move to the next phase, an actual publicly announced campaign – as can she. But the arc of her effort may be hobbled by the fact that she is hardly a fresh face.

Then there's the family dynasty issue. Some voters may resist the idea of a succession of presidents that goes "Bush, Clinton, Bush, Clinton" – especially since the second Bush presidency has struggled so profoundly of late.

Still, Clinton brings the test of time to the equation. After 14 years in the national spotlight, the chances that she will wither or make a major mistake seem lower than with her chief rival, Obama. As senators, both must spend the entire next year casting each vote carefully just to remain viable for the nomination. Whoever wins the nomination then must do the same for the general election campaign.

If Sen. John McCain (R) of Arizona wins his party's nomination, he will face the same challenge. But if the nominee is one of the "formers" running on the GOP side – such as former New York Mayor Rudy Giuliani or former Massachusetts Gov. Mitt Romney – he will be free of the pressure to cast votes.

One dimension of the Clinton campaign that carries both risks and positives is her gender. A female nominee may make the already difficult South even harder to contest, with the exception of battleground state Florida. How the Mountain West, where the Democrats have made gains in recent elections, and the Midwest react to a woman nominee is an open question.

On the plus side for Clinton, she has a "very strong connection to the women's movement, which is an important base in the Democratic Party," says Andrew Polsky, a political scientist at Hunter College in New York.

Candidates Face New Test: Winning Netroots Primary (WSJ)

DOJ_NMG_0119123

By Amy Schatz

The Wall Street Journal, January 22, 2007

WASHINGTON -- Soon after Sen. Hillary Rodham Clinton announced her bid for the presidency on the Internet, her campaign was boasting of its success in one of the most important new presidential battlefields: the Netroots Primary.

Within hours of launching her bid Saturday, her campaign Web site had attracted 10,000 messages of support, 2,200 submissions for its blog contest and had signed up people to its email list at the rate of 100 a minute, the campaign said.

Mrs. Clinton's decision to enter the presidential race online and conduct a "national conversation" in live video Internet chats before heading to campaign isn't the conventional route taken by presidential hopefuls. This year, however, candidates are making extra efforts to win the favor -- and money -- of keepers of Web logs, or bloggers, and other Internet activists.

Mrs. Clinton's embrace of the Internet shows how seriously candidates are taking the power of the online activist community. Bloggers and other Netroots activists didn't get Howard Dean elected in 2004 or Joseph Lieberman unelected in 2006, but they certainly played a big, vocal role in both races. Unlike other early primary contests, there is no set date to decide which candidate wins or loses the Netroots primary, but early support by the Internet community this year, at least for Democratic candidates, could help decide which candidate wins the party's nomination.

"It's a fact that in Democratic politics, [the Internet has] grown increasingly important and it's par for the course for candidates to pay attention and to communicate to this community," said Peter Daou, the Clinton campaign's Internet director and former head of blog outreach for the Kerry-Edwards 2004 presidential campaign.

Other Democrats are taking the Internet announcement route this year. Yesterday, New Mexico Gov. Bill Richardson took the presidential plunge online in a video recorded in English and Spanish. Last week, Illinois Sen. Barack Obama announced his bid online. Former North Carolina Sen. John Edwards went to New Orleans for his official announcement, but his Internet site posted a preannouncement video and subsequently posted several more.

While Democratic candidates appear hesitant to ignore online activists, Republicans hoping to win the 2008 nomination have been somewhat slower to embrace the online activist community. That may simply be because Republican candidates haven't experienced the sort of online uprising that led to Mr. Dean's early success in 2004 or Mr. Lieberman's primary loss last year.

When Republican Sen. Sam Brownback of Kansas announced his candidacy on Saturday, he did it at a rally in Topeka. The Internet sites of both Arizona Sen. John McCain and former New York Mayor Rudy Giuliani offer little more than a biography and links that enable supporters to sign up for more information or donate money.

Former Massachusetts Gov. Mitt Romney has poured more attention and money into his site. On the day he announced his exploratory committee, the campaign launched an Internet video feature dubbed "Mitt TV," and began an outreach effort to right-leaning bloggers.

On The Electronic Campaign Trail (WP)

By Chris Cillizza, Dan Balz

The Washington Post, January 22, 2007

By noon on Jan. 10, Matt Rhoades and Kevin Madden knew they had a problem.

The two men handle communications for former Massachusetts governor Mitt Romney's presidential exploratory committee and had been told about a video flying around the Internet that spliced clips from Romney's 1994 debate with Sen. Edward M. Kennedy (D-Mass.). In it, Romney (R), then running for the Senate in a losing campaign against Kennedy, voiced support for abortion rights and gay rights -- positions he has since renounced.

Romney's political inner circle, alerted to the threat, decided to strike back quickly. Less than eight hours after the attack appeared, a video of Romney rebutting the charges was being sent to his supporters and to Republican blogs.

"In a viral information age, a distortion of the record can quickly sink in as fact," Madden said. "It was very important to show that what was an anonymous attack eventually became a moment of strength for our campaign."

Not long ago, an anonymous video on the Internet would have elicited little more than amusement from the candidate under attack. But the 2006 midterm campaign -- in which then-Sen. George Allen (R-Va.) saw his hopes for reelection, not to

DOJ_NMG_0119124

mention the White House, torpedoed by his now-infamous "macaca" moment captured on a widely seen video -- changed the rules.

But if last year was the year of the rogue videographers, the already-underway 2008 presidential campaign is likely to be remembered as the point where Web video became central to the communications strategy of every serious presidential candidate.

Playing defense is only one use of Web video. Equally important, the candidates and their staffs see Web-based video as an inexpensive and potentially significant tool for telling their campaign story without the filters of the traditional media.

Call it the YouTube effect, and it is only growing. The video-sharing site, which less than a year after its founding was bought by Google for $1.65 billion, has revolutionized the transfer of information via video, spawned a number of imitators and forced candidates to recalibrate choices, from their announcement strategies to their staffing decisions.

Sen. Hillary Rodham Clinton (D-N.Y.), for example, is to participate in three live online chats starting tonight -- a rapid-fire follow-up to the announcement of her presidential ambitions via video Saturday. The campaign will solicit questions in advance, and Clinton will respond on her Web site.

Peter Dao, the campaign's Internet strategist, who worked on the 2004 presidential campaign of Sen. John F. Kerry (D-Mass.), said Clinton's team hopes to make her campaign as interactive as possible and said the opportunities today are far advanced over just a few years ago.

"I remember in 2003 and 2004 when you said 'blog,' most people didn't know what you meant or the significance of it," Dao said, adding that with the growth of blogs and social networking sites, "the ubiquity of it is so amazing . . . the sky's the limit."

To be sure, the political establishment remains slightly behind the technological curve -- innovative video work for presidential campaigns is more likely to be done by 20-somethings than by more established media consultants -- but the times are clearly changing.

Take former senator John Edwards (D-N.C.). The night before he formally announced his presidential candidacy from New Orleans to a battery of cameras from the traditional media, his advisers posted a 2 1/2 -minute video on YouTube and Rocketboom.com in which the candidate outlined the themes of his campaign. To draw attention to that video, the campaign bought advertising on a variety of political blogs and e-mailed bloggers.

"Our goal was to have people go and watch that video so they could hear directly from John what this campaign was about," said Mathew Gross, chief Internet strategist for the Edwards campaign. "Within the first 48 hours or so, 50,000 people had watched that video. Now it is over 100,000 people who have seen it."

That was hardly the end of it for Edwards. Later that day he held a town hall meeting in Des Moines with more than 1,000 attendees. But the campaign streamed the session live on the Edwards Web site and, according to campaign officials, about 40,000 people tuned in to watch. The campaign used four cameras to cover the meeting, with a director shifting camera angles to increase the production values. "It was very much like live television," Gross said.

Since then, the campaign has edited the session into segments and posted them on YouTube, increasing the potential reach of what would have been a one-time event for a local audience.

Campaigns have added a position to their tables of organization: Several have decided to employ a videographer to track the moves -- public and behind the scenes -- of the candidate. "From a positive standpoint, it's providing that kind of backstage access that nobody else except the people on the campaign get to see," said Spencer Whalen, an e-campaign strategist for Sen. John McCain (R-Ariz.).

When Sen. Barack Obama (D-Ill.) set up his exploratory committee last week, his campaign sent an e-mail to supporters with a link to a video of the candidate describing why he was preparing to run for president -- a relatively inexpensive way to deliver a message, and one that was virtually unthinkable two campaigns ago.

"The evolution of the Internet as a means of organizing has been something that's grown exponentially," said David Axelrod, a media consultant for Obama. "McCain in 2000 spawned a lot of contributions on the Internet. The Howard Dean campaign in 2004 certainly was a quantum leap. As more and more people become wired to the Internet and fluent in it, it becomes a greater and greater tool for organizing the grass roots and the democratization of politics. It's not just a tool for delivering messages to people but a tool for people to deliver messages to you."

DOJ_NMG_0119125

And it is a tool for attack. Other campaigns took note of how Romney responded to the anonymous video and said they will be on notice for similar tactics that could be used against them. "If you're able to create a good viral attack ad, not as a campaign but as an individual, that can really get out there and get going," said Gross, the Edwards staffer. "That Romney episode of responding was a very smart move."

But the video record also provides a potential shield. If a rival campaign takes a quote or a incident out of context and uses it as an attack, McCain's team will have the full record to rebut, if needed.

In the 2004 campaign, the group Swift Boat Veterans for Truth got huge attention for a relatively small media buy for an ad attacking Kerry. In that case, cable news magnified the ad's impact by airing it over and over. Kerry's failure to respond more quickly is now seen as a critical mistake that contributed to his defeat.

In this campaign, groups such as the Swift Boat Veterans will not need cable television's assistance. They can go straight to the Web via YouTube and let millions of Americans see ads on their own time. A television commercial paid for by MoveOn.org, a leading progressive advocacy group, attacking McCain for his support for sending more troops to Iraq began running last week in Iowa and New Hampshire as well as on some national cable stations. It was also posted on YouTube and by Friday was one of the most popular videos on the site -- greatly expanding its universe of viewers and its influence on the national conversation.

The accelerated use of campaign video is likely to continue throughout the 2008 campaign as technology opens new opportunities and challenges, with even more significant changes likely by 2012, when Internet Protocol television -- the equivalent of television channels based on the Web -- becomes more technically and financially feasible.

For now, the race is on to exploit today's technology and compete for attention not just against other campaigns but also against other Web sites. "You'll see a technology Internet primary with people trying to do interesting things and move the ball forward," Gross said. "There is so much creativity on the Internet, as a campaign, how do you reach that level of creativity and interest?"

Just $83.8 Million? No Thanks (LAT)

By Dan Morain

The Los Angeles Times, January 22, 2007

For the first time since the nation launched its grand experiment with publicly financed presidential campaigns three decades ago, major party nominees in 2008 are expected to turn down all public funds.

The reason: The grant, expected to be $83.8 million, might not be enough to run a winning campaign.

Sen. Hillary Rodham Clinton (D-New York) is the first top-tier candidate to tip her hand that she intends to leave the public money on the table. Senior Clinton advisor Howard Wolfson said by e-mail Sunday that she would not take matching funds in the primary campaign or, if she wins the Democratic nomination, in the general election.

On her campaign website, Clinton is asking that donors give her $2,100 for the primary and another $2,100 for the general — a tangible sign that she won't seek matching funds in the general election. Candidates who take public money in the general election must forgo fundraising.

Using her contacts and those of President Clinton, Sen. Clinton raised nearly $40 million for her 2006 Senate race, showing she can tap moneyed interests in New York and California, two deep wells of Democratic money.

"She'll do fabulously" in the money race, said Sacramento lobbyist Darius Anderson, who helps Democrats raise money and is a business associate of one of Clinton's backers, Los Angeles billionaire Ron Burkle. "The Clinton network and the Clinton list is by far the most extensive of any Democrat."

Abandonment of the public financing system would threaten the survival of a Watergate-era reform that was supposed to limit the influence of big donors in presidential politics and enable more candidates to compete.

If major candidates walk away from public financing, "it really calls into question why it exists at all," said Robert D. Lenhard, chairman of the Federal Election Commission, a supporter of the system..

DOJ_NMG_0119126

The current system is being rendered obsolete by escalating campaign costs, sophisticated fundraising techniques, tepid public support and big-foot candidates such as Clinton who could raise $100 million on their own before the first 2008 primary — and $500 million by election day.

There are efforts to revive the system. "It is a reversal, but not necessarily a fatal reversal," said Steven Weissman of the nonpartisan Campaign Finance Institute in Washington, among the groups pushing to rescue public financing.

But it remains to be seen whether the heavy spending forecast for 2008 will, as public-finance advocates predict, trigger public disgust and lead to new reforms.

Until then, "To be considered a top-tier serious candidate almost by definition means you're not going to be participating in the public financing system" in either the primary or general election campaigns, said Democratic consultant Chris Lehane of San Francisco, who worked in the White House during the Clinton presidency.

As originally envisioned, the matching funds system offered candidates a deal: In exchange for voluntarily limiting their spending, the federal government would provide them with tax money to defray primary campaign costs and relieve them of having to raise money in the general election.

Taxpayers pay for it all by checking a box on their income tax forms earmarking $3. But despite outcries against the influence of private money in politics, the concept has not caught on with the public. At its height in 1980, 28% of taxpayers marked the box. Now, not even 10% ask that part of their taxes be used for presidential campaigns.

It's a system that seems almost quaint in an age of Internet fund-raising and in the face of other laws that have the effect of opening the way for big campaign spending. While $83 million seems massive, it could pale by comparison with the sums that candidates could raise from private sources — increasing the likelihood that nominees would leave the public money on the table.

"It is mind-boggling," said Washington consultant Jeffrey Bell, a Republican who supports public financing.

A handful of candidates have previously turned down public money for primary campaigns rather than agree to limit their fundraising, a precondition for getting the taxpayer largess. Ross Perot and Steve Forbes didn't need it; they used personal wealth. In the 2004 primaries, President George W. Bush and Sen. John F. Kerry (D-Mass.) raised more money than would have been permitted had they used matching funds.

But in every general election campaign, beginning in1976 when Jimmy Carter beat President Ford, the nominees have accepted matching funds. In 2004, the FEC gave $75 million each to Kerry and Bush. With an inflation adjustment, the grant will exceed $80 million in 2008 — if anyone takes it.

"The nominees of both major parties are likely to turn down public money for the general election for the first time in history, and raise private contributions for both the primary and the general," FEC commissioner Michael E. Toner said in an interview.

The system has become obsolete for a variety of reasons. By law, the election commission raises the amount of matching funds based on inflation, but the cost of campaigning has far outpaced inflation. Toner predicts that major party nominees will raise $500 million each by election day — roughly double what Bush and Kerry raised in 2004.

Fundraising itself has changed, aided by direct mail and the Internet. Legislation by Sens. John McCain (R-Ariz.) and Russell D. Feingold (D-Wis.) was intended to limit the influence of money in politics. But it also more than doubled the amount that individual donors could give to presidential candidates. That in turn has made it easier for candidates to raise yet more money.

The maximum that a single donor can give is $2,100 for a primary and another $2,100 for a general election, though the commission probably will raise that to $2,200 or $2,300 this year.

"Fundraising has changed so much that in order to ... get people to opt into the public funding system, you would have to dramatically increase the subsidy and the amount that a candidate could spend," said Anthony Corrado, a political scientist at Colby College in Maine and an expert on presidential campaign finances.

The law also provides candidates with millions of dollars for primaries — so long as they agree to restrict their spending. In 2008, the cap on spending would be about $50 million.

DOJ_NMG_0119127

The demand for money for 2008 is heightened by the heavily front-loaded primary calendar. Democrats will hold caucuses in Iowa and Nevada and primaries in New Hampshire and South Carolina between next Jan. 14 and Jan. 29. (Republicans have not set their primary calendar.)

Campaign finance experts believe a candidate easily could spend $25 million in those four states, then face a crush of primaries in February, possibly including California's.

As of last month, Clinton had $14.4 million in her campaign account. Several experts said Clinton could amass $100 million by the end of 2007.

Sen. Barack Obama (D-Ill.), McCain, former New York Mayor Rudolph W. Guiliani, and former Massachusetts Gov. Mitt Romney could raise similar sums. By contrast, Bill Clinton had $3.3 million in 1991 as he headed into Iowa and New Hampshire.

"There is going to be a $100-million entry fee in this White House race," Toner said.

Aides to at least one other candidate talk openly about his plan to bypass federal funds.

"Our intention is to opt out, but we will not make a final decision until later this year," said consultant Roy Behr of Los Angeles, representing former Iowa Gov. Tom Vilsack, a Democrat running for the presidency.

Though not tipping his hand, McCain "believes the public financing system is not fulfilling its original goal and must be reformed," said McCain spokesman Danny Diaz.

Advocates say the money race of 2008 will underscore the need to salvage the federal system. The Campaign Finance Institute suggests raising the match, offering candidates $3 for each dollar they raise in small sums. A $100 donation could be leveraged into $400. Feingold is expected to re-introduce legislation to raise the subsidy, though experts say a fix could not be instituted by the 2008 campaign.

"The system has become outmoded and we need to fix it," said Fred Wertheimer, long a proponent of public financing and head of the nonpartisan group Democracy 21, which also is pushing for an overhaul. "All the fundraising is going to make our case. The story is going to demonstrate why the [public financing] system makes sense."

But others question whether the public will lament the demise of a system derided as "welfare for politicians."

Darry Sragow, a Democratic attorney and consultant in Los Angeles, said most voters see no benefit in spending tax money on politics.

"It is the height of irony, if not insult, to say to a voter: 'We're going to take your money and send you all that mail you hate, and produce all the negative ads that make you want to use the remote,' " he said.

Iraq Tinges Clinton, McCain (WSJ)

By Jackie Calmes

The Wall Street Journal, January 22, 2007

WASHINGTON -- New York Sen. Hillary Clinton's official entry into the 2008 presidential race, which she begins far out in front of a growing Democratic pack, doesn't just rattle the rivals in her own party. It also is underscoring new doubts among Republicans about how formidable their own front-runner, Arizona Sen. John McCain, might be against the woman they most love to hate.

The vulnerabilities of both front-runners start, above all, with their stances on the increasingly unpopular war in Iraq. As Mrs. Clinton's weekend announcement of her candidacy made clear, they are responding to that issue in opposite ways.

Mrs. Clinton has long been suspect among liberal Democratic activists for her 2002 vote approving President Bush's use of force in Iraq, and then for declining to disavow it. Saturday, she showed that she has changed course. In her online announcement of her candidacy, she trumpeted a plan she has presented to block Mr. Bush's proposed increase in U.S. troop strength. The announcement, timed to get a jump on the president's State of the Union address tomorrow night, seemed designed to address her main problem with her party's base, though it could feed a sense that she is too cautious and calculating.

By contrast, Mr. McCain continues to be the most prominent supporter of the war, the president and a military buildup. That remains a popular stand among Republican voters, polls show. But it has been eroding his popularity with the general public, which over time has admired his independence but now overwhelmingly opposes the war. A new Wall Street Journal/NBC News

DOJ_NMG_0119128

poll, conducted Jan. 17-20, shows Americans by 65% to 30% say Mr. Bush shouldn't go ahead with his proposed troop "surge" if Congress passes a nonbinding resolution against it.

Selling Point

Further McCain slippage in the polls, in turn, would undercut his top selling point among Republican voters long suspicious of his maverick ways and his past criticism of Christian conservative leaders: The belief that Mr. McCain is the Republican who is best able to beat their nemesis, Mrs. Clinton.

A number of Republican leaders privately have been making that case within the party, among them former party chairman Haley Barbour, now Mississippi's governor, and Mississippi Sen. Trent Lott, the second-ranking Senate Republican leader. As the mood about the war worsens, skepticism about Mr. McCain's national appeal is building. One pro-McCain Republican lobbyist says not only voters are at stake, but also the donors he needs: "The war is really hurting McCain with the finance types."

Predictably, supporters for other Republican aspirants -- among them former New York Mayor Rudy Giuliani, former Govs. Mitt Romney of Massachusetts and Mike Huckabee of Arkansas, and Kansas Sen. Sam Brownback, who also announced his candidacy over the weekend -- are fanning the questions about Mr. McCain. As a sign of the reassessments, several Republicans pointed to last week's news that prominent national strategist and former Minnesota Rep. Vin Weber, one of Mr. McCain's earliest supporters in 2000 against then-Gov. George Bush, has become Mr. Romney's policy chairman.

Mr. Weber, in an interview, declined to address Mr. McCain's war woes. But, anticipating that Democrats will choose Mrs. Clinton, he said, "Republicans are increasingly beginning to see that if Democrats are going to nominate the consummate insider, ... perhaps that gives us our ultimate opening -- a face from outside Washington. Maybe it's Romney, maybe it's Giuliani, maybe it's Huckabee. I think it's Romney. But nobody's made the sale yet. It's still early."

For its part, the McCain campaign argues the senator remains formidable, judging both by polls and Republican endorsements in states with early nominating contests. Advisers cite the recent "Battleground Poll" conducted by bipartisan pollsters for George Washington University, which suggested Mr. McCain could beat Mrs. Clinton by 10 points. (So could Mr. Giuliani, according to the poll, though his liberal social stances lead many Republicans to conclude he can't win their nomination.) Echoing Mr. McCain's recent remark that he would rather lose an election than a war, his backers also suggest he will get points for principled consistency on the war where others, not least Mrs. Clinton, have shifted.

"John McCain is doing what he believes is right for our troops and for our country," McCain spokesman Danny Diaz said yesterday. "This is a principled individual who is committed to seeing us achieve victory in Iraq and winning the war on terror."

Both Mrs. Clinton and Mr. McCain face questions about their electability, as evidenced by the expanding field of competitors in both parties. Mr. Brownback, a favorite of social-issue conservatives who opposes the troop increase, entered the Republican contest Saturday with a more traditional political rally of family and supporters in Topeka. Yesterday, New Mexico Gov. Bill Richardson, a former congressman and, in Bill Clinton's administration, both United Nations ambassador and energy secretary, joined the Democratic fray with a Web announcement.

Comedy Skit Captures Sentiment

Mrs. Clinton's emerging high profile as the Democratic-led Congress moves to stop a troop increase, and perhaps even seek to bring troops home, is likely to help her with party voters. Moreover, most Democratic contenders originally supported the war, with exceptions such as Illinois Sen. Barack Obama and Ohio Rep. Dennis Kucinich.

Still, her shift underscores what even some supporters say is a vulnerability -- a sense that her political calculations leave people uncertain where she stands. This sentiment was captured hours after her announcement, in the opening comedy skit on television's "Saturday Night Live." The Clinton character says that for every one-point increase in Mr. Obama's popularity, more troops would come home; if he craters, "the troops can stay in Iraq."

The Clinton camp hit the electability argument head on in its opening volley on the new campaign Web site. Pollster and chief strategist Mark Penn opened his "campaign memo" with the question, "People are always asking, can Hillary Clinton win the presidency? Of course she can."

He cited her 2000 election in New York, and her landslide re-election in November with increased support from traditionally Republican areas. To arguments that she is a divisive figure, Mr. Penn cited recent polls showing an increase in the number of Americans who view Mrs. Clinton favorably.

DOJ_NMG_0119129

While many Democrats worry that she is unpopular among white men, Mr. Penn wrote that, "Women constitute a huge 'X' factor in this upcoming election" since more than 54% of voters will be women, and younger voters especially "believe it is about time this country had its first woman president."

Defend Innocent Life (WT)

By Sam Brownback

The Washington Times, January 22, 2007

Each January from all corners of the nation, hundreds of thousands descend upon the nation's capital. They come -- often in freezing conditions -- for a most significant march on Washington. They come for the March for Life on the anniversary of the tragic Supreme Court decisions in Roe v. Wade and Doe v. Bolton that made abortion legal during all nine months of pregnancy.

Youth is the most remarkable feature of the gathered, peaceful crowd. Observing the sea of people, you see faces of all colors and creeds; you see the young and the old; you see hope; you see cheerfulness; you see energy. Most of all though, you see the youth. Such a sight will disabuse most anyone of the notion that old men or politicians are the leaders of this movement. The young are the driving force. They will not stop coming; they are paying attention to the actions of their elected leaders; and they want a change in policy.

The youth understand that a large number of their generation were aborted before they ever had a chance in life. Since the tragic 1973 Supreme Court cases of Roe and Doe, more than 40 million of their peers' lives have been snuffed out because of abortion.The youth know that one of those 40 million could have been their spouse, and, for some, they realize that they too came very close to being one of the 40 million.

Life is beautiful. One's value is not contingent upon external features, such as one's bank account, one's successes or one's lineage. A human being's value is intrinsic, not earned. Without this basic moral understanding, few of our laws would make much sense. Laws against murder, for instance, would fail to make sense if we did not deem human life to be intrinsically valuable and worthy of protection.

Rather than choose an arbitrary starting point for valuing human life, we should go to the point when life begins. For this, science gives us clear understanding of when a new human life begins. Science tells us that life begins at the moment of conception, when the combination of 23 chromosomes from each pronucleus results in the 46 chromosomes present in the zygote embryo. From the moment of conception onward, a new human being is present until that life is ended in a laboratory, by an abortionist, or at some point after birth. Sadly, our current life-related policy in the United States ignores science, choosing capricious points at which to protect innocent human life. Our current policy is inconsistent, defying both logic and decency.

In the past Congress, had Republicans come out of the gate on issues central to advancing the cause of life, there is little doubt that values voters would have been inspired. Instead, in November, Republican majorities in both houses of Congress were swept from power, in part, according to some commentators, by the fact that frustrated values voters were unmotivated. The election was not a repudiation of the values for which Republicans stand; it was a repudiation of Republican performance when it came to living up to those values. As one example, consider that in the Senate the first Republican-initiated vote on abortion did not take place until late in the Congress with passage of the Fetus Farming Prohibition Act in July 2006; and this was followed by a vote on commonsense parental-notification legislation right before the election. The voters are well-educated and it was obvious to them that the past Congress did not share their priorities, except when it was close to election time.

Americans are a life-loving people. They always have been. Whether Republicans are returned to power by the voters will in large part depend upon whether Republicans embrace a Culture of Life both philosophically and in practice. The voters are watching.

I have great confidence that the leadership of our party will embrace the culture of life more consistently, and I am hopeful that they will, even from the minority, help us chart a course to find ways to get pro-life policies enacted. These are policies that are embraced by the majority of Americans. This past election was a wake-up call for pro-lifers, and the extent to which Republicans act with constancy and integrity will determine when the pro-life party of Abraham Lincoln and Ronald Reagan is returned to the majority.

DOJ_NMG_0119130

Sen. Sam Brownback, Kansas Republican, is the ranking member on the Joint Economic Committee, Financial Services Committee and General Government Appropriations Subcommittee. He also chairs the Senate Values Action Team and co-chairs the Human Rights Caucus.

The Religious Test (USAT)

By David E. Campbell, J. Quin Monson

USA Today, January 22, 2007

Should Americans fear Mitt Romney because he is a Mormon? In spite of what some political pundits have recently argued, the answer is a resounding no.

Should Romney fear how some Americans will react to his religion? Unfortunately, recent polls say yes. But just like another Massachusetts politician who faced questions about his religion, namely John F. Kennedy, Romney can, and should, tackle uneasiness about his religion head-on — sooner rather than later.

Romney has not yet officially announced his plans to run for the Republican nomination, yet the darts have already begun to fly. In fact, some critics have argued that Romney should not be elected solely because of his membership in the Church of Jesus Christ of Latter-day Saints (LDS):

•Writing in Slate, columnist Jacob Weisberg says that if Romney truly believes in his religion, "I don't want him running the country."

•Damon Linker, in The New Republic, says voters should reject Romney on religious grounds. Echoing precisely the same concerns raised about Kennedy's Catholicism, Linker argues that a Mormon president would be controlled by his church's hierarchy. In his words, "would it not be accurate to say that under a President Romney, the Church of Jesus Christ of Latter-day Saints would truly be in charge of the country?" Actually, no, it would not be accurate, any more than it was accurate to say that Kennedy would take orders from the Vatican. And neither would it be accurate to accuse the LDS church of pulling the strings of other prominent Mormon politicians, such as Senate Majority Leader Harry Reid, D-Nev., Sen. Gordon Smith, R-Ore., the late Rep. Mo Udall, D-Ariz., and numerous others.

It is true that, like many religious groups, the LDS church occasionally makes policy pronouncements, as it did last June in support of a federal constitutional amendment banning gay marriage. However, this kind of political activity has not served to constrain Mormon elected officials. Reid, at the time the Senate minority leader, led the opposition to the amendment. In response to a reporter's question about his open opposition to the LDS church's public position, his press secretary Sharyn Stein said that the church had asked members to express their opinions on the issue, so her boss was doing so "loudly and repeatedly on the Senate floor."

A President Romney would have the same autonomy to speak and act independently of his church.

Romney's challenge, however, is to make this clear to the American public. It is here that the parallel to Catholicism is instructive.

John F. Kennedy was not the first Catholic to run for president. That distinction belongs to Gov. Al Smith, D-N.Y., who, after winning the Democratic nomination in 1928, faced outright hostility to his Catholicism and suffered an ignominious defeat at the polls. The anti-Catholic bigotry that Smith confronted was in the living memory of many Democrats as Kennedy began his bid for the presidency. In an era when primaries were non-binding and often ignored by the leading candidates, Kennedy entered the West Virginia primary to show that a Catholic could win in a heavily Baptist state and thus settle the "Catholic question." He won the primary and the nomination. But still doubts lingered in the minds of the electorate about his religion.

To put those doubts to rest, Kennedy marched into the proverbial lion's den and delivered a speech to Protestant ministers in Houston. That speech is a classic appeal for religious tolerance. In it, Kennedy declared, "I do not speak for my church on public matters, and the church does not speak for me."

Similarly, enough Americans have doubts about Romney's religion that he should not wait for the primaries to tackle the "Mormon question." Recent polls find that about four out of 10 Americans say that they are unwilling to vote for a Mormon. We suspect that many voters are simply reflecting the fact that Mormonism is unfamiliar to them; it is natural to be uneasy with the unknown. However, Romney's own election in Massachusetts as well as the elections of Gordon Smith, Rep. Ernest Istook, R-

DOJ_NMG_0119131

Okla. , and former U.S. Representative Richard Swett, D-N.H., demonstrate that voters outside the Mountain West, where Mormons are most heavily concentrated, can become comfortable with Mormon candidates from across the political spectrum.

The heavy scrutiny focused on presidential candidates, even this early in the campaign, and the unease of some voters with a Mormon president, means that Romney should do now what Kennedy waited until the fall of 1960 to do. Romney needs to take a page from the Kennedy playbook and address his religion forthrightly, in a high-profile venue.

At a time when religion and politics are increasingly intertwined, it would be an opportunity to remind all Americans why the wall between church and state has served the country well.

Whatever issues voters might have with Mormonism, it is wrong to reject Romney because of his faith, just as it was wrong to reject Kennedy for his, or to disqualify today's Catholic politicians, such as Sen. John Kerry, D-Mass., and House Speaker Nancy Pelosi, D-Calif., for theirs. It is no different from dismissing Sen. Hillary Clinton, D-N.Y., because of her gender or Sen. Barack Obama, D-Ill., because of his race.

This is not an endorsement of Romney — we leave it to the voters to decide whether he deserves to be president. Rather, we endorse the spirit of Article VI in the Constitution, which states that there should be no religious test for public office.

Kennedy captured that spirit well in 1960 when he said: "While this year it may be a Catholic against whom the finger of suspicion is pointed, in other years it has been — and may someday be again — a Jew, or a Quaker, or a Unitarian, or a Baptist."

Or even a Mormon.

David E. Campbell teaches political science at the University of Notre Dame. J. Quin Monson teaches political science at Brigham Young University. The views expressed are their own and do not necessarily represent the views of their respective institutions.

Richardson Enters Presidential Race (LAT)

By Ricardo Alonso-Zaldivar

The Los Angeles Times, January 22, 2007

WASHINGTON — New Mexico Gov. Bill Richardson jumped into the pack of Democratic White House hopefuls Sunday as a middle-of-the-road politician with a multifaceted resume who, if elected, would be the first president of Latino descent.

Richardson, 59, was born in Pasadena to a Mexican mother and an American father. Fluent in Spanish, he has courted and received Latino support over a career of more than 25 years in politics, while managing to avoid being pigeonholed as an ethnic politician.

"I believe the country would be ready for a woman president, an African American president, Hispanic president," Richardson said on ABC's "This Week," announcing the formation of an exploratory committee that enables him to begin raising money and hiring a campaign staff. "But I wouldn't run as a Hispanic candidate. I would run as an American, proud to be Hispanic, proud of my heritage."

Getting noticed will be his immediate challenge. Although Richardson's career in public service includes 14 years in the House and stints as United Nations ambassador and Energy secretary under President Clinton, he starts out in the back of a diverse pack, among the so-called second tier of Democratic candidates.

An ABC News/Washington Post poll, conducted Tuesday through Friday and published Sunday, gave Richardson 1% of Democrats surveyed, far behind Sen. Hillary Rodham Clinton of New York (41%), who announced her own exploratory committee Saturday; Sen. Barack Obama of Illinois (17%), who entered the race Tuesday; and former Sen. John Edwards, the party's 2004 vice presidential nominee (11%).

"I will outwork anybody," Richardson said. "I am a Westerner. I'm a governor."

Political insiders said it would be a miscalculation to dismiss Richardson's candidacy.

"In the course of a campaign, there are plenty of opportunities for a candidate with a compelling message, who is not as well-known, to go out there and gain support," said Democratic media consultant Anita Dunn. Democratic National Committee Chairman Howard Dean "at this point in 2004 had maybe 2%, 3%. Gov. Richardson clearly has an impressive resume; he's very smart, and works quite hard."

DOJ_NMG_0119132

A case in point is when Richardson first ran for governor in 2002, pledging to shake 600 hands a day. According to the Almanac of American Politics, he wound up breaking Teddy Roosevelt's record of 8,513 by shaking 13,392 hands at the New Mexico State Fair and a tailgate party at the University of New Mexico on Sept. 16.

"He was not afraid to be an underdog at the beginning of his career, and he was successful," said Brian Sanderoff, an independent pollster in Albuquerque. "If in his mind he is thinking vice president, he's not sharing that with anybody. He's going for the win, whether it's realistic or not."

Said Richardson, who was reelected in November with 69% of the vote: "If I don't get the nomination, I'll come back and be governor."

On the Iraq war, Richardson supports a phased withdrawal of American troops, with diplomatic efforts to broker a peace among that country's warring ethnic and religious factions. He favors trying to talk to Iran and Syria to seek their help in ending the conflict. He supports redeploying American troops from Iraq to fight the Taliban in Afghanistan.

"What we're doing now is not working," Richardson said. "The American people are against it. The surge that the president wants is going to cause more sectarian violence."

Richardson has some experience dealing with recalcitrant foreign regimes. He negotiated with the North Koreans, the Cubans and the Sudanese, and with the Taliban when they held sway over Afghanistan.

On domestic issues, he is somewhat to the right of many Democrats. He gets the endorsement of the National Rifle Assn., for instance.

On immigration, Richardson supports an overhaul of current laws to provide a path to citizenship for longtime illegal residents who can prove they are otherwise law-abiding.

Although he chided the Democratic Party for allowing President Bush to make strong inroads among Latino voters in the 2004 election, it's unclear to what extent Richardson would command a following outside of New Mexico.

"We have a very credible woman running and a very credible African American, and a very credible Latino, but I don't think any block of voters will go to any of these candidates based on gender and ethnicity," said Dunn, the media consultant. "I do think Gov. Richardson clearly has the opportunity to appeal to Hispanic voters' sense of history."

Latino voters have helped Richardson get elected at every stage of his political career, but he has usually pursued a broad agenda in office, appealing to diverse constituencies.

As governor, he pushed through tax cuts on income and capital gains backed by many in the business community. He also signed an executive order extending healthcare and other benefits to the domestic partners of gay and lesbian state employees. And he signed legislation cracking down on drunk drivers, a serious public safety problem in New Mexico.

As chief executive of a small state, Richardson has sometimes stepped on other politicians' toes, belying his easygoing image.

"He moves very fast, and very aggressively, and the devil is always in the details," said Sanderoff, the New Mexico pollster. "He sometimes has a lukewarm, if not cool, reception from fellow Democrats, who feel they are not consulted enough. He is seen as somebody who can be a bit of a bully."

Richardson's plans, which were widely known last week, were undercut somewhat by Clinton's announcement, and her candidacy was the focus of discussion on the Sunday talk shows. Another contender for the Democratic nomination, Sen. Joseph R. Biden Jr. of Delaware, described her on "Fox News Sunday" as "the odds-on pick right now," and Sen. Edward M. Kennedy (D-Mass.) told NBC's "Meet the Press" that she was "in a very strong position."

Potential Republican rivals used similar language, with Sen. John McCain of Arizona, on NBC, and former House Speaker Newt Gingrich of Georgia, on Fox, both calling her "formidable."

But Gingrich suggested that Obama's actions last week had "forced Sen. Clinton's hand by weeks. I mean, he has gained ground so rapidly that I think she sort of thought she had to remind her friends she was around."

Another Republican, Sen. Chuck Hagel of Nebraska, told C-SPAN's "Newsmakers" program Sunday that he also was considering a presidential bid, perhaps as an independent. He is a leading GOP critic of Bush's Iraq policy and is co-sponsoring a nonbinding resolution opposing an increase in U.S. forces there.

DOJ_NMG_0119133

Richardson's Quest (ABQ)

By Kate Nash

Albuquerque Tribune, January 22, 2007

Gov. Bill Richardson jumped on the presidential bandwagon this morning, revealing in English and Spanish on his just-launched Web site that he's in.

The site was activated just as Richardson was telling ABC's George Stephanopoulos that he's the man for the job.

In an interview taped by the network last week in Santa Fe, Richardson said he'll outwork any other candidate, and trotted out a laundry list of his accomplishments.

"Most importantly, I can bring this country together. I'm a negotiator. I've brought countries together, closer, on peace treaties. I've rescued Americans, hostages and servicemen. What we have right now is an opportunity to deal with major issues that really are dividing this country. I have the experience, I've been in Iraq, I've negotiated with Saddam Hussein. I was secretary of energy, I increased energy efficient in our country," he said. "I've been a governor, I created 86,000 jobs in four years, I've cut taxes, I've brought economic growth to our state, I've made our schools better. I've got the strongest record on the environment and dealing with clean energy and fighting global warming," Richardson said.

"A lot of people give speeches on these issues. I've actually done it."

Even before the show aired, the secret was out: Just after 5 a.m local time, Good Morning America played a clip of an interview.

"Also, New Mexico Gov. Bill Richardson announcing today, he'll be on 'This Week,' that he wants to run. He would be the first Hispanic president of the United States if he won. I asked him about it."

Richardson told Stephanopoulos: "I believe this country is a very tolerant, positive country. I believe the country would be ready for a woman president, an African-American president, a Hispanic president, but I wouldn't run as a Hispanic candidate, I would run as American, proud to be Hispanic, proud of my heritage."

Richardson on Monday is expected to hold a news conference in Santa Fe and to file the papers to establish an exploratory committee. He would make an official announcement soon, according to his Web site.

On his the site, www.richardsonforpresident.com, Richardson talks about energy, the economy and the war.

"The next president of the United States must get our troops out of Iraq without delay," he said. On 'This Week,' he was more specific, saying the United States should set a timetable for phased withdrawal that has U.S. combat troops out of Iraq by year's end. He also said troops should be redeployed to Afghanistan to wage the war on terrorism.

The bilingual governor was born in Pasadena but grew up in Mexico City until he was a teenager. His Mexican mother, Maria Luisa Lopez-Collada, still lives in Mexico. His father died in 1972.

The announcement ends months of murmurs about whether Richardson would run for the country's top job. Responding to a question from Stephanopoulos, Richardson said he had no interest in being anyone's vice president. "I've got a better job being governor of New Mexico. If I don't get the nomination (for president), I'll come back" to Santa Fe, he said.

Richardson, 59, joins several other Democrats who have also said they want to lead the United States, including most recently Sens. Barack Obama and Hillary Clinton. The most recent ABC poll gave Clinton a commanding lead among the potential Democratic contenders, with 41 percent. Obama was second at 17 percent, while Richardson was last on the list with 1 percent.

He now must persuade Democrats to make him the nominee against a Republican candidate for the 2008 election. He also must raise the minimum of $30 million that political observers say he'll need to make him competitive.

In November, the first-term Richardson was elected to a second, four-year stint along with Lt. Gov. Diane Denish.

After his swearing-in on New Year's Day, he held an extravagant bash at two Downtown Santa Fe hotels, to which he invited 7,000 people. The fiesta, dubbed the Boots and Bolos Inaugural Ball, even featured hundreds of jars of Gov. Bill Richardson Inaugural Salsa. Attendees were given plastic blue wristbands, with his and Denish's name on them, akin to the yellow bracelets made popular by cyclist Lance Armstrong.

Richardson, whose name doesn't have the same cache as Sen. Hillary Clinton, is nevertheless not an unknown in national politics.

DOJ_NMG_0119134

He served in Congress from 1983-97, when then-President Bill Clinton tapped him to be the U.S. ambassador to the United Nations. A year later, Clinton appointed him as the secretary of the Department of Energy.

In the past year, Richardson has made several trips to the East Coast, New Hampshire in particular. He was in another early-primary state, South Carolina earlier this month.

Money from his re-election campaign has gone to Democratic candidates in places like Nevada, Wisconsin, Colorado, and Kansas.

During his career, he's negotiated with world leaders and travled to the farthest reaches of the world, including earlier this month to Sudan, Africa, to negotiate a cease-fire between government groups and rebel factions.

After he had returned and announced that he'd brokered a deal, one group, representatives of the Sudan Justice and Equality Movement rebuffed him, saying they had not agreed.

Richardson late last year also went to Sudan to secure the relase of journalist Paul Salopek, who was detained there for more than a month.

As governor, he's solidified his Democratic base, but also befriended Republicans with initiatives including tax cuts and economic development packages.

Richardson, if elected, would be the nation's first Hispanic president. His mother is Mexican and lives in Mexico. He was born in California and raised in both Mexico and Boston.

Already, he's made state history by raising the most money Í nearly $14 million Í for his 2006 gubernatorial race. He flew through his first term, pushing an increase in the state's minimum wage, a commuter train from Albuquerque to Santa Fe, a $250,000 life insurance policy for members of the National Guard.

This legislative session, he wants tax cuts, is still pushing a wage increase and wants a $250 million road improvement package.

Richardson's wife is Boston native Barbara Richardson. They live in the Governor's Mansion in Santa Fe and have no children.

Kansas Senator, N.M. Governor Join List Of Hopefuls (USAT)

By Jill Lawrence

USA Today, January 22, 2007

WASHINGTON — Three people in two days. That's how fast the field of would-be presidents grew over the weekend.

The latest entry is New Mexico Gov. Bill Richardson, a former congressman, U.S. Energy secretary and United Nations ambassador who aims to be the Democrats' first Hispanic nominee.

"Everybody gives speeches about how they're going to fix the country's major problems. I've actually done it in the positions that I've held," Richardson said in an interview Sunday.

Richardson's move was overshadowed by New York Sen. Hillary Rodham Clinton's jump into the Democratic race on Saturday. Another headlines casualty was Kansas Sen. Sam Brownback, who announced his bid for the Republican nomination Saturday in Topeka.

Richardson said he will form an exploratory committee today and make it official in two months when his state's legislative session concludes. He said he'll raise money Tuesday in California and campaign over the weekend in Nevada, site of an early nomination contest.

Clinton said she was forming an exploratory committee, which allows presidential hopefuls to raise money for a campaign. Her headline — "I'm in" — left little doubt she, too, is a full-fledged candidate. She'll be in Iowa this weekend and New Hampshire next month.

Today through Wednesday, as a counterpoint to President Bush's State of the Union address Tuesday, Clinton is holding live video chats each evening with people who sign up at hillaryclinton.com.

"No matter where you live, no matter what your political views, I want you to be a part of this important conversation right at the start," she said. "For three nights in a row, I'll sit down to answer your questions about how we can work together for a better future."

DOJ_NMG_0119135

Brownback called himself a leader on issues important to economic, social and compassionate conservatives. "I've stood with them. I've pursued and pushed these issues. I've been aggressive," he said in an interview Sunday. "That gives me an advantage over the others looking at the field."

Brownback has worked to fight AIDS, poverty and genocide in Africa. He supports a constitutional amendment to ban gay marriage and overturning Roe v. Wade, the Supreme Court decision that legalized abortion nationwide. He proposes a personal tax code with a single rate and individual retirement accounts as voluntary alternatives to Social Security.

Richardson recently negotiated a 60-day cease-fire in Darfur, working with the Save Darfur Coalition and the State Department. He said he will formalize his candidacy after a New Mexico legislative session he hopes will produce a higher minimum wage, expanded health care coverage and increased use and sales of alternative energy.

On Iraq, Richardson opposes the president's plan to commit more troops and would cut off money for the increase. He supports a phased troop withdrawal and national reconciliation talks among Iraqis.

Richardson says his advantages include being a governor, a Westerner and Hispanic, and having hands-on experience in two critical areas: energy and foreign policy. Beyond his résumé, he said, "You have to have passion and vision. You have to be well organized. You have to be able to raise money. … I can hold my own" on all those.

The rush of weekend activity came several days after Illinois Sen. Barack Obama formed a committee to raise money for a virtually certain candidacy.

Talk shows on Sunday showcased no fewer than six people who are running for president or say they might: Richardson, Brownback, Arizona Sen. John McCain, Delaware Sen. Joseph Biden, Nebraska Sen. Chuck Hagel and former House speaker Newt Gingrich. That's about a quarter of two dozen prospects looking at the first contest in decades with no president or vice president running on either side.

Democratic Governor Of New Mexico Joins Race (NYT)

By Matthew L. Wald

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Gov. Bill Richardson of New Mexico said on Sunday that he intended to run for the Democratic nomination for president, joining a growing field that includes Senators Hillary Clinton of New York (since Saturday) and Barack Obama of Illinois (since Tuesday).

Mr. Richardson, elected to a second term as governor in November with a historic 69 percent of the vote, has a varied résumé. He was elected to Congress to represent the Santa Fe area eight times, and then was chosen by President Bill Clinton to be ambassador to the United Nations, and later, secretary of energy.

As governor, he has kept a hand in international politics, working to arrange a cease-fire this month between the government of Sudan and rebels in the Darfur region, and meeting several times with officials from North Korea to discuss nuclear weapons.

Mr. Richardson, 59, was born in Pasadena, Calif., and spent part of his childhood in Mexico City. His mother is from Mexico.

In an interview Sunday on the ABC program “This Week,” Mr. Richardson said: “I believe this country is a very tolerant, positive country. I believe the country would be ready for a woman president, an African-American president, Hispanic president.”

He added, “But I wouldn’t run as a Hispanic candidate. I would run as an American, proud to be Hispanic, proud of my heritage.”

Video of his announcement appears on his Web site in English and Spanish.

Mr. Richardson also emphasized his experience as governor, dealing with budgets, health care, the environment, drunken driving and other issues. In his position as chairman of the Western Governors’ Association and at home in Santa Fe he has been a proponent of renewable energy sources.

Mr. Richardson is an enthusiastic campaigner. According to his campaign, the Guinness Book of World Records cites him as the politician who shook the most hands in one day — 13,392 — during his 2002 campaign for governor, beating President Theodore Roosevelt’s record of 8,515, set in 1909.

DOJ_NMG_0119136

Perhaps more relevant to a national campaign, Mr. Richardson is also a strong fund-raiser. While chairman of the Democratic Governors Association, he raised more than $28 million for candidates for governor.

N.M. Governor Joins Presidential Race (WP)

By Chris Cillizza

The Washington Post, January 22, 2007

New Mexico Gov. Bill Richardson began a run for the Democratic presidential nomination yesterday, betting that his long rÃ©sumÃ© and Hispanic heritage will boost his chances in a field already stocked with better-known candidates.

"I am taking this step because we have to repair the damage that's been done to our country over the last six years," Richardson wrote in an e-mail to supporters. "Our reputation in the world is diminished, our economy has languished, and civility and common decency in government has perished." Richardson also announced his intentions -- in Spanish and English -- on his campaign Web site.

Richardson will file paperwork with the Federal Election Commission today to establish a presidential exploratory committee but will not formally announce his bid until New Mexico's legislative session ends in March.

His announcement comes just one day after Sen. Hillary Rodham Clinton (N.Y.) joined the Democratic race and less than a week after Sen. Barack Obama (Ill.) made his intentions clear. Polling done in early-voting states such as Iowa shows Clinton and Obama in the Democrats' top tier along with former North Carolina senator John Edwards.

Richardson joins a group running behind the top three that includes Sens. Joseph R. Biden Jr. (Del.) and Christopher J. Dodd (Conn.) as well as former Iowa governor Tom Vilsack.

Unlike the other second-tier candidates, Richardson is making history as he seeks to become the first Hispanic president of the United States. Although Richardson said his ethnicity is not a point of emphasis in the campaign, it could help his chances. Hispanics are the largest minority group in the United States and are becoming increasingly active and influential in national politics.

Acknowledging that he is not yet on the level of the front-runners, Richardson argued that he alone in the field has a record of creating solutions to tough problems. "I can talk the talk and walk the walk," Richardson said.

Richardson spent 15 years in Congress before being named U.S. ambassador to the United Nations by President Bill Clinton in 1997. A year later he was appointed energy secretary. Richardson returned to elected office in 2002, winning the gubernatorial race. Last fall he cruised to a second term with 69 percent of the vote.

Throughout his career in public life, Richardson has also served as a roving diplomat, dispatched to defuse crises in hot spots including North Korea and Iraq. He spent several days in Sudan last week before making his presidential intentions known.

On Iraq -- the issue which most animates Democratic primary voters -- Richardson has called for a phased withdrawal of U.S. troops to be completed by the end of this year. "There is no military solution," he said.

Regardless of the strength of his rÃ©sumÃ©, Richardson faces a rocky path to the nomination. In a recent Washington Post-ABC News poll, 1 percent of Democratic voters said they would support Richardson in a primary. By contrast, Clinton took 41 percent, Obama 17 percent and Edwards 11 percent.

Asked how he can compete with nationally known candidates such as Clinton and Obama, Richardson said: "I'll outwork them."

Meanwhile, Sen. Chuck Hagel (R-Neb.) declined to rule out an independent candidacy for president in 2008.

"I have not decided I am going to run for president, so maybe that'll be the next set of questions that you could ask after I decide what I'm going to do," Hagel said during an interview with C-SPAN.

Hagel has been perhaps the most vocal Republican critic of President Bush's handling of the war in Iraq -- a position that could make it difficult for the senator to make a serious run at the GOP nomination.

New Mexico Governor Joins '08 Fray (WT)

By Eric Pfeiffer

The Washington Times, January 22, 2007

DOJ_NMG_0119137

New Mexico Gov. Bill Richardson yesterday joined a crowded field of Democrats seeking their party's 2008 presidential nomination, citing his experience on foreign policy and as a Western state's chief executive.

"I will outwork anybody. I'm a governor," Mr. Richardson said during an appearance yesterday on ABC's "This Week." "Governors have good records in being elected presidents because we balance budgets, we deal with health care, with education."

John F. Kennedy's 1960 victory is the last White House triumph by a sitting senator.

Despite his deep resume, which also includes turns as a congressman, energy secretary and U.N. ambassador, Mr. Richardson's announcement was overwhelmed on yesterday's talk shows by the discussion focused on Saturday's presidential announcement by Sen. Hillary Rodham Clinton, New York Democrat.

"I believe I can be competitive in raising money," Mr. Richardson said when asked by host George Stephanopoulos whether he could compete with Mrs. Clinton's fundraising organization. "A lot of people give speeches about these issues. I've actually done it," he said.

Mr. Richardson also sought to play down speculation that he is secretly campaigning to run for vice president.

"I'm not interested in being vice president. I've got a better job as governor of New Mexico. If I don't get the nomination, I'll come back and be governor," he said.

The recently re-elected governor, who is one of the few members of his party to get an "A" rating from the National Rifle Association, said he thinks Democrats will warm to his candidacy once they get to know his issues, which include favoring a redeployment of American forces from Iraq.

"The surge that the president wants is going to cause more sectarian violence. And right now, we should be deploying those troops that America has in Iraq, we should redeploy them in Afghanistan, where the Taliban are a threat and terrorism is a threat."

Sen. Joseph R. Biden Jr., Delaware Democrat and a possible 2008 rival, said he sees Mrs. Clinton as his party's White House front-runner.

"I think she's incredibly formidable and has got to be the front-runner and the odds-on pick right now," the Senate Foreign Relations Committee chairman told "Fox News Sunday."

A Washington Post-ABC News poll of 1,000 released yesterday showed that Mrs. Clinton was the favorite of 41 percent of Democrats, far ahead of the 17 percent backing Illinois Sen. Barack Obama and the 11 percent who support former Sen. John Edwards of North Carolina. The poll was taken from Tuesday to Friday and has a 4 percentage point margin of error.

"But this is a marathon. There's a long way to go," said Mr. Biden, who already has announced his own presidential campaign. "We're a lifetime away."

Another potential candidate, former House Speaker Newt Gingrich, said yesterday he would run only "as a last resort." Mr. Gingrich had previously said he would seek the White House only if no other Republican had emerged as a clear front-runner by the fall.

"Fox News Sunday" host Chris Wallace told Mr. Gingrich that "you sound as if you think about running for president as a last resort, not as a first resort?"

"Exactly," Mr. Gingrich answered. "I mean, nobody's ever said it quite that way, but you're right."

Mr. Gingrich also praised Mrs. Clinton's political skills and dismissed claims that she is too polarizing a figure to win.

"I don't care what anyone else says -- she and her husband are the most formidable pair of politicians in America," the Georgia Republican said. "She is ahead in every poll. She can raise far more resources than any other Democrat. ... And you'd have to say, given those assets, that she has a six-out-of-10 chance or better of being the Democratic nominee."

For The Clinton Candidacy, A Soft Launch (WP)

By Anne E. Kornblut

The Washington Post, January 22, 2007

NEW YORK, Jan. 21 -- One day after declaring for president, Sen. Hillary Rodham Clinton (D-N.Y.) gave her first public glimpse of how she will run: as the mother of a daughter, as a serious student of policy and as a two-term senator from New York.

DOJ_NMG_0119138

With minimal staff, no family members and not even a sound system to amplify her remarks, Clinton appeared on Sunday at a colorless community clinic in Manhattan to announce a piece of health-care legislation, her first real outing since launching her presidential bid online. Despite a media crush that overwhelmed the participants, Clinton treated the event like a routine stop, acknowledging only during a question period at the end that she had finally decided to run.

"I am worried about the future of our country, and I want to help put it back on the right course, so that we can work together to meet the challenges that confront us at home and abroad in order to secure a better future for all," Clinton said when asked why she wants to be president, embracing the 2008 campaign after more than six years of frenzied speculation about her plans.

"I believe that I am in the best position to be able to do that," she said. And she repeated her latest mantra: "I'm in to win. And that's what I intend to do."

Instead of campaign rhetoric, Clinton focused on the specific theme of health care for children, locking hands with a little girl who joined her onstage. In so doing, she signaled that she will use her uniqueness as a woman -- and more specifically as a mother -- to stake out her ground in the crowded presidential field at a time when Democrats across the board are putting children at the center of their imagery and message.

Earlier this month, Rep. Nancy Pelosi (D-Calif.) made a vivid impression by assuming the House speakership surrounded by a squadron of young grandchildren. Sen. Barbara Boxer (D-Calif.) recently questioned whether Secretary of State Condoleezza Rice, not having family of her own, could understand the stakes in Iraq.

In the past, such gestures have raised fears among some Democrats of being perceived as the "Mommy Party" -- a party of seemingly soft domestic issues such as child care and government entitlement programs, in contrast to a Republican Party that stood for national security. But focusing on children's health care was a consistent move for Clinton, who began her career working for the Children's Defense Fund, championed health care as first lady in the early 1990s and authored the book "It Takes a Village," about the way children are handled in society.

Using her first appearance as a candidate to present her domestic side -- rather than the tougher side she has displayed as a member of the Senate Armed Services Committee and on her recent trip to war zones in Afghanistan and Iraq -- suggested that, at least initially, Clinton would like to strengthen her appeal to women, who make up a large part of both the electorate and the Democratic Party.

Even the location had meaning: The event was held at the Ryan Chelsea-Clinton Community Health Center, named for the Chelsea and Clinton neighborhoods whose needs it serves, and echoing the name of Clinton's daughter.

"We really are thrilled that this health center is named so appropriately," she said.

Chelsea Clinton, who now works for a hedge fund, played a minimal role in her mother's 2006 Senate reelection campaign, even skipping the state nominating convention because of a work conflict. Although she did not appear with her mother Sunday afternoon, campaign advisers have said they expect her to play a much more significant part in the presidential race, where there are already a number of photogenic children, including the young families of Sen. Barack Obama (D-Ill.) and former senator John Edwards (D-N.C.).

"If you're a mother or a grandmother, then you have an automatic connection with an enormous cross section of society," said Stephanie Cutter, a Democratic strategist who worked for Sen. John F. Kerry (D-Mass.) in 2004 but is not currently aligned with a candidate. "Women make up more than 51 percent of the voting electorate, and they show up at the polls more often than men. If you can authentically connect with them on a very personal level, then that's very important."

Arriving at Sunday's event more than half an hour later than planned, Clinton was, for all her understatedness, met with an explosion of flashbulbs and a crowd of bewildered families who had been invited to meet her.

Dozens of camera crews crammed the back of the overheated room. Japanese broadcasters did live shots from the crowd. Secret Service agents kept close watch as staff members corralled irritated photographers in a pen. Frantic members of the health center's staff tried to make room for the invited guests, who were pressed against the walls without seats. Small children squirmed and cried.

Two little girls, Olivia and Camilla Harden, were brought onstage as beneficiaries of the federal health-care system Clinton sought to promote. "You know, if there is any doubt in anyone's mind about why we need health insurance for every child, take a look at Camilla and her little sister Olivia," Clinton said, indicating the two playful girls.

DOJ_NMG_0119139

Clinton announced that she and Rep. John D. Dingell (D-Mich.) will sponsor legislation to expand the Children's Health Insurance Program to include more middle-class families. Invoking her daughter and husband, she said all parents should be able to give their children the comprehensive health care that she and Bill gave Chelsea.

Though it was her first appearance as a presidential candidate, the occasion was organized by her Senate staff and announced through her Senate office, suggesting that she will not run away from her perch but rather use it to her advantage. None of the numerous campaign staff members she has hired (not even Howard Wolfson, a New York-based consultant and a close adviser) was in evidence.

Nothing prohibits sitting lawmakers -- or presidents -- from campaigning in office, and taxpayer money can be used for travel and organizing as long as there is a reason related to their official duties.

If anything, Clinton seemed to be following the mold of her last Senate campaign, in which she worked methodically to raise money and build support. Throughout that campaign, which cost her more than $30 million to win 67 percent of New York, Clinton emphasized smaller appearances, especially upstate, appearing with groups of voters rather than at massive, flashy rallies.

Her event on Sunday felt like an extension of that campaign -- except for the context.

Clinton Confident In Her 2008 Prospects (AP)

By Beth Fouhy

AP, January 21, 2007

Sen. Hillary Rodham Clinton expressed confidence Sunday in her presidential prospects and said she awaits a spirited contest for the 2008 Democratic nomination.

"I'm looking forward to it. It'll be a great contest with a lot of talented people and I'm very confident. I'm in, I'm in it to win and that's what I intend to do," she said after her first public appearance since announcing her candidacy Saturday.

Clinton's comments came during a visit to a Manhattan community health clinic, where the New York senator was promoting a federal children's health-care program.

Clinton said she would introduce legislation to expand the Children's Health Insurance Program to all families who need it, regardless of income. Aides said Clinton was determined to attend to her Senate duties throughout the campaign.

Reflecting her new status as a leading presidential contender, the room was packed with media — some two dozen television camera crews jockeyed for position with scores of reporters from as far away as Germany. Photographers waited outside in chilly temperatures for over an hour to snap pictures of Clinton's arrival.

Clinton said she decided to run after talking to family, friends and supporters since her re-election in November.

"It was a thorough review for me about the problems we confront in the country, the particular strengths and talents I would bring — both to the race and the White House," Clinton said.

"I concluded, based on the work of my lifetime and my experience and my understanding of what our country has to confront in order to continue to make opportunity available to all of our citizens here and to restore our leadership and respect of America around the world, that I would be able to do that — to bring our country together to meet those tough challenges," she said.

The former first lady answered questions after promoting the CHIP legislation. She appeared onstage gripping the hands of 4-year old Olivia and 2-year old Camilla Harden, whose parents said they relied on CHIP for their daughters' health care. The girls looked bewildered as hundreds of flashbulbs popped and cameras whirred throughout the room.

"It's simply wrong for any child to lack health care in America. That's where we start," Clinton said.

Earlier Sunday, one of her White House rivals said Clinton is the favorite right now for the Democratic nomination but added that the party is a "lifetime" away from making its 2008 choice.

"I think she's incredibly formidable and has got to be the front-runner and the odds-on pick right now. But this is a marathon. There's a long way to go," said Sen. Joe Biden, D-Del.

The former first lady joined the race on Saturday, hoping to become the first female president.

DOJ_NMG_0119140

A crowded field of Democratic candidates is led by Clinton, Illinois Sen. Barack Obama and 2004 vice presidential nominee John Edwards. New Mexico Gov. Bill Richardson jumped in Sunday.

A Washington Post-ABC News poll released Sunday showed Clinton was the favorite of 41 percent of Democrats, more than double the support of any of her rivals.

Clinton made her announcement on a video posted Saturday on her Web site. Obama said last week he was setting up a committee to raise money and gauge support for a run.

Former GOP House Speaker Newt Gingrich, who is considering a 2008 bid, said he thought Obama "forced Senator Clinton's hand by weeks. I mean, he has gained ground so rapidly that I think she sort of thought she had to remind her friends she was around."

Gingrich said Clinton "can raise far more resources than any other Democrat, probably raise more resources than all the other Democrats combined. And you'd have to say, given those assets, that she has a six-out-of-10 chance or better of being the Democratic nominee."

Biden appeared on "Fox News Sunday." Gingrich was on "Meet the Press" on NBC.

Clinton Opens Her Campaign With Health Insurance Plan (NYT)

By Patrick Healy

The New York Times, January 22, 2007

With a 4-year-old girl clutching her hand, Senator Hillary Rodham Clinton began her newborn presidential campaign yesterday at a Manhattan health care clinic, announcing legislation that would significantly expand federal health insurance for Americans under age 18.

Mrs. Clinton said her husband, Bill, and their daughter, Chelsea, would play "support system" roles for her, and she pledged to continue protecting New York's interests in Washington even as she campaigns in Iowa and New Hampshire.

She said she wanted to be president because she was "worried about our country" and wanted to "put it back on the right course."

She made no reference to the other seven Democratic candidates, other than to say the race would be a great contest and that "a lot of talented people" were running.

The visit to Ryan/Chelsea-Clinton Community Health Center, which is just blocks west of Broadway (and is named after two neighborhoods it serves), was highly scripted political theater.

Reminiscent of the scene this month when Representative Nancy Pelosi became the first woman to be speaker of the House, children surrounded Mrs. Clinton and climbed over their parents in the audience. The event was intended to convey both her policy smarts and her warmer maternal side — a combination new to presidential primaries.

During most of the half-hour event, a 4-year-old girl named Camilla Harden, a beneficiary of the program, clutched Mrs. Clinton's left hand. Eventually Camilla began scampering around with her sister, Olivia, 2. Every time Mrs. Clinton patted or tickled the girls, the photographers' cameras clicked madly.

Mrs. Clinton's proposed legislation would renew the Children's Health Insurance Program, which provides money to states to cover Americans under age 18 whose families earn too much money to qualify for Medicaid. The 10-year-old program, which now covers four million children, is to expire this fall. Representative John D. Dingell, Democrat of Michigan, plans to introduce a similar bill.

Mrs. Clinton's legislation would raise the income eligibility limit so that more children could enroll; in New York, a family of four earning $75,000 would qualify. And the bill would allow any family, as well as employers, to buy insurance.

"They're trapped between the rising costs and the broken system, and we can help them get out of that trap," Mrs. Clinton said.

Members of the senator's staff said they were still working out the cost of the proposal. About 8.3 million Americans under 18 do not have health care, but about 70 percent of them are already eligible for Medicaid or for the program Mrs. Clinton seeks to expand.

Clinton's Camp Fires First Salvo (NSDY)

DOJ_NMG_0119141

By Glenn Thrush

Newsday, January 22, 2007

WASHINGTON -- Sen. Hillary Rodham Clinton's pollster fired an opening salvo at Sen. Barack Obama and John Edwards yesterday, claiming their campaigns are "stalled or falling" -- and suggesting Obama isn't tough enough to withstand GOP attacks in 2008.

A day after Clinton announced she would run for president -- and win -- her campaign's chief strategist Mark Penn sent a memo to reporters intended to offset an avalanche of articles emphasizing Clinton's high disapproval ratings and questioning her electability.

"She is not just strong, but the strongest Democrat in the field," wrote Penn, referring to a new national poll showing Clinton with a commanding 20-plus-point lead over Obama and Edwards, the Democratic nominee as vice president in 2004.

In Manhattan yesterday, Clinton echoed that mantra, saying, "It will be a great contest with a lot of talented people and I'm very confident. ... I'm worried about the future of our country and I want to help put it back on the right course. I believe I am best-positioned to be able to do that and that's why I'm running."

She went on to say her daughter, Chelsea, and her husband, Bill, are "my greatest advisers."

But it was Penn who stated that no other Democrat is tough enough to beat back Sen. John McCain or former New York City Mayor Rudolph Giuliani.

In a clear reference to Obama's lack of political experience on the national stage, Penn wrote: "Some of the commentators look at the ratings of people who have not yet been in the cross-fire, and say they might have a better chance. Recent history shows the opposite."

He then set his sights on Sen. John Kerry and former Vice President Al Gore, who also might run in 2008. "The last two Democratic presidential candidates started out with high favorable ratings and ended up on Election Day -- and today -- far more polarizing and disliked nationally," said the pollster, who cut his teeth on President Bill Clinton's 1996 re-election campaign.

An Obama spokesman had no comment. Attempts to contact Edwards, Kerry and Gore weren't successful.

Obama announced the formation of his exploratory panel Tuesday but didn't get a boost in the polls. Clinton now holds a commanding 41-17 percent lead over the Illinois senator among Democrats and Democrat-leaning Independents, according to an ABC News/Washington Post poll taken before her announcement, and after Obama's Jan. 16 campaign kickoff.

Strikingly, Clinton did even better among black Democratic voters, amassing a 26-point lead over Obama. "Hillary's Democratic primary support is climbing, while others are stalled or falling," crowed Penn.

Clinton isn't doing nearly as well in early primary and caucus states, particularly Iowa, where she trails Obama, Edwards and ex-Iowa Gov. Tom Vilsack.

Clinton is planning her first trip to that state next weekend, according to a news report.

Penn chalks up Clinton's poor showing in Iowa to her absence and lashed out at candidates who have made frequent stops in the state. "While some candidates have been in Iowa and New Hampshire for years, running as permanent presidential candidates, Hillary has been working hard as a senator for New York," Penn wrote.

Staff writer Reid J. Epstein contributed to this story.

Hillary Is In (WP)

The Washington Post, January 22, 2007

HILLARY RODHAM Clinton's announcement Saturday that she is entering the Democratic presidential race is not a surprise, but that doesn't take away from its significance. There has been a flurry of justifiable excitement over Sen. Barack Obama (D-Ill.), but Ms. Clinton's candidacy is equally momentous: Never before has there been a female presidential contender with such a strong prospect of winning the White House. As with Mr. Obama, that is a development to be welcomed by Americans of both parties.

Ms. Clinton enters the Democratic race as the immediate front-runner, with impressive experience in her husband's White House and on her own in the Senate and with an unmatched political operation. She is a disciplined campaigner with a broad grounding in domestic and foreign policy. She also has $14 million in the bank and the proven ability to harvest millions more.

DOJ_NMG_0119142

But if Ms. Clinton begins with formidable assets, she also faces formidable challenges. One involves the Democratic base and its unhappiness with her position on the war in Iraq. Unlike Mr. Obama, who wasn't in the Senate at the time but made his opposition clear, Ms. Clinton voted to authorize the war; she has been more reluctant than some of her Democratic rivals, most notably the 2004 vice presidential nominee, John Edwards, to renounce that backing or to call for immediate departure of the troops. "I am cursed with the responsibility gene," Ms. Clinton told the New York Times in an interview upon returning from Iraq last week. "You've got to be very careful in how you proceed with any combat situation in which American lives are at stake."

More than a little self-serving, perhaps, but Ms. Clinton's approach is, in fact, more responsible than those of some of her opponents. While this is good policy, it could be risky politics, especially in states that hold early primaries. The trick for Ms. Clinton will be to navigate the primary process on the war and other issues in a way that attracts, or at least assuages, liberal voters while not casting her as a poll-driven panderer or locking her into positions that could complicate a general election campaign.

A second and somewhat contradictory issue for primary voters is the matter of Ms. Clinton's "electability": Is she such a polarizing figure, with such high negatives (44 percent in the latest Washington Post-ABC News poll, compared with 29 percent for Mr. Obama) that she would be at a disadvantage in the fall campaign? The question about Hillary Clinton may be not so much whether a woman can win the presidency but whether this woman can.

The Clinton campaign confronts this problem directly on its Web site. Chief strategist Mark Penn argues that the candidate's poll ratings are strong, that she has demonstrated in New York the ability to win over voters in Republican areas and that she is "the one potential nominee who has been fully tested." That may be true, but for Hillary Clinton, the toughest test is still ahead.

How Obama vs. Clinton Shapes Up (WP)

By E. J. Dionne Jr.

The Washington Post, January 22, 2007

Three differences and three similarities will define the contest between Hillary Rodham Clinton and Barack Obama.

The most important difference lies in where their respective political journeys began. After her early work as an advocate for children, Clinton came to political maturity in the South as part of her husband's efforts to rescue the Democratic Party from its low point in the 1980s. She was shaped by her party's need to win back moderate and conservative voters who had strayed to Ronald Reagan's banner.

The resulting Clinton project was a brilliant top-down effort to shape new Democratic ideas that would appeal to Southern whites and the Northern working class. This explains why both Clintons were drawn to the centrist Democratic Leadership Council, far more an elite policy shop than a grass-roots organization.

In a 2002 speech, Clinton signaled her respect for this approach by praising Al From, the DLC's founder and chief executive, for understanding "from the very beginning . . . that the right ideas were more important even than improving technology, organization or fundraising." Both Clintons have employed Mark Penn, the premier New Democratic pollster who is incessant in his efforts to locate the political center.

Obama, by contrast, began his political life as a community organizer in inner-city Chicago. His earliest experiences were of a bottom-up politics mobilizing the poor and the marginalized. This had the paradoxical effect of giving some of his ideas a decidedly progressive and activist tilt and others a more conservative tinge.

Consider two statements he made in 1997, shortly after his election to the Illinois Senate. On the one hand, Obama noted that welfare recipients "generally are not represented down here in Springfield," the capital, and that his job was to stand up for them.

But the organizer's emphasis on local and community responsibility sounded quite traditional when he declared the same year that "though we may be lobbying for more school funding, it's also important for us to bring education into the homes and ensure parents are checking children's homework, turning off the television, teaching common courtesy."

DOJ_NMG_0119143

In keeping with his grass-roots background, Obama's campaign for the 2008 Democratic presidential nomination kicked off with a sense that it was a national movement, while Clinton, from the moment she announced her intentions on Saturday, commanded a well-established, well-staffed and well-financed national organization.

This second contrast can be exaggerated, since Obama will have ample financing. But the feel of the two campaigns is palpably different, with Obama enjoying an advantage on passion and Clinton on organization and discipline.

There are warnings for both candidates from the 1984 Democratic primaries, when Walter Mondale, the clear favorite, was nearly upended by the bright young upstart, Gary Hart. The danger for Clinton is that her front-running campaign will develop the habits of a cautious, inflexible behemoth. The bad news for Obama is that the solid Mondale had staying power and ultimately prevailed, though he lost in November.

There are, however, limits to the 1984 comparison, as a Clinton supporter noted over the weekend. Obama has been built up into a party savior a full year before the primaries -- he will not enjoy Hart's element of surprise -- even as expectations for Clinton have been defined downward by the incessant speculation about whether she can win.

Thus the third difference: Clinton, more than any other Democrat, has been both scarred and toughened by the partisan warfare of the past 15 years, while Obama is unscathed and untested.

This contrast was reflected in their announcement speeches. Obama attacked a politics that "has become so bitter and partisan" and pledged himself to "our common interests and concerns as Americans." Clinton spoke proudly of her ability to take on partisan foes. "I have never been afraid to stand up for what I believe in or to face down the Republican machine," she said. "I know how Washington Republicans think, how they operate and how to beat them."

Yet if Clinton and Obama present different profiles, they are, in certain respects, very much alike.

Both have displayed an unusually sophisticated and apparently genuine understanding of the role of religious faith in American politics. Both pride themselves on their ability, proven in their home states, to win over political moderates and voters not tethered to ideology.

And the woman who would become the nation's first female president and the man who would become its first African American president know how important the men and women of the white middle class will be to the outcome of the next election. Such voters will probably determine if either of them gets to become a national trailblazer -- and also if any other Democrat can find a way to get in the middle of their fight.

Anyone But A Bush Or A Clinton (LAT)

By James Burkee

The Los Angeles Times, January 22, 2007

HAVING REFUSED a third term as president, George Washington offered the nation a farewell address in 1796, urging Americans to cherish the Union and to avoid the "baneful effects" of political partisanship. Successors such as Thomas Jefferson warned against the formation of an "unnatural" aristocracy of men who inherited great fortunes and political office.

Both of these warnings have been overlooked in the debate over Hillary Rodham Clinton's 2008 presidential run. But if she secures the Democratic nomination, wins and serves two terms, by 2017 the United States will have been governed by either a Bush or a Clinton for 28 years. That's three decades governed not just by the same two families but much of the same supporting staff. As Dick Cheney is a name familiar to both Bush presidencies (as George H.W. Bush's secretary of Defense and his son's vice president), so too may a Hillary Clinton presidency resuscitate familiar names such as Harold Ickes, Paul Begala and James Carville.

And it might not end there. Former Florida Gov. Jeb Bush, encouraged by Republican leaders and the current president (who said, "I would like to see Jeb run at some point"), has not ruled out a White House bid or a vice presidential slot on the ticket in 2012 or 2016.

If Washington's caustic, partisan atmosphere is to change, the era of Bushes and Clintons needs to end in 2008.

Three times in American history have close relatives of former presidents won the office. John Quincy Adams, son of John Adams, lost the popular vote to Andrew Jackson in 1824 but won in the electoral college amid charges of a "corrupt bargain."

DOJ_NMG_0119144

Benjamin Harrison, grandson of William Henry Harrison, lost the popular vote to Grover Cleveland in 1888 and also suffered as a "minority president" and mere figurehead. George W. Bush lost the popular vote to Al Gore in 2000.

Recent polls suggest that a significant body of Americans, perhaps 40%, will not vote for Hillary Clinton under any circumstances — so it is unlikely that she could enter the Oval Office with a strong electoral mandate. The ironic upshot is that such a Hillary Clinton presidency — weakened by low approval and beset by partisan sniping — would mirror George W. Bush's presidency.

That the Bush's administration has been consumed by political partisanship comes as no surprise to students of history. From the time of John Quincy Adams — whose term in office marked the end of the Era of Good Feelings — the children, grandchildren and spouses of presidents engender exceptional hostility when they seek office themselves. For all their personal capacities, the latter Adams, Harrison and Bush — like Hillary Clinton — inherited their claims to the presidency. George W. Bush would not be president today were his name not George Bush, nor Hillary a senator from New York absent the Clinton name. This nation's traditional commitment to meritocracy inclines many to reject these "unnatural" aristocrats, who never garner widespread popularity.

Minority and bare-majority presidents are weak leaders because nothing undergirds presidential power like an election mandate. The strongest post-World War II presidents — Dwight Eisenhower, Lyndon Johnson and Ronald Reagan — were also its most popular. (Eisenhower and Johnson won at least 55% of the vote; Reagan polled just over 50% in 1980 with independent John Anderson in the race, then 59% in 1984.) Presidencies enveloped by partisanship — Harry Truman, Jimmy Carter and Bill Clinton — were made of men who won office on the barest of majorities or pluralities (Truman won 49.6% of the popular vote in 1948; Carter won 50.1% in 1976; Clinton won 43% and 50% in 1992 and 1996).

Pundits compare 2006 to the late Nixon years, with a country disillusioned by war and a deep distrust of its political leadership. In one of his last interviews, former President Ford lamented the "extreme partisanship that exists in the nation's capital today," suggesting that partisanship is even worse than in the post-Watergate era he inherited.

The nation needs today, as it got in Ford then, a president respected by both Republicans and Democrats who can restore trust in politics. It needs new faces and new ideas if it is to confront advancing crises of war, debt and entitlement reform. And it needs a president who can assume office in 2009 swimming in the political capital that only a mandate can bring. The nation needs a candidate who can win 55% or more.

And that will not happen with a Bush or Clinton on the ballot.

Campaign Allegation A Source Of Vexation (WP)

By Howard Kurtz

The Washington Post, January 22, 2007

Days after Barack Obama jumped into the presidential sweepstakes, he was hit with a thinly sourced story from his past--39 years in his past, to be exact.

The allegation, by a conservative magazine, raised questions about whether the Illinois senator had been schooled in Islamic radicalism when he was all of 6 years old.

Insight, a magazine owned by the Washington Times, cited unnamed sources in saying that young Barack attended a madrassah, or Muslim religious school, in Indonesia. In his 1995 autobiography, Obama said his Indonesian stepfather had sent him to a "predominantly Muslim school" in Jakarta, after two years in a Catholic school -- but Insight goes further in saying it was a madrassah and that Obama was raised as a Muslim.

Fox News picked up the Insight charge on two of its programs, playing up an angle involving Hillary Clinton. The magazine, citing only unnamed sources, said that researchers "connected" to the New York senator were allegedly spreading the information about her rival for the Democratic presidential nomination.

The New York Post, which, like Fox, is owned by Rupert Murdoch, also picked up the article, with the headline: " 'OSAMA' MUD FLIES AT OBAMA."

Thus, in the first media controversy of the 2008 campaign, two of the leading candidates find themselves forced to respond to allegations lacking a single named source.

DOJ_NMG_0119145

"The allegations are completely false," says Obama spokesman Robert Gibbs. "To publish this sort of trash without any documentation is surprising, but for Fox to repeat something so false, not once, but many times is appallingly irresponsible. This is exactly the type of slash-and-burn politics the American people are sick and tired of." Obama, aides note, is a Christian and belongs to a Chicago church.

Clinton campaign officials were relieved that what they regard as an absurd allegation was not picked up more widely. "It's an obvious right-wing hit job by a Moonie publication that was designed to attack Senator Clinton and Senator Obama at the same time," says Clinton spokesman Howard Wolfson. Insight, like the Washington Times, is owned by a company controlled by the Rev. Sun Myung Moon. No one answered the phone at Insight's office yesterday and its editor did not respond to an e-mail request for comment.

On the morning show "Fox & Friends" on Friday, co-host Steve Doocy said that madrassahs are financed by Saudis and teach a radical version of Islam known as Wahhabism, though he said there was a question whether that was the curriculum in the late 1960s, when Obama attended the school. Another co-host, Gretchen Carlson, said that those on the show weren't referring to all Muslims, only "the kind that want to blow us up."

After the show, Obama aides complained to Fox about what the campaign deemed inflammatory language.

Bill Shine, Fox News's senior vice president for programming, says the "Fox & Friends" hosts "did say repeatedly, over and over, that they were getting this from Insight magazine." He says the show will provide a "clarification" today by including the comments of Obama campaign spokesmen. He says the morning program is "an irreverent show" on which the hosts sometimes express their opinions.

On Friday afternoon, John Gibson, host of Fox's "The Big Story," began a segment this way: "Hillary Clinton reported to be already digging up the dirt on Barack Obama. The New York senator has reportedly outed Obama's madrassah past. That's right, the Clinton team reported to have pulled out all the stops to reveal something Obama would rather you didn't know -- that he was educated in a Muslim madrassah."

Reportedly?

Gibson's guest, Republican strategist Terry Holt, a former Bush campaign spokesman, said that the effort could be "a despicable act by an absolutely ruthless Clinton political machine. We know that they are capable of doing this." But if the information wasn't linked to Clinton, Holt said, she should "disavow" it. There was no Democratic strategist on the segment, but Gibson did read an Obama campaign statement dismissing the article as false.

Gibson portrayed the controversy as an example of hardball politics: "Picture the commercial, 'Hi, I'm Barack Obama. Funny thing happened to me on my way to the White House, somebody discovered I didn't go to a kindergarten, I went to a madrassah.' This is how the big kids play politics."

Asked if Fox News was promoting unproven rumors about Obama and Clinton, as some liberal blogs have charged, Shine says: "Some on the left might think that. I don't think anybody should read anything into that."

There was a time when major media outlets refused to touch unsubstantiated allegations. When Gennifer Flowers sold her account of an affair with Hillary Clinton's husband to the Star tabloid in 1992 -- allegations that turned out to be true, at least in part -- some news organizations went with it and others shied away for days. These days, the time elapsed between a flimsy charge from some magazine or Web site and amplification by bigger media outlets is often close to zero.

Clinton, meanwhile, faces a longer-range problem with the media. Unlike Obama, whose out-of-nowhere candidacy has been celebrated by reporters and columnists alike, the former first lady has drawn skeptical coverage from the mainstream press, stemming from the battles of her husband's administration.

"She will have to show people that she is not the person her critics describe: radically liberal, ruthlessly ambitious, or ethically compromised," the New York Times said yesterday.

"She will also have to overcome her reputation for political calculation, an inconsistent stump presence and her intimate ties to the polarizing events of her husband's White House tenure," the Los Angeles Times said.

"Clinton is known for her upright bearing and her bare knuckles," the Chicago Tribune said. At this stage, at least, many journalists seem determined to take the Democratic front-runner down a peg or two.Don't Blog About Us!

London's Daily Telegraph has decided that this blogging thing is fine -- up to a point.

DOJ_NMG_0119146

Hours before Saddam Hussein's execution, Toby Harnden, the paper's Washington correspondent, filed a story saying that the former Iraqi dictator "will spend the last moments of his life hooded" before he is hanged. Hussein declined the hood, but a rewritten Telegraph piece for the final edition repeated the erroneous detail.

In a blog posting on his paper's Web site earlier this month, Harnden responded to a reader who said, along with some unprintable words, that his story was "full of inaccuracies and made-up background."

"You're right that writing about Saddam's hanging before it happened was not my finest hour. It was one of those tricky journalistic challenges . . . The doomed dictator remains forever hooded in the headline. Hey, ho," he wrote.

Harnden said nothing about the paper's management, except to praise "my industrious online colleagues" for updating his story. Still, the Telegraph responded by taking down the posting and warning its staff. According to the Guardian, the Telegraph's Web editor wrote: "Please avoid blogging about your relationship with your employer, whether the Telegraph Media Group as an entity, 'the desk,' or 'my boss,' even in jest. Such comments are frequently misconstrued and can easily backfire. Think carefully before blogging about journalists' 'tricks of the trade.' "

Says Harnden: "The whole episode was pretty unfortunate. I think some lessons have been learned about the nature of blogging and its relationship to traditional reporting as we all try to grapple with the new online world."

Michelle Obama: Reluctant Political Spouse (NSWK)

By Karen Springen And Jonathan Darman

Newsweek, January 22, 2007

Jan. 29, 2007 issue - Michelle Obama has always been a creature of discipline and decorum. As a young lawyer, she initially brushed off advances from her future husband, Barack Obama, because they worked at the same firm. A reporter, visiting her Chicago home in 2004, noticed a to-do list for her two daughters that included time for "play." She is in bed most nights by 9:30 and rises each morning at 4:30 to run on a treadmill. "She'll sacrifice the sleep so she can make sure she has that time," says Susan Page, a friend since Harvard Law School. "Once she has a plan, she goes for it."

Now, however, Michelle's once orderly life is tending toward the chaotic, in the form of a presidential campaign, and no amount of planning can stave it off. Last week her husband's name was on the lips of every Democrat from Boston to Berkeley after he announced he was forming a presidential exploratory committee. But Michelle was out of sight—the Obama campaign declined to make her available for this story—even as many Democrats wondered what she thought of her husband's big leap. After all, she has made no secret of her ambivalence about being a political spouse: "If politics were my passion," she told the Chicago Tribune in 2004, "I'd find out how to do it and make it work." In the weeks before his announcement, Obama seemed to stiffen when asked what his wife thought of a presidential run.

The hesitant spouse is a well-known character in presidential politics, and Michelle has never been quite as conflicted as some of her comments might suggest. From the earliest days of her marriage, she has provided crucial support to Barack's political life—introducing him to the Chicago neighborhood where he would make his political name and sharing his passion for work in that community. Her friends say Michelle has long seen great things in her husband's future. "If you say to Michelle, 'Are you surprised [by the attention]?' " says her friend Valerie Jarrett, "she would say, 'The American people are beginning to see what I always knew—he's an extraordinary man born to lead'."

To her friends, Michelle seems to manage public and private pressures with effortless poise. She is intimately involved with her husband's work, reading drafts of his major speeches and tweaking his big ideas and little punctuation choices alike. But she also works full time as vice president for community relations at the University of Chicago Hospitals and juggles the schedules of her two daughters, Malia, 8, and Natasha, 5. "Wherever we're at, people come up to her [and say], 'I love your husband'," says her friend Yvonne Davila. "She gives them hugs ... She makes it seem kind of flawless."

Michelle has long had a talent for making hard work look easy. Growing up in a working-class family on Chicago's South Side, she logged long hours practicing the piano, scrawled short stories in a spiral notebook and excelled in school, skipping the second grade. Her academic performance got her into Princeton, and friends can't recall her chafing at being one of a handful of African-Americans on campus. One spring break, she and her two roommates tagged along with a Jewish student group on a ski

DOJ_NMG_0119147

trip to Vermont. "We were three black women on a trip with all of these white Jewish kids," one roommate, Angela Acree, recalls. "We stuck out like sore thumbs. But we had a great time."

After college, Michelle entered Harvard Law School, and then joined the Chicago law firm Sidley & Austin. In 1988, she was charged with mentoring a summer intern named Barack Obama. Attraction was instant, but Michelle thought an office romance unseemly. Still, Barack pursued his blushing adviser. "I think it would be OK if you went to lunch with this guy," a Sidley colleague, Kelly Jo MacArthur, remembers telling Michelle.

Lunch they did, and before long they were partners in all things professional and personal. In Chicago, they quickly stood out as an attractive, talented couple. Inside, though, it was a time of turmoil for Michelle; the death of her father in 1990 and the sudden death of another college roommate, Suzanne Alele, at only 25, compelled her to take stock of her own life. She decided to turn her back on Sidley and its hefty salary: "I wanted to have a career where I was thrilled to wake up," she told a reporter in 2004.

Public service seemed like a good fit. In 1990, Michelle interviewed for a position under Jarrett, then the deputy chief of staff to Chicago Mayor Richard Daley. Jarrett offered her the job on the spot. Michelle was flattered but had one request: "I need you to meet with my fiancé," she said. "I'm making a huge career decision ... He's nervous and he wants to know who's looking out for me." (Jarrett passed the test.)

Meanwhile, Michelle was helping to open doors for Barack. The child of a Kenyan father and a white, Kansan mother, Obama has spoken openly about his struggle as a young man to identify with the black urban American experience. After marrying Michelle in 1990 and settling on the South Side, he gained entree to one of the strongest African-American enclaves in the country. "There are a lot of successful people who have a hard time working in the community because they're not from there," says John Rogers, a Chicago investment banker and a friend of Michelle and her brother, Craig Robinson, since college. "Craig and Michelle can do it because it's where they come from."

Michelle's community ties came in handy when Barack, by then a state senator, ran for the U.S. Senate in 2004. He faced a primary dominated by some of the Democratic Party's most formidable political families. Barack won the nod thanks to the support of influential African-American business leaders, some of whom had closer ties to Michelle than they did to him. As chair of the Chicago Stock Exchange, Jarrett, Michelle's old boss and close friend, was among the most powerful African-American women in Chicago and served as finance chair of the Obama campaign.

After Barack's election, Michelle fretted publicly over what all his time away in Washington would mean for their family. But friends say that, after an exhausting Senate campaign, she cherished the relative calm of life back home in Chicago. Even now, she is still trying to keep things low key. A day after her husband's announcement last week, she celebrated her 43rd birthday at home in Chicago over bowls of chili with a friend and each of their children. "I'm sure they'll try to shelter the girls as much as they can," says Jarrett, "but some level of spotlight is inevitable." No question.

Handling that spotlight will be a challenge. In the past, Michelle has occasionally played tough enforcer with Barack in interviews but, as Nancy Reagan and Hillary Clinton can attest, voters prefer First Ladies who use a soft touch. The campaign has a careful program for introducing the Obama family to the American public in the weeks before and after his official announcement on Feb. 10. Hesitant or not, Michelle will be smiling for the cameras. Once she has a plan, she goes for it.

Obama: A Race Away From The Past? (NSWK)

By Ellis Cose

Newsweek, January 22, 2007

Jan. 29, 2007 issue - When Jesse Jackson ran for president in 1984, he resembled Barack Obama in some striking respects. A charismatic and compelling figure in his early 40s, Jackson leapt into the contest and forced America to wrestle with questions of political access and equal opportunity. In many important ways, however, Barack Obama is no Jesse Jackson—and that is a key to Obama's political appeal. Whereas Jackson was a fully formed public figure—with all the baggage that entails—Obama is a work in progress who has the ability to embrace nearly whatever qualities he chooses.

DOJ_NMG_0119148

Before setting his sights on the White House, Jackson had been a major presence on the national stage for nearly two decades. He was "bloodied up from the civil-rights battle," as he told me last week, and already had won the allegiance of many blacks and the enmity of many whites.

Obama, in contrast, "did not come up through the ranks in our community," says Jackson. Instead he "fell out of the sky in Boston," a reference to how Obama was thrust onto the national stage after an electrifying speech at the 2004 Democratic National Convention. Obama would not dispute this. He sees himself as a "post-baby-boom politician" who represents something different from those people—black, white, other—who came before him. But he acknowledges his debt to them. It is a "testimony to the sacrifices and struggles of previous generations," to people like Martin Luther King Jr. and Rosa Parks, he told me last year during an interview in Kenya, that he is where he is today.

That Obama is somewhat removed from the civil-rights struggle, is not well known to much of its leadership and—having been raised largely in Hawaii by his white mother and her parents—does not have a typical up-from-the-ghetto story has led some to wonder what to make of him. In a much-discussed column in New York's Daily News, Stanley Crouch commented: "When black Americans refer to Obama as 'one of us,' I do not know what they are talking about ... Obama makes it clear that, while he has experienced some light versions of typical racial stereotypes, he cannot claim those problems as his own—nor has he lived the life of a black American." Joseph Lowery, a former chairman of the Southern Christian Leadership Conference, the organization that King led, argues that Obama's history should not count against him. "As we move further and further into the new century, we are not going to always be able to have people running for high office who are directly connected to the civil-rights movement," he says. He describes Obama as a "a very impressive young man" about whom he doesn't know enough.

Like much of the rest of America, in other words, civil-rights veterans wonder: who is Obama, really? They are also intrigued about Obama-mania and whether it "heralds, perhaps, the birth of a new day for fuller inclusion of blacks in the body politic," says Wade Henderson, head of the Leadership Conference on Civil Rights.

Much about America has changed since Jackson's first run. A new generation has reaped the fruits of the civil-rights revolution. That is all for the good, says Jackson, as long as "civil-rights beneficiaries see their connection to the benefactors."

Obama clearly understands that connection. At the same time, he cannot afford to be seen as one constantly catering to the civil-rights establishment. And he thinks black Americans know that. The black community, he observed during one conversation, is much more sophisticated than many people suspect. It has supported him, he pointed out, even though he speaks a "very universal language."

Obama certainly does not have a lock on the black vote. Many blacks have political ties to, or feel deep affection for, the Clintons, and will therefore tilt more toward Hillary than Obama. Al Sharpton also has his fans. If he runs again, as he's hinted he might, he could draw votes from Obama—though not very many, it seems. To win, Obama will have to put together the type of "universal" coalition no black politician has ever done at the national level. (According to the new NEWSWEEK Poll, voters give Obama a 46 percent to 44 percent edge over GOP Sen. John McCain; Hillary is up 48 to 47. Both Dems lose by a hair to Rudy Giuliani.) One thing that makes him so appealing is his bedrock faith that that is possible, that he does not need to pit one group against another, that politics can be a constructive and unifying force. Of course, we have heard that message before. Now we have to see if Obama can deliver on it.

Presidential Pickings (USNEWS)

By Michael Barone

U.S. News and World Report, January 22, 2007

The single most glaring defect in our mostly admirable political system is the presidential selection process. You can point to other defects—the equal representation of the states in the Senate, judicial usurpation of decision making on sensitive issues—but the downside risks are greater in the selection of the one official who is far more powerful than any other. So what's wrong with it?

It starts too early, takes too long, and ends too abruptly. Thirteen months from today—and 10 months before the general election—we will probably know the nominees of both parties. Some candidates have been busy running most of last year, and

DOJ_NMG_0119149

now they're busy announcing their exploratory committees. So anyone who doesn't want to devote two or three years to nonstop fundraising and campaigning is ruled out. That would have eliminated past candidates like Dwight Eisenhower.

Then the races for the nominations tend to end abruptly. Iowa caucusgoers and New Hampshire primary voters—fewer than 350,000 people in a nation of 300,000,000—effectively chose the Democratic nominee last time, a choice many Democrats now regret. In 2000, 573,000 South Carolina primary voters effectively chose George W. Bush over John McCain.

It excludes many serious candidates. There's an assumption that anyone who hasn't held elective office is ineligible, which means that almost no one with actual working experience in the White House runs. The exceptions for 2008 are Hillary Rodham Clinton and, if he runs, Al Gore. Talented White House veterans like Hamilton Jordan or James Baker aren't considered presidential timber; the exception to the rule was Colin Powell, but he didn't run. Instead there's an assumption that just about any U.S. senator, no matter how bereft of managerial experience, is eligible. John Edwards used the proceeds from a $25 million lawsuit to win a Senate seat and has spent most of his time since running for president. Barack Obama won a Senate seat over weak opponents and delivered a stirring speech at the 2004 Democratic National Convention, and now he is off and running, too. Edwards and Obama are, in different ways, mesmerizing speakers and may turn out to be good managers as well. But we have little way of knowing whether they will.

It gives too much power to Iowa and New Hampshire. For years I've thumbed through the Constitution, looking for the provision that says that Iowa and New Hampshire come first. I haven't found it yet. Neither state, as Michigan Sen. Carl Levin has pointed out, is remotely typical of the nation. For this cycle, Democrats are adding early contests in Nevada and South Carolina. They're not typical either: The Las Vegas unions are the big power bloc in Nevada, and about half of South Carolina's Democratic voters are black. A better system would be the Delaware plan, which Republicans considered briefly but rejected. It had four rounds of primaries, with the smallest states voting first, so that no one could clinch a nomination till the last round. But no politician with any thought of ever running for president (i.e., almost no politician) will risk dissing Iowa and New Hampshire.

It gives one person the power to determine who is vice president. We take it for granted that the presidential nominee, and he or she alone, selects his or her running mate. But that's crazy. Ever since Jimmy Carter delegated real work to Walter Mondale, the vice presidency has been a serious office. A vice president can become president anytime and usually becomes a serious presidential candidate. We devote all manner of time and trouble to selecting presidential nominees, then toss the choice of their possible successor to one person.

So what can we do? The best answer I come up with is: Muddle through. We are not going to have a national primary or the Delaware plan or an open convention. Voters should keep in mind that character as well as issue positions is important. They should study all available clues about the managerial abilities of candidates like Mitt Romney, whom they haven't seen in action (as they have seen Rudy Giuliani). This is the first election in 80 years in which it's clear that the incumbent president and vice president are not running. The system, for all its defects, has mostly given us pretty good presidents. Let's hope America's luck holds.

Schumer: How Dems Can Win White House (NSWK)

By Chuck Schumer

Newsweek, January 22, 2007

Jan. 29, 2007 issue - I am blessed. I love my job. I wake up every Monday morning excited about the week ahead. The one downside is how consuming it is. I don't have much time for leisure activities. So whenever I can, I fit in a nice bike ride through New York City. It's good exercise, it helps me relax, and it's a great time to noodle on difficult problems. In the fall of 2005, I somehow found time for a late-afternoon bike ride. It was just about halfway between the 2004 and 2006 elections. As I pedaled around Brooklyn and Queens, incognito behind my sunglasses and helmet, I was consumed by the question that Democrats in every part of the country are asked almost every day: What does the Democratic Party stand for? How can it help the middle class and those struggling to make it there?

From the Great Depression through the 1960s, the Democrats were the party of the middle class. We won by talking about the social safety net, neglected groups and a stronger federal government. In 1980, Ronald Reagan shifted that mantle to the Republicans. The country was focused on crime, taxes and America's place in the world. By 2005, Americans had new

DOJ_NMG_0119150

concerns. Technology had created a Brave New World: terrorism, global competition, longer life. Democrats sometimes had a difficult time speaking in a convincing way on these issues. Republicans didn't have that problem. They figured out specific issues that connected to their deeply held values, defined themselves clearly by those issues and then stood by them unequivocally. In 2004, they did it with eight words: War in Iraq. Cut taxes. No gay marriage. Those eight words sum up the reasons for George W. Bush's re-election.

"What are our eight words?" I thought.

Biking through New York's boroughs in 2005, I thought about some old friends, Joe and Eileen Bailey. Though they are imaginary, I frequently talk to them. To me, they represent the hardworking and often-ignored families who are not tuned in to special-interest newsletters or editorial pages, but want a little something more from their government and their leaders.

In 2006, Democrats did much better with people like Joe and Eileen, but only because of Bush's mistakes. We had our own eight words: No war in Iraq. No corruption. Bad economy. But these eight words did not describe our own vision; they were the negative image of the Republican message. In 2006, they helped us win back Congress. In 2008, we will need to do more to persuade the Baileys to again trust the Democratic Party.

As we head toward the election, the competition between the two parties is very close. As in 1932 and 1980, the electorate is up for grabs. Reagan Republicanism, which the middle class has supported since 1980, is under strain. The average middle-class person is looking to the government once again. Still, it won't matter if Democrats don't fill the void. We need our own eight words.

I know what you're thinking. "Hurry up, Schumer! What are the eight words that will save the Democratic Party?"

The truth is, the eight words are far more elusive than you might imagine.

Believe me, I've spent two years trying to find them. Slogans are easy. Empty promises, like "better health care," are easy. But they don't stand for anything; they're typical political b.s. To generate our words, we need concrete ideas that clearly and concisely communicate our values. It's not yet possible for Democrats to boil down our core ideology into eight words. That's not a knock on Democrats. It took Republicans years to develop theirs. The eight words are the end result, not the beginning of the process.

In part of my book, "Positively American," I try to start the process by presenting 11 goals, which I call "The 50 Percent Solution." Taken together, these ideas could help define what Democrats stand for. In the book, I explain each goal, how we can achieve it and why it is important to the Baileys. For example, Democrats should commit to increasing reading and math scores 50 percent by dramatically increasing federal involvement, and funding, in public schools. We should increase the number of college graduates by 50 percent. We should call for reducing illegal immigration by at least 50 percent and increasing legal immigration. We should cut our dependence on foreign oil by 50 percent, and reduce cancer mortality, abortions and childhood obesity each by 50 percent. We should increase our ability to fight terrorism by 50 percent. Sounds like a lot. It is. Together, we can do it—and more. Families, from Appleby to Bailey to Zutter, deserve no less.

How Deep A Distaste For Politicians Who Waffle? (WP)

By Shankar Vedantam

The Washington Post, January 22, 2007

When George W. Bush takes the podium tomorrow night to deliver his sixth State of the Union address, what are the chances he will say this? "The war in Iraq has been one gigantic mistake. I am sorry I got us into this mess. I am going to bring the troops home right away."

Even those who think anything is possible in politics would have to say the odds of such a speech are close to zero. Bush's position on Iraq has been unyielding, even as the original reasons for the war have been discredited and U.S. troops have become mired in a vicious sectarian struggle. Bush has held fast to his views even as public support for the war, and for him personally, has fallen to near-record lows.

DOJ_NMG_0119151

All of this raises a puzzle: Through much of Bill Clinton's presidency and in the last presidential election, voters said they were turned off by leaders who waffled. Americans say they want consistency from their president, not someone who panders to them by checking opinion polls before taking a stance on important issues.

One of the most effective Republican ads in the 2004 election, in fact, showed Sen. John F. Kerry (D-Mass.) windsurfing back and forth across the TV screen as an announcer talked of how Kerry had changed his views on various topics. (For reasons that probably have to do with Internet mischief-makers, a Google search yesterday for the term "waffle" produced John Kerry's official Web site as the top link.) In Bush, Americans have found a leader who gives them consistency in spades. If people really admire consistency, how is it that Bush's ratings have fallen so low?

"It is nice in theory to admire someone's consistency, but if that person has the power to effect change and affect you, then you may not admire it so much," said Hillary Hoffman, a psychologist at the University of Miami.

Experiments that explore the effects of consistent and inconsistent political stands on voters have produced a range of results. But one theme that emerges is that people think they admire consistency more than they actually do.

Hoffman once asked groups of people whether they would vote for a politician named Johnson. One group was told Johnson supported private ownership of handguns, while the other was told he was for gun control. The groups were later asked to rate the politician after a statement he supposedly made six months later. Some volunteers were told Johnson had reversed his position, while others were told he had been consistent.

The psychologist found that it mattered less to both pro-gun and anti-gun volunteers whether Johnson was consistent than whether he agreed with the volunteers' own views about guns.

When voters say they want consistency from a politician, in other words, they may really mean they want a leader who consistently agrees with them.

"Holding fast to an unpopular position . . . will gain a politician virtually nothing in the eyes of the public," concluded Hoffman and her colleague Charles Carver. "Personal respect for consistency appears very unlikely to translate into votes."

Psychologist Kevin McCaul at North Dakota State University said it is possible that people evaluate consistency differently depending on whether an issue is emotional. On a hot-button subject such as Iraq, for example, he said consistency probably matters less than whether the politician's final stance matches voters'.

"If you waffle on issues which people don't care about, then they don't care where you end up, they just care that you are waffling," McCaul said. But if voters are passionate about some topic -- abortion, for example -- then they primarily care about where a politician stands on that topic now. On issues we care about deeply, in other words, we are less interested in whether a leader's views are authentic and more interested in the bottom line -- what the leader is going do about that issue now.

But didn't Kerry pay a price in the last presidential election for waffling on the hot-button issue of the war in Iraq? McCaul argued that Kerry lost not because he was waffling but because the country was bitterly divided over the war in 2004. Had public opinion then been as sharply critical as it is now, McCaul said voters would have ignored Kerry's waffling -- or even welcomed it -- because most voters would have agreed with Kerry's critical stance on the war.

If the psychologist is right, Sen. Hillary Rodham Clinton (D-N.Y.) is unlikely to pay a political price in the 2008 presidential election for strongly supporting the Iraq war early on and for being critical of it now, so long as public opinion remains against the conflict.

One study McCaul conducted showed North Dakota voters and legislators thought consistency in a politician was very important. But this study and several others, McCaul and his colleagues concluded, "simply fail to support the intuitive views of many voters and politicians alike that the average voter values, above all, the politician who 'sticks to his guns.' "

None of this means consistency does not matter. Politicians who change their minds every other week will leave voters unsure of what they will actually do. But it appears we are willing to forgive inconsistency in politicians if they switch their views once -- as long as the change brings their stance into alignment with our views.

After listening to McCaul, I told him I still thought consistency was very important in a leader.

The psychologist thought for a moment: "I am going to go out on a limb and say, 'no you don't. You just think you do.' "

Before The Flood (opinion) (NYT)

DOJ_NMG_0119152

By Jacques Leslie

New York Times, January 22, 2007

San Francisco

WHEN the 40-foot-high Kaloko dam collapsed on the Hawaiian island of Kauai last March, its reservoir released a 70-foot-high, 200-foot-wide, 1.6-million-ton wave that carried away 16 cars, hundreds of trees and a cluster of houses, drowning all seven occupants. At least two bodies were swept three-quarters of a mile to the ocean; four were never recovered.

It is tempting to dismiss Kaloko's collapse as an isolated event, but given the perilous state of the nation's dams, it is more likely a harbinger. In 2005, the American Society of Civil Engineers gave United States dams a D, a grade that is still justified two years later.

For starters, the nation's dam stock is rapidly aging. Most dams need major repairs 25 to 50 years after they're built, and most United States dams are at least 25 years old; some, like the 116-year-old Kaloko, were built more than a century ago.

As dams age, their danger increases. This is a matter of not just advancing decrepitude, but "hazard creep" — the tendency of developers to build directly downstream from dams, in the path of floods that would follow dam failures. The result is that even though Americans now build few dams, more and more dams threaten people's lives. Chiefly for this reason, the number of dams identified in one estimate as capable of causing death and in need of rehabilitation more than doubled from 1999 to 2006, from around 500 to nearly 1,400. The civil engineers' 2005 report placed the number of unsafe dams much higher, at more than 3,500.

On top of that, dam safety officials are so overworked that in most states, they don't come close to carrying out all the inspections required by law. According to the engineers' society, the average state dam inspector is responsible for 268 dams; in four states the number exceeds 1,200. It is no coincidence that even though Hawaiian law requires dam inspections every five years, Kaloko was never inspected.

We don't even know how many dams the country possesses. Using one set of criteria, the National Inventory of Dams, maintained by the Army Corps of Engineers, places the number at 79,777, while the sum of dams inventoried by the states is more than 99,000. Even that number is questionable, since it includes suspiciously low counts from several states. In addition, state officials are constantly discovering previously uncounted dams during routine inspection trips. And if the definition of dams is broadened to include the smallest ones, the estimates are as high as several million.

Unlike, say, waterways and sanitation plants, a majority of dams — 56 percent of those inventoried — are privately owned, which is one reason dams are among the country's most dangerous structures. Many private owners can't afford to repair aging dams; some owners go so far as to resist paying by tying up official repair demands in court or campaigning to weaken state dam safety laws.

When the Kauai public works department ordered Kaloko's owner to stop grading a hilltop next to the reservoir in 1997, the local mayor interceded, instructing the responsible county engineer not to interfere; an investigation by a Hawaiian deputy attorney general published on Jan. 8 found that the owner then covered the earthen dam's emergency spillway with dirt, in the process weakening the dam's defenses.

Thousands of dams have been abandoned by their owners, and over time, title to them has become obscure — 12 percent of the dams in the Army Corps of Engineers' inventory have no known owner. As these dams become dilapidated, the states are left with the expensive task of repairing or dismantling them. Privatization advocates, take heed: this is a cautionary tale.

Climate change will also make dams more dangerous by increasing precipitation in many parts of the country, thus undermining the flood assumptions that underlie dam designs. Consider that in October 2005 and last May, two strong but hardly cataclysmic New England rain storms caused the overtopping or breaching of more than 400 dams in three states; a much fiercer storm would compromise far more dams, worsening flooding and potentially endangering thousands of people.

Dams are ranked according to the danger they pose — "high hazard" dams threaten human life if they fail; "significant hazard" dams threaten property; and "low hazard" dams threaten neither. But many dams are inaccurately ranked — the Kaloko dam, for instance, was rated low hazard.

In addition, in most states the rankings do not take into account the potential impact of toxic chemicals from factories, agricultural runoff and mines that gather in sediment behind dams, even though their sudden release can poison humans,

DOJ_NMG_0119153

wildlife and vegetation far downstream. When a coal tailings dam near Inez, Ky., failed in October 2000, 250 million gallons of coal sludge were sent into the Big Sandy River and its tributaries, killing aquatic life in the streams.

More sobering still, about half the dams in the Corps' inventory, including many high-hazard ones, do not have emergency plans in case of failure. When these plans are properly executed — by identifying structures likely to be inundated and keeping up-to-date records of residents' phone numbers — they save lives. But the plans that do exist are often inaccurate, and many of the people they're intended to protect have no idea of the potential peril they face. California is the only state that even requires property buyers to be informed of potential jeopardy from an upstream dam.

The American Society of Civil Engineers estimated in 2005 that repairing dams threatening human life would cost $10.1 billion, while a 2003 study by the Association of Dam Safety Officials placed the cost of repairing all non-federally owned dams in the national inventory at $36.2 billion. In the last session Congress considered legislation to repair dams at a rate of $25 million a year for five years, but even that feeble gesture didn't make it out of committee.

Americans are easily persuaded to spend hundred of billions of dollars combating debatable terrorist threats from outside the United States, while failing to notice that inside the country, the infrastructure is crumbling. True, outside forces from time to time topple established regimes, but usually not before their insides have started to rot.

Jacques Leslie is the author of "Deep Water: The Epic Struggle Over Dams, Displaced People and the Environment."

Virginia's Republican Hams (WSJ)

The Wall Street Journal, January 22, 2007

Virginia was once a solidly conservative Republican state, but in recent years it has tilted Democratic. A big reason for the shift is the GOP's recent love affair with higher taxes. In the 1990s Republican Governors George Allen and Jim Gilmore won sweeping victories running as tax cutters. Then in 2004 Richmond Republicans enacted the largest tax increase in the commonwealth's history -- a $1 billion hike in sales and tobacco taxes. Now they are flirting with another tax hike even though the state has a Blue Ridge Mountain-high $900 million budget surplus.

Why? The hot political issue in northern Virginia is traffic congestion. Though the state budget has doubled in 10 years, road building hasn't kept pace with population. "Not a penny of the 2004 tax increase went to fund the state's highest need, roads," fumes GOP state Senator Ken Cucinelli.

The Republican plan would spend $1 billion more for roads and cost-inefficient transit programs and pay for it through borrowing, raising taxes and fees on cars and trucks, and giving local governments authority to raise their assessments.

To be fair, these are nickel and dime fees compared to the $600 million in new taxes that Democratic Governor Tim Kaine is seeking. Democrats in the legislature, who pretend they want to fix the traffic problem, are cynically obstructing any solution so that Republicans take a fall. But if the GOP raises taxes yet again, Mr. Kaine is let off the hook and Republicans forfeit their brand identity as the anti-tax party.

Only 10 years ago the Virginia GOP was riding high after Jim Gilmore was elected Governor on a wildly popular message: "End the Car Tax." Now the Virginia Republicans want to raise car taxes. Have they learned nothing from the party's implosion in Washington?

A Tiptoe Budget (WP)

The Washington Post, January 22, 2007

.

MARYLAND GOV. Martin O'Malley (D) didn't waste any time stashing his lofty talk about bold initiatives and great programmatic leaps. That's all right, because the fat years have ended; the governor inherited a $400 million shortfall for the coming fiscal year and is staring at a projected budget gap of $1.3 billion for the following year. Until Mr. O'Malley comes up with a serious revenue plan -- and that seems to be in his bulging wait-till-next-year file for the legislature -- there's trouble ahead.

To patch things for now, Mr. O'Malley would snatch nearly $967 million from the state's "rainy day" reserve fund, leaving $674 million, the minimum required by state guidelines. That's a one-time grab; what will next year bring? To his credit, Mr. O'Malley has done some fiscal shaving and shifting to bring down spending, which will disappoint various constituencies but

DOJ_NMG_0119154

makes sense in the short run. His $30 billion plan would increase state spending by a modest 2.5 percent, a smaller figure than in nine of the past 10 years. Spending increased by 12 percent in the last budget of Gov. Robert L. Ehrlich Jr. (R).

Mr. O'Malley proposes a record amount of money for school construction. In providing funds to meet the separate demands of the 2002 Thornton education plan, the governor wisely held back $94.7 million from the Geographic Cost of Education Index, which would have steered additional money to Montgomery and Prince George's counties. Mr. Ehrlich never funded it. A reasonable case can be made that Montgomery could absorb the cost and that Prince George's should drop its TRIM -- Tax Reform Initiative by Marylanders -- tax cap before passing the hat for help from Annapolis. The governor's proposal to freeze tuition at public universities will draw cheers, but, again, how long can a freeze stay in place?

In his budget submission letter, Mr. O'Malley raved that his initial budget "begins to rise to our perils and possibilities.'' But if he doesn't get cracking on the revenue front, those "perils" will dominate. The governor must produce a full-fledged revision of Maryland's tax system, which hasn't undergone significant repair in about 50 years. Corporate income tax shelters ought to be eliminated. The gas tax, not raised in 15 years, must be increased, and a tax on services is long overdue.

The Democratic legislature won't roll over and endorse all that the new governor seeks, but he should seize the honeymoon moment to take on some of the big issues with proposals for this session.

Rice Flirts With New Ideas In Search For Mideast Peace (AFP)

By Sylvie Lanteaume

AFP, January 22, 2007

US Secretary of State Condoleezza Rice embarks on a high-profile campaign to revive Israeli-Palestinian peace talks next month, but with no signs Washington is ready for a radical break with an approach that has proved fruitless for the past six years.

Pushed to take a greater role in peacemaking by European and Arab allies and under intense pressure for a foreign policy success in light of the Iraq quagmire, Rice announced during her recent Middle East tour that she will broker a rare summit meeting between Israeli and Palestinian leaders in February.

Washington will also host a meeting on February 2 of the so-called Quartet of Middle East mediators whose 2003 "road map" for achieving Palestinian statehood and peace with Israel has languished since its inception.

Rice said during a week-long trip to the Middle East and Europe that her aim was to "accelerate" implementation of the three-phase road map put forward by the United States, European Union, United Nations and Russia.

The parties never made it past the map's first stage which, reflecting the post-September 11 US war on terrorism, required the Palestinians to halt militant attacks on Israel while requiring the Jewish state to freeze settlement activity -- neither of which happened.

Rice has indicated a new US willingness to move beyond the road map's strict sequencing, which gave radical militants an effective veto power over progress since attacks on Israel were enough to bring the process to a halt.

"Everybody understands the obligations in it, but we'd gotten to a place that it was stalled, because if they weren't making progress on the first phase of the road map, then you couldn't talk about the end of the road map and what might lead to the establishment of a Palestinian state," she said.

Instead, Washington has expressed a willingness to deal simultaneously with the confidence-building measures embodied at the start of the road map and talks on end-game issues like the shape and institutions of a Palestinian state.

The revised approach reflects in part a 2002 Saudi peace plan centered on Arab states recognizing Israel in exchange for Israel withdrawing to its pre-1967 borders.

But Rice, whose immediate focus is on bringing together the moderate Palestinian president, Mahmud Abbas, and Israeli Prime Minister Ehud Olmert to advance a possible deal, has sidestepped tough questions about each man's political weakness.

Abbas and his secular Fatah party are locked in a power struggle with the radical Islamic movement Hamas, which controls the Palestinian government and has refused to recognize Israel.

Olmert's popularity has plummeted since Israel's perceived mishandling of a July-August war against Lebanon's Islamic militia, Hezbollah.

DOJ_NMG_0119155

While showing in interest in exploring some peacemaking ideas that President George W. Bush has previously shunned, Rice made clear over the past week that she was not ready to break the administration's taboo on engaging directly with Syria and Iran over their support for the Islamic radicals.

She also insisted she would not follow her predecessors in the kind of shuttle diplomacy used by past US administrations in their efforts to broker an Israeli-Palestinian peace deal.

"You don't build the possibility for breakthroughs on something as intractable as the Israeli-Palestinian conflict by five months of shuttle diplomacy," she told reporters accompanying her on the recent tour.

"There has to be a process of laying groundwork and I think we've been laying groundwork and we'll see if we've laid enough groundwork to actually produce a breakthrough," she said.

"I do think there's already been progress," she added.

Rice argued that a realignment of forces in the Middle East caused by moderates on all sides seeing their common interest in countering the spread of Iranian-backed Islamic radicalism has created new possibilities for peace.

"You sense that the tectonic plates underneath this conflict have shifted," she said.

US Aims To Trump Skeptics With Mideast Push (AFP)

By Stephen Collinson

AFP, January 21, 2007

The United States is promising an "intense" diplomatic drive in the Middle East, hoping to buck regional skepticism and its own weakened position by cracking open the Israeli-Palestinian deadlock.

With US troops mired in Iraq after nearly four bloody years, the White House turning up the heat on Iran and Syria, and Lebanon on a political knife edge, the prospect of peace dawning anywhere in the region appears slim.

But US Secretary of State Condoleezza Rice last week declared that earthshaking events like the Israeli war with the radical Shiite Hezbollah militia in Lebanon in mid-2006 had ushered in a turning point.

"A lot has happened in the Middle East in the last several years, and a lot has clarified in the Middle East," Rice said in London after a swing through the region last week.

That supposed shakedown is seen by US administration officials as exposing a divide between supposedly disruptive, radical influences such as Iran and Syria and their affiliated radical groups, and the United States's moderate Arab allies.

Rice argued the new atmosphere could provide a new chance for Israelis and Palestinians to thrash out what a future Palestinian state might look like, after years of violence which stalled the "roadmap" to peace.

"With that shift in alignment, I think you now have a chance to perhaps make progress in this issue in ways which you didn't before," she said.

But critics of President George W. Bush's administration say the idea that there has been some kind of fundamental geopolitical reordering is fanciful.

"I find this rhetoric is becoming almost Soviet in its distance from reality," said Anatol Lieven, a scholar at the New America Foundation think tank.

Critics accuse Bush of wasting US leverage by failing to make any serious effort to mediate the Arab-Israeli conflict during six years in power -- especially through his rejection of the late Palestinian leader Yasser Arafat.

After its struggles in Iraq, and with no sign of an exit that would not risk sparking regional chaos, the administration is also charged with presiding over a dangerous weakening of US prowess in the region.

Wayne White, a retired veteran of the State Department's Bureau of Intelligence and Research, who joined Lieven at a forum organized by the Middle East Policy Council on Friday, said the only clear sign from the region was that US policy was failing.

"If there is a moment of clarity with respect to Iraq and the Israeli-Palestinian issue, it is that the situation in Iraq could not be worse," he said.

Rice's comment on the Israeli-Palestinian situation flew in the face of even US expectations for progress, he argued.

"I found those remarks rather perplexing, to say the least."

DOJ_NMG_0119156

Skeptics often argue that the deepening abyss in Iraq has had the simple effect of emboldening and strengthening America's sworn enemy, Iran.

The US refusal to talk to foes in Tehran and Damascus also contributes to a deepening sense of regional crisis, they say.

Bush upped the ante against Iran earlier this month, as he announced a last-ditch troop "surge" designed to finally pacify Baghdad.

He warned US troops would chase down Islamic Republic operatives in Iraq, and dispatched a second aircraft carrier battle group to the Gulf, while offering Patriot missile defenses to US allies.

But Rice is arguing that from the eye of the storm, diplomatic progress is possible on the Israeli-Palestinian track, promising an "intense" couple of weeks which will see a string of high-profile visits to Washington, including talks of the Middle East Quartet, made up of the United States, Russia, the United Nations and the European Union.

She plans to return to the region in February, and has pledged to host a three-way summit with Israeli Prime Minister Ehud Olmert and Palestinian president Mahmud Abbas on February 2 in Washington.

"I think there are still really, really hard issues here. But you sense that the tectonic plates underneath this conflict have shifted," Rice said.

But doubters point out that Olmert and Abbas may not be in a position to convince their respective people of any hard compromises on the road to peace.

Olmert's popularity plummeted after Israel failed to crush Hezbollah in the summer conflict. Abbas has struggled for months to seal a unity government pact with the radical Islamic movement Hamas.

Quartet Upbeat On Mideast Peace Drive (FT)

By Harvey Morris

Financial Times, January 22, 2007

Senior officials of the international "quartet" have begun talking up the prospects of reviving stalled Middle East peace efforts in the coming weeks, although an unsettled political outlook in both Israel and the Palestinian Authority threatens to damp their optimism.

Members of the quartet – the US, European Union, United Nations and Russia – are proposing to leapfrog the step-by-step approach of the moribund "road map" they published in 2003 and move the parties towards direct talks on a final resolution of the conflict.

"There's an emerging consensus that the period of crisis management is over and that we must move to the political phase and, within a reasonable time, define the framework," said Javier Solana, the EU's foreign policy chief, who was in the region at the weekend.

His visit followed close on the heels of a tour by Condoleezza Rice, US secretary of state, to the Middle East and Europe.

On her final stop, in Germany, she said that initial talks she planned to hold jointly with Ehud Olmert, the Israeli prime minister, and Mahmoud Abbas, PA president, could take place by mid-February.

"We're not yet at the point where I think we can determine what we would do about formal negotiations," Ms Rice conceded. "It is really a time to try to get the parties into more of a confidence-building phase and we will see what comes after that."

The quartet is expected to meet in early February for its first high-level meeting in months. Angela Merkel, chancellor of Germany, which now holds the rotating EU presidency, left for Moscow on Sunday for talks with Vladimir Putin, Russian president. Her spokesman said the Middle East and a revival of the quartet's efforts would be an important topic raised.

The switch in emphasis towards final status talks came after Mr Abbas pre-empted an expected call from Ms Rice to accept proposals to establish a transitional Palestinian state with interim borders, a half-way solution the Palestinians feared would leave the most contentious issues of refugees and final frontiers unresolved.

The ill-fated road map proposed a performance-based route towards Palestinian statehood that would start with a halt to violence and end with a permanent settlement, for which the deadline was 2005.

DOJ_NMG_0119157

The document referred to a provisional state with temporary borders in stage two of the plan. Palestinian officials, however, noted that this was only presented as an option by the quartet.

"We don't want to see a state with temporary borders," Mohamed Dahlan, the PA's former Fatah security chief, told reporters in Ramallah on Friday. "In the past 10 years we wasted too much time on interim solutions."

Mr Dahlan said he did not believe the present Israeli government was interested in peace or that the current political uncertainty in Israel allowed for a resumption of the peace process.

The Olmert government is hard-pressed with other issues at the moment, following the announcement of a criminal investigation into the prime minister that might lead to corruption charges and after the sudden resignation of Dan Halutz, chief of staff, over last year's war in Lebanon.

Quartet officials noted, however, that there appeared to be support in the Labour party, Mr Olmert's coalition partner, for a move towards final status talks with the Palestinians. They said some of Labour's views were also shared by Tzipi Livni, foreign minister, and a member of Mr Olmert's Kadima party.

"Mr Olmert is faced with the option of doing nothing or moving to final status negotiations," said a senior quartet official. "There has not been a moment that this has been more likely since Camp David," the official said, referring to the abortive 2000 Palestinian-Israeli summit hosted by Bill Clinton, former US president.

Mr Abbas was on Sunday making a final effort to reach agreement with the PA's ruling Hamas party to establish a government of national unity.

During a visit to Damascus, he held a much-anticipated meeting on Sunday with Khaled Mashaal, the exiled Hamas leader, and there were reports of progress on choosing cabinet posts.

But the PA president also insists that a new government must accept existing agreements with Israel, a condition that would mean Hamas for the first time in effect recognising Israel's existence.

If the Damascus talks fall through, Mr Abbas has said he will go ahead with his plan to hold new parliamentary and presidential elections, a move that could bring fresh factional turmoil and dent the apparent mood of optimism within the quartet.

Palestinian Leaders Begin Unity Talks (NYT/AP)

The New York Times/AP, January 22, 2007

DAMASCUS, Syria, Jan. 21 (AP) — The Palestinian Authority president, Mahmoud Abbas of the Fatah faction, and Khaled Meshal, the exiled chief of the rival Hamas faction, met Sunday but failed to resolve an increasingly bloody dispute between their movements and form a unity government.

But the two men said in a statement that they had "achieved major progress" in the meeting, their first since July 2005, and that they hoped to resume talks within two weeks.

"There are still points of disagreement, but we will try to resolve them through a national dialogue until we form a national unity government," Mr. Meshal said during a news conference with Mr. Abbas in the Syrian capital, Damascus.

The two sides emphasized that recent Palestinian infighting, which has killed at least 62 people, was unacceptable.

"We stress that dialogue is the only language allowed for solving our differences," Mr. Meshal said.

Unity Deal Eludes Palestinian Leaders (WT/AP)

By Zeina Karam

The Washington Times/AP, January 22, 2007

DAMASCUS, Syria -- Palestinian Authority President Mahmoud Abbas and the exiled chief of the rival Hamas faction failed last night to resolve their differences over forming a unity government, dashing hopes for a quick end to deadly clashes between their supporters.

But Mr. Abbas and Hamas leader Khalid Mashaal said they "achieved major progress" during the meeting -- their first since July 2005 -- and hoped to resume talks within two weeks.

"There are still points of disagreement, but we will try to resolve them through a national dialogue until we form a national unity government," Mr. Mashaal said at a press conference with Mr. Abbas in Syria's capital, Damascus.

DOJ_NMG_0119158

The two sides stressed that recent Palestinian fighting, which has killed at least 62 persons since May, was unacceptable and pledged to exert efforts to avoid political friction.

"Palestinian bloodshed was considered totally prohibited, and we must exert all efforts to avoid frictions and internal clashes," Mr. Abbas said.

The two men had been scheduled to meet Saturday evening, but that session was canceled.

Officials from both sides had cautioned against expecting immediate results from yesterday's meeting.

Both sides said differences remained, without providing details. The thorniest issues have been control of the two factions' security forces and Hamas' refusal to recognize Israel or commit to previous accords signed between Israel and the Palestinian Authority.

An official of Mr. Abbas' Fatah party in the Gaza Strip was optimistic about the meeting, saying Mr. Abbas and Mr. Mashaal had agreed to let an independent run the Interior Ministry, though they did not agree on who should lead the powerful security wing.

"I think some things were accomplished. Some issues were resolved, and others remain problematic. That would need continuation of dialogue here in Gaza and mediation in Damascus," said Abdel Hakim Awad, Fatah's spokesman in Gaza.

He said differences also remained over the wording of the official document laying out the new government.

The deputy head of Hamas' political bureau, Moussa Abu Marzouk, who attended part of yesterday's talks, said the one sticking point was the conditions under which Mr. Abbas would name a new prime minister for the unity government.

Despite the lack of agreement, he said the meeting "will send a message to the Palestinian people that the two sides are committed to continue dialogue."

The militant group Hamas, which controls the Palestinian parliament and Cabinet, and Mr. Abbas' more moderate Fatah movement have been stuck in political deadlock since Hamas' victory in legislative elections last year. Mr. Abbas was elected president separately.

The refusal of Hamas to recognize Israel's right to exist led to Western sanctions, which have paralyzed the Palestinian economy.

Rice's Rhetoric, In Full Retreat (WP)

By Jackson Diehl

The Washington Post, January 22, 2007

Eleven months ago Secretary of State Condoleezza Rice held a joint news conference with Egyptian Foreign Minister Ahmed Aboul Gheit to report on their talks in Cairo. After Aboul Gheit summed up the topics, Rice pointed out that he had forgotten one: "Iran. You missed Iran." She then spent most of her time on Egypt's progress -- or lack of it -- "as it faces questions of democracy and reform."

Last week Aboul Gheit and Rice again appeared side by side, this time in the Egyptian tourist capital, Luxor. Once again each offered a summary of the talks -- which this year, unlike last, included President Hosni Mubarak. This time Iran loomed large in their discussions, as did Iraq. But it was Rice who neglected to mention something: "democracy and reform." During the course of her visit to Egypt, and her latest tour through the Middle East, the words never publicly crossed her lips.

The reversal this represents is staggering -- especially to Egyptians who have closely tracked Rice's visits to their country. After all, her first notable act on moving to the State Department two years ago was to cancel a visit to Egypt in order to signal U.S. displeasure with the arrest of one of the country's leading liberal democratic politicians, Ayman Nour. Thanks in part to Rice's gesture, Nour was released and Mubarak announced a multicandidate election for president in which Nour was eligible to participate.

When Rice did get to Cairo, in June 2005, she delivered a speech at the American University that was a clarion call for democracy across the Middle East. She opened her joint news conference with Aboul Gheit by saying, "we look to the Egyptians and the Egyptian people to also take a major role in leading reform in this region." And she warned Mubarak against using fraud and thuggery to manipulate the promised elections.

DOJ_NMG_0119159

"The Egyptian government must put its faith in its own people," she said. "The day must come when the rule of law replaces emergency decrees, and when the independent judiciary replaces arbitrary justice. The Egyptian government must fulfill the promise it has made to its people, and to the entire world, by giving its citizens the freedom to choose."

In the succeeding months, Mubarak did the opposite. He did use fraud and violence to control the presidential and parliamentary elections. After they were over, Nour was again arrested, and he was sentenced to prison on patently bogus charges. So when Rice appeared alongside Aboul Gheit last February, she talked about "disappointments and setbacks."

"We have talked candidly about those," she said. "We want to see an Egypt that is fully developing politically and along the lines of reform as well. And so we've discussed the future of reform. We will continue to discuss the future of reform."

Only things got worse. Mubarak canceled scheduled parliamentary elections. His security forces violently broke up protest demonstrations. Opposition leaders, from members of the Muslim Brotherhood to pro-democracy bloggers, were arrested and tortured. Nour's appeals were denied.

Before Rice arrived in Cairo this time, the city was buzzing about Internet videos -- not of Saddam Hussein but of Egyptian police who had been captured torturing innocent citizens. Mubarak had just announced a series of constitutional amendments that would exclude serious opposition candidates from future elections and curtail independent judicial monitoring of balloting. Nour is still in jail.

About all this, Rice said nothing. Instead, she praised the "important strategic relationship" with the 78-year-old Mubarak. In Rice's new parlance, Egypt has suddenly become part of a "moderate mainstream" in the Middle East, which, the secretary hopes, will stand with the United States and Israel against the "extremists" -- Iran, Syria, Hezbollah and Hamas.

Rice has made no real attempt to explain the somersault in her policy, which comes across as a feckless attempt to simplify the increasingly chaotic and dangerous situation across the region. But her latest duet with Aboul Gheit made me wonder if she still remembered that day at the American University. She took questions; one man pointed out that the United States had supported dictatorships in the Middle East for 60 years.

"Yes," conceded Rice, "there's 60 years when we didn't -- we were not outspoken about the need for democracy in this part of the world."

"Things have changed. We had a very rude awakening on September 11th, when I think we realized that our policies to try and promote what we thought was stability in the Middle East had actually allowed, underneath, a very malignant, meaning cancerous, form of extremism to grow up underneath, because people didn't have outlets for their political views." She didn't need to add that al-Qaeda was founded, in large measure, by Egyptians.

Five-and-a-half years after Sept. 11, the cancer is still growing in Egypt, and elsewhere in the "moderate mainstream." But Rice and her president, it seems, have gone back to sleep.

From Bad To Worse (USNEWS)

By Mortimer Zuckerman

US News and World Report, January 29, 2007

Is your journey really necessary? That was the slogan on the old World War II poster intended to encourage Americans to save energy. With her recently completed journey to the Middle East, Condoleezza Rice wasted both time and energy—and badly dented America's diplomatic credibility.

The secretary of state's intention was to revive the "road map" plan to settle the Israeli-Palestinian conflict. It is a worthy but misconceived idea. The conflict that must be settled once and for all—before anyone attempts anything like the plan envisioned in the road map—is the conflict among the Palestinians, which is now verging on outright civil war. In Gaza, Hamas and Fatah gunmen have been killing and kidnapping each other with increased ferocity since unknown gunmen killed three young sons of a Fatah security official. In reprisal attacks, the prime minister, Hamas's Ismail Haniyeh, and the foreign minister were attacked. Hamas operatives also murdered an imam who had the temerity to condemn the movement. In the past year, the number of Palestinians murdered has increased 50 percent.

Behind all the carnage is a call for early elections by the president, Fatah's Mahmoud Abbas, who wants to replace the ineffective Hamas government. Polls show more than half the Palestinian population is fed up with Hamas; 86 percent of those in

DOJ_NMG_0119160

Gaza say their lives have worsened since Hamas took over. Why? Because Hamas refuses to recognize Israel and renounce terrorism, international sanctions have intensified unemployment and poverty among Palestinians.

Hamas sees the call for elections as an absolute casus belli against Fatah, so both seek outside help as they rearm. Hamas has received a reported $250 million from Iran, which wants to see Hamas as militarily strong as its puppet Hezbollah in southern Lebanon.

Shooting galleries. Israeli Prime Minister Ehud Olmert, meanwhile, has conceded a lot to Abbas. Palestinians, he says, could eventually have an independent state in the West Bank and Gaza if they turn away from violence, recognize Israel's right to live in peace, and give up their demands for refugees from the 1948 Mideast War to return. Olmert's substantive offerings to date include the release of $100 million of Palestinian tax revenues so Abbas can pay salaries, the removal of security roadblocks, permission for troops loyal to Abbas to enter the Palestinian territories from Jordan, and for Fatah to receive weapons through Egypt. If all that weren't enough, Olmert is also putting a hold on military action in northern Gaza in return for the deployment of Palestinian Authority security forces to prevent rocket attacks against Israeli towns—a critical requirement as the lethal Kassams become increasingly accurate. No country can allow its cities to become shooting galleries where merely crossing the street and going to the grocery are the daily equivalent of russian roulette. The weapons, instead, just keep on coming: Egypt has utterly failed to prevent arms and explosives for Hamas from crossing its border to Gaza.

The roadblock to peace is Hamas. Prime Minister Haniyeh is just back from Tehran, where he declared time and again that his organization will never recognize Israel, will not honor any of the existing agreements between Israel and the Palestinians, and will continue its jihad until Jerusalem is liberated and "the face of the Zionist state would disappear," according to the Economist. Hamas seeks constant combat against Israelis in the hope of wearing them down morally, physically, and psychologically.

Tehran Announces More Tests Of Missiles (WT/AP)

By Nasser Karimi

The Washington Times/AP, January 22, 2007

TEHRAN -- Determined not to budge under pressure, Iran announced new tests of short-range missiles yesterday, and hard-line President Mahmoud Ahmadinejad dismissed criticism that the country's economy has been hurt by U.N. sanctions imposed over its nuclear program.

The missile tests come as the U.S. Navy is sending a second aircraft carrier to the volatile Persian Gulf. U.S. officials said the USS John C. Stennis, which will arrive in the region within weeks, is meant to be a warning to Iran.

The deployment appeared to alarm some in Iran's hard-line leadership, including a member of a powerful cleric-run body who warned last week that Washington plans to attack, possibly by striking Iranian nuclear facilities.

U.S. officials have long refused to rule out any options in the face-off with Tehran, but they say military action would be a last resort.

Stressing Iran's preparedness, state television said the Revolutionary Guards planned to begin three days of testing the short-range Zalzal and Fajr-5 missiles yesterday. It could not be confirmed whether the exercise had begun near Garmsar, a city about 60 miles southeast of Tehran.

"The maneuver is aimed at evaluating defensive and fighting capabilities of the missiles," the report quoted an unidentified Guards commander as saying.

Last year, Iran held three large-scale military exercises to test what it called an "ultra-horizon" missile and the Fajr-3, a rocket that it says can evade radar and use multiple warheads to hit several targets simultaneously.

Though U.S. officials suggest Iran exaggerates its military capabilities, Washington is concerned about Iranian progress in developing missiles. Some of its missiles are capable of hitting U.S.-allied Arab nations and Israel, which Mr. Ahmadinejad has said should be wiped off the map.

The United States, which led military maneuvers of its own in the Persian Gulf in October, also accuses Iran of supporting militants in Iraq's sectarian bloodshed and is trying to rally Arab allies to isolate the Tehran regime.

DOJ_NMG_0119161

Iran's new maneuvers are the first since the U.N. Security Council imposed sanctions last month over Mr. Ahmadinejad's defiance of its demand that Tehran suspend uranium enrichment. The sanctions ban selling materials and technology that could be used in Iran's nuclear and missile programs.

The United States and its allies accuse Iran of secretly developing atomic weapons in violation of its treaty commitments. Tehran has repeatedly denied that, saying its program is solely for the purpose of developing nuclear technology to generate electricity.

Mr. Ahmadinejad has remained defiant, saying Iran has the right to conduct uranium enrichment, a process that can produce fuel for nuclear reactors but also provide material fuel for atomic bombs.

The president's tough talk has come under criticism from both ends of Iran's political spectrum. Some reformists and conservatives have accused Mr. Ahmadinejad of focusing too much on fiery anti-Western rhetoric and not enough on domestic issues, including the economy.

Iran's Leader Stands By Nuclear Plans; Military To Hold Exercises (NYT)

By Nazila Fathi

The New York Times, January 22, 2007

TEHRAN, Jan. 21 — Iran's internal battle over President Mahmoud Ahmadinejad's defiant rhetoric on Iran's nuclear program continued to simmer on Sunday, with the president repeating his vow to ignore international sanctions and a moderate daily newspaper warning of Iran's increasing isolation.

Speaking to reporters in Parliament, Mr. Ahmadinejad described the United Nations Security Council sanctions resolution as "a rusty instrument" that "has no effect."

"The resolution was born dead," he said. "Even if they issue 10 more such resolutions it will not affect Iran's economy and politics."

He promised to continue Iran's nuclear program, saying other countries "should know that the nuclear program is our red line," the television news reported.

He made those comments days after two hard-line daily newspapers close to Iran's supreme religious leader, Ayatollah Ali Khamenei, called on Mr. Ahmadinejad to distance himself from the nuclear issue, a sign that the president's his political capital may be declining as his country comes under increasing international pressure. The newspapers accused him of using inflammatory language.

On Sunday, a third newspaper, the daily Kargozaran, which represents the views of moderate forces in the country, warned that international opposition against Iran was reaching an alarming level.

"It appears that the pressure against Iran is increasing, and, unlike an optimistic view, there is a tangible tendency among the countries in the region and in the international community toward America's policies against Iran," Jalal Khoshchehreh, the foreign editor, wrote.

The Security Council passed a sanctions resolution on Dec. 23 intended to curb Iran's uranium enrichment and missile programs. The United States and some European nations have said that Iran's nuclear program is for creating nuclear weapons. Iran contends that the program is peaceful.

In what appears to be a response to increasing Western military pressure, the Revolutionary Guards will test-fire missiles in a three-day military exercise expected to begin Monday, state-run television said. The military will fire Zelzal and Fajr-5 missiles near Garmsar, 60 miles southeast of Tehran.

The maneuvers, the first since the resolution was passed, followed the recent American decision to deploy a second aircraft carrier in the Persian Gulf, effectively doubling the United States presence there, and to extend deployments of Patriot antimissile defense systems in Kuwait and Qatar. The British Navy is also sending more ships to the gulf.

Also on Sunday, Mr. Ahmadinejad proposed a budget for the next year of the Iranian calendar, which begins on March 21, based on a significantly lower price of oil. Iran's budget is heavily dependent on oil revenues, and Mr. Ahmadinejad's budget last year was based on a price of $44 a barrel.

DOJ_NMG_0119162

The budget he presented to Parliament on Sunday reduces the price to $33, allowing a wide cushion in case oil prices continue to fall from their current level of about $52 a barrel.

"It is signal to our enemies, saying, 'We are ready, and we will manage the country even if you lower the oil prices,' " Mr. Ahmadinejad said.

State TV: Iran Conducts New Tests Of Short-range Missiles (USAT)

USA Today, January 22, 2007

Iran's elite Revolutionary Guards on Sunday were to begin three days of testing short-range Zalzal and Fajr-5 missiles, state television reported.

The announcement came days after the United States said it was sending a second aircraft carrier to the Persian Gulf. The maneuvers would be the first since the United Nations Security Council imposed sanctions last month on Iran for continuing to enrich uranium, which can be used to make bombs or fuel for nuclear power plants. "Ten more similar resolutions will not affect our economy and our policy," President Mahmoud Ahmadinejad said. Iran says its nuclear program is to produce electricity.

Palestinian leaders hit impasse on coalition government

Palestinian President Mahmoud Abbas and exiled Hamas leader Khaled Mashaal failed to agree on a unity government during their meeting in Damascus, Syria. Despite the impasse, the two leaders said in a statement that they "achieved major progress" in their first meeting since July 2005 and that they hoped for another round of talks within two weeks.

Hamas and Abbas' more-moderate Fatah movement have been deadlocked since Hamas won parliamentary elections a year ago.

Earthquakes rattle Indonesia; no severe damage reported

A powerful earthquake shook Indonesia's northeastern Sulawesi province Sunday, and two smaller quakes hit the eastern Papua province today. There were no reports of deaths or severe damage. The U.S. Geological Survey pegged Sunday's quake at magnitude 7.3.

A tsunami alert was issued Sunday, but there were no destructive waves. In December 2004, an earthquake off Indonesia's Sumatra island triggered a tsunami that left nearly 230,000 people dead or missing.

U.S. envoy: North Korea nuclear talks may resume

Talks aimed at persuading North Korea to give up nuclear weapons are likely to resume within two weeks, Assistant Secretary of State Christopher Hill said in Beijing. Hill, the chief U.S. envoy to six-nation talks hosted by China, met with Wu Dawei, the Chinese vice foreign minister. The talks began in 2003; the latest round ended in December without progress. The other countries in the talks are Russia, Japan and South Korea.

Military Surplus Parts Illegally Find Their Way To Iran, U.S. Officials Say (WP/AP)

By Sharon Theimer, Associated Press

The Washington Post, January 22, 2007

Fighter-jet parts and other sensitive U.S. military gear seized from front companies for Iran and brokers for China have been traced in criminal cases to a surprising source: the Pentagon.

In one case, federal investigators said, contraband purchased in Defense Department surplus auctions was delivered to Iran, a country President Bush has branded part of an "axis of evil."

In that instance, a Pakistani arms broker convicted of exporting U.S. missile parts to Iran resumed business after his release from prison. He purchased Chinook helicopter engine parts for Iran from a U.S. company that had bought them in a Pentagon surplus sale. U.S. Immigration and Customs Enforcement agents say those parts reached Iran.

Sensitive military surplus items are supposed to be demilitarized or "de-milled" -- rendered useless for military purposes -- or, if auctioned, sold only to buyers who promise to obey U.S. arms embargoes, export controls and other laws.

Yet the surplus sales can operate like a supermarket for arms dealers.

DOJ_NMG_0119163

"Right Item, Right Time, Right Place, Right Price, Every Time. Best Value Solutions for America's Warfighters," the Defense Reutilization and Marketing Service says on its Web site, calling itself "the place to obtain original U.S. Government surplus property."

Federal investigators are increasingly anxious that a top priority on Iran's shopping list is within its easy reach: parts for the precious fleet of F-14 Tomcat fighter jets the United States allowed Iran to buy in the 1970s when it was an ally.

In one case, convicted middlemen for Iran bought Tomcat parts from the Defense Department's surplus division. Customs agents confiscated them and returned them to the Pentagon, which sold them again -- customs evidence tags still attached -- to another buyer, a suspected broker for Iran.

"That would be evidence of a significant breakdown, in my view, in controls and processes," said Greg Kutz, the Government Accountability Office's head of special investigations. "It shouldn't happen the first time, let alone the second time."

A Defense Department official, Frederick N. Baillie, said his Pentagon unit followed procedures.

"The fact that those individuals chose to violate the law and the fact that the customs people caught them really indicates that the process is working," said Baillie, the Defense Logistics Agency's executive director of distribution and revitalization policy. "Customs is supposed to check all exports to make sure that all the appropriate certifications and licenses had been granted."

Taking Iran Down A Notch (USNEWS)

By Thomas Omestad

U.S. News and World Report, January 29, 2007

The battlefield, so far, remains confined to Iraq. But the war, in some sense, is growing wider—and more dangerously unpredictable.

The Bush administration's military campaign in Iraq—and its broader approach to the Middle East—are morphing into a head-on struggle against Iran's growing influence. The shift portends either peril or promise. Critics fear President Bush has made another dangerous gamble that is more likely to expand the conflict than to bring Iran to heel. The clarifying focus on Iran, officials counter, offers an opportunity to block the region's leading provocateur from fomenting extremism and pursuing nuclear weapons.

Call the revised strategy "pushback," if you like. The aim is to raise the price for Iranian actions on a range of fronts—from its bank—rolling of militants in Lebanon and the Palestinian territories to its alleged supplying of weapons to anti-U.S. Shiite militias in Iraq to its defiant nuclear programs. "We are clearly upping the ante and sending a powerful message to Iran," Nicholas Burns, the under secretary of state for political affairs, said in an interview last week. "They have to understand that there are consequences for their actions. This is a concerted strategy, no doubt about it."

Seek and destroy. One piece of that strategy, U.S. News has learned, is the creation of a military special operations task force to move against Iranian agents in Iraq. Task Force 16, as it is known, demonstrates the high priority assigned to the administration's new anti-Iranian drive. Its structure is modeled after the units set up to hunt for Saddam Hussein and kill Iraqi al Qaeda chief Abu Musab Zarqawi. The special ops effort is part of President Bush's newly announced pledge to "seek out and destroy the networks providing advanced weaponry and training to our enemies in Iraq." In recent weeks, U.S. forces have conducted at least two raids that captured Iranians said to be officers of the Revolutionary Guard Corps' al-Quds Brigades. Five Iranians are still being detained despite Iran's claim that they are diplomats with legal protection and have been "kidnapped."

A consensus within the administration sees Iran as emboldened by its surging oil revenues, the insurgent and sectarian violence bogging down U.S. forces in Iraq, the tenacity of its ally Hezbollah in surviving Israeli attacks in Lebanon, and the rising power of the radical Palestinian Hamas movement. "The threat that Iran represents is growing; it's multidimensional," Vice President Dick Cheney said on Fox News. U.S. intelligence czar John Negroponte says Iran now casts a "shadow" across the region. Adds Defense Secretary Robert Gates, "The Iranians clearly believe that we are tied down in Iraq ... that they are in a position to press us in many ways."

The U.S. get-tougher approach on Iran starts with Iraq, but it extends far more broadly. The administration has moved quietly on some fronts—perhaps to avoid alarming countries like Russia and China that oppose a more confrontational approach. But taken together, the various pieces point to an integrated strategy to counter Iran. "It's a shift in U.S. policy to rolling

DOJ_NMG_0119164

back Iranian influence," says Vali Nasr, an Iran expert at the Council on Foreign Relations. "The administration sees dealing with Iran as key to these other issues." Adds Michael Rubin, an American Enterprise Institute analyst who dealt with Iran issues at the Pentagon in Bush's first term, "a critical mass of information" about Iranian activities in Iraq and beyond forced the administration's hand. "It's a moment a long time in coming," he says.

U.S. Officials Try To Interpret China's Silence Over Satellite (NYT)

By David E. Sanger And Joseph Kahn

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Bush administration officials said that they had been unable to get even the most basic diplomatic response from China after their detection of a successful test to destroy a satellite 10 days ago, and that they were uncertain whether China's top leaders, including President Hu Jintao, were fully aware of the test or the reaction it would engender.

In interviews over the past two days, American officials with access to the intelligence on the test said the United States kept mum about it in hopes that China would come forth with an explanation.

It was more than a week before the intelligence leaked out: a Chinese missile had been launched and an aging weather satellite in its path, more than 500 miles above the earth, had been reduced to rubble. But protests filed by the United States, Japan, Canada and Australia, among others, were met with silence — and quizzical looks from officials in The Chinese Foreign Ministry, who seemed to be caught unaware.

The mysteries surrounding China's silence are reminiscent of the cold war, when every case of muscle-flexing by competing powers was examined for evidence of a deeper agenda.

The American officials presume that Mr. Hu was generally aware of the missile testing program, but speculate that he may not have known the timing of the test. China's continuing silence would appear to suggest, at a minimum, that Mr. Hu did not anticipate a strong international reaction, either because he had not fully prepared for the possibility that the test would succeed, or because he did not foresee that American intelligence on it would be shared with allies, or leaked.

In an interview late Friday, Stephen J. Hadley, President Bush's national security adviser, raised the possibility that China's leaders might not have fully known what their military was doing.

"The question on something like this is, at what level in the Chinese government are people witting, and have they approved?" Mr. Hadley asked. He suggested that the diplomatic protests were intended, in part, to force Mr. Hu to give some clue about China's intentions.

"It will ensure that the issue will now get ventilated at the highest levels in China," he said, "and it will be interesting to see how it comes out."

The threat to United States interests is clear: the test demonstrated that China could destroy American spy satellites in low-earth orbit (the very satellites that picked up the destruction of the Chinese weather satellite).

Chinese military officials have extensively studied how the United States has used satellite imagery in the Persian Gulf war, the wars in Iraq and Afghanistan, and in tracking North Korea's nuclear weapons program — an area in which there has been some limited intelligence-sharing between Chinese and American officials. Several senior administration officials said such studies had included extensive analysis of how satellite surveillance could be used by the United States in case of a crisis over Taiwan.

"This is a wake-up call," said Robert Joseph, the under secretary of state for arms control and international security. "A small number of states are pursuing capabilities to exploit our vulnerabilities."

As a result, officials said, the Chinese test is likely to prompt an urgent new effort inside the Bush administration to find ways to counter China's antisatellite technology. Among the options are efforts to "harden" vulnerable satellites, improve their maneuverability so that they can evade crude kinetic weapons like the one that destroyed the Chinese satellite and develop a backup system of replacement satellites that could be launched immediately if one in orbit is destroyed.

DOJ_NMG_0119165

American officials noted that the United States and Russia had not conducted such tests for two decades, and that the international norm had changed, in part because so many private satellites had been launched by many nations. "The Chinese seem out of step on this one, and we don't know why," one official said.

But the more immediate mystery about the destruction of the satellite revolves around China's prolonged silence — and what it says about the commitments President Hu and President Bush have made concerning increasing their communication, and diminishing the secrecy around China's military buildup.

Chinese leaders often hesitate to engage with foreign officials on matters of military secrecy. It took days to get the Chinese to respond in the first foreign policy crisis to confront the Bush administration — the forcing down, on Chinese territory, of an American spy plane in 2001. Eventually the plane's crew was returned, unharmed, but the prolonged silence unnerved American officials.

In this case, the communication blackout raised the possibility that top Chinese officials were either trying to anger the United States or that the test was conducted without the full involvement of the one official who has authority to coordinate the military and civilian bureaucracies: President Hu. American officials said they believed that the Foreign Ministry — the one department that deals daily with the rest of the world — was left in the dark.

"What we heard, in essence, was, 'We'll get back to you,' " said a senior American diplomat. "It was unclear they even knew what was going on."

Chinese political and military analysts, who would not speak on the record about an issue the Chinese government still regards as secret, said they considered it unlikely that the army's Second Artillery forces, in charge of its ballistic missiles, would conduct a test of a sophisticated new weapon without approval from the highest levels.

But they suggested that the test might have been approved in principle, with little advance preparation for the diplomatic fallout in the event it was successful. That entails not just new military worries; the destruction of the weather satellite left debris in space that could damage satellites from other nations.

"It's the kind of silence that makes you wonder what's happening inside the country," said another senior American official who has been monitoring the case. "I'm sure the Chinese leadership knew there were tests under way, in a general sort of way. But they don't seem to have been prepared for a success, and they clearly had not thought about what they would say to the world."

The timing is significant. Chinese officials have hinted in recent months that they are prepared to grant an American request to establish a military-to-military hot line that may be used to enhance communication. But China has moved slowly to establish the link, which is based on the cold war hot line to Moscow, and there is little evidence that Chinese military officers would have offered an explanation for the antisatellite test if it had been set up.

President Bush and Mr. Hu hold regular phone conversations about continuing issues, including how to manage North Korea's nuclear program. But Mr. Hu and Mr. Bush never developed the kind of close ties that Mr. Bush's aides forecast once the pragmatic-sounding Mr. Hu, who is close to Mr. Bush's age, took office.

Their relationship suffered during an awkward trip by Mr. Hu to Washington last spring, when Mr. Bush declined to hold a state dinner for him — there was a working lunch instead — and the arrival ceremony was marred by a mistaken announcement that the anthem that would be played would be for the Republic of China, the formal name for Taiwan.

Sen. Biden Warns Against Space Arms Race (AP)

By Desmond Butler

AP, January 22, 2007

The Senate Foreign Relations Committee chairman warned on Sunday against fostering an arms race in space after China was reported to have conducted an anti-satellite weapons test.

Sen. Joe Biden, D-Del., said the test was provocative, but that the United States had ways to combat the threat posed by it.

"I don't think we should be overly worried about this at this point," Biden said. "We have ways to deal with that ability."

The U.S. said China conducted the test earlier this month in which an old Chinese weather satellite was destroyed by a missile.

DOJ_NMG_0119166

Biden, who is running for president in 2008, said President Bush's policy on weapons in space need to be reviewed.

"One of the things we have to talk about is whether or not the, sort of, ideological base notion about how we deal with space and weapons in space and the use of weapons from space is something that is a path we should continue to follow," he said.

In October, Bush signed an order asserting the United States' right to deny adversaries access to space for hostile purposes. As part of the first revision of U.S. space policy in nearly 10 years, the update said the U.S. would oppose the development of treaties or other restrictions that seek to prohibit or limit America's access to or use of space.

"This is not the direction we want to go, in escalating competition in space. And we should be talking about it," Biden said.

Analysts said China's weather satellites would travel at about the same altitude as U.S. spy satellites, so the test represented an indirect threat to American defense systems.

The Chinese foreign ministry has denied knowledge of the test.

Biden appeared on "Fox News Sunday."

Foreign-Aid Program May Be Hamstrung By Budget (WSJ)

By Michael M. Phillips

The Wall Street Journal, January 22, 2007

WASHINGTON -- President Bush's signature foreign-assistance program is likely to run out of money this year, leaving in the lurch several poor countries that have labored to meet its strict eligibility standards, according to aid officials.

Mr. Bush introduced the Millennium Challenge program in 2002 as a new approach to fix the perceived failures of overseas-development assistance.

The grants would be large enough to transform the recipient nations' economic fortunes, he said then, and the money would go only to countries that met quantitative standards for honest government, free-market policies and generous social spending.

Now the program's budget is expected to fall short of its projected needs by $400 million to $1 billion, depending on the outcome of congressional negotiations over the coming weeks. The crunch comes at a time when Morocco, Tanzania, Mozambique and several other developing nations are nearing agreements on huge aid packages.

"At a lower level of funding, [the program] will need to turn away countries that have developed sound proposals designed to assist millions of the poor -- such as microfinance programs that help women, and water, irrigation, and transportation systems that enable poor farmers to participate in the local economy," said John Danilovich, chief executive of the Millennium Challenge Corp., which implements the aid effort.

When the program was launched, the president promised to secure $5 billion a year from Congress for his plan.

Instead, he has consistently asked lawmakers for less than that, and lawmakers have consistently provided less than he requested.

The Republican-led Congress failed to complete fiscal 2007 spending bills before this month's hand-over to the Democrats. It appears likely that the Democrats will hold this year's spending largely to 2006 levels and focus instead on the fiscal 2008 budget, which takes effect Oct. 1.

"The Republicans' failure to get the job done will unfortunately leave a number of agencies in a situation that is less than ideal," said Rep. Nita Lowey, New York Democrat and chairwoman of the subcommittee that funds the aid effort.

The squeeze will likely provide the aid program with between $1.14 billion and $1.75 billion this year, compared with the $3 billion Mr. Bush had requested. The president again plans to ask Congress for $3 billion for the program when he presents his 2008 budget next month, according to two people familiar with the proposal. \Antipoverty advocates are lobbying furiously on the Hill to ensure that request is fully funded.

The Millennium Challenge Corp. was still struggling to get off the ground and facing stiff congressional criticism when Mr. Danilovich, a former oil-shipping executive and Republican activist, took over in late 2005.

He accelerated its grant-giving, and the agency now boasts 11 aid agreements totaling $3 billion, including a $461 million package for Mali and an equivalent deal for El Salvador.

DOJ_NMG_0119167

Mr. Danilovich has met with scores of lawmakers to plead the agency's case. The program's demanding eligibility standards, he says, have given countries from Lesotho to Georgia an incentive to crack down on corruption and other impediments to economic growth.

Still, many lawmakers worry that the Millennium Challenge Corp., which is barred by Congress from employing more than 300 people, is paying more attention to signing deals than it is to ensuring that they are implemented well enough to actually promote growth and reduce poverty.

"There are very few champions [on Capitol Hill] and, I think, dwindling support," said Sheila Herrling, senior policy analyst at the nonpartisan Center for Global Development think tank in Washington.

Ms. Herrling said that some key lawmakers want to steer Millennium Challenge aid away from roads, airports and other infrastructure projects and toward health, education and other social programs.

North Korea Talks Should Resume Soon: US Envoy (AFP)

AFP, January 22, 2007

Six-nation talks on North Korea's nuclear programme should resume as soon as possible, the chief US envoy to the negotiations said after holding discussions with host nation China.

"I have had lengthy discussions with (Chinese Vice Minister) Wu Dawei and we have agreed to the need to get the six-party talks going as soon as possible," US Assistant Secretary of State Christopher Hill told journalists.

"I would hope the Chinese government will be able to announce soon the start-up of the six-party talks."

Hill made the comments before flying back to the United States, wrapping up a whirlwind trip to brief South Korea, Japan and China on his rare one-on-one talks with North Korea's nuclear envoy Kim Kye-Gwan in Berlin last week.

Kim met with his counterpart in Russia, the sixth member nation of the diplomatic forum that began in 2003, while Hill briefed his six-party counterparts in Seoul, Tokyo and Beijing.

International concern has intensified since North Korea, one of the most isolated and impoverished countries in the world, tested a nuclear weapon in October last year.

The test led to UN sanctions and even condemnation from China, Pyongyang's most important ally.

Washington subsequently redoubled efforts to implement a six-party deal reached in September 2005 to verifiably dismantle North Korea's nuclear programme in exchange for diplomatic recognition and food and energy aid.

Six-nation talks in December, the first since the nuclear test, failed to result in any tangible progress as North Korea, emboldened by the detonation, demanded an end to the UN sanctions.

The reclusive state also insisted that US financial sanctions implemented in late 2005 be lifted.

Hill said the US Treasury Department would resume separate bilateral talks with North Korea soon, which focus on Macau's Banco Delta Asia, accused of laundering money on behalf of the impoverished state.

"We have not determined where they (financial talks) will be held but that will not be a problem," Hill said.

"They will probably be held before or at the same time as the six-party talks."

Hill expressed the hope that the next round of six-party negotiations would be more fruitful than the last round.

"Based on all the consultations we've had in the last week or so I think we have a basis for getting together as soon as possible in the six-party talks and making progess," Hill said before departing Beijing for Washington.

During his talks with Wu, Hill said he briefly discussed a surprise January 11 Chinese missile test that destroyed a satellite, resulting in worldwide concern that China could trigger an arms race in space.

"We had some private discussion, but let me allow the defense department and state department to speak on that issue," Hill said, refusing further comment.

South Korea's nuclear envoy Chun Young-Woo will visit Beijing this week to discuss the resumption of the six-party talks, Hill said.

U.S. Envoy Sees Potential In Korea Talks (AP)

By Alexa Olesen

AP, January 22, 2007

DOJ_NMG_0119168

The U.S. envoy to talks on North Korea's nuclear disarmament said Monday he believed there was potential for progress in the next round of negotiations and China would soon announce a start date.

The comments follow pledges by the key players, Washington and Pyongyang, to strive for progress in the slow-moving negotiations.

The Chinese-organized international talks took on added urgency after North Korea alarmed its neighbors in October by testing a nuclear bomb. But the latest round ended in December in Beijing with no breakthroughs.

U.S. Assistant Secretary of State Christopher Hill told reporters that Washington was disappointed with the lack of progress in the last round but that he believed there was "a basis for making progress" when negotiators meet again. He did not elaborate.

Hill said that in talks Sunday with his Chinese counterpart, Wu Dawei, the two sides agreed the high-level negotiations should start again "as soon as possible."

"We hope that the Chinese government will be able to announce soon the start up of the talks," he said.

Meanwhile, South Korean media reported that North Korea has agreed to discuss the disarmament of its nuclear weapons when talks resume, which would mark a shift in the North's stance.

North Korea agreed to directly address moves to disarm when Hill and the North's chief nuclear envoy, Kim Kye Gwan, met in Berlin last week, the Yonhap news agency reported, citing unidentified diplomatic sources.

A South Korean newspaper reported Monday that at the Berlin meeting, North Korea and the United States came close to an agreement for the communist state to freeze its nuclear activity and allow international monitoring in exchange for aid.

Chosun Ilbo newspaper, citing unidentified officials in Seoul and Beijing, said Kim offered to halt the operation of the five-megawatt reactor at the North's main nuclear complex and other nuclear activity while allowing monitoring by the International Atomic Energy Agency, the U.N. nuclear watchdog.

In return, Kim demanded the United States provide the impoverished North with economic and energy aid and show "sincerity" in efforts to resolve a dispute over Washington's imposition of financial restrictions against Pyongyang, the report said.

Hill responded positively to Kim's request for aid, the paper said. But the report did not say how the U.S. diplomat reacted to the North's request over the financial dispute.

South Korean officials were not immediately available for comment.

Previously, Pyongyang said it would not discuss nuclear disarmament unless the United States first lifted financial restrictions imposed for the North's alleged counterfeiting and money laundering.

Separate talks between the U.S. and North Korea on the financial sanctions issue were also expected to resume soon, but no date or location had been fixed yet, Hill said.

"I think they will be very soon, probably the same time or before the six party talks," he said.

The participants in the six-party talks are North Korea, the United States, Japan, South Korea, China and Russia.

U.S. Envoy Upbeat About New Korea Talks (NYT)

New York Times, January 22, 2007

BEIJING, Monday, Jan. 22 — The chief American envoy to talks on North Korea's nuclear weapons program said Monday morning that he hoped a new round of six-nation negotiations would get under way shortly, and he expressed cautious optimism about prospects for reaching a settlement.

The envoy, Christopher R. Hill, an assistant secretary of state, told reporters after consultations with the Chinese in Beijing that he felt there was a new "basis for making progress." He said China, the host of the talks, may announce the start date for a new session shortly.

His relatively upbeat assessment came after he had a rare bilateral meeting with his North Korean counterpart in Berlin last week.

The last round of talks in December began with a burst of optimism, but ended in stalemate.

A South Korean newspaper, the Chosun Ilbo, reported Monday that North Korea had offered to halt the operation of the five-megawatt reactor at its main nuclear complex while allowing monitoring by the international weapons inspectors.

DOJ_NMG_0119169

It said that in return, the United States agreed to provide the North with economic and energy aid and show “sincerity” in efforts to resolve a dispute over Washington’s imposition of financial restrictions.

U.N. Left Out Of Plans For Korea (WT)

By Andrew Salmon

The Washington Times, January 22, 2007

SEOUL -- Planning for a handover of military command to South Korean forces has failed to provide for a small but vital U.N. force, jeopardizing the allied deterrent on the Peninsula, the U.S. commander said.

Gen. Burwell B. Bell, joint head of the Combined Forces Command, warned that the problem must be resolved because a crisis on the Peninsula could "almost instantaneously lead to combat operations."

In that case, "there could be no time to make changes in our command structure while crisis escalates," Gen. Bell told reporters. Unless the problem is addressed, "this situation will make it impossible to credibly maintain the armistice."

Combined Forces Command, led since the Korean War by a U.S. general, has operational wartime control over about 29,000 U.S. troops and more than 600,000 South Korean troops.

At the request of the government of President Roh Moo-hyun, that command will be dissolved, and the South Korean forces would serve under South Korean command. The change is set to go into effect in the next two to five years.

However, Gen. Bell warned, no adequate planning has been done for the parallel U.N. Command, a largely administrative body that oversees the 1953 armistice that ended the Korean War.

The unit has only 60 soldiers, but it provides the legal framework for the mobilization of reinforcements from the 16 U.N. member states that fought in the Korean War if another conflict breaks out.

"It allows sending states to return forces to Korea without further [U.N.] resolutions," said Dave Oten, spokesman for U.S. Forces Korea. "The legal authority is already there."

Gen. Bell, in a meeting with foreign journalists late last week that was also attended by senior diplomats from the 16-nation U.N. coalition, warned that clarity in command structures will be essential during the coming transition to Korean command.

"The inactivation of Combined Forces Command and the transfer of Republic of Korea forces wartime [operational command] to an independent ROK military command will create a military authority-to-responsibility mismatch for the United Nations Command," he said, using the acronym for Republic of Korea.

He noted that the U.N. commander would no longer have "immediate access" to South Korean troops, a situation that would undermine the military deterrent.

Traditionally, the commander of U.S. forces in Korea also serves as U.N. commander. Gen. Bell said he expects that arrangement to continue and that the U.N. commander will maintain operational control of all U.N. forces in Korea.

One ambassador at the conference confirmed that his country was paying close attention to the way the U.N. Command will be structured during the transition.

The United States and South Korea are at odds over the timing of the transition of the Combined Forces command. Although the Korean government proposed the change, it is in less of a hurry than the American side is.

Seoul expects to be ready to take full control after 2012, but Washington is pressing to make the switch as early as 2009.

Gen. Bell said that he hoped a definite date would be ironed out through bilateral negotiations by this summer.

It was the general's second press conference this year. Two weeks ago, he spoke about issues bedeviling the U.S.-Korea alliance, particularly budgetary disagreements and reported Korean moves to delay the redeployment of American troops from their central Seoul base to a less intrusive garrison near the city of Pyeongtaek, 40 miles south of the capital.

The frank nature of the general's comments surprised some analysts.

"Bell is expressing his frustration. the Korean side doesn't want to make difficult decisions, and it is leaving Washington frustrated," said Peter Beck, a Seoul-based analyst with the International Crisis Group.

"There is not even a master plan for Pyeongtaek that both sides can agree on. Korea wants control, but doesn't have the means of pulling it off on their own."

DOJ_NMG_0119170

The alliance has been strained by mass anti-American protests aimed at U.S. troops, the rise in South Korea of a new generation of liberal politicians who are critical of Washington and the Bush administration's suspicion toward Seoul's attempts to engage North Korea.

LETTERS (WSJ)

Wall Street Journal, January 22, 2007

U.N.'s Program for the Poor of North Korea Strives to Forestall Corruption

In response to Melanie Kirkpatrick's Jan. 19 editorial-page commentary "United Nations Dictators Program" and the accompanying editorial "U.N. Cash for Kim" about the United Nations Development Program's work in North Korea, I would like to offer some important context and relevant facts.

Here are the facts: There is no reason to believe that our programs were subverted to fund nuclear activities in North Korea, and the most recent audits conducted in 1999, 2001 and 2004 did not raise this concern. We would also welcome an independent and external audit of our operations in North Korea. Moreover we strongly support the secretary-general's call to have an inquiry into the operations of the U.N.'s funds and programs world-wide to ensure there are no misperceptions about our activities in North Korea or elsewhere.

UNDP operations in North Korea are in accordance with decisions of the 36 countries on its board, which includes the U.S., and with resolutions passed recently by the Security Council. They are also in accordance with UNDP's board-approved financial regulations. All of UNDP activities in North Korea have been and continue to be subject to regular audits and controls.

Here is the context: Operating a development agency in North Korea is a complex business. To give an example, operating in North Korea entails an unavoidable transfer of foreign currency. Either we pay our local staff and contractors directly in Euros or we exchange euros for North Korean won via the central bank. In light of the current context, we are taking all possible steps to reduce to an absolute minimum of hard-currency transactions and have decided that direct recruitment of staff is pre-requisite for our continued cooperation in the DPRK. The only way to prevent all hard currency from finding its way into North Korea would be to cease operations there.

Our organization works in North Korea because the member states of the U.N. and UNDP's board have made it very clear that they want us there. UNDP and its sister U.N. agencies have helped the North Korean people cope with a devastating famine in the 1990s and continue their assistance to improve the lives of North Korea's impoverished people. If the member states of the U.N. and UNDP's board were to decide that our presence there were no longer useful, we would leave immediately.

House Call: Doctor-Patient Bond

As a primary care internal medicine physician who has made house calls for the past 27 years, I found your report "Green Thumb: Finding Doctors Who Will Make House Calls" (Money & Investing, Jan. 13) to be factual and interesting, but missing one critical point that affects both doctors and patients. It isn't the physical event of a house call that is so greatly helpful for many ailing patients; it is much more often the presence of a trusted doctor at the bedside who can help the patient and family make the right decisions.

A hired-gun house call will produce a spur-of-the-moment physician of uncertain credentials, a doctor with litigation concerns, a physician with no prior knowledge about medical history or a doctor-businessman looking for payment for the time spent driving and talking. Often, the final result may be a call to 911 for the patient to be transported to an emergency room where expensive tests may clarify a diagnosis and where life-sustaining procedures may be brought to an elderly person who had been ready for the end of life.

I have found that when a patient reaches out from his or her bed, clutching my hand with a grip that is often surprisingly strong, the payment for the doctor and the value for the patient isn't financial but is instead an intangible that comes from deep within the souls of both the doctor and the patient.

DOJ_NMG_0119171

Roger C. Dunham, M.D.

Santa Barbara, Calif.

There is no way an insurer can adequately compensate for a house call, and I am embarrassed to charge a patient what I think the visit is really worth. So, I usually don't charge the patient or the insurance carrier anything. I am sure that other primary-care doctors also do the house call as an act of charity, particularly when they visit the elderly sick. The visit gives the doctor a chance to better understand the dynamics of the home situation and strengthen their relationships with their patients. Whether or not to charge for house calls is a very personal matter, but at least for the elderly, it seems that charging takes away from the physician's satisfaction. In an inexplicable way, I think it also lessens the physician's effectiveness.

The FICA Life

In regard to "No New Taxes" by Mike Pence, editorial page, Jan. 13: The fear of a Republican Social Security tax increase is so great in some quarters that opponents are throwing everything they can find at it in their march toward an America that contributes as little as possible to anything: The "poor" middle-class working Americans struggling to make ends meet and earning more than $94,200 a year will be exploited beyond belief and, no doubt, will be forced to sell their homes and withdraw their children from college. It won't amount to a hill of beans to the rest of us who earn average wages and see FICA as a way of life.

Michael D. McCaffrey

Yarmouthport, Mass.

Antediluvian Outlook

Attempting to discredit free trade, Sen. Byron Dorgan resorts to tired rhetorical tricks (Letters, Jan. 18). For example, he complains about the loss of manufacturing jobs. In fact, though, most of these job losses are due to automation that increases workers' productivity. As economies advance, the loss of manufacturing jobs is no more surprising or regrettable than was our loss over the past few centuries of agricultural jobs or our earlier loss of hunter-gather jobs.

Sen. Dorgan calls free-traders "blind." It is much closer to the truth to call protectionists antediluvian.

Oil, Gas Investments Vital to Our Security

The Bush administration's decision to lift oil and natural gas drilling bans in areas of the Gulf of Mexico and Bristol Bay, Alaska, is a step in the right direction to improving American energy security ("U.S. Is Raising Gulf Royalties for Oil and Gas," Jan. 10). But the administration is sending a mixed message by raising the royalty rates on new offshore deep-water federal oil and gas leases, effectively steering capital away from future American energy investment and increasing our dependence on foreign energy sources.

In evaluating deep-water projects, independent producers perform a careful cost-benefit analysis, factoring in lease bonus payments and royalties. Under the administration's proposed increases, royalty rates will discourage high bonus payments and potentially discourage many American energy projects. Higher royalty rates almost always lead to less resources being developed.

Oil and natural gas are essential components of America's energy supply for the foreseeable future. Policies that reduce investments in American oil and gas production are a threat to American energy security.

Freely Traded Yuan Is Worth Rooting For

When it comes to the U.S. trade imbalance, the only exchange rate that really matters is the rate between the dollar and the Chinese yuan ("Why U.S. Should Root for Dollar to Weaken More," The Outlook, Jan. 8). With most of our trading partners, exchange rates act to naturally adjust trade imbalances; however, as long as the yuan isn't floating freely, a weakening dollar, relative to other world currencies, won't have the desired effect of reducing our trade imbalance in any significant way. The deficit will remain high because Chinese imports, which make up the bulk of the deficit, will remain cheap. Exports to other countries from the U.S. won't make up the difference because an artificially weak yuan hurts the competitiveness of those other economies. Furthermore, even if the dollar weakens, the loss of the U.S. manufacturing base, especially over the past 20 years and especially to China, means that there are fewer goods to export. Exporting, therefore, has a diminished ability to affect the trade balance.

Rather than "rooting" for a weakening dollar around the world, we should be insisting on a freely traded yuan or imposing tariffs on all Chinese goods to make up for the existing artificial valuation.

Vision Of Rebuilding Lebanon Wanes (NYT)

By Hassan M. Fattah

The New York Times, January 22, 2007

BINT JBAIL, Lebanon, Jan. 16 — In August, Mohammed al-Seyed watched with some pride as tractors driven by Hezbollah men rolled in to begin scooping away the rubble and debris of a month of war with Israel, while engineers and others set to work.

This Hezbollah stronghold would soon rise again, the leaders of both the town and the militant group's building arm, Construction Jihad, said defiantly.

More than five months later, however, with winter here and Lebanon's government enmeshed in political crisis, the tractors are gone, the army of men has disappeared and Bint Jbail's town center still resembles Dresden after World War II.

"They told us everything was going to be rebuilt soon," Mr. Seyed said Tuesday, speaking of town leaders. "They're not doing anything now. We want to build but they won't let us. They promise to pay us, but they don't. All we want is our homes back and they won't even let us have them!"

There may be as many excuses for the slowdown in rebuilding in the south as there are political factions in this nation. Some people blame the weather; some say residents living abroad are just taking their time; some officials cite disagreements over the amounts paid to those who have lost their homes. In one rare admission, a senior Construction Jihad official said his group was overwhelmed by the destruction.

"Our goal initially was to work with our own hands, but we soon realized we weren't enough, so we decided to begin reimbursing people," said Abou Ali Bayloun, regional director for Construction Jihad in the southern port town of Tyre. "It is natural that the workers in the area will not be enough in the area. It needs a lot of workers to do this."

But politics is at the heart of the problem. Hezbollah and its supporters point fingers at the government of Prime Minister Fouad Siniora; the government reflects the accusation back at Hezbollah. Residents now blame both sides.

Ultimately, some analysts say, neither side wants to take responsibility for the task of reconstruction. The government avoids direct involvement on the ground, trying to avoid blame for inefficiency, while Hezbollah has also reduced its activities and is capitalizing on residents' frustrations for the lack of action.

"One side doesn't want to be accused of slowing things down," said Habib Debs, professor of urban planning at the American University of Beirut. "The other side wants to blame the government for not doing anything. So nothing is being done and both are happy that that neither is doing anything."

Certainly, the two sides lack coordination and cooperation, which alone is a serious barrier to reconstruction. Fear, too, plays a role: residents who could begin building have hesitated, fearing further conflict with Israel or, worse, civil war.

"People are terrified," said Ali Eid, deputy mayor of the town of Srifa, one of the few southern towns witnessing major construction. "They know that if there's problem in Beirut, it will spread and spread south. We've started because we had to. But Bint Jbail is closer to any war that may happen."

DOJ_NMG_0119173

The political wrangling unleashed in the war's aftermath, culminating in the walkout by six Hezbollah-aligned ministers in November and six weeks of unbroken demonstrations in Beirut by Hezbollah and its new allies — including Christian and Druse groups that were once its mortal enemies — has raised sectarian tensions, especially between Sunnis and Shiites.

Officials of the Siniora government insist that they have done what they could for the Shiite-dominated and Hezbollah-friendly south, but that the political crisis has prevented major decisions from being made.

"Hezbollah has been part of all the committees," said Mohammad Safadi, minister of public works and transportation. "They are part of the decision-making process so they are as much to blame." Mr. Safadi said that up to 40,000 households had received government payments of up to $40,000 each to rebuild their homes and could proceed at will.

But officials in Bint Jbail and other southern towns accuse the government of adding red tape and withholding aid to punish them. Bint Jbail's leaders say that electricity service worsened after Mohammad Fneish, the minister of electricity and water resources, resigned with the other Shiite-aligned ministers. They say that telephone service is still spotty because the minister of telecommunications is Marwan Hamadeh, an ally of the Druse leader Walid Jumblat, an outspoken critic of Hezbollah.

"The whole south is in the same situation as us," said Haitham Bazzi, who heads a committee on reconstruction for the old section of Bint Jbail. "They have forgotten us, despite the war and everything we went through. That's why many people here are fed up and want the government out even before the politicians do."

The town — which has 6,000 full-time residents and almost 30,000 living abroad, most in the United States — was adopted by the government of Qatar, which promised to finance the reconstruction. But many villagers feared that residents would take the payments and abandon the village, so Ali Bazzi, the mayor, lobbied to get the Qataris to hire a construction company to rebuild the whole area and preserve its historic nature.

He outlined big dreams for his decimated town in August. It was to become a model city in the south, with new apartment blocks, wider streets and modern infrastructure. A group of local residents and college professors stepped in with its own competing plan, which would rebuild the historic homes, preserving the town's character while leaving the high rises at the town's periphery. The debate, local residents say, continues.

Now the reconstruction plan is moving in stages, said Hussein Saad, a member of the city council. The first stage, now complete, entailed reimbursements of up to several thousand dollars for reparable damage to homes. The second will pay up to $40,000 for rebuilding demolished homes. And finally a third will rebuild homes in the historic older district. The foundations of a temporary market are in place, to house stores and stalls until the bombed-out market is rebuilt.

But city officials say that much of the process has been stalled as they wait for approvals from the Department of City Planning, a branch of the Ministry of Public Works and Transportation in Beirut. Mr. Safadi, the minister, acknowledged the delay but said he had found a way to work around the problems.

The cabinet has drafted new legislation allowing all residents of the south to expedite construction, but said the legislation would normally have to be passed by Parliament. Instead, the cabinet has encouraged city governments to move ahead.

"We simply can't wait for Mr. Berri to hold a session of Parliament any more," Mr. Safadi said, speaking of Nabih Berri, the speaker of the Parliament who has backed the opposition and has refused to convene Parliament. "We can no longer hold the people ransom."

In the rubble of Bint Jbail on Tuesday, Mr. Seyed's voice continued to rise. "I am going to pitch my tent in the center of town and stage my own protest," he said. "We'll bring down the city government. We'll bring down the whole damn show."

An Israeli Ross Perot (NSWK)

By Kevin Peraino

Newsweek, January 29, 2007

Officially it was only a Chanukah party, but the blowout that billionaire Arkady Gaydamak threw a few weeks ago in Tel Aviv was also one hell of a political rally. Hundreds of outsize candles and scores of plasma televisions cast a flickering glow on banks of tulips and orchids that had been flown in for the occasion—as was the evening's star entertainer, Enrique Iglesias. Fashion models in low-cut dresses mingled with septuagenarian rabbis and top-tier politicians like Benjamin Netanyahu. The guest list was so tight that the uninvited son of a cabinet minister was caught trying to push his way in through the kitchen. "Half

DOJ_NMG_0119174

the guests were there out of genuine appreciation for Mr. Gaydamak," says David Nitzani, the event's organizer. "And then there were a bunch who just wanted to be seen."

A $2 million bacchanal is hardly the traditional way to observe the Jewish "festival of lights." But Gaydamak has no patience for stodgy ritual, and the 54-year-old Moscow-born financier is just about the only one in Israel who feels like celebrating. After last summer's punishing war with Hizbullah and a rash of political scandals this winter, Israelis are fed up with their current crop of leaders. Military Chief of Staff Lt. Gen. Dan Halutz has resigned after a series of investigations found that his forces had mishandled the Lebanon war. Prime Minister Ehud Olmert faces 14 percent approval ratings—and now a criminal investigation into his role in the sale of one of Israel's largest banks while he was Finance minister. One of his top aides has already been placed under house arrest in a fraud investigation involving the state's Tax Authority. (Both Olmert and his aides deny any wrong-doing.) A recent poll by Israel's Dahaf Institute found that 85 percent of Israelis considered their political leaders to be corrupt. "There's a [power] vacuum," says Shlomo Avineri, a political scientist at Jerusalem's Hebrew University. "And that's when these sorts of oligarchs step in."

Gaydamak styles himself as a sort of Israeli Ross Perot—an eccentric electoral outsider with the bank account and business acumen to fill the gap. During last summer's war, Gaydamak paid about $14 million to house 6,000 Israeli refugees in two tent cities along the Mediterranean. In November he sent 2,000 residents of Sderot, an Israeli village near the Gaza border that has been hammered by rocket attacks, for a weeklong vacation at a Red Sea beach resort. Critics view Gaydamak as more of a Citizen Kane—an awkward tycoon desperately trying to buy friends and build a political base. "Give me three months, and half the Knesset will be mine," Gaydamak told the Israeli daily Yediot Ahronot late last year. A poll last year in the same newspaper predicted that a party led by Gaydamak could win eight out of 120 Knesset seats in a snap election—enough to make him a behind-the-scenes kingmaker. (Gaydamak tells NEWSWEEK he has no current plans to run for office.)

His past could be a problem. After emigrating from the Soviet Union in 1972, Gaydamak built a fortune on oil deals and the Russian stock market. In 2000 he relocated to Israel from France, where he is wanted for alleged tax evasion. (He denies any impropriety.) A 2002 study by the nonprofit Center for Public Integrity in Washington, D.C., concluded that Gaydamak "epitomized the business of war in the post-Cold War era—an entrepreneur with global ties to arms smuggling, resource exploitation and private military companies." For his part, Gaydamak says: "I was never involved in any arms sales, deals—nothing. It's a complete lie."

Despite his political liabilities, mainstream politicians aren't taking chances. Earlier this month a Knesset committee debated a measure nicknamed the "anti-Gaydamak law," which would require any candidate to count large philanthropic gifts as campaign expenses, making them subject to spending limits already on the books. Still, even the measure's author, Ran Cohen, doubts it will ever become law. "He has enough money to buy other politicians," says Cohen. "I'm not sure I'll win."

To many Israelis, Gaydamak's murky reputation outweighs his apparently good intentions. Mordechai Eleasi, a 38-year-old Sderot resident, spent a weekend this past November relaxing with his wife and three kids at a luxury hotel in Eilat on the tycoon's tab. But Eleasi says he has no intention of voting for Gaydamak. "He's a nice guy, we thank him, but that's all," says Eleasi, with the cool indifference of an underwhelmed prom date. "I never really thought about him as anything more than that." Gaydamak's money can buy influence, gratitude—possibly even votes. It still can't buy love.

In Somalia, New Government Faces Old Problem: Clans (NYT)

By Jeffrey Gettleman

The New York Times, January 22, 2007

MOGADISHU, Somalia, Jan. 18 — Fifteen men and one woman sat on the floor of a sunlit room. It was hot. Many people were sweating. The elders of the Ayr clan had called a political meeting, and very quickly it was clear that their attitudes toward the nation's newly empowered transitional government were unanimous — and bitter.

"The government is weak," said Mohammed Abdi, an Ayr elder. "We can't support it."

Somalia, which has been an archetype of Africa's ills for so long, has waited 16 years for this government. The United Nations has invested millions of dollars into propping it up. American officials are so intent on it succeeding that, in the interests

DOJ_NMG_0119175

of regional stability and counterterrorism, American forces have ventured onto Somali soil for the first time in more than a decade to hunt down the last of the Islamist leaders who held a firm grip on much of the country until just a few weeks ago.

But whether Somalia pulls itself together now or explodes into bloodshed again depends not on American troops, foreign peacekeepers, investment or aid. It depends on clans. "Clannism," said Ali Mahdi Mohammed, an influential clan leader and once a contender for president, "is our national cancer."

It was clan animosities that tore down Somalia's last government in 1991, clan militias that humiliated American troops in 1993, bringing a troubled aid mission to a hasty end, and clan warfare that has consumed countless lives and reduced Mogadishu, Somalia's once-beautiful capital by the sea, into a pile of bullet-pocked bricks.

The government, which took the capital for the first time last month, is trying to address the clan problem head-on. It is using a mathematical formula based on rough estimates of the population (the last census was in 1975) to allocate parliamentary seats and ministerial posts on a clan basis, and plans to govern like that until the next elections, which are proposed for 2009.

But that approach is hardly original — and it does not have an encouraging history. It is the 14th attempt since 1991 to form a clan-based government; all the others have disappeared into a vortex of suspicion and violence.

The Green Line in Mogadishu, a blasted-out boulevard with blackened buildings on each side, is a monument to fratricide. It is the dividing line between two clans, the Haber Gedir and the Abgal, which are actually part of the same family.

Somalia's main clans are divided into a dizzying number of subclans, sub-subclans and even sub-sub-subclans, and the term clan is loosely used for large family networks, like the Hawiye, and smaller ones, like the Ayr.

There is no definitive clan chart, with different clans disputing how they are interrelated, and Somalis argue over whether they have physical differences. But all clans are based on ancient genealogies. You cannot join a clan. You are born into one.

The Islamists, who seized power six months ago, had their own solution for this. They tried to submerge clan identities under the blanket of Islam, the one thing, besides language, that all Somalis share. They delivered more stability to Mogadishu in their short reign than the city had seen for a decade and a half.

But then they made an enormous mistake. In December, the Islamists tried to seize all of south-central Somalia, including Baidoa, the seat of the transitional government. Their attacks provoked a crushing response from neighboring Ethiopia, which commands one of the most powerful militaries in Africa and viewed the Islamists as a regional threat. Within a week, the Ethiopian forces, with approval from American officials, annihilated the Islamist army.

Now many Somalis wonder what would have happened to the Islamist ideology if the Ethiopians had never stormed in. "Islam was probably the best answer for us," said Hassan Gedi Roble, a chief of the Dir clan. "A government of clans is only going to create clan competition." The Islamists have gone underground, vowing to wage a guerrilla war.

And already the resistance in the capital is beginning to work along clan lines, with attacks against government troops concentrated in neighborhoods that were Islamist strongholds. Government soldiers are so frightened of driving through Tawfik, dominated by the Ayr, that they change out of their uniforms into street clothes before they enter. In other areas not far away, like Sinai, inhabited by many Abgal, shopkeepers pump their fists in the air and cheer when they see the government troops.

Clans have been the bedrock of Somali identity since the first bands of nomads fought over water holes.

"Out there, you needed to belong to someone," said Yusuf Mohammed Ali, a shipping magnate and respected figure among the Suleiman clan.

The same is true today on Mogadishu's chaotic streets. In a place that has teetered so long with no government, no police forces, few institutions and great uncertainty, clans function as a safety net, a social network — most people marry within their clan — a justice system and, most importantly, as protection.

The factionalism makes government a tricky affair. Somalia's infamous warlords, like Muhammad Qanyare Afrah, are essentially clan leaders with their own clan armies.

Everybody in Mogadishu calls Mr. Qanyare a warlord, but he prefers "M.P."

"We are members of Parliament," he said, referring to a group of fellow militia leaders who were given positions in the government in an attempt to bring peace. "We are not street boys."

DOJ_NMG_0119176

Mr. Qanyare, who is from the Mursade clan, laid out the long history of conflict between the Haber Gedir (which includes the Ayr) and the Darod, the clan of the transitional president, Abdullahi Yusuf Ahmed.

Relations with the Ayr seem especially combustible: it is one of the largest clans in Mogadishu; many of the Islamist leaders were Ayr; and government officials have accused Ayr elders of backing the insurgency. Ayr elders say they have been cut out of the new administration.

American officials are urging the government to reconcile with all clans, and they are becoming increasingly alarmed about the authoritarian streak of the government, which has already declared martial law and briefly shut down radio stations.

Senator Russell D. Feingold, Democrat of Wisconsin and chairman of the Senate's subcommittee on Africa, said at a conference in Washington this week that President Yusuf's government was "already running the risk of missing a critical window to establish itself as a credible, transparent and representative government."

The transitional government says security begins with disarmament, but so far disarmament has been mostly a farce. Mr. Qanyare and a few other militia leaders turned in some rusty guns this month.

But military grade firepower is still everywhere. Somalia was a cold-war dumping ground for arms, and then it exploded into every-clan-for-itself anarchy. That combination created such a gun glut that high-powered assault rifles are openly sold for $15 at a Mogadishu market called Sky Shooters (a place where shoppers test the goods by unleashing a stream of lead into the sky).

Many of Mogadishu's residents, even those who resented the Islamists' draconian decrees — no Western music, no cigarettes, no high-heeled shoes — said they felt safer a few months ago. That annoys Abdirizak Adam Hassan, the president's chief of staff.

"This government is constrained by rules," he said. "Unlike the Islamists, we can't just go around lashing people."

One obvious problem is the transitional government's reliance on Ethiopian muscle. Ethiopian troops may have been willing to vanquish the Islamist army, but they are not willing to work as policemen.

The Ethiopian military is now threatening to leave altogether in a matter of weeks, apparently trying to pressure the United Nations and the African Union to quickly assemble a peacekeeping force to fill the vacuum. Only a small portion of the necessary troops have been committed, and it is not clear how the Somalis will receive them.

The best hope is that Mogadishu's residents are so exhausted by war that they will not turn on the foreign peacekeepers the way they did in 1993 when they attacked American and United Nations soldiers who had come to help feed them.

Mr. Mahdi, the former presidential contender, said the government had about three months to pull things together. "After that," he said, "Mogadishu will be ungovernable."

Already, more than a dozen people have been killed in insurgent strikes. On Thursday, thousands of flyers mysteriously appeared across the city warning people to stay away from government soldiers.

Abdi Fatah, a former Islamist fighter who clipped his beard and swapped his robes for polo shirts and slacks, said, "The Ayr guys are meeting every night."

The Ayr elders denied they were fueling the insurgency.

But when asked if the government had as much grass-roots support as the Islamists, their meeting room suddenly grew quiet.

"That was a joke, right?" one man asked. And then the room burst into derisive laughter.

From Marine To Warlord (LAT)

By Edmund Sanders, Times Staff Writer

The Los Angeles Times, January 22, 2007

A Somali who once lived in West Covina now has hopes of becoming president of his homeland.

MOGADISHU, SOMALIA — The Planning Department clerk from West Covina was mapping bike routes and San Bernardino Freeway overpasses when two U.S. Marines drove up in a white Chevrolet and took him away.

The night before, on Oct. 3, 1993, Hussein Mohammed Aidid had watched in horror as television conveyed images of a disastrous U.S. military mission against a Mogadishu warlord. After two Black Hawk helicopters crashed, an ensuing gunfight left 18 American servicemen dead, and rioting Somalis dragged some of the bodies through the streets.

DOJ_NMG_0119177

"Hell is coming," he recalled thinking before turning off the TV in disgust.

Perhaps no one in the world was more conflicted than Aidid, a Somalian immigrant who settled in Southern California as teenager. He had served with the U.S. Marines in Mogadishu for four months that year as part of Operation Restore Hope, and the death of the U.S. Rangers "was like a black hole inside of me."

But his father, Mohammed Farah Aidid, was the warlord the U.S. was targeting.

The next morning, at the U.S. Marine base at Camp Pendleton, a commander asked Aidid to send a letter to his father, pleading for the release of a captured U.S. pilot. He said he didn't hesitate.

"I felt almost as if I could have been in that conflict and died," he said.

Three years later, however, Aidid would abandon his job and his military ties in America to return home after the death of his father. Aidid assumed control of his father's militia, inherited a vast swath of territory and became one of Somalia's most powerful warlords himself.

Today Aidid, 44, is trying to change mantles again. As interior minister for Somalia's struggling transitional government, he is the man charged with restoring security to Mogadishu. After routing Islamic fighters from southern Somalia last month with the help of Ethiopian troops, the government is trying to bring order after 16 years of chaos and clan wars.

Described by critics as a wily opportunist who switches alliances easily, Aidid makes no secret of his desire to one day become president. Despite anger by some Somalis over the recent U.S. airstrike against suspected terrorists in the country, Aidid said his U.S. background is an asset, not a liability.

"People say to me: 'You are our connection to the world. You understand that world. Be that bridge,' " he said.

Over the years, Aidid has struggled to emerge from the shadow of his famous father. Both are still vilified in some parts of the country for using ruthless tactics to crush opponents. Even political allies groan at his occasional blunders, such as his recent suggestion that Somalia and archrival Ethiopia might one day merge into a single country.

"He's a lightweight," said Ken Menkhaus, Somalia scholar at Davidson College in North Carolina. "He's never had the gravitas of his father."

But even those who scoff at Aidid as immature or unstable warn against counting him out. His family and clan connections, encyclopedic memory and track record for political survival guarantee his spot as a power broker in Somalia's future.

Supporters praise Aidid as the first to make the transition from warlord to politician. They say his push for reconciliation, including forgiving the clan that killed his father in a 1996 battle and giving up land for peace, fostered an environment that enabled the current government to form.

"He's fresh and young and doesn't have a black record," said Abdirasak Farah Ahmed, a taxi driver from Aidid's clan. "He was the main one who got rid of the warlords. He is the only one who can unite the people."

In the sitting room of his rented Mogadishu house, Aidid remains a clash of U.S. and African cultures. He wears a dark Western suit and power tie, with bare feet. He acknowledges two wives and seven children, though an aide counts four wives and 20 kids.

He can dance and feast in a cow field during an all-night clan festival, but still retains some of his old military habits, such as jotting down tasks and thoughts in a small notebook. He speaks so rapidly at times, for example rattling off the "Seven Habits of Highly Effective People," that it seems his mouth can scarcely keep pace with his brain.

Aidid enjoyed a comfortable upbringing as son of a military guard until his father was jailed in 1969 on suspicion of plotting a coup against then-dictator Mohamed Siad Barre. In 1975, Aidid's father was released from prison and rejoined the resistance. He sent Aidid to the U.S. His mother and other siblings would soon join.

"We moved into exile so my father could do the opposition work he had to do," Aidid said. When he graduated from Covina High School, he said, joining the Marines was a natural choice. "I come from a military family," he said. "My hero was my father. I felt I must do something for my new country." His interest in science and math led him to specialize in computers and programming, studying the inner workings of MX missiles and artillery.

After serving in Iraq in the 1991 Persian Gulf War, Aidid's unit was tagged for a four-month mission in Mogadishu to deliver food and humanitarian support. Siad Barre had been ousted in 1991 in a revolution led by Aidid's father, but his clan had become engaged in a power struggle that was destabilizing the country.

DOJ_NMG_0119178

It was a personal journey for Aidid, who briefly reunited with the father he had not seen for several years. After Aidid and his unit returned to California in March 1993, his father's relations with the United States unraveled further, and Somalia unraveled with them.

During the following two years, Aidid resumed his old life, living in Diamond Bar, driving around in a Mazda RX-7 and eating at Chinese restaurants. When he returned to Somalia in 1995 to introduce his fiancee, a Somali also living in California, to his father, the elder Aidid tapped his son to be his successor.

Just one year later, Mohammed Aidid was fatally shot in battle. The clan elected the younger Aidid to take over as head of a coalition of clans and warlords known as the Somali National Alliance.

"It was the hardest decision," he said. "My life [in the U.S.] was set. I knew that system. I didn't know anything about Somalia." Ultimately, he said, he felt obliged to fulfill a promise to his father to one day take over.

Aidid reconnected with his Somalian roots. He started another family in Mogadishu. He began referring to the Oct. 3 U.S. helicopter crash as a "gloomy day for the aggressors" and a "victorious day for the Somalis." But Aidid said he never developed the taste for the life of a warlord.

"My father was a general," he said. "He did things by action. I reversed. I flipped the coin. I did things through reconciliation."

Analysts confirm that the younger Aidid was among the first to seek reconciliation in Mogadishu, though they noted that at times he also boycotted peace conferences. He reached a power-sharing agreement with other Mogadishu warlords. But fighting soon resumed. And Aidid, who began with a huge expanse of southern Somalia, including Mogadishu, Baidoa and Kismayo, had retrenched by 1999 into Mogadishu's presidential palace, a small but symbolic holding.

"Sometimes a lion delivers a cat," said one Somalian clan leader, drawing a disparaging comparison between father and son.

Aidid continued his father's bloody campaign to hold Baidoa against an Ethiopian-supported resistance. Thousands of civilians were killed in the fighting, and Aidid's militia was accused of human rights abuses, such as killing the wives of rebels and shooting residents lined up for food.

"He's a criminal," said Abdulaziz Mohamed Omar, 22, who said he lost three cousins to Aidid's fighters.

Aidid blamed the violence on Baidoa's rebels and defended his record. His goal, he said, was never to control land or make money.

"We didn't remove Siad Barre to become another dictator," he said.

He said he started a process that eventually weakened warlords, including himself, and brought all sides to the negotiating table.

"The objective was to create a democratic society, to reconcile with warlords and put them into parliament," he said. "And that strategy worked."

Experts say Aidid's version of history is a bit revisionist.

"His father, and to some extent the son, contributed to the instability and chaos in Somalia," said Ted Dagne, analyst at the Congressional Research Service.

Aidid said his standing in Somalian politics stems from popular support. "We survived here for so many years because we are with the people and their hearts," he said.

Aidid said he hoped to extend reconciliation to the U.S. by forging a closer relationship with the country he said offered him so much. Memories of Oct. 3 are never far from his mind, and he said he'd like to build a memorial in Mogadishu for those who died that day. As a reminder, Aidid said he still holds the dog tags of the captured U.S. pilot he helped release.

"I'm keeping them for him," Aidid said. "I want to give them to him when I see him."

Murder Of Outspoken Journalist Tests Turkey's Democratic Gains (CSM)

By Yigal Schleifer

The Christian Science Monitor, January 22, 2007

DOJ_NMG_0119179

The murder Friday of a prominent and outspoken Armenian journalist has sent shock waves throughout Turkey and raised questions about whether a recent nationalist upsurge in the country has taken a violent turn. It also presents the government with what many say is a serious challenge to its already embattled democratization and reform efforts.

The journalist, Hrant Dink, was a vocal critic of Turkey's treatment of its religious minorities and had been particularly outspoken against the government's policy of rejecting claims that the mass killings of Armenians by the Ottoman Turks in 1915 was genocide. He was shot in broad daylight just outside the offices of the bilingual Turkish-Armenian newspaper Agos, where he served as editor.

"A bullet has been fired at democracy and freedom of expression. I condemn the traitorous hands behind this disgraceful murder," Prime Minister Tayyip Erdogan said on television soon after Mr. Dink was murdered. "This was an attack on our peace and stability."

The past few years have seen Turkey engaged in a deep internal struggle. On the one hand, the country's drive toward European Union (EU) membership has resulted in significant political reforms, particularly regarding democratization and human rights, and the freeing up of the debate on what had previously been taboo subjects, such as the Armenian question.

On the other hand, the EU-related reforms have been met with a strong nationalist backlash.

Nationalist lawyers and prosecutors, for example, have been able to use a law, known as Article 301, to charge writers and journalists like Dink and Nobel Laureate Orhan Pamuk with the crime of insulting Turkish identity as a way of stifling the emerging debates and putting the brakes on Turkey's EU bid.

Dink was tried under this article, and in 2005 was convicted and handed a suspended six-month prison sentence.

"In a sense, both sides have been sharpening their axes, thinking that the EU question is the final intellectual battle in Turkey," says Ali Carkoglu, a professor of political science at Istanbul's Sabanci University. "It touches on everything that is salient in Turkish politics: the Islam versus secularism debate, democratization, and the extent to which individual human rights are to be protected."

For many Turks, the killing of Dink harks back to the turbulent '70s and '80s, when journalists and intellectuals were frequently the victims of ideologically inspired violence. Although Turkey has moved forward, some wonder whether Dink's murder is an indication that the political gains made over the past few years have yet to be consolidated.

"In a way, he took too many risks, he underestimated his opponents," says Rifat Bali, an Istanbul-based researcher who studies Turkey's minority communities. "Some of the ultranationalist core of Turkey has not changed. It is a militant core that is ready, if necessary, to murder its ideological opponents," he says.

Unlike in the past, however, Turkey's government was quick to respond to the murder, sending top officials to oversee the investigation. The quick arrest of the suspect – teenager Ogun Samast – is also seen as a positive sign, since in the past perpetrators of such crimes were rarely caught.

"Those who created nationalist sentiment in Turkey have fed such a monster that there are many youngsters on the streets who do not find the ... state nationalist enough and are ready to take the law into their own hands," wrote Ismet Berkan in his daily column in Radikal, one of Turkey's main dailies. Extreme nationalism in Turkey is divided into secular and religious camps, although what unites both is non-Muslim minorities.

Experts here say the murder poses a major challenge for the Turkish government, led by the moderately Islamic Justice and Development Party (AKP).

With its EU bid already suffering – negotiations with Brussels have been partially suspended since December – the killing of a journalist who had already been the target of legal proceedings strongly condemned by the EU will only increase the pressure on Ankara and further tarnish its image in Europe.

"The image problem was already bad and this can only make it worse. Turkey will be seen as a country not only curtailing freedom of expression but the country that can also produce people who will assassinate writers and thinkers," says Suat Kiniklioglu, director of the German Marshall Fund's office in Turkey.

"The atmosphere that created this person to go after Hrant Dink with a gun was really the result of the atmosphere created by the trials brought on by Article 301," he says. "In that respect, the government will need now to really take article 301 seriously."

DOJ_NMG_0119180

Outside the offices of Agos, an Armenian word that refers to a place where a seed is growing, a makeshift memorial has been created near the spot where Dink was gunned down, with crowds gathering to light candles and lay down flowers.

Dink, who founded the paper in 1996, used his last few columns to write about his legal woes.

"For me, 2007 is likely to be a hard year," he wrote in one column. "The trials will continue, new ones will be started. Who knows what other injustices I will be up against."

In his final column, Dink wrote about the increasing amount of hate mail he was getting, including one letter that scared him enough that he went to the local prosecutor to ask for protection, although without any luck.

"I don't know anyone else like him who raised his voice for minorities and democracy in Turkey," says Murat Celikkan, a veteran Turkish journalist and human rights activist.

"Intellectually he was a very important figure for Turkey. We don't have anyone else like him."

The Murder Of Hrant Dink (WSJ)

By Elif Shafak

The Wall Street Journal, January 22, 2007

ISTANBUL -- "I feel like a pigeon," Hrant Dink wrote in his last article. "Like a pigeon I wander uneasily amidst this city, watching my back constantly, so timid and yet, so free." That pigeon was gunned down Friday by a young Turkish fanatic on one of the most crowded streets of Istanbul.

Few people can inspire a whole nation in their lifetime, fewer still with their death. Hrant Dink did both. He was a prominent journalist, the editor of the Armenian weekly Agos, an outspoken intellectual, a peace activist, a true citizen of Istanbul and a dear friend. When the news of his assassination broke, thousands poured into the streets, chanting, "We are all Hrant Dink, we are all Armenian!" People slept in front of his office, guarding the spot where he'd fallen with candles and flowers.

The next day, all the main Turkish papers, left or right, spoke in a chorus of outrage on their front pages. Even more hard-line writers sincerely mourned his loss, asking where things had gone wrong. His death shattered the country and the grief cut across all sorts of ideological and social divides. His funeral will be attended by people from all religions, ethnicities and political inclinations. For Hrant Dink was a man impossible not to love, and far from "denigrating Turkishness," the crime which an Istanbul court convicted him of (under the anti-free-speech Article 301), for talking about the killings of Armenians in the closing days of the Ottoman Empire, he truly loved this land.

That his death was interpreted by some beyond Turkey as proof that Turks don't belong in the European Union would have upset Hrant. Without close ties to the EU, and the West as a whole, he worried that the country will become less democratic and more insular. His Turkey is a tapestry, a place where conflicting voices coexist. His best friends, companions and colleagues were Muslim Turks.

Yet Hrant Dink was, since his early childhood, used to discrimination. As he was getting ready to appeal his six-month sentence (eventually suspended) to the European Court of Justice, he wrote that, "I had no other option left. Why is it that although everyone tried under Article 301 has been acquitted one way or another, I have been sentenced to prison? Is it because I am Armenian and they wanted to intimidate me, teach me my limits?" Hrant knew the price to be paid for being in the political and ethnic minority, and still refused to withdraw into a glass ghetto.

Surrounded with friends and family, Hrant Dink was in many ways a lonely man. As critical as he was of Turkish ultranationalism, he had little time for Armenian ultranationalism. At his talks in the U.S., Europe and Australia to Armenian groups, he never played to the gallery. The biases and generalizations about Turkey and Turks in the Armenian diaspora frustrated him. "There is a big difference between Armenians in the diaspora and Armenians in Turkey," he once said. "You guys are Armenian one day a year, on the 24th of April" -- the commemoration of the 1915 massacres and deportations -- "whereas we are Armenian every day of the year but on that one."

Hrant opposed a French bill last year that sought to criminalize denial of the Armenian genocide, as well as a similar law now under discussion in the U.S. Congress. "If they pass the law in France, I will go there," he said, "and though I believe the opposite, I will openly say that there was no genocide." As a genuine supporter of freedom of expression, Hrant believed that it

DOJ_NMG_0119181

should be up to people, Turks and Armenians together, to find the means to reconcile, not to politicians to pass judgment on that history.

Many people asked Hrant why he didn't leave Turkey for Europe or America. The answer he gave was the inspiration for one that a Turkish-Armenian characters in my last novel, "The Bastard of Istanbul," offers.

"But why would I want to do that? This city is my city. My family's history in this city goes back at least 500 years. Armenian Istanbulites belong to Istanbul, just like the Turkish, Kurdish, Greek and Jewish Istanbulites do. We have first managed and then badly failed to live together. We cannot fail again."

Ms. Shafak is the author of "The Bastard of Istanbul" (Viking, 2007).

Pressure Builds On Blair Over Weapons Probe (CSM)

By Mark Rice-Oxley

The Christian Science Monitor, January 22, 2007

Britain is facing stinging international criticism for smothering a corruption inquiry into arms deals with Saudi Arabia, a decision that appears to sacrifice probity and rule of law for the sake of security and commercial relations.

Prime Minister Tony Blair, who took responsibility for the move to pull the plug on a two-year inquiry into the multibillion-dollar Al-Yamamah deals, argued that persisting with the probe would jeopardize the struggle against terrorism.

His chief law officer, Attorney General Lord Goldsmith, has indicated that lives were at stake. The government's argument is that the corruption inquiry, which was pursuing allegations that Saudi middlemen received tens of millions of pounds in bribes for "facilitating" the arms deals, was becoming so uncomfortable for the Saudis that it was jeopardizing cooperation on security.

But the move has generated furious condemnation. Domestically, critics are seeking a legal ruling to overturn the decision. And internationally, the Organization for Economic Cooperation and Development (OECD) says it suspects Britain is in breach of an anticorruption convention and has given London until March to come up with some answers.

"This is unprecedented," says Helen Fisher, an OECD spokeswoman. "It's a huge issue at the OECD. The committee makes it very clear that [bribery] is not a part of doing business, that there has to be a level playing field. When dealing with developing countries, bribery does massive damage."

When it was signed in the mid-1980s, the Al-Yamamah arms deal was trumpeted as a breakthrough moment for Britain's defense industry. The initial deal provided for the sale of 200 Tornado fighter jets to the Saudis, and was won from under the noses of French and US rivals. A second phase followed in the 1990s. Altogether the deal has already earned the now-private defense firm BAE Systems more than £40 billion ($79 billion), according to most estimates.

But there were soon whispers of bribery, allegations of perks lavished on Saudi dealmakers, accusations that senior figures in the Saudi royal and family may have benefited from bribes worth as much as £60 million ($120 million). An inquiry by Britain's National Audit Office examined the deal in 1992. Its report was unprecedentedly suppressed.

The Serious Fraud Office (SFO) took up the case in November 2004. Its deliberations reportedly threatened the third phase of Al-Yamamah under which Britain will supply Saudi Arabia with 72 Eurofighter aircraft for around £70 million ($140 million). BAE has denied any wrongdoing.

The government said the commercial aspect, though considerable, was not the reason for ordering the SFO to call off the hunt. Mr. Blair said last week that proceeding with the SFO probe "would have been devastating for our relationship with an important country with whom we cooperate closely on terrorism, on security, on the Middle East peace process."

Blair's case has been undermined somewhat by reports that MI5 and MI6, the security services, could not confirm that there were any explicit threats by the Saudis to discontinue cooperation if the investigation ran its full course.

But several security experts say that the case highlights the awkward dilemma facing Blair.

"The UK does have security problems and the Saudis can help," says Rodney Wilson, a Middle East expert at Durham University. "It comes down to names and flows of funding and people who are Al Qaeda sympathizers in the UK, activists," says Professor Wilson. "It's important information."

He says Britain had to balance international flak "with the possibility of getting blown up.... International criticism is one thing, but the job of the government is to protect citizens here and abroad and this information does help that."

DOJ_NMG_0119182

For others, the scramble to keep the Saudis on board, however, is less understandable. MJ Gohel, a terrorism expert at the London-based Asia-Pacific Foundation, says Saudi cooperation in the war on terror has been "half-hearted." The Saudi government has not done enough, he says, to stop terrorist finance, and its domestic crackdown is aimed more at antiroyalty elements rather than at anti-Western ones.

"They buy a lot of arms from Britain, so on a trading and financial level it's important, but on a strategic and intelligence level, the advantages of this alliance are quite dubious," he says.

Critics at home and abroad can continue to embarrass Blair on the issue. Britain is a signatory to the OECD's convention on corruption. Article 5 says the prosecution of bribery "shall not be influenced by considerations of national economic interest, the potential effect upon relations with another state or the identity of the natural or legal persons involved."

The 29 other nations in the OECD, along with six observer nations, said last week they all had "serious concerns" that Britain was in breach of the convention. "To argue that the public interest was more important than the rule of law is an incredible reversal of 1,000 years of political struggle to enshrine the public interest in the law," says Lawrence Cockcroft, chairman of the British branch of Transparency International.

He says the affair will now make it harder for London to lecture others about corruption, weakening at a stroke the international consensus that has been building in the past decade to tackle graft.

US And EU Near Agriculture Trade Deal (FT)

By Eoin Callan And Alan Beattie

Financial Times, January 22, 2007

Trade negotiators from the US and European Union are edging towards a deal that could restart stalled world trade talks, according to people familiar with the discussions.

The progress follows a meeting of high-level officials that finished at the weekend and constant cabinet-level contact between Washington and Brussels in the run up to the World Economic Forum meeting in Davos, Switzerland, this week, officials said.

The proposed outline of an agreement between the world's two largest trading blocs includes politically explosive concessions that are already causing rifts in Europe and alarm in the US farm lobby.

The fragile deal that is starting to emerge has yet to be finalised and comes amid tremendous uncertainty about whether negotiators can get the political backing to achieve a breakthrough in the Doha round of trade talks.

The deal that has been taking shape behind closed doors includes a proposal by Brussels to cut barriers to foreign agricultural products by an average of at least 54 per cent and a conditional offer by the US to lower the ceiling on its domestic farm subsidies to close to $17bn (€13.1bn, £8.6bn).

This tentative pact represents a significant advance beyond entrenched battle lines over farm policy that have impeded wider trade talks for years. Both sides have also explored yet deeper cuts to tariffs and subsidies, according to people familiar with the dialogue.

An official said: "We are trying to get to the absolute limit of what is politically feasible without falling off a cliff."

The latest round of transatlantic talks began four days ago and included detailed technical discussions about ways to narrow differences over exemptions for so-called sensitive products such as beef and dairy produce. A senior EU trade official said the talks were "constructive but not definitive".

Both sides are also keenly aware that the deal taking shape is meeting active resistance from Paris, which has demanded that the farm talks in Doha be put on the agenda of the meeting of EU agriculture ministers next Monday.

This hostile political environment makes the progress in negotiations all the more remarkable and has prompted Brussels to seek the support of Angela Merkel, the chancellor of Germany.

While Germany has traditionally played a key role in persuading Paris to accept trade deals, the poor state of Franco-German relations suggests that while Berlin might find it easier to push for a deal, France might feel freer than before to block it.

DOJ_NMG_0119183

The Bush administration has also met key figures on Capitol Hill who will shape policy on agriculture and trade under the new Democratic leadership of Congress. But it is likely to take weeks to establish whether Congress would consider renewing President George W. Bush's trade promotion authority – which expires in six months and is needed to complete a deal.

These approaches included an appeal to Collin Peterson, the influential chairman of the agriculture committee in the House of Representatives, to tone down his opposition to the renewal of trade promotion authority.

The congressman said after the meeting that he remained deeply critical of US trade policy but was not determined to wreck a Doha deal that included meaningful benefits for US farmers.

Mr Bush is also likely to use his State of the Union speech on Tuesday to address growing public and political concerns about the economic disruption caused by trade.

But this is unlikely to quash scepticism at the World Trade Organisation about the political mandate of US and EU negotiators, or cure the breakthrough-fatigue shared by participants and observers of the Doha round.

Any agreement is also contingent on reciprocal concessions by Brazil and India on lowering barriers to trade in industrial goods and services – which are still under negotiation.

Brazil has been negotiating separately with the US and EU and dispatched a senior diplomat to Delhi over the weekend to try to broker a common position ahead of talks planned for Davos. A US trade official said the Swiss forum would allow for important meetings to take place but would not produce any public statement on a "breakthrough".

But there was sufficient expectation that fresh political impetus would emerge from the forum that the G20 group of developing nations was mobilising to hold multilateral talks next week in Geneva.

Merkel Energizes Western Links To Russia (WSJ)

By Marcus Walker

The Wall Street Journal, January 22, 2007

After a meeting with German Chancellor Angela Merkel, Russian President Vladimir Putin pledged to ensure smooth natural-gas and oil supplies to Europe just weeks after Russia shut down an oil pipeline to the European Union during a dispute with neighboring Belarus.

The announcement after yesterday's meeting in Sochi, on Russia's Black Sea coast, underscored Ms. Merkel's growing role as the linchpin in Europe's troubled relationship with Russia, its dominant energy supplier, at a time when concerns about Russia's clout and direction are growing.

In an interview with The Wall Street Journal last week ahead of her Russia visit, Ms. Merkel made it clear she had no illusions about a relationship that has split the EU between countries that believe the EU should take a tougher line with Moscow and those that favor a more pragmatic approach. "Irritations like those that have occurred should not be repeated," she said of this month's oil-supply interruption, which hit Germany, Poland, Hungary, Slovakia and the Czech Republic. But she added, "The fact remains that we won't be able to manage without Russian gas and oil in Europe, and we don't want to either." (Read an edited transcript of the interview.)

With U.K. Prime Minister Tony Blair and French President Jacques Chirac both in the final months of their terms, Ms. Merkel, a physicist by training from the former East Germany, is growing into a role as the go-to person in Europe and for other major international partners as well.

Last week, Secretary of State Condoleezza Rice stopped in Berlin to talk with Ms. Merkel on her way back from a trip to the Middle East. The trip came shortly after Ms. Merkel had visited Washington and called for a revived effort by the "quartet" of America, Russia, the EU and the United Nations to secure peace in Israel's occupied territories. Also last week, U.S. and North Korean diplomats chose Berlin for rare bilateral talks aimed at resolving the standoff over Pyongyang's nuclear-weapons program.

Ms. Merkel's status as Europe's most influential political actor is partly due to timing -- she holds the EU's rotating presidency and this year's chairmanship of the Group of Eight leading nations. But her combination of plain speaking and bridge building has won her admirers on the international stage. In addition, Germany's revived economy has restored the country's status as the EU's economic powerhouse. Ms. Merkel earned respect last year by solving a rancorous EU budget dispute

DOJ_NMG_0119184

between Britain and France and by mending German-American fences, severely damaged when her predecessor, Gerhard Schröder, fell out with President Bush over the Iraq war.

In Sochi, Mr. Putin said that to improve security of supply to the EU, Russia would seek to cut its dependence on transit routes through neighboring states such as Belarus. Mr. Putin also said Russia would speed up work on building a gas pipeline to Germany under the Baltic Sea. The Baltic pipeline project, however, has caused divisions between Germany and others in Europe, particularly Poland, precisely because it seeks to bypass Poland, Belarus and other transit countries. Poland fears it would then become more vulnerable to political pressure from Moscow, because turning off the gas or oil to Warsaw would no longer also mean switching off the supply to Berlin and Paris.

In the Belarus case earlier this month, Russia shut the oil supply because Belarus imposed transit fees in response to a pricing dispute with Moscow. A year ago, a Russian-Ukrainian pricing dispute also led to shortfalls in Europe's gas supply, triggering a storm of concern over the EU's dependence on Russian energy. The EU gets 25% of its natural gas, representing 44% of its natural-gas imports, from Russia.

In Thursday's interview, Ms. Merkel said she wanted to "build a distribution network within the EU, so that we can help each other in an emergency," an offer designed to ease Polish fears over the Baltic pipeline project. At the same time, she said the EU should aim to further diversify its sources and suppliers of energy.

Ms. Merkel said she wanted to write a Russian commitment to stable energy supplies into the EU's 10-year-old cooperation treaty with Russia, which is due for renegotiation. "Regulating it by treaty in this way offers an opportunity to build trust," said Ms. Merkel, adding, "It's important to remember that, apart from these irritations, Russia has been a stable energy supplier in Europe over many decades, also during the Cold War."

Negotiations on a new so-called Permanent Co-operation Agreement with Russia were supposed to start late last year. However, Poland has blocked the EU side from starting talks, demanding that Moscow first end a yearlong ban on meat imports from Poland. Russia says there are continuing problems with Poland's meat-certification system. Poland says the ban is political.

This week, Ms. Merkel heads to Davos, Switzerland, for the annual meeting of the World Economic Forum, where she will present an ambitious agenda for the G-8 this year. Items include global warming, Africa's economic development and EU-U.S. economic cooperation. On her trip to Washington, Ms. Merkel delivered a set of proposals on how to reduce nontariff barriers between Europe and the U.S.

She said in the interview that she still hopes the stalled Doha Round of world trade talks will succeed, and that she prefers multilateral trade liberalization to a web of bilateral trade deals. She stressed that she doesn't want her proposal for better-functioning trans-Atlantic trade to be seen as a rival proposal to a world trade deal.

"Doha is concerned with tariffs, with trade barriers," she said, while her proposals for trans-Atlantic trade are designed to reduce regulatory hurdles to trade. She cited financial-market regulations, patent rules and auto-emission standards as instances where "we inflict an unbelievable amount of costs on each other in accessing the American market and the European market."

The fact that past proposals for a trans-Atlantic single market got nowhere doesn't deter her. "Business has a very great interest in this," she said. "This is a big project -- you can't get through it in half a year. ... But I want to establish it on the agenda at the EU-U.S. summit, and then we can take on points step by step."

Russia To Cut Use Of Energy Transit Countries (FT)

By Neil Buckley And George Parker

Financial Times, January 22, 2007

Russia's President Vladimir Putin said on Sunday that Moscow would reduce its dependence on transit countries, such as neighbouring Belarus and Ukraine, to help guarantee security of energy supplies to Europe.

His comments came as Angela Merkel, the German chancellor, chided Russia for failing to warn Europe before it briefly cut oil supplies through a pipeline across Belarus this month, and said Russian-EU communications on energy needed to improve.

DOJ_NMG_0119185

Energy security dominated talks on Sunday between the two leaders at Mr Putin's residence near the southern Russian city of Sochi, although they also discussed the Middle East and Kosovo, the breakaway province of Serbia. Mr Putin reiterated a warning that Moscow would only support a solution for the province that satisfied both the Kosovan population and Belgrade.

The meeting was the first between the two leaders since Russia cut oil supplies without warning for three days through the Druzhba pipeline amid a dispute over transit tariffs with Belarus.

Mr Putin told reporters after the meeting that Russia would "develop our transportation network in the most active way, so we have the capacity to supply our raw materials directly to our main customers".

"We will speed up our work on building a pipeline system to the coast of the Pacific Ocean, [and] we will broaden our capacity to transport hydrocarbons in the north, including in north-west Russia, to reduce our dependence on transit states," he added.

His comments were in part a reference to the controversial Nordstream pipeline, which a consortium led by Gazpro, the state-controlled energy group, is building under the Baltic Sea from Russia to Germany, bypassing countries including Poland. Mr Putin and Ms Merkel are understood to have discussed ways of bringing other countries into the pipeline projects.

Dmitry Peskov, a spokesman for Mr Putin, said more European countries were expressing interest in becoming involved.

"When we have this project we will have the capacity to ensure the reliable and stable flow of energy resources to Europe," he said. "We will not be dependent on the will of any transit countries."

But the inclusion of other partners risks causing further anger in Poland, unhappy about the Nordstream project because it bypasses its territory and the deal was signed over its head by Berlin and Moscow.

Ms Merkel suggested an improved mechanism for energy communications could form part of a new partnership and co-operation agreement on which Russia and the EU are due to start negotiations. Those remain frozen, however, after the two sides failed to secure a breakthrough in a dispute over Russia's long-standing ban on imports of Polish meat, prompting Warsaw to maintain a veto on new EU-Russia talks.

"I told Mr Putin that [energy] communication has to be improved and Mr Putin confirmed that, so that we could avoid any worries," Ms Merkel said.

Mr Peskov admitted that the recent oil shutdown had caused concern in the west and the dispute might have been handled better.

He said the dispute had been "an emergency", but admitted "it would have been better had we informed" European customers of the imminent supply halt.

Investors Credit Putin As They Pile Up Profits (WSJ)

By Guy Chazan

The Wall Street Journal, January 22, 2007

MOSCOW -- In Western capitals, Vladimir Putin has an image problem. Politicians in the U.S. and Europe routinely accuse him of squelching domestic dissent, strong-arming foreign oil companies and using Russia's vast energy resources to blackmail neighbors.

One constituency, however, has a strikingly different take on the Russian president. To many investors, Mr. Putin is a hero. The reason: the Russian stock market's spectacular rally during his seven years of rule.

When Mr. Putin took office in January 2000, the country's publicly traded stocks were valued at $74 billion. Their value now exceeds $1 trillion. Russia's benchmark RTS index rose 71% in 2006, the fourth year under Mr. Putin that the market has returned more than 50%.

"He's done a helluva of a job," says Mark Mobius, an emerging-market guru and managing director of Templeton Asset Management Ltd. "The country has made tremendous strides in the time we've been there, and you've got to give Putin credit for that."

Many money managers are betting the rally will continue this year -- even with lofty valuations, falling oil prices and rising political uncertainty in the run-up to Russian presidential elections in March 2008, when Mr. Putin is obliged by term limits to stand down.

DOJ_NMG_0119186

To be sure, some investors agree with Western criticism of Russia's spotty human-rights record and of Mr. Putin's moves to undermine the independence of Russia's courts and parliament. They concede that in the long run democratic institutions are crucial for healthy market economies. But for the time being, concern about the state of Russian democracy isn't driving share prices.

Events that shape the West's political stance toward Russia, like the unsolved murder in London last November of Alexander Litvinenko -- the former KGB agent who on his deathbed accused Mr. Putin of having him poisoned -- barely register on most investors' radar screens.

The Kremlin has denied any responsibility for Mr. Litvinenko's death and answers broader Western criticism by saying that Russia is pursuing its own path to democracy.

Huge Strides

Many investors argue that critics don't give Mr. Putin enough credit for the huge strides Russia has made under his presidency. Though he has created mammoth state-run national champions that dominate the oil and gas industry, they say there is plenty of competition in other sectors. And in sharp contrast to the spendthrift populism of Venezuela's Hugo Chávez, Mr. Putin has kept tight control of Russia's purse strings, despite the oil boom.

"Two key factors in any emerging market are economic predictability and political stability," says Chris Weafer, chief economist at Alfa Bank in Moscow. "Russia has the first thanks to oil, and the second thanks to Putin."

Oil is the cornerstone of Russia's rebound. The world's second-biggest crude exporter after Saudi Arabia, Russia has reaped huge dividends from the commodity boom over the past five years. The inflow of oil dollars has lifted the value of stocks and real estate here to unprecedented highs.

But bankers and investors say Mr. Putin's contribution has been crucial. He inherited a country that defaulted on its debt in 1998, reducing itself to a pariah in international financial circles, and repaired its tottering public finances. He also bolstered the central government's waning power. "He did a lot of positive things in a very short period of time," says Mr. Mobius, who oversees $32 billion in emerging-market assets, 5% of which is invested in Russia.

Indeed, Russia now boasts the biggest foreign-exchange reserves outside Asia, huge budget surpluses and an $89 billion rainy-day fund created as a hedge against falling oil prices. It has also paid off most of its foreign debt.

Even among investors, however, Mr. Putin has his detractors. Some were outraged by the Kremlin's politically motivated campaign against billionaire Mikhail Khodorkovsky and his company OAO Yukos, the blue-chip oil giant that was Russia's most popular stock among Western investors until the Kremlin partially renationalized it in 2004. Mr. Khodorkovsky ended up in prison on fraud and tax-evasion charges.

Others shrink from his aggressive brand of state capitalism. Many took exception, for example, to the way Royal Dutch Shell PLC was forced to sell control of the huge Sakhalin energy project to the government-run natural-gas monopoly OAO Gazprom last month after Russian regulators suddenly discovered a raft of environmental violations. Shell acknowledged some lapses but said it had been working to fix them.

Western investors also frequently cite widespread corruption and a lack of transparency as major obstacles to doing business in Russia. Last year the country shared 121st place in watchdog group Transparency International's annual corruption perceptions index with Third World countries like Rwanda, Benin and Honduras. Some businessmen complain that corruption has got worse under Mr. Putin.

"In general, Putin's been a good leader, though former Yukos shareholders and current Shell executives may beg to differ," says Samuel Oubadia, co-manager of the ING Russia fund, which has $940 million in assets under management and was up 67.5% last year, the best 2006 return among U.S.-based emerging-market funds.

Though the Yukos case cost investors around $45 billion in lost value, the Kremlin followed up with investor-friendly moves that did much to restore market confidence: the removal of restrictions on foreign ownership of shares in Gazprom, and the sale of stock in the state oil company OAO Rosneft last summer.

As a result, the RTS has delivered a 250% return since its lows at the depths of the Yukos crisis in July 2004. Shares in Gazprom have nearly quadrupled over the same period: It is now one of the world's largest companies, with a market capitalization of $239 billion, and is showing up in portfolios all over the world. Fidelity Investments is a big shareholder and U.S.

DOJ_NMG_0119187

mutual-fund manager T. Rowe Price Group Inc. says Gazprom is among the top 10 holdings of two of its retail emerging markets funds.

Meanwhile, Western corporate giants, such as General Motors Corp., Citigroup Inc. and Toyota Motor Corp., unfazed by the Kremlin's heavy-handed treatment of companies like Shell, have poured into the country to get a piece of Russia's consumer boom. Foreign direct investment, though still low in proportion to the size of the country's economy, doubled last year to $30 billion. Major U.S. investment banks like Goldman Sachs Group Inc. and Morgan Stanley have ramped up their Moscow operations, drawn there by the emergence of strong, cash-rich Russian companies looking to list overseas and buy assets abroad.

Against that backdrop, the market is ready to indulge Mr. Putin. When Bill Browder, one of Russia's biggest foreign investors and once a staunch defender of the Kremlin's policies, was refused entry into the country in November 2005 as a "threat to national security," the initial reaction was disquiet: Over the ensuing months, investors pulled hundreds of millions of dollars out of his fund, Hermitage Capital Management. But the outflows stopped last summer, and Mr. Browder's fund, which has $3.4 billion in assets under management, was up 39% last year.

Mr. Browder says he is still "selectively bullish" about Russia, though he is less likely these days to give Mr. Putin all the credit for the country's turnaround. "My logic is that it's a liquidity-driven market, and the forces driving liquidity are still there," says Mr. Browder.

Highly Vulnerable

Skeptics warn that with a stock market dominated by natural-resource companies, Russia remains highly vulnerable to swings in commodity prices. So far this year, a fall in the price of crude has helped push the RTS down 5.7%

"If we get oil prices in the region of $45 per barrel this year, I wouldn't be surprised to see the market trading at around 1200," or roughly a third from its record end-of-2006 close, says John-Paul Smith, global strategist at Pictet Asset Management, which has around $11 billion invested in emerging markets assets.

Part of the problem is that Mr. Putin has made little headway diversifying Russia's economy and lessening its dependence on energy exports. "In the past, investors were able to give Russia the benefit of the doubt because its assets were so cheap," says Mr. Weafer, the Alfa Bank economist. "Now they need to know where the long-term growth is going to come from."

Politics is another potential danger. Though there is little doubt that Mr. Putin's preferred candidate -- he hasn't said who that is -- will win the 2008 elections, uncertainty about the succession could still spook the market, some analysts warn.

But betting against Mr. Putin has been a losing proposition for investors in the past. "I've said at the start of every year there's no way we can get more than 30% out of Russia," says Alexander Schwarzkopf of Altima Partners, which has $2.5 billion in assets under management, a quarter of it in Russia. "Every time I'm proved wrong."

Serbia Poll Points To Victory For Nationalist Hardliners (FT)

By Neil Macdonald

Financial Times, January 22, 2007

Hardline nationalists won the largest share of votes again in Serbia's parliamentary elections on Sunday, in a result that will keep "democratic forces" on the defensive for another four years.

Vojislav Kostunica, the nationalist-leaning prime minister, looks well placed to keep his job at the head of a new coalition government, although his new partners could push harder for reviving European Union pre-accession talks.

But the election result could further obstruct western efforts to award independence to Kosovo, the disputed province of Serbia governed by the United Nations since 1999.

The extreme nationalist Radical party has won 81 seats in the 250-seat legislature, about the same as it has held since the last parliamentary elections, in 2003.

The centre-left Democrats, led by Boris Tadic, the country's staunchly pro-EU president, increased their share less than they had hoped, winning only 65 seats, according to results announced by independent monitors after polls closed.

DOJ_NMG_0119188

The Democrats, who stayed out of Mr Kostunica's last government, are expected to take over key economic portfolios, but probably in return for accepting him as head of the cabinet.

Mr Kostunica's electoral list has won only 47 seats, making it the third largest bloc in the 250-seat legislature. However, the Radicals and Democrats have categorically refused to work together, giving him considerable bargaining clout.

The elections are the south-eastern European country's first under a new constitution following Montenegro's exit from a dysfunctional state union last year, ending the last tie between former Yugoslav republics. But Serbia still wrestles with losing Kosovo, its southern province, which was placed under UN administration in 1999 and could be transferred to EU supervision this year.

Martti Ahtisaari, chief UN mediator in the dispute, has waited until after the se elections to present his proposal, thought to call for ending Serbia's sovereignty over the mostly ethnic Albanian -territory.

While all the main parties agree that Kosovo should remain part of Serbia, the prime minister has also blamed the EU for pressure to arrest Ratko Mladic, the fugitive Bosnian Serb war leader wanted for genocide.

Mr Kostunica prevaricates about co-operating with the UN tribunal in The Hague, although he said his government was unable to locate and capture General Mladic. However, he promises to "integrate" the deeply polarised country and press ahead with legal and economic reforms.

G17 Plus, a free-market party led by Mladjan Dinkic, who recently resigned as finance minister, with 19 seats would be the other obvious choice for a coalition government. However, post-election bargaining will be intense and could be complicated if the announcement over Kosovo inflames nationalist passions.

The Democrats named their own candidate, Bozidar Djelic, as a more EU-friendly alternative for prime minister after Mr Kostunica refused to rule out a coa-lition with the Radicals.

China Shift On Reserves Isn't Likely To Hit Dollar (WSJ)

By James T. Areddy

The Wall Street Journal, January 22, 2007

SHANGHAI -- China's decision to make greater use of its $1.06 trillion in foreign-exchange reserves could fuel uncertainty about the dollar but is unlikely to result in any immediate selling of the U.S. currency by the world's fourth-biggest economy.

In a speech Saturday at the end of a key financial working conference, Premier Wen Jiabao said China would "actively explore and expand the channels and methods for using foreign-exchange reserves," according to the official Xinhua news agency. The comment was the highest-level confirmation yet that China is thinking actively about how it can use the reserves, which have increased by more than six times since 2000 and made China one of the largest holders of U.S. Treasury bonds.

Mr. Wen's comment on reserves was part of a broader strategy outlined at the two-day national financial work conference, held every five years. The strategy aims to strengthen the financial system and reduce the economy's dependence on exports and investment. Among its main points is Beijing's intention to restructure the financial system in rural areas, where most Chinese live. U.S. officials and others have urged such efforts, saying China's mounting currency reserves -- which are fueled by huge trade surpluses -- show it hasn't done enough to develop its domestic economy.

The framework Mr. Wen outlined in his speech was extremely broad. The pattern set by past conferences suggests more specific policies will emerge in coming months.

Global financial markets are likely to zero in on what the weekend meeting means for China's dollar policy. Mr. Wen said nothing about selling dollars, but currency traders are hypersensitive to any signs Beijing is losing its appetite for the U.S. currency. Wang Qing, an analyst at Bank of America in Hong Kong, said the message of the conference is twofold: Beijing intends to encourage imports in a bid to erode its currency reserves, and it is planning to create an entity that will invest a portion of the reserves. For markets, "this might rekindle this talk of diversifying the reserves" away from dollar-denominated assets such as U.S. Treasurys, Mr. Wang said.

Beyond Mr. Wen's vague comment about expanding the use of the reserves, Xinhua cited the premier as saying China would take measures to bring balance to China's international payments, where the country has much more money coming in

DOJ_NMG_0119189

than going out. He also reiterated that China would continue to steadily advance its exchange-rate overhauls aimed at making the yuan more flexible.

China already has used portions of its currency reserves to recapitalize big state-owned banks. In recent months, analysts have debated the possible use of the reserves for other purposes including investment in natural resources. But the reserves, which are held and managed by China's central bank, don't comprise cash that the government can simply spend as it wants.

One thing Beijing could do to erode its reserves, or at least slow their growth, is encourage Chinese companies to import more oil and other commodities. That would require them to repurchase dollars from the central bank sold to it by exporters. China also could shift a portion of the reserves into a new entity, like ones operated by the South Korean and Singaporean governments, that invest in companies on behalf of the government. Bank of America's Mr. Wang said that whatever it does, Beijing will be eager not to rattle financial markets with its plans.

Another possible use of the currency reserves would be to inject some of them into Agricultural Bank of China, which lends primarily to rural borrowers and is the only one of China's four big state banks that hasn't yet received this kind of bailout. Mr. Wen said Beijing has decided to restructure Agricultural Bank into a stock-holding company, a move that could lead to an eventual listing of the weak institution.

Only 60% of China's 120 million rural families have access to financial-system offerings such as loans, according to Xinhua, making it difficult to replicate in its hinterland the economic growth China has seen in coastal cities.

Chavez To U.S.: 'Go To Hell, Gringos!' (AP)

By Christopher Toothaker, Associated Press Writer

AP, January 22, 2007

President Hugo Chavez told U.S. officials to "Go to hell!" on his weekly radio and TV show Sunday for what he called unacceptable meddling after Washington raised concerns about a measure to grant Venezuela's fiery leftist leader broad lawmaking powers.

The National Assembly, which is controlled by the president's political allies, is expected to give final approval this week to what it calls the "enabling law," which would give Chavez the authority to pass a series of laws by decree during an 18-month period.

On Friday, U.S. State Department deputy spokesman Tom Casey said Chavez's plans under the law "have caused us some concern."

Chavez rejected Casey's statement in his broadcast, saying: "Go to hell, gringos! Go home!"

Chavez, who was re-elected by a wide margin last month, has said he will enact sweeping reforms to remake Venezuela into a socialist state. Among his plans are nationalizing the main telecommunications company and the electricity and natural gas sectors.

The president's opponents accuse him of using his political strength to expand his powers.

Relations between Caracas and Washington have been tense since Chavez was briefly ousted in a 2002 coup that he claimed the U.S. played a role in. The Bush administration has repeatedly denied being involved, although it recognized an interim government established by coup leaders.

Since then, Chavez has consistently accused the U.S. of conspiring to oust him and often asserts the CIA is working to destabilize his government. U.S. officials have denied trying to overthrow Chavez, but they have labeled him a threat to democracy.

Criticizing excessive consumption and self-indulgence, Chavez also announced plans in his broadcast to raise domestic gasoline prices and approve a new tax on luxury goods such as private yachts, second homes and extravagant automobiles.

He did not give details on the gas price hike, which he said would not affect bus drivers who provide public transportation, or the luxury tax. He said revenue from the new measures would be put toward government social programs.

Venezuela is one of the world's leading petroleum exporters and gasoline now costs as little as 12 cents a gallon due to government subsidies.

DOJ_NMG_0119190

In typical style, Chavez spoke for hours Sunday during his first appearance on the weekly program in five months. He sent his best wishes to the ailing Cuban leader Fidel Castro, his close ally and friend who has been sidelined since intestinal surgery last summer.

Chavez also remarked on the hanging of former Iraqi President Saddam Hussein: "They took out Saddam Hussein and they hanged him, for good or worse. It's not up to me to judge any government, but that gentleman was the president of that country."

Venezuela's Revenue Push Comes With Big Risks (WSJ)

By José De Córdoba

The Wall Street Journal, January 22, 2007

In a move that may hint at growing economic problems in Venezuela, the country's president, Hugo Chávez ordered his telecommunications minister to seize control of a Verizon-controlled telecommunications company before paying compensation to its U.S. owners.

Mr. Chávez's announcement threw further doubts on whether Verizon Communications Inc. would receive fair compensation for its stake in Compañia Anónima Nacional Teléfonos de Venezuela, known as CANTV. It also raises questions about the health of the Venezuelan economy as the price of oil that Venezuela depends on continues to fall -- and Mr. Chávez shows no signs of cutting his rate of spending.

By seizing CANTV before paying its owners, Mr. Chávez would boost the state's revenues immediately. In other revenue-raising measures, Mr. Chávez announced that Venezuela would boost the price of gasoline charged by the state-owned oil company at domestic gas stations.

Venezuelans have long paid just pennies per gallon for gasoline. Mr. Chávez said the increases, which he didn't specify, wouldn't affect the poor because they don't drive cars. But in the past, such increases in the price of fuel have proved to be political dynamite. In 1989, hundreds died in riots in Caracas when transport companies passed along a rise in their fuel costs to consumers.

Earlier this month, Mr. Chávez announced Venezuela would nationalize CANTV as well as the country's private power companies. At the time, Venezuelan officials said the companies would receive fair compensation. In a statement, Verizon said that while the process Venezuela plans to follow in nationalizing the company hasn't been fully defined, "we support efforts to adopt a proper process."

Mr. Chávez addressed the CANTV issue during his weekly television show. "CANTV was practically given away when it was privatized," he said, and then he urged his telecommunications minister to take over the company quickly.

With about $50 billion of reserves, Venezuela has sufficient funds to purchase the companies, which Robert Bottome, the publisher of VenEconomia, a leading Caracas financial journal, estimates are worth around $4 billion.

But a New York investment banker who closely follows Venezuela says the point of nationalizing companies is for countries to get access to their cash flow. If Venezuela pays for CANTV upfront, it would be laying out more money initially than it was collecting for the telecom firm. Delaying the payment to CANTV shareholders would produce a cash gain for the Chávez government from the start, and probably drive down the ultimate price it would pay.

Mr. Chávez's moves come as world oil prices have continued their downward spiral. Friday, the price of the Venezuelan mix of crudes was down to about $46.87, about $15 below highs of around $60 last year. Meanwhile, inflation has escalated to more than 20%, according to private economists.

Even while the price of oil has fallen, Mr. Chávez, who won a landslide re-election in December, and has vowed to remake Venezuela into a socialist state, has continued a spending spree, increasing domestic subsidies and promises of foreign aid.

Rwanda Suspects Seek Asylum (WT)

By Jim McElhatton

The Washington Times, January 22, 2007

Three Rwanda citizens who faced death sentences in the 1999 kidnapping and slaughter of two Americans in Uganda are seeking political asylum now that U.S. authorities have moved to drop the charges.

Francois Karake, Leonidas Bimenyimana and Gregoire Nyaminani, reputed members of the Liberation Army of Rwanda who have been detained in the D.C. Jail for nearly four years, were charged in the bludgeoning deaths of Robert Haubner and his wife, Susan Miller, of Portland, Ore.

The couple, on a safari vacation to see rare mountain gorillas, were killed with six other tourists from New Zealand and Britain when men with guns, axes and machetes raided their camp in a national park in Uganda on March 1, 1999. Authorities said the killings were meant to erode U.S. support for Rwanda's government. The men were brought to the U.S. to face trial in 2003.

However, prosecutors earlier this month filed a motion to drop felony murder charges after a federal judge last year threw out the defendants' confessions, citing evidence that the men were tortured while imprisoned by Rwandan officials.

With a dismissal pending, the defendants are seeking asylum in the U.S. because of "fear of persecution" if they go back to Rwanda, according to recently filed court records.

Defense attorneys disclosed the applications for asylum last week in a memo to U.S. District Judge Ellen S. Huvelle.

"This will assure that once charges are dismissed, the defendants will not be at risk for being taken from the country without the opportunity to address their fear of persecution, which would await them when they return," the memo stated.

It is not clear whether the three men, whom authorities have called terrorists, could live in the United States. A spokesman for the U.S. attorney's office said that once charges are dropped the men would be handled "as would any other person or persons who do not have legal immigration status to remain in the U.S."

But efforts to deport them would be complicated if the men have completed applications seeking political asylum, said a specialist on the issue.

With a completed application, "no action can be taken to deport you" until authorities decide whether to grant asylum, said Christopher D. Candland, a political science professor at Wellesley College who has testified as an expert witness in political asylum cases.

However, Mr. Candland said U.S. Citizenship and Immigration Services officials almost certainly would detain the defendants after the criminal charges are dropped.

Defense attorneys, who have declined to comment on the case, stated in recent legal filings that they want Judge Huvelle to postpone deciding whether to dismiss charges until after Department of Homeland Security officials provide formal notice that they are reviewing the asylum applications.

Without such notice, the attorneys argue, the defendants risk being sent back to Rwanda as soon as the criminal charges are dropped.

Judge Huvelle's opinion in August stated that the defendants' confessions were "extracted only after countless hours of repetitive questioning over a period of many months, during which time they were subjected to periods of solitary confinement ... torture and repeated physical abuse."

Prosecutors said the men were among a band of about 100 that invaded the Bwindi Impenetrable Forest National Park, a remote rainforest in the southwestern region of Uganda known for the presence of rare mountain gorillas.

The group attacked the park's guards and sentries, killing four, one of whom was burned alive. Three women were raped before being killed. And some of the victims, including Mr. Haubner, were beaten to death with axes.

Family members of Mr. Haubner and his wife could not be reached for comment yesterday. Last year, Mr. Haubner's sister, Deanne Haubner, told the Oregonian newspaper that the confessions should have been admitted as evidence even if the defendants were tortured because "so were Rob and Susan and all the people they killed."

"So I'm afraid I don't feel sorry for them if they were tortured," she said.

Darfur: Aid Workers Are The New Targets (NSWK)

By Rod Nordland

Newsweek, January 29, 2007

Last Sept. 11 was a momentous day in Darfur, too. After unidentified militiamen attacked aid workers from the Nobel Prize-winning Médecins sans Frontières at a roadblock on that date, most of the international aid groups ministering to Darfur's 6

DOJ_NMG_0119192

million people stopped using the roads. On Dec. 18, in the southern town of Gereida, unrelated gunmen attacked the compounds of Oxfam and Action Contre la Faim. More than 70 aid workers subsequently pulled out of the refugee camp there—Darfur's largest, with 130,000 people—leaving only 10 Red Cross employees behind. Yet at the time no one revealed what had really sparked the dramatic pullbacks. In both cases, international staff, including three French aid workers, were either raped or sexually assaulted in territory controlled by the Sudanese government and its allies.

Rape as a weapon has become depressingly commonplace in Darfur, where 200,000 Africans have been killed and a third of the population have been sent fleeing into camps in three years of war. But the attacks on international aid workers herald a dramatic and dangerous new trend—the deliberate targeting of those helping to keep Darfur's millions of refugees alive. A dozen staffers from foreign NGOs have been killed in just the past six months, more than in the previous two years. There are an estimated 14,000 aid workers in Darfur now, the majority of them Sudanese, working for foreign NGOs and U.N. agencies and delivering $1 billion a year in aid. Just a few more horrific attacks could throw that massive operation into jeopardy. Last week 14 U.N. agencies working in Darfur issued a stark warning that "the humanitarian community cannot indefinitely assure the survival of the population in Darfur if insecurity continues."

Médecins sans Frontières country director Jean Vataux confirms that two MSF staffers, a Sudanese and a European, were subjected to a serious sexual assault on Sept. 11 after being forced out of their vehicle near Zalingei, in an area under government control. While the women were not raped, Vataux says, "there was a clear desire to hurt and humiliate." The women were badly beaten as well. Vataux says MSF reported the incident to Sudanese authorities, who promised to investigate but so far have not reported any outcome. Action Contre la Faim's country director Philippe Conraud confirms that two Frenchwomen working for ACF in Gereida were raped by armed men, but would not provide details. In the Gereida attack, aid agencies' compounds were systematically looted, numerous vehicles stolen and staff terrorized at gunpoint for six hours.

The two incidents add to a pattern of increased violence since a peace agreement was signed last May between the government and some rebels. After that, rebel factions splintered further. In some areas, the government is working with rebel signatories; in others, it's fighting them, and in some places the rebels are fighting one another. The version of the conflict that has seized the imagination of the world—and that prompted former secretary of State Colin Powell to describe the killing there as "genocide"—involved marauding Arab militiamen known as Janjaweed, often backed up by Sudanese military forces, laying waste to scattered villages. Now as many as 12 different groups are at each other's throats, tussling over control of huge refugee camps or angling for their share of promised government compensation. On Jan. 10, New Mexico Gov. Bill Richardson announced he had brokered a 60-day ceasefire; so far, it has yet to start. "The ceasefire?" says a senior officer with the African Union peacekeepers in Darfur, who asked to remain anonymous for fear of offending Sudanese authorities. "That's like the peace. We haven't seen either."

Assaults on aid organizations have wide repercussions. After a Dec. 8 attack on the International Committee of the Red Cross compound in Kutum, in northern Darfur, all but three of the international staff pulled out. Villagers driven from their homes by Janjaweed have since dispersed rather than seek refuge in the camp there. "We don't know where 30,000 people are," says Rebecca Dale of the International Rescue Committee. "Only about two or three thousand have shown up."

Khartoum has pledged to give aid agencies unfettered access to Darfur, and has frequently boasted of its cooperation with the international community. Yet the NGOs say their workers, especially those from Western countries, are frequently denied visas and travel permits, while key equipment and supplies are held up in Sudanese Customs. And they cannot complain too loudly. "We can't afford to be kicked out," says Dawn Blalock, spokesman for the United Nations' Office for the Coordination of Humanitarian Affairs. The stakes are too high: Blalock points out that the aid groups have managed to lower the overall malnutrition rate in Darfur below the emergency level of 15 percent. Without them, no one knows how bad it could get.

Those who speak out have paid a price. The Norwegian Refugee Council, serving 250,000 displaced Darfurians, was expelled in November to hardly a murmur from the United Nations. Late last year the U.N. secretary-general's representative to Sudan, Jan Pronk, the highest U.N. mission official there, was thrown out by Khartoum after he complained publicly about continued Janjaweed attacks. He has yet to be replaced, leaving the U.N. mission leaderless. "The international community have been taken for a ride," says Pronk. And yet again, the ones suffering most are the people of Darfur.

DOJ_NMG_0119193

Ban's Reform Call (WSJ)

The Wall Street Journal, January 22, 2007

U.N. Secretary-General Ban Ki Moon has been on the job for less than a month, but with a 26-word announcement Friday he did more to reform that international body than anything ever attempted by predecessor Kofi Annan.

"The Secretary-General will call for an urgent, system wide and external inquiry into all activities done around the globe by the U.N. funds and programs." So said Mr. Ban's spokesman after the Secretary-General met with Ad Melkert, associate administrator of the United Nations Development Program. The key word here is "external." Concerns about corruption in the U.N.'s Oil for Food program bubbled for years before Mr. Annan finally agreed to set up the independent Volcker Commission.

The proximate cause for Friday's meeting between Messrs. Ban and Melkert, and for Mr. Ban's clean-house announcement, was Melanie Kirkpatrick's op-ed article in these pages Friday detailing irregularities in the UNDP's programs in North Korea and citing U.S. concerns that tens of millions of dollars in hard currency have been funneled to dictator Kim Jong Il.

The UNDP must have got Mr. Ban's memo. We publish today a letter1 from the agency's Mr. Melkert, responding to Ms. Kirkpatrick's article and our accompanying editorial. "We . . . welcome an independent and external audit of our operations in North Korea," he writes. And, "If the member states of the U.N. and UNDP's board were to decide that our presence there were no longer useful, we would leave immediately."

Kim Jong Il is about as likely to change the way he does business as he is to move to Hollywood to pursue his avocation as a movie buff, so a UNDP pullout from North Korea is the right policy. The Pyongyang government won't even permit U.N. officials to visit the sites of some of the projects that their agency is funding. There's no way of knowing whether the "battery factory" paid for with U.N. money actually exists or is just a vehicle for funding Kim's regime.

In a statement posted on its Web site Friday, the UNDP asserts that it can account for all but $337,000 of its recent expenditures in North Korea. Of the $6.5 million spent in 2005-2006, it says, only $337,000 went to projects directly managed by the North Korean government. The agency now manages most of its projects in North Korea directly.

If oversight has improved in the past two years, so much the better. In any case, any investigation ought to go back at least to the late 1990s, when an internal audit turned up shenanigans and much more money was spent, and ideally all the way back to 1979, when the program began.

We also couldn't help but notice the second-day story by the Washington Post's Colum Lynch, whose reporting is known to speak for the U.N. bureaucracy. He said some in the U.N. consider the U.S. questions to be an attempt to discredit Mark Malloch Brown, who ran UNDP from 1999-2005 before becoming Mr. Annan's chief of staff. We hadn't mentioned Mr. Malloch Brown in our Friday editorial, but now that Mr. Lynch does we agree his tenure at UNDP should also be looked at.

Meanwhile, the UNDP's executive board meeting this week should be lively as members consider the U.S.-led motion to defer UNDP programs in North Korea pending an investigation. The 36-member board is composed of 18 "rich" countries and 18 "poor" ones, which means those that provide the money and those that spend it. It would be quite a spectacle if the poor countries side with fellow board member North Korea.

The ultimate sanction is money, and there's already movement in Congress to withhold the U.S. contribution to the UNDP, which last year constituted 11.4% of the agency's core budget. Unlike dues to the U.N., contributions to the UNDP and other agencies are voluntary. New Jersey Republican Scott Garrett plans to introduce a bill this week to cut off U.S. funding for the UNDP pending a full accounting and an investigation into its program in North Korea. Ileana Ros-Lehtinen, ranking Republican on the International Relations Committee, said Friday that she "and other members" are determined to apply "pressure."

In the absence of a U.N. leadership that demanded transparency and accountability, Congress and various U.S. Administrations have been trying to reform the organization for years. If Secretary-General Ban follows through on his call for "external" audits of all U.N. programs, it will be a refreshing change at Turtle Bay.

TERRORISM NEWS:

Greece, U.S. Probe Attack (WT)

By Andrew Borowiec

The Washington Times, January 22, 2007

NICOSIA, Cyprus -- U.S. and Greek security services report close cooperation in the investigation of a grenade attack on the U.S. embassy in Athens, offsetting months of diplomatic squabbling and negative Greek opinion polls about the United States and its policies.

"We have discovered that there is excellent cooperation between Greece and the United States in combating violence and terrorism," said Giorgios Koumoutsakos, a spokesman for the Greek Foreign Ministry.

Although the perpetrators of the embassy attack are not known, FBI agents have joined a Greek police team in conducting extensive searches in the capital and vicinity, coordinated by the Ministry of Public Order. More than 20,000 cars had been checked by the weekend.

Initial comments by the Greek press ranged from warnings of more attacks to assurances that neither Greek prestige nor relations with the United States had been damaged by the incident.

Although no one was injured in the Jan. 12 attack with a rocket-propelled grenade, it sparked a wave of speculation about security in Greece, a longstanding American concern before the dismantling in 2002 of the terrorist "November 17" organization.

The Greek press is divided on the strength and objectives of the latest attackers, who are thought to belong to a leftist group that calls itself "Revolutionary Struggle."

Mary Bossis, a Greek analyst on terrorism, described the group as potentially highly dangerous because "it doesn't have a specific program but has ties to crime syndicates."

Investigators trace the origins of Revolutionary Struggle to 2003, when a wave of seven attacks with explosive devices caused material damage but no casualties. No member of the organization has been arrested.

The influential Vima daily in Athens said the attack on the embassy was "powerful, audacious and highly symbolic."

"Unfortunately terrorism is returning, ready to put its dark and damaging stamp on political developments," the newspaper wrote. But Nikos Konstandaras, a commentator for the Kathimerini daily, dismissed the attack as the work of "certain groups trying to make themselves appear heroic.

There has been little change in opinion polls, which for the past six months have shown persistent opposition to the United States and mistrust of U.S. policies -- including its handling of internal issues such as poverty.

"Anti-American sentiment in Greece exists on all social levels and across different age groups, irrespective of ideological and political convictions," wrote Kathimerini. As reasons it cited U.S. support for the former military junta, the war in Iraq and American support for Turkey, Greece's historical foe.

Nevertheless, Americans are generally welcomed in Greece and U.S. tourism has been growing the past two years, according to government data.

Editorial: A Case Of Whiplash (FWST)

The Fort Worth Star-Telegram, January 22, 2007

DOJ_NMG_0119197

Leave it to the Bush administration to bend the law to the breaking point -- and then couch its return to reason as merely a voluntary fine-tuning of policy.

It happened when the administration finally gave up on language that accommodated what bordered on torture of detainees captured in Afghanistan and Iraq. It happened when the administration relented on its resistance to extending protections of the Geneva Conventions to terrorism suspects.

And it happened again when the administration agreed to let the Foreign Intelligence Surveillance Court authorize wiretaps to spy on phone calls involving suspected foreign terrorists.

Not long after the 9-11 terror attacks, Bush allowed the National Security Agency to monitor calls between people in the United States and international sources suspected of connections to al Qaeda or other terrorist groups. But the program operated outside the Foreign Intelligence Surveillance Act system that was set up to prevent surveillance abuses in gathering foreign intelligence within U.S. borders.

When The New York Times in December 2005 revealed the existence of the warrantless eavesdropping program, administration officials insisted that the Constitution and congressional authorization gave Bush power to bypass the FISA Court, which Bush portrayed as too slow and cumbersome to accommodate national security needs in battling terrorism.

But now Attorney General Alberto Gonzales insists that the Justice Department was working to put the spying program under FISA Court oversight long before the warrantless wiretapping came to public light.

If that's so, why didn't he say so long before now? Why continue to feed the disturbing impression that this administration is determined to make itself more equal than the other two branches?

Notably, administration officials haven't backed down on their claims of executive authority. Stepping under the FISA Court umbrella appears to be a pragmatic act: Democrats who have been skeptical of Bush's overreaching now control Congress, and an appeals court later this month will consider whether a federal judge in Detroit properly held the wiretapping program unconstitutional.

Gonzales called orders from the FISA Court authorizing the monitoring "innovative" and "complex." But he doesn't want to reveal details -- even though, according to several news reports, FISA Court President Judge Colleen Kollar-Kotelly doesn't object to releasing the court's orders (which include classified material) if the Justice Department agrees.

The American public doesn't need to know sensitive operational details about programs legitimately operating to protect our security. It does need to stop getting whiplash from an administration that repeatedly tests our trust and damages its own credibility.

Editorial: Wiretap Backtrack (BANGORN)

Bangor (ME) Daily News, January 22, 2007

Facing congressional investigations and legal challenges, the Bush administration last week reversed course and said it would seek the approval of a secret court before monitoring Americans' international communications as part of its terrorism surveillance work. Bringing the eavesdropping program back under the Foreign Intelligence Surveillance Court is the right thing to do, but it does not negate the need for continued scrutiny from Congress, which the Senate Judiciary Committee reiterated Thursday with tough questions for Attorney General Alberto Gonzales.

Unfortunately, Mr. Gonzales did not answer most questions. Particularly troublesome, the attorney general is refusing to allow the court to reveal details of the arrangement worked out with the administration. The court's presiding judge said she would detail its orders to lawmakers if allowed to do so by the Bush administration. Mr. Gonzales said the administration wanted to keep details of the wiretapping operation confidential.

The committee is right not to take the administration's word that the program, even under court review, is within the president's authority and meets constitutional requirements. It heard the same assurances about the torture of suspected terrorists and detaining such suspects without access to judicial proceedings. The administration has since backed off both these stances due to adverse court rulings and belated intervention from Congress.

In December 2005, it was revealed that the National Security Agency was eavesdropping on phone calls and e-mails between the United States and other countries without warrants. The Bush administration said Congress told the president to use "all necessary and appropriate force" to stop terrorists when it passed the Authorization for Use of Military Force after the Sept. 11 terrorist attacks. Several senators, including Maine Sens. Olympia Snowe and Susan Collins, say it wasn't their intention in voting for the resolution to give the president the authority to bypass the Foreign Intelligence Surveillance Act. The administration said the FISA process was too slow and cumbersome.

With the Democratic takeover of Congress, it has changed its mind. The Justice Department this week said it had recently received several warrants from the court allowing it to monitor communications where there was probable cause to believe one

DOJ_NMG_0119198

of the participants had terrorist links. With the orders in hand, future eavesdropping would be conducted with the approval of the FISA court, Attorney General Gonzales said.

Without knowing details, such as whether warrants are issued on a blanket basis, lawmakers must continue to scrutinize the program to ensure American's privacy is protected.

Bush Tries To Dodge Accountability Again (ROT)

Roanoke (VA) Times, January 22, 2007

The administration backtracks on warrantless wiretaps just in time.

Last week, the Bush administration backtracked on its program of warrantless wiretapping. Attorney General Alberto Gonzales said officials will no longer listen in on Americans' international phone calls and e-mails without first getting court approval. It's a promising victory for civil liberties and the Constitution.

However, before Democrats start crowing that the party's control of Congress led to the change, they should look at the administration's history in cases like this. The reversal reflects less a fear of Congress and more the White House's tactics to avoid legal rebuke.

The administration had said its eavesdropping program did not require court oversight. Now it has worked out a deal with the Foreign Intelligence Surveillance Court for warrants. The details of the program remain dismayingly vague, but it is certainly a move toward what the administration should have been doing in the first place.

So why, after more than a year of insisting everything was proper, has the administration reversed course? No doubt the threat of congressional investigations was a factor, but coming federal trials that could have declared the whole program illegal seem the more likely cause.

This isn't the first time the administration has employed this dodge.

Recall the case of Jose Padilla, an American citizen detained by the administration as an enemy combatant. When the Supreme Court was about to review his detention, the administration suddenly dropped allegations that he was a terrorist and moved his case to the criminal justice system, rendering the appeal moot.

Likewise, in the case of Yaser Hamdi, another American held incommunicado by the military, the White House released him to Saudi Arabia before the courts could rule.

Engage in illegal activities. Continue them while challenges wind their way through the courts. When a final decision is near, pull the carpet out from under the case to avoid legal reckoning. The administration can cling to its illusion that it still has the right to ignore the Constitution.

The courts should not allow the president to circumvent justice again. The Bush administration says it will get a warrant for now, but the challenges to government intrusion should go forward to remind the executive that his power has limits.

Wiretap Shift Raises Questions (SPT)

St. Petersburg (FL) Times, January 22, 2007

The public has known about the warrantless domestic wiretapping program of the Bush administration since the New York Times broke the story in December 2005. It took from then until the day before Attorney General Alberto Gonzales was scheduled to appear before the new Democratic-controlled Senate for the administration to finally bring its intelligence-gathering into compliance with the law. We appreciate the action but are left to wonder what took so long and whether there is less here than meets the eye.

It was a shocking revelation when the newspaper reported that the National Security Agency had been authorized by President Bush to monitor the international phone calls and e-mails of people inside this country suspected of terrorist links. Congress, under the Foreign Intelligence Surveillance Act, established a process for warrants to be issued by a secret court when counterterrorism or counterintelligence was at issue. Yet Bush's order ignored the jurisdiction of this court and approved spying on Americans without any court oversight.

After the program came to light, Bush refused to acknowledge its extralegal nature, declaring instead that he had the inherent authority as commander in chief to order warrantless eavesdropping. This stunning position was reiterated by Gonzales on Thursday during questioning by members of the Senate Judiciary Committee.

The administration's ongoing claim of supreme executive authority adds a measure of discomfort to its overdue concession to the rule of law. The attorney general informed Congress in a letter on Wednesday that the administration will shut down its warrantless eavesdropping program in favor of one that respects the FISA court's jurisdiction. But in his testimony before the Senate committee, Gonzales gave no assurances that the administration would not revert to its old ways in the future.

Maybe that is why lawmakers from both parties were left wondering what the administration is really up to. Questions were raised about why it took five years to bring the NSA eavesdropping program into compliance with FISA. Some senators wanted

DOJ_NMG_0119199

to know whether the administration was making individual showings to the FISA court, as is constitutionally required, or requesting broad warrants that could be used to spy on many people at once. Gonzales was not forthcoming.

The purpose of the sudden change in policy appears to be an attempt by the administration to avoid having its authority questioned, investigated and potentially curtailed by Congress. The demise of warrantless spying is a desirable policy reversal, even if it is not clear that there has been a change of attitude in the White House.

EDITORIAL Bush Administration Backs Off Of Secretive, Dangerous Policy (AAS)

Austin (TX) American-Statesman, January 22, 2007

Elections have consequences. Just ask U.S. Attorney General Alberto Gonzales, who announced last week that President Bush will no longer order wiretaps without the approval of a special federal court.

In the aftermath of the Sept. 11, 2001, terrorist attacks on the United States, the president had allowed the National Security Administration to wiretap — without a warrant — telephone conversations and electronic mail between a party in the United States and one outside the country. The program was not disclosed to the public until The New York Times reported it in December 2005.

Until last week, the president had defended the program as a constitutional use of his authority to defend the nation. He and his supporters also argued that it was not legally necessary, and not practical, to first get court approval.

But critics in Congress and elsewhere, including this newspaper, argued that not only was court approval necessary, the procedure itself was already in place, had been for years and posed no obstacle to the government when it needed to move quickly.

The Foreign Intelligence Surveillance Court was created in 1978 to handle such sensitive situations, is highly secretive and has rarely denied approval of a wiretap request. The law even provides for situations in which, in emergencies, the wiretap can be placed first and the warrant sought shortly thereafter.

The issue is not whether to wiretap — of course persons suspected by the government of terrorist activities ought to be investigated. And to date, we know of no instance in which the Bush administration wiretapped political enemies or critics.

But no president, regardless of party, should have the power to order a wiretap on the private conversations and messages of someone in the United States without the constitutional check of court approval. It's far too tempting for those given such unlimited power to apply it ever more widely and eventually threaten the privacy of all.

The Bush administration complained of shortcomings in the 1978 law, but it never asked Congress to change it, and few in the Republican majorities in the House and Senate challenged the administration's assertion of wiretapping authority.

But the Nov. 7 election installed Democratic majorities much more willing to take on the president on the wiretap issue and other matters touching on national security and Americans' civil rights. And so on Wednesday, Gonzales suddenly announced that the administration had worked out its problems with the special court and that wiretaps would be submitted to it for approval.

Some in Congress suspect the administration is playing word games, and Gonzales fed that suspicion by refusing to give details about the new policy during an appearance before a Senate committee on Thursday. On the other hand, conservative voices that had stoutly defended the presidential refusal to get warrants for the wiretaps were outraged by the administration's sudden about-face.

Whatever its motive, the Bush administration was right to start going to the court to get the warrants, and we hope the court itself will not be a rubber stamp for this or any other administration.

Financing Terrorists Is Not About Speech (LAT)

The Los Angeles Times, January 22, 2007

THE SUPREME COURT has rightly refused to block the trial of seven Los Angeles residents accused of contributing funds to an Iranian opposition movement that the State Department has branded a terrorist group.

The high court let stand a ruling by the U.S. 9th Circuit Court of Appeals that prosecuting the defendants — who are innocent until proved guilty — posed no 1st Amendment problem. As Judge Andrew J. Kleinfeld pithily put it: "Sometimes money serves as a proxy for speech, and sometimes it buys goods and services that are not speech. Guns and bombs are not speech."

In 1997, then-Secretary of State Madeleine Albright designated the Marxist group Mujahedin Khalq, or MEK, as a "foreign terrorist organization," a designation reaffirmed in 1999. Formed in the 1960s to oppose the rule of the shah of Iran, MEK now opposes the Islamic regime in Tehran and, according to the State Department, engaged in terrorism against Iran between 1997 and 2001.

Under the 1996 Antiterrorism and Effective Death Penalty Act, it's a crime to knowingly provide material support to an organization that appears on the State Department's list. The defendants in the Los Angeles case are accused of soliciting donations for MEK in Los Angeles and of wiring at least several hundred thousand dollars to an MEK bank account in Turkey.

DOJ_NMG_0119200

The truth of those allegations is a matter for a jury. What the defendants sought from the 9th Circuit was a ruling that their prosecution violated the 1st Amendment because of flaws in the way MEK was designated a terrorist organization.

Yet, as Kleinfeld noted, MEK's own description of its activities supported the terrorist designation. The designation was on the books when the defendants allegedly contributed to the group. More to the point, as the Supreme Court has recognized in upholding restrictions on contributions to election campaigns, money cannot always simplistically be equated with speech even in a domestic context. The "money is speech" mantra makes even less sense when the money buys guns.

Of course, the State Department should use care in designating a group as a terrorist organization. Such designations can be challenged though not ignored. Individuals accused of providing such a group with material support shouldn't be able to substitute their judgment for the department's any more than consumers should be able to substitute their judgment about a dangerous drug for that of the Food and Drug Administration. Neither case is a free-speech issue.

HOMELAND RESPONSE:

TSA To Track Rail Shipments With Toxic Cargo (USAT)

By Thomas Frank, Usa Today

USA Today, January 22, 2007

WASHINGTON — The government for the first time will monitor rail shipments of potentially deadly cargo passing through cities to make sure cars vulnerable to attack don't sit unguarded for too long.

The Transportation Security Administration (TSA) will start a nationwide tracking system in about a month to determine how long rail cars filled with lethal materials are stopped on tracks or sit in unsecured storage yards in urban areas.

Unguarded rail cars filled with toxic chemicals such as chlorine in cities are the single biggest terrorist threat related to the nation's railroads, the TSA says.

The U.S. Naval Research Lab has said an attack on such a rail car could kill 100,000 people. Railroads carry 105,000 carloads of toxic chemicals a year, and 1.6 million carloads of other hazardous materials such as explosives and radioactive items, the government says.

The new tracking system lets the TSA enforce an agreement it reached with railroads to cut the amount of time hazardous rail shipments spend unguarded in cities. The agreement, signed by the 257 railroads that transport toxic chemicals, aims to reduce by 25% this year the number of hours hazardous rail shipments sit unguarded in each of 46 major urban areas. "This immediately reduces the risk of a terrorist attack," TSA chief Kip Hawley said. "These cars will not be sitting ducks."

The TSA plans to send inspectors soon to areas where it finds toxic shipments unguarded for long periods and work on safety improvements. Railroads can give toxic cargo priority so it doesn't sit on tracks waiting for other trains to pass, or store it in guarded yards.

The tracking comes as cities consider banning or restricting hazardous rail shipments. Local officials fear attacks and accidents like the fiery train derailment Tuesday near Louisville that spewed toxic smoke and forced people from homes, businesses and a school.

"Rerouting is by far the most important way to reduce risk," said Fred Millar, a rail-safety advocate who helped enact a ban in Washington, D.C., in 2005, the nation's first. "If you don't reroute hazardous shipments, it's not a serious program."

Rail companies fear such laws would force them to send hazardous cargo hundreds of miles around cities. CSX Transportation blocked the Washington ordinance with a lawsuit that is pending.

Hawley said barring hazardous rail cargo from cities could force it onto trucks, which are more easily attacked and accident-prone. "You want to keep it on rail," Hawley said.

Matthew Zone, a Cleveland city councilman who proposed barring hazardous cargo from one of that city's four rail lines, called the TSA monitoring "a move in the right direction."

Railroads carry two-thirds of shipped toxic chemicals, most of it chlorine and anhydrous ammonia, a fertilizer.

Should US Track Each Foreigner's Exit? (CSM)

By Alexandra Marks

The Christian Science Monitor, January 22, 2007

A program to record visa-holders' departures via land is being suspended because of technology issues, say security officials.

The United States knows when visitors carrying visas enter the country, but it has no idea when, or if, most of those people leave.

DOJ_NMG_0119201

Congress ordered that key flaw in the immigration system to be fixed as far back as 1996 – in part because as many as 100,000 people overstay their visas annually and join the ranks of undocumented workers. But the 9/11 attacks gave the request new impetus: The 9/11 commission in 2004 recommended that the loophole be closed, and the 2004 Intelligence Reform and Terrorism Prevention Act mandated that it be done "as expeditiously as possible."

By the end of this year, the Department of Homeland Security (DHS) expects to have a system in place to track people who leave by air or by sea. But it has decided to abandon its efforts to track the exits of foreigners who depart through the nation's border checkpoints on land.

Tuesday, top DHS officials will go before the Senate Judiciary Committee to explain the department's rationale.

"Land presents somewhat of a challenge," says the DHS official who confirmed that the land exit program was being suspended. "We're still looking into doing it at some point in time; it might be a number of years."

The problem, according to DHS, is that the technology doesn't yet exist to create an entry/exit program for people who cross by land – at least not without causing huge traffic delays that would disrupt commerce and daily life in border towns.

Critics say the real problem is a lack of political will and confused priorities. They charge that DHS has set the technical bar too high – for instance, requiring the system to be able to check people's exit from the country while they're driving by at 50 miles per hour.

The controversy over the entry/exit program, which is called US Visit, illustrates not only the difficulty of securing US borders physically, but also the larger question of how best to use limited resources to improve security in a post-9/11 world. Advocates of a comprehensive exit and entry program say it is crucial to security, because the nation must know who's leaving as well as who's coming into the US. Indeed, two of the 9/11 hijackers had overstayed their visas.

"We have to recognize that there are very real threats and it still is an international border – people who've become used to quick and easy crossings have to understand that there are very compelling reasons now to change the way they do business," says Jessica Vaughan, a senior policy analyst at the Center for Immigration Studies in Washington. "Maybe just-in-time manufacturing was fine in 2000 when you could get a truckload of stuff across the border very quickly and easily, but things are different now."

Critics of US Visit say it's a waste of valuable resources to focus on the 309 million people who cross the nation's land borders annually. More than 70 percent of those who cross regularly are truck drivers, workers, or people going to visit family across the border. The vast majority of the rest are vacationers.

"I understand the politics as to why we'd like to target temporary visitors, students, and others, but I haven't seen ... a really cogent analysis about why [it] would be better to put billions of dollars into that as opposed to training people to speak foreign languages and infiltrating groups that are suspicious," says Allan Wernick, a professor at Baruch College in New York and chairman of the Citizenship and Immigration Project.

DHS is testing its exit-verification program at 12 airports and two seaports. It has set up kiosks where visitors swipe their travel documents as well as have two fingerprints and a picture recorded to ensure they are indeed the person who came in on that visa. By the end of the year, DHS plans to have that system operating at the 80 US airports that accommodate international travelers.

DHS also had a pilot program at five land ports. That system used radio frequency technology to scan a chip in people's visas when they drove out of the country into Canada or Mexico. The goal was for it to work if cars were driving as fast as 50 miles an hour.

"That's unrealistic. Even with E-ZPass you have to slow down to five miles per hour," says Ms. Vaughan, in a reference to a toll-tracking card used by commuters.

A DHS spokesperson said the radio frequency technology failed in part because it couldn't prove that the people carrying the visas with the microchip were the same ones who came into the country – a congressional requirement. A recent General Accountability Office study found that to meet the mandate that the exit program be biometric, DHS would have to spend billions to expand border crossings and hire new staff to prevent huge traffic back-ups at the border.

A DHS spokeswoman defends delaying the implementation at land ports until the technology is available to make it viable to use the biometric visa identifiers – such as fingerprints – at the land ports of entry.

"We've had success by incrementally phasing the program in at airports, and that's what's resulted in no traffic buildup. And we will be phasing it in sometime in the future at land ports," says Anna Hinken, a US Visit spokeswoman. "Biometrics is the future. "These types of systems require resources and planning. It's not something that happens overnight."

U.S. Watches For Cultivation Sites Of 'Pepsi Jihad' (WT)

By Shaun Waterman

The Washington Times, January 22, 2007

DOJ_NMG_0119202

U.S. law-enforcement and intelligence officials say they are taking steps to monitor and combat the spread of Islamist extremism and support for a violent holy war against the West among a "Pepsi jihad" generation of young Muslims in the United States.

At a hearing last week, officials from the CIA, FBI and Department of Homeland Security told lawmakers that the United States had less of a problem with "homegrown" Islamist terrorists than Europe did because of its history as a nation of immigrants.

"I think the American historical experience ... with bringing in various groups and giving them, frankly, more opportunity than they might have enjoyed elsewhere has helped us immeasurably in this regard," CIA Director Michael V. Hayden told the House Permanent Select Committee on Intelligence.

Despite that, Phillip Mudd from the FBI's National Security Branch said, the ideology of extremist Islam -- and its attendant support for violence against the West in general and the United States in particular -- was spreading in the United States.

"The commonality we have [with Europe] is people who are using the Internet or talking among friends who are part of what I would characterize as a Pepsi jihad. ... It's become popular among youth, and we have this phenomenon in the United States."

Charlie Allen, the head of intelligence for the Department of Homeland Security, said the department reorganized its intelligence analysts late last year and "created a branch focused exclusively on radicalization in the homeland [that] is studying the dynamics of individual and organizational radicalization."

He said the United States did not have "the alienation and the de facto segregation that we see in some places in Europe," but that nonetheless there were "pockets of extremism" in the country.

He said the branch would create state-by-state and regional assessments this year "of the means and mechanism through which radicalization manifests throughout the United States."

He added that another factor present in many of the successful "homegrown" Islamist attacks in Europe -- the Madrid and London transit bombings being the classic examples -- was a leader directing would-be terrorists to training facilities.

"Frequently, we see a charismatic leader ... who selects people for further education, perhaps overseas, particularly into South Asia."

The question of the role played by al Qaeda's central command in Pakistan in providing support and direction for so-called "homegrown" plots in Europe has vexed analysts since the Madrid rail bombings in March 2004.

"While the incidents might be homegrown and the recruitment base, if you will, can often be second-generation immigrants who have a Muslim background, we've always found some kind of linkage back to" al Qaeda's leadership, said Director of National Intelligence John D. Negroponte.

Mr. Allen noted that the Homeland Security Department had a unit dedicated to demographic analysis of immigrant communities in the United States, which might, wittingly or not, harbor networks of criminals or human smugglers that terrorists could exploit.

The unit will fuse intelligence and law-enforcement reporting to "assess patterns in which migrant communities -- and likely associated extremists -- may or could travel to and establish themselves within the homeland." The unit aims to "provide strategic warning of mass migration to the United States and likely exploitation by illicit actors."

WAR NEWS:

Senators Seek Support Against Iraq Surge (AP)

By Hope Yen

AP, January 22, 2007

Two leading Senate Democrats sought to build support Sunday for a bipartisan resolution opposing President Bush's war strategy in Iraq, cautioning that division over whether it goes far enough could spell defeat.

"The worst thing we can do is to vote on something critical of the current policy and lose it," said Sen. Carl Levin, D-Mich., who chairs the Senate Armed Services Committee. "The public doesn't support his policy, a majority of Congress doesn't support his policy."

"If we lose it, the president will use the defeat of a resolution as support of his public policy," Levin said.

The new Democratic-led Congress heads this week toward its first vote on the war, with the Senate Foreign Relations Committee beginning debate Wednesday on a resolution condemning Bush's proposal to send 21,500 more troops to Baghdad and Anbar province. A vote could come as early as that same day.

DOJ_NMG_0119203

The proposed nonbinding resolution, which is largely symbolic and would have no affect on money for troops, states that "it is not in the national interest of the United States to deepen its military involvement in Iraq, particularly by escalating the United States military force presence in Iraq."

It has generated some division among Democrats who want to go farther by cutting funding for new troops, moderates in both parties who want softer language and Republican leaders who have vowed to filibuster.

On Sunday, Levin and Sen. Joseph Biden, D-Del., who sponsored the resolution along with Republicans Chuck Hagel of Nebraska and Olympia Snowe of Maine, called their proposal a first step that would send a "powerful message" that Bush must change course.

Other congressional steps, such as limiting federal appropriations for the war, could come later if Bush were to continue pushing forward with additional troops in defiance of the resolution, they said.

Biden, who chairs the Senate Foreign Relations Committee, downplayed the notion that support could splinter over how far lawmakers should go to restrain the president's power to wage war. He said he expected the half-dozen competing proposals to oppose the war each would get an airing.

"I don't think there's any muddled message here," Biden said. "They'll all get a chance to be voted on, with some discussion."

The proposals to limit the war vary.

Rep. John Murtha, D-Pa., and Sen. Edward Kennedy, D-Mass., say they want to cut funding for new troops to prevent the deployments. Sen. Christopher Dodd, D-Conn., has a proposal that would cap troops at existing levels.

Republican Sen. Gordon Smith of Oregon said he was wary of the term "escalating" in the resolution and was working with Sens. Susan Collins, R-Maine, and Ben Nelson, D-Neb., on a "constructive, nonpartisan resolution that expresses the opposition of the Senate to the surge."

Collins and Nelson, alongside Sen. John Warner, R-Va., were expected to announce the details Monday.

And the fiscally conservative Blue Dog Democrats say they would introduce legislation this week calling for greater accountability on how Iraq war funds are spent.

Bush, meanwhile, was expected to address the Iraq war in his State of the Union address Tuesday and renew his calls to work together with Democrats on a bipartisan way forward.

Earlier that day, the Senate Armed Services Committee will also hear from Lt. Gen. David Petraeus, a former division commander in Iraq, who was tapped by Bush to replace Gen. George Casey as the top American commander in Iraq.

On Sunday, Biden said despite the competing proposals, there was overwhelming bipartisan support in Congress against the war. He said Vice President Dick Cheney was absolutely wrong in suggesting that a resolution against the war would "embolden our enemy."

"Every single person out there that is of any consequence knows the vice president doesn't know what he's talking about. I can't be more blunt than that," Biden said. "He is yet to be right one single time on Iraq."

Hagel suggested there may be more Republican support than is generally known for seeking a vote in Congress toward ending the war in Iraq.

"It is wrong to put American troops in the middle of a sectarian civil war," he said. "Are we not to register our sense of where we are going in this country?"

"Let every member of the Senate express themselves," he said, saying they owe that to the American public.

"We have anarchy in Iraq," he said. "It's getting worse."

Biden and Levin spoke on "Fox News Sunday," and Hagel was on CBS' "Face the Nation."

McCain Hits Resolution On Surge (WT)

By Stephen Dinan

The Washington Times, January 22, 2007

Sen. John McCain yesterday said voting for a resolution disapproving of President Bush's troop-surge idea would be a slap at the 21,000 new troops that would be sent to Iraq under the plan, putting the upcoming congressional debate on the Iraq war in stark terms.

Mr. McCain and other Republicans also signaled their worry over Gen. George Casey's nomination to become Army chief of staff, signaling another possible congressional fight for Mr. Bush with his own party as he tries to move forward on his new Iraq strategy.

"I have very serious concerns about General Casey's nomination," Mr. McCain said on NBC's "Meet the Press," arguing Gen. Casey's record in Iraq may not merit the new post and would send a wrong message to the troops.

DOJ_NMG_0119204

Mr. Bush has announced he will commit more than 17,000 more soldiers to Baghdad to try to help Iraqi national police and military units quell Sunni-Shi'ite violence, and said he will send 4,000 Marines to go after al Qaeda fighters in Anbar province.

Top Senate Democrats, joined by a leading dissident Republican, last week announced a resolution opposing Mr. Bush's plan. Senate Democratic leaders have promised to force a floor vote, and House Democratic leaders said they are working on their own similar resolution. The resolution is not binding on Mr. Bush, but the lawmakers hope the signal it would send would cause him to change course.

Both Republicans and Democrats used yesterday's round of talk shows to try to build support for their positions heading into what is shaping up as a major showdown.

Sen. Carl Levin, Michigan Democrat and chairman of the Senate Armed Services Committee, said Democrats must unify behind the resolution, though, or risk a fracture that could deliver a public victory to Mr. Bush.

"The worst thing we can do is to vote on something which is critical of the current policy and lose it," Mr. Levin, one of the authors of the resolution, said on "Fox News Sunday."

Pulling further to the left are those such as Sen. Edward M. Kennedy, Massachusetts Democrat. He said troop escalations have failed in other parts of Iraq in the past, and said the one idea that hasn't been tried is "de-escalation."

"That's a policy, which I believe, then, will require the Iraqi government to assume responsibility for their security, rather than now sending additional troops, which will be an additional crutch for the Iraqi government in delaying their judgment decision in order to take the security," he said.

Mr. Kennedy has his own bill that would force the president to come back to Congress for permission to broaden the war. He said if Mr. Bush ignores the will of Congress as expressed in upcoming votes, lawmakers should then defund the war.

"If we have a president that is going to effectively defy the American people, are going to defy the generals, defy the majority of a Congress of the United States in Republicans and Democrats, then we, I think, have a responsibility to end the funding for the war," he said on NBC. "Are we really being more loyal to our troops, putting them in the midst of a civil war?"

Mr. McCain, who is exploring a run for president, is now closely tied to the troop-surge idea, even though he said that his choice would be to send still more troops to make sure they get the job done.

"I promise you, if we fail here, there will be plenty enough blame to go around to everyone, including to me," Mr. McCain said, acknowledging that he is so tied to the plan that Democrats now call it the "Bush-McCain increase."

He said the Democrats' resolution would be a slap at the troops Mr. Bush is preparing to send.

"This resolution is basically a vote of no confidence in the men and women we are sending over there," he said. "We're saying, 'We're sending you -- we're not going to stop you from going there, but we don't believe you can succeed, and we're not willing to support that.' I don't think the troops would find that an expression of support."

Webb Would Defund Rebuilding Iraq (USAT)

By Kathy Kiely

USA Today, January 22, 2007

WASHINGTON — The Democratic senator who will deliver his party's formal response to President Bush's State of the Union address Tuesday says he favors cutting off funding for Iraq reconstruction in order to pay for Hurricane Katrina recovery instead.

"How can we keep sending billions of dollars over to Iraq and not fund a really energetic effort to help places like New Orleans?" Sen. Jim Webb, D-Va., asked in an interview Friday. Webb said that Iraq and what he sees as the precarious state of the nation's economy and infrastructure are two of the topics he'll tackle in his speech.

Senate Majority Leader Harry Reid, D-Nev., chose Webb, an iconoclastic freshman, to deliver the prime-time rebuttal to the president. Reid said Webb personifies the "spirit of bipartisanship," and the call for "a new direction for working families and an end to the war in Iraq."

Webb also highlights the Democrats' effort to move beyond their traditional political base. A senator for less than a month, Webb is a combat veteran who says, "I can still justify the war in Vietnam." His eldest son is a Marine stationed in Iraq.

Webb is a former Republican who won election in a state Bush carried by 9 percentage points in 2004. This marks the second year in a row that a Democrat from Virginia will deliver the State of the Union response. Last year, the honor went to Gov. Tim Kaine.

A pugnacious former boxer, Webb made headlines by rebuffing Bush's attempt to ask about Webb's son at a White House reception with a call to bring the troops home from Iraq. The White House wouldn't comment, but Webb confirmed the incident.

"I didn't start it," said Webb, who insists he harbors no hard feelings. "I wouldn't mind having lunch with George W. Bush."

Webb, who has written novels, screenplays and magazine articles, said that he's working with Reid about the general themes of his speech but that he has "enough independence" to say it his way.

DOJ_NMG_0119205

"I'm really careful with words," Webb said.

In his speech, which the senator said he's trying to keep to about five minutes, he plans to address:

·Iraq and national security. Webb, who called the administration's decision to invade Iraq "reckless," said he won't support cutting funds for the military effort, but he wants Congress to create pressure for a diplomatic solution. "There will never be political stability in Iraq as long as there are American combat troops on the streets of Iraq," he said. "We need to get them out."

·Economics and globalization. Webb said he believes that the "internationalization of corporate America" is widening the gap between rich and poor.

·Government accountability. Webb said he will discuss ethics reform and efforts to expand congressional oversight of the executive branch.

Webb, who served as secretary of the Navy in the Reagan administration, intends to do some horn-tooting for his new party: "I think the Democratic leadership really deserves some kudos."

Congress's Challenge On Iraq (NYT)

The New York Times, January 22, 2007

President Bush's refusal to come up with a serious policy on Iraq means that the Democrats will have to goad him toward one. Congress needs to do more than just oppose the latest ill-conceived military escalation. It needs to insist that American troops are not captive to the destructive policies of an Iraqi government for which sectarian revenge counts for more than national unity and civil peace.

To do that, it needs to demand that Mr. Bush impose firm, enforceable benchmarks on Prime Minister Nuri Kamal al-Maliki — if any American troops are going to remain in Iraq.

In the Senate a nonbinding, bipartisan resolution seems headed toward early passage. Sponsored by Joseph Biden, Chuck Hagel and Carl Levin, it expresses strong opposition to sending more troops, citing the failure of the Iraqi government to keep its past promises on national reconciliation.

Passing this resolution by the widest possible bipartisan margin would be a good first step. It would make clear to the American people (who called for a change last November), to President Bush (who didn't listen) and to Mr. Maliki (who didn't seem to notice) that the days of uncritical American support for Shiite misrule are over.

Already, the newly questioning tone in Congress has pushed Mr. Maliki to distance himself — at least publicly — from his ally Moktada al-Sadr, whose Mahdi Army has been responsible for some of the worst outrages against Baghdad's Sunni population. It is too early to say whether this is a public relations ploy, or whether Mr. Maliki will now allow the Americans and his own army to move against Mahdi Army strongholds. The Senate resolution should make clear that that is the first prerequisite for continued American support.

Hortatory statements are unlikely to change Mr. Bush's mind or Mr. Maliki's behavior, so the Congress will likely have to go further. Both houses will need to find ways to use their power — including the power of the purse — to do what Mr. Bush refuses to do: set and enforce deadlines for the Iraqi government to disarm militias, share oil revenues and reintegrate the Sunni middle class into Iraqi life.

Funding limits that simply freeze the number of troops, like the one Senator Edward Kennedy now proposes, are inadequate. The much more difficult challenge is to figure out ways to compel Mr. Bush to come up with a policy that has at least some chance of letting American troops come home without leaving total chaos behind.

Even if the Congress could stop Mr. Bush from sending an additional 20,000 troops, there will still be 130,000 caught in Iraq's maelstrom.

Congress Plays Bad Cop On Iraq (LAT)

The Los Angeles Times, January 22, 2007

AS SOON AS this week, the Senate could adopt a nonbinding resolution that reads in part: "It is not in the national interest of the United States to deepen its military involvement in Iraq." The House is likely to follow suit.

Whether the final wording of the resolution refers to President Bush's planned movement of 21,500 more U.S. troops to Iraq as an "escalation" or something else (the language may be softened to attract more Republican votes), it would represent a dissent from the surge, the centerpiece of Bush's revised Iraq policy. The resolution would have no effect on the conduct of the war — and any attempt by Congress to meddle in military strategy should be rejected — but it would be seen as a blow to the president.

Maybe it shouldn't be. Congress actually could be doing Bush a favor by disagreeing with him. Ideally, passage of the resolution would create a diplomatic version of the "good cop/bad cop" routine, with Congress playing the role of the bad cop and Bush using its stubbornness as leverage in dealing with Iraqi Prime Minister Nouri Maliki.

DOJ_NMG_0119206

Such a strategy is possible because there is not as much daylight between Bush and his congressional critics as the resolution indicates. In addition to opposing the surge, the resolution — drafted by Sens. Joseph R. Biden Jr. (D-Del.), Chuck Hagel (R-Neb.) and Carl Levin (D-Mich.) — calls for the United States to "transfer, under an appropriately expedited timeline, responsibility for internal security and halting sectarian violence in Iraq to the government of Iraq and Iraqi security forces."

Bush's plan disdains timetables, but it also involves pressuring Maliki to come down hard on his fellow Shiites in the Al Mahdi militia headed by Muqtada Sadr. That pressure seems to be having an effect. Two commanders of that militia complained last week that Maliki, under U.S. pressure, was no longer protecting them. On Friday, U.S. and Iraqi forces arrested one of Sadr's lieutenants.

There is no guarantee that Maliki won't backslide or that the surge will stabilize Baghdad and Al Anbar province as Bush hopes. In going on record against the surge, however, Congress won't — and probably can't — stop it. But the nonbinding resolution could still serve Bush's other objective if the Iraqis take it not literally but seriously as reaffirmation of Bush's pledge that the U.S. commitment in Iraq is not open-ended.

In June, a Senate that was only marginally more Republican than the current body soundly rejected a resolution calling for a withdrawal of U.S. forces to begin by the end of 2006, with no timetable for complete withdrawal. That the current resolution probably will prevail is a reflection not just of the passage of time and the changeover of Congress but also of growing and bipartisan fatigue with the war.

If he is smart, Bush will use that impatience to his advantage in pursuing both aspects of his "new way forward" — a surge in U.S. troops and a message to the Iraqis that the surge is their last, best and temporary hope of U.S. assistance in keeping their country together.

McCain, Graham May Oppose General Casey As Army Chief (Correct) (BLOOM)

By Nadine Elsibai

Bloomberg, January 22, 2007

(Corrects spelling of Lindsey Graham in first paragraph)

Jan. 21 (Bloomberg) -- Senators John McCain and Lindsey Graham, who have strongly backed sending more U.S. troops to Iraq, indicated they may not support a promotion for the current military commander there because of past U.S. mistakes.

McCain, senior Republican on the Armed Services Committee, said on NBC's ``Meet the Press" program that he likely won't support General George Casey's nomination as Army chief of staff because of the ``failed leadership" of the U.S. forces in Iraq. Graham, another Republican member of the panel, said on CNN that Casey will face ``hard questions" during confirmation hearings.

President George W. Bush announced earlier this month he is replacing Casey as commanding general of multinational forces in Iraq and nominating him to the Pentagon post. Casey has been the top commander in Iraq since July 2004, and sectarian violence there has worsened over the past year. McCain is a leading Republican voice on military matters and, along with Graham, has been pushing the president to commit more forces to the fight. Bush announced Jan. 10 he will send 21,500 more soldiers and Marines into Iraq.

``I have very serious concerns about General Casey's nomination," McCain, of Arizona, said. ``I'm concerned about failed leadership, the message that sends to the rest of the military."

The strategy advocated by Casey and General John Abizaid, head of the U.S. Central Command, ``has not produced the outcomes we all desire in Iraq," Graham, of South Carolina, said on CNN's ``Late Edition" program. ``And General Casey will be held to account for the advice he's given in the past."

Changes

Abizaid is retiring. Bush picked Admiral William Fallon to replace Abizaid as head of military operations in the Middle East and Lieutenant General David Petraeus to replace Casey in Iraq.

Before Bush's announcement, the U.S. had about 132,000 troops in Iraq. Casey said last week that the additional troops will be in Iraq until ``late summer." More than 3,000 U.S. military personnel have died since the March 2003 invasion of Iraq, including 12 who were killed in a helicopter crash yesterday, according to the Defense Department. At least 10 more were killed in insurgent attacks or by roadside bombs.

Democratic and Republican lawmakers continued to voice opposition to Bush's strategy. Democratic Senators Carl Levin of Michigan and Joseph Biden of Delaware and Republican Senator Chuck Hagel of Nebraska are sponsoring a nonbinding resolution opposing the addition of more troops to Iraq.

``I want every member of the United States Senate to have to take a position on this," Hagel said on CBS's ``Face the Nation" program. ``We have kids dying every day. It is wrong to put American troops in the middle of a sectarian civil war."

DOJ_NMG_0119207

Levin, chairman of the Senate Armed Services Committee, said on the ``Fox News Sunday'' program that the U.S. should ``keep the pressure on the Iraqis to reach a political settlement and not deepen our military involvement, which adds targets but doesn't add much in the way of pressure.''

Levin has called for the U.S. to set a timetable of four to six months for withdrawing most of its forces from the country and is planning hearings on Bush's strategy.

`Wrong Way'

Biden, chairman of the Foreign Relations Committee, said today that Bush is trying to fix the Iraq problem ``the exact wrong way'' as he and Vice President Dick Cheney maintain that withdrawing from Iraq would only embolden the enemy.

Bush isn't ``listening to his military,'' Biden said on the Fox program. ``He's not listening to his old secretaries of state. He's not listening to his old friends. He's not listening to anybody but Cheney, and Cheney is dead-wrong.''

Congressional Democrats opposed to the plan, along with some Republicans, are exploring options to block Bush's strategy by attaching conditions to future military spending measures or passing legislation that requires the president to ask Congress to authorize a troop increase.

In a recent Newsweek magazine poll, 68 percent of the U.S. public opposed Bush's deployment of more troops to Iraq, including 45 percent who said they were strongly opposed. Twenty-six percent favored the approach.

The poll found that more people had confidence in the new Democratic congressional leaders to make decisions on Iraq, with 55 percent saying they trusted the Democrats more than the Republican president. Thirty-two percent said they had more faith in Bush.

The poll, released yesterday, has a margin of error of plus or minus four percentage points. It is based on interviews of 1,003 adults on Jan. 17 and 18.

McCain May Oppose Pick For Army Staff Chief (WP)

By R. Jeffrey Smith And Walter Pincus

The Washington Post, January 22, 2007

Sen. John McCain (R-Ariz.) said yesterday that he is inclined to oppose President Bush's appointment of Gen. George W. Casey Jr. as the new Army chief of staff, on the grounds that Casey's 2 1/2 -year tenure as U.S. military leader in Iraq was marked by "failed leadership."

McCain, the senior Republican on the Armed Services Committee, which must confirm Casey's appointment, and a likely presidential candidate in 2008, accused Casey of presiding over "a failed policy" in Iraq, in which McCain said Iraqi forces were expected too quickly to assume growing responsibility for security matters there.

Reiterating his support for the troop "surge" to Iraq announced recently by President Bush, McCain said on NBC's "Meet the Press" that U.S. policy had produced Iraqi turmoil so bad that, if no change were made, "within months we would see a total breakdown in Iraq." The result, he said, would be ethnic cleansing between rival religious groups in the capital on the scale of that in Srebrenica, where Serbian military forces slaughtered 8,000 Bosnian Muslims in 1995.

"We can't expect Americans to sit outside Baghdad or outside the borders and watch such a thing go on," McCain said.

While he said he preferred a larger troop buildup than the new 21,500-person deployment proposed by Bush, McCain said the new U.S. military commander in Iraq, Lt. Gen. David H. Petraeus, had assured him that if Petraeus "needed more, he would receive them."

The Senate Foreign Relations Committee is expected to take up resolutions on Iraq on Wednesday, some nonbinding and others that would cap the number of U.S. troops there or reduce future funding for American or Iraqi security forces.

Sen. Joseph R. Biden Jr. (D-Del.), chairman of the committee and co-sponsor of a bipartisan, nonbinding resolution that would put senators on record as opposing Bush's plan, said votes on other approaches would not deliver a muddled message.

"There's an overwhelming . . . consensus that we should deescalate the war," he added during an appearance on "Fox News Sunday."

Sen. Carl M. Levin (D-Mich.), chairman of the Armed Services Committee, said on the same program, "It will be a very powerful message if a bipartisan majority of the Congress say that they disagree with the increased military involvement in Iraq." He added that could only be a first step: "If the president does not take heed to that step, at that point, you then consider another step."

Levin warned, however, "The worst thing we can do is to vote on something which is critical of the current policy and lose it, because if we lose that vote, the president will use the defeat of a resolution as support for his policy."

Unlike Petraeus, Casey has been privately skeptical about the wisdom of deploying five new divisions now. He argued last year that the presence of U.S. troops was fostering an unhealthy Iraqi dependency on foreign assistance. After publicly

DOJ_NMG_0119208

embracing Bush's plan, however, Casey said that it could make Baghdad residents begin to feel safe in their neighborhoods by the end of the summer.

McCain retorted yesterday: "It's taken us nearly four years to get to this desperate situation we're in today. So to think that within three or four months or a short period of time that we could retrieve the situation, I think, is just foolishness."

McCain has previously sought to deny military promotions to officers whose work in Iraq displeased him, including several associated with policies that he said had led to the abuse of U.S. military detainees there. While not promising outright to oppose Casey's appointment, he said, "I have hard questions to ask him, and I'm very skeptical about it."

Levin has said he is inclined to back Casey.

Meanwhile, McCain faces opposition from some Republican lawmakers who disagree with his endorsement of the troop buildup.

Among the members of the Foreign Relations Committee, according to Sen. Chuck Hagel (R-Neb.), "I don't believe there was one Republican senator who came forward with any kind of enthusiasm or any kind of strong support of the president's plan."

"The party that I first voted for on top of a tank in the Mekong Delta in 1968 is not the party I see today," Hagel said on CBS's "Face the Nation" yesterday.

As for the nonbinding resolution, McCain called it "basically a vote of no confidence in the men and women we are sending over there."

McCain, whom polls have shown running neck and neck among potential voters with newly announced Democratic presidential candidate Hillary Rodham Clinton, said yesterday that the senator from New York would make a "serious president." He did not reiterate his February 2005 comment that she would make a "good president."

U.S. Troops' Deadly Weekend (LAT)

By Borzou Daragahi

The Los Angeles Times, January 22, 2007

BAGHDAD — Two Marines were killed Sunday in Al Anbar province west of the capital, bringing the weekend U.S. death toll to at least 27, a dramatic increase in fatalities that comes as President Bush is trying to convince a wary public of his plan to escalate the military presence in Iraq.

The U.S. military also reported that at least five more U.S. soldiers and one Marine had died in separate combat incidents in Baghdad and Al Anbar on Saturday, the third-deadliest day for American forces since the March 2003 invasion of Iraq.

Another 44 Iraqis were killed or found dead in political and sectarian violence, including the bombing of a bus in a middle-class Shiite Muslim neighborhood of Baghdad that left seven dead and 15 injured.

A British soldier was killed Sunday when his vehicle struck a roadside bomb in the southern city of Basra. Four British soldiers were injured in the blast.

The deaths come as the U.S. begins to deploy thousands of additional troops into Iraq, the first of 21,500 meant to bolster forces that must confront Shiite and Sunni Arab gunmen in a complex peacekeeping and counterinsurgency mission.

The bulk of the U.S. deaths Saturday came in the crash of a Black Hawk helicopter northeast of Baghdad. Twelve soldiers were killed.

U.S. officials have not announced the cause of the crash.

A witness and an insurgent group said that hostile fire had struck the aircraft. CNN, reporting from Washington, quoted an anonymous Pentagon official saying that the crash was probably caused by insurgent fire.

In Saturday's most audacious guerrilla attack, gunmen in sport utility vehicles and uniforms stormed a provincial security building in Karbala as U.S. and Iraqi officials discussed plans to protect pilgrims during an upcoming Shiite religious festival. The gunmen made their way past checkpoints and burst into the building, guns blazing.

Five U.S. soldiers were killed and three injured in the attack.

Karbala is a Shiite stronghold that abuts the Sunni Arab heartland. U.S. and Iraqi officials would not disclose whether they suspected Shiite militants or Sunni insurgents in the attack.

"The mystery that accompanied this operation was so deep that we can't accuse any side," Aqil Khazali, the governor of Karbala province, told reporters.

The city of Karbala has fallen under the sway of radical Shiite cleric Muqtada Sadr and his Al Mahdi army. But officials loyal to Sadr's movement, which on Sunday ended a largely symbolic boycott of the Iraqi government, denied that the Al Mahdi army had staged the assault.

"There is an extremist side that wants to pretend that this act is done by the Sadr movement, but everybody knows that the Al Mahdi army doesn't have such abilities," said Haidar Tarfi, a Sadr representative in Najaf.

DOJ_NMG_0119209

The Sadr movement's decision to again embrace the political process may help bolster Iraq's weak central government, which attempts to administer the country from behind the walls of the heavily fortified Green Zone.

U.S. officials have described Sadr's movement as the single greatest threat to the stability of Iraq and the primary instigator of sectarian violence.

White House officials, over the objections of many in Congress and a majority of Americans, have launched their plan to increase the number of troops in Iraq in hopes of stabilizing the country.

"I think that this is our chance now, our last chance, to have a new strategy which will give us a chance to prevail," Sen. John McCain (R-Ariz.), a supporter of Bush's plan, said in an interview on NBC's "Meet the Press."

The plan's stiffest congressional opponents include some Republicans, including Sen. Chuck Hagel of Nebraska, who said in an interview on CBS' "Face the Nation" that lawmakers should vote up or down on a resolution to stop the president's troop increase.

"I want every member of the U.S. Senate to have to take a position on this," Hagel said. "We have kids dying every day. It is wrong to put American troops in the middle of a sectarian civil war."

Analysts say Bush's plan may or may not work, but it will surely entail higher U.S. casualties, which will deepen the war's unpopularity.

"The bind Bush is in is that most Americans have pretty much had it with this whole venture," said Wayne White, a former State Department intelligence analyst who is now at the Middle East Institute, a Washington think tank.

"Throwing even more men into Iraq is seen as throwing good money after bad," he said. "The strategy he's embarking on will cause more U.S. casualties. There's no way around it."

Some U.S. military commanders in Iraq say the sacrifices will prove worthwhile.

"We're winning in places that don't make the news," Marine Col. William Crowe, commander of the 7th Marine Regiment, said at a ceremony Saturday in which the 2nd Marine Regiment assumed responsibility for part of the Sunni-dominated Al Anbar province.

daragahi@latimes.com

Times staff writer Tony Perry in Al Asad and special correspondents in Baghdad, Hillah, Kirkuk and Najaf contributed to this report.

At Least 27 U.S. Troops Killed In Iraq Over Weekend (CHIT)

By Borzou Daragahi

Chicago Tribune, January 22, 2007

BAGHDAD -- At least 27 U.S. troops were killed in a helicopter crash and insurgent attacks across Iraq over the weekend in one of the deadliest stretches for the American military here in nearly two years.

The surge in fatalities comes just days before President Bush's State of the Union address , which is likely to inject a note of urgency into the debate over his Iraq policy.

The weekend's deadliest episode was the crash of a Black Hawk helicopter northeast of Baghdad on Saturday afternoon, killing all 12 U.S. soldiers aboard. The military initially had said 13 were killed but revised it to 12 early today.

South of the capital in the Shiite Muslim city of Karbala, men armed with grenades, mortars and assault rifles swarmed a provincial security building manned by U.S. and Iraqi forces, the military said. At least five U.S. soldiers were killed and three wounded.

Today, the U.S. military reported the deaths of five more troops, four soldiers and a Marine assigned to Regimental Combat Team 5 in Anbar province.

Five more U.S. troops and at least 59 Iraqis were also reported killed or found dead Saturday and today in politically motivated violence as Iraqi and American forces stepped up an effort to target Shiite militiamen and Sunni Arab insurgents.

A British soldier was also killed today when a roadside bomb struck his vehicle in Basra. Four British soldiers were also injured in the blast.

U.S. military officials said the cause of Saturday's helicopter crash had yet to be determined, but Iraqi sources said it was shot down. A witness said he saw ground fire bring down the aircraft, and an insurgent group claimed responsibility for the attack in an Internet posting that could not be authenticated.

Iraqi officials and witnesses said the crash took place near the town of Buhriz in the region of Tarefiya, a rural Sunni enclave of canals and wheat fields about six miles south of Baqubah, the capital of Diyala province. The area is known as an insurgent stronghold. A recent joint U.S.-Iraqi military offensive focused on Diyala.

A message posted on the Web by the Mujahedin Army, an insurgent group that operates out of Baghdad and Diyala provinces, claimed responsibility for the attack.

DOJ_NMG_0119210

"The helicopter was downed by [an] antiaircraft [rocket] that belongs to the Mujahedin Army in Buhriz," said the statement, posted to a Web site where insurgent claims are frequently trumpeted.

An Iraqi witness, who spoke on condition of anonymity, said the helicopter was felled by ground fire, but the U.S. military could not confirm the account. Lt. Col. Josslyn Aberle, a military spokeswoman in Baghdad, said that the crash took place northeast of Baghdad about 3 p.m.

"All passengers and crew were military service members," she wrote in response to an e-mailed query, adding that more information was expected today. So far no additional information has been released. The military withheld names of the victims pending notification of family members.

Saturday's crash was the first since a U.S. Marine CH-53 transport chopper went down in an accident in Al Anbar province Dec. 11, killing one Marine.

Insurgents last shot down a helicopter on May 14, near the village of Yousifiya south of the capital; two soldiers died in that attack.

At least 25 soldiers were killed Saturday. The deadliest day for American service members in Iraq was Jan. 26, 2005, when 37 U.S. troops were killed, 31 of them in the accidental crash of a CH-53E Super Stallion helicopter in Al Anbar.

The Karbala clash erupted as U.S. and Iraqi officials planned security for the Ashura festival, an annual Shiite pilgrimage. Karbala has come under the sway of Shiite militiamen loyal to radical cleric Muqtada Sadr, but it also is adjacent to Sunni areas. A statement released by the military Saturday did not clarify whether the attackers were suspected Sunni or Shiite gunmen.

Iraqi officials said the audacious attack began when a half-dozen vehicles filled with men wearing official-looking uniforms made their way past a checkpoint and burst into the provincial security building, guns blazing.

Americans view Sadr's movement as the country's biggest threat. Today lawmakers close to Sadr, the Shiite cleric, announced they were ending a largely symbolic boycott of the government.

The sharp rise in American military deaths comes as the U.S. intensifies its efforts to curb violence in Baghdad, with Pentagon planners and White House officials pushing forward with a plan to increase the number of U.S. soldiers in Iraq by 21,500.

The first of the additional troops, the 3,200 soldiers of the 2nd Brigade of the 82nd Airborne Division, have arrived in Baghdad and will be "fully operational" within two weeks, the U.S. military said today in a statement.

Their mission will be to help Iraqi security forces "clear, control and retain key areas" of Baghdad "to reduce violence and to set the conditions for a transition to full Iraqi control of security in the city," the military said.

Bush and other supporters of the plan say it is an essential move to give the Iraqi government breathing space to crack down on violent groups and heal political wounds.

Opponents, including Democratic Party leaders in Congress and some skeptical Republicans, consider it a risky escalation that could bolster anti-American sentiment in Iraq and across the Middle East, and lead to more U.S. casualties. Since the 2003 invasion of Iraq, 3,047 U.S. troops have died in Iraq, according to icasualties.org.

Weekend Violence Includes One Of U.S. Troops' Deadliest Days In Iraq (USAT)

By Rick Jervis And Jim Michaels, Usa Today

USA Today, January 22, 2007

BAGHDAD — The U.S. military on Sunday added six to the number of American servicemembers killed a day earlier, bringing Saturday's death toll to 25 and making it one of the deadliest days of the war for U.S. troops.

Two Marines also were killed Sunday in separate incidents in western Anbar province, according to a military statement today.

The spike in deaths came as U.S. reinforcements streamed into Baghdad as part of the White House's new strategy to pacify the capital and western Iraq.

The U.S. military said Sunday that four soldiers and a Marine died Saturday from wounds suffered in separate clashes in Anbar province, center of Iraq's Sunni insurgency. Separately, a soldier was killed by a roadside bomb northeast of Baghdad, the military said.

The military said it is continuing to investigate the cause of a helicopter crash on Saturday that killed 12 soldiers northeast of Baghdad. Investigators are looking into the possibility the helicopter was brought down by enemy fire.

The military is also investigating an attack on a government center in Karbala, a Shiite holy city. Five U.S. soldiers died and three were wounded Saturday in that clash. Two other soldiers also died Saturday in separate incidents.

The 25 U.S. fatalities on Saturday made it the third-deadliest day of the war. The bloodiest day was Jan. 26, 2005, when 37 U.S. troops died, 31 in a helicopter crash. Twenty-eight U.S. service personnel died on the third day of the U.S.-led invasion in March 2003.

DOJ_NMG_0119211

In Karbala, the provisional governor said U.S. troops battled militia members who attacked his office ahead of a 10-day Shiite religious festival. Akeel al-Khazaali said the gunmen wore military uniforms and drove black SUVs similar to those used in official convoys.

Renewed violence over the weekend coincided with the arrival in Baghdad of the first U.S. reinforcements who are part of a plan to boost troop levels in Iraq by 21,500 American servicemembers. The additional troops will be placedin Baghdad and Anbar province.

A brigade of the 82nd Airborne Division, about 3,200 soldiers, arrived in Baghdad and will be operating in the capital by early next month, the U.S. military said. "The brigade adds operational flexibility that will assist in securing the population," Lt. Gen. Ray Odierno, the second-ranking U.S. commander in Iraq, said in a statement.

Iraqi officials have pushed to quicken the transfer of full control of Iraq's military to the government. On Sunday, members of the parliamentary bloc led by rebel Shiite cleric Muqtada al-Sadr said they were ending their nearly two-month government boycott, saying they have won an agreement to speed up the turnover of command to the Iraqi government.

The lawmakers said they reached a compromise with the government of Prime Minister Nouri al-Maliki involving a timetable for Iraqi forces to take over security and the withdrawal of U.S. forces. They did not release details. Al-Sadr's loyalists withdrew from parliament and the Cabinet in November to protest al-Maliki's decision to meet with President Bush in Amman. Thirty of the 275 lawmakers and six of the 38 Cabinet members are in al-Sadr's bloc.

"We announce our return to parliament, we will attend today's session," Bahaa al-Araji, one of the 30 lawmakers loyal to al-Sadr, said during a news conference Sunday.

U.S. Ambassador Zalmay Khalilzad and top U.S. commanders have called for al-Sadr's Mahdi Army militia to be disarmed, accusing it of operating Shiite death squads.

U.S. Toll In Iraq Is 27 For Deadly Weekend (NYT)

By Damien Cave

The New York Times, January 22, 2007

BAGHDAD, Jan. 21 — The United States military said that two marines died Sunday in western Iraq and that an additional seven service members died Saturday. The deaths brought the weekend toll to 27 and made Saturday the third-deadliest day for United States forces since the war here began.

Seven of the deaths announced Sunday, including those of three marines, were caused by “enemy action” in Anbar Province, a restive stronghold of the Sunni insurgency, while another soldier was killed Saturday in Baghdad by a roadside bomb, the military statements said.

New details also emerged about clashes on Saturday in the Shiite holy city of Karbala, which left five Americans dead. Lt. Col. Scott R. Bleichwehl, an American military spokesman, said the gunmen who stormed the provincial governor’s office during a meeting between American and local officials were wearing what appeared to be American military uniforms in an effort to impersonate United States soldiers.

The sophisticated attack hinted at what could be a new threat for American troops as they start a fresh security plan centered on small bases in Baghdad’s bloodiest neighborhoods, where soldiers will live and work with Iraqi forces. Military officials have said that one of their greatest concerns is that troops will be vulnerable to attack from killers who appear to be colleagues.

It is not uncommon for gunmen to impersonate Iraqi security forces, but this seems to be the first time that attackers have tried to disguise themselves as Americans.

Colonel Bleichwehl declined to provide further details about the Karbala attackers, emphasizing that the attack was still being investigated. But Iraqi officials said the gunmen disguised their intent with uniforms, American flak jackets, guns and a convoy of at least seven GMC sport utility vehicles, which are usually used by American officials in Iraq.

Karbala’s provincial governor, Akeel al-Khazaali, said at a news conference that the local police at a checkpoint on the city’s edge waved the vehicles through because they believed the convoy held important Americans. At other checkpoints, the police said, the vehicles sped through without stopping. In one case, some of the impersonators fired their weapons, and when they reached the provincial offices, they simply attacked.

The police in Babil said the disguises were imperfect — officers at checkpoints saw that the men were bearded, they said — but sufficient to get the gunmen through a crowded, heavily patrolled city without being searched.

After the attack, which was repelled by American forces, the police said, the gunmen fled north into Babil Province, where several sport utility vehicles matching the description of those used in the attack were found Sunday.

DOJ_NMG_0119212

Mr. Khazaali said the identities of the gunmen were unknown. Other Iraqi officials said the clues pointed to Sunni groups based in Elbu Alwan, a Sunni stronghold about 25 miles north of Karbala in Babil Province. Four of the vehicles were found there early Sunday morning, the police said.

They said American and Iraqi troops immediately surrounded the town and were still searching the area on Sunday.

Some police commanders in Babil Province and Mr. Khazaali said one of the recovered vehicles in Elbu Alwan held three American bodies and a fourth soldier who was critically wounded. Mr. Khazaali also said that at least one additional American had been kidnapped. But American military officials said they were not missing anyone, and other police commanders in Babil said the men found in the vehicle were gunmen.

The sport utility vehicles also held clues of the attackers' elaborate efforts to pass as American. One had a sign on its back window warning drivers to stay back, in English and Arabic, the authorities said, a close copy of those used on some official American vehicles. They also said a bag of civilian American clothing, guns and body armor had been found in the vehicles.

The police said two other empty vehicles were found in Sadda, about 15 miles north of Hilla, the major city in the province.

Uncertainties also lingered Sunday about Saturday's deadliest incident, the crash of a Black Hawk helicopter north of Baghdad that left 12 service members dead. Though local authorities said the helicopter was shot down, the military said once again on Sunday that the crash was still under investigation. It provided no information about the cause of the crash.

The deadliest day for American service members in Iraq also involved a helicopter crash. On Jan. 26, 2005, 37 uniformed Americans died, including 31 when a Marine helicopter crashed in a sandstorm. The second-deadliest day was March 23, 2003, when 28 Americans were killed and Pfc. Jessica Lynch, among others, was captured.

In Baghdad, lawmakers loyal to the militant cleric Moktada al-Sadr ended their nearly two-month boycott of Parliament and ferociously lashed out at American officials for their recent arrest of a cleric and senior adviser to Mr. Sadr, Abdel Hadi al-Daraji.

Falah Shashal, one of 30 members in the bloc supporting Mr. Sadr, said the American raid, in which one of Mr. Daraji's guards was killed, "was inhuman and against human rights."

Two separate car bombs in the capital killed at least seven people and wounded 20 more, an Interior Ministry official said. A roadside bomb killed a British soldier north of Basra in southern Iraq, according to the British military.

In Mosul, the Iraqi police detained three Iranians on Saturday, said Wathiq al-Hamdani, the police chief for Nineveh Province. He said the men were found without passports and claimed that they had permission to travel in an adjacent Kurd-controlled area and were lost. American forces detained six Iranians on Jan. 11 after raiding an office in Erbil, a major city in Iraqi Kurdistan.

In Dibis, in Kirkuk Province, gunmen fired on guards protecting local oil facilities on Sunday, setting one oil well on fire. Iraq's oil minister, Hussein al-Sharistani, said that such attacks appeared to be on the rise. He said at a news conference that 289 Iraqi oil workers had been killed in 2006, and an additional 179 wounded. He called on Iraqis to inform the authorities if they saw anyone "target the interests of Iraq and those who kidnap ministry staff from the work sites to stop Iraq from exporting its oil."

Disguises Used In Attack On Troops (WP)

By Ernesto Londoã±o

The Washington Post, January 22, 2007

BAGHDAD, Jan. 21 -- The armored sport-utility vehicles whisked into a government compound in the city of Karbala with speed and urgency, the way most Americans and foreign dignitaries travel along Iraq's treacherous roads these days.

Iraqi guards at checkpoints waved them through Saturday afternoon because the men wore what appeared to be legitimate U.S. military uniforms and badges, and drove cars commonly used by foreigners, the provincial governor said.

Once inside, however, the men unleashed one of the deadliest and most brazen attacks on U.S. forces in a secure area. Five American service members were killed in a hail of grenades and gunfire in a breach of security that Iraqi officials called unprecedented.

The attack, which lasted roughly 20 minutes, came on a day when the United States lost at least 20 other troops, including a dozen in a helicopter crash, making it the third most lethal day for American forces in Iraq.

Meanwhile, the military announced the arrival of 3,200 troops of the 82nd Airborne Division's 2nd Brigade Combat Team, the first unit to reach Baghdad as part of a 21,500-troop increase that the Bush administration hopes will restore order in the violent capital.

"Soldiers from the 82nd come to us ready to engage in a wide variety of operations in support of the Iraqi Baghdad Security Plan," Lt. Gen. Raymond T. Odierno, the second-ranking U.S. commander in Iraq, said in a statement. "The brigade adds operational flexibility that will assist in securing the population."

U.S. military officials said Sunday that they could not discuss the attack in Karbala in detail because it remained under investigation. But they said the version of events provided by the governor's office was consistent with their preliminary findings.

After arriving at the Provincial Joint Coordination Center in Karbala, 60 miles southwest of Baghdad, the attackers detonated sound bombs, Iraqi officials said. "They wanted to create a panic situation," said an aide to Karbala Gov. Akeel al-Khazaali, who described the events with the governor's permission but on condition of anonymity because he fears reprisals.

The men then stormed into a room where Americans and Iraqis were making plans to ensure the safety of thousands of people expected to visit the holy city for an upcoming holiday.

"They didn't target anyone but the American soldiers," the governor's aide said.

After the attack, the assailants returned to their vehicles and drove away. It was unclear how many people participated, and the men's identities and motive remained unclear, but the attack was particularly striking because of the resources and sophistication involved, Iraqi officials said.

The men drove off toward the city of Babil, north of Karbala, where they shot at guards at a checkpoint, said Capt. Muthana Ahmad, a police spokesman. Vehicles later recovered contained three bodies and one injured individual. The U.S. military took possession of the vehicles, the spokesman said.

In December 2004, a U.S. base in Mosul was penetrated by a suicide bomber who killed 22 people, including 14 U.S. service members. But Saturday's attack appeared to present a new danger to authorities in Iraq: assailants who disguise themselves as officials and travel in convoys.

"The way it happened and the new style, the province has not seen before," said Abdul al-Yasri, head of the provincial council in Karbala. "And this will make us insist on carrying on the security procedures even on official delegates and diplomats when they are coming to Karbala province."

Military officials said Sunday that the cause of the helicopter crash, which killed 12 soldiers northeast of Baghdad on Saturday, also remained under investigation. They said they could not confirm accounts by Iraqi officials and civilians who said it was shot down by insurgents in a Sunni Muslim-dominated area of Diyala province. U.S. officials initially reported that 13 soldiers died in the crash.

The military also announced that two Marines were killed in separate combat incidents Sunday in Anbar province in western Iraq. The military said four soldiers and one Marine were killed in combat Saturday in Anbar. The service members' names were withheld pending notification of their relatives, officials said.

The British military said that a roadside bomb in the southern city of Basra killed one British soldier and wounded four, [a] news agency reported.

Reports of carnage targeting Iraqis also continued Sunday. A passenger stepped off of a public minivan in central Baghdad, leaving behind a bomb that exploded, killing four police officers and three civilians, said Gen. Sadoun Qasim of the Iraqi Interior Ministry.

Elsewhere in Baghdad, at least five people were killed by two improvised explosive devices.

Four Iraqis, including a 1-year-old and a 5-year-old, were killed Friday by an improvised explosive device in the city of Yusufiyah, south of Baghdad, the U.S. military said in a statement. An ambulance transporting one of the wounded struck another roadside bomb en route to the hospital. The second blast caused no injuries.

In Ramadi, 60 miles west of Baghdad, a hospital official said the body of a fighter from the insurgent group al-Qaeda in Iraq was taken to the hospital after being discovered in a house. The 31-year-old man had been carrying a fake Iraqi passport and a real Saudi one, according to Muhammad Ismail, a doctor at the hospital.

Sadr Bloc Ends Boycott Of Iraqi National Assembly

The parliamentary bloc of radical Shiite cleric Moqtada al-Sadr announced an end to a boycott that has kept Iraq's young National Assembly semi-paralyzed for two months.

The Sadr bloc returned to the assembly after a parliamentary committee and the speaker, Mahmoud al-Mashhadani, agreed to a series of demands, said Falah Hasan Shenshel, a member of the Sadr bloc.

The demands included establishing a timetable for the buildup of Iraqi troops and the withdrawal of U.S. troops, and a condition that the presence of foreign troops would not be extended without a vote by the assembly, Shenshel said. U.S. troops should retreat from Iraqi cities and return to their bases by the end of August, he said.

"By doing so, America would confirm that it came to Iraq as a liberator and not as an occupier," Shenshel said.

Sadr's movement has 30 seats in the 275-member parliament, and his political loyalists have called for a prompt withdrawal of U.S. troops. He is widely regarded as a focal instigator of the sectarian violence that has ravaged the country in recent months.

Also Sunday, two officials said that Prime Minister Nouri al-Maliki had ended his protection of Sadr's militia, the Mahdi Army, after U.S. intelligence convinced him that the group was infiltrated by death squads, the Associated Press reported. The officials spoke on condition of anonymity because the information was confidential.

DOJ_NMG_0119214

"Al-Maliki realized he couldn't keep defending the Mahdi Army because of the information and evidence that the armed group was taking part in the killings, displacing people and violating the state's sovereignty," one official said.

U.S. Forces Look To Iraqi City For Progress (LAT)

By Alexandra Zavis

The Los Angeles Times, January 22, 2007

MOSUL, IRAQ — The date 11/11 is so ingrained in the memory of residents of this ancient citadel that it requires no further explanation than 9/11 would in the United States.

On Nov. 11, 2004, the city that had been heralded as an American success story fell to Sunni Arab insurgents and the local police melted away.

It took U.S.-led troops months of hard fighting to reclaim Mosul, a diverse city of about 2 million people wedged between the Kurdish north and Arab south, about 60 miles from the Syrian border.

More than two years later, U.S. officials are again touting the city as an example of progress in an intensified effort to train Iraqi forces to take over security so American troops can begin heading home.

Thousands of new police officers and soldiers have been recruited here and across northern Iraq. Their U.S. handlers say they are better trained, better equipped and more motivated than their predecessors, allowing American forces to reduce their presence in the six northern provinces by more than a third over the last year, to about 19,500.

The 2nd Iraqi Army Division assumed security control over Mosul on Dec. 22 and is expected to fall under the command of Iraqi ground forces today, completing a hand-over that is a cornerstone of the U.S. exit strategy in Iraq.

Still a violent place

Yet the city where former Iraqi leader Saddam Hussein's feared sons, Uday and Qusai, died in a gunfight with U.S. forces in 2003 is far from subdued. Bombings and mortar barrages rattle residents almost daily, and neighborhoods remain hotbeds of the Sunni Arab insurgency. Assassins have killed police officers, journalists, university professors, even a popular singer.

Senna Ahmed, a 27-year-old primary school teacher, said she had not taken her three children for a walk in more than a year. She lives in a predominantly Sunni neighborhood of drab concrete homes that is a focus of violence.

Every day, she said, the streets are clogged with checkpoints — some run by the police, others by Americans, and some by insurgents. Fighters pull up at high speed, set up weapons and start firing at the security forces, sending residents scurrying indoors to escape the inevitable riposte.

"We are caught between the hammer of the insurgents and the anvil of the troops," she said.

U.S. military officials think insurgents inspired by Al Qaeda and funded by exiled members of Hussein's Baath Party are trying to regain a foothold in the city. Last month, the U.S. military announced the capture of a senior Al Qaeda in Iraq leader who they said had returned to Mosul to reorganize the insurgency after spending months directing operations in west Baghdad.

With the U.S. planning to deploy about 17,000 additional troops in Baghdad, officials predict that insurgents will soon redirect many of their activities to cities such as Mosul and nearby Tall Afar. But the province's governor and police and army chiefs say that Mosul will not fall again.

"We sacrificed our blood for this country," said Duraid Kashmoula, who succeeded his slain brother as governor of Nineveh province and has survived more assassination attempts than he can count. "We are not going to let it go now."

Yet he and others blanch at the possibility of American troops leaving the region, which receives little support from Baghdad.

"It is not a good idea for them to leave right now," said Mosul's police chief, Gen. Mohammed Wathiq.

Nobody wants a repeat of 11/11, they said.

No match for insurgency

In the year after the U.S.-led invasion in 2003, the United States spent millions in Mosul refurbishing schools and factories, setting up a police force and fire department, and forming one of the first city councils to draw in members of all the major ethnic and religious groups. At the time, the councils were heralded as a model of representative government.

But when U.S. forces reduced their presence, the police force proved no match for the insurgency, leaving Kashmoula to defend the governor's palace with a handful of bodyguards.

U.S. and Iraqi officials think they have again turned the city around. This time, they say, they have trained and equipped two divisions of soldiers, about 8,000 troops each, and more than 18,000 police officers for the province, of which Mosul is the capital.

Police officers and soldiers who before rarely left their bases are guarding checkpoints, cruising bustling shopping streets, collecting intelligence, conducting raids and breaking up insurgent cells, with U.S. forces taking an increasingly secondary role, American officials said.

DOJ_NMG_0119215

When insurgents attack, the local security forces swarm to the fight, said Army Col. Steve Townsend, commander of the 3rd Stryker Brigade Combat Team, 2nd Infantry Division, based in Ft. Lewis, Wash.

"Sometimes they will say to us, 'Why don't you stay on the [base] today? We'll take care of you,' " said Lt. Col. Fred Johnson, Townsend's deputy. "That's pretty powerful."

The U.S. effort in Mosul, they said, has benefited from close ties with a group of strong Iraqi leaders, including Kashmoula and Wathiq, who meet regularly over endless rounds of sweet tea to coordinate security in the city.

Wathiq regularly goes on patrols with his forces and never misses an opportunity to promote their successes on television.

He strode into his office one Friday morning, normally a day off, for an early morning security meeting with U.S. commanders. He told them he had been out on patrol until 5 a.m., and stopped at home only long enough to change clothes.

"In 2004, there was no security, no peace. Now we are maybe 75% secure," he said, as glasses of tea were passed around the room, which was barricaded behind layers of concrete walls and concertina wire.

As if on cue, a loud explosion rocked the building. Wathiq reached for the phone and barked questions. A suicide car bomber had just plowed into an army convoy, he informed his visitors. There were injuries, but no one was killed.

The main problem, he continued, is the justice system. Police and soldiers are making arrests, but judges are afraid to dispense harsh sentences.

"The terrorists know where they live, and they are afraid," he said, before tucking a pistol into his waist and racing off in a heavily armed convoy to watch a police team play an army squad in a soccer match.

Lack of trust all around

In a bid to counter the problem, the Nineveh criminal court has recently started bringing judges up from Baghdad to try terrorism cases, securing death sentences against at least five defendants, according to local news reports.

Sports matches aside, there remains deep distrust between Wathiq's locally recruited police officers, most of them Sunni Arabs, and the city's predominantly Kurdish soldiers, who were brought in from the north by the U.S. military to help fill the security vacuum in 2004.

Army commanders accuse the police rank-and-file of ties to the insurgency. The police and some residents treat the soldiers like outsiders.

Corruption and inefficiency plague both forces. Residents grumble that police officers are as likely to commit crimes as to solve them. And it can take months for ammunition, spare parts and other crucial supplies to reach the units.

Chronic electricity and fuel shortages compound the misery. Residents say they get only a few hours of power a day and can find no diesel to run generators or gas to heat their homes.

Iraqi officials worry that if services don't improve, public support could swing back to the insurgency.

"The locals are becoming our enemies because of the bad services they are getting," said Brig. Gen. Aziz Abdal Hussein, a former army commander who heads Mosul's Joint Coordination Center, the Iraqi equivalent of a 911 system.

His biggest concern is the legions of young men with no jobs. They are easy prey for insurgents willing to pay $100 to plant a bomb.

"If we don't find them jobs," he said, "the terrorists will."

Hawkish Gates Sees More Force As Leverage (NYT)

By David S. Cloud

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Less than a month after Defense Secretary Robert M. Gates took office, his imprint on American military strategy is beginning to show.

Mr. Gates, it turns out, is a hawk.

In just the last two weeks, he has supported deepening the American military commitment in Iraq, spoken approvingly of sending more troops to Afghanistan and, after dispatching a second American aircraft carrier to the Persian Gulf, declared that negotiations with Iran right now would be futile.

But a hawk may not be all he is. His favorite quotation from history, he told reporters traveling with him this week for meetings with allies and commanders in Europe and the Middle East, is from Frederick the Great, the 18th century Prussian monarch and gifted musician: “Negotiations without arms are like music books without instruments.”

Or, put another way, it takes military power to create the leverage necessary to make negotiations fruitful.

DOJ_NMG_0119216

Mr. Gates seems to be hoping that a short-term application of military might can shift the balance of power in the region sufficiently to make eventual political settlements — between Shiites and Sunnis in Iraq, with Taliban insurgents in Afghanistan and even with the ayatollahs in Iran — more plausible for the United States than they appear right now.

It is too early to say whether this new approach will work, or even whether Mr. Gates's views will ultimately drive decisions in an administration where President Bush himself has rarely shown interest in that sort of strategic thinking.

But there is no mistaking the course change at the Pentagon.

Already there are signs, some large and some small, that Mr. Gates would like to discard assumptions that have dictated how the Bush administration has fought in Iraq.

The most far-reaching of those has been the idea, promoted by his predecessor, Donald H. Rumsfeld, that the American military should be deployed with the fewest number of forces necessary to do the job.

In practice, many critics inside and outside the military say, that has meant that the Army and Marine Corps have never had adequate force levels to do the job in Iraq.

Mr. Bush's plan to send more than 20,000 additional troops to Iraq was not Mr. Gates's idea, but he quickly supported it after joining the administration last month, even overruling military commanders who asked initially for only about 7,000 more troops.

Mr. Gates does seem to share Mr. Rumsfeld's concern that sending more American troops will only delay the day when Iraq's government will assume greater responsibility for security.

But rather than withhold additional troops altogether, Mr. Gates has insisted that the additional forces are a source of leverage over the Iraqi prime minister, Nuri Kamal al-Maliki.

He has emphasized repeatedly that the American troop buildup, which is happening over a period of months, could be halted if Iraq's Shiite-dominated government does not deliver on promises to send its own troops to Baghdad and not to interfere with operations against Shiite death squads in Baghdad.

Perhaps the biggest test of Mr. Gates's influence will be whether the United States follows through on this threat if Mr. Maliki does not comply with those promises.

Mr. Gates's formative experience in government came over a three-decade career as a Soviet specialist in the Central Intelligence Agency.

He argued in a 1999 speech, almost a decade after he stepped down as C.I.A. director, that billions of dollars in covert aid, including Stinger missiles, to the Afghan rebels fighting the Soviet occupation in the 1980s enabled them to "fight the vaunted Soviet Army to a standoff and eventually force a political decision to withdraw."

At its height, the Soviet deployment to Afghanistan was over 100,000 troops, more than double the current American and NATO force level in Afghanistan, and yet the Soviets still retreated in defeat.

In some ways, the United States, as an occupying army in both Afghanistan and Iraq, is dealing with the same difficulties the Soviets faced then.

How can it avoid the same fate? Mr. Gates seems to think it can be done by, in addition to pressuring Mr. Maliki, bringing pressure to bear on other countries to help stabilize the region.

Hopscotching around the Persian Gulf last week, Mr. Gates met with leaders from Saudi Arabia, Qatar and Bahrain, appealing to those Sunni governments to urge their fellow Sunnis in Iraq to reach a political accommodation with the Mr. Maliki's Shiite-dominated government.

His warning to the Persian Gulf kingdoms was blunt: If Iraq falls apart, the Iranian Shiites will gain power in the region, to the Sunnis' disadvantage.

Mr. Gates also seems to think there might be a way to restrain Iran's nuclear ambitions and its meddling in Iraq, short of going to war against Iran. He mused publicly last week that negotiations between the United States and Iran might one day make sense, if the United States could regain "leverage" over the Iranians.

How to do that? As Frederick the Great might have said, send in more troops and another aircraft carrier first.

Al-Maliki Turns On Shi'ite Militia (WT/AP)

By Steven R. Hurst, Associated Press

The Washington Times, January 22, 2007

BAGHDAD -- Iraq's prime minister has stopped protecting Shi'ite cleric Muqtada al-Sadr's militia because U.S. intelligence convinced him that the group was infiltrated by death squads whose actions were leaving him isolated, two officials said yesterday.

DOJ_NMG_0119217

In a desperate bid to fend off an all-out U.S. offensive, the radical anti-American cleric on Friday ordered the 30 lawmakers and six Cabinet ministers under his control to end their nearly two-month boycott of parliament. They were back at their jobs yesterday.

Sheik al-Sadr already had ordered his militia fighters not to display their weapons. They have not, however, ceded control of the formerly mixed neighborhoods that they captured by killing Sunnis or forcing them to abandon their homes and businesses.

The U.S. death toll from Saturday climbed to 25, as the military reported yesterday that six more troops had died that day, the deadliest in two years.

The latest military reports said that four soldiers and a Marine had died during combat Saturday in Anbar province and that one soldier was killed in a roadside bombing northeast of Baghdad.

Nineteen of the deaths were reported Saturday: 12 in a Black Hawk helicopter crash, five in an attack on a security meeting in the Shi'ite holy city of Karbala and two in roadside bomb attacks elsewhere. It was the third highest one-day toll of the war.

Prime Minister Nouri al-Maliki's turnaround on the Mahdi Army was surprising. As recently as Oct. 31, he had intervened to end a U.S. blockade of Sadr City, the Shi'ite enclave in Baghdad that is the militia's headquarters. The group has been held responsible for much of the sectarian bloodshed that has turned the capital into a battle zone in the past year.

Sometime between Oct. 31 and Nov. 30, when the prime minister met President Bush in Amman, Jordan, Mr. al-Maliki began to believe the U.S. intelligence reports and other evidence about the militia, the two government officials said.

"Al-Maliki realized he couldn't keep defending the Mahdi Army because of the information and evidence that the armed group was taking part in the killings, displacing people and violating the state's sovereignty," said one official.

Both he and a second government official who confirmed the account refused to be identified by name.

"The Americans don't act on rumors but on accurate intelligence. There are many intelligence agencies acting on the ground, and they know what's going on," said the second official, confirming the Americans had given Mr. al-Maliki overwhelming evidence about the Mahdi Army's deep involvement in the sectarian slaughter.

Earlier this month, Mr. Bush and Mr. al-Maliki separately announced a new security drive to cut off the sectarian violence in the capital and surrounding regions.

Mr. Bush announced that an additional 21,500 U.S. troops would be sent to Iraq, and Mr. al-Maliki promised a similar number of forces, who will take the lead in the overall operation.

Iraq's Special Forces Command division has teamed with the Americans since late last year for a series of pinpoint attacks in which at least five top Mahdi Army figures have been killed or captured.

The neighborhood-by-neighborhood sweep, expected to begin in earnest by next month, will target Sunni insurgents, al Qaeda in Iraq and its allied militant bands as well as Shi'ite militias, such as the Mahdi Army and the Badr Brigade.

The latter is the Iranian-trained military wing of Iraq's most power Shi'ite political group, the Supreme Council for the Islamic Revolution in Iraq.

The first government official said Mr. al-Maliki's message was blunt.

"He told the sheik that the activities of both the Sadrist politicians and the militia have inflamed hatred among neighboring Sunni Arab states that have been complaining bitterly to the Americans," the official said.

Sunni Muslims are the majority sect in the key Arab countries, including Saudi Arabia, Jordan and Egypt.

Bush And Maliki: With Friends Like These… (NSWK)

By Michael Hirsh And Richard Wolffe

Newsweek, January 29, 2007

It may have been the last time George W. Bush felt really good about Iraq. Last June, as the president flew back from a surprise visit to Baghdad—and his first sitdown with the new Iraqi prime minister, Nuri al-Maliki—he was visibly excited. Bush was savoring a rare moment in his presidency: an unbroken string of great news out of Iraq. The U.S. Air Force had just knocked off Abu Mussab al-Zarqawi at his hideout north of Baghdad. The tough, plain-spoken Maliki had replaced Ibrahim Jaafari, Iraq's disastrously wishy-washy interim prime minister. And Bush had brazenly ordered Air Force One into a war zone in broad daylight so that he could shake hands with Iraq's first democratically elected leader under the new Constitution. The president wasn't disappointed. "I wanted to hear whether or not he was stuck in the past or willing to think about the future," a relaxed Bush later told reporters onboard Air Force One. "And I came away with a very positive impression." Maliki, Bush said back then, "is a no-nonsense guy that talks about priorities and how he's going to achieve the priorities. And that's comforting."

The White House doesn't seem to be taking much comfort in Maliki now. Late last week Bush gathered a group of his dwindling Republican supporters in the third-floor solarium at the White House to discuss his latest plan to salvage the war in Iraq—the deployment of 21,000 more U.S. troops to pacify Baghdad and Anbar province. According to one participant,

conservative Sen. Craig Thomas of Wyoming, many of the GOP senators expressed doubts that America could depend on Maliki. They cited the Shiite leader's failure to quell the sectarian violence that contributed to the deaths of more than 34,000 Iraqis in 2006, according to the United Nations, as well as nearly 600 U.S. soldiers since he took over in May. "The president expressed doubts, too," says Thomas. With Vice President Dick Cheney sitting silently beside him, Bush "also indicated he was going to make pretty clear what he expects from the prime minister." Echoing Secretary of State Condoleezza Rice, who recently told Congress that Maliki was living on "borrowed time," Bush added ominously that "if [Maliki's effort] doesn't work very well there's a good chance those people over there will replace him," says Thomas.

Rarely have so many American hopes depended on a single foreign leader—and one of dubious loyalties at that. The president will walk into the well of the House for his seventh State of the Union speech this week, knowing that his fate is inextricably tied to Maliki's. While Bush will get the customary ovation, he knows the war has emboldened Democrats and silenced Republicans in Congress. In the new NEWSWEEK Poll, the president's approval rating matched his record low of 31 percent. Seventy percent of Americans disapprove of his handling of Iraq, and more than half trust the Democrats in Congress to make better decisions about the war. Two thirds oppose his plan to inject more troops into the fight. Among Republicans, however, there is still broad support for both the war and the president, which creates a dilemma for nervous GOP candidates looking to the next election.

Not surprisingly, the president has retooled his State of the Union address to focus on Iraq. And the key audience will not be Democrats, who are planning to vote on a nonbinding Senate resolution opposing Bush's "surge" plan next week. Instead it will be Republicans, at least a dozen of whom are expected to join Sen. Chuck Hagel voting in favor.

Much of their skepticism can be traced back to mistrust of Maliki, who admittedly has not given them much reason for confidence. The Iraqi prime minister was put into power with the support of Shiite radical Moqtada al-Sadr's political bloc, and has stymied previous U.S. attempts to target Sadr's Mahdi Army militia. During the most recent U.S. attempt to stabilize Baghdad, just last fall, he could not or would not provide enough Iraqi troops to make the plan work. His handling of Saddam Hussein's execution, an unsavory affair marred by Shiite taunts of the former dictator, again raised questions of whether he was biased against Sunnis. "So much of our future in that place is in the hands of Maliki," says one Republican doubter, Sen. George Voinovich of Ohio, who doesn't think the Iraqi prime minister is up to the challenge. He also worries that Maliki wants to turn Iraq into "a Shiite theocracy like they have in Iran."

True, like many Shiite opponents of Saddam, Maliki spent almost a decade in exile—in Syria and Iran—in the 1980s. During that time he developed ties to the Sadr family, and his Dawa Party is seen by many Iraqi Sunnis as part of Tehran's sphere of influence. Yet unlike Sadr or other Iraqi politicians like Abdelaziz al-Hakim, leader of the Iranian-backed Supreme Council for Islamic Revolution in Iraq (SCIRI), he is not a cleric himself. He also has a reputation as a pragmatist, earned while helping to negotiate Iraq's Constitution in 2005. Asked about Sadr last week, Maliki said that if the cleric works with the Baghdad government, then "he is my friend and he is my ally. If he does the opposite, he would be someone who is rebellious, someone who is acting against the law. To assure you ... in the last four years, I only talked to [Sadr] twice."

Bush's new public coolness toward Maliki is at least partly an attempt to show skeptical Republicans that he's not going into this blindly. For his part, Maliki cannot afford to look as though he's kowtowing to Washington when Sunni insurgents continue to massacre his fellow Shiites. He hasn't publicly supported Bush's "surge" plan, and responded to questions about Rice's "borrowed time" remark by saying the secretary had given a "morale boost" to terrorists.

On the other hand, to establish his bona fides with Bush, Maliki emphasized to reporters in Baghdad last week that Iraqi forces had detained some 400 members of Sadr's militia in recent months. Still, U.S. officials were unnerved two weeks ago when Maliki named an obscure Shiite general from Iraq's south, Lt. Gen. Aboud Qanbar, as the new commander of Iraqi forces in Baghdad. A U.S. official who is privy to Iraq intelligence but would discuss sensitive material only anonymously noted that there were many other officers whom Maliki could have chosen for the job who would have been less polarizing to Sunnis.

The U.S. military is now so suspicious of Maliki that on Friday, when U.S. forces arrested Sadr's media director in Baghdad, Sheik Abdul Hadi Darraji, the prime minister's office wasn't even informed of the raid. Darraji has been linked to death-squad killings of Sunnis in Baghdad. Some Iraqi politicians who are also leery of Maliki say it was wise of the Americans to keep him out of the loop. "If Maliki had been told, [the arrest] wouldn't have happened," says Mahmoud Othman, a Kurdish member of Parliament. "Maliki would not agree to this." Indeed Maliki has intervened several times in recent months to secure the release of Sadr supporters.

Why has Bush seemingly staked his legacy on this contradictory figure? At one time the bond seemed deeply personal. At their last face-to-face meeting, in Jordan in November, Bush called the Iraqi prime minister "the right guy for Iraq." His judgment was based partly on Bush's respect for Maliki's courage under fire. "He's been in power for six months, and I've been able to watch a leader emerge," the president told reporters. At the same time, White House officials also revealed they had

DOJ_NMG_0119219

eavesdropped on Maliki's private conversations to make sure the Iraqi prime minister was telling his supporters the same thing he was telling U.S. officials. They were reassured that he was, for the most part—a marked contrast to Jaafari.

According to sources knowledgeable about the discussions, departing U.S. ambassador Zalmay Khalilzad has also supported Maliki's line on Sadr—that his ties to the cleric give him a better chance than anyone of persuading Sadr to work within the political system. But the biggest reason to trust Maliki may simply be that Washington has no other choice. Hakim's SCIRI is the single largest party in Parliament and would likely provide the next prime minister if Maliki were voted out. But U.S. officials note that the first Shiite death squads to appear on the scene in 2005 had shadowy links to the Ministry of Interior, which is dominated by Hakim's party. There is no talk of replacing Maliki with a military strongman—something that would be virulently opposed not only by Iraqis but also, according to the NEWSWEEK Poll, by 83 percent of Americans. Maliki "is a reasonably bad choice among a set of really bad options," says one former senior U.S. official who spoke anonymously because he maintains close ties to the White House.

Ironically, American generals may be more willing to give Maliki time than the politicians back in Washington. Lt. Gen. David Petraeus, the incoming commander of multinational forces in Iraq, understands that the main point of the surge is to provide just enough security on the streets of Baghdad. Then, say Defense officials speaking anonymously because they are not authorized to discuss Petraeus's thinking, Maliki can theoretically persuade Sadr to stand down his militia. If that succeeds, then the frightened Sunni population might just be persuaded to part ways with insurgents. While Mahdi militia commanders warn they will retaliate if attacked by the Americans, for now the movement's political leaders are urging patience. "We have instructions from Sayeed Moqtada to stay calm so that the Sadr followers aren't dragged into this confrontation," Baha al-Araji, a senior Sadr leader and member of the National Assembly, told NEWSWEEK.

The question is whether Bush or Maliki will get all the time they need. Sen. Gordon Smith of Oregon, another Republican who has come out as a strong critic of the surge plan, says many of his GOP colleagues who still publicly support the war effort have told him they're giving the president until the end of 2007. "Patience is not inexhaustible, and it is likely to run out this year," Smith said. The problem: the better part of the "surge" troops won't get there until the middle of 2007, leaving Maliki little time to produce.

And so Bush and Maliki are engaged in an awkward minuet with one another: each needs a partner, but they can't afford to dance too closely. As Maliki himself puts it rather clinically: "A relationship of interconnected interests has been formed between me and President Bush." While administration officials deny there is any "Plan B" if Maliki fails—if he prevents U.S. troops from going after Shia militias and Sunni insurgents equally, for instance—this is mostly to try to pump up public confidence. "Of course the administration has thought about it," says Philip Zelikow, who served as Rice's senior counselor until January. "They don't want to talk about it. They're trying to create a climate of positive expectations to replace the vicious cycle of negative expectations last year." Expectations are fine—for a time. But reality ultimately matters more, and the shape of that reality is now in the hands of Nuri al-Maliki.

History's Verdict (USNEWS)

By Kenneth T. Walsh

U.S. News and World Report, January 22, 2007

Only 32 percent of Americans approve of his job performance. Forty-three percent say that his war was a mistake. Critics deride him as too stubborn and inflexible. Others dismiss him as an intellectual lightweight. But the president sticks to his guns. "I wonder how far Moses would have gone if he'd taken a poll in Egypt?" he writes. "It isn't polls or public opinion of the moment that counts. It's right and wrong."

Sounds like President Bush, defending his policies in Iraq and the war on terrorism. Actually, it was Harry Truman in 1952, defending his conduct of the Cold War and the war in Korea.

As Bush struggles to salvage victory in Iraq and regain some political traction with his State of the Union address, the 43rd president increasingly sees himself—rightly or wrongly—in the mold of the 33rd. Bush recently told congressional leaders his own policies would be vindicated by history, just as Truman's were. Others aren't so sure.

"Both men happened to be in office when a new international challenge took place, and each dealt with it in a different way," says Boston University historian Julian Zelizer. Adds presidential scholar Doug Brinkley: "What they have in common is that both are presidents who operate out of certitude" and stayed the course despite opposition from their adversaries in Congress and doubts among the American people.

In a commencement address at West Point last May, Bush praised Truman for restructuring both government institutions and the armed forces to deal with the communist threat, and for showing bold decisiveness by ordering an airlift to break a Soviet blockade of Berlin. "By the actions he took, the institutions he built, the alliances he forged, and the doctrines he set down, President Truman laid the foundations for America's victory in the Cold War," Bush told the cadets. He added that America's

DOJ_NMG_0119220

adversaries today are similar to those Truman faced—enemies who pursue a "murderous ideology that despises freedom, crushes all dissent, has territorial ambitions, and pursues totalitarian aims."

The problem is that at least some presidential scholars believe Bush may be exaggerating the parallels. They wonder whether his response in Iraq or his approach to terrorism measures up to the sort of hard-eyed realism or long-term vision displayed by Truman. "A little knowledge is a dangerous thing," says Rutgers political scientist Ross Baker. "President Bush can draw a lot of false analogies."

Adds presidential scholar Robert Dallek: "Everybody who gets into serious trouble in the presidency invokes the Truman history and the Truman experience. But there's only one Harry Truman."

These historians also tend to draw a distinction between the magnitude of the decisions thrust on Truman and those facing Bush. While Bush and his allies say he is "trying to reposition America for a new world order" in the wake of 9/11, Brinkley observes, "the Bush argument is a huge stretch. It dishonors the legacy of Truman to make the comparison."

Truman, who took over the presidency following the death of Franklin Roosevelt in April 1945, presided over the end of World War II. He ushered in the atomic age by ordering the bomb dropped on Japan. He and his aides devised a series of pathbreaking institutions to contain communism during the Cold War. Among Truman's innovations: the founding of the United Nations, the World Bank, and the International Monetary Fund in 1945; the creation of the CIA, the National Security Council, and the Joint Chiefs of Staff, and the promotion of the Truman Doctrine, which declared America's intention to help nations combat communist insurgencies around the world, all in 1947; starting the Marshall Plan to provide massive economic aid to Europe in 1948; the Berlin airlift in 1948-49; and the NATO treaty in 1949, which placed Europe under an umbrella of U.S. security.

White House Press Secretary Tony Snow told U.S. News that Truman "laid the foundation for presidents later. President Bush wants to lay foundations for future presidents on the central point of our national security for many years to come."

Still, the critics are skeptical. Bush's creation of the Department of Homeland Security, which he initially opposed, and his other steps to fight terrorism—like reorganizing the nation's intelligence capabilities—may not measure up to Truman's achievements, according to some historians. "He's really reaching," Dallek argues. "Where is his containment doctrine, as Truman had? What is his doctrine for ending the war on terrorism?"

Yet there is one big unknown: The scholars admit that if there are no more major terrorist attacks on the United States by the end of his presidency, Bush can argue that he accomplished his most vital mission—keeping America safe. That would be an accomplishment that historians couldn't ignore. Both Bush and Vice President Dick Cheney have always linked the war in Iraq to the global war on terrorism. They say fighting in Iraq is keeping the "evildoers" at bay and preventing them from taking their battle into the United States.

BIG DOINGS

Truman and Bush governed during historic times. "Each period of our national history has had its special challenges," Truman said in his inaugural address on Jan. 20, 1949. "Those that confront us now are as momentous as any in the past. Today marks the beginning not only of a new administration but of a period that will be eventful, perhaps decisive, for us and for the world."

In his State of the Union address on Jan. 31, 2006, Bush made a similar point. "We've been called to leadership in a period of consequence. We've entered a great ideological conflict we did nothing to invite," he said. "[T]he destination of history is determined by human action, and every great movement of history comes to a point of choosing."

Both presidents sought to spread democracy around the world—Truman in opposition to communism, Bush in opposition to Islamic jihadism. "Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors but also against their ancient enemies—hunger, misery, and despair," Truman proclaimed in his 1949 inaugural. Bush has echoed those themes many times.

In a statement that startled many in Washington, Bush declared in his inaugural speech on Jan. 20, 2005: "The survival of liberty in our land increasingly depends on the success of liberty in other lands. The best hope for peace in our world is the expansion of freedom in all the world. ... So it is the policy of the United States to seek and support the growth of democratic movements and institutions in every nation and culture, with the ultimate goal of ending tyranny in our world."

COMPARING KOREA AND IRAQ

It was after his surge of far-reaching Cold War initiatives in the late 1940s that Truman experienced his most bitter dilemma. In November 1950, as American and allied forces pushed North Korean invaders out of South Korea, disaster struck. China flooded the peninsula with several hundred thousand troops and pushed the United States, the South Koreans, and other coalition forces back 300 miles. Gen. Douglas MacArthur urged the administration to recognize that the United States was in a state of war with China and to drop 30 to 50 atomic bombs on Manchuria and the cities of China. Truman, fearing a world conflagration, refused to seriously consider those options. MacArthur, however, continued to promote his plan on Capitol Hill,

DOJ_NMG_0119221

until April 11, 1951, when Truman announced that he had fired the popular general. At the time, it was a much-criticized decision; Truman was accused of refusing to take the blame for a war gone bad. But the firing was later lauded by historians. They said the commander in chief could never allow a military officer to defy him.

Bush sees parallels in his steadfast pursuit of victory in Iraq, despite many setbacks. And Bush's removal of his top generals in early January seemed based on a Truman-like conviction that the top brass need to be on the same page as the president, this time regarding a "surge" of troops into Iraq. Gen. John Abizaid is being replaced by Adm. William Fallon as the top U.S. commander in the Mideast, and Gen. George Casey is being replaced by Lt. Gen. David Petraeus as U.S. commander in Iraq.

But Rutgers political scientist Ross Baker points out that the Korean War was a broad international operation, conducted under United Nations auspices. "It really was a multinational force," Baker says, in contrast to the Iraq war, which started as a mostly unilateral intervention, with some help from Britain, and remains largely a U.S. enterprise. Casualties in Korea, though, were far heavier. The United States has lost about 3,000 soldiers and marines in Iraq so far. The Korean War claimed more than 54,000 Americans.

THE COLD WAR AND THE WAR ON TERRORISM

"President Bush makes an explicit comparison between the beginning of the war on terror and the beginning of the Cold War," says a former senior Bush adviser who was at the president's side for most of his first term. "Truman had massive historical challenges with a nation that had grown tired. But Truman very consciously tried to put in institutional frameworks to deal with these challenges."

In his farewell address to the nation, given from the Oval Office on Jan. 15, 1953, Truman said, "I suppose that history will remember my term in office as the years when the Cold War began to overshadow our lives. I have had hardly a day in office that has not been dominated by this all-embracing struggle. ... And always in the background there has been the atomic bomb. But when history says that my term of office saw the beginning of the Cold War, it will also say that in those eight years we have set the course that can win it."

Bush takes a different tack. "You never know what your history is going to be until long after you're gone," he says. "So presidents shouldn't worry about history. You just can't. You do what you think is right, and if you're thinking big enough, that history will eventually prove you right or wrong."

Dallek has reached his own controversial conclusion, and Bush would not be pleased. "Bush will be remembered more for the war in Iraq than the war on terrorism," the historian told U.S. News. "The war in Iraq is a disaster. And there is no grand strategy for the war on terrorism." Unless Bush can turn Iraq around or somehow elevate the war on terrorism to a historic level, "he will be seen as a failed president," Dallek contends.

Yet Bush appears to believe he is destined to win the war on terrorism, according to friends. "He believes he is there for a reason," says a confidant, "and he should try as hard as he can—and leave the rest to God."

Truman was less moralistic, emphasizing the importance of "luck and personality, forces quite beyond effort or determination," writes biographer David McCullough. "And though few presidents had ever worked so hard or taken their responsibilities so to heart in time of crisis as Truman had since the start of the war in Korea, it was luck, good and bad, and the large influence of personality that determined the course of events time and again, and never more so than in late December 1950 [shortly after China entered the Korean War], in the midst of his darkest passage."

Truman believed a president's first job was to make the tough choices. "The greatest part of the president's job is to make decisions—big ones and small ones, dozens of them almost every day," Truman said in that January 15 farewell address. "The papers may circulate around the government for a while, but they finally reach this desk. And then, there's no place else for them to go. The president—whoever he is—has to decide. He can't pass the buck to anybody. No one else can do the deciding for him. That's his job."

Bush made a similar point to reporters last April. "I hear the voices," he declared, "and I read the front page, and I know the speculation. But I'm the decider, and I decide what is best."

When he talks privately to friends and aides, Bush says the central question for history will be not whether he did too much in the war on terrorism but whether he did enough. "No one's going to accuse this president of not being tough enough in trying to prevent it," says a key White House adviser.

There is another parallel. In 1946, the besieged president's party lost control of both houses of Congress to the GOP, partly as a referendum on Truman and his policies. The same thing happened to the Republicans under Bush in last November's elections. Led by Truman, the Democrats made a comeback in 1948 and recaptured Congress, but four years later, in 1952, they not only lost Congress but also were ousted from the White House by Republican Dwight Eisenhower.

That can't be heartening for Bush as he ponders the next two years.

Iraq Study Group: The Forgotten Men (NSWK)

By Dan Ephron

Newsweek, January 22, 2007

Jan. 29, 2007 issue - For Leon Panetta, the gesture of respect failed to disguise the rebuff. Two hours before George W. Bush announced plans to send more troops to Iraq earlier this month, the president had his national-security adviser, Stephen Hadley, brief members of the Iraq Study Group by phone on the "surge" plan. Nine of the bipartisan panel's 10 members were on the line, including co-chairs James Baker and Lee Hamilton.

Panetta, one of the Democrats on the commission and President Bill Clinton's former chief of staff, says Hadley began by listing those recommendations Bush had chosen to incorporate into his plan. Most were minor, according to Panetta. "I interrupted him and said that while we made 79 recommendations, three were the heart and soul of the report," Panetta told NEWSWEEK, citing the drawdown of U.S. troops by next year, the need to penalize the Iraqi government if benchmarks were not met and the call for diplomacy with Iran and Syria. Hadley's response—the three were not part of the Bush plan—left Panetta feeling hoodwinked. "Mainly I'm offended by the way they created the impression they gave it consideration but really didn't." (A National Security Council official confirmed the exchange.)

A month ago, members of the graybeard Iraq Study Group were rock stars in Washington. Their report appeared to herald a return to pragmatism in Iraq, and the published version whizzed to the top of The New York Times best-seller list (fifth, as of last week, in the nonfiction paperback category). Now Hamilton, Baker and the rest are back running academic institutes or consulting firms, gone and maybe forgotten.

Or are they? Baker and Hamilton are returning to Congress this month to testify before key committees and argue for a wider diplomatic push in the Middle East. "I think you may be seeing our coming out more publicly," says Edward Djerejian, Baker's top adviser. (His boss is known to think that while the troop surge can be squared with the panel's recommendations, Bush's refusal to engage Iran and especially Syria diplomatically is the real mistake.) With opponents on both sides of the aisle predicting that Bush's surge will fail, some Capitol Hill insiders are talking about the ISG report as a kind of Plan B, to be revisited a few months down the road. "Even if it's not the star people thought it would become, the north star, it's still there, and a lot of what's in it will probably happen anyway," says a senior Democratic staffer in the Senate who did not have his boss's permission to speak on record.

If other panelists are disappointed, they're not letting on. Democrat Vernon Jordan says he knew from the start Bush would pick and choose: "I'm not walking around wounded." Ditto Alan Simpson, the Republican former senator from Wyoming: "We're all grown-up boys and girls. We didn't stick our thumbs in our mouths and pout." Edwin Meese, the Republican who served as Ronald Reagan's attorney general, thought Bush actually incorporated most of the panel's recommendations. And Hamilton says the panel "changed the debate" on Iraq, affecting the language Bush used in his speech.

If that sounds like cold comfort, there's always the report's financial success to savor. Publisher Vintage Books says 280,000 copies have already been shipped to stores, not bad for a policy manual. No, Baker et al. don't get a windfall. After commission expenses are paid, a portion of the money goes to the National Military Family Association, which supports the spouses and children of soldiers in service. With more troops heading to Iraq, it's money well spent.

Zakaria: Has Bush Soured The World On Democracy? (NSWK)

By Fareed Zakaria

Newsweek, January 22, 2007

Jan. 29, 2007 issue - No president has attached his name more completely to the promotion of democracy than George W. Bush. He speaks of it with genuine passion and devoted virtually his entire second Inaugural to the subject. His administration talks constantly about its "freedom agenda" and interprets global events largely in such terms. Last summer, for example, as missiles, car bombs and IEDs exploded across Lebanon, Gaza and Iraq, Condoleezza Rice described the violence as the "birth pangs" of a new, democratic Middle East. So it is striking to read this year's annual survey of "freedom in the world," released last week by Freedom House, a nonprofit that is engaged in promoting democracy around the globe. The report points out that 2006 was a bad year for liberty, under attack from creeping authoritarianism in Venezuela and Russia, a coup in Thailand, massive corruption in Africa and a host of more subtle reversals.

"The percentage of countries designated as free has failed to increase for nearly a decade and suggests that these trends may be contributing to a developing freedom stagnation," writes Freedom House director of research Arch Puddington in an essay released with the rankings. Puddington also calls attention to the "pushback" against democracy. Regimes across the world are closing down nongovernmental organizations, newspapers and other groups that advocate for human rights. And, I

DOJ_NMG_0119223

would add, what is most striking is that these efforts are not being met with enormous criticism. Democracy proponents are on the defensive in many places.

What explains this paradox—of freedom's retreat, even with a U.S. administration vociferous in promoting democracy? Some part of the explanation lies in the global antipathy to the U.S. president. "We have all been hurt by the association with the Bush administration," Saad Eddin Ibrahim, the Egyptian activist, told me last month. "Bush's arrogance has turned people off the idea of democracy," says Larry Diamond, co-editor of the Journal of Democracy.

But he goes on: "There's a lot more to it than that. We need to face up to the fact that in many developing countries democracy is not working very well." Diamond points to several countries where elections have been followed by governmental paralysis, corruption and ethnic warfare. The poster child for this decline has to be Nigeria, a country often lauded for its democracy. In fact, the place is in free fall—an oil-rich country with per capita GDP down to $390 (from $1,000 20 years ago), a ranking below Bangladesh on the United Nations Human Development Index, and with a third of the country having placed itself under Sharia. The new Freedom House survey rates Haiti higher now because it held elections last year. But does anyone believe that those polls will change the essential reality in Haiti—that it is a failed state?

The basic problem confronting the developing world today is not an absence of democracy but an absence of governance. From Iraq to the Palestinian territories to Nigeria to Haiti, this is the cancer that is eating away at the lives of people across the globe, plunging countries into chaos, putting citizens' lives and livelihoods at risk. It is what American foreign policy should be focused on. But the president's freedom agenda sees the entire complex process of political and economic development through one simple lens, which produces bad analysis and bad outcomes.

Consider Iraq. The administration has constantly argued that Iraq has witnessed amazing political progress over the last four years only to be undermined by violence. In fact, Iraq has seen its politics and institutions fall apart since the American invasion. Its state was dismantled, its economy disrupted, its social order overturned and its civic institutions and community corroded by sectarianism. Its three communities were never brought together to hammer out a basic deal on how they could live together. The only things that did take place in Iraq were elections (and the writing of a Constitution that is widely ignored). Those elections had wondrous aspects, but they also divided the country into three communities and hardened these splits. To describe the last four years as a period of political progress requires a strange definition of political development.

The administration now rewards democracies with aid. But why not have a more meaningful measure? Why not reward countries when they protect human rights, reduce corruption and increase the quality of governance? "Our aid should be conditional on absolute standards," says Diamond. "The European Union has forced change on countries that want to join it by demanding real progress on tough issues."

An administration that thinks of itself as tough has been almost romantic in its views of the world. There is good and evil out there. But there is also competence and incompetence, and that makes a crucial difference around the globe—in fact, even in the United States.

War's Arab Supporters Bitter Over Its Results (WP)

By Anthony Shadid

The Washington Post, January 22, 2007

DUBAI, United Arab Emirates -- With a certain satisfaction, Lebanese journalist Michael Young watched a local station broadcast images seen across the world on April 9, 2003: the toppling of Saddam Hussein's statue in Firdaus Square, its reverberations rumbling across a stunned Middle East. Out of curiosity, he switched to a satellite station from Syria. It was showing a documentary on a venerable Damascene mosque. He flipped to another channel, where a former Egyptian general was dismissing the idea that day that the Iraqi capital had even fallen.

"If they were scared of what was happening in Baghdad, there was more power in this moment than might have been expected. The regimes were truly scared of this moment, truly scared," recalled Young, the opinion editor of the Daily Star in Beirut.

"The problem is," he added, "the Americans failed."

The coterie of Arabs who supported the U.S.-led invasion were never the target of expensive American propaganda efforts. Their unpopular stands in the Arab world earned them inboxes full of angry e-mails; a few claimed they got death threats. And nearly four years after the invasion they backed, their sense of frustration, resentment and even betrayal speaks volumes about how withered American standing is in the Middle East today and how far the region itself has deteriorated, riven as it is by escalating conflicts, worsening sectarian tension and a simmering struggle with an ascendant Iran.

"It's a success story for al-Qaeda, a success story for autocratic Arab regimes that made democracy look ugly in their people's eyes. They can say to their people: 'Look at the democracy that the Americans want to bring to you. Democracy is

DOJ_NMG_0119224

trouble. You may as well forget about what the Americans promise you. They promise you death,' " said Salameh Nematt, a Jordanian analyst and the former Washington bureau chief for the Arabic-language daily newspaper al-Hayat.

Added Magdi Khalil, an Egyptian writer and proponent of the invasion, "Everything, everything is very gloomy."

The Israeli-Palestinian conflict has long festered, cultivating indelible resentment toward the United States, Israel's strategic ally. Now it is joined by growing crises and wars in Lebanon, Iraq and, on the Arab world's borders, Iran and Somalia. The Bush administration is moving to arm perceived allies: Nearly $100 million is proposed for Palestinian security forces pitted against the Islamic movement Hamas and potentially hundreds of millions more for the Lebanese army, seen as a bulwark against the ambitions of the Shiite Muslim movement Hezbollah. Across the region, political affiliations are being pared to the raw bone of sectarianism, often accompanied by emotional expressions of Sunni and Shiite identity.

From the Persian Gulf to Egypt, the arc of the administration's avowed aim of promoting democracy in a region still largely run by autocrats and monarchs has come full circle. In the latest sign of shifting priorities, Secretary of State Condoleezza Rice eschewed public criticism of Egypt's authoritarian government during a visit last week, declaring it instead part of "an important strategic relationship, one that we value greatly." Some critics see a reversion to past U.S. policy, forging an alliance of what Washington considers mainstream, albeit autocratic, states against Iran, Syria and groups such as Hamas and Hezbollah.

Implicit, critics say, is the prospect of greater confrontation in a region already racked by it.

"What's coming is worse than what is now," columnist and editor Ghassan Tueni wrote in Beirut's an-Nahar newspaper.

"If the future and coming two to three years are negative, and what is sought after fails, the legacy will be a disaster, one of the first major disasters of the 21st century," said Shafeeq Ghabra, a political science professor at Kuwait University.

In March 2003, most of the Arab world saw the imminent invasion as American revenge for the attacks of Sept. 11, 2001, a grab for Iraq's oil, a play for unquestioned supremacy in the region, a way to protect Israel or, often, a convergence of all of them. Like Young and Khalil, Ghabra was one of the very few in the Arab world who saw the invasion as opportunity. Hussein was a malignant current in the Middle East, he thought, and only force, American force, could remove him and initiate a transformation in a sclerotic region.

He expected the United States to have had an effective plan for postwar Iraq. Soon after, he expected a renewed and serious U.S. attempt to broker an end to the Israeli-Palestinian conflict, still seen by most here as the axis of tension in the Middle East. Like Young, he was most optimistic the day Baghdad fell. But even then, and in ensuing weeks, he remembered fearing what was being unleashed, as looting and chaos ravaged the Iraqi capital. Then the Americans -- to him and others, inexplicably -- dissolved the Iraqi army.

"You saw the maximum of power and success and the moment of failure, side by side," he said.

In the fall of Hussein's government, some still see a redeeming moment. They cite Lebanon's 15-year civil war as a hopeful analogy: In time, after breathtaking carnage, the war ended there, and Lebanon remained a troubled but recognizable country.

"Nobody can prove the situation would be better if there was no invasion of Iraq. Nobody can argue that if Saddam were in power now, things would be better," said Ahmed Alrabe, a former Kuwaiti lawmaker and education minister.

More often heard are the words of Khalil. "Now," he said, with a bitter laugh, "there is only conflict and hatred."

The landscape of the Middle East today is vastly different than it was in 2003. Governments in countries such as Egypt and Syria felt insecure then, buffeted by budding reform and protest movements or international pressure. These days they appear emboldened, even confident. Iran is developing a more assertive foreign policy in the region, from Lebanon and the Palestinian territories to the Gulf.

Proponents of the invasion often point to those governments, more than the mistakes of the United States, as the culprits in Iraq's unraveling. They had the most to lose if President Bush's vision, however impractical or overly optimistic, led to more accountability in the region.

"The reason Iraq failed is partly because of American miscalculations, but partly also because everyone in the region wanted them to fail," Nematt said. "Everyone took an active role in undermining the democracy project in Iraq."

But those who most fervently supported the American action bestow much of the blame on the United States itself, in a critique all the more bitter because it comes from admirers: There was no plan for the postwar period and too few troops; Iraqis played too small a role in the early days; and the Americans fumbled about as Iran, Syria and other countries outdueled them in Iraq. Fundamentally, some say, U.S. officials knew too little about the country they inherited, imagining a blank slate for their vision.

"The United States has a remarkable capacity to screw things up bureaucratically," Young said. "Maybe I should have anticipated the same thing would happen in Iraq, I admit."

"Everything is gray, and the Americans never figure it out until it's too late," he added.

In the studios of al-Arabiya in Dubai, Abdul Rahman al-Rashed sat in his sleek office, from where he heads the newsgathering operation for one of the Arab world's largest news channels. On television sets that adorned the walls, a recitation

DOJ_NMG_0119225

of today's Middle East scrolled across the screens: simmering civil strife in the Palestinian territories, deadlock in Lebanon, more carnage in Iraq.

"From bad to worse," the Saudi journalist said of the region, waving his hand. "It's the worst I've ever seen. Definitely."

He recalled a word and an image that he believes charted the American experience in Iraq. The word was occupation, the American decision to run Iraq for more than a year like postwar Japan instead of installing some sort of nominally independent Iraqi government after Hussein's fall. "This is colonialism; no one uses this word at all," he said. The image was the scene in Fallujah in March 2004, when angry residents killed four American contractors working for the U.S. military, mutilated their bodies and strung up two of the corpses from a bridge. "They were easily dragged into a confrontation," Rashed said of American leaders.

"They would get into some kind of shifting sand, and it would be difficult for them to win the war," he remembered thinking. "I knew at that moment they have the force, but they don't have the brains to manage the Iraqi situation."

Many who supported overthrowing Hussein dismissed the question of whether they would still back the invasion. The question itself is impossible or unfair, some said. But Rashed -- who said he sees as the best-case scenario a contained civil war within Iraq and the worst case a regional conflagration -- is blunt. "Of course, I would take the status quo at that time over change," he said.

At a fashionable cafe in Beirut, Young talked about a region where "the sectarian genie has been let out of the bottle." American policy, he said, reminded him of past decades: engaging despots for the sake of stability. Words such as "disaster" and "civil war" peppered his conversation. And he hinted at a sense of bitter frustration, even betrayal, in his views.

"The American agenda has completely changed," Young said. "What Iraq was set out to be has been supplanted by a completely different agenda -- containing Iran and containing Iran's allies."

"The democracy debate has ended today," he added, "and I regret that."

Iraq's Refugees (WP)

The Washington Post, January 22, 2007

ONE OF THE few postwar problems the Bush administration prepared for before the invasion of Iraq was a refugee crisis. It didn't occur in the spring of 2003, and for months afterward administration officials pointed to that fact as a sign of the war's success. Now, four years later, a refugee crisis is exploding -- and, as is so often the case with Iraq, the administration has been slow to recognize the problem and even slower to respond.

The crisis essentially began last February, when the bombing of a Shiite mosque touched off sectarian war across Iraq. Since then, according to the United Nations, some 500,000 Iraqis have been displaced from their homes, and 40,000 to 50,000 more are leaving every month. As many as 2 million Iraqis are abroad, including many who left during the regime of Saddam Hussein. The majority are in Jordan and Syria.

The negative consequences of this exodus could go well beyond a humanitarian tragedy. Jordan could be politically destabilized by the influx of Iraqis. Most of the refugees in Jordan and Syria are Sunni; as the history of the Palestinians vividly demonstrates, these communities could easily become bases and breeding grounds for the Iraqi insurgency.

The U.S. response has been shockingly small. Though it is spending $8 billion a month on the war, the Bush administration has budgeted only $20 million for refugee assistance this year. Only 466 Iraqis have been allowed to immigrate to the United States as refugees since 2003, including 202 last year. Most shameful has been U.S. treatment of translators and drivers who have risked their own and their families' lives to work for military units in Iraq: Just a handful have been granted asylum, and a special visa program has a six-year waiting list.

At a Senate hearing last week, State Department official Ellen R. Sauerbrey suggested that the number of Iraqi refugees accepted in the United States could be expanded, using most of the 20,000 emergency slots set aside annually, if funding were provided. Pressed by Sen. Edward M. Kennedy (D-Mass.), she also indicated that State would consider a special parole program to expedite the admission of Iraqis. Congress should make sure the necessary funding is included in an upcoming administration supplemental budget request for the war.

More steps are needed. The United States ought to greatly increase funding for U.N. refugee programs; it should allow Iraqis to request U.S. asylum at the embassy in Baghdad and consular offices around the country and not just outside of Iraq. It should begin working with Jordan on ways to ensure that Iraqi refugees there are provided with adequate services and jobs.

The best way to help Iraqi refugees, of course, is to secure their country so that they can return home safely. Since that won't be possible anytime soon, the United States is bound by both practical and moral considerations to address a crisis that it helped to create.

Embassy Row (WT)

DOJ_NMG_0119226

By James Morrison

The Washington Times, January 22, 2007

Starring Indonesia

The Indonesian ambassador thinks too many Washingtonians know too little about his country, so his embassy has produced a series of television shows to promote the sprawling, culturally rich and ecologically unique nation of more than 17,500 islands in Southeast Asia.

Indonesia, the world's most populous Muslim nation, makes news in the West when Islamist terrorists attack tourist resorts in Bali or hotels in the capital, Jakarta.

However, Ambassador Sudjadnan Parnohadiningrat says his country deserves better press.

"We would like to present the diversity of our country to the American people," he said. "We would like to show the face of modern-day Indonesia."

The debut film, "Gado-Gado Indonesia," will be aired tomorrow at 9 a.m. on Fairfax Public Access Channels 10, 33 and 37, Arlington Independent Media Channel 69 and on the MHz Network, which is carried on several cable TV channels in the region.

The show will be repeated on Jan. 27 at 6 a.m., Jan. 28 at 5:30 p.m. and Jan. 29 at 8:30 p.m.

New ambassador

President Bush has nominated William B. Wood to replace Ronald E. Neumann as ambassador to Afghanistan.

Mr. Wood is currently ambassador to Colombia. The White House did not announce why Mr. Neumann is leaving the post after about a year and a half.

The appointment is the latest in a diplomatic shuffle that included Zalmay Khalilzad, former ambassador to Afghanistan and Iraq, replacing John R. Bolton as ambassador to the United Nations, and Ryan C. Crocker, currently ambassador to Pakistan, replacing Mr. Khalilzad in Iraq.

The Senate must approve the nominations.

Diplomatic traffic

Foreign visitors in Washington this week include:

Today

·Deputy Prime Minister Gianfranco Fini of Italy, who addresses the Center for Strategic and International Studies. Mr. Fini, also the former foreign minister, is now leader of the National Alliance, the main opposition party in parliament.

·Wen-cheng Lin of the Taiwan Foundation for Democracy and Jiunn-Rong Yeh of the National Taiwan University. They participate in a panel discussion on democracy in Taiwan at the American Enterprise Institute.

·Elliot Morley, a member of the British Parliament, adviser to Prime Minister Tony Blair on climate change and president of the London-based Global Legislators Organization for a Balanced Environment (GLOBE) International; Adam C.T. Matthews, secretary-general of GLOBE; and Michael Jay, former director of the British Foreign Office. They hold a noon press conference at the National Press Club to discuss a summit of Group of Eight and developing nations on climate change scheduled for Feb. 14 and 15 in Washington.

Tomorrow

·Ali Afhsari, an Iranian student leader for civil rights, who addresses the Middle East Institute on the political future of Iran.

Wednesday

·AIDS Ambassadors Paul Bekkers of the Netherlands, Lennarth Hjelmaker of Sweden, Michel Kazatchkine of France, Michel Lastschenko of Belgium and Sigrun Mogedal of Norway. They meet with Mark Dybul, the U.S. global AIDS coordinator, other administration officials, members of Congress and think tank analysts.

·Kay Axhausen, a professor at the Institute for Transport Planning and Systems in Zurich. He participates in a panel discussion on transportation issues with U.S. analysts at the Swedish Embassy.

Friday

·Ioannis Eliades of the Byzantine Museum in Nicosia, Cyprus, and Charalambos Chotzakoglou of the Hellenic Open University in Athens. They discuss threats to Cyprus' cultural heritage in a forum at the Cyprus Embassy.

Harsh Winter Has Afghans Struggling For Survival (WP)

By Pamela Constable

The Washington Post, January 22, 2007

KABUL -- It was well below freezing in Raza Khan's tiny concrete apartment late one recent night. Half a dozen children huddled under blankets on the floor, coughing in their sleep. The fire in the rusty stove had faded to ashes, and there was no more wood to stoke it. Sometime before dawn, Khan's 3-month-old granddaughter, breathing raggedly from pneumonia, grew still and died.

DOJ_NMG_0119227

"There are 18 of us, and we only have three blankets. It is not enough," said Khan, a gray-bearded man of 75 who earns about $2 a day pulling handcart loads in city streets. The baby had been treated at a city hospital and sent home, but she was not strong enough to recover. "It was just too cold," the old man said.

Winter across Afghanistan is a season of majestic beauty, with distant snowcapped mountains rising in all directions, icicles forming on orchard branches and midday sunlight sparkling on iced-over irrigation streams that meander across a thousand fields.

But in the capital, it is a season of unrelenting harshness for tens of thousands of poor families, focused on the struggle to survive. People spend their days scrounging to buy a few chunks of coal or firewood, and their nights huddled under common blankets around braziers called sandali, praying for dawn to come.

More than five years after the U.S.-led overthrow of Islamic Taliban rule and the advent of an internationally backed civilian government, the country is still so destitute and undeveloped that most inhabitants have no central heating, electricity or running water. Even in Kabul, some desperate families remain beyond the reach of foreign aid agencies that provide cold-weather assistance such as free coal and blankets in impoverished rural provinces.

Winter is the time that most starkly sets apart Kabul's nouveau riche from its permanent poor. The cozy, generator-heated homes and winking shop lights of central neighborhoods such as Wazir Akbar Khan and Shar-i-Nau, home to Afghan officials and international agency employees, seem far removed from the pitch-dark alleys and frigid rented rooms of suburban slums such as Chelsitoon and Char Qala.

Worst off are thousands of former refugees such as Khan and his family, unskilled people who returned to Kabul after years of wartime exile in Pakistan. Unable to find stable jobs or shelter, they survive on the margins of a chaotic, crowded capital that has quadrupled in population since the U.S.-led invasion. Some live in tents on vacant lots or squeeze into alleys, squatting on narrow bits of frozen land.

"All my children are sick. When I cook dinner, the room becomes a little warm and I put them under a blanket. But it gets cold soon, and they wake up and start crying," said Roya, 25, a laundress with four children who lives in a single cavelike room with patched tent cloth forming a flimsy fence around her tiny front yard outside.

Two winters ago, the Afghan Ministry of Migration offered to move several hundred refugee families from their tents into empty, rent-free apartment buildings on the southern outskirts of Kabul. Roya said she refused to move, because the location was too far from affluent homes where she can walk to wash and iron clothes. The customers also give her food, and earlier this month her tiny room was hung with strings of drying beef, special donations distributed to the poor during the Muslim holiday of Eid al-Adha.

Khan and many of his neighbors took up the government's offer and moved to Teknikom, a five-story concrete college dormitory built by the Soviet Union in the 1980s and later abandoned. Today it is home to about 3,000 people, but in many ways it is still a ghost building.

The corridors are windy and dark, with blankets hung across open doorways and plastic taped over gaping windows. Small children, many of them barefoot, play in the halls. The original heating and plumbing systems have not worked in years, so older boys collect sacks of scrap paper and donkey dung to use as fuel.

"This is worse than the tents," said Yar Mahmad, 25, an unemployed driver whose ailing 10-month-old son also died of cold this month. Neighbors had each lent him $2 for medicine for the boy and then helped bury him, lighting a fire to warm their hands while they dug in the frozen ground. "Now I owe $400, and I lost my son, too," Mahmad said glumly.

No one knows exactly how cold it gets here, because there is no national weather service. Afghan television stations report the local weather based on forecasts by faraway foreign meteorologists, conveyed via the Internet. But aid workers said the temperature had recently dipped to 5 degrees Fahrenheit at night.

Even for residents with slightly better incomes than Mahmad's, a Kabul winter such as this one, which struck earlier than usual, brings hardships unimaginable in the West. The city's overloaded, war-damaged power system is still near collapse despite extensive repairs since 2001. Homes typically receive electricity only a few hours every other night, assuming that they're wired at all. Water must be heated in buckets, and bathing can be an excruciating ordeal.

Because much of the capital's commercial life takes place outdoors, in sidewalk stalls and workshops, winter weather shuts down much of the economy. Only a few kinds of business thrive in the cold weather: the used-clothing sellers who hang sweaters and jackets from roadside fences, and the coal and wood sellers who chop and stack their wares on frozen lots.

Rabbani, an elderly man who sells firewood in the Old City district, waits for customers by the stove in his toasty plywood hut, keeping an eye on a mountain of chopped logs. Often poor families send their sons to buy a few kilograms of wood at a time, and Rabbani sometimes adds a couple of sticks to the meager pile on his ancient scale.

DOJ_NMG_0119228

"I think I am the only happy man in Kabul, because when it gets cold, everyone comes to me," he said. "It is so hard for people. They ask for three kilos, and I know it will only burn for an hour. If they earn $2 a day, they have to choose between buying bread and wood."

Cold-related deaths usually come one or two at a time, but occasionally poverty and bad weather conspire to produce large numbers in one place. Last month, 80 women and children perished in central Logar province when they were trapped in several remote hillside villages after a heavy snowfall.

Afghan and international aid officials said they began planning last summer to help people in the most vulnerable regions get through the coldest months. The U.N. World Food Program, working with the Ministry of Rural Development, trucked 21,000 tons of donated oil, wheat, lentils and salt to warehouses in more than a dozen provinces.

Nevertheless, they said, the deliveries were delayed by bad security and red tape at the Pakistani border. On top of that, winter arrived early, making it hard for trucks to reach some remote spots. In some cases, officials resorted to airdropping supplies by helicopter.

"This year has been very challenging, with millions of people at risk, but we have avoided a crisis," said Ebadullah Ebadi, a spokesman for the World Food Program here. "In some provinces with heavy snows, the roads are cut off for three to four months. Because of the drought, places that used to be breadbaskets are now asking us for food."

One wealthy private philanthropist, Ehsan Bayat, has also been delivering emergency food and supplies to families in many parts of the country. He sends fleets of private trucks to needy regions and then personally flies there in Afghan army helicopters to inspect and distribute the supplies.

Bayat, an Afghan American entrepreneur who owns one of two major cellphone companies and a private TV station in Kabul, has also been taking winter supplies to needy families in the capital. Residents at the Teknikom building said that he had brought them a load of blankets and coal but that what they really needed were permanent homes.

"There is nothing here for us: no jobs, no land. In the summer we can work as laborers, but in the winter all we do is wait in the cold," said Nader Mohammed, 38, the unofficial leader of the Teknikom families. "We thought we would be welcomed home when we left Pakistan. Now we just sit here by the stove, asking ourselves why we came back."

Decreased Military Role Leaves Gaps In Drug War (LAT)

By Josh Meyer

The Los Angeles Times, January 22, 2007

WASHINGTON — Stretched thin from fighting in Iraq and Afghanistan, the U.S. military has sharply reduced its role in the war on drugs, leaving significant gaps in the nation's narcotics interdiction efforts.

Since 1989, Congress has directed the Pentagon to be the lead federal agency in detecting and monitoring illegal narcotics shipments headed to the United States by air and sea and in supporting Coast Guard efforts to intercept them. In the early 1990s, at the height of the drug war, U.S. military planes and boats filled the Southern skies and waters in search of cocaine-laden drug vessels coming from Colombia and elsewhere in South America.

But since 2002, the military has withdrawn many of those resources, according to more than a dozen current and former counter-narcotics officials, as well as a review of congressional, military and Homeland Security documents.

Internal records show that in the last four years the Pentagon has reduced by more than 62% its aerial surveillance flight hours over Caribbean and Pacific Ocean routes that are used to smuggle in cocaine, marijuana and, increasingly, Colombian-produced heroin. At the same time, the Navy is deploying one-third fewer patrol boats for detecting and catching smugglers.

The Defense Department also plans to withdraw as many as 10 Black Hawk helicopters that have been used by a multi-agency task force to move quickly to make drug seizures and arrests in the Caribbean, a major hub for drugs heading to the United States.

And the military has deactivated many of the high-tech surveillance "aerostats," or radar balloons, that once guarded the entire southern border, saying it lacks the funds to restore and maintain them.

The Department of Defense defended its policy shift in a budget document sent to Congress in October: "The DOD position is that detecting drug trafficking is a lower priority than supporting our service members on ongoing combat missions."

Members of Congress and drug-control officials have said the Pentagon's cuts and redeployments have hamstrung the U.S. drug interdiction effort at a time when an estimated 1,000 metric tons of inexpensive, high-quality cocaine are entering the country each year.

It's hard to gauge the precise impact of the pullback because authorities say they only know how much narcotics they are seizing, not how much is getting through — especially with fewer surveillance planes and boats to gather intelligence.

In the budget report to Congress, the Pentagon estimated recently that it detected only 22% of the "actionable maritime events" in fiscal 2006 because it "lacks the optimal number of assets."

DOJ_NMG_0119229

Even when they detected suspected smuggling vessels, U.S. authorities had to let one in every five go because they lacked the resources to chase them, Pentagon officials conceded in their report.

"We have not stopped trying to fix that gap. We're very much concerned about it, and working very hard to try and fix these problems," Edward Frothingham III, acting deputy assistant Defense secretary for counter-narcotics, said in an interview. "DOD is in no way lessening our support" for the war on drugs, he said. "But in the post-9/11 world, some of these assets are needed elsewhere."

With Pentagon support dropping, the Coast Guard and other Homeland Security agencies such as U.S. Customs and Border Protection are trying to play a greater role in the interdiction effort. But current and former officials within those agencies say they do not have the resources to do the job because they, too, have had to dramatically redeploy assets since the sweeping post-Sept. 11 reorganization that made Homeland Security the front line in keeping terrorists out of the United States.

"I can't stand here and tell you drugs aren't coming into the U.S. by sea. It happens," said Cmdr. Jeff Carter, a Coast Guard spokesman. "There are huge challenges, but we are making a dent."

(The Justice Department, through the FBI and Drug Enforcement Administration, also has a central role in the drug war, but it is more focused on arresting narcotics traffickers in the U.S. than on interdiction.)

The cutbacks continue at a time when the Pentagon has officially reclassified the drug interdiction effort as part of the broader war on terrorism, citing intelligence showing growing ties among terrorists, drug dealers and organized-crime syndicates.

"In the post-9/11 world, where both securing and detecting threats to our nation's borders have become critical national security objectives, we cannot continue to neglect the fact that narco-traffickers are breaching our borders on a daily basis," according to a report that was quietly issued last month by the House Subcommittee on Criminal Justice, Drug Policy and Human Resources.

At a November 2005 hearing before another House subcommittee, Rep. Dan Burton (R-Ind.) said the lack of available military assets and the amount of drugs getting through "just boggled my mind."

"The spike in narcotics shipments via Central America we ignore at our own peril," said Burton, who at the time was chairman of the international relations subcommittee on the Western Hemisphere. "They could be carrying weapons, terrorists and other things that could destroy not only the youth of America, but American cities."

The weakening of the U.S. drug interdiction effort comes just as U.S. authorities have had some major successes in the drug war, led by the Pentagon's Joint Interagency Task Force-South, based in Key West, Fla. Authorities have seized increasing amounts of cocaine since 2001, including a record 300,000 pounds in 2005, although records show that seizures dropped off sharply in 2006, when authorities seized 230,000 pounds.

Counter-narcotics officials, including some in the Pentagon, acknowledge that the large recent seizures are only masking more fundamental problems caused by the sharp decline in drug interdiction assets.

The recent successes were due in part to improved inter-agency cooperation and U.S. efforts to bolster the Colombian government's counter-narcotics program. They were also aided by a windfall of intelligence gained from a program known as Operation Panama Express, which allowed authorities to pinpoint major shipments of drugs, documents show. That intelligence has largely dried up as Colombian drug lords tightened their operational security, making the Pentagon's detection and monitoring assets in the so-called transit zones ever more critical, according to U.S. documents and officials.

"What you've had is a significant downsizing of the counter-narcotics effort in the transit zones, and that has very direct national security implications," said Robert B. Charles, assistant secretary of State for international narcotics and law enforcement affairs from 2003 to 2005. He said the loss of resources threatened to "consign future generations of young Americans to a deluge of cocaine and heroin."

Perhaps the most important link in the drug interdiction chain is the Pentagon's aerial patrols. Without them, a U.S. military ship can detect only about one out of every 10 suspected drug vessels (one out of five if the ship has a helicopter on board), according to statistics from the Joint Interagency Task Force-South.

With the planes, whose radars can cover hundreds of miles, the military's odds improve to seven out of 10.

Department of Defense aerial patrol hours in the transit zones declined from 6,062 hours in fiscal 2002 to a low of 1,432 in 2005. They rose to 2,296 in the most recent fiscal year, which ended in October, but since then, the Pentagon has grounded much of its fleet of P-3s for long stretches, due to lack of pilots, money for flying time or maintenance issues, documents show.

Military officials concede the aerial surveillance situation is dire, and likely to get much worse. That's because most of the Pentagon's drug planes are Vietnam-era P-3s that were mothballed for years before being brought back into service for the drug war. Many of them have been redeployed to war zones or for use in counter-terrorism operations, Frothingham said. Those remaining suffer from wing corrosion so serious that they're in the shop much of the time, U.S. documents and officials say. Many of them have no working radar, but their replacements won't be ready until at least 2012.

DOJ_NMG_0119230

The Pentagon has also redirected other planes used to spot smugglers — including fighter jets and high-flying reconnaissance planes — toward other missions, and turned down requests to use unmanned drones in the drug war.

Things aren't much better at sea, where there is a continuing lack of Navy resources to intercept drug runners who are using "go fast" multi-engine boats that are often 40 feet long, travel at up to 40 knots and capable of carrying several tons of cocaine.

In the Eastern Pacific transit area, four U.S. ships are dedicated to patrolling an area larger than the continental United States.

Two years ago, U.S. authorities discovered that smugglers were easily avoiding military boats by navigating far into the eastern Pacific Ocean with the help of at-sea refueling vessels. In comparison, for every four days of patrol, U.S. military ships spend an average of eight days traveling to and from the transit zone to refuel, said Rear Adm. Jeffrey J. Hathaway, director of the JIATF-South.

Frothingham's tiny counter-narcotics office at the Pentagon is still looking for a solution because the department's leadership won't commit military tankers for the task. A senior Pentagon budget official said the British government recently pledged to provide a tanker in the Pacific, but only temporarily.

Homeland Security agencies, the Coast Guard in particular, have moved boats and planes to the region to intercept smugglers, but documents show that in most cases, the U.S. presence remains far below what it was before Sept. 11, 2001.

In May, the Pentagon decided to withdraw its Caribbean-based Black Hawk helicopters for use elsewhere. The Justice Department protested, calling the helicopters a linchpin in the U.S. counter-drug effort because they ferried law enforcement agents among the thousands of islands that cocaine traffickers use as transshipment points.

That opposition has pushed back the withdrawal of the Black Hawks until October, but counter-narcotics officials say the larger problem is that no other agency has received funding to keep them operating.

As the U.S. fortifies its border with Mexico, counter-narcotics officials warn that smugglers could simply move east and penetrate the vast border along the Gulf Coast. In response to such threats, various U.S. agencies had for years been using radar-equipped tethered aerostats to provide continuous and long-range monitoring of smugglers by land, air and sea.

The Pentagon took over the Tethered Aerostat Radar System, or TARS, in 1992 and shut down three of the balloons in the Bahamas in 1994. Then, in 2001 and 2002, it shut down three others in Texas, Louisiana and Florida, leaving virtually the entire Gulf Coast uncovered — from Florida to east Texas, and part of the Caribbean as well.

The Pentagon won't put the radar balloons back up because it believes the money is better spent elsewhere, Frothingham said.

In November 2005, the Government Accountability Office raised serious concerns about the shortcomings in the interdiction effort, and said it was particularly troubled by the lack of strategic planning by the Pentagon and Homeland Security to deal with a major redeployment of drug war assets that it believed would only get worse, not better.

The GAO, the independent investigative arm of Congress, requested that the Pentagon and Homeland Security Department devise comprehensive plans on how to maintain the drug interdiction effort with dramatically fewer resources.

More than a year later, the GAO's Jess T. Ford said in an interview that he had seen few signs of progress.

"If that trend continues," he said, "it just means we are going to miss more and more opportunities."

Bigger Force Unnecessary (USAT)

By Gordon Adams

USA Today, January 22, 2007

Expand the American ground forces? That puts the manpower cart before the strategic horse. Just what is the mission? If we buy that, we can buy a larger Army.

Reduce force stress? That's about Iraq — this larger ground force arrives after Iraq has been decided. Leaving Iraq removes force stress; what's the mission for the bigger force?

Other big, unilateral invasion and long occupation missions are sheer fantasy, given our experience in Iraq. The American people have had enough of that. But where would they be?

·Iran? A country that rejects our "liberation," has hostile terrain, is four times as large as Iraq in area and three times larger in population, with a million-man military?

·Korea? We are shrinking in Korea because the North is so weak and the South has a superbly trained, active force of 650,000 (and 4.5 million in reserves).

·Pakistan? Our invasion would galvanize 169 million people in an Islamic country with a 1.1-million man military and nuclear weapons. Should we need to prevent Pakistan's nuclear weapons from falling into the wrong hands, the mission would be targeted and fast, with heavy use of air power to avoid a land invasion and occupation.

DOJ_NMG_0119231

·China? Let's stipulate that the United States is not going to mount a land invasion of China.

·Afghanistan? A serious candidate, but our allies support us there, unlike in Iraq. Leaving Iraq allows us to beef up in Afghanistan, but the real need there is not only the military, but counter-narcotics programs, foreign assistance and tough diplomacy with Pakistan.

None of these missions makes sense, and only they would justify growing the Army. What about the "long war" against terrorism? While the military (particularly the smaller Special Forces) has its role in this struggle, terror is a tactic that demands the other elements of statecraft — diplomats, lawyers, spies, special forces, homeland defenders, foreign assistance providers.

Instead of adding troops we don't need, maybe it is time to beef up these other tools — our diplomacy, civilian reconstruction, foreign assistance, intelligence and public diplomacy. The military has a key role in this effort, but we don't need a larger one. We need one more sharply trained to its specific combat mission in the framework of a workable strategy of international engagement. We ought to answer the strategy, mission and toolkit questions, before we throw another $150 billion at the military knowing we are not doing another Iraq anytime soon.

Gordon Adams is a Fellow at the Woodrow Wilson International Center for Scholars. From 1993 to 1997, he was the senior White House national security budget official.

Strains On U.S. Forces Justify Increasing Troop Strength (USAT)

USA Today, January 22, 2007

Growth won't help in Iraq but is prudent way to meet new threats.

A little-noticed story last week about a U.S. Army battalion in Afghanistan highlighted a critical problem for the U.S. military. The 1,200-soldier battalion is due to rotate out this spring, then to deploy later this year to Iraq, where U.S. commanders could use its help. But the top general in Afghanistan, anxious for more troops to fight resurgent Taliban forces, told reporters he wants to keep those 1,200 soldiers in Afghanistan through the end of the year.

The tug-of-war over a single battalion is the latest evidence that the military — particularly the Army — is too small for the jobs it's doing, or may have to do.

Aggressively (and rightly) downsized after the Cold War, U.S. forces were kept that way by former Defense secretary Donald Rumsfeld after 9/11 even as the stresses of fighting simultaneously in Iraq and Afghanistan began to show. With Rumsfeld out of the picture, President Bush and new Defense Secretary Robert Gates have endorsed a plan to add 92,000 troops to the Army and the Marines.

That's a modest increase — barely 7% of the roughly 1.4 million active-duty U.S. military — and even that will take several years. The schedule isn't likely to be of great help in Iraq, but it's a prudent way to prepare U.S. forces for the unpredictable challenges of the war on terrorism.

Most importantly, the U.S. military would have staying power it now lacks. The fighting in Iraq and Afghanistan has been a test of whether the current military is large enough to support long deployments of large numbers of troops. It obviously is not.

In an emergency, U.S. commanders could muster many more than the 150,000 to 170,000 troops in Iraq and Afghanistan, but sustaining them for years is much harder. Repeated deployments since 9/11 have put severe strain on the Army. About a quarter of Army troops have served more than once in Iraq or Afghanistan, and some are headed for their third tours. The Pentagon has had to shrink the time between combat deployments, and the stress on people and equipment has reached disturbing levels.

That leaves the United States ill-prepared to cope with potential threats in Korea, where some 30,000 troops are stationed, or elsewhere.

It would be dangerously unwise to seek a war with Iran, for instance, but ground forces are stretched so thin now that it's not a viable threat, which weakens diplomatic leverage aimed at resolving Iran's nuclear weapons program.

Strategists also worry about a nightmare scenario in which U.S. forces might have to fight in Pakistan. One fear is that radical Islamists could assassinate President Pervez Musharraf and threaten to get control of Pakistan's nuclear weapons. Pakistan's population of 169 million dwarfs those of Afghanistan, Iran and Iraq.

The goal of a wise foreign policy should be to avoid conflicts, but it is unwise not to prepare for them. Having an obviously strained military sends a dangerous signal to U.S. enemies around the world.

Now that the secretary of Defense supports enlarging the Army and Marine Corps, the more challenging question may be how to pay for more troops — and it certainly should be the Pentagon's burden to come up with the money.

Adding 92,000 troops would cost roughly $15 billion a year — not insignificant, but also not a huge new expense in a defense budget that tops $400 billion a year. The Pentagon needs to decide which of its many weapons programs are essential and which are just convenient.

DOJ_NMG_0119232

Cost cutters have already trimmed some programs aimed at giving ground troops futuristic weapons such as robot vehicles. An ambitious program to build a next-generation fighter jet, even though today's are the best in the skies, is another potential target. So are Cold War systems such as submarines and tanks that have less utility today.

Better yet, as Congress reviews the troop-increase plan, it could restrain its members who regularly force the Pentagon to squander money on military bases and weapons systems that it doesn't want.

Iraq has shown at least two things: The United States should not provoke ill-conceived wars of choice. And if U.S. forces are called on for lengthy peacekeeping or counterinsurgency missions, all the high-tech weapons in the U.S. arsenal are no substitute for boots on the ground.

DOJ:

Editorial: You're Fired (SACBEE)

The Sacramento Bee, January 22, 2007

Furtive Justice Department boots attorneys

Since the November elections, the Justice Department has asked an unknown number of U.S. attorneys around the country, including two in California, to resign before the end of their terms. As Sen. Dianne Feinstein, D-Calif., has said, these are forced resignations in districts that have major ongoing cases.

Last week at the Senate Judiciary Committee hearing, Feinstein asked Attorney General Alberto Gonzales how many U.S. attorneys were being fired, but he would not give a number.

One Californian departing is Carol Lam, the U.S. attorney in San Diego who is pursuing corruption related to the prosecution of Rep. Randy "Duke" Cunningham, now in prison, thanks to her. The other is Kevin Ryan, the U.S. attorney in San Francisco who is in the middle of investigating whether 25 companies illegally withheld information about lucrative stock options for top executives.

It is customary that U.S. attorneys are prepared to leave office when a new president is elected. At the beginning of their terms, presidents have the discretion to name the 93 U.S. attorneys, who then must be confirmed by the Senate. They typically serve until the president leaves office. These midterm U.S. attorney firings are unusual, particularly because there are no allegations of misconduct.

Feinstein is alarmed that a little-known, last-minute change to the USA Patriot Act Reauthorization in March 2006 allows the attorney general to replace U.S. attorneys without Senate confirmation. The change was not in the original bills approved by the House and Senate, and thus never got a hearing. At the request of the Justice Department, Sen. Arlen Specter, R-Pa., added the provision during a House-Senate conference committee, which reconciles House and Senate bills for a final vote.

Under the old law, the attorney general could name an interim U.S. attorney for 120 days and when that term expired, the U.S. District Court would name a replacement until a presidential nominee was confirmed by the Senate. Feinstein has introduced a bill to restore the old law.

Presidential appointment with Senate confirmation remains an important check and balance in our system of government. The Senate and the House should approve Feinstein's bill immediately to prevent an unwarranted tilt toward presidential power.

CORPORATE SCANDALS:

Apple Prosecutor Quits Team For Private Sector (FT)

By Kevin Allison In San Francisco

Financial Times, January 22, 2007

A federal prosecutor on the team investigating options backdating at Apple, the computer maker, is leaving government service for a job with a private white-collar law firm.

The departure of Chris Steskal, a member of the federal task force that brought the first charges in options backdating in August, comes days after his boss, Kevin Ryan, the US attorney for northern California, became one of several top federal prosecutors to announce that they would be leaving office.

The twin losses may interrupt the US government's effort to crack down on backdating. The justice department and the Securities and Exchange Commission are already struggling to keep up with hundreds of backdating cases.

A spokesman from the US attorney's office in northern California said the investigations into options backdating would continue in spite of the departures.

DOJ_NMG_0119233

“US Attorney Ryan is taking care to ensure a smooth transition in the office’s cases,” the spokesman said. “There continue to be many assistant US attorneys with strong investigative skills and substantial trial experience on the stock options backdating task force and throughout the office, who are fully capable of carrying on the work of the task force.”

More than 160 companies are under scrutiny for improper options backdating, in which companies use hindsight to fudge options grant dates in order to inflate their value. Although backdating itself is not illegal, it can fall foul of securities laws if not properly disclosed. It also creates accounting problems.

Federal prosecutors and the SEC are actively investigating a backdated options grant to Steve Jobs, Apple’s co-founder and chief executive. Apple, which has turned the results of its own internal investigation into the matter over to federal authorities, has cleared Mr Jobs of any wrongdoing.

Meanwhile, dozens of top executives at other companies who knew about or engaged in improper dating of stock options grants have been sacked. Many companies have been forced to restate past earnings – some to the tune of hundreds of millions or even billions of dollars.

Mr Steskal is to join the law firm Fenwick & West. News of Mr Steskal’s departure was first reported on Friday by The Recorder, a publication covering the legal industry.

Federal Prosecutor Leading Apple Probe To Leave For Fenwick (LAW)

By Justin Scheck, The Recorder

California Recorder, January 22, 2007

It was a move Christopher Steskal couldn't resist -- but what does it mean for the Apple probe and impending Brocade trial?

Christopher Steskal, the federal prosecutor who indicted the country's first stock option backdating prosecution in June -- and the leader of a criminal probe into Apple Inc.'s options grants -- will leave the San Francisco U.S. Attorney's Office next month to lead the white-collar practice at Fenwick & West.

Steskal has been busy with options prosecutions in recent weeks -- Apple CEO Steve Jobs was interviewed by prosecutors and SEC lawyers earlier this week, according to people familiar with the case. But the offer from Fenwick was too enticing, Steskal said.

"I didn't spread my resume around the Valley," he said Friday, referring to Silicon Valley, saying that leaving a prosecutor's post is never easy.

"You're always going to be leaving cases on the table," he said.

Steskal comes to Fenwick as perhaps the pre-eminent prosecutorial expert in options backdating, the white-collar bar's biggest source of business these days.

"He's got the respect of his colleagues, the judges and the defense bar," said Fenwick's Chairman Gordon Davidson.

Steskal leaves behind the impending trial of two executives from Brocade Communications -- the first people to be indicted for backdating -- as well as the Apple probe, which has so far zeroed in on the tech company's legal department.

Steskal said Friday that he was well into negotiations with Fenwick -- which the firm initiated in November -- before learning that Fenwick partner Dennis DeBroeck was married to Nancy Heinen, who had been Apple's GC until last year. Sources have said investigators are interested in Heinen's role in Apple's options grants, and she has been represented by Cristina Arguedas, of Arguedas, Cassman & Headley and by Miles Ehrlich of Ramsey & Ehrlich since shortly after Apple's internal probe into backdating was launched.

That added a wrinkle to the standard conflict issues that arise when a prosecutor moves to the defense bar.

"I learned that bit of information a little bit later," he said, and immediately contacted the ethics officer of the San Francisco U.S. Attorney's Office.

"What we did was contact D.C. and got a written opinion from them, and I'm transitioning the case," he said. "I'm not making any substantive decisions regarding that case."

Fenwick does intellectual property work for Apple, a client touted on the firm's site.

Steskal's departure is a major blow to the U.S. Attorney's Office. He's been the lone prosecutor in the hard-fought Brocade case, and the main driver of at least a dozen other probes in addition to Apple.

"It would be hard to understand how this couldn't have an effect on that investigation, when the lead prosecutor, or co-prosecutor, is going to leave in the middle of the investigation," said Thomas Carlucci, a partner at Foley & Lardner who represents former Apple in-house lawyer Wendy Howell, a potential target of the probe.

With U.S. Attorney Kevin Ryan on his way out and his top deputy -- and Apple co-prosecutor -- Eumi Choi also shopping herself to white-collar defense firms, the move leaves dozens of options cases in limbo.

DOJ_NMG_0119234

Ryan spokesman Luke Macaulay said there are plenty of experienced prosecutors to absorb Steskal's caseload, and that the office is close to hiring two new prosecutors to handle securities cases.

FENWICK'S COUP

When Steskal settles into Fenwick's San Francisco office, he'll bring a high-profile white-collar name to a firm that has been missing one since its former top criminal defender, Brad Lewis, decamped last summer for a Fenwick client.

The new recruit could mean big business: Fenwick's robust corporate and securities litigation practices should feed white-collar work to Steskal.

Speaking over coffee on Friday, Steskal said he hadn't planned to leave the prosecutors' office anytime soon, but was drawn by the opportunity to lead a practice that has a ready source of clients.

"They're one of the few firms left that have all the pieces in place except for someone to carry the white-collar load," he said.

"With such strong ties with board members in the Valley, they're in a great position to do the internal investigations," he added.

Davidson agreed.

"Our securities litigation practice has been inundated with special investigations," he said. "Special investigations seem to be just a part of good corporate governance."

Steskal said Fenwick is also an attractive place because it has big Valley presence but hasn't been associated with sketchy options practices.

"They probably represent a third of the companies in the Valley, and relatively few of those companies have had the same stock options issues that other firms' clients have had," he said. "In part, I think that speaks a lot to their attention to corporate governance issues and conflict issues."

Still, potential conflicts are a major question when a prosecutor with pending investigations goes to the defense side.

"That was a concern of mine," Steskal said, one that he, the U.S. Attorney's Office and Fenwick worked carefully to address.

"He can't tell us what he's working on and never will, but we gave him a list of the investigations we're involved in," Davidson said.

"What I did was, any investigation where Fenwick represented parties or witnesses, I withdrew from," Steskal added.

BACK ON TRACK

While he's made his name in government, Steskal said he'd been planning to be a defense lawyer since he graduated from Harvard Law School in 1992.

But after working as an associate, first at Cravath, Swaine & Moore, then at Howard, Rice, Nemerovski, Canady, Falk & Rabkin, Steskal said, he decided he needed more trial experience and went to the U.S. Attorney's Office.

In 2001, then-San Francisco U.S. Attorney Robert Mueller was seeking to stock the office with bright young lawyers.

"Bob Mueller hired me because he liked my resume," Steskal said. "I was never going to be a career prosecutor," he added. "I would be a career prosecutor if I was independently wealthy or had won the lottery, but I'm not and I haven't."

Current and former prosecutors who've worked with Steskal say he's known for being smart, aggressive and relentless. His courtroom reputation was sealed by the conviction last year of real estate developer John Hickey in a case he handled with Assistant U.S. Attorney Timothy Crudo.

Steskal inherited the old -- some would say stale -- case years after it was indicted, and more than a decade after Hickey committed the acts that allegedly defrauded investors of $17 million. The new lead counsel had to dig through a pile of dusty files.

"It was a huge task to marshal that case," he said last week. "I mean, the evidence was way over 10 years old, and a lot of the witnesses hadn't been interviewed in 10 years. A lot of them hadn't been interviewed at all."

Steskal and Crudo secured a conviction on counts of securities and mail fraud.

"He earned a great deal of respect in the office for resuscitating a very old prosecution and winnowing it down to a very successful case," said Berkeley-based defense lawyer Miles Ehrlich, who, as a supervisor in the U.S. Attorney's Office, had assigned the case to Steskal.

But even while that trial was going on, Steskal had a probe of Brocade Communications simmering on the back burner.

PAPER TRAILS

Steskal said Friday that his interest in Brocade was first piqued by a New York Times column in early 2005 -- long before anyone was paying attention to options backdating -- that discussed the company's financial restatement.

"I was thinking like a securities class action lawyer, and there was a mention in the press release about document irregularities, and that's a red flag," he said. "You've got to think like Bill Lerach a little bit, and it's actually a lot of fun."

DOJ_NMG_0119235

He investigated it for more than a year before realizing that backdating would be bigger than his investigation of a single company.

"Like most people, I started reading the Wall Street Journal piece" early last year on studies indicating that options backdating was widespread.

Steskal's investigation, conducted jointly with the SEC, continued another several months, and in June, former Brocade CEO Gregory Reyes and ex-HR manager Stephanie Jensen were charged. While the investigation was lengthy, Steskal said, "it didn't take an unusually long time for a securities case."

But it did generate an unusual amount of publicity, rancor from the defense team and skepticism from U.S. District Judge Charles Breyer, who is presiding over both the criminal prosecution and the SEC's civil suit against former executives.

Breyer, though, had only good things to say Friday about the outgoing prosecutor.

"I think he's a very competent lawyer," Breyer said. "He's extremely professional. He's industrious, and I have a great deal of respect for his integrity."

Richard Marmaro, a partner at Skadden, Arps, Slate, Meagher & Flom defending Reyes, wasn't as quick with praise for the lead prosecutor on a case he's publicly denounced.

"I wish him the best in private practice," he said.

Sunrise Bogged Down In Accounting (WP)

By Cecilia Kang

The Washington Post, January 22, 2007

Theirs was a classic entrepreneurial story. In 1981, Paul and Terry Klaassen, in their 20s, bought and renovated an old nursing home in Oakton with $16,000 in savings.

Terry was motivated by personal experience: When her mother became ill, she found the level of care available at the time to be inadequate and undignified. Paul saw the business potential in developing a warmer and more personalized European model of senior care, like that in his family's native Netherlands.

The couple moved into the home and eventually turned the business, Sunrise Senior Living, into one of the nation's largest senior residential services providers, operating 436 retirement communities in the United States, Canada and Europe. The Klaassens had landed smack in the middle of a sweeping demographic shift as America's growing aging population was looking for better retirement options and willing to pay for better services.

Yet as analysts touted Sunrise's business outlook, that rosy picture began to fray.

Last week, the McLean-based company said it would again delay the filing of its financial results for all four quarters of 2006, which it had previously promised to deliver on March 1. Sunrise blamed the postponement on the complexity of an ongoing internal accounting review and a Securities and Exchange Commission inquiry into its accounting practices and allegations of insider stock sales.

"We share the disappointment of our investors and stakeholders regarding this delay," Bradley B. Rush, Sunrise's chief financial officer, said in the company's statement. "Rather than continue to predict the date of the ultimate end of the process, which depends on third parties, we will continue to provide interim updates as we proceed, as fast as possible, toward completion." Rush's office said he was unable to schedule an interview.

The troubles for Sunrise began last May, when executives announced they would implement a new way of accounting for profits and losses from certain joint ventures. The move resulted in an accounting review of past earnings reports and the reduction of $100 million in profits between 1999 and 2005.

The company's share price dropped 34 percent after the announcement, reaching the year's lowest point in late July 2006. Last week, pension funds for the United Food and Commercial Workers Union filed lawsuits against Sunrise charging the company with accounting fraud and insider stock trading. Another union pension fund, the SEIU Master Trust, has pressed the company in letters about insider stock sales and the questionable timing of stock options grants.

Sunrise has said that the SEC inquiry was prompted by the SEIU's letters. In its release last week, it accused the SEIU of writing the letters to generate media attention as part of an attempt to organize Sunrise workers. Steve Abrecht, executive director of the SEIU Master Trust, said the SEIU has no members at Sunrise and has no plans to organize a union at the company.

"We're very disappointed. They've had plenty of time to do an investigation, and why they can blame it on us is hard to imagine," Abrecht said.

The pension fund also has urged Sunrise to review the composition of the review committee the company created last December. Sunrise has not disclosed who is on the committee, and the SEIU said it suspects that it might include company directors.

DOJ_NMG_0119236

"It's not appropriate to have a special committee made up of board members. It would be too conflicted; they would be investigating themselves," Abrecht said.

One question raised is the $32 million in stock sales by Sunrise executives from December 2005 to May 2006, when the new accounting system was announced. The Klaassens sold about $20 million in Sunrise shares during that period, in 12 separate transactions.

Some shareholders have alleged that company executives, including the Klaassens, knew about the accounting changes months before they were made public and unloaded their shares ahead of the news. These shareholders cite a comment made during a May 11 conference call with analysts, when a Sunrise executive said the new accounting method "came into consideration late in 2005."

The company has maintained that the board members and executives did not have prior knowledge of the financial restatement at the time of their stock sales.

Another shareholder, LongView Small Cap Index Fund of Amalgamated Bank in New York, wants a review of bonuses and awards given to senior executives during the periods when earnings were restated. In a request to be voted on by shareholders at the company's annual meeting this spring, LongView argues that executives who did not meet performance targets based on the new financial results between 1999 and 2005 should return the money, the fund said.

Even with a cloud hovering above Sunrise, many analysts who follow the industry maintain that the underlying health of the company is strong. The firm has not filed a financial report since last March.

"Fundamentals for this business are terrific," said Jerry L. Doctrow, a research analyst with Stifel Nicolaus. "Sunrise really founded the assisted-living industry in America and has the brand and reputation of a high-quality provider."

Sunrise grew quickly with the help of some savvy acquisitions, including the $150 million purchase of Marriott International's senior living operation in 2003. The company's hallmark is building communities with tony architectural details, such as French doors and vaulted ceilings, and complementing those surroundings with a broad array of concierge and health services.

The company has also experienced setbacks. In the late 1990s, Sunrise found itself competing against at least a dozen other major senior living providers, and the supply of senior housing outstripped demand. Since then, the industry has consolidated and demand has caught up with the number of residential units available. In September 2005, as the company sought to evacuate residents from areas hit by Hurricane Rita, a bus Sunrise chartered for its residents exploded and 23 people were killed.

Analysts have expressed disappointment with the latest delay in financial reporting. But they also have given the company high marks for its operations. Sunrise has said that occupancy rates at the communities it operates has risen to about 94 percent. On Jan. 11, Sunrise and Prudential Real Estate Investors announced a joint venture to develop 18 senior communities in Britain valued at $1 billion.

"We view this announcement as a reminder that the company's core strategy of developing and operating high-quality senior living properties in attractive locations is clearly on track," Ryan Daniels, an analyst at William Blair wrote in a report.

Doctrow said the company has said repeatedly that its accounting problems have not affected its operations. "The important thing for us is cash flow, and they say none of this has affected their cash flow," he said.

Hedge Funds And Insider Trading (NYT)

The New York Times, January 22, 2007

A truism of investing is that to beat the market consistently, an investor must either take above-average risk or trade on inside information. That inevitably casts a cloud over hedge funds, which exist to beat the market. Many fail, sometimes spectacularly so. But many succeed. The question is, How?

The Wall Street Journal reported that Eliot Spitzer was asking just that question. Shortly before he resigned as New York's attorney general to become the governor, Mr. Spitzer opened investigations into whether employees at companies including Best Buy and Circuit City had improperly given nonpublic information to hedge fund managers.

Two research firms, the Gerson Lehrman Group and Vista Research, a unit of McGraw Hill, are also under investigation. They specialize in matching up people who have information — say, middle managers — with clients who crave information, like hedge funds managers. The firms collect fees from hedge fund clients and pay sources as consultants. Business for these firms has boomed since 2000, when federal regulators enacted disclosure rules that made executives at public companies wary of speaking privately with big investors.

It will be up to the prosecutors to determine if the matchmaking firms merely appear to be conduits for nonpublic information, or if they indeed are. The firms say they follow procedures to guard against any inappropriate disclosures.

DOJ_NMG_0119237

But the safeguards seem weak. Gerson Lehrman told The Journal that it reminds its consultants not to divulge confidential or restricted information. A Vista spokesman said consultants must sign an ethics code that says they're "never expected" to comment on their employer.

New York's new attorney general, Andrew Cuomo, should pursue any wrongdoing. And the new Congress should move forward with hedge fund regulation. The possibility of a destabilizing meltdown only grows the longer the funds escape oversight.

CRIMINAL LAW:

Gambling Subpoenas On Wall St. (NYT)

By ANDREW ROSS SORKIN And STEPHANIE SAUL

The New York Times, January 22, 2007

The Justice Department has issued subpoenas to at least four Wall Street investment banks as part of a widening investigation into the multibillion-dollar online gambling industry, according to people briefed on the investigation.

The subpoenas were issued to firms that had underwritten the initial public offerings of some of the most popular online gambling sites that operate abroad. The banks involved in the inquiry include HSBC, Credit Suisse, Deutsche Bank and Dresdner Kleinwort, these people said.

While online gaming sites like PartyGaming and 888 Holdings operate from Gibraltar and their initial public offerings were held on the London Stock Exchange, companies that do business with them and have large bases in United States have come under scrutiny by regulators in Washington.

None of the biggest United States banks like Goldman Sachs or Citigroup underwrote the initial public offerings in London, in part because of the legal ambiguity of the sites; they are illegal in the United States, but still accessible to residents.

The subpoenas, earlier reported by The Sunday Times of London, appeared to be part of an indirect but aggressive and far-reaching attack by federal prosecutors on the Internet gambling industry just two weeks before one of its biggest days of the year, the Super Bowl.

Unable to go directly after the casinos, which are based overseas, they have sought to prosecute the operations' American partners, marketing arms and now, possibly, investors.

The prosecutors may be emboldened by a law signed by President Bush last October that explicitly defined the illegality of running an Internet casino. Even before that law, the Unlawful Internet Gambling Enforcement Act, was adopted, the government said that Internet gambling was illegal under a 1961 provision.

These offshore casinos, typically based in Costa Rica or Antigua, allow American bettors to use their home and office computers to place wagers on a range of contests.

Millions of Americans participate; more than half of all bets placed to major offshore casinos are from residents of the United States.

The prosecutors' efforts have already taken a toll in the last two years on offshore casinos, most notably with the arrest last year of David Carruthers, the chief executive of an Internet sports book, BetonSports. The company is based in Britain and has operations in Costa Rica, but Mr. Carruthers was detained at the Dallas airport while traveling through the United States.

The arrest led to BetonSports' decision to stop taking bets from the United States, crippling its business.

Several weeks later, agents of the Port Authority of New York arrested Peter Dicks, the chairman of Sport-ingbet, which offers online sports betting and, like Mr. Carruthers's company, trades on the London Stock Exchange. Mr. Dicks was arrested at Kennedy Airport.

Last week, a British online money transfer business, Neteller, said it would cease handling gambling transactions from United States customers because of regulatory uncertainty.

"It appears that the Department of Justice is waging a war of intimidation against Internet gambling," said I. Nelson Rose, a professor of law at Whittier Law School in Costa Mesa, Calif., who is an expert on Internet gambling law.

Another lawyer, Lawrence G. Walters of Altamonte Springs, Fla., said the development was disconcerting because the prevailing wisdom had been that investment in a company that is legal and licensed in its jurisdiction was not grounds for prosecution.

"It would be the first time that that kind of liability has been imposed," Mr. Walters said.

But he cautioned that the subpoenas could be part of a government fact-finding effort and might not signal a plan to prosecute banks

Libby Trial To Display Changed Reporter-Source Relations (NYT)

DOJ_NMG_0119238

By Neil A. Lewis

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — As the perjury and obstruction of justice trial of I. Lewis Libby Jr. unfolds over the next few weeks, the ways in which the case has vastly reshaped relations between reporters and high government officials will be on vivid display.

Most striking, a handful of reporters for major news organizations will testify for the prosecution. They will be asked to recount conversations they had in 2003 with Mr. Libby, then Vice President Dick Cheney's chief of staff, that were undertaken with some understanding that they were confidential.

The highly unusual spectacle of journalists giving testimony at a criminal trial about their reporting is a result of the intense investigation into the disclosure of the identity of a Central Intelligence Agency operative. Previous leak investigations typically ended in failure as reporters were able to fend off prosecutors' efforts to delve into what they learned from government sources.

But in trying to determine how Valerie Wilson, who was known by her maiden name, Valerie Plame, came to be identified as a C.I.A. operative in a newspaper column in July 2003, the prosecutor, Patrick J. Fitzgerald, successfully pressed reporters to testify before a grand jury, threatening jail if they refused. In the case of one, Judith Miller, formerly of The New York Times, Mr. Fitzgerald, with the backing of the courts, succeeded in having her jailed for 85 days until she relented.

Rodney A. Smolla, the dean of the University of Richmond Law School and an authority on the First Amendment, said the Libby investigation had made clear that any promise of confidentiality from a reporter now comes with an asterisk.

"This has undercut the assumptions that existed for several decades that a reporter's promise of confidentiality is not only sacrosanct as a matter of journalistic ethics but relatively secure as a matter of law," Dr. Smolla said. "Now it's clear that the legal system will try to break that promise, and the sources and reporter appear much more vulnerable, at least in the federal system, than was thought to be just a short time ago."

There is no formal code that describes the rules of engagement for officials and reporters in Washington, but a less-than-neat system evolved over decades that allowed government sources to impart information to journalists without having their identities revealed publicly. Editors, hoping to be more accountable to the public, have tried in recent years to change those practices.

Nothing may have shaken those ways of doing business and the underlying relationships as much as the Libby case.

The impact in the workaday world is difficult to measure, as it is impossible to know of articles never written because officials decided not to risk becoming sources. Eve Burton, vice president of the Hearst Corporation, said her company had refrained from publishing or broadcasting stories in recent months to avoid the risk of becoming embroiled in a subpoena battle that could lead to fines and jail terms for reporters.

Another effect has been on how news organizations reconsider the pledges their journalists may make.

Bill Keller, the executive editor of The Times, has suggested that reporters may sometimes wish to negotiate the conditions of confidentiality with a source.

In a speech in October, Mr. Keller said such negotiations could go something like this: "I will keep your name out of the paper, and if I am subpoenaed as part of a leak investigation my paper will fight it. But if we lose in the courts I do not plan to go to jail or allow the paper to be fined into bankruptcy."

Mr. Libby, who is known as Scooter, is charged with lying to both a grand jury and F.B.I. agents who were investigating the leak of Ms. Wilson's identity to journalists. The case began with a July 14, 2003, column by Robert D. Novak, saying that Ms. Wilson worked at the C.I.A. and was married to Joseph C. Wilson IV, a former ambassador who had days before accused the administration of distorting intelligence to help the case for going to war in Iraq.

Mr. Libby had nothing to do with the leak to Mr. Novak, but he testified under oath that he had not disclosed information about Ms. Wilson to other journalists. Ms. Miller and Matthew Cooper of Time magazine told the grand jury that he did, in fact, talk about Ms. Wilson with them. Mr. Libby also testified that he learned of Ms. Wilson's identity from a third journalist, Tim Russert of NBC News, but Mr. Russert is expected to testify that that is false.

Mr. Libby's lawyers are expected to argue that he did not tell those reporters about Ms. Wilson and that, even if he did, he remembered incorrectly what had happened.

Many people experienced in the capital game of source and reporter will understand the thesis Mr. Fitzgerald has put forward — that Mr. Libby expected that reporters would successfully resist cooperating with law enforcement officials and that his conversations with them would never be revealed.

Mr. Fitzgerald has also said he may try to explore at trial the issue of whether waivers of confidentiality given by Mr. Libby to reporters in order to allow them to testify were genuine. Mr. Fitzgerald's goal would be to demonstrate that Mr. Libby was actually trying to hide information rather than have it disclosed.

To that end, the trial may try to solve one of the case's mysteries: whether there was any hidden meaning to a note Mr. Libby wrote to Ms. Miller giving her permission to testify before the grand jury. In September 2005, Mr. Libby wrote to Ms. Miller saying he had not spoken to reporters about Ms. Wilson and then relieving her of any journalistic obligation to keep their conversations confidential.

Mr. Libby told Ms. Miller, who was in jail at the time for refusing to cooperate with the prosecutor, that she should testify, get out of jail and experience the autumnal delight of Colorado's aspens changing color. "Out West, where you vacation, the aspens will already be turning," Mr. Libby wrote. "They turn in clusters because their roots connect them."

Was that phrase a simple attempt at a literary turn? Or was it a veiled plea for Ms. Miller to "turn" with him and back up Mr. Libby's account that he had not disclosed Ms. Wilson's identity to her?

Before Ms. Miller went to jail, she dismissed the validity of an earlier waiver Mr. Libby had offered to all journalists. She asserted that such waivers from sitting government officials were inherently coerced.

Ms. Miller wrote in The Times that after two months in jail she "owed it to herself" to clarify whether Mr. Libby's waiver was genuine. She authorized her lawyers to seek an explicit waiver from Mr. Libby, which he granted in a telephone conversation and in the letter about aspens.

To challenge the sincerity of that waiver, Mr. Fitzgerald would probably note that, when Ms. Miller eventually testified before the grand jury, she provided information that was used against Mr. Libby in the indictment. If Ms. Miller testified truthfully to Mr. Libby's detriment, Mr. Fitzgerald may argue, then Mr. Libby must not have intended to encourage her to testify at all.

Official Backed Plans Of Business Connections (WP)

By David S. Fallis And Michael Laris, Washington Post Staff Writers

The Washington Post, January 22, 2007

Former Planning Chief Had Ties to Companies

In 2004, Peter J. Knop, a wealthy Loudoun landowner, asked the county to allow his family company to build a vast entertainment complex with a theater and studios on his 1,000-acre property near Dulles Airport.

Lawrence S. Beerman II, then chairman of Loudoun's Planning Commission and a venture capitalist, had business plans of his own. He was raising money for the purchase of an Alabama-based trucking fleet known as Evergreen Transportation Inc., according to records and interviews. He brought that deal to the Knops, and they invested, Knop said.

Two weeks after the sale was completed, Beerman voted favorably on the Knops' entertainment center, helping it clear its first regulatory hurdle.

Beerman, who held sway over land decisions in Loudoun County for nearly a decade, voted multiple times in favor of companies with which he had business ties, according to records and interviews.

His actions took place in a county where major land-use decisions have been dominated by a small group of public officials and their close allies in the development industry, The Washington Post found in a year-long investigation.

Beerman resigned abruptly from the Planning Commission in July after reporters conducted interviews about his ties to Knop and others doing business in Loudoun.

Beerman was part of a small group of public officials who assumed power in Loudoun in 2004 with the backing of a well-funded network of developers, a building industry group and others in the real estate industry. In the years since, some of those officials have worked closely with their backers, coordinating privately to ensure votes favorable to major projects, according to thousands of e-mails and other documents obtained under public records laws.

Beerman's relationships have drawn the interest of the FBI, according to two individuals who said they have been interviewed in recent months and asked to remain anonymous because of the sensitivity of the inquiry. An agent asked questions about Beerman's business activities and his actions on the Planning Commission, said one of those interviewed.

Debbie Weierman, spokeswoman for the FBI's Washington Field Office, would not say whether agents are conducting an investigation in Loudoun but said her office "is looking into reports of possible public corruption, unfair business practices and the like . . . in the Washington metropolitan area."

Beerman did not respond to written questions about his relationship with Knop.

Knop viewed Beerman as crucial to the family's development plans, according to e-mails.

In preparation for a meeting with Beerman to discuss possible Planning Commission concerns over the terms of the proposed entertainment complex, Knop wrote, "we need a script DETAILED as to EXACTLY what we want to say, give and get, and BEFOREHAND, reseaerch what he wants, so we have something to offer him." The 2004 e-mail was written to Kristen Kalina, a lobbyist Knop had hired to help promote his projects.

"Good, I agree," Kalina responded in an e-mail, which went on to discuss the size of the project and its potential impact on traffic. She suggested that she and Knop ask Beerman "to give us some insight as to what he has heard privately" from other

planning commission members about Knop's proposed entertainment center. "Based on the fact that you just helped him out on the Alabama deal, he owes us this information. . . . I dont think he'll balk. Do you?"

Knop's company made a payment to Beerman for thousands of dollars while he was a planning commissioner, according to an interview with Knop's former accountant, Angela Kelleher. The money was connected to Beerman's efforts to resolve a land dispute between Knop and Greenvest L.C., a major developer, she recalled.

Kalina also remembered payments to Beerman, which she described in a deposition, although her statements were inconsistent about when the payments were made.

Knop, who said there was nothing improper about their dealings, denied paying Beerman while he was on the commission -- "not a penny," he said in an interview.Political Forays

Beerman and Knop have known each other for years, a period during which Beerman helped shape Loudoun's development as a rapidly growing suburb.

In 1992, Beerman was appointed to a citizens committee advising on development plans near Dulles Airport. In 1995, he was elected to the Board of Supervisors, where he positioned himself as the board's go-to person on financial matters.

"I was a step ahead of most people because I knew what they were talking about," Beerman said in an interview this summer. He later declined to answer additional questions from reporters.

Beerman lost his bid for reelection in 1999 and was defeated again when he ran for board chairman in 2003. But he still had a voice in development decisions: He served two years on the county's Sanitation Authority, which controls water and sewage lines, and in 2004 was appointed to the Planning Commission, a nine-member board that helps decide which projects can be built in the county. The commission elected Beerman its chairman.

Under Beerman's leadership, the commission abandoned its practice of publicly disclosing contacts with people who had business before the board. He said in an interview that he also encouraged fellow commissioners to "do our work independently" by talking outside of meetings individually to county staff and developers with pending proposals. He regularly backed major developments across the county, including large communities near Dulles Airport proposed by Toll Brothers Inc. and Van Metre Cos.

The work came naturally to him, he said. "If you're doing this for 15 years, you kind of get a feel for it," Beerman said.

Beerman, 46, lives with his family in Ashburn. He has a passion for golf and running, and he previously worked as an investment banker. During his years in local politics, he repeatedly met with developers and their advocates to discuss proposals, building strong ties in that world. His business colleagues say he is an affable dealmaker with a sensitive radar for opportunities.

"I've had my hand in a whole bunch of different businesses," said Beerman, who said he has been involved in projects including a cell tower in Leesburg and a technology startup in Limerick, Ireland. He said he has helped finance Blockbuster franchises, cable TV companies and a medical imaging venture.Work as a Loan Officer

In February 2003, Beerman took a job as a residential loan officer with George Mason Mortgage LLC, a major lender in Northern Virginia. He asked to be assigned to the company's account with Greenvest, saying he had a contact there, according to George Mason chief executive D. Gene Merrill.

Greenvest, led by co-owner Jeff Sneider, had joined forces with former supervisor Dale Polen Myers to back a slate of candidates in 2003 who were sympathetic to the building industry. Myers backed Beerman, who lost. He was nominated to the Planning Commission by another Myers protege, Supervisor Stephen J. Snow (R-Dulles).

George Mason had a preexisting relationship as a "preferred lender" with Greenvest's home-building arm, Cambridge, according to records and interviews. That meant customers in Maryland and West Virginia who purchased homes from Cambridge were promised discounts of $4,000 to $10,000 if they used a mortgage company from the list of two or three preferred lenders.

Beerman was a point of contact at George Mason for these loans and received commissions on the mortgages he handled, records show. While Beerman benefited, other Greenvest companies had proposals pending before the Planning Commission for billions of dollars in new homes. Greenvest companies make up the county's largest private landowner.

At some point, Merrill said, Greenvest executives became concerned about a potential conflict and canceled the arrangement until it was cleared by the commonwealth's attorney in October 2004.

In a four-page advisory opinion written at Beerman's request, Loudoun Commonwealth's Attorney James E. Plowman concluded that because Beerman's work was with Cambridge, he did not have a "personal interest" in Greenvest matters before the Planning Commission. In Virginia, conflict-of-interest laws generally prohibit officials from voting on matters if they have a personal interest in the outcome.

"One thing I tell people is just because something might smell bad, it doesn't mean it's a statutory violation," Plowman said in an interview, noting that home buyers were not forced to use George Mason.

DOJ_NMG_0119241

But Plowman also encouraged Beerman to be mindful of potential conflicts -- if, for example, Beerman knew the Planning Commission was taking up a Greenvest project in which Cambridge would be one of the builders. In that case, Plowman said Beerman would be required to disqualify himself.

Beerman had told Plowman that from 10 to 25 percent of his loan business was from Cambridge. "His annual compensation from this would be expected to exceed $10,000 annually," according to the opinion.

Two other commonwealth's attorneys, when asked about Plowman's opinion, said they would have advised Beerman not to vote on any Greenvest matters, either because his actions could be a conflict or appear to be a conflict.

"It's easy to use your imagination and come up with all sorts of scenarios where Beerman, through his company, has a stake in Greenvest's overall success, which would have to be affected by getting the green light for new development," noted one commonwealth's attorney, who spoke on condition that he not be identified because of the sensitivity of the matter.

Three weeks after Plowman's ruling, Beerman began casting a string of votes favorable to Greenvest, including four that sharply increased the value of the company's land by allowing more than 1,800 additional homes to be built on almost 1,000 acres. That gave Greenvest companies the right to build seven times the number of homes allowed before Beerman's commission and the Board of Supervisors acted.

In a written response on behalf of Greenvest, attorney Francis A. McDermott said the company had no financial relationship with Beerman and had never paid him. There was, McDermott said, no "attempt to link" the preferred-lender arrangement "to favorable results" before county officials. "In short, Greenvest has never done anything improper, or attempted in any way to exercise improper influence" over Beerman's votes or opinions, McDermott said.

Beerman said in an interview this summer that he saw nothing improper about his work as both public official and mortgage lender.

"I don't have any conflicts," Beerman said. "If someone calls me for a mortgage, they call me out of the blue. . . . I can't stop somebody from calling me. They are not calling me because, 'Oh my gosh, he voted for it.' They call me because they got a referral, or they know me, or whatever."

Late last year, Beerman left his job at George Mason and became vice president for land acquisition at Van Metre, a major home builder in the county.Business Ventures

When Beerman was on the Board of Supervisors in the late 1990s, he went to Peter J. Knop and described a cell tower venture.

"It's a great investment. What do you think?" Knop recalled Beerman saying.

Knop said he invested, one of three times he has put his money into businesses brought to him by Beerman. Two -- the cell tower venture and the trucking company -- occurred while Beerman was a public official, records and interviews show.

Knop said he also invested in a medical imaging business at Beerman's invitation.

"He puts together venture capital deals, and we participate in those deals," Knop said. "When he does a good deal, he gets a fee."

In the case of the Evergreen trucking company, the deal was a winner: The company's revenue and profits have grown substantially since 2004, according to company Chairman Sean Kish.

Knop is best known in Loudoun for his construction waste dump, an imposing mountain of rock, dirt and other material. Although it dominates the landscape on his property, known as Ticonderoga Farms, Knop has nevertheless crafted other ambitious plans for the land, including his vision of a "world cultural center" with an agricultural tourist attraction. The plans were later downsized to a corporate retreat and picnic pavilions.

His vision, however, did not include a plan by Greenvest to build hundreds of homes next door. Knop opposed the project, hoping to keep a buffer of undeveloped land next to his property.

Beerman, who was on the Planning Commission and later voted in favor of the project, stepped in and attempted to mediate in 2004, records show. In 2005, Beerman came out to the Knop property for two meetings, one of which included a Greenvest representative, according to an account by a Ticonderoga employee filed in court.

"We had floated various ideas because we know that he's close to people in Greenvest," Knop said in an interview. Knop is in business with his son, Peter R.Q. Knop.

Knop and his son considered a solution that would have paid Beerman handsomely: Greenvest would sell the Knops some of the property, and the county would allow Greenvest to build the same number of houses on less land, according to e-mails.

Under that scenario, "Larry gets 25k," Peter R.Q. Knop wrote in a 2005 e-mail that began "Beerman proposal."

Greenvest had rebuffed Knop's attempt to purchase the property the year before. And Knop said no payment was made to Beerman, noting that it would have been inappropriate. Knop said in an e-mail to his lawyer that he did not believe the ideas from the e-mail were presented to Beerman, calling them "internal thoughts."

DOJ_NMG_0119242

In a lawsuit against the county, Knop challenged the development, saying it was incongruous in that area and should not have been approved. Attorneys in the suit took depositions from Knop's employees and others and obtained their e-mails, including the message from Knop to his lawyer.

Kelleher, Knop's former accountant, who described in an interview a Knop payment to Beerman, remembers it being for $5,000 and said she thought it was connected to the Greenvest dispute. She said she was certain it coincided with his time on the Planning Commission.

"I remember writing the check, because it was one of those, 'Hmmmm, should we really be writing this check to this man?' " Kelleher said. She worked for Knop until mid-2005.

In July 2004, Knop sent Kalina, his lobbyist, an e-mail demanding an "up to date list of ALL contributions made to ALL politicians and other groups" from 2002 through 2004.Knop was frustrated at a county official's skepticism about his entertainment center.

"This should include the 'consulting fee' of 7,000. paid to Beerman. . . . Also any other fees or retainers or other sums paid to people not in their official capacity (I would include . . . other fees paid to people on the inside," Knop wrote. "If we are ever to operate efficiently, AND win, this is something which better be done ASAP," he wrote, referring to the accounting of contributions.

Kalina, a tobacco and oil company lobbyist before she began working for Knop in early 2004, was asked in a deposition about that e-mail and the $7,000 fee.

"And he was a member of the Planning Commission at the time that this $7,000 consulting fee was paid. Isn't that right?" asked the attorney questioning her.

"Yes," she answered.

Later in the deposition, after answering further questions about the payment, she said she was uncertain if it was ultimately paid to Beerman. "Maybe there was, maybe there wasn't" a payment, she said. She ended the deposition saying, "We had paid Mr. Beerman consulting fees related to other business activities for things that he did."

During the time Kalina worked for Knop, Beerman was on the Planning Commission.

Knop and his son said in an interview that the $7,000 was payment for Beerman's consulting work on a cell tower venture sometime between 2000 and 2002. Peter J. Knop said he used quotation marks around the words "consulting fee" because he believed Beerman had overcharged. As evidence of the consulting work, Knop's son later produced a copy of a canceled check to Beerman for $7,500 dated June 19, 2002.

Kelleher said the payment to Beerman that she recalled was more than 18 months later, when he was on the Planning Commission. The Knops did not respond to written questions about that discrepancy.

Knop said he has continued to work with Beerman over the years because he is good at what he does.

"His business is knowing, both in politics as well as in business, knowing where the deals are. And how do you find out where the deals are? You know -- and are on good terms with -- everybody. Larry is a very likable guy."

Influence Of Developers, Allies Runs Deep (WP)

By Michael Laris And David S. Fallis, Washington Post Staff Writers

The Washington Post, January 22, 2007

Six months after they took office in 2004, members of the Loudoun Board of Supervisors demonstrated in a single afternoon their ability to help a friend.

First, they voted 6 to 3 to boost the number of homes that could be built on the family farm of Dale Polen Myers, a former supervisor who had been instrumental in getting many of them elected. The next month, a builder bought the property from Myers's family for $12.2 million -- four times its assessed value before the zoning decision, records show.

Next, the board agreed unanimously to authorize the county to purchase a different parcel for $13.5 million, once again helping Myers, who was acting as the real estate agent. That earned Myers and her boss a commission that by industry standards would range from $270,000 to $675,000.

Such coziness has become routine among some Loudoun officials and a group of politically connected developers, landowners and others in the real estate industry, The Washington Post found in a year-long investigation.

An examination of thousands of e-mails, telephone records and county land databases and scores of interviews shows the extent to which this network of development advocates was able to influence land-use decisions in one of the country's fastest-growing and richest counties.

Supervisors sometimes followed step-by-step direction from those in the development industry on how to vote and what to say in public, according to e-mails and other county records. One planning commissioner who resigned last year voted favorably on projects by companies with which he had business ties.

DOJ_NMG_0119243

In their three years in office, a majority of the current board members have voted at least two dozen times in favor of projects benefiting people or companies who helped the officials get elected. Many of those political backers were enriched, including developers and landowners who made millions when their home-building and commercial projects were approved by the county board, as well as development lawyers who netted large legal fees and real estate agents who made commissions on the deals.

Voting for friends or political allies is not, in itself, improper under Virginia conflict-of-interest laws. Those laws prohibit officials from accepting items of value, including business opportunities, that could influence their actions and from voting on matters in which they have a "personal interest."

Experts caution that in many cases it is difficult to determine whether a public official has a personal interest because the legal definition is complex and open to interpretation.

The county's supervisors and planning officials have served as gatekeepers to a wave of suburban development. Since 1990, Loudoun's population has tripled to more than a quarter-million, transforming a landscape of open fields to a series of expanding construction sites. That growth has brought thriving new communities and jobs, as well as worsening traffic and the financial burden of building new schools and providing other services.

Loudoun officials defended their efforts to work closely with developers and others.

"This is local citizen government, and these are complicated issues, and you have to reach out to somebody," said Supervisor Stephen J. Snow (R-Dulles). He said supervisors must tap the expertise and resources of the private sector to solve the county's transportation and other challenges, and that means working proactively with development companies and approving more houses to help generate additional funds.

Snow and other officials also said that their votes were based on the projects' merits and their view of what is best for the county.

Myers declined repeated requests to be interviewed.

In recent months, FBI agents have interviewed several people in the county about development decisions, according to three who said they have been contacted. One person, who declined to be named because of the sensitivity of the inquiry, was interviewed at length and said the agents probed for information about whether local officials may have development interests that would conflict with their duties on a public body.

Debbie Weierman, spokeswoman for the FBI's Washington Field Office, would not say whether agents are conducting an investigation in Loudoun but said her office "is looking into reports of possible public corruption, unfair business practices and the like . . . in the Washington metropolitan area."

Until late last year, the board votes helped spur the county's swift growth. But as voters have shown signs of displeasure, supervisors seeking reelection in November have backed off from their general enthusiasm for rapid development, voting down a major building project known by advocates as Dulles South and limiting construction in western Loudoun.

At the same time, new construction has slowed with a sagging market. Nevertheless, tens of thousands of homes that have been approved are yet to be built.Myers's Many Roles

Myers, 50, likes to say that her family has owned land in Loudoun "only" since 1779. She is a regular presence at public meetings, where she lobbies officials in the hallway and from the podium on causes that have included youth baseball and rights of property owners.

In eight years in public office, first as an appointed planner in 1992 and then as chairman of Loudoun's Board of Supervisors in the late 1990s, Myers was a dogged advocate for speeding up development.

But in 1999, voters threw her out of office and swept in eight politicians to the nine-member Board of Supervisors who promised to limit growth. The county's population had doubled in a decade to 169,000, and voters -- many of them newcomers themselves -- were attracted to the message of protecting Loudoun's quality of life.

Myers was able to turn that painful defeat into a string of business opportunities. She was looking for work just as developers and home builders were looking for people to help them block the limits on development they expected from the new board.

Myers started a consulting firm and began working with Carter Braxton Real Estate in Leesburg. She also joined with a group of builders, landowners, lawyers and Tysons Corner-based developer Greenvest L.C. to mount a well-funded, years-long campaign to regain political clout after the surprise defeat at the polls by the anti-growth forces.

After supervisors passed the strict development limits they had promised, Greenvest companies filed more than 20 lawsuits against the county, part of a coordinated barrage of about 200 such suits by developers seeking to overturn building restrictions. Greenvest companies own more land in Loudoun than any other private landowner -- more than 5,000 acres, much of it undeveloped.

DOJ_NMG_0119244

Myers became a key organizer of Citizens for Property Rights, a lobbying group that assailed county supervisors who supported building limits, targeting them with attack ads and sharply criticizing them at public meetings.

Greenvest, counseled by Myers, pushed to replace the county supervisors with officials sympathetic to development. The goal, Chief Executive Jim Duszynski said in a 2003 interview, was "regime change."

In the run-up to the 2003 election, Greenvest companies and executives contributed $18,000 to the campaigns of six pro-growth board candidates and thousands more indirectly through state and local GOP organizations. Overall, companies and individuals tied to the development industry poured more than $490,000 into supervisor campaigns in Loudoun, more than seven times the figure four years earlier, according to data from the nonprofit Virginia Public Access Project.

Myers and others in the real estate development industry took key jobs in Loudoun's Republican Party and backed candidates who would provide reliable votes for development. Myers became a top strategist for three candidates: Bruce E. Tulloch, whom she had first encouraged to run in 1999; Snow, a former Army helicopter pilot whose district includes many of Greenvest's planned developments; and Lawrence S. Beerman II, a former county supervisor.

The campaign succeeded, and when the votes were counted Nov. 4, 2003, candidates supported by Myers, Greenvest or their allies had won six of the nine seats on the Board of Supervisors. They made up the new majority: Tulloch (Potomac), Snow, Lori Waters (Broad Run), Jim Clem (Leesburg), Mick Staton Jr. (Sugarland Run) and Eugene A. Delgaudio (Sterling), all Republicans.

Beerman didn't make it to the general election, losing in the Republican convention. But Snow later nominated Beerman to the Planning Commission.

When Snow was sworn into office just before Christmas 2003, Myers stood beside him. At a party meeting after the election, GOP Chairman J. Randall Minchew, a prominent development attorney, congratulated Myers for her role in helping elect a new majority and spoke of having her mentor the freshman supervisors.The New Regime

The new supervisors met for the first time in January 2004, and Tulloch took effective command. Voters had elected another supervisor, Scott K. York, an Independent, as chairman, but Tulloch, a burly, aggressive figure, marshaled the six votes needed to give him control of the board's agenda.

Tulloch and his majority went to work. The board took an initial vote to allow central sewer and water lines throughout a 23,000-acre swath stretching from Leesburg to south of Dulles Airport. It was a key step in an effort to open up a vast area to builders. Greenvest had purchased thousands of acres there.

Myers was now at the center of a powerful political network largely built on a common interest in seeing Loudoun expand. In 2004, she was appointed to the county's Board of Equalization, whose role in valuing property kept her involved in land-use questions.

Myers retained her role as a key adviser to Greenvest. "Dale was in and out of the office all the time," said a former Greenvest executive who asked to remain anonymous so he could speak freely about the company. "She was advising [Greenvest officials] a lot about land use and what to be doing."

She was also counseling county officials. Snow said Myers and Beerman brought him their detailed plans for how sections of his district should be developed. "Those two were invaluable about the process of where things should go and why they should go," Snow said.

Behind the scenes, some supervisors kept in close contact with Myers. Cellphone records obtained under public records laws showed more than 150 calls between her and Tulloch or Snow from September 2005 through mid-January 2006.

Snow shared e-mails with Myers that he received from constituents on matters before the board. In October 2005, Supervisor Sarah R. "Sally" Kurtz (D-Catoctin) sent an e-mail to the rest of the board and other county officials asking for an investigation into possible favoritism by the Board of Equalization, on which Myers sat. About an hour later, Snow forwarded the e-mail to Myers, records show.

Tom Jewell, Myers's boss at Carter Braxton, said Myers has been unfairly "vilified" over political issues. Jewell, a prominent county Democrat and the firm's owner, described Myers as a hardworking person of integrity who devotes her free time to charity, including fundraising for Inova Loudoun Hospital.

"I just see the amount of good that she has done for this community. She loves this place," Jewell said, adding that her expertise in government land-use policies is invaluable. "Where Dale truly makes her money and gets her clients is her knowledge. . . . She has a mind like a steel trap."The July '04 Meeting

At a pivotal meeting in July 2004, the board approved the two proposals that were lucrative for Myers. In both cases, Myers's name went unmentioned in the public debate.

The vote rezoning her family's farm gave U.S. Home Corp. permission to build 500 homes on the property near Ashburn, beside a meandering waterway called Goose Creek. That was three times the 163 homes that could have been built with no board action, although within the limits of what was allowed under the county's plans.

DOJ_NMG_0119245

Myers's second victory at that meeting came when Tulloch urged the county to purchase a parcel of land from the Islamic Saudi Academy Inc., a company affiliated with a conservative religious school in Fairfax County funded by the Saudi government. The school had intended to relocate to Loudoun but changed its plans.

Tulloch brought the deal to the board and urged supervisors to buy the land to build schools. Such an acquisition normally would take months as the county hashed out budget and planning issues, according to county officials. But Tulloch insisted that the supervisors move quickly, saying at the board meeting that he knew "for a fact" that the school had buyers willing to pay more than the county would pay. When asked later, Tulloch said developer Robert Buchanan was planning to pay more than the $13.5 million the county paid.

Buchanan said in a recent interview that he was going to pay considerably less -- "in the range" of $11 million. Buchanan had a contract to buy the land, records show, but agreed to step aside so the county could purchase it.

After the county completed its purchase, Myers and Carter Braxton received the sales commission, Jewell said. The Saudis had asked Myers to list the property, Jewell said, because as a supervisor in the late 1990s she had supported their plan to build the school in the face of virulent opposition ."They knew what she had gone through."

Tulloch said in an interview that he did not learn that Myers was the agent until "well, well, well after the vote," saying, "in fact, a month probably went by" between the vote and his learning of Myers's role.

Two Loudoun officials, however, recalled Tulloch telling county staff in discussions days before that vote that Myers was handling the sale. "We clearly learned at that time that Dale was the broker for the transaction," said County Administrator Kirby M. Bowers, who was briefed by his staff.

Tulloch defended the purchase, saying the land has gained in value. It was assessed at $15.5 million in 2006. Nothing has been built on the property since the county bought it.

The sale netted the Saudis $10 million more than they had paid six years earlier.Talking Points Prepared

As the pro-growth supervisors settled into office in 2004, they appeared to be taking cues from people with a financial stake in board decisions.

Jeffery Cowart, president of Delta Strategies, Inc., a Leesburg public relations company that has advocated for Greenvest and others, coached Snow, another of the new pro-growth majority, on how to answer critics of growth, records show. In one set of " talking points," Cowart included advice on how Snow should respond if he was asked about political contributions from Greenvest. The company gave $2,000 to his campaign.

"Steve Snow's vote cannot be bought and sold," Cowart wrote in a 2004 e-mail, providing language for the supervisor. "I served my country in the military for 25 years to protect and preserve democracy and the buying and selling of votes was not among those values."

Cowart also wrote statements for Snow supporting Cowart's causes, including a local hospital he represented, e-mails show. And Cowart helped prepare a PowerPoint presentation that Snow could use in meetings to represent his thoughts on why more development in his district was good for the county, records show.

Snow, 61, who refers often to his experience as a military planner, said his work with developers simply reflected his political beliefs.

"I did what I said I was going to do," he said in a recent interview. "There's a supposition, I think, built in now to the psyche of the American people, that if you're in politics that you . . . inherently must be corrupt, that you must be on the take," he said. "They just assume you're there for self-interest, as opposed to . . . public service." Snow said he is in office to protect property rights and solve problems for residents in his district.

Once, in a moment of frustration, Snow became discouraged with his party and entertained thoughts of resignation. He dashed off an e-mail in 2005 to county GOP chairman Minchew, who had joined with Myers, Greenvest and others to help elect the new board.

"I will resign . . . as Supervisor if you wish," Snow wrote.

Minchew pressed Snow to stay.

"You are too valuable."The Ritz-Carlton Project

In the summer of 2005, the board was scheduled to vote on an enclave of resort homes managed by the Ritz-Carlton. The development, including a Jack Nicklaus-designed golf course, is across the street from Oak Hill, the still-pristine estate where President James Monroe retired in 1825.

On the eve of the vote, Tulloch and Snow received a detailed e-mail from Minchew, who represented the Ritz developer and had urged them to support his proposal. The vote was also important to Myers: She had been hired as a consultant for the project, according to Jim Brown, one of the developers.

DOJ_NMG_0119246

Minchew wanted two entrances to the development so that service workers could enter separately from wealthy residents. The owners of Monroe's estate opposed the plan, saying it would disturb their historic property, a case also made by Supervisor James Burton (I-Blue Ridge).

"Dear Bruce and Steve . . . You have one heck of an agenda tomorrow," read the e-mail from Minchew dated July 18.

"I would suggest that Steve simply make the motion (we will e-mail over to you today a draft motion) and let the application be approved over Mr. Burton's objections, probably on a 5-4 vote," wrote Minchew, who copied the e-mail to Myers.

"I think that as little discussion as possible is best course of action."

The two supervisors followed Minchew's script, with Snow making the motion and Tulloch seconding it. After heated debate, the vote came out better than Minchew predicted: 6 to 3.

Minchew declined to be interviewed.

Tulloch had taken a keen interest in the Ritz project, which he said would be an attractive, high-end addition to the county. He traveled to a similar Ritz-Carlton resort in Jupiter, Fla., at his own expense, he said, and lunched with Nicklaus to discuss golf courses. Later, he offered to use his office budget to fly Zoning Administrator Melinda Artman there to demonstrate the benefits of such a development, Artman said.

Artman said she declined the trip, saying that she would base her zoning decision solely "on what the ordinance says."This Year's Race

In its first two years, Loudoun's board of supervisors, driven by its pro-growth majority, approved more than 9,000 new homes brought forward by a host of building firms, according to county records.

Greenvest gained permission in four key votes to build more than 1,800 homes in addition to the roughly 300 that would have been allowed under the previous zoning. The total value of those additional homes could reach $1 billion, based on current sale prices.

The recent defeat by supervisors of the Dulles South plan, in which they rejected Greenvest's proposal to build 15,000 homes there, does not end the company's plans to build in the area. Greenvest is pursuing four major applications to build the same number of homes there. If the county rejects those plans, the company calculates that it could build about 2,000 homes without new approvals by the board.

Those who helped elect the pro-growth board in 2003 are gearing up for this year's race, and at least some of their efforts have been aimed at removing one supervisor: Waters, who fell out of line with some of her Republican colleagues.

Waters, the former executive director of the conservative Eagle Forum who had been elected with Myers's help, began balking in 2004 at Myers's calls for swifter home building in rural Loudoun and near Dulles.

"We need to ostracize her," Snow wrote in a 2004 e-mail. "She is anti-growth and anti-property."

Snow's e-mail went to Patricia Shockey, a Myers confidante. "Later when the opportunity presents itself, go for the jugular," Shockey told Snow. "Dale Myers will get her."

News researchers Madonna Lebling, Bobbye Pratt and Julie Tate contributed to this report.

Suspected San Rafael Kidnapper Arrested Man Who Posed As FBI Agent Demanded $5K 'Bail' (SFC)

By Demian Bulwa, Chronicle Staff Writer

San Francisco Chronicle, January 22, 2007

(01-21) 16:38 PST SAN RAFAEL -- A 40-year-old San Rafael man's Sunday morning coffee run with his girlfriend turned into a terrifying ride when a young man posing as an FBI agent took him into custody for questioning, police said.

The couple had just bought coffee at a 7-11 store on Medway Road when a cream colored Lincoln Town Car pulled behind them on Canal Street, flashed a light at them, said Margo Rohrbacher, a San Rafael police spokeswoman. They pulled over.

David Charles Moon, 26, also a San Rafael resident, emerged in a crisp coat, a tie and a knit cap that said "FBI," Rohrbacher said.

Moon convinced the man to get into his Town Car and drove off. The girlfriend soon received a call at home from her boyfriend asking her to deliver $5,000 "bail" at a nearby home renovation store.

"Needless to say," Rohrbacher said, "that's not how we do business. That didn't sound right to her, so she called 911."

Moon saw police waiting for him and tried to flee. After leading police onto Highway 101, Moon took the central San Rafael exit and "vanished," Rohrbacher said. When police spotted Moon and the Town Car again, he again tried to drive away but crashed instead, suffering minor injuries.

The victim had escaped along the way and, minutes after Moon's crash, rang a San Rafael resident's door bell seeking help, and she called 911, Rohrbacher said.

DOJ_NMG_0119247

Once officers put together the two incidents, they arrested Moon on suspicion of kidnapping and other charges. His bail was set at $1 million, and he faces the possibility of spending the rest of his life in prison, Rohrbacher said.

San Rafael police are looking into whether Moon pulled anyone else over posing as an agent.

"It's certainly very possible," Rohrbacher said.

Fake FBI Agent Kidnaps San Rafael Resident, Asks For $5k Bail (AP)

AP, January 22, 2007

San Rafael, Calif. (AP) -- David Charles Moon donned a knit cap that said FBI when he steered his car behind a San Rafael couple, flashed a light and told them to pull over, police said.

Moon, 26, emerged from his cream-colored Lincoln Town Car wearing a crisp coat and tie, and convinced the man he had just pulled over to come with him for FBI questioning.

The victim's girlfriend soon received a call from her boyfriend, who asked herr to deliver $5,000 "bail" at a nearby home renovation store.

"Needless to say," said San Rafael police spokeswoman Margo Rohrbacher, "that's not how we do business. That didn't sound right to her, so she called 911."

When Moon went to retrieve the money, he saw police waiting for him and led police onto Highway 101 before he "vanished" after taking the San Rafael exit, Rohrbacker said.

Police spotted Moon again later, but when Moon tried to drive away he crashed, suffering minor injuries.

Meanwhile the victim managed to escape and rang a San Rafael's resident's door bell. The resident called 911, Rohrbacher said.

Police arrested Moon on suspicion of kidnapping and other charges and set bail at $1 million.

San Rafael police are looking into whether Moon pulled anyone else over posing as an agent.

San Rafael PD Chases & Arrests Suspected Kidnapper (BCN)

Bay City News Wire, January 22, 2007

(BCN) SAN RAFAEL San Rafael police arrested a man Sunday morning suspected of posing as a police officer to kidnap a man and then holding him for ransom, San Rafael police spokeswoman Margo Rohrbacher said Sunday.

A man and a woman were leaving a 7-Eleven store in San Rafael between 5:30 a.m. and 6 a.m. when a man in what looked like an unmarked police vehicle pulled them over, Rohrbacher said.

The suspect, who was wearing an FBI baseball cap and had a spotlight and what looked like a police light the dashboard of his vehicle, then “arrested” the man, handcuffed him, put him in his car and drove away.

When the woman called the San Rafael Police Department to ask where she should go to pay his bail, police said they didn’t have any record of an arrest.

A short time later, the suspect called the woman from the victim’s cell phone and told her to meet him at a Home Depot store with $800 cash.

The woman called the police, who headed over to the Home Depot to meet the suspect.

A sergeant who was first on the scene saw a car matching the description of the vehicle the woman had given.

Two people could be seen inside the car.

When the suspect saw the sergeant, he sped away and entered northbound U.S. Highway 101 at the Bellam Boulevard onramp.

Once on the highway, police and the suspect reached speeds up to 100 mph, Rohrbacher said.

The suspect then took the central San Rafael exit and the car disappeared, Rohrbacher said.

Police put out a countywide all points bulletin on the suspect vehicle and discovered that it was an overdue rental car.

A short time later, officers spotted the vehicle near San Rafael High School on Mission Avenue.

This time there was only one person in the vehicle, Rohrbacher said.

The suspect fled from police again, but took a turn in the 400 block of East Francisco Boulevard too fast, lost control of his vehicle and slammed into a tree and a pole, Rohrbacher said.

Meanwhile, the San Rafael Fire Department received a call for medical help in the Peacock Gap area of Point San Pedro Road.

A man, who turned out to be the victim of the kidnapping, had knocked on a door in the neighborhood and asked for help.

He was bleeding from the head, Rohrbacher said.

The victim was taken to a nearby hospital for treatment.

The suspect, who has been identified as 26-year-old David Charles Moon, a San Rafael resident, was also taken to a nearby hospital where he will be treated and then arrested, Rohrbacher said.

Writers' Sources Sought In Pellicano Case (LAT)

By Chuck Philips, Times Staff Writer

The Los Angeles Times, January 22, 2007

A co-defendant accuses federal authorities of giving two reporters secret information.

Defense attorneys for a codefendant of indicted private investigator Anthony Pellicano have accused federal agents pursuing a wiretapping case against the pair of leaking confidential information.

In a motion filed Friday in U.S. District Court in Los Angeles, lawyers for entertainment attorney Terry Christensen call on the court to force New York Times reporters David Halbfinger and Allison Hope Weiner to reveal the names of their sources for a report published Jan. 11 in the newspaper.

The motion contends that the article slanted the evidence against Christensen, an entertainment lawyer who is accused of ordering an illegal wiretap of billionaire Kirk Kerkorian's former wife.

At the time, the couple were embroiled in a contentious child-support battle, and Christensen hired Pellicano as his private investigator.

The motion said the article presented confidential recordings "out of context" with the intent to "pillory [Christensen] in public." Christensen's legal team accused the government of leaking material that their client could not rebut because he was bound by a gag order imposed by the court.

In the article, the New York Times printed excerpts of 33 recordings Pellicano made of his own conversations with Christensen — unbeknownst to the entertainment lawyer.

The story quotes from several of those conversations, which appear to indicate that Christensen and Kerkorian knew that the billionaire's ex-wife, Lisa Bonder Kerkorian, was being wiretapped by Pellicano.

The story also quotes Christensen as saying that Kerkorian would likely hire Pellicano again.

In the motion, Christensen's lawyer, Terree A. Bowers, says prosecutors have done nothing to prevent or ameliorate repeated breaches of the court's April 3 order not to release documents and audio recordings related to the case.

Three weeks after the court issued the gag order, the New York Times ran an article by Halbfinger and Weiner that cited selective portions of raw FBI interviews — classified reports that reflect the personal views of an interviewing agent, not verbatim quotes of what a witness actually said, the motion states.

Shortly after the article ran, the U.S. attorney's office in San Diego launched an investigation to determine the sources of the leaks.

The motion says that Christensen and his legal team immediately volunteered to participate in interviews with FBI agents and the San Diego prosecutor. (Assistant U.S. Atty. Robert Ciaffa holds that job but is not named personally in the document.)

In addition, the motion says, Christensen's lawyers provided the U.S. attorney's office with "crucial witnesses and information" to aid FBI agents in their investigation.

One of those witnesses, an unnamed Los Angeles businessman, told Ciaffa and his investigators that the New York Times reporters had revealed to him that they obtained court-sealed documents from the government before they were released to the defendants as discovery materials in April, the motion says.

In the motion, Bowers appeared to express frustration with the pace of the investigation into the leaks.

"This [leak investigation] is going nowhere," Bowers wrote. "Approximately nine months have passed since the San Diego U.S. attorney's office initiated its investigation. There is no justification to delay the subpoenas of the two reporters."

On Sunday, the U.S. attorney's office in San Diego did not return calls; neither did the New York Times nor the FBI.

Broward Exec Facing 20 Years In Prison (MH)

By Patrick Danner

The Miami Herald, January 22, 2007

Peter Lombardi, the former president of Mutual Benefits Corp., was sentenced to 20 years in federal prison Friday for his role in defrauding some 30,000 investors out of nearly $1 billion.

Lombardi had pleaded guilty in October to one count of securities fraud in the massive investment scheme, which was shut down in 2004.

DOJ_NMG_0119249

Lombardi, 56, could have faced additional charges that carried a potential life sentence, but he has agreed to cooperate with the FBI and the U.S. Attorney's Office in their ongoing investigation into Mutual Benefits -- a viatical and lifesettlement company that was based in Fort Lauderdale.

Lombardi's assistance could lead to the indictment of other individuals, said Jon May, Lombardi's Fort Lauderdale lawyer.

Joel Steinger, described by authorities as Mutual Benefits' "de facto chief executive," has not been charged. His brother, Leslie Steinger, who authorities say also had a role at the company, hasn't been charged either. Their lawyers couldn't be reached Friday.

"There were a lot of people who worked there who are potentially targets of the government's investigation," May said.

Mutual Benefits purchased the life insurance policies of the sick and elderly and then sold them to investors, who paid less than the policies' face values. Such investments are often referred to as "death futures" because investors stand to earn a better profit the quicker the death.

PONZI SCHEME

Authorities alleged the company defrauded investors by using bogus life expectancies in figuring when the insured would die. When the insured outlived their life expectancies, authorities said Mutual Benefits used money from new investors to pay premiums on those insurance policies -- making it a modern-day Ponzi scheme.

The 20-year sentence imposed by U.S. District Judge Paul Huck was the maximum Lombardi could have received on the securities-fraud charge. May said he hopes Lombardi will receive a reduction based on his assistance. Lombardi doesn't have to report to prison until April 9 so he can continue to assist prosecutors.

"Mr. Lombardi said . . . he was very sorry for his conduct," May said of Lombardi's court appearance Friday.

A March 30 hearing has been set to determine the restitution to be made by Lombardi. He previously paid $6 million to settle a civil action brought by the Securities and Exchange Commission.

As part of the same settlement, the Steingers each agreed to pay $9.5 million. But more than a year later, the Steingers have yet to pay in full, according to Alise Johnson, a lawyer with the SEC in Miami.

BALANCE DUE

Joel Steinger has paid about $3.5 million, Johnson said. The balance hasn't been paid yet because of a claim to the money made by his estranged wife, who filed for divorce in 2005.

Leslie Steinger has paid about $5 million. The balance was due last month, but Johnson said he failed to make the payment. He has been given until the end of this month to pay the rest.

The SEC maintained the insurance investments Mutual Benefits sold to investors were securities subject to the agency's regulation. A federal judge later agreed. Lombardi and the Steingers agreed to the $25 million settlement with the SEC without admitting or denying the allegations.

Last month, Clark Mitchell, a one-time Miami Beach doctor, pleaded guilty to one count of healthcare fraud for calculating fraudulently low life expectancies for the insured who sold their policies to Mutual Benefits. His sentencing is set for March 7.

FEMA Swindler Gets 14 Months (BSH)

Biloxi Sun Herald, January 22, 2007

JACKSON - A New Orleans man has been sentenced to 14 months in federal prison after he used a FEMA registration number to get multiple rooms at Jackson hotels after Hurricane Katrina, then rented out the rooms for cash.

Derrick Shane Miller was also sentenced to three years of supervised release after his prison term and was ordered to pay $27,811 in restitution to FEMA, U.S. Attorney Dunn Lampton said in a Friday statement.

Miller pleaded guilty to the charges in October.

Federal prosecutors said Miller used the FEMA number to secure the rooms from Oct. 28, 2005, to March 31, 2006. He admitted his actions were part of a scheme to defraud the agency.

Miller was indicted June 6 after an investigation by the FBI, the Mississippi Bureau of Narcotics and the Hinds County Sheriff's Department.

As Thieves Go Online To Sell Loot, Their Victims Follow (USAT)

By Brad Heath

USA Today, January 22, 2007

Popular online marketplaces that have made it easier for thieves to sell stolen property also are making it easier than ever for victims to track what was taken from them.

DOJ_NMG_0119250

Before the emergence of marketplaces such as eBay, petty thieves turned regularly to pawnshops to unload stolen gadgets, jewelry and other items. That left their victims no easy way to find and recover their property. Now, by using search engines, victims are often able to locate what was stolen and take steps to get it back.

"It's kind of evolved with the Internet," says Larry Abrahamson, district attorney in Colorado's Larimer County. "Basically, if a victim (in the past) wanted to find something that was stolen, they'd go and search the local pawnshops. Now all you've got to do is sit down at your computer. It's made it easier for victims."

Abrahamson's office is pursing a case in which security officers at a Fort Collins high school found 32 stolen computers for sale on eBay. The computers were taken in a break-in during the school's winter recess. Police were able to use the online listing to find and arrest two 17-year-old students, he says.

"It literally took a minute, a minute and a half to find them," says Norm Bastian, security manager of the Poudre School District in Fort Collins.

No one keeps track of how often victims or authorities recover stolen property online. Abrahamson says police still check with pawnbrokers as part of theft investigations more often than they search for items online. The largest online marketplace, eBay, cooperates daily with law enforcement but will not disclose the number of cases in which it is asked for assistance, spokeswoman Catherine England says.

Such searches are not without obstacles. EBay alone adds about 6 million items a day, and even if stolen property shows up on the site, picking it out from among dozens of similar items isn't always easy.

Even so, "We've actually heard from law enforcement that eBay is probably one of the dumbest places criminals can go to try to sell stolen property," England says. That's because sellers need to provide detailed personal information so they can be paid.

Tammy Schroden spent the better part of a day tracking down her son's possessions on eBay after they were stolen from a Northwestern University fraternity house in Evanston, Ill., in June. She located his Nintendo game system and tipped off campus police, who bid on it but lost out to another bidder at the last minute, school spokesman Charles Loebbaka says.

Schroden's own bid — $35 for two of her son's video games — was a winner, though. When the games arrived in the mail, they had "Schroden" written on the back, she says. Eventually, Loebbaka says, campus police identified a 17-year-old from Evanston as the seller, and persuaded the boy's father to give back a stolen laptop and printer and to pay $2,600 restitution. "If I didn't pursue this," Schroden says, "I know it wouldn't have gotten as far as it did."

State Inmates Outlive Those On Outside, Report Says (CHIT/AP)

Associated Press

Chicago Tribune, January 22, 2007

WASHINGTON -- State prison inmates, particularly blacks, are living longer on average than people on the outside, the government said Sunday.

Inmates in state prisons are dying at an average yearly rate of 250 per 100,000, according to the latest figures reported to the Justice Department by state prison officials. By comparison, the overall population of people ages 15 to 64 is dying at a rate of 308 a year.

For black inmates, the rate was 57 percent lower than the overall black population--206 versus 484. White and Hispanic prisoners both had death rates slightly above their counterparts in the overall population.

The Justice Department's Bureau of Justice Statistics said 12,129 state prisoners died from 2001 through 2004.

Eight percent were murdered or killed themselves, 2 percent died of alcohol, drugs or accidental injuries, and 1 percent of the deaths could not be explained, the report said.

The rest of the deaths--89 percent--were due to medical reasons. Of those, two-thirds of inmates had the medical problem they died of before they were admitted to prison.

Medical problems that were most common among both men and women in state prisons were heart disease, lung and liver cancer, liver diseases and AIDS-related ailments.

But the death rate among men was 72 percent higher than among women. Nearly one-quarter of the women who died had breast, ovarian, cervical or uterine cancer.

Four percent of the men who died had prostate or testicular cancer.

More than half the inmates 65 or older who died in state prisons were at least 55 when they were admitted to prison.

State prison officials reported that 94 percent of their inmates who died from an illness had been evaluated by a medical professional for that illness, and 93 percent got medication for it.

With Kids Dead, L.A. Vows Gang Crackdown (WP/AP)

By Jeremiah Marquez, The Associated Press

The Washington Post, January 22, 2007

LOS ANGELES -- A 14-year-old girl was killed by Hispanic gang members who police say were targeting blacks. A 9-year-old girl died after being hit by a stray bullet as gang members exchanged shots near her home. A cop was wounded in a gunbattle with a suspected gangster.

The soaring violence is prompting police and politicians to promise one of the toughest crackdowns against gangs in city history.

"This is the monster, this is what drives people's fears," said Deputy Chief Charles Beck, who oversees a South Los Angeles district where gang-related crime jumped 24 percent during the year ending in November.

However, the effort has met skepticism in the city that has an estimated 700 gangs with 40,000 members _ about four for every police officer _ and that gave birth to some of the nation's most notorious gangs, including the Crips, Bloods and Mara Salvatrucha, or MS-13.

"It's too big, it's too entrenched, it's too intimately connected with the urban setup here," Malcolm Klein, a gang expert at the University of Southern California, said of the gang problem. "You can reduce it. But the idea you can somehow eliminate it is ridiculous."

Gangs have thrived for generations in Los Angeles, but the especially violent past year caught police brass off guard. Citywide crime rates fell in 2006 but gang-related offenses increased 14 percent _ the first hike in four years. In the San Fernando Valley, gang murders, assaults, robberies and other crimes jumped 42 percent.

Mayor Antonio Villaraigosa has appealed to U.S. Attorney General Alberto Gonzalez for millions of dollars in anti-gang funds and for more federal prosecutors to pursue racketeering and other charges mostly used in the past against organized crime.

FBI Director Robert Mueller has assigned agents to an anti-gang task force in the San Fernando Valley to work alongside police deputized as federal officers.

Authorities promise to increase enforcement in afflicted neighborhoods. The officers will be armed with injunctions forbidding gang members from assembling in certain areas, lawsuits aimed at shutting down gang hangouts as nuisances and probation orders barring gang members from returning to their neighborhoods after their release from prison.

In some ways, the approach mirrors a multi-agency Boston campaign in the 1990s, known as the Boston Miracle, that resulted in a dramatic decline in gun violence and murder rates.

Past efforts in Los Angeles, however, have produced mixed results.

"We've seen this movie before," said Mario Corona, a former member of the Pacoima Criminals gang in the San Fernando Valley who now works to rehabilitate gang members.

The city has been hampered in the past by a lack of resources and changing department priorities, according to a city-funded report by civil rights attorney Connie Rice.

And a 1980s anti-gang unit known as Community Resources Against Street Hoodlums, or CRASH, was disbanded after allegations of police corruption. Few of the thousands of suspected gang members in South Los Angeles were ever charged.

Residents are demanding renewed action while trying to stay out of the line of fire.

Esteban Martinez, 41, hears gunshots at night in the San Fernando Valley, where he lives with his wife and four small children.

"Everybody is afraid, but they don't speak (to police) because they are afraid to get into trouble with the gang members," Martinez said. "I'm worried about my family."

Two weeks ago, an officer searching a house in the area for wanted gang members was wounded in the leg when a gang-banger fired through a closed bedroom door.

Nothing has outraged the city more than the gang slayings of children. Last month, 9-year-old Charupha Wongwisetsiri was standing in her family's kitchen when she was struck by a stray round from gang crossfire in Angelino Heights near downtown.

That came just five days after the shooting death of Cheryl Green, a 14-year-old black girl, who was talking to friends in the Harbor Gateway area. Two Hispanic gang members, who police said were intent on killing blacks, were arrested.

Alex Sanchez, a former MS-13 member who now runs a gang intervention program, said police moves to identify the worst gangs could instead lead to more crime.

"It's feeding the egos of gang members," Sanchez said. "They're all going to want to be on the top 10."

Others said nothing will change without more jobs and better education.

DOJ_NMG_0119252

"Until we get those gangsters into real jobs, we are going to have a lethal ongoing problem, pure and simple," said Jorja Leap, a social welfare professor and gang expert at the University of California, Los Angeles, who advises the mayor. "It will never change."

Racial Attacks By Gangs Rising, L.A. Officials Fear (LAT)

By Megan Garvey And Patrick Mcgreevy, Times Staff Writers

The Los Angeles Times, January 22, 2007

Statistics give only a partial picture, because determining motivation can be difficult.

The headlines are among the most stark documenting gang violence. A Latino gang member, without saying a word, guns down a 14-year-old black girl standing on a sidewalk. A black gang member shoots a Latino toddler point-blank in the chest.

For the most part, though, the role racial animosity has played in gang crime has gone unexamined, largely undocumented in crime statistics and often tamped down by politicians and law enforcement officials anxious about inflaming tensions.

That changed this month when Los Angeles Mayor Antonio Villaraigosa, Police Chief William J. Bratton and L.A. County Sheriff Lee Baca all spoke with unusual candor of their concern that an increasing number of gang crimes appear to be born out of racial hatred. In a few instances, the Los Angeles Police Department has identified Latino gangs they say are indiscriminately targeting African American residents in what appear to be campaigns to drive blacks from some neighborhoods.

The acknowledgment by top officials, some activists say, has been a long time coming.

"What is happening is similar to small earthquakes taking place along a major fault line," said Khalid Shah, executive director of Stop the Violence Increase the Peace Foundation, who said he has heard from numerous communities across the region reporting rises in racially motivated gang attacks. "Ultimately the danger is that there will be an explosion, particularly, I think, if we put our heads in the sand and try to act like this issue isn't real."

But getting a handle on how much gang violence is rooted in racism is difficult.

A Times analysis of Los Angeles Police Department statistics gives a partial picture, with numbers available only in cases in which a suspect's race is known.

The tracking shows that the vast majority of the most serious gang crime remains intra-racial: Latinos attacking Latinos, blacks attacking blacks.

Last year there were more than 2,700 black-on-black or Latino-on-Latino incidents compared with slightly more than 500 interracial attacks.

Intent is often unknown

Harder to determine is intent. Without an admission of motivation, and often without even a suspect to question, knowing why a victim was targeted by a gang member is difficult: Was it skin color? Did they or family members have direct ties to gangs? Was it just bad luck? Mistaken identity?

In cases where gang-related homicide, aggravated assault or robbery crossed racial lines, LAPD tracking shows an 11% jump in incidents from 2002 to 2006; from 213 to 240 black-on-Latino attacks; and from 247 to 269 Latino-on-black attacks. As those interracial crimes rose, intra-racial gang attacks fell by 23%, from 3,577 to 2,780.

In a city where blacks and Latinos make up 96% of known street gang members and often live in proximity, it would not be unexpected that the two groups account for the vast majority of interracial gang crime.

"It should be no surprise to anyone that gang members have racist tendencies," Bratton said. "Both street and prison gangs are constituted on race. But the reality is, most gang crime is motivated by greed and territory. Nevertheless, it is right that penalties are enhanced for hate crimes, and the LAPD will continue to aggressively investigate them."

While citywide statistics show small bumps in interracial attacks, some neighborhoods are seeing troubling increases.

Of the 13 attempted murders involving gang members in the west San Fernando Valley since July, 10 involved black victims and Latino suspects, Lt. Tom Smart said. In many cases, the black victims were not affiliated with gangs, he said.

Still, Lt. Paul Vernon, an LAPD gang expert, said the citywide figures should be looked at in context.

Latinos and blacks are not equally represented in either the city's population or documented gang membership. About 49% of Los Angeles residents are Latino and about 10% are black, according to the most recent Census Bureau estimates.

Of the city's estimated 39,000 street gang members, the LAPD reports about 56% are in Latino gangs and about 40% in black gangs.

Of homicides, aggravated assaults and robberies committed by black gang members, about 2 in 10 are against Latinos. About 1 in 10 of the crimes committed by Latino gang members are against blacks.

Even with an uptick last year, gang crimes remain far below the historic highs of more than a decade ago.

Geography, identity and money remain driving forces in gang crime far more than race, law enforcement officials said.

DOJ_NMG_0119253

"The vast majority of gang crimes are not based on hate, as in 'I'm going to get you because of your race.' They are based on 'You are an outsider,' " Vernon said. "Now, certainly, race is one thing that can distinguish an outsider, but that doesn't mean it is based on hatred of the race."

Where violent crime takes place plays a major role in the relatively comparable number of interracial crimes committed by Latino and black gang members, despite blacks making up a much smaller portion of the population. A significant number of gang crimes occur in the Newton, Southwest, Southeast, and 77th Street divisions — an area of the city that generated 37% of violent crime citywide last year and still has a large black population.

Those who follow gang crime caution that statistics currently kept by law enforcement make it difficult to determine specific motivations for most crimes. In hundreds of cases even the race of the suspect is unknown.

In some neighborhoods, however, racism is clearly a factor.

One recent case to draw national attention was the shooting death last month of Cheryl Green, 14. Green, who was black, was allegedly targeted by 204th Street Latino gang members because of her race.

Her shooting was one in a recent series of racially charged incidents in that neighborhood, where a decade ago the LAPD had won awards for cracking down on the 204th Street gang and a rival black gang.

Assistant Chief Earl Paysinger said the 204th Street gang isn't like most other gangs in the city. "They have taken it to the extreme with utter hate. And they have become more extreme. Spraying 'No N's here' on the walls," he said.

Racial conflict is not new in Los Angeles, where long-simmering racial tensions and anger over police treatment of blacks fueled major riots in 1965 and 1992.

By the time Los Angeles erupted over the not-guilty verdicts in the Rodney G. King police beating trial, issues between white and black Los Angeles were already being overtaken by a massive demographic shift of Latinos into the region.

By the early 1990s, many South Los Angeles neighborhoods had become majority Latino, a population that has continued to grow in recent years.

Coexistence is strained

With that shift came changing gang boundaries. Alex Alonso, who studies gang territories in Los Angeles and runs the website streetgangs.com, said that though rival black gangs have traditionally had well-defined territories that do not overlap, Latino and black gangs had long coexisted on the same streets with little trouble.

As more and more areas changed from majority black to majority Latino — and conversely as blacks moved into traditionally Latino areas such as Harbor Gateway and parts of the Valley — open conflict broke out in some cases.

At the same time, Alonso said the underlying tensions were not openly talked about, with some politicians worrying that such dialogue might inflame racial divisions.

Gang violence in general, he said, has been a difficult topic for leaders hoping to promote their areas as good places to live.

He pointed to the situation in Highland Park, where the Avenues, a notorious Latino gang, in 1995 unleashed a six-year campaign to drive African Americans out of their predominantly Latino neighborhood.

Last summer, four of the gang's leaders were found guilty in federal court of hate crimes. Three were sentenced to life in prison, and the fourth is scheduled to be sentenced Monday.

"In Highland Park no one wanted to discuss what was really going on," Alonso said. "Who knows what would have happened if they had? Maybe something would have been done sooner."

In the absence of admissions from suspects, local leaders have been quick to downplay race as motivation. Last summer, when three Latinos, including a 12-year old boy, were killed execution-style by black suspects in South Los Angeles, Villaraigosa urged residents not to jump to conclusions, although police said the victims had no gang ties and no known enemies.

"There is no information to believe that this is racially motivated," he said at the time. The case is still under investigation.

Racism often downplayed

Fernando Guerra, a Loyola Marymount professor and director of the Center for the Study of L.A., said there has been little upside for politicians in talking about the racial overtones of gang violence. The instinct, he said, is to downplay racism as a cause, in part because "it's not clear what the policy will be or even if there is a public policy that would work."

One factor in racial street violence may be long-standing racial divisions in jails and prisons. Early last year , thousands of Latino and black inmates in Los Angeles County jails engaged in a series of fights over more than a week, leaving scores injured and two black inmates dead.

As felons go in and out of jails and prisons in the state with increasing frequency, some observers worry that the strict racial divisions learned behind bars are becoming internalized.

"Given the racial dynamics of violence in prison, it would be very scary if that got transferred onto the street," said Cheryl Maxson, a UC Irvine professor who studies crime and street gangs.

DOJ_NMG_0119254

Robin Toma, executive director of the Los Angeles County Human Relations Commission, called gangs a "serious problem" when it comes to hate-based crimes.

Last year, the county reported the first increase in hate crimes since 2001. But even with the jump, hate crime reports in 2005 were at their second-lowest level in the county since 1990.

And the raw numbers are still tiny in comparison with overall crime — 69 incidents of documented gang hate crimes compared to tens of thousands of crimes reported countywide.

One step to better understanding the role of racism would be for law enforcement agencies to track and make available to researchers information about specific motivations in gang crimes when known.

"When you're talking about gang-on-gang violence, you ask, 'How much of that is part of normal gang conflicts over drugs and territory?' " Maxson said. "The question is: 'What is the role of racial conflict when you think of gang conflict?' "

On the streets, though, Alonso said both black and Latino residents in the gang neighborhoods he regularly visits have little doubt. From their perspective, he said racially motivated gang attacks have "absolutely gone up."

Kidnap Suspect Dreads Facing His Parents (WP/AP)

The Washington Post/AP, January 22, 2007

NEW YORK, Jan. 21 -- The man accused of kidnapping two Missouri boys and holding one of them for four years told a newspaper that life was good for him during that period.

Michael J. Devlin, 41, said his own parents, who live nearby, have not visited him since his arrest earlier this month, the New York Post reported Sunday.

"I don't know how I'm going to explain myself to my parents. It's much easier talking to a stranger about these things than your own parents," Devlin told the Post in two 15-minute interviews at the Franklin County Jail in Union, Mo. They were his first public comments, aside from a brief court appearance, since his arrest.

The pizzeria manager is accused of taking William "Ben" Ownby, 13, just after the boy got off a school bus Jan. 8 in Beaufort, Mo., about 50 miles southwest of St. Louis. A schoolmate's tip about a white pickup truck led authorities to Devlin's apartment in Kirkwood, Mo., a St. Louis suburb, where they found Ben and Shawn Hornbeck, 15, on Jan. 12. Shawn had been missing since 2002.

"I guess I was relatively happy" during those four years, Devlin said.

Devlin pleaded not guilty Thursday to charges of kidnapping Ben. He also is charged with kidnapping Shawn but has not entered a plea in that case.

Devlin, who refused to discuss anything related to the case, said he "was never really interested in" romantic relationships. He would not say whether he is attracted to women.

"I can't talk about that because it has to do with the case," he said.

The Post said Devlin appeared downcast and red-eyed during the first interview Friday but was smiling and more upbeat during an interview Saturday.

"I feel nothing," he said in the first interview. "I hide my emotions from other people. I hide the way I feel."

Around 2002, he started losing contact with close friends, most of whom he knew from the pizza parlor he managed in Kirkwood.

"I guess you could say I was lonely. All my friends starting getting married and having kids," he said. "Hanging out with friends just becomes a lower priority" for them.

Devlin's attorneys, Michael Kielty and Ethan Corlija, criticized jail security Sunday and said they had previously advised their client against talking to the media.

They said they had a verbal agreement with jail officials that only family and Devlin's attorneys would see him. The lawyers said the reporter who got in to see Devlin presented herself as a "family friend" to jail officials, not as a reporter.

Kielty also said the woman told Devlin she was writing for a university publication.

Post spokesman Howard Rubenstein said, "The response of the New York Post is that they stand by their published report."

Kielty and Corlija said they planned to ask a judge Monday to move Devlin to a "more secure" facility.

"I don't care if she's a reporter for the New York Post or the milkman -- the fact that she can get in is a big deal," Corlija said.

DOJ_NMG_0119255

Franklin County officials plan to investigate how the reporter, Susannah Cahalan, got access to Devlin, the St. Louis Post-Dispatch reported.

Nightclub Shooting May Beget Legislation (WP)

By Susan Levine And Theresa Vargas

The Washington Post, January 22, 2007

In the wake of a teenager's death this weekend in a packed District nightspot, D.C. Council member Jim Graham plans a meeting within days of police, regulators, industry officials and parents to craft emergency legislation barring minors from clubs that serve liquor.

"There's something wrong here," Graham (D-Ward 1) said yesterday as he weighed his options as chairman of the committee overseeing liquor control. "It's pretty amazing that the only prohibition in D.C. law in terms of a minor being in an establishment where alcohol is available [deals with] a minor being in a liquor store during school hours."

Taleshia Ford, 17, was killed early Saturday morning at Smarta/Broadway, at 1919 Ninth St. NW, when another patron's gun fired during an altercation with a bouncer. Police have made no arrests in the case.

Despite catering to teenagers, the business had a license allowing it to serve alcohol to anyone 21 and older, and the dance floor was crowded with a combination of ages. The club's owner, Smart E. Aziken, did not respond to calls seeking comment yesterday.

Graham said he was greatly concerned by the dangerous potential of "mixing alcohol and adults and teens" in a nightclub, not only because of the possibility of adults buying drinks for minors but also because of the chance teenagers could be induced into risky behavior. In the absence of city law, bars and nightclubs that exclude underage patrons do so at their discretion.

"This has got to stop," Graham said, adding that he hopes to have a bill ready for the council's Feb. 6 session. Through a spokesman, Mayor Adrian M. Fenty (D) said he would support strengthened legislation to protect youths from such situations.

Smarta/Broadway, also known as Club 1919, was temporarily shut down by police after the shooting. Its black wrought-iron doors were secured yesterday by a thick rusted chain held together by two locks. Taped outside were three "Notice of Closure" signs.

"The Chief of Police finds that continued operation of this establishment would present an imminent danger to the health, safety and welfare of the public," the signs read. Police have the authority to keep the business closed for 96 hours.

The club, near the U Street corridor, opened in September 2004. According to Jeff Coudriet, director of operations for the city's Alcoholic Beverage Regulation Administration, its application specified it would have seating for 50.

During its first year, the club was cited for selling and serving alcohol after hours, and Aziken, 44, was given a $2,000 fine and a five-day suspension. The city cited the club for additional violations last May, including a noise complaint and an allegation that patrons were allowed to leave with liquor in hand. Aziken was due to appear Wednesday for a hearing on those matters.

"In layman's terms, he's sort of racking things up here," Coudriet said.

Because of this weekend's violence, Aziken is expected tomorrow at a "summary suspension hearing" by the agency's Alcoholic Beverage Control Board, which can indefinitely withhold the club's license or revoke it. "It's firmly in our hands at that point," Coudriet said.

Meanwhile, Ford's family continued making funeral arrangements, and police pursued their investigation of the shooting. The girl, a senior at Booker T. Washington Public Charter School, had persuaded her mother to let her go to the club with older relatives.

"It's rough," said an uncle, Richard Bynum. "They're taking this real hard."

Police said the gun was taken into Smarta/Broadway by a male friend of a woman ejected earlier in the evening, allegedly for smoking marijuana. A half-dozen security guards might have been on duty, but the club had no metal detector. Officers say they believe the gun discharged accidentally.

The department, which had no leads yesterday on the pair's identity, is offering up to $25,000 to anyone who provides information leading to an arrest and conviction in Ford's killing. Authorities asked people with information to call detectives at 202-727-9099.

Cmdr. Larry McCoy, who heads the 3rd Police District, said neighbors had complained to officers about noise disturbances at the club but not about more serious problems.

"It wasn't on my radar" before, McCoy said. "It is now."

CIVIL LAW:

Unabomber Wages Legal Battle To Halt The Sale Of Papers (NYT)

By Serge F. Kovaleski

The New York Times, January 22, 2007

Nine years after he began serving a life sentence for the Unabomber crimes, Theodore J. Kaczynski is fighting to reclaim more than 40,000 pages of his writings and correspondence so he can preserve them in their rawest form for the public to read.

Mr. Kaczynski, 64, is in a legal battle with the federal government and a group of his victims over the future of the handwritten papers, which include journals, diaries and drafts of his anti-technology manifesto.

The journals contain blunt assessments of 16 mail bombings from 1978 to 1995 that killed 3 people and injured 28, as well as his musings on the suffering of victims and their families. The government wants to auction sanitized versions of the materials on the Internet to raise money for four of Mr. Kaczynski's victims.

But, citing the First Amendment, Mr. Kaczynski has argued in court filings that the government is not entitled to his writings and has no right to alter them. The writings were among the items taken from his remote Montana cabin after his arrest in April 1996. In a motion drafted in pen, he said he planned to argue that the government had too much discretion under a federal restitution law to confiscate writings.

The four victims pursuing restitution from Mr. Kaczynski were initially reluctant to agree to the auction, fearing it could ghoulishly generate more notoriety for him and further publicize their pain. But some were equally horrified by the prospect of Mr. Kaczynski reclaiming his writings.

One of the victims, Gary Wright, a computer-store employee seriously injured in an attack 20 years ago next month, said it was difficult for the four to reach a consensus.

"How do you take four people and try to come to an agreement when they have been wronged in different ways and are in different stages of healing with different types of losses?" said Mr. Wright, now a businessman in Salt Lake City. "I'm sure that emotions were running rampant and that people were reliving it."

Mr. Kaczynski came to be known as the Unabomber after the Federal Bureau of Investigation's code name for the case, Unabom, coined because the targets included universities and airlines. In his 18-year bombing campaign Mr. Kaczynski seemed bent on thwarting the advance of technology, and his victims included university professors, scientists and business executives.

One victim who is not seeking restitution, David Gelernter, a professor of computer science at Yale, said in a letter to the court that he hoped "the criminal's property will be destroyed, or (if need be) sealed for a century at least and then made available at no charge to scholars of depravity."

A federal judge in Sacramento approved the government's auction proposal last August as a way for the group seeking restitution to collect some of the $15 million it is owed by court order. But the judge ordered that any references to Mr. Kaczynski's victims be deleted.

Mr. Kaczynski challenged the deletions, asserting that they would violate his right to freedom of expression, and that his writings should remain intact.

A lawyer for Mr. Kaczynski, John P. Balazs, said his client wanted to donate the originals to a library.

The Labadie Collection at the University of Michigan, which houses materials on anarchism and other protest movements, already has a sizable collection of Mr. Kaczynski's more recent writings and of correspondence since his arrest. Kelly Cunningham, a spokeswoman for the university, said that if Mr. Kaczynski offered to turn over additional writings, the university would examine them to determine whether they were suitable for the collection.

Among the documents that would be auctioned are letters that Mr. Kaczynski received over 25 years at his Montana cabin from his brother, David, and his mother, Wanda.

It was David Kaczynski who led the F.B.I. to his older sibling. And while he expressed support for the victims, he said he was distressed that private family correspondence might fall into the hands of strangers and that the government had not asked him if he wanted the letters.

"I'm in favor of anything that would help the victims," David Kaczynski said in an interview. "But in a personal sense, having these letters treated as murderabilia is appalling to us. How do you balance the need for human decency and dignity with doing the best thing?"

David Kaczynski said this would not be the first time that he had felt let down by the federal government. The F.B.I. had promised to keep his role in the case a secret and to give the family at least one day's warning before they arrested his brother. They did neither.

DOJ_NMG_0119257

"I feel our family has a stake in preserving our privacy and dignity," he said, "but certainly our dignity is compromised by having our letters to Ted transformed into letters of curiosity for some collector of celebrity murder cases."

In the latest twist in a three-year legal battle over the writings, Theodore Kaczynski is adopting a new strategy that could, one of the prosecutors said, mire the case in the federal courts for at least another year or two.

Also known as Inmate 04475-046 at the federal maximum-security prison in Florence, Colo., Mr. Kaczynski has asked an appeals court to assign him a new lawyer who is an expert in First Amendment litigation. Otherwise, he has told the court, he wants to represent himself in an appeal of the ruling that authorized auctioning the papers.

In approving the auction, Judge Garland E. Burrell Jr. rejected Mr. Kaczynski's argument that the sale and altering of the original writings would violate the First Amendment.

Because of the pending appeal of Judge Burrell's ruling, the four victims cannot receive, for the time being, the $7,025 the government collected towards restitution from the sale of Mr. Kaczynski's interest in his Montana land, according to Ana Maria Martel, an assistant United States attorney.

Susan Mosser, whose husband, Thomas J. Mosser, was killed 12 years ago after opening a package containing a bomb that had been sent to their North Caldwell, N.J., home by Mr. Kaczynski, expressed indignation.

"Did he worry about the rights of Hugh Scrutton, Tom Mosser or Gil Murray, from whom he took the right to live?" she wrote in an e-mail message sent through her lawyer.

"Or the rights of the other fathers, sons, brothers, sisters or husbands who were recipients of his bombs, and who suffered real, painful and genuine irreparable harm? Or the rights of those who loved them?" asked Ms. Mosser, who is one of the parties seeking restitution.

Mr. Kaczynski wrote prolifically. He was the author of a 35,000-word manifesto that was published in The Washington Post seven months before his capture. The New York Times jointly financed publication of the tract. Soon after his arrest, Mr. Kaczynski appealed unsuccessfully to the Supreme Court, arguing that his prosecution had been so tainted by news reports that the government had forfeited its right to prosecute him. In January 1998, he pleaded guilty to the federal charges against him.

In addition to Mr. Kaczynski's writings, the government's auction inventory includes an assortment of more than 250 books from his cabin. The titles include "The Brothers Karamazov," "Roman Political Ideas and Practices" and "Fundamentals of Analytical Chemistry." Among the other items cataloged for auction are bowstrings and arrows in a quiver, two axes, a scabbard and a Montana driver's license.

In a July 2005 opinion that led the prosecution to propose an auction, the United States Court of Appeals for the Ninth Circuit said the government's original plan for the sale of Mr. Kaczynski's possessions "plainly fails to serve the victims and their families."

"Though the government purported to represent these individuals, we see nowhere in the record their viewpoints and desires regarding the enforcement of the restitution order," the opinion said.

The court said its understanding of the restitution plan was that the government would assign a value to Mr. Kaczynski's items, deposit that amount of taxpayer money into an account for the victims and keep the property indefinitely. The ruling sent the matter back to the district court and stipulated that if the government did not produce a reasonable plan to maximize the monetary return to the victims, Mr. Kaczynski would get his property back.

Ms. Martel, the assistant United States attorney, said the group of four victims pressing for restitution initially had been unequivocal about not wanting any of Mr. Kaczynski's possessions sold.

"Every time there was a discussion about what we should do with the goods, it was like opening a scab for them," Ms. Martel said. "They were very anguished that Kaczynski would receive more publicity, and that someone was going to be buying his writings about taking pleasure in their suffering. But it was clear that if they didn't agree to an auction, it would all go back to Kaczynski."

The prospect of an auction also did not sit well with Mr. Gelernter, the Yale professor who was severely injured by one of the mail bombs in 1993. He filed a letter with the court in late 2005 in which he asked that the proposed sale not happen.

"My wife and I are outraged that the court has decided to turn the sale of this criminal's property into a circus — or (more accurately) into a P.R. bonanza, starring the criminal himself," Mr. Gelernter wrote. "Why have you decided to help vicious misfits with cash to burn lionize this evil murderer?"

In a recent e-mail message to The New York Times, Mr. Gelernter said he had nothing but pity and contempt for anyone who would bid on Mr. Kaczynski's items unless "they're acting for a police agency or some serious research project that seeks to rid the world of (not 'understand') such vicious cowardly thugs."

But he emphasized that the other victims had the right to "call their own moral shots" and that he hoped that they received everything they wanted .

"God knows they deserve it," Mr. Gelernter said.

DOJ_NMG_0119258

Cuyahoga Comeuppance (WSJ)

The Wall Street Journal, January 22, 2007

The judicial hammer finally came down last week on the California law firm of Brayton Purcell, one of the giants of the asbestos bar. All the firm had done was file a false claim, lie in court and obstruct discovery. But hey, everyone has a bad day once in a while.

The ruling came from Ohio Judge Harry Hanna of the Cuyahoga County Court of Common Pleas, as he barred Brayton Purcell from practicing in his court. In the process, the judge exposed one of the darker corners of tort abuse: asbestos trusts, or funds set up by bankrupt companies to pay legal claims.

The judge is overseeing a suit brought by Brayton Purcell, which claimed Lorillard Tobacco's cigarettes had caused the late Harry Kananian's mesothelioma. What emerged in court, however, is that Brayton Purcell and other firms had previously filed numerous claims to other asbestos trusts claiming that Kananian had developed his asbestos cancer for different reasons.

This is called "double dipping," and because trust payouts are confidential the public rarely learns of these abuses. Our Kimberley Strassel exposed the Kananian scam last year on these pages, reporting on court records showing that Brayton Purcell and its lead attorney, Christopher Andreas, had gone to extraordinary lengths to hide these facts.

In his opinion, Judge Hanna found that Brayton Purcell disobeyed court orders and lied to the court about it; that it had filed a false claim to an asbestos trust, because "this fiction, of course, improved chances of recovery from the trust"; that Mr. Andreas had lied to the court about what he knew about the claim forms and when and had encouraged trusts to resist discovery; and that the lead counsel had shown a "shocking" lack of "respect" during his deposition.

"The record before this court indicates that Brayton Purcell institutionally and Christopher Andreas individually have failed to abide by our rules. They have not conducted themselves with dignity. They have not honestly discharged the duties of an attorney in this case. Therefore, they have forfeited their privileges to practice before this court," the judge wrote.

Cuyahoga County has long been a mecca for asbestos lawsuits, and tens of thousands are still pending. Judge Hanna and two of his colleagues are charged with overseeing that docket, which means that Brayton Purcell's banishment is a serious sanction that hurts its pocketbook. Even better would be if his ruling inspires the Ohio State Bar Association and local or federal prosecutors to look at his findings, in particular the description of how Brayton Purcell filed a fraudulent claim with the express aim of getting a payout.

Judge Hanna is also setting an example for the judiciary, which has to take a harder line if litigation fraud is going to be reined in. Texas federal Judge Janis Graham Jack blew the whistle on silicosis fraud in 2005, while the Michigan Supreme Court recently outlawed the "bundling" of asbestos suits, a practice that had clogged courts and pressured companies into unfair settlements. Bankruptcy judges have also been exposing "prepackaged" bankruptcies, which often let trial lawyers and asbestos companies bilk insurers with bogus claims.

Judge Hanna has now opened the door to more scrutiny of "double dipping" and the rampant fraud inherent in asbestos trusts. The goal should be for more judges to allow for the discovery and admissibility of trust forms in ongoing litigation. His opinion is required reading for other judges, who can start asking whether similar dishonesty is destroying the integrity of their own courts.

CIVIL RIGHTS:

Roe's 34th Year Sees A New Washington (WT)

By Amy Fagan

The Washington Times, January 22, 2007

Today marks the 34th anniversary of the Supreme Court's Roe v. Wade decision, and as thousands descend on the District to protest abortion, some new twists have emerged on the political landscape, including a Democrat-controlled Congress, an upcoming Supreme Court decision and a burgeoning presidential race.

With Democrats in charge of the House and Senate, some pro-choice leaders see an opportunity to affirm and protect the landmark 1973 ruling that made abortion a constitutional right.

"I do believe that there are some opportunities for affirmative legislation that would protect women's lives and health," said Vicki Saporta, president of the National Abortion Federation. "We don't expect further abortion restrictions to move through Congress."

Still, it remains to be seen how Democratic leaders will handle the abortion issue.

The pro-life community -- participating in the annual March for Life today -- is readying itself for Democrats seeking more funding for groups that support abortion and perhaps lifting restrictions on federal funding for abortion.

DOJ_NMG_0119259

But pro-life leaders note the House will still take a pro-life stance on many issues and that President Bush will likely veto objectionable legislation.

"We just need to do all we can to make the case that abortion exploits women and destroys children," said Rep. Christopher H. Smith, New Jersey Republican and chairman of the Bipartisan Congressional Pro-Life Caucus.

Mr. Smith also expects some Democrats -- especially those with their eyes on the White House -- to strike a moderate, seemingly pro-life tone on abortion.

"There may be a bogus attempt to claim common ground while money is being given to Planned Parenthood," he said, warning pro-lifers to be skeptical.

Meanwhile, activists on both sides are awaiting a decision by the Supreme Court, expected before June, on whether to uphold a federal law banning an abortion procedure sometimes called partial-birth abortion.

The pro-life community argued the law bans a procedure in which a half-born baby is killed, while the pro-choice community argued it's too broad and would ban a range of abortions.

The high court overturned a similar Nebraska law in 2000, but the Republican-controlled Congress approved a new federal ban in 2003. It was challenged in three separate lawsuits and overturned by federal courts.

But in the meantime, the pro-life movement scored a key victory with the confirmation of two new conservative Supreme Court justices -- Chief Justice John G. Roberts Jr. in 2005 and Justice Samuel A. Alito Jr. last year.

More pressing is who will control the White House in 2008.

EMILY'S List, a group that aims to elect pro-choice Democratic women, quickly endorsed Sen. Hillary Rodham Clinton, New York Democrat, who announced her presidential candidacy Saturday.

At the same time, the pro-life Susan B. Anthony List invited several likely presidential candidates to a breakfast this morning, including Sen. Sam Brownback, a Kansas Republican and pro-life leader.

"We have to establish upfront that a presidential candidate's stance on life will be a deciding factor for a large number of voters," said the group's president, Marjorie Dannenfelser

Mrs. Clinton is sponsoring legislation that's billed as a way to reduce unintended pregnancies -- and therefore, abortions -- with initiatives, such as more federal funding for family planning.

Nonetheless, much of the action on the abortion issue will continue to take place at the state level. Last year, the South Dakota Legislature passed an abortion ban, but it was overturned by state voters in a November ballot initiative.

Ms. Saporta said this was a key victory for the pro-choice side. She also touted other victories, including a new California law seeking to protect abortion providers from anti-abortion crimes.

But Tom McClusky, vice president of government affairs at the Family Research Council, said the South Dakota situation "is not stopping other states," five of which are considering some sort of abortion ban.

And the fight continues.

Ms. Saporta said she thinks states will continue to try to restrict abortion, but she doesn't expect the courts to take "any action that would result in Roe being overturned."

Mr. Smith said he and others will continue to work to restrict and ultimately stop abortion.

"We think of ourselves as the modern-day abolition movement," Mr. Smith said. "Slavery was not abolished overnight."

ANTITRUST:

Senators To Explore Airline Merger (USAT)

By Marilyn Adams, Usa Today

USA Today, January 22, 2007

US Airways' (LCC) hostile bid for Delta Air Lines moves into the political realm this week when a U.S. Senate panel explores the potential effect of industry consolidation on fares, air service and jobs.

US Airways CEO Doug Parker and Delta CEO Gerald Grinstein will testify at Wednesday's hearing before the Senate Committee on Commerce, Science and Transportation, chaired by Sen. Daniel Inouye, D-Hawaii.

Federal regulators, consumer advocates and economists are also on the witness list.

"We're looking forward to it," said C.A. Howlett, US Airways' top lobbyist. "The instinctive reaction … is to be naturally skeptical. But the market is driving what's occurring."

Delta executives declined interview requests. US Airways — itself a merged airline formed by the 2005 takeover of the old US Airways by America West — wants to buy Delta out of bankruptcy reorganization.

DOJ_NMG_0119260

The deal would create the nation's largest domestic carrier. Delta, already the USA's third-biggest carrier, wants to remain independent.

Some lawmakers and other critics of the deal say it could reduce competition and raise ticket prices, especially in cities along the East Coast where both are strong. At Reagan Washington National Airport, for example, US Airways and Delta combined control a majority of the gates and landing slots.

But US Airways argues the merger would cut costs and improve service nationwide.

Sen. Olympia Snowe, R-Maine, who serves on the Commerce Committee, met with Grinstein last week and will meet this week with Parker. Delta and US Airways together control 60% of flights from Portland, Maine's largest city.

"Our state and the traveling public should not be put at a disadvantage because of airline consolidation," she said in a statement.

Last week, Sen. Charles Schumer, D-N.Y., sent a letter to Parker, demanding to know his plans for air service to upstate New York airports if the merger occurs.

In a press release, Schumer noted Delta and US Airways together operate more than 60% of the flights from Binghamton, N.Y.

"We could see fares begin to rise and flights disappear," he said.

US Airways says it has lowered fares across New York since the 2005 merger with America West.

On Jan. 10, US Airways raised its original mid-November bid for Delta by 20%, to $10.2 billion. US Airways has given Delta's creditor committee a Feb. 1 deadline to respond.

United Airlines, the USA's No. 2 carrier, has held preliminary merger talks with Continental Airlines. And Northwest Airlines, which filed for bankruptcy protection the same day in the same New York courthouse as Delta in 2005, hired an investment banker to explore a deal, possibly one with Delta.

Any such merger would have to be approved by the Justice Department and the Department of Transportation.

Congress has no official role to intervene. But vocal opposition from lawmakers could make a deal politically harder to get done.

Sun Nears Deal To Buy Intel Chips For Servers In Likely Hit To AMD (WSJ)

By Don Clark

The Wall Street Journal, January 22, 2007

Sun Microsystems Inc. and Intel Corp., two Silicon Valley powers that have frequently taken opposing sides in technology battles, appear ready to work together.

The companies have been negotiating an agreement under which Sun would buy Intel chips for use in server systems, according to people briefed about Sun's plans. A deal, which could be announced as soon as today, may include an endorsement by Intel of Sun's Solaris operating system, these people said.

Sun's use of Intel chips, while not unprecedented, would be a blow to Advanced Micro Devices Inc., which is now Sun's exclusive source for chips based on the popular x86 design used in most personal computers and servers. It also would be a sign of the renewed competitiveness of Intel's chips, which outsell those of AMD but whose performance levels had fallen behind that of AMD's products until recently.

Sun, of Santa Clara, Calif., also would keep making computers based on AMD chips, these people said. That dual-supplier strategy is already used by competitors Hewlett-Packard Co., International Business Machines Corp. and Dell Inc. Adding Intel-based servers would help Sun match the breadth of those rival offerings.

A Sun spokesman declined to comment, as did a spokesman for Intel.

Sumit Dhanda, an analyst with Banc of America Securities, wrote a research note Friday predicting Sun would begin using Intel chips in servers that would hit the market in late 2007. He based the prediction on unspecified "channel checks," a phrase that often refers to information from companies that supply components to computer makers.

A relationship with Intel would be the latest in a series of steps by Sun to become more flexible about technology. The company has an internally developed line of chips called Sparc that was seen in the mid-1990s as a competitive threat to Intel's chips. Scott McNealy, Sun's former chief executive officer, for years criticized rivals for relying too heavily on Intel's x86 line, and was even more derisive about a separate product family, known as Itanium, that H-P and others use for high-end servers.

Intel, meanwhile, has been a major proponent of Microsoft Corp. and its Windows operating system, which Sun battled for years with its Solaris and Java software. But Mr. McNealy and Jonathan Schwartz, who was promoted to succeed him as CEO in April, have had to shift strategies as x86 servers became a mainstay in the computer rooms of most companies.

DOJ_NMG_0119261

In 2000, Sun bought Cobalt Networks Inc., a maker of smaller servers that used Intel chips; Sun eventually stopped selling those systems. In November 2003, Sun forged a deal to begin making servers with AMD's Opteron chips. Those machines are now one of the fastest-growing parts of Sun's business, though it still gets more revenue from Sparc-based systems.

Servers that use x86 chips often run the open-source Linux operating system or Microsoft's Windows. Sun became more receptive to the latter option after an April 2004 settlement of antitrust claims it filed against Microsoft. But Mr. Schwartz also pushed the company to aggressively market Solaris for x86 systems, an initiative that could be aided by Intel's endorsement.

For Intel, landing Sun would be Chief Executive Paul Otellini's biggest customer win since the June 2005 adoption of its chips by Apple Inc., another frequent critic of Intel technology in the past. Though neither Sun nor Apple buys huge volumes of microprocessors, they are both known as technically savvy and their opinions carry weight among customers.

Sun is likely to remain a close partner with AMD, whose assistance helped make Sun a major x86 server vendor. Mr. Dhanda, with Banc of America Securities, estimated that in 2008 Intel's sales to Sun might amount to $25 million to $50 million -- assuming Intel can grab 25% to 50% of the shipments that now come from AMD. That would lower AMD's annual per-share profit by about one or two cents, he estimated. AMD is expected to post a profit for 2006 of 91 cents a share, according to the average of analysts tallied by Thomson Financial.

John Taylor, an AMD spokesman, declined to comment on the possibility of a Sun-Intel relationship. But he added that competition between the chip makers is good, driving innovation and serving "the market demand for choice."

Ford, Toyota See Alliance Potential (WSJ)

By Norihiko Shirouzu And Jeffrey Mccracken

The Wall Street Journal, January 22, 2007

Toyota Motor Corp. and Ford Motor Co. are sending more signals that they may want to establish deeper ties. But the cautious courtship between the two auto giants suggests a more modest, and less painful, approach than the megamergers of the late 1990s or the three-way alliance proposed last year among General Motors Corp., Nissan Motor Co. and Renault SA.

Speculation that Toyota and Ford might be edging toward some form of alliance has heated up since a meeting in mid-December between Ford Chief Executive Alan Mulally and Toyota Chairman Fujio Cho. Both companies scrambled to play down the significance of that encounter, calling it a mere "courtesy." They stressed the talks produced no specific deals.

· The Situation: Following a December meeting between Ford CEO Alan Mulally and Toyota Chairman Fujio Cho, the auto makers are separately considering the pros and cons of an alliance.

· What's at Stake: Toyota fears political pressure in the U.S. as Detroit swoons. Ford may see potential in Toyota's hybrid engines.

· The Bottom Line: An equity deal isn't considered likely, but people familiar with the matter say both are open to a partnership.

People familiar with the matter say the meeting was prompted by an invitation from Toyota, sent from Toyota's top brass to Mr. Mulally via a visitor to Dearborn, Mich., where Ford is based, in mid-October. That messenger, a friend of former Toyota Chairman Hiroshi Okuda, met with Mark Fields, president of Ford's Americas operations, and gave him Mr. Okuda's invitation to the new Ford CEO.

Part of Toyota's aim in courting Ford is diplomacy -- an effort to win what people familiar with management's thinking describe as political peace from the U.S.'s second-biggest automobile producer. Though protectionist rhetoric has abated significantly, Toyota officials remain concerned about a possible backlash as they continue to gain market share in the U.S. while Detroit's Big Three shut factories and ax jobs. Analysts expect Toyota to outsell Ford in the U.S. on an annual basis as early as this year.

Toyota also could benefit in a practical way if Ford agreed to use its gasoline-electric hybrid technology. That is in part because Toyota's momentum in establishing its hybrid design as an industry standard has slowed. GM has lured German auto makers DaimlerChrysler AG and BMW AG into a powerful alliance to develop a hybrid system of their own that they say is simpler than Toyota's. Other companies, including Honda Motor Co., are trying to go it alone.

Messrs. Mulally and Cho, after talking for more than two hours, ended the meeting by agreeing to meet again soon, a person familiar with the situation said. A Toyota spokesman said no further meeting has been scheduled between the two but stressed that Toyota remains open to the idea of forming a tie-up to share costs of developing new technology or joining hands in popularizing new technology. Toyota also has shared operations with GM, including an automobile assembly plant in Fremont, Calif., that it has run jointly with the U.S. car maker since the late 1980s.

DOJ_NMG_0119262

"So long as it is a win-win for both parties and there is a reason for partnering...we're open to the idea of forming a partnership. I think anyone among major auto makers around the world could potentially be our alliance partner," Toyota President Katsuaki Watanabe said in an October interview.

Analysts say it is unlikely Toyota would seek to buy a stake in Ford, even though Toyota's market capitalization far exceeds Ford's. A primary obstacle is the 40% voting stock controlled by the descendants of Ford founder Henry Ford. Also, Toyota has generally avoided large -scale acquisitions and alliances with rival auto makers. Ford, meanwhile, has too many financial troubles to buy a significant stake in Toyota.

Even the most efficient auto makers are worried about a glut around the world of auto-making capacity and surging costs to pack cars with new technologies in part to meet increasingly stringent safety and emissions regulations. Those concerns tend to spur interest in alliances that can help bring down component or raw-material costs, or those for developing new technology, to give them an edge.

Ford, according to a person familiar with its thinking, could be interested in a joint venture or partnership with Toyota that could focus on powertrain technology such as gasoline-electric hybrid engines or on smaller, four-cylinder engines.

The December meeting, in Tokyo, was broad-based, and senior executives at Toyota said Mr. Mulally discussed his experience at Boeing Co., where he led its commercial-aircraft division before joining Ford in September. He said he studied Toyota's lean-manufacturing process and transplanted some of the Toyota-devised production and inventory-control techniques like just-in-time parts delivery to Boeing's overall aircraft-assembly operations.

Being a lean-manufacturing expert himself, those executives say, Mr. Cho was impressed by Mr. Mulally's knowledge. One of them said Messrs. Mulally and Cho "really hit it off" and predicted that their instant rapport may provide the springboard for a technical relationship of some kind.

"I don't know if Mr. Mulally realizes this," said one senior Toyota executive, "but if he asked for help or suggested a way to collaborate, knowing Mr. Cho, he would go out of his way to be responsive."

Ford, which has forecast substantial losses this year, has struggled to keep its engines competitive with other auto makers and in 2006 had to back off a much-hyped goal of building 250,000 hybrid vehicles annually because it realized it didn't have the capability to do so.

"Ford came out of that [Tokyo] meeting feeling Toyota was worried that politically there could be problems for it in the United States if Ford continued to struggle, so Toyota might want to do something that publicly looked like they were helping Ford, while it also marginally helped Toyota," said one of the people familiar with the matter.

This person said there would be more talks in the future between Ford and Toyota about pursuing some sort of technology-sharing venture.

Cracking Down On Mixtape CDs (NYT)

By Jeff Leeds

The New York Times, January 22, 2007

Not long before Christmas, Jeff Baker, the chief of police of Morrow, Ga., a small town just south of Atlanta, and one of his officers were walking through a local shopping mall when they happened to pass a kiosk hawking rap music CDs. One in particular caught their attention.

The CD was “Tha Streets Iz Watchin,” with songs performed by the rapper Young Jeezy and, as Chief Baker recalled, it did not carry the name or address of the owner of the music copyrights, as Georgia law requires. Rather than arrest the kiosk vendor immediately, Chief Baker said, “We’d rather go after the source of the material. And at that point we had no idea what the source was.”

Any rap music aficionado would; the creator of the album is DJ Drama, whose real name is Tyree Simmons, arguably the nation’s most prominent producer of mixtapes, the name given to popular but largely unlicensed CDs stocked with yet-to-be released rap hits and free-style rhymes.

And many more people now know: last week, local authorities, working with the recording industry’s trade association, stunned fans and music executives alike by raiding DJ Drama’s studio in Atlanta and arresting him and a fellow D.J., Don Cannon, on racketeering charges. Investigators seized more than 81,000 allegedly pirated CDs and say the pair were producing unlicensed recordings and selling them without permission.

The raid sparked an outcry among many rap fans. But it also threatens to throw into public view the recording industry’s awkward relationship with mixtapes, long an integral element of rap culture and now commonly for sale on street corners, Web sites, many independent record shops and occasionally big chains.

DOJ_NMG_0119263

Even as industry-financed antipiracy squads hunt for unauthorized recordings, senior executives at the major record labels privately say that they have courted — and often paid — top D.J.'s to create and distribute mixtapes featuring the labels' rappers as part of efforts to generate buzz.

"It might not necessarily have the label's logo on it, but they're the ones cutting the checks for the recording and production" of many mixtapes, said Ian Steaman, a longtime talent and marketing executive who writes for the hip-hop Web site Different Kitchen. "It's just kind of understood you need that channel of exposure for any kind of real, credible artist. I don't think this industry's ready to deal with that conversation."

The raid also exposes a schism that is taking shape as the industry tries to stanch a slide in album sales, for which many blame piracy. On one side, many label executives and officials at the Recording Industry Association of America, which represents the major music companies, say the mixtape is contributing to the problem. They argue that sales are ultimately undermined when the mixtape leaps from promotional giveaway item to replacement for an artist's official label-distributed album.

On the other side are a separate faction of label executives and a variety of artists, many of whom privately say they are worried that the chill cast on the mixtape world would handicap labels' efforts to promote hip-hop sales, which declined roughly 20 percent last year, more than any other major genre, according to Nielsen SoundScan data.

Label executives remained puzzled over the sudden arrest of DJ Drama, whose ascent through the unregulated world of compilations has largely taken place in plain sight during the last couple of years. There has been speculation that the police inquiry into his business affairs was further spurred by tips from a competitor or unhappy customer. Chief Baker of the Morrow police declined to comment on the participation of any informants.

Mixtapes have been part of rap since the genre's earliest days in the 1970s — back then, D.J.'s who spun records at clubs or parties committed their playlists to cassettes. But the proliferation of CD burners in the last several years has made the production and wide circulation — or sale — of mixtapes easier than ever.

It has also enhanced their role in tastemaking. Particularly since formerly underground mixtape hero 50 Cent broke out as a mainstream rap superstar in 2003, the top producers of unlicensed CDs have been embraced by the industry's biggest corporations, who wager that the D.J.'s reputations as renegades will translate into the sale of legitimate, licensed compilations, too.

Atlantic Records, for one, hired the mixtape D.J. known as Sickamore as a talent scout and had signed DJ Drama, to its artist roster with plans to release an authorized mixtape-style album this year. Def Jam, Columbia and other big labels have released such CDs in the past.

The labels' reliance on the D.J.'s is complicated further by the fact that many of the top mixtape creators also double as radio D.J.'s on major rap stations. Many label executives acknowledge that when they write checks to certain D.J.'s to produce a mix CD for an artist, there is often an expectation that the D.J. will play the artist's music on the air — an arrangement that recalls the industry's recent radio corruption scandals involving illicit pay-for-play, or payola.

Brad Buckles, the recording association's executive vice president for antipiracy, said authorities seized about two million unlicensed hip-hop mix CDs last year, and speculated that sales of the recordings through Web sites and other channels could be running to the tens of millions of units annually.

Public performance of certain mixtape material "is probably good promotion," Mr. Buckles said. "When you start selling them by the tens and hundreds of thousands, I don't know that anyone is saying that's of great promotional value."

Even in the case of DJ Drama, whose mixtapes have been credited with stoking the careers of artists like Young Jeezy, Lil Wayne and last year's best selling rap artist, T.I., it appears not everyone applauded inclusion on his recordings. The police said lawyers representing an array of artists sent cease-and-desist demands protesting the unauthorized use of their music, though they declined to identify the artists.

Nonetheless, the arrests instantly sent a shiver through hip-hop circles. One prominent Web site, mixunit.com, halted the sale of its usual wares and instead refocused on rap posters and T-shirts. Under a logo that read "Free Drama & Cannon," the site said only that it was reorganizing with features that are "positive to the artists, D.J.'s and fans of this special element of hip-hop."

Fans and music executives say the raid will most likely push the production and sale of mixtapes further underground — and encourage more efforts to skirt the edge of laws against the sale of unauthorized songs. At one major mixtape Web site, fans can choose from an array of current mix CDs on display. To get one, though, they must pay $7 for a sticker bearing the Web site's name. Each sticker comes with a free mixtape.

The business can be tricky for the D.J.'s themselves too, said Mr. Buckles of the recording industry association. D.J.'s creating mixtapes with the intent of offering them free sometimes find that bootleggers then replicate the music and sell it.

"This is a world," he added, "where everything just careens out of control once it's created."

ENVIRONMENT:

Climate Policy's Odd Man Out (WP)

By Sebastian Mallaby
Washington Post, January 22, 2007
Debate Is Fast Passing Bush By

Last week the administration embarrassed itself on climate change, and today will be excruciating. A confluence of forces -- the Democratic takeover of Congress, freak winter weather, Al Gore's documentary on global warming -- has conspired to create an exciting moment in the climate debate. But the Bush team seems determined to be a wallflower, and to step on its own toes as it watches.

The embarrassment began when James Connaughton, the head of the White House's Council on Environmental Quality, told me that he accepts the case for a cap-and-trade system, at least as a concept. After I quoted him last week, Tony Snow, the White House spokesman, issued a denial: "Let me just walk you back from the carbon caps story," he said firmly. That sounded clear enough, but on Thursday the New York Times quoted Connaughton reiterating his openness to the cap-and-trade concept.

While the White House was sorting out its message, the rest of Washington was busy. Over at the Reagan building, a conference on carbon trading sold 600 tickets at $595 a pop and turned away 150 executives hungry to study the intricacies of permit allocation. Meanwhile, multiple climate bills were floating around Congress, and the House leadership promised to create a special climate committee to force legislation past the auto lobby.

All of which was a warm-up for today's excitement. This morning, on the eve of the president's State of the Union speech, an all-star team of chief executives is descending on Washington to make the case for a comprehensive climate approach built around a cap-and-trade system. The team includes four large power utilities as well as the chemical company DuPont; the aluminum giant Alcoa and the oil major BP. Naturally it features General Electric, the leading industrial cheerleader for climate regulation.

The CEOs' visit raises awkward questions for the Bush administration. Team Bush appears to believe that a cap-and-trade system would burden business, but business leaders are saying they want cap-and-trade enacted. When he spoke to me earlier this month, Connaughton argued that the spread of state requirements on renewable fuels made aggressive federal carbon regulation less urgent. Yet business leaders evidently prefer a federal solution to a complex patchwork of state initiatives.

But the biggest embarrassment in the CEOs' visit concerns the extraordinary timing. Ordinarily, lobbyists aiming to influence the president's agenda do not seek to upstage him the day before his State of the Union address. They lay down a marker in advance so the White House has time to feed their ideas into its speechwriting machinery.

So what happened on this occasion? The chief executives are in Washington today because they aren't even trying to influence the White House. As they planned their visit over the past weeks, they were barely in touch with the Bush team because they assumed Bush to be irrelevant. Just a few days ago, the planners of the visit realized that they were inadvertently trampling on the State of the Union. But by then it was too late. Would 10 chief executives rearrange their schedules to accommodate a lame-duck president? Forget it.

Eight months ago, when Gore's climate documentary was released, this state of affairs was inconceivable. Not only was Bush still a player, the case for climate change was widely doubted. Chortling climate-deniers, expecting an easy propaganda victory over the man whose energy-tax proposal they killed in 1993, greeted Gore's movie with glee. A group called the Competitive Enterprise Institute put out two TV commercials asserting that climate science is inconclusive. A House Republican hearing ridiculed a graph that features prominently in Gore's movie showing the world's temperature puttering along in a steady state before shooting upward like the handle of a hockey stick.

But this time around, Gore has proved a tougher adversary. His movie has grossed an astonishing $24 million, not counting foreign sales; the accompanying book has spent 29 weeks on the New York Times bestseller list. His Republican opponents have lost control of Congress. And the Competitive Enterprise Institute has lost the patronage of Exxon Mobil, which decided to stop financing climate lies and start discussing carbon regulation.

All of which makes for a surreal situation. Al Gore, the man who lost the agonizing 2000 election, has emerged as a force in the debate of the moment. George Bush, his nemesis, is so completely marginal that business guys ignore him. Meanwhile, John McCain and Barack Obama, two leading presidential contenders, are co-sponsoring a cap-and-trade bill in the Senate. To anyone who watched climate politics these past few days, the post-Bush era seemed to be beginning.

Thinking Strategically (WSJ)

By Andy Grove

DOJ_NMG_0119265

The Wall Street Journal, January 22, 2007

As a connoisseur of strategy -- student, practitioner (in business) and teacher -- I have long been intrigued with the relationship between strategic principles applied to nations and strategies pursued by businesses. Strategy had its origin in military use, but over time it migrated into the business setting. The linkage is still there: Most contemporary business students, for example, will have read Sun Tzu's "Art of War" in their Business Strategy course. But it is a different relationship that preoccupies me.

Just as medical research tests biological processes in large populations of fruit flies or rodents before human application, I am intrigued by the prospect of applying -- to nations -- the strategic practices that have been formulated and evaluated in the "laboratory" of the world's businesses. As in medical applications, we must be careful in extrapolating from one to the other. Nevertheless, I believe there are benefits to such comparative analysis.

The first question that needs to be examined is this: If business's task is to generate revenue and profits for its owners, what is the equivalent task for a nation and its government? The principal measure is the Gross Domestic Product of the country. Changes in this number are commonly used yardsticks of economic health. Moreover, when one compares two national economies, say the economies of the U.S. and China, the first measure we use in this comparison is GDP. But when we talk of GDP, we must consider not just the GDP of today, but the long-term stability of the productive capacity of our economy. This is how factors like national security enter into the objectives of a government.

What about governance? Corporations are run by senior management, with power concentrated in the hands of the chief executive. The equivalent to this in our country is the institution of the executive branch headed by the president. It is important to stress that even as individual presidents come and go, we expect the institution to be durable, with a view and a constancy of purpose that is appropriately long-range.

A successful business strategist must understand cognitively and instinctively the structure of the industry in which the business operates, and must know that as the structure changes, so must the winning strategy. By way of historical example, IBM, a huge, vertically integrated company, dominated the computer industry before the advent of the personal computer. All computer companies had to be cognizant of IBM's influence on the entire industry, and had to construct strategies which allowed them to prosper in coexistence with this monolith. The arrival of the personal computer changed all this. New rules replaced old ones governing vertical integration, development of standards, and many other factors.

After the Cold War, a similar change took place in the world of nations. Monolithic and vertically integrated military powers gave way to numerous sources of power, each following independent strategies, sometimes in partnership, sometimes embroiled in friction. That changed the rules governing international relations. If national strategy in the days of the Cold War was dominated by the presence and size of nuclear weapons capabilities, what are the critical dominant factors today, when these weapons are increasingly widespread? What takes their place? Religious beliefs? Historical relationships or enmities? How does one set strategies when these factors are unknown? As in the case of the computer industry, it takes many years to figure out how the new rules work.

An important task of strategic analysis is to determine the sources of power that affect our business. If competitors, customers or suppliers have undue influence over the behavior of our business, we lose control of our destiny, to our long-term detriment. As an example, if the control of a scarce ingredient that we need in our business is tightly held by other players, can we afford to be indifferent?

Oil is just such a scarce resource. Its availability determines the growth of a national economy. This has concerned every U.S. president since Richard Nixon, who emphatically devoted a major part of his State of the Union message in 1974 to the necessity of regaining control over our destiny by achieving independence from foreign oil suppliers.

What has happened since is illustrated in the nearby chart.

Such charts, sometimes referred to as "stagger charts," are often used in business to gauge performance against plan. They are an important way in which accountability is evaluated. A stagger chart shows a goal set in a given year for the years to follow. The actual result obtained, along with the new plan, is then shown in the next horizontal line. Looking up and down in a vertical column, one can see the consistency, or lack of it, between the various plans. Looking at the asterisked numbers along the diagonal shows how our actual energy dependence deteriorated as time went on, despite repeated commitments to reverse this trend.

The most recent addition to this thread of commitments was when President Bush, in his 2006 State of the Union address, set a new goal to replace more than 75% of our oil imports from the Middle East by 2025. Even if we somehow achieved 100% replacement of all imports by that time, when we compare this goal with the one set by President Nixon in 1974, we see a 45-year slippage in the course of 32 years. Even though the importance of the energy independence issue has been recognized and emphasized by every president since 1974, our vital national objective is vanishing like a mirage in the distance.

DOJ_NMG_0119266

This kind of dependence gives great power to other nations over our destiny. It is not inconceivable that our foreign policy could be determined by them, using energy availability as a lever. If this possibility seemed far-fetched a few weeks ago, the events involving Belarus have brought home its plausibility.

In a well-publicized study of a large number of corporations, Jim Collins has found that longevity of success in the marketplace is associated with a certain leadership style. I was particularly impressed by the finding that successful leaders are able to face what Mr. Collins calls the "brutal facts" of the competitive positions of their companies. As I observe our political leaders today, I have a hard time finding many examples of a willingness to do this. In fact, I find an alarming tendency to skirt the critical issues by not even pronouncing the words that describe them, rendering them "non-words." Examples: Who among our national leaders spells out that the likely consequence of the heightened global competition is to suppress domestic wage rates? Or addresses the need to allocate the increasingly complex and expensive medical procedures being developed today? Or admits that our emergency medical system is heading toward catastrophe as it becomes the last-resort access to medical care for the growing millions of uninsured? Non-words lead to non-solutions, in energy dependence and in other key issues.

Our nation's corporations have been under severe criticism for a variety of shortcomings. Even so, the capitalist/free-market system of corporations consistently produces results. When corporations do not produce, they become irrelevant and often perish. In other words, if the brutal facts are not faced by the leaders, the brutal reality sets in. By contrast, our national strategy-setting and -execution machinery often seem broken. Consider this: Could we pull off the Manhattan Project today? With its complexities of planning and execution, under extreme time pressure? I doubt it.

Fruit flies can teach us how to cure diseases in human beings. Why not study how businesses set strategies and execute them, and adopt the best methods to address the overwhelmingly important issues facing our society?

Mr. Grove is retired chairman of Intel Corp.

Coastal Homeowners Can't Find Insurance (NSWK)

By Karen Breslau

Newsweek, January 22, 2007

Jan. 29, 2007 issue - During the nine years she's lived in her historic sea captain's house on Cape Cod, Mass., Paula Aschettino never filed a claim against her homeowner's insurance policy. But last year she received a letter from her insurer, Hingham Mutual Group, canceling coverage on her nine-room, $600,000 oceanfront home, which has withstood its share of hurricanes since 1840. She and her husband, Michael, scrambled to find other insurance but were repeatedly denied. "They just said we are in a high-risk area," she says. A spokesman for Hingham, which canceled 9,000 Cape Cod policies, says that the company's own coverage—known as "reinsurance"—had doubled in the past year, making it necessary to withdraw from the coastal market.

The Aschettinos finally found other insurance, but only for nearly double their old premium of $1,800, and with a sky-high deductible of $12,000 against wind damage. Incensed, Aschettino circulated a petition among her neighbors demanding price reform from industry regulators. "People feel they are being totally ripped off," she says. "People are afraid to even make claims, because they are afraid they're going to be dropped."

Up and down the Eastern Seaboard, hundreds of thousands of policyholders like the Aschettinos are being dropped by their insurers; many more have had to swallow double-, even triple-digit increases in premiums and deductibles. While discontinued policies and rate hikes are nothing new in hurricane-battered Florida and the Gulf Coast, insurers are now dinging homeowners in the Northeast and mid-Atlantic states. Allstate Insurance recently announced it wouldn't take new homeowner policies in New Jersey, Connecticut and Delaware—or the five boroughs of New York City. The company also won't renew 30,000 of more than 600,000 policies it carries in and around New York City. A host of other firms are refusing to insure properties along the Atlantic coast from Maine to the Carolinas.

Why the sudden rash of cancellations? An increase in "extreme weather events" that many scientists—and now insurers—believe are linked to climate change. It's not just Category 4 hurricanes that have insurers worried. Around the country, companies have been racking up record property losses from freakish weather, such as the ice storms last week that paralyzed much of the Great Plains and froze California's citrus crops. In recent years, wildfires in the Northwest, drought and hail in the Midwest, windstorms, lightning strikes on power grids, soil subsidence and other calamities of nature have led to cumulative property losses that exceed those caused by hurricanes. "There's a shift going on to more frequent, extreme weather events," says Evan Mills, an environmental scientist at the U.S. Department of Energy's Lawrence Berkeley National Laboratory. "It's as much an issue in the heartland as on the coast."

Global warming is the culprit, claim many—including several insurers who are canceling policies. While scientists cannot determine whether a single weather event is caused by a natural cycle, or is evidence of more permanent, malignant climate change, the pattern of mounting losses is clear. According to Mills, weather-related catastrophe losses have increased from

DOJ_NMG_0119267

about $1 billion a year in the 1970s to an average of $17 billion a year over the past decade. In 2005, the year of Katrina, that figure reached $71 billion.

Even before Hurricane Katrina—an event that has yet to be conclusively linked to climate change—catastrophe modelers had begun to look at the probability of a Category 3 or higher storm hitting the Eastern Seaboard. What they found was terrifying: because of increasing temperatures in the Atlantic, along with changes in air and sea currents, a major storm in the densely populated and highly priced Northeast would dwarf the $45 billion in insured losses wrought by Katrina. One study found that a repeat of the "Long Island Express," the Category 3 storm that plowed through New England in 1938, killing 600 people, would cause $200 billion in damage today. (For the record, the Aschettinos want it known that their house survived the Long Island Express.) The damage from a Category 5 storm directly hitting a major city, could, researchers say, "exceed the total capacity" of the U.S. insurance industry. Before he retired earlier this year, National Hurricane Center director Max Mayfield issued a final warning: "We're setting ourselves up for a major disaster."

For many homeowners, the disaster has been financial. Stanley Dutton, a retiree from Ft. Walton Beach in Florida's panhandle, saw premiums on his 1968 ranch-style house increase from $394 in 2000 to $5,479 this past November. "I just can't put up with this anymore," says Dutton, who is selling his home and moving to Alabama. Consumer advocates, and more than a few politicians, suspect that insurers are using the fear of global-warming-related catastrophe to shuck risk onto policyholders and the taxpayers who fund the government insurers of last resort. Despite huge Katrina-related losses in 2005, the Consumer Federation of America estimates that in 2006, the insurance industry cleared profits of nearly $60 billion, its highest ever. (The figure includes not just property but life and auto lines combined.) Industry representatives say that although 2006 was a light storm year in the United States, they have to incorporate climate risk in their rates to remain stable—and profitable—in the future. "We believe what the scientists are telling us," says Michael Treviño, a spokesman for Allstate, which paid $5.7 billion in catastrophic losses in 2005 and has sharply cut back its coverage. "The country is in the beginning of period where we've sustained more frequent and more intense hurricanes," he says. "We believe it would be bad business to continue to add to our risk."

Whether companies are price gouging in the name of global warming will become clear only in retrospect. Regardless of who pays for the damages, climate change means tough economic choices for all Americans, 54 percent of whom now live within 50 miles of a coastline. Industry experts interviewed by NEWSWEEK were unanimous in their insistence that land-use policies and lax building standards must be reformed. "As a society we have to decide: do we want to pay for people to have that ocean view?" asks Tim Wagner, director of the National Association of Insurance Commissioners. Rather than pulling back, some insurance companies are creating incentives for customers who build with climate change in mind. Fireman's Fund Insurance offers discounts to commercial owners who rebuild damaged property using "green" building practices, which tend also to improve building safety.

Still, denial persists. In Florida last week, the legislature convened a special session to tackle the state's home-insurance crisis. One lawmaker tried to persuade his colleagues to exempt the state's panhandle from stricter—and more expensive—building codes by arguing the region's ubiquitous pine trees were "strong enough" to shield buildings against hurricane-force winds. There were guffaws on the Senate floor as another senator invoked the "Three Little Pigs" before rejecting the measure. Little is certain in the insurance world, except for this: no one will be laughing when the Big Bad Wolf blows the house down.

With Jessica Bennett in New York and Catharine Skipp in Tallahassee

FBI/DEA/ATF/USMS:

Mexico: No U.S. Pressure In Extraditions (AP)

By Mark Stevenson

AP, January 22, 2007

Mexico's attorney general said Sunday four alleged drug lords were extradited to the United States to stop them from communicating with their cartels from behind bars and to reduce the risk of violence and escape, not because of U.S. pressure.

Mexico sent Osiel Cardenas, the alleged Gulf cartel leader who was believed to be running his gang from prison, to the U.S. on Friday along with Palma Salazar, the alleged former leader of the Sinaloa cartel, and brothers Ismael and Gilberto Higuera Guerrero, former chiefs in the Arellano-Felix cartel in Tijuana.

"This decision was a unilateral and sovereign one by the Mexican government," Attorney General Eduardo Medina Mora told a news conference. The aim was to break any "physical and geographical" contact they might have had with their gangs while in Mexican prisons. He also said Mexico plans to extradite other criminals and suspects who have exhausted their legal appeals.

Mexico has recently shown more willingness to extradite drug lords, even those facing life in prison. A record 63 alleged criminals were sent to the U.S. in 2006 alone. However, it refuses to extradite anyone who would face the death penalty, which is illegal in Mexico

Along with the four drug lords, Mexico also extradited 11 alleged criminals wanted in the U.S. on charges including murder, drug trafficking, kidnapping and sex crimes.

U.S. Attorney General Alberto Gonzales called the extraditions "unprecedented in their scope and importance."

In an interview with the Spanish newspaper El Pais published Sunday, President Felipe Calderon acknowledged that "organized crime was getting out of control ... there was a risk in Latin America that Mexico could become a country dominated by insecurity and violence."

The attorney general's comments appear to be a public admission that Mexico was struggling to keep traffickers like Cardenas from running their gangs, or staging escapes and assassinations, from behind bars.

The Mexican attorney general's office has also said the extraditions were aimed in part at cracking down on turf battles between Mexican drug cartels, which have cost hundreds of lives in recent months in states like Michoacan, Guerrero, Baja California and Sinaloa. The government has recently sent thousands of soldiers and police to try to stem the drug-fueled violence.

Medina Mora acknowledged that while Mexico could suffer some backlash, he did not believe it would face anything like the war Colombian drug traffickers fought in the 1980s to avoid extradition.

In the 1980s, a group of Colombian traffickers known as "los extraditables" began a campaign of bombings and assassinations to pressure the Colombian government not to send them to the United States to face justice.

Editorial: New Offices A Weapon To Combat Drug Cartels (SAEN)

San Antonio Express-News, January 22, 2007

The Texas-Mexico border separates sovereign nations, but social problems do not respect sovereignty.

And, because checkpoints represent such ineffective barriers when it comes to these problems, cooperation between Mexico the United States is crucial.

The U.S. government realizes partnership is necessary, according to recent reports, and that should encourage border residents growing increasingly anxious over the violence plaguing the area.

The Drug Enforcement Administration has asked the Mexican government to approve new DEA offices in Nogales, Matamoros and Nuevo Laredo, although officials refuse to provide any details, the Houston Chronicle reported.

"DEA has a very strong relationship with Mexican authorities, but any talk of new offices is premature," agency spokesman Steve Robertson said. "No decision has been made yet."

By targeting the three cities for possible offices, the agency has picked the strongholds of the drug cartels. The drug lords covet the same things — smuggling routes into the United States. And their struggle for supremacy has endangered the lives of ordinary citizens, including Americans who cross the border as tourists.

"Clearly, Mexico and the United States have a shared responsibility to make our communities safer from the drug traffickers and criminals who are threatening our way of life," Attorney General Alberto Gonzales said after meeting with his Mexican counterpart recently.

Gonzales was not referring to the DEA offices specifically, but such offices would go a long way toward enhancing the cooperation necessary to combat the pernicious drug trafficking.

U.S. Feds: Thai Wiretap Helps Bust International Heroin Crew (AP)

AP, January 19, 2007

NEW YORK (AP) — A heroin trafficking organization that processed drugs from Pakistan and Afghanistan through a storefront in Thailand has been busted with help from the first wiretap recordings to be authorized by Thai judicial authorities in a U.S. investigation, prosecutors say.

Three men from Thailand extradited to the United States to face drug charges made initial appearances in U.S. District Court in Manhattan, where they were ordered held without bail Thursday in a case authorities said processed more than $30 million in drug money.

If convicted as leaders of the drug organization, which was headquartered in Bangkok, the men each could face at least 10 years in prison and up to life in prison.

An indictment in the case said government evidence against the men included recordings captured by the first wiretap judicially authorized by the Supreme Court of Thailand as part of a U.S. investigation. U.S. Attorney Michael Garcia credited the Royal Thai Police law enforcement officers as playing a key role in the probe.

DOJ_NMG_0119269

In September, Thailand's prime minister was ousted in a bloodless coup by the military, and an interim government was set up to rule the country. Garcia's spokeswoman Rebekah Carmichael said prosecutors could not comment on the extent of help from Thailand authorities in the probe and whether the cooperation was enhanced or harmed by the coup.

The U.S. government has tried over the past decade to broaden the number of countries through which it can investigate problems like drugs and terrorism in cooperation with foreign governments.

The extraditions, as prosecutors said in court papers and a release, resulted from Operation Ivory Triangle, an investigation of drug networks in Bangkok, Lagos, Nigeria, and New York.

Prosecutors said the networks distributed heroin received from Pakistan, Afghanistan, Myanmar (formerly Burma) and northern Thailand throughout the world, including the United States, Europe, Hong Kong, China, Japan, Malaysia and Indonesia.

In an indictment, prosecutors said that a heroin business operating out of a Thai storefront provided packages of drugs that human couriers swallowed or hid inside secret compartments in suitcases as they carried them through complex distribution routes.

To get to New York, the drugs sometimes went through Pakistan, Europe, Cuba, Mexico and Miami, prosecutors said.

The route was expensive: Heroin bought for $3,500 to $6,000 per kilogram in Thailand eventually was resold in the United States for as much as $100,000 per kilogram, the U.S. government said.

Around The Nation (WT)

The Washington Times, January 22, 2007

U.S. extradites drug suspects

The U.S. government has extradited three men from Thailand to stand trial on charges of operating an international heroin-trafficking organization that routed the drug from Pakistan, Afghanistan, Burma and northern Thailand throughout the world, including the United States.

Yaya Yahayai, Henry Sichone and Andrew Sarpong, who are accused of conspiracy in a scheme to distribute heroin globally, were charged as part of "Operation Ivory Triangle," said John P. Gilbride, U.S. Drug Enforcement Administration special agent in charge.

According to indictments handed up in U.S. District Court in New York, Mr. Yahayai headed the drug trafficking organization from August 2004 until December 2005, assisted by Mr. Sichone, operating mainly out of a storefront in Bangkok.

The indictments said members of the organization transported the heroin through human couriers, mail, cargo shipments and other means.

Richardson plans presidential run

New Mexico Gov. Bill Richardson intends to take the initial step toward the Democratic nomination, hoping his extensive resume will fuel an insurgent campaign to become the first Hispanic president.

Mr. Richardson plans to announce tomorrow that he will soon file the papers to create a presidential exploratory committee, several officials with knowledge of his plans said yesterday. The governor is scheduled to appear on ABC's "This Week."

Mr. Richardson, 59, is a former congressman, U.N. ambassador and Energy Department secretary.

Border shooting images not clear

BISBEE, Ariz. -- A deadly Border Patrol shooting that drew criticism from Mexico's president was recorded by surveillance cameras, but the images are not clear, authorities said.

The Border Patrol is trying to have the tape digitally enhanced to show more detail of the Jan. 12 confrontation east of Bisbee, said Michael Nicley, chief of the agency's Tucson Sector.

Francisco Javier Dominguez Rivera, 22, of Puebla, Mexico, was fatally shot by an agent who had responded to a call about a group of seven persons crossing the desert.

Mondale criticizes vice president

ATHENS, Ga. -- Vice President Dick Cheney has bullied federal agencies and given absurd advice about the nation's risk and Iraq, Walter Mondale said yesterday.

"I think that Cheney has stepped way over the line," the former vice president said at the opening of a three-day conference about former President Jimmy Carter at the University of Georgia.

"I think Cheney's been at the center of cooking up farcical estimates of national risks, weapons of mass destruction and the 9/11 connection to Iraq," Mr. Mondale said.

Responding to Mr. Mondale's comments, Lea Anne McBride, a spokeswoman for Mr. Cheney, said: "Twice elected to serve with President Bush, the vice president is committed to protecting Americans from those who wish to do us harm."

Navy relieves sub commander

DOJ_NMG_0119270

The Navy said yesterday it had relieved the commander of a nuclear submarine that was involved in an incident that killed two sailors.

On Dec. 29, rough seas swept four American sailors from the deck of the submarine off the coast of southwestern England. The USS Minneapolis-St. Paul was leaving Plymouth harbor when the sailors were knocked into the water by surging waves. The four men were taken to a hospital in Plymouth, where two were pronounced dead.

According to officials, an initial review determined the incident was avoidable and due in part to a poor decision by the commander. A formal investigation is still under way. He was identified by the Navy as Cmdr. Edwin Ruff.

According to the Navy, Cmdr. Ruff was reassigned to a shore-based post in Norfolk.

Teen fatally stabs classmate in fight

FRAMINGHAM, Mass. -- A 15-year-old boy was fatally stabbed yesterday in a hallway at his high school in this affluent Boston suburb, and a classmate was charged with murder after blurting out, "I did it, I did it," authorities said.

Investigators would not comment on a motive for the attack.

John Odgren, 16, pleaded not guilty in the killing of 15-year-old James Alenson and was jailed without bail. He was to be tried as an adult.

The teen's attorney, Jonathan Shapiro, said his client has Asperger's syndrome, a form of autism, and has been taking medications for many years.

From wire dispatches and staff reports

Feds: Heroin Traffickers Busted, Headed To N.Y. (WNBC)

WNBC-TV, January 22, 2007

Three men have been extradited from Thailand to face federal charges in New York in connection with two international heroin-trafficking organizations, say law enforcement authorities.

Federal indictments name Yaya Yahayai, Henry Sichone and Andrew Sarpong, charging they participated in conspiracies to distribute heroin from Pakistan, Afghanistan, Burma and northern Thailand throughout the world, including the United States, Europe, Hong Kong, China, Japan, Malaysia and Indonesia.

DEA Special Agent in Charge John Gilbride said, "Operation Ivory Triangle led us on a trail throughout the world from the Bronx to West Africa to Bangkok, Thailand. Today, this world-wide heroin trafficking enterprise is out of business."

Court papers say Yahayai and Sichone operated a heroin business primarily from a storefront in Thailand from August 2004 to December 2005. Members of the organization transported the heroin through human couriers, mail and cargo shipments. The human couriers either swallowed the heroin or carried it in concealed compartments inside suitcases. They paid $3,500 to $6,000 a kilogram and then sold the heroin around the world for $100,000 a kilogram.

Sarpong is said to have recruited a courier to travel with the heroin to the U.S. from Thailand. In May 2006, a co-conspirator of Sarpong was arrested in Manhattan as she attempted to deliver 640 grams of heroin to a customer in the Bronx. The court papers say Sarpong supplied 10 passports, including U.S. passports, to a confidential informant, intending they be used by couriers to illegally bring the heroin into the country.

The three men will appear in federal court in Manhattan later today. They face up to life in prison if convicted. The indictments also seek forfeiture of more than $30 million in narcotics proceeds produced by the drug trafficking operations.

Cocaine Charge Lands Ex-cops In Prison (AP)

AP, January 19, 2007

WASHINGTON (AP) — Guatemala's former top anti-drug investigator and his one-time deputy were sentenced Friday to 10 years in a U.S. prison for conspiring to distribute cocaine.

Adan Castillo, the former chief of Guatemala's special anti-drug police force, and Jorge Aguilar Garcia, Castillo's one-time deputy, were arrested in 2005.

The men were lured to the United States for what they thought was training on fighting drug traffickers. In reality, the U.S. Drug Enforcement Administration had been investigating the men for four months with the help of the Guatemalan government.

The two men pleaded guilty last year.

U.S. officials estimate about 75 percent of the cocaine that reaches American soil passes through Guatemala, in part because its government long did little to stop it.

Potholes & Heroin (NYDN)

By Alison Gendar, Daily News Police Bureau Chief

New York Daily News, January 22, 2007

A city pothole repairman lived a secret life as a drug courier, selling high-quality heroin smuggled into the city by a Colombian crew.

Ricardo Calderon, a city Department of Transportation employee, was paid to fill potholes and pave streets in Queens. But cops arrested him, months after watching him pick up dirty drug money - $57,000 in cash - while on the job, authorities told the Daily News.

Federal Drug Enforcement Administration agents, NYPD detectives and state police dismantled the final pieces of the drug cartel that had employed him during a series of raids last week.

"You can't make this stuff up," said New York City narcotics prosecutor Bridget Brennan. "Imagine the surprise of agents conducting surveillance when a DOT truck pulls up and a worker gets out to pick up a bag of cash. ... You never know when an investigation may lead you to the highest level of an international distribution network."

Calderon, a Colombian native, played a crucial role in trafficking heroin from Pereira, Colombia, to drug distributors in the city, authorities said.

He delivered heroin that had been smuggled into the U.S. aboard cruise ships to three suppliers - Norbero Yepes, Gustavo Cardona and Ruben Acosta - in the Bronx, authorities said.

The men allegedly ran the Moacho-Mare drug ring in Woodlawn, selling the smack to dealers in New York, several other Northeast cities and as far west as Ohio.

Before the sting operation, Calderon was caught on cell phone wiretaps setting up the drug deal while he and other DOT workers were fixing streets in Queens.

"I'm working. I'm in Maspeth. Call me, and I'll tell you at what address we'll meet," Calderon told Yepes on the wiretaps, authorities said.

On June 16, 2004, Calderon had his street repair crew drive him to Joey's Pizza on Grand Ave. in Maspeth.

He jumped off the truck and, wearing his yellow Local 983 T-shirt, sauntered into the pizza parlor. Yepes came out a few minutes later, got into a car parked nearby and blew his horn several times to signal Calderon to come to the car, authorities said.

Calderon trotted over and took a plastic bag stuffed with bundles of cash out of Yepes' trunk. The money was advance payment for a kilo of high-quality heroin, authorities said.

Yepes had told Calderon to bring the heroin to the pizza parlor, but the pothole man balked at carrying drugs in the city truck. Calderon was heard on wiretaps setting up another meeting to deliver the drugs, authorities said.

Agents kept Calderon under surveillance for the next seven months as they built their case and traced his supply lines to Colombia. He was arrested on Feb. 14, 2005.

Five months later, he was fired from the DOT - not because of the drug allegations but because he had lost his license and couldn't drive a truck anymore, authorities said.

Calderon and his relatives own five apartments in Flushing, Jackson Heights and Woodside, as well as a vacant lot in Rockaway, law enforcement sources said.

He also bought a Washington condo from former city DOT Commissioner Christopher Lynn for $60,000, Lynn confirmed. The property, sold in January 2005, has a value of about $230,000.

"His sister was an engineer at DOT and was a dear friend of mine. If you look at his status when he bought it, he wasn't accused of doing so much as throwing a gum wrapper on the ground," said Lynn, who headed the DOT from 1996-97.

Calderon was convicted of drug crimes and sentenced last month to nine years in prison. He was one of 89 people, in the United States and Colombia, arrested during the three-year investigation, authorities said.

The Colombian smugglers stashed the heroin in double-sided suitcases and inside small packets sewn into running shorts, and then boarded cruise ships bound for Florida.

Other drug couriers swallowed balloons filled with heroin, carrying a pound or more of smack inside their lower intestines.

Authorities said Acosta, 29, was caught on wiretaps joking with Yepes about how they might have to cut open the drug couriers if any of them had trouble "excreting" the heroin pellets.

Acosta's suggestion, according to authorities who heard the wiretap: Go to Home Depot and buy a saw.

Federal Investigators Target Two N.C. Internet Pharmacies (AP)

AP, January 22, 2007

Two North Carolina-based Internet pharmacies are under investigation for distributing controlled substances, according to a federal indictment unsealed last week.

Wilmington-based United Care Pharmacy and a sister business, Kwik Fill in Fayetteville, distributed several controlled drugs without requiring customers to consult with a physician, according to the indictment. The Drug Enforcement Administration

says United Care distributed several types of drugs, including erectile dysfunction drug Viagra, painkiller Vicodin and anti-anxiety drug Xanax.

United Care only required customers to fill out an online questionnaire, "which allegedly received little or no consideration by a physician before being approved," according to the indictment.

Four people have been charged in what the DEA described as a "rogue Internet pharmacy." Wilmington residents Andrew Thomas Russo and Denis Leborgne, along with David John of Nashville, Tenn., and pharmacist John F. Tuite of Myrtle Beach, S.C., made their first court appearances last week.

Jay Campbell, executive director of the North Carolina Board of Pharmacy, described operations such as United Care as a "significant threat to the public health and safety."

"The board is pleased to see that federal law enforcement is seeking to hold United Care's operators criminally liable for their conduct," he said.

Businessman's Plea Ends Pot-factory Case (YOUNGVIN)

By Patricia Meade, VINDICATOR CRIME REPORTER

Youngstown Vindicator, January 22, 2007

This is the case in which three judges wrote letters in support of a drug peddler.

YOUNGSTOWN — It came as somewhat of a surprise to federal drug agents that a lawman and legitimate businessmen were linked to a massive pot factory concealed in a warehouse.

Roger S. Bamberger, assistant U.S. attorney and 23-year veteran of the Organized Crime Drug Enforcement Task Force, reflected on the case that ended Tuesday with the guilty plea of Edwin J. Stupka, 49.

Stupka, the 11th defendant in the case, moved to Tucson, Ariz., from Youngstown around the time the first marijuana trafficking arrests were made in 2003.

He was indicted in May 2006, charged with money laundering (nearly $2 million) and conspiracy to distribute more than a ton of marijuana. He will be sentenced April 3 by U.S. District Judge Peter C. Economus in Youngstown federal court.

The advisory sentencing guideline range is nine to 15 years. As part of a plea agreement, Stupka must forfeit his ill-gotten gains — including a plane and hilltop mansion in Arizona.

Stupka has acknowledged that he attempted to launder $1.7 million through a scheme to buy a chain of Arabica Coffee Houses in Cleveland.

Bamberger said "lady luck appeared on the side of law enforcement" with the discovery of the marijuana farm inside a warehouse at 814 Marshall St. in early 2004. A Youngstown police officer and special agent with the federal bureau of Alcohol, Tobacco, Firearms and Explosives were taking photos near the warehouse in preparation for an upcoming trial when they smelled marijuana.

He said it was not only one of the largest seizures for the Drug Enforcement Administration — 3,500 plants in seven rooms — but some of the participants' backgrounds surprised investigators:

Robert Arroyo had operated Frontier Woodworking and the B&O Station Brewery and Restaurant.

Joseph Pedaline, the warehouse owner, also had Pedaline Iron Works and a heating/air conditioning company. Arroyo and Pedaline had done work on the Poland Library.

Kevin Rouan had the Pyatt Street Produce Co.

William Umbel operated the popular Pyatt Street Diner. Before sentencing in 2005, character/reference letters on his behalf were written to Judge Economus by three local judges — R. Scott Krichbaum, Robert A. Douglas Jr. and Charles J. Bannon. Judge Economus called the letters self-serving and did not consider them.

Frank Carbon had been the No. 2 man at the Mahoning County Sheriff's Department. He allowed marijuana to be stored in his office space underneath the police academy building on Southern Boulevard in Boardman.

In June 2002, Pedaline was featured with his then-partner, Arroyo, in The Vindicator as co-owners of the B&O. The remodeled train station opened then in its second attempt as a restaurant.

Investigators

Bamberger said the marijuana case was investigated by the Youngstown DEA Task Force, which includes the IRS Criminal Investigation Unit; Bureau of Criminal Identification and Investigation; police from Boardman, Youngstown, Salem, Warren, Poland Village and Beaver Township; and deputies from the Mahoning County Sheriff's Department.

He credited the "investigative acumen" of task force members Kim Nusser, a BCI special agent, Mike Hughes, a Boardman sergeant, and Gary Gruver, an IRS agent, for the airtight case.

"The citizens of the Mahoning Valley were well served by their collaborative efforts," Bamberger said.

DOJ_NMG_0119273

The federal prosecutor said the marijuana distribution began as early as 1992 and continued through the summer of 2003. Stupka invested thousands of dollars in the indoor marijuana factory on Marshall Street in 2001.

Investigators learned that the high-grade pot was selling for $3,200 a pound, Bamberger said.

Guilty Pleas From 3 Heroin Kingpins (JJ)

By Michaelangelo Conte, Journal Staff Writer

Jersey Journal (NJ), January 22, 2007

Three leaders of a Hoboken-based drug ring that moved up to 20,000 bags of heroin through Hudson County each week were living the high life on drug profits, officials said. But yesterday all three pleaded guilty to federal drug crimes carrying sentences of up to 25 years in prison, officials said.

Jose "Nutty" Gonzalez, 25, of Third Street in Union City, Rory Praylow, 28, of Jackson Street in Hoboken, and Manuel "Murder" Suarez, 31, of Palisade Avenue in Jersey City, pleaded guilty in federal court in Manhattan yesterday morning, officials said.

They were among eight people busted after the six-month investigation that came to a head last March 6, Hudson County Prosecutor Edward DeFazio said.

Just after midnight that day, Hoboken police, working with the federal Drug Enforcement Agency and the Hudson County Prosecutor's Office, spotted leaders of the cartel meeting at the Hess Station on 14th Street in Hoboken, reports said.

"We are very gratified with the successful prosecution of these major drug dealers," Hudson County Prosecutor Edward DeFazio said of the pleas entered in federal court in Manhattan. "It's an outstanding example of the cooperation of law enforcement and prosecutorial agencies."

During the six-month investigation numerous searches of locations and vehicles were conducted, resulting in seizure of 27,000 bags of heroin, four loaded semiautomatic handguns and a bulletproof vest, officials said. One of the guns recovered was later connected to a shooting in Hoboken on Super Bowl Sunday last year, DeFazio said.

Also arrested and facing charges as a result of the drug probe are Philip "Spud" Pasquale, 22, and Darryl Oliver, 35, both in Hoboken; Jason "Jay" Santos, 25, and Alex Gonzalez, 21, both of Jersey City; and Mary Gama, 27, of Union City, officials said.

Cyclist Tammy Thomas Pleads Not Guilty (WP/AP)

By David Kravets, The Associated Press

The Washington Post, January 22, 2007

SAN FRANCISCO -- Former elite cyclist Tammy Thomas pleaded not guilty in federal court Friday to charges of lying to a grand jury investigating steroid use in sports.

Thomas, the first athlete charged in a probe that has implicated some of the biggest stars in baseball and track and field, is charged with three counts of perjury and one count of obstruction of justice.

Thomas, who appeared much slimmer than during her racing days, declined comment after being released on $50,000 bond.

Thomas was banned from cycling for life in August 2002 after the performance-enhancing drug Norbolethone was detected in her urine.

The drug, once an obscure steroid used in human tests in the 1960s, was rediscovered by chemist Patrick Arnold, who supplied the Bay Area Laboratory Co-Operative with undetectable performance-enhancing drugs and is among five people who have pleaded guilty in the investigation.

Defense attorney Tony Tamburello said outside court that Thomas is innocent of any crimes because she did not knowingly lie to the grand jury when she testified in October 2003.

"She did not know at the time that she was taking that substance," Tamburello said. Nobody told her "this was Norbolethone."

Thomas was a silver medalist in the individual sprint at the 2001 World Track Cycling Championships. She has maintained her innocence and said the positive results might have been triggered by contraceptives she was using.

The indictment accuses Thomas of lying when she testified to a grand jury that she never used performance-enhancing drugs. She also is said to have lied when she testified that she did not get illegal drugs from Arnold, who pleaded guilty last year and was sentenced to three months in prison.

"She never met Patrick Arnold," Tamburello said.

Each count against Thomas carries a maximum five-year prison term and $250,000 fine. She was ordered to appear March 23 in federal court, when a trial date is likely to be set.

DOJ_NMG_0119274

The probe has netted guilty pleas from BALCO founder Victor Conte, BALCO vice president James Valente and track coach Remi Korchemny as well as Greg Anderson, Barry Bonds' personal trainer, who served three months and is back in prison for refusing to testify against the Giants slugger.

Authorities suspect Bonds, like Thomas, lied to the 2003 grand jury when he said he never knowingly used steroids. A probe of Bonds for perjury and possible tax-evasion charges is ongoing.

Trevor Graham, who coached track stars Marion Jones, Justin Gatlin and Tim Montgomery, has pleaded not guilty to charges of lying when he said he did not distribute steroids to his athletes or tell them where they could be obtained.

Colombian Government Is Ensnared In A Paramilitary Scandal (NYT)

By Simon Romero

The New York Times, January 21, 2007

BOGOTÁ, Colombia, Jan. 20 — The government of President Álvaro Uribe, the largest recipient of American aid outside the Middle East, has found itself ensnared in a widening scandal as revelations surface of a secret alliance between some of the president's most prominent political supporters and paramilitary death squads.

Testimony this week from Salvatore Mancuso, a former paramilitary commander who admitted to orchestrating the killing of more than 300 people, as well as a document made public on Friday implicating more than a dozen politicians in the pact with paramilitaries, have injected fresh detail into a slow-burning scandal that has caused Colombia's elite political class to shudder in recent weeks.

Senior members of Mr. Uribe's government and Mr. Uribe himself have said that anyone shown to have had illegal ties to the paramilitaries, which terrorized Colombian cities and the countryside in the nation's internal war, which has gone on for decades, and made fortunes in cocaine trafficking, should be prosecuted in courts of law.

The scandal has already touched Mr. Uribe's cabinet, with Senator Álvaro Araújo, the brother of Foreign Minister Maria Consuelo Araújo, under investigation for collaborating with militias.

"If there's someone involved at the highest level, they will be fired," Francisco Santos, Colombia's vice president, said in an interview. "Scrutiny is fine for us," Mr. Santos said. "This country needs to know the whole truth."

Some of the details coming to light about the breadth of paramilitary activities are the result of a process set in motion by Mr. Uribe's own government, which has allowed paramilitary leaders to confess their crimes and pay reparations in exchange for reduced sentences of no more than eight years in prison.

Though some militia leaders have balked at the deal, much of Colombia has been gripped by the first such confession, that of Mr. Mancuso, a cattleman who helped found the paramilitary movement in the 1980s in an effort to combat leftist guerrillas.

Mr. Mancuso, 48, who studied English at the University of Pittsburgh, wept during the first days of his testimony at a special hearing in Medellín last month. This week, however, he simply read from a statement describing how he oversaw the assassinations of hundreds of people, with some operations made possible with information from military intelligence.

Mr. Mancuso also put Mr. Uribe in the spotlight by saying that militias pressured people to vote for the president in 2002, when Mr. Uribe was first elected. Mr. Uribe responded quickly by going on a national radio network to say he had never sent any emissaries to strike deals with the paramilitaries.

On the heels of Mr. Mancuso's testimony, a document rumored to exist in recent weeks was published in the daily newspaper El Tiempo on Friday. It describes a secret pact in 2001 between Mr. Mancuso, other paramilitary leaders and 11 congressmen, two governors and five mayors, in which those present agreed to work together to forge "a new social contract," largely in order to protect private property rights.

Senator Miguel de la Espriella, one of the signatories to the pact, helped bring the scandal to light last year by disclosing the ties between politicians and paramilitaries. Like other officials implicated in the pact, he said he was forced to sign, raising doubts as what type of legal punishment, if any, they might receive.

"At first we declined to sign, but when they put a man with a rifle next to the document we understood we had no choice," Mr. de la Espriella, a member of the Democratic Colombia party, said in an e-mail interview.

Asked why he was the only politician to come forward with details of the secret agreement, Mr. de la Espriella, alluding to widespread suspicions that legislators and government officials had for years worked in tandem with the paramilitaries, responded, "I told myself that a half-truth doesn't serve anybody, and we should all contribute to the enlightenment of the truth during so many years of war."

Those who signed the document included not only supporters of Mr. Uribe but also high-ranking officials in the political opposition, pointing to how a growing portion of the political establishment could be tarnished by the scandal.

DOJ_NMG_0119275

Some 30,000 paramilitary members have been demobilized during Mr. Uribe's government in recent years. Colombia's military still receives more than $700 million a year in aid from the United States to combat drug trafficking and armed insurgencies.

Two guerrilla groups, the Revolutionary Armed Forces of Colombia and the National Liberation Army, still operate in the country. A truck carrying more than 600 pounds of explosives this week destroyed a dairy plant in southern Colombia owned by Nestlé, the Swiss food company, an act that the police attributed to the rebels.

Although the scandal has emerged as the most pressing political challenge to Mr. Uribe's presidency, his approval ratings remain high, at above 60 percent, after five years of rule and a re-election victory last year. Many Colombians credit Mr. Uribe for declining levels of murders and kidnappings and robust economic growth.

However, political analysts here say a steady stream of disclosures related to the paramilitary scandal could diminish Mr. Uribe's credibility, particularly if implicated officials are perceived to have close ties to the president. The scandal has already entangled a former ambassador to Chile and a former head of the intelligence service.

Equally pressing for Mr. Uribe's government could be the scandal's influence on discussions in the United States Congress of aid to Colombia and a trade agreement awaiting Congressional approval that has been signed by Mr. Uribe and President Bush. Political analysts say the Democratic-led Congress is expected to add greater scrutiny of human rights issues in Colombia.

CONGRESS-ADMINISTRATION:

Bush Draws Up Ambitious Domestic Agenda (USAT)

By David Jackson

USA Today, January 22, 2007

WASHINGTON — President Bush vowed that the Iraq war would not deter him from engaging the Democratic-controlled Congress on a sweeping domestic agenda, including helping states tailor their own plans for health insurance.

In an interview with USA TODAY, Bush pointed to the health care initiatives of California Gov. Arnold Schwarzenegger and former governors Mitt Romney of Massachusetts and Jeb Bush of Florida as reasons to support state-specific plans. However, he said state plans should not lead to universal health care run by the federal government.

"There's a lot of people in Washington that say the federal government ought to run health care. I'm not one," he said in a wide-ranging and occasionally testy conversation Friday.

Bush said he will use Tuesday's State of the Union speech to highlight a new health care plan. The plan calls for a health care tax deduction of $7,500 for individuals and $15,000 for families. The tax break would apply whether people buy their own insurance or receive coverage through their jobs.

Under Bush's plan, health insurance benefits from employers would be considered taxable income. That means people with generous health coverage would pay taxes on the amount that exceeds the tax deduction.

Bush's speech also will include more about a new energy initiative, flexibility on meeting education standards, and renewed calls to work with Democrats on immigration and other issues. "I'm going to remind Congress that we've got to show the American people that we're capable of accomplishing some big things," he said.

Sen. Edward Kennedy, D-Mass., said there are opportunities to work with Bush on issues such as immigration and health care, but "the most important issue facing us today is Iraq."

"If the president is serious about strengthening relations with Congress he should begin by seeking authority from Congress for any escalation of the war," Kennedy said Sunday in an e-mail statement.

Kennedy, chairman of the Senate panel that oversees health care, said he's concerned Bush's plan "only deals with the tax code" and may undermine the health coverage many Americans now have.

Among the domestic issues highlighted by Bush in the interview:

·Social Security. Bush said he would support new talks with Democrats on the retirement program's future with "no preconditions." He declined to rule out discussion of a tax increase to address the program's long-term solvency. "The spirit is, 'Bring your best idea how to solve the problem; we'll see if we can find common ground,' " he said.

However, Bush, who supports creating individual investment accounts in the system, indicated he remains opposed to raising taxes. "I've showed that you can solve Social Security without raising taxes."

·Energy. Bush repeated a call made last year for more alternative energy sources but declined to outline specifics. He said he would push "a bold initiative that really encourages America to become less dependent on oil."

The administration has long linked its energy programs to efforts to address global warming. "The new technologies I'll be outlining will help us deal with the issue of 'greenhouse gases,' " he said.

DOJ_NMG_0119276

·Immigration. Bush said he will continue to push for a bill that would expand opportunities for foreign "guest workers," even though conservatives in his party such as Rep. Duncan Hunter, R-Calif., say such programs amount to amnesty for illegal immigrants.

·Balanced budget. He said he will submit a budget to be balanced by 2012 without raising taxes, but did not say whether it would depend on major cuts to existing programs, future economic growth or some combination of both.

·Education. In calling for an extension of his No Child Left Behind education law, Bush said he wants "flexibility" to help struggling schools "without backsliding on standards." The law, passed with bipartisan support in 2001, expires this year. He also wants to make it easier for parents to move their children from failing schools.

·Terrorist surveillance. Bush said the program of monitoring international calls of terrorism suspects "has not been weakened" now that it is under a secret court's supervision.

·Diseases. Bush will ask Congress to help curb the spread of diseases such as malaria and AIDS worldwide. He said it means his foreign policy "is more than just spreading freedom."

Bush To Offer Health Insurance Reforms (FT)

By Eoin Callan

Financial Times, January 22, 2007

Healthcare reform will on Tuesday be thrust to the forefront of the policy issues facing candidates for the White House in 2008 when President George W. Bush uses his State of the Union speech to propose a new tax regime for health insurance benefits.

The president will appeal for support for proposals in next month's budget to cap the amount of health premiums Americans can deduct from taxable income and use the savings to offer greater tax relief for those with less generous plans.

The White House has also pledged to complement trail-blazing initiatives in California and Massachusetts to address the problem of the uninsured.

The initiatives come as opinion polls show increasing public anxiety while the costs of healthcare outstrip inflation and US employers pare back on the health benefits they provide to their workforces.

The White House said its plan would include a "standard deduction for health insurance", while families with insurance would not pay taxes on the first $15,000 (£7,600) in compensation and single people would not pay taxes on the first $7,500.

The healthcare issue will prove divisive for the Democratic party, which is more united in its opposition to Mr Bush's conduct of the war and of climate change policy.

But it is seen by Republican strategists as a particular handicap for Hillary Clinton, who holds a commanding opinion poll lead over her Democratic rivals for the presidential candidacy after taking at the weekend the first legal steps towards launching her 2008 campaign. The New York senator and former first lady has yet to address decisively her association with failed healthcare reforms during her husband's presidency.

However, she moved quickly to toughen her stance over the war in Iraq as she sought to sharpen her differences with Mr Bush and fend off a challenge from Barack Obama, the first-term senator for Illinois. In a Washington Post poll on Sunday, Mrs Clinton was backed by 41 per cent of Democrats questioned.

The former first lady is expected to lead the crucial early rounds of fundraising by the crowded field of Democratic aspirants – joined on Sunday by Bill Richardson, the New Mexico governor – in spite of a problematic record on both foreign and domestic policy. She called for the withdrawal of US troops from Baghdad and an eventual end to the occupation of Iraq. In 2002 she voted in favour of a resolution authorising an invasion.

Mrs Clinton said she did not have "faith" in Nouri al-Maliki, the Iraqi prime minister, as she stayed ahead of her Senate colleagues by backing a binding resolution aimed at stemming the flow of funds to Baghdad.

Bush Bids To Increase Focus On Health Care With Plan On Tax-Based Aid For Consumers (WSJ)

By John D. McKinnon, John Harwood

The Wall Street Journal, January 22, 2007

WASHINGTON -- As a new Wall Street Journal/NBC News poll1 indicates health-care costs are the nation's top economic concern, President Bush joined the debate with a sweeping insurance initiative -- one that threatens a possible tax increase for many upper-income people.

White House officials said Mr. Bush will seek to extend tax deductibility of health coverage to everyone who buys it outside the workplace. But under Mr. Bush's plan, employer-provided health insurance benefits would be counted as part of income for the first time, and thus made taxable.

DOJ_NMG_0119277

Historically, the government hasn't taxed employer-provided health insurance benefits but gives smaller tax breaks, or none at all, to many people who buy insurance themselves outside the workplace. The tax system is especially unfair to employees who work without traditional benefits, experts say. Effectively, Mr. Bush is proposing to eliminate the imbalance by giving everyone the same deduction -- $15,000 for families, $7,500 for singles.

Cracking the problem of health-care inflation is emerging as a major political issue for the foreseeable future, due to the persistent rise in costs, employer efforts to shift more of the burden to workers and the aging of the baby boomer generation. Still, the odds of major legislation in the current Congress appear long, and health care is likely to be a point of contention in the 2008 presidential race.

Hopes for a Large Effect

The Treasury Department estimates that the change would prompt a net increase of five million in the number of Americans with health insurance, and administration officials are hopeful the effect will be even larger. In his weekly radio address, Mr. Bush said his plan is "designed to help make basic private health insurance more affordable -- whether you get it through your job or on your own." Over 10 years, the plan would have no cost to the government, according to a person close to the administration. But details weren't available over the weekend.

With the average premium for an employer-provided family policy at $11,500, 80% of employees with health benefits would see their overall tax go down, a person close to the administration estimated. But many executives and professionals, as well as some rank-and-file union workers, could see their taxes increase.

The change also would mean a tax break for most, if not all, of the 17 million people who obtain coverage themselves, administration officials estimate. The deduction also could be used to reduce income subject to the payroll taxes that support Social Security and Medicare. That is intended to provide a benefit to lower-income workers who often don't owe any income tax.

A family without insurance earning $60,000 could get a total tax savings of about $4,500 under the plan, the person close to the administration said. That includes $2,250 of income-tax savings and an equal amount of savings from payroll taxes. Families can buy high-deductible coverage for themselves in the insurance market for an average of $5,200 -- little more than the amount a typical family could save on taxes under the administration plan.

Suits the Public Mood

At a time when the president is bucking political head winds on his Iraq policy, Mr. Bush's emphasis on health care well suits the public mood. In the new Wall Street Journal/NBC News poll, a 33% plurality of Americans calls the cost of health care the economic issue that concerns them the most -- outpacing problems such as jobs going overseas (identified by 24%), the federal budget deficit (13%) and lack of jobs that pay well (12%).

Some advocates praised Mr. Bush's plan as unexpectedly bold and predicted it would help turn the focus of the health-care debate further toward reform of the private-insurance market and away from creating or expanding government-run health-care programs.

"This really changes the conversation," said Grace-Marie Turner, president of the conservative Galen Institute. "People understand tax deductions."

But several said the administration will have to do more to help the poorest of the uninsured. Mr. Bush hinted in his Saturday radio address that he will have another initiative aimed at encouraging states to create insurance pools for lower-income people.

Despite the tax plan's appeal, the effective cap on deductibility of employer-provided coverage will be controversial with many congressional Democrats, who are focused on shoring up the workplace system of insurance and worry the White House proposal would undermine it. Unions and many large employers will worry about the long-term effect, particularly if it encourages younger, healthier workers to drop out of workplace plans and buy cheaper insurance themselves.

Part of the Problem

If Mr. Bush's plan isn't dead on arrival to Congress, "I think it's going to be wounded on arrival," said Ron Pollack, executive director of Families USA, a liberal advocacy group.

Many Republicans counter that the traditional unlimited tax break available for employer-provided care is actually part of the problem with the U.S. system and contributes to overspending and inflation in the sector.

Conservative economists say the change would touch off intense competition in the insurance marketplace and thereby help hold down prices, while also giving consumers more incentive to buy high-deductible coverage and become smarter shoppers.

Universal Health Coverage Attracts New Support (WP)

By Christopher Lee

The Washington Post, January 22, 2007

DOJ_NMG_0119278

Harry and Louise have had a change of heart.

Thirteen years after television ads from the insurance industry featuring the fictional middle-class couple helped kill the Clinton health-care plan and make universal coverage politically radioactive, comprehensive proposals for expanding coverage to millions of uninsured Americans are flowering again inside the Beltway and around the country.

And this time, advocates hope, the political climate is right for the best ideas to grow, in large part because many business groups that opposed earlier efforts now agree that rising health-care costs and increasingly tougher access to insurance are unsustainable trends.

Whether Washington will do more than talk about the problem, however, remains to be seen. Money is tight, and some experts say major shifts in federal policy are unlikely until after the 2008 presidential election, in which health care is expected to be a major focus.

Many are not willing to wait. Karen Ignagni, president of America's Health Insurance Plans -- the same industry association that once funded the "Harry and Louise" ads -- was among representatives of 16 business, medical and consumer groups that last week called for Congress to spend $45 billion over five years to extend health coverage to most of the nation's uninsured children. After that, the groups said, lawmakers should direct billions more toward covering uninsured adults, mostly through a mixture of tax breaks and expanded federal programs.

"On this issue, the polls show that Democrats, Republicans and independents want progress," Ignagni said. "The most expensive course is to do nothing."

John J. Castellani, president of the Business Roundtable, an association of chief executives of 160 U.S. companies, issued a similar call at a separate news conference last week with leaders of AARP, the politically powerful seniors organization, and the Service Employees International Union (SEIU). "Our soaring health-care costs put American goods and services at a significant competitive disadvantage, and they slow economic growth," Castellani said. "Policymakers must act."

In recent weeks, proposals for dramatically expanding coverage have been floated by Ignagni's industry group, the Children's Defense Fund and Sen. Ron Wyden (D-Ore.). Sen. Edward M. Kennedy (D-Mass.) and Rep. John D. Dingell (D-Mich.), who lead important congressional committees, plan to pursue legislation to allow Americans under 65 to enroll in Medicare or in the health coverage enjoyed by Congress. And a bipartisan group of two senators and three House members introduced legislation last week to help states fund innovative ways to cover more people.

"Health care has been poked and prodded for years," said Wyden, who wants to replace employer coverage with a centrally financed system of private insurance for all Americans. "I believe it is time for diagnosis and treatment."

Much of the activity in Washington is being spurred by a wave of experiments at the state level, particularly Massachusetts's decision last year to require all residents to obtain health insurance, through state-subsidized policies if necessary. This month, California Gov. Arnold Schwarzenegger (R) proposed a similar plan for all 36 million Californians, funding its $12 billion cost partly through fees on employers, hospitals and doctors.

In Pennsylvania, Gov. Edward G. Rendell (D) last week proposed creating a program of state-subsidized private insurance to help many of the 767,000 uninsured people in his state. The plan would impose taxes on tobacco and on businesses that do not offer coverage, and it would phase in a requirement that people earning more than 300 percent of the poverty level (about $60,000 for a family of four) obtain insurance.

"It is no longer a question of whether we can afford to act," Rendell said, noting that treating Pennsylvania's uninsured costs $1.4 billion annually. "The cost of inaction is far greater in terms of individual health consequences and from the increasing burden on taxpayers."

Vermont enacted legislation last year that seeks to expand coverage so that at least 96 percent of residents will have insurance by 2010. Illinois began a major expansion of coverage for children in 2005. That same year, Maine began implementing a plan whose goal is to cover all of the state's 130,000 uninsured residents by 2009.

Other states considering expanding coverage include Connecticut, Indiana, Iowa, Louisiana, Minnesota, Missouri, New Hampshire, New Jersey, New Mexico, North Carolina and Wisconsin, according to the National Conference of State Legislatures.

All the state activity is adding pressure on politicians in Washington to act on a problem that grows worse year by year. Recent census figures show that a record 46.6 million Americans, including 8.3 million children, had no health insurance in 2005, up from 39.7 million in 1994. Employer coverage is more expensive and less available.

"As usual, Washington is behind the rest of the country," said Andy Stern, president of the SEIU. "We're ready to have a very bipartisan solution. What you are seeing now that you didn't see in 1994 is that everyone is on the same side saying, 'We want universal coverage.' The only question is, 'How?' "

Ah, yes, "how" -- and how to pay for it.

DOJ_NMG_0119279

Expanding coverage is a costly proposition, and Democrats, in control of Congress for the first time since 1994, have pledged not to pass major new spending proposals unless other programs are cut to avoid increasing the federal deficit.

While there is bipartisan support for reauthorizing the decade-old state-federal Children's Health Insurance Program, which covers more than 4 million children at a cost of $5 billion a year, experts say at least $12.7 billion more is needed over the next five years just to keep covering the same number of kids.

Moreover, President Bush has given no sign of departing from his advocacy of special tax-favored savings accounts and changes in the tax code as the best ways to make health insurance more affordable. In his State of the Union speech this week, Bush plans to propose more such changes and to announce a new initiative to help states get more residents into private insurance.

"We must address these rising costs so that more Americans can afford basic health insurance," the president said Saturday in his weekly radio address. "And we need to do it without creating a new federal entitlement program or raising taxes."

Despite the new enthusiasm, in the short run, most attempts to expand coverage will probably continue to happen at the state level, some lawmakers said. Federal efforts will be largely incremental and devoted to helping the states find their way.

"The states become laboratories," said Rep. Frank Pallone Jr. (D-N.J.), chairman of the House Energy and Commerce subcommittee on health. "Politically that's necessary. If we tried to adopt a universal health-care plan on the federal level, we probably wouldn't have the votes."

Sen. George V. Voinovich (R-Ohio), a member of a bipartisan group that wants to steer new grants to states, called health care "the greatest domestic problem" but also said that "the truth of the matter is that dealing with this problem between now and the election is not realistic."

"Congress is not going to act in a major way to deal with this access problem in the next couple of years," said Sen. Jeff Bingaman (D-N.M.), another member. "That's the unfortunate reality that we're facing. And so we're saying most of the effort that is possible is at the state level and at the local level. And we want to encourage it and we want to provide assistance."

But ultimately, Washington will have to do more, said Charles N. Kahn III, president of the Federation of American Hospitals.

"At the end of the day, I think the federal government and the federal taxpayers have a responsibility," said Kahn, whose organization was among those calling for $45 billion to cover children. "Clearly, there are states that are looking into this. They can come up with some resources. But we feel that in order to get the ball rolling from where we are now, this is the role that the federal government needs to play."

Bush Expected To Make Call For Improved Fuel Economy (NYT)

By Matthew L. Wald

New York Times, January 22, 2007

WASHINGTON, Jan. 21 — There is widespread anticipation, inside government and outside, that President Bush will call for better fuel economy in his State of the Union address on Tuesday.

The White House has posed questions to the Transportation Department about various options. One idea under consideration, government officials and car company executives who have consulted with the White House say, is to do away with the existing system of fleet averages, as has already happened with light trucks, and set a standard for each vehicle, based on its “footprint,” or distance between the wheels.

The president asked for the authority to do that last year, but Congressional Democrats rejected his request, saying the White House should use its existing power to simply raise the average. A standstill has resulted.

The federal official in charge of gasoline mileage rules, Nicole R. Nason, has been telling members of Congress that when the current rules for car mileage were set, in 1975, she was 5 years old. Ms. Nason, administrator of the National Highway Traffic Safety Administration, says she hopes that when her 5-year-old daughter starts driving, the standard will be higher. But that hope has not been enough to budge either side.

Raising the number from the current 27.5 miles per gallon would cause hundreds more highway deaths each year because automakers would meet the goal by moving to smaller cars, the administration argues. It also says that the system puts an undue burden on companies that specialize in large cars — that is to say, American automakers.

A problem for the Democrats is that, once there is no fleet average, the debate gets murkier because there is no single number to argue over. Simply reforming the system without setting specific goals is “a license for obfuscation,” said Clarence M. Ditlow, director of the Center for Auto Safety, which monitors the auto industry and government safety regulators.

Critics are pushing hard. Representative Edward J. Markey, a Massachusetts Democrat who wants to increase fuel economy, said: “Our problem in dealing with the Bush administration is that when they want to send troops to fight for oil, they do

DOJ_NMG_0119280

that whether they have the authority or not. When you ask them to reduce the need for oil, suddenly they're concerned about authority."

Higher-mileage cars can be just as safe as gas-guzzlers, Mr. Markey said, and to argue otherwise would mean "that the Ford Escape hybrid is less safe than the regular Ford Escape." He plans to reintroduce a bill that would push the standard up by one mile per gallon per year for the first 10 years, and 4 percent per year thereafter.

The car portion of the Corporate Average Fuel Economy system, known as CAFE, has not changed since 1990, and the rule governing pickups, vans and sport utility vehicles is only slowly changing. Mr. Bush, however, is expected to take steps to encourage the development of batteries used to power hybrid-electric vehicles and further raise production of ethanol.

Established in 1975 after the Arab oil embargo, the system set a minimum standard for cars twice as high as the average at the time, pushing the standard to 27.5 miles per gallon in 1985. After minor adjustments from 1985 to 1990, the car standard has been frozen at 27.5 since 1990, first by Congressional order and now by a dispute over how the rules should be structured.

Over that 17-year period, domestic oil production has declined nearly a third, to 5.2 million barrels a day from 7.4 million. As demand has grown, imports have risen by more than two-thirds to fill the gap, to 10.1 million barrels a day from 5.9 million. Ethanol, liquids from coal and tar sands are all possible alternatives, but none will make major contributions in the near future; using less oil will require reducing driving or using vehicles with better gasoline mileage.

The rule has produced unintended consequences. For example, it led car makers to redefine many household vehicles as "trucks," because those had a more lenient standard. And automakers got credit under the system for building vehicles that could run on ethanol or other alternatives, even if the vehicles actually ran on gasoline.

And the window sticker has added a wry phrase to the American vocabulary: Your actual mileage may vary. Last year, in an effort to fix that, the E.P.A. reduced the mileage promised by the sticker.

Last spring, under the "footprint" system for light trucks, Ms. Nason's agency set rules for model years 2008 through 2011.

The rules will push a typical Ford Explorer to 25.2 miles per gallon in 2011, from 19.4 in the 2007 model year, as measured by the Environmental Protection Agency. A PT Cruiser (which Daimler-Chrysler has classified as a light truck, helping it meet the truck average) to 28.1 miles per gallon in 2011, up from 27.4 in 2007.

(Both Ford and Daimler-Chrysler have the option of complying with the old rules based on a fleet average rather than the new vehicle-by-vehicle rule, which takes effect between model years 2008 and 2011.)

The industry's official position is that the decision should be left to the highway traffic safety administration. Gloria Bergquist, a spokeswoman for the Alliance of Automobile Manufacturers, which represents all the major companies except Honda, said, "They're supposed to crunch the data and come up with a sweet spot, between affordability, safety concerns, jobs, and technology, and come up with the number."

The technology to go farther on a gallon of gas is no secret, but it costs money that Detroit auto companies have been loath to spend, especially now that they all have financial problems. For years, the automakers have argued that fuel economy is not a priority for buyers, and they have built a product line that follows that assessment.

Robert Heavenrich Jr., who retired last year as a fuel economy researcher at the E.P.A.'s Ann Arbor laboratories, said there was lots of room for modernization. More modern technology would use less fuel to do the same work. For example, Mr. Heavenrich said, he drives a 1985 General Motors Sierra Cutlass with a 231-cubic-inch engine. "You can go down to a Buick dealer today and get that same engine-transmission combination," he said.

Mr. Heavenrich said that many Japanese cars used a hardware-software combination that allowed some cylinders to shut down during periods of low demand, like highway cruising, to save fuel, but that American manufacturers had generally not incorporated that innovation because it would raise production costs.

The E.P.A. report on fuel economy trends that Mr. Heavenrich produced annually until last year said that mileage would be about 30 percent higher if buyers would settle for the vehicle size and performance characteristics that prevailed in the mid-1980s. But what sells is heavier, zippier cars.

To some extent, though, consumers have voted for higher standards. The actual average fuel economy for cars sold in the 2005 model year, the most recent one for which numbers are available, was just over 30 miles per gallon.

Bush Expected To Warn On Energy Security (AP)

By H. Josef Hebert

AP, January 21, 2007

A year after warning America of its addiction to oil, President Bush is expected to renew concerns about energy security in his State of the Union address. But will the rhetoric be followed by action? Up to now, the record has been mixed.

DOJ_NMG_0119281

Aides hint of a major pronouncement on energy in the speech before Congress and the nation Tuesday night. Yet the president is expected to take a predictable path, urging expanded use of ethanol in gasoline, more research into cleaner burning coal and on gas-electric "hybrid" cars, and greater nuclear energy.

He may tweak his voluntary program on climate change. Aides, however, say the president remains opposed to mandatory cuts in carbon dioxide and other heat-trapping "greenhouse" gases as has been proposed in Congress.

A year ago, Bush declared "America is addicted to oil" and he set a goal of replacing three-fourths of today's oil imports from the Middle East by 2025. He pledged to press for alternatives to oil and for more efficient use of energy.

He has had some success in getting more domestic production.

The Bush administration has opened new federal lands for oil and gas drilling. Last month, Congress approved opening a large new area in the Gulf of Mexico to drilling. This month, Bush lifted a longtime ban on oil and gas drilling in Alaska's Bristol Bay.

But when it comes to weaning the country away from oil, the president's critics say his rhetoric has not been matched by action.

"President Bush actually cut funding for the key energy-saving technologies," says Joseph Romm, a former head of the renewable fuels and efficiency programs at the Energy Department during the Clinton administration.

The department's requests for renewable fuel and conservation programs have stayed flat at about $1.18 billion annually over the past six years — really a decline if inflation is considered, energy efficiency advocates say.

"Since 2002, the energy efficiency programs at the Energy Department have dropped by a third in real dollars," says Kateri Callahan, president of the Alliance to Safe Energy, a private advocacy group.

When one program is increased, others have suffered, these critics maintain.

They acknowledge spending increases for research into solar and wind energy, but contend that came at the expense of two other renewable energy programs that were eliminated: research into geothermal energy deep within the earth and efforts to make hydroelectric dams more fish friendly.

Congress has not been all that helpful, either.

The energy law passed in 2005 authorized $3.8 billion worth of renewable energy and conservation programs. But a vast majority of those programs are without funds, neither requested by the administration nor approved by Congress.

Callahan points to a $450 million consumer education and outreach campaign on energy efficiency in that law, but says "not one penny has been appropriated" nor has the money been sought by the administration.

Energy Secretary Samuel Bodman says the administration over the years has spent nearly $12 billion in developing new energy technologies. He cited the president's $2.1 billion "advanced energy initiative" in the State of the Union a year ago.

But most of that program goes for nuclear research and clean coal technology that generally has little impact on the country's dependence on oil, 70 percent of which is used in transportation.

For that, Bush told a renewable fuels conference last year in St. Louis, "we need to change how we power our automobiles. ... I like the idea of promoting a fuel that relies upon our farmers."

Bush has supported lawmakers' push to use more corn-based ethanol as a gasoline blend and he is expected to call for a sharp escalation of ethanol use in his speech.

It is a political sure bet as ethanol has widespread bipartisan support.

Among the first bills introduced in the new Democratic-run Senate calls for using 60 billion gallons of ethanol, 10 times current production capacity, by 2030.

Two 2008 presidential hopefuls, Democratic Sens. Barack Obama of Illinois and Joe Biden of Delaware, are its leading co-sponsors.

Ethanol is "riding a big wave" this year, says Mark McMinimy, a policy analyst at the Stanford Group. "The renewable fuels-ethanol juggernaut enjoys one of the most prized commodities in Washington — broad-based support, bipartisan political momentum."

But even there, the administration has been criticized for not living up to the rhetoric.

In last year's State of the Union speech, Bush announced a goal to make a "new kind of ethanol practical and competitive within six years." His administration followed within days with a budget calling for only a modest increase — about $29 million — for research into cellulosic ethanol development.

Last week, the House passed legislation that would funnel $14 billion in money collected from oil companies into a renewable fuel fund. Ethanol lobbyist Bob Dinneen of the Renewable Fuels Association welcomed the action and urged that the fund finance loan guarantees — approved by Congress in 2005, but not funded — for cellulosic ethanol plants.

Yet the White House strongly opposed the House-passed bill in part because it said additional taxes on the oil companies should not be used to pay for such new programs.

DOJ_NMG_0119282

A report last week by the General Accountability Office, the investigative arm of Congress, concluded "it is unlikely" that the government's current research and development programs will provide the alternative energy sources needed to "reverse our growing dependence on imported oil."

Bush Proposals Find Little Success (WT)

By Stephen Dinan

The Washington Times, January 22, 2007

President Bush's record of getting his State of the Union proposals enacted, after successes in his early years in office, has dropped off substantially.

Of the 12 initiatives that he proposed or called on Congress to pass in 2006, the White House can claim complete success on just three: renewing the Patriot Act, expanding health savings accounts and expanding electronic medical records. That followed unfulfilled calls in 2005 to reform Social Security and the tax code and to pass a guest-worker program for illegal aliens and future immigrants.

That record is a far cry from the major policies Mr. Bush proposed in his 2002, 2003 and 2004 speeches, and later won from Congress, including a stimulus package to pull out of recession in 2002, a $15 billion fund to combat AIDS, a prescription-drug benefit in Medicare, passage of the authority to more freely negotiate trade agreements and the goal of cutting the deficit in half.

This year, Mr. Bush is dropping the laundry-list-style proposals and will instead focus on five major themes, on which he thinks he can find common ground with Democrats.

"I just think some of the old State of the Union formulas have kind of run their course," White House press secretary Tony Snow said last week, acknowledging that the new format is in part a reflection of the new political reality of Democrats controlling Congress.

Clark Judge, a speechwriter for President Reagan and Vice President George Bush, said the recent poor record of accomplishment is part of Mr. Bush's overall political problem -- falling approval ratings.

"That's part of why his numbers dropped -- that the achievements, what he set out to do, particularly in domestic policy, didn't happen, Social Security reform being the big one, but so too making the tax cuts permanent," Mr. Judge said.

Democrats said they just want to see action out of Mr. Bush.

"I wish the president would stop talking about things and just do something," said Senate Majority Leader Harry Reid, Nevada Democrat.

In 2002, Mr. Bush's first State of the Union -- as a new president he did not deliver such an address in 2001 -- came as Democrats controlled the Senate. Yet with split control, the president rang up a series of substantial successes. In addition to the stimulus package and trade authority, he also proposed the USA Freedom Corps and won a new package of post-Enron scandal corporate rules.

His 2005 speech was grand in its reach, proposing to overhaul both the tax code and Social Security, as well as the immigration system. But none of those came to fruition, and by last year, he aimed lower, calling for a commission to look at Social Security and for moderate changes to laws.

Even those, though, proved too much, despite Republican control of Congress.

Many of the changes fell victim to Republicans' failure to pass most of the annual spending bills that stymied many of his 2006 proposals, such as the Advanced Energy Initiative or training 70,000 high school teachers.

The White House blamed congressional Democrats, who instead of going back to work this year on those spending bills decided to continue 2006 funding levels through fiscal 2007.

"It's unfortunate that this new Congress chose to move forward in a way that they have a yearlong continuing resolution rather than completing the important work of those appropriations bills," said Scott Stanzel, a spokesman for the president.

Still, he said, the ball got rolling on many of their priorities.

"There was a lot of important work that went on last year both on the domestic and international front," he said.

Kathleen Hall Jamieson, director of the Annenberg Public Policy Center at the University of Pennsylvania, said that State of the Union addresses are the toughest speeches a president gives and that rarely do historians find them memorable. She said they are "time-bound" because they are usually tied to taking stock of last year's accomplishments and the upcoming year's legislative agenda.

That's not to say they have been without memorable rhetoric, such as his 2002 declaration of Iran, Saddam Hussein's Iraq and North Korea as an "axis of evil."

But this year's different style of speech gives Mr. Bush an opening, she said.

DOJ_NMG_0119283

And she said Mr. Bush's opening salvo last year on energy policy -- he declared the nation "addicted to oil" -- sets the table for this year's promised focus in part on energy policy. White House officials have told Republicans in Congress that they expect to make the most significant headlines on energy issues.

Mr. Judge said there's still plenty of time for Mr. Bush to establish a good legacy, beginning with tomorrow's speech and centering on Social Security and immigration and buying enough time for his Iraq policy to work.

"The pieces are in place, as bad as things look right now, for having had a very successful administration," Mr. Judge said.

Speechwriters For Bush Seek Perfect Pitch (NYT)

By Sheryl Gay Stolberg

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Most Americans think of President Bush as the commander in chief. His speechwriters have another name for him: the editor in chief.

"He always wants it to be logical and straightforward," William McGurn, the chief White House speechwriter, said in a hurried telephone interview on Friday, just four days before the State of the Union address. "That's his big obsession. I always say I've been edited by Bill Buckley at the National Review, Bob Bartley at The Wall Street Journal. And the president is the strictest editor, the most line by line."

Mr. McGurn, a former Journal editorial writer, and his team of about a half-dozen writers and researchers have had more than their usual exposure to presidential editing this winter. The address on Tuesday comes 13 days after Mr. Bush's prime-time speech on his new strategy in Iraq, one that even some Republicans have criticized as uninspiring, a rhetorical dud.

For the people who get paid to put words in the president's mouth, the pressure is on.

"My job is to explain the president's policy and put it forward, to state his priorities in his voice," Mr. McGurn said. "So we do what he wants, not what someone may say on the cable news."

But this is Washington, where punditry is practically an official sport, and the pundits disagree. "A mediocre speech that was flat," said David Gergen, a former Nixon speechwriter, echoing the sentiments of many. "It was solid, but they miss Gerson."

Mr. Gergen was referring to Michael J. Gerson, Mr. McGurn's predecessor, who left the administration last summer. He is credited with what many say was Mr. Bush's best speech, to a joint session of Congress nine days after the Sept. 11 attacks.

Of course, writing a speech is only half the equation; the other half is in the delivery. Veteran Bush-watchers say the president is never as good standing solo before a television camera, as he did in the White House library for the speech on Iraq, as he is before a live audience.

Mr. McGurn and his crew, which includes a onetime spokesman for former Senator Jesse Helms and a staff member who four years ago was editing the student newspaper at Yale, are described by Clark Judge, a former speechwriter for Mr. Reagan and for the first President Bush, as "a first-rate team."

They also have the task of writing for the president in very different times than Mr. Gerson did. The bipartisan support for Mr. Bush that swept over Congress and the nation after Sept. 11 is long gone, the war in Iraq is going badly, and the president is about to deliver his first State of the Union address to a Congress controlled entirely by Democrats.

Mr. Bush was determined to be prepared. Mr. McGurn said he and Christopher G. Michel, the Yale graduate, were in the Oval Office going over the Iraq speech in December when the president announced: "I need to get started on the State of the Union. We can't wait."

That called for reinforcements. Mr. McGurn's deputy, Marc A. Thiessen, the former Helms spokesman, was already working on the State of the Union. With Mr. McGurn and Mr. Michel still busy on Iraq, John McConnell, the lead speechwriter for Vice President Dick Cheney, was brought in. So, too, was Matthew Scully, a speechwriter who left in 2004. Mr. Scully now lives in Los Angeles; he has been camping out in a Washington hotel since Jan. 6.

Every White House speechwriter, current and former, knows the traditional State of the Union formula: a laundry list of ideas, many of them destined to die in the bowels of some Congressional committee room. (In 2004, Mr. Bush proposed sending humans to Mars, a plan that even Republican strategists mock today.)

This year, the president told his speechwriters that he wanted a more thematic speech, one that would focus on a few core issues, like energy, immigration and health care, where Mr. Bush hopes to achieve compromise with the Democrats.

Mr. McGurn would not disclose details, and as for soaring rhetoric, he would not say. But he did say the president was not much interested in "flowery language."

At this point, Mr. Bush is well into rehearsing. By Friday, he had already had several run-throughs in the family theater of the White House, with officials including Stephen J. Hadley, the national security adviser, and Condoleezza Rice, the secretary of state, listening in.

DOJ_NMG_0119284

For his part, Mr. McGurn is a bit tired after a month of 12-hour days and 6:45 a.m. phone calls, and in need of a decent meal. In one eight-day stretch after Christmas, he and fellow writers ate breakfast, lunch and dinner every day in the White House mess, except when it was closed, as it was for dinner on New Year's Day.

"We went to Fuddruckers," said the man who puts words in the president's mouth. "It was, like, 8 o'clock. Nothing else was open."

The Clinic Is Open (NYT)

The New York Times, January 22, 2007

Companies are proving that when it comes to health care, you can re-teach old dogs an old trick. On-site health clinics in the workplace, which had been disappearing since their peak in the 1970s, are staging a comeback. Corporations are waking up to the fact that healthy employees are more productive, while sick workers are a drag on the bottom line. And they're trying to do something about it.

The sky-high cost of health care in the United States isn't just a challenge for the families that struggle to pay rising premiums and co-payments. It's also a serious issue for American companies, whose competitors in other countries often benefit from national health insurance programs.

As Milt Freudenheim reported recently in The Times, some big American-based companies have rediscovered that it's cheaper in the long run to spend a little more on in-house health clinics. Companies from the Pepsi Bottling Group to Credit Suisse have opened or expanded their clinics. More than a quarter of the nation's 1,000 largest employers will likely offer some kind of on-site health services by the end of the year.

For employees, a clinic is a major time saver, convenient and cheap (or even free). For companies, spending a relatively small amount of money on early detection and basic preventive care can save on expensive hospital bills down the line. It's an interesting stopgap solution, provided companies do not abuse their knowledge of employee medical conditions and remain focused on the long-term health of their workers, instead of just steering them away from expensive procedures.

Innovative as they are, office and factory infirmaries will hardly solve the nation's entrenched health care crisis.

Total health spending reached nearly $2 trillion in 2005, accounting for 16 percent of the economy. It is a bit scary that the 6.9 percent increase in health spending that year — rather than a cause for alarm — is celebrated as the slowest pace of increase in six years. There are 47 million uninsured people in this country. State governments, like those in Massachusetts and California, are trying to chip away at the problem and business groups are lobbying in Washington for help with out-of-control costs.

While it is a welcome sign that businesses and states are trying to come up with answers, health care is a national issue that requires a comprehensive solution.

Gold-Plated Indifference (NYT)

By Paul Krugman

The New York Times, January 22, 2007

President Bush's Saturday radio address was devoted to health care, and officials have put out the word that the subject will be a major theme in tomorrow's State of the Union address. Mr. Bush's proposal won't go anywhere. But it's still worth looking at his remarks, because of what they say about him and his advisers.

On the radio, Mr. Bush suggested that we should "treat health insurance more like home ownership." He went on to say that "the current tax code encourages home ownership by allowing you to deduct the interest on your mortgage from your taxes. We can reform the tax code, so that it provides a similar incentive for you to buy health insurance."

Wow. Those are the words of someone with no sense of what it's like to be uninsured.

Going without health insurance isn't like deciding to rent an apartment instead of buying a house. It's a terrifying experience, which most people endure only if they have no alternative. The uninsured don't need an "incentive" to buy insurance; they need something that makes getting insurance possible.

Most people without health insurance have low incomes, and just can't afford the premiums. And making premiums tax-deductible is almost worthless to workers whose income puts them in a low tax bracket.

Of those uninsured who aren't low-income, many can't get coverage because of pre-existing conditions — everything from diabetes to a long-ago case of jock itch. Again, tax deductions won't solve their problem.

The only people the Bush plan might move out of the ranks of the uninsured are the people we're least concerned about — affluent, healthy Americans who choose voluntarily not to be insured. At most, the Bush plan might induce some of those people to buy insurance, while in the process — whaddya know — giving many other high-income individuals yet another tax break.

DOJ_NMG_0119285

While proposing this high-end tax break, Mr. Bush is also proposing a tax increase — not on the wealthy, but on workers who, he thinks, have too much health insurance. The tax code, he said, "unwisely encourages workers to choose overly expensive, gold-plated plans. The result is that insurance premiums rise, and many Americans cannot afford the coverage they need."

Again, wow. No economic analysis I'm aware of says that when Peter chooses a good health plan, he raises Paul's premiums. And look at the condescension. Will all those who think they have "gold plated" health coverage please raise their hands?

According to press reports, the actual plan is to penalize workers with relatively generous insurance coverage. Just to be clear, we're not talking about the wealthy; we're talking about ordinary workers who have managed to negotiate better-than-average health plans.

What's driving all this is the theory, popular in conservative circles but utterly at odds with the evidence, that the big problem with U.S. health care is that people have too much insurance — that there would be large cost savings if people were forced to pay more of their medical expenses out of pocket.

The administration also believes, for some reason, that people should be pushed out of employment-based health insurance — admittedly a deeply flawed system — into the individual insurance market, which is a disaster on all fronts. Insurance companies try to avoid selling policies to people who are likely to use them, so a large fraction of premiums in the individual market goes not to paying medical bills but to bureaucracies dedicated to weeding out "high risk" applicants — and keeping them uninsured.

I'm somewhat skeptical about health care plans, like that proposed by Gov. Arnold Schwarzenegger, that propose covering gaps in the health insurance market with a series of patches, such as requiring that insurers offer policies to everyone at the same rate. But at least the authors of these plans are trying to help those most in need, and recognize that the market needs fixing.

Mr. Bush, on the other hand, is still peddling the fantasy that the free market, with a little help from tax cuts, solves all problems.

What's really striking about Mr. Bush's remarks, however, is the tone. The stuff about providing "incentives" to buy insurance, the sneering description of good coverage as "gold plated," is right-wing think-tank jargon. In the past Mr. Bush's speechwriters might have found less offensive language; now, they're not even trying to hide his fundamental indifference to the plight of less-fortunate Americans.

Emerging Grievances Within Party Likely To Test Pelosi (WP)

By Jonathan Weisman

The Washington Post, January 22, 2007

Beneath the resounding Democratic victories of the past two weeks, tensions have been growing between House Speaker Nancy Pelosi and many new committee chairmen and other members over her aggressive management style and her approach to the war, according to lawmakers and advisers.

Powerful committee chairmen have bridled at the California Democrat's decision to impose six-year term limits on them. Liberal Democrats say she is being too cautious in confronting President Bush on the war in Iraq. Rank-and-file Democrats say she erred in denying Republicans more say in the early legislation, making the speaker appear autocratic.

And many Democrats complain that Pelosi is relying too heavily on a coterie of liberal allies from her home state and Massachusetts to the exclusion of more conservative lawmakers from the Midwest and the South.

The friction will present a growing challenge as Democrats move from the poll-tested, popular items that breezed through the House this month to more difficult legislative ventures, such as efforts to stem global warming, overhaul the nation's immigration laws, shrink the budget deficit and resolve the war in Iraq. It could also hand Republicans a powerful political weapon as they seek to regain power in 2008 by challenging the crop of new Democrats hailing from Republican-leaning districts.

Rep. Marcy Kaptur (D-Ohio) praised Pelosi for guiding through so many popular legislative items so quickly but pleaded for her to develop a more inclusive leadership style.

"If I had any advice, it would be 'Don't isolate yourself inside the territory you're most familiar with,' " Kaptur said last week. "I guess I would say to her, 'Don't be isolated by your California experience.' "

Pelosi aides and allies say she is doing her best to be inclusive, and to consult with the strong-willed old bull chairmen, but she must also make room for the new voices that helped the Democrats win back the majority. They said that although that will not be easy, most Democrats will be patient as the new majority settles in.

DOJ_NMG_0119286

"I think we suffered the last time the Democrats were in power from too much chairman autonomy," said Rep. Barney Frank (D-Mass.), a Pelosi ally and the chairman of the House Financial Services Committee. "Accusing the speaker of trying to manage public policy is like accusing the fire department of trying to fight fire."

Pelosi took over the speakership this month after a messy leadership fight in which she backed the losing candidate, Rep. John P. Murtha (D-Pa.), for House majority leader. She then threw herself into her "hundred-hour" blitz.

In 2 1/2 weeks, the House adopted new rules to curtail the influence of lobbyists and control deficit spending, then passed half a dozen bills to increase the minimum wage, bolster homeland security, fund stem cell research, order the federal government to negotiate lower drug prices for Medicare, cut some student-loan interest rates, and eliminate tax breaks for oil companies to finance alternative-energy research. On virtually every vote, Republicans joined united Democrats in droves.

But backstage, the firm -- some say heavy-handed -- style Pelosi used to ensure passage of those bills and deal with committee chairmen began to chafe.

Pelosi angered her chairmen and much of the Congressional Black Caucus with her decision to maintain a Republican rule limiting committee chairmanships to six years. Those chairmen and black members have waited years, even decades, to wield power as they patiently abided by the seniority system.

Now, some of the most powerful Democratic chairmen, such as Energy and Commerce's John D. Dingell (Mich.), Appropriations' David R. Obey (Wis.), and even ideological allies such as Oversight and Government Reform's Henry A. Waxman (Calif.), are openly questioning her decision.

They point to Republican experiences with term limits, when candidates for vacated chairmanships competed with one another to raise political cash for GOP candidates and offered legislative fealty to their leaders to win appointments.

That competition strengthened the hand of the leadership and introduced politics -- even the taint of corruption -- to a process that once ran on simple seniority, some Democrats note.

But Pelosi has stood her ground, arguing that fresh blood needs to circulate through the committees. Rep. Rahm Emanuel (Ill.), chairman of the House Democratic Caucus, said the excesses of those competitions were the products of the Republican Party, not the process.

"Tom DeLay created that culture," he said, referring to the Republican former House majority leader. "That's not us."

Some Democrats were frustrated with her decision not to give Republicans a chance to offer even one amendment on the six bills that passed in the initial spate. Pelosi promised the Republicans that they will have more input on other matters, but some Democrats say she has unnecessarily ceded the moral high ground.

"As we try to move forward, we have to make sure transparency and cooperation is part of the legislative process," said Rep. Jim Costa (D-Calif.), an advocate of more comity in the House.

Some rank-and-file members see bias toward "bicoastal liberals" in Pelosi's inner circle -- particularly Reps. George Miller (D-Calif.) and Edward J. Markey (D-Mass.) -- and short shrift given to the views of Midwesterners and more conservative Southern Democrats.

On the war front, two Democratic camps have developed. Liberals and antiwar stalwarts such as Murtha, one of Pelosi's closest allies, want to aggressively use the power of the purse to affect policy, possibly by denying funds for increased troop strength in Iraq. But some senior Democrats and members of the leadership, such as Emanuel and House Majority Leader Steny H. Hoyer (D-Md.), counsel a go-slow approach, in which Democrats start with a nonbinding resolution against the president's policies, use hearings to build up public support for more dramatic action, and gauge voter feelings before legislative action to stop a military buildup in Iraq.

In the most public breach, Pelosi created a special committee dedicated to global warming, infuriating Dingell, whose committee would inevitably lose jurisdiction. Dingell fumed: "These kinds of committees are as useful in relevance as feathers on a fish."

The move crystallized fears among some moderate Democrats that Pelosi would "policy shop" to produce the legislative outcome she wants, even if that outcome goes against the grain of the moderates' constituents, several House members said.

At a rancorous closed-door meeting of the Energy and Commerce Committee last week, members of all political stripes backed Dingell and threatened to subject the proposed committee to a public execution on the House floor. One conservative Democrat said Friday that the issue could turn even nastier than the race between Hoyer and Murtha for majority leader.

"These are very major blunders on her part," said a senior Democratic adviser who served for years in the House and spoke on the condition of anonymity for fear of breaching his ongoing relationships. "The general feeling is that she keeps her own political counsel. She doesn't have any staff who are her eyes and ears and can tell her what's really going on in the caucus."

DOJ_NMG_0119287

Emanuel conceded some missteps and miscommunication, but he said they are not indicative of larger issues. Committee chairmen can abide term limits, Emanuel said, but they should have been informed of her thinking on the subject. "Nobody likes being caught by surprise," he said.

The fears created by the new panel on global climate change stem largely from concerns that the committee will be permanent, amassing influence at the expense of other panels, Emanuel said. Pelosi will put in writing that it will be disbanded at the end of the 110th Congress.

Pelosi spokeswoman Jennifer Crider said that the speaker has confidence and trust in her committee chairmen but that Pelosi also wants to create new platforms from which fresh voices can be heard. New task forces have been created to get the pulse of members in their 30s, veterans and rural representatives. There is a new black working group to supplement the long-standing Congressional Black Caucus and a faith working group to give a voice to the religious.

Such groups may compete with traditional power centers, but Pelosi will stand by her efforts, aides to the speaker say.

Student Loan Scam (WP)

By Robert D. Novak

The Washington Post, January 22, 2007

House Democrats were extolling their student loan bill for opening college to Americans with moderate incomes on Wednesday when Rep. Tom Price, a second-term Republican from Georgia, took the floor. "If only this bill did what they say," Price declared. His admonition constituted more than the usual hyperbole of congressional debate.

The bill, passed by an overwhelming, bipartisan vote, was touted as reducing the interest on federally subsidized student loans, from the present 6.8 percent to 3.4 percent. Actually, it gradually reaches the 3.4 percent level on July 1, 2011. A student taking out a loan on July 1 of this year would pay 6.12 percent after graduation. Only 29 percent of all students getting loans would be eligible for this gradual reduction. Other student loan programs will be cut to help cover the $7 billion cost over five years. And contrary to what the Democrats suggest, the bill does nothing to slow skyrocketing college tuition.

Such details are obscured, however, by the brilliant success of Speaker Nancy Pelosi's "first 100 hours." The student loan bill is one of the politically popular measures rushed through the opening days of the first Democratic-controlled House session in 12 years -- without hearings, without committee authorization and without meaningful debate. While Democratic support has been unanimous, Republicans are divided and listless.

In contrast to the ideologically diverse Democrats who controlled Congress in the past, today's House majority members are like automatons. The hand of Rep. Rahm Emanuel, chairman of the House Democratic Caucus, was apparent as Democrats newly elected under his leadership took the floor to deliver nearly identical speeches of how this bill will help poor students.

Rep. Ed Perlmutter, who won a previously Republican-held district in Colorado, used the now common anonymous anecdote in his floor speech. He told of seeing "a woman whose kids have gone to school with mine" at a swim meet in Arvada, Colo. "She told me that one of her kids is in college now, and she has another that will be going in a couple of years. She is a single mom, and her kids have done well in school, but the cost of college has become prohibitive for their entire family. She said her kids have been excellent students, but she was fearful they could not get into college and be able to pay for it."

Perlmutter added that this "single mom" thanked him for this bill changing "the cost of higher education." In fact, the bill has nothing to do with the prohibitive cost of college. It will have no effect whatsoever on her child now in college. If her second child is literally enrolling in a couple of years (in January 2009), the interest rate would be 4.76 percent, to be paid after the student leaves college. The mom may have thanked Perlmutter too soon.

Because Democrats are now committed to "pay-go" (offsetting all spending increases), this bill means cutting $6 billion from other federally subsidized student loan programs, on top of a net $12 billion cut by the last Republican-controlled Congress.

On the eve of Wednesday's debate, the Consumer Bankers Association and the Financial Services Roundtable sent a joint letter to members of Congress. The offset cuts in loan funding, the organizations warned, "cannot be absorbed by the nation's loan providers without compromising the kinds of benefits and services now provided to college students and their families."

This warning was not expected to effect heady Democrats, but it should have promoted caution among Republicans. It did not. While Democrats were 232 to 0 for the bill, only 71 Republicans followed their leadership and voted against it. The 124 Republicans voting aye included such erstwhile conservative stalwarts as Todd Akin (Mo.), Virgil Goode (Va.), Chip Pickering (Miss.), Joe Pitts (Pa.), Dana Rohrabacher (Calif.), Ed Royce (Calif.) and Todd Tiahrt (Kan.).

The once militant, united House Republicans are demoralized and on the run. They were battered in the last campaign for cutting school loans in the previous Congress and are willing to go along with a sham bill, hoping for Senate gridlock or a presidential veto.

GOP Seizes On Dissent In Majority (WT)

DOJ_NMG_0119288

By Christina Bellantoni

The Washington Times, January 22, 2007

House Republicans have been quoting some unlikely allies when complaining about the methods used by the new Democratic majority -- Democratic leaders.

As the House approved the final piece of Speaker Nancy Pelosi's initial "Six for '06" agenda, Republicans lamented that the bills in the package did not go through committees and that amendments were not allowed.

Backing up their point were Senate Majority Leader Harry Reid of Nevada; Rep. Charles B. Rangel of New York, House Ways and Means Committee chairman; and Rep. John D. Dingell of Michigan, the House's longest-serving member.

"They are shutting out not just Republicans but all of the talented members of this Congress," said Rep. Adam H. Putnam of Florida, chairman of the Republican Conference.

Mr. Putnam and other Republicans repeatedly trotted out last week an article about Mr. Reid in Time magazine that included an assertion: "In private, Senate sources say, Reid has been critical of the Speaker for what he believes was unnecessary roughness in ramming through her first-100-hours agenda, refusing to allow Republicans to propose amendments and breaking her campaign promise to open up the lawmaking process."

The article didn't quote the Nevada Democrat directly criticizing Mrs. Pelosi, but Republicans seized on it, saying she had achieved a "trifecta" of Democratic critics.

"Top House Tax Writer, Senate Majority Leader, and now the Dean of the House," Republicans blared in a press release citing Mr. Reid, Mr. Rangel and Mr. Dingell.

The New York Post reported that Mr. Rangel is "butting heads" with the speaker over the committee process, and that there is tension between the two over tax policy.

Mr. Rangel told The Washington Times that he is "uncomfortable" with Republicans' using him to support their own point and that he is confident Democratic leaders will return to regular order now that their opening agenda has been passed.

"That was part of the 100-hour agenda, and I'd like to believe that is behind us now," Mr. Rangel said.

Though Republicans for a dozen years largely shut Democrats out of the lawmaking process using many of the same tactics, they have justified their complaints this year by saying voters sent a message they want more bipartisanship.

"I understand the need for the majority party to make its move, to make its first impression," said Minority Leader John A. Boehner of Ohio. "I understand that the first couple of bills had to come flying right to the floor, but we are short-circuiting democracy here."

Mrs. Pelosi and Majority Leader Steny H. Hoyer say their agenda has been subjected to several committee hearings and point out that their 2006 campaign highlighted their six legislative priorities, which all passed this month with some Republican support.

They note that a minimum-wage increase passed the Appropriations Committee last year but never went to the floor for a clean vote and point out their bill to expand federal support from embryonic stem-cell research is identical to one passed by the previous Congress.

Republicans counter by saying the accelerated process this month led to at least two mistakes -- the exemption of American Samoa from a minimum-wage increase and failure to include in the initial ethics package a measure barring ex-lawmakers convicted of felonies from receiving government pensions. Democrats plan to fix both errors.

"The jamming of an agenda, relying only on a handful of people, is resulting in a bad product," Mr. Putnam said. "It's not just Republicans who are noticing. Majority Leader Reid is talking about the railroading of a process and [Chairman] Rangel is saying committees need to have a role, and we couldn't agree more."

Minority Whip Roy Blunt of Missouri said Mrs. Pelosi's "rush to judgment" has produced errors that even seasoned Democrats complain about.

"The chairmen -- they're being ignored as well by the way -- understand that," he said.

Mr. Hoyer, praising the Republicans who voted for the Democratic agenda, said last week he intends "to try to continue to work on a bipartisan basis" and "reach consensus as we move forward."

"In the future, it will be more difficult," the Maryland Democrat said. "That does not mean we will always be able to do that, but it does mean that we will always try."

Further exciting Republicans was Mrs. Pelosi's plans to establish a special committee on global warming that might take aim at U.S. automakers, whose cars are a leading source of carbon emissions. The move irritated Mr. Dingell, the chairman of the Energy and Commerce Committee who hails from Michigan, home to the auto industry.

A Democratic source said some of the leaders and more conservative members were frustrated that Mrs. Pelosi seems to be pushing her own agenda by going around them. Sources said Mrs. Pelosi did not collaborate with Mr. Hoyer when crafting the plan for the warming committee.

Republican Rep. Steve King of Iowa also noted that the freshmen from both parties "have really been shut out of this process," accusing a few Democrats of making all the decisions.

"I hope the freshmen finally have a voice. I hope it starts Monday morning," he said Friday.

When John Meets Al (NYT)

The New York Times, January 22, 2007

Four major bills have recently been offered in the Senate calling for mandatory controls on carbon dioxide, the main global warming gas. And last week, 10 big companies, including General Electric, Alcoa and progressive utilities like PG&E of California, joined in an informal coalition to press Congress and President Bush for action.

All of this has been accompanied by considerable fanfare. But at least as important was a quiet little letter to the members of the House Committee on Energy and Commerce from its new chairman, John Dingell.

A Michigan Democrat who in recent years has opposed stronger fuel economy standards for automobiles, Mr. Dingell is, at best, agnostic on global warming. But he said he would put climate change at the top of the committee agenda this year and, for good measure, would invite Al Gore — whose documentary "An Inconvenient Truth" has raised public awareness of the issue — to testify first.

Mr. Gore should quickly accept. Mr. Dingell's support will be essential to any real progress on curbing emissions. In recent years, serious discussion of climate change has been largely confined to the Senate. But laws must be passed by both chambers, and if anything is to happen in the House, it will need Mr. Dingell's participation and consent.

That is the main reason House Speaker Nancy Pelosi established a select committee on global warming last week — not to end-run Mr. Dingell's powers, which she can't really do, but to elevate an issue she regards as important and to pressure Mr. Dingell to take a leadership role.

Mr. Dingell is 80 now, a formidable warrior who during 51 years in the House has played a pivotal role in pushing through nearly every cornerstone environmental law, including the Clean Air Act, the Clean Water Act and laws protecting wilderness and endangered species. But while he supported fuel economy standards years ago, his loyalties to Detroit have led him to oppose further restrictions. As for global warming, he has said that he needs to be convinced that the consequences are truly worth worrying about, and if they are, that the problem can be addressed without bankrupting the country.

Hardly a believer, in other words, but plainly open to persuasion. Which is why it's essential for Mr. Gore and others to become part of the conversation Mr. Dingell has invited. In the end, what is most likely to move him forward is not pressure from Ms. Pelosi or anyone else but appeals to his well-documented sense of environmental stewardship.

Big Business Has Plenty Of Allies In Democrats' Congress (LAT)

By Tom Hamburger And Janet Hook

Los Angeles Times, January 22, 2007

WASHINGTON — Incoming House Speaker Nancy Pelosi terrified the oil industry late last year when she outlined her priorities for the new Democratic majorities in Congress. Within the first 100 hours, she promised, they would "roll back the multibillion dollar subsidies for Big Oil."

Last week, however, when Pelosi (D-San Francisco) won House approval of the much-touted bill socking it to the oil companies, it turned out to be considerably less drastic than many in the industry originally feared. Out of an estimated $32 billion in subsidies and tax breaks that the oil companies are scheduled to receive over the next five years, the final House bill cut just $5.5 billion.

It's not just oil: From one end of the House Democrats' "first 100 hours" agenda to the other, businessmen and their K Street lobbyists have found success amid the fear in dealing with the new Congress.

Surprising as it might seem in view of the Democrats' public rhetoric, business groups are getting their telephone calls returned. And they're getting plenty of face time with the new House and Senate leaders.

Thanks to this access, the oil industry fended off many of what it considered the most objectionable features of the proposed energy bill, while the big pharmaceutical companies had success keeping some unwanted provisions out of the new House Medicare drug bill.

And, while the House was passing its minimum wage bill, small business lobbyists were working the Senate to win tax breaks for their clients in the Senate's version of the bill.

"There was a lot more anxiety initially because of not knowing what was going to transpire," said Stuart Roy, a member of the DCI Group, a prominent Washington lobby shop, and a onetime aide to former GOP House Majority Leader Tom DeLay of Texas. Now, Roy said, "the anxiety level is down."

DOJ_NMG_0119290

Democrats are quick to point out that even if the high-profile flurry of bills contained concessions to business, they still went further than anything passed by the old Republican majorities. Instead of trimming back oil subsidies, for example, the GOP and President Bush had expanded tax credits for oil companies, saying they were necessary to encourage domestic production.

Still, as the opening round came to an end, many business lobbyists said they were relieved.

In part, the business community's early impact reflects the fact that it is a constituency Democrats can't afford to ignore. As they prepare for the 2008 election season, in which they hope to hold and extend their congressional majorities and also take over the White House, Democratic candidates will need substantial business support in the form of campaign contributions.

In addition, business groups and their K Street lobbying firms have moved quickly to adapt to the new political equation on Capitol Hill, developing new tactics in Washington and at the grass roots, as well as dusting off some time-honored ways of dealing with the opposition.

Many lobby shops had already begun adding knowledgeable and well-connected Democrats to their rosters, turning away from the "K Street Project" in which DeLay and other GOP leaders had pressured such firms to hire conservatives and dump Democrats.

"One of the lessons is that good lobbying is always bipartisan," said Scott Segal of Bracewell & Giuliani, a lobbying firm that maintained its bipartisan credentials despite the GOP pressure.

On the oil bill, Segal represented a leading oil refinery and an industry trade association. His team included former Texas Democratic Rep. Jim Chapman, along with Mike Pate, who was legislative director to the late Democratic Sen. Lloyd Bentsen of Texas. All three reached out to moderate Democrats in the new Congress.

The moderates in turn had ready access to Pelosi and led the way in softening the impact of the final bill.

Two Texas representatives took the lead: Gene Green, who represents the Houston area, and Chet Edwards of Waco. Green said the process worked because Pelosi took the unusual step of calling on "energy state legislators to tell her what we could agree to." Green particularly was a point of contact for the industry and for staff. On Jan. 9, he hosted a private meeting of about a dozen members and 20 to 30 industry lobbyists — including those representing every major oil company — to go through the legislation.

The meeting followed a series of sessions discussing the bill hosted in Pelosi's office, often led by her top energy aide, Amy Fuerstenau. .

In late November, Pelosi's conference room was filled with a coalition of environmental and consumer groups who presented a list of subsidies the oil industry enjoyed, totaling $32 billion over five years.

The list, according to one participant, included subsidies that Democratic lawmakers had unsuccessfully proposed to get rid of in years past, including several that particularly alarmed the oil industry.

One conferred favorable tax treatment for U.S. refineries that expand and upgrade their plants. Another allowed industry accounting methods that reduced their taxes dramatically. A third included a tax credit that helped manufacturers compete with imports.

Charles Drevna, a top executive of the National Petrochemical & Refiners Assn., communicated separately with Pelosi's staff opposing all three of those changes. The concerns were also represented separately by other lobbyists, and by Green and other members of Congress.

In the end, the industry was able to preserve the first two tax breaks, but lost the right to use the manufacturers credit.

Drevna was not happy with the final bill, even though it preserved two of the tax breaks he fought to save.

He and other lobbyists said the environment on the Hill was clearly less favorable for business now that Democrats are in control.

But he acknowledged that his arguments were heard. "The speaker didn't lie to us. She told us what she was going to do and went ahead and did it."

Steve Elmendorf, a lobbyist who was a top aide to the Kerry campaign, said, "The biggest change for the business community is that in dealing with Democrats, they are not the only people at the table. Labor unions, trial lawyers, consumer advocates are also part of the discussions. That wasn't true with the Republicans."

That was cause for celebration for some last week like Tyson Slocum, who handles energy issues for the left-leaning Public Citizen organization. "In the past, the oil industry had exclusive jurisdiction over the U.S. Congress, but that's not the case anymore. Now they have an equal seat with the rest of us."

Slocum said that "the House could have been far more aggressive," in the energy bill. Still, he called it "a fantastic start, especially in light of what recent Congresses have done."

The minimum wage hike debate two weeks ago was also a tribute to the continuing clout of the business lobby, particularly small business. As the House overwhelmingly voted to increase the minimum wage from $5.15 to $7.25 with the support of scores of Republicans, the lobbyists found success in the Senate, where the GOP still has tremendous leverage.

DOJ_NMG_0119291

Democrats, including Senate Finance Committee Chairman Max Baucus of Montana, declared they could not pass the wage hike without including tax breaks for small businesses and restaurants that are seen as hardest hit.

Meantime, the pharmaceutical lobby, Washington's most potent lobbying force, successfully blocked what it considered the most extreme proposals for reducing drug costs.

At one point Pelosi considered advocating a new government-run drug program, but dropped the idea and went with a less ambitious plan.

Like other industries, drug companies are hiring Democrats as lobbyists and ramping up campaign contributions. For example, lobbyist attendance at fundraisers for Ways and Means Chairman Charles B. Rangel has skyrocketed. Organizers had to add tables at a breakfast fundraiser Jan. 18 at the Phoenix Park Hotel because twice as many people as expected showed up.

Rangel was not previously close to the drug industry, whose lobbyists had battled his efforts on Medicare benefits in the past. Last week, however, a source close to Rangel said the industry's leading trade group had offered to host a fundraiser for him; Rangel has not decided whether to accept.

"I've got so many new friends these days," he told one reporter.

U.S. Financial Sector Is Losing Its Edge, Report Says (NYT)

By Jenny Anderson

The New York Times, January 22, 2007

Adding to a chorus of concern that the United States is losing its edge as the leading financial center, Senator Charles E. Schumer and Mayor Michael R. Bloomberg will release a report today urging the country to take a series of steps to improve its legal and regulatory environment.

If not, the report warns, it could lose 4 to 7 percent of the global financial services market over the next five years.

“The last thing that New York and the country, for that matter, need is to wake up one morning and find we are no longer the financial capital of the world,” Senator Schumer, Democrat of New York, said. “This report shows that could happen not just for I.P.O.’s, but for all financial services, all too easily and all too soon.”

The committee’s primary recommendations echo those of a similar report released in November, focusing on easing or eliminating provisions of the Sarbanes-Oxley Act for small and foreign companies — some steps that the Securities and Exchange Commission is currently undertaking — and curbing securities-related litigation. The latest report is one in a series commissioned in the public and private sectors voicing concern that the United States is falling behind because of a burdensome legal and regulatory environment.

The report adds some new dimensions to the debate, however, making recommendations to ease immigration restrictions facing skilled professionals from other countries, urging convergence on international accounting standards and recommending the adoption of Basel II, an international accord on capital standards, without increasing capital requirements as some United States banking regulators have suggested.

Taking pre-emptive steps to address concerns about regulation and litigation might halt the country’s loss of market share and add $15 billion to $30 billion in revenue in 2011 alone, the study said. It would also allow for the creation of 30,000 to 60,000 jobs in the securities sector.

Like all reports focused on American competitiveness, the latest report, entitled “Sustaining New York’s and the U.S.’s Global Financial Services Leadership” and conducted by McKinsey, addresses the fact that the United States now commands a significantly declining share of the global market for initial public offerings.

But it also examines the broader financial services arena, including the fast-growing derivatives and structured product markets, the gigantic loan market as well as the traditional markets in stocks and bonds.

The report shows foreign markets closing in on the United States in size and certain product offerings. For example, in 2005, American investment banking and sales and trading revenue totaled $109 billion ($69 billion in sales and trading and $40 billion in investment banking) compared with $98 billion in Europe and $37 billion in Asia.

The United States remains the largest financial market in the world, as measured by what is called “financial stock” — equities, private debt, government debt and bank deposits — with $51 trillion in 2005, but its pace of growth was significantly slower than in other markets, especially the Asia-Pacific (excluding Japan) and Britain.

Emerging markets will naturally grow faster than the more developed United States market. But administration officials for Mr. Bloomberg and Mr. Schumer said the report aimed to address factors particular to the United States, namely litigation and regulation, which might deter businesses from coming here.

Critics of easing regulatory standards and the ability to bring securities class-action lawsuits point out that litigation costs have been unusually high because of settlements related to the frauds that caused the collapse of Enron and WorldCom.

DOJ_NMG_0119292

Europe has a larger share of some of the more innovative areas of finance, including derivatives, the report concludes. Europe has a 56 percent share of the $52 billion global revenue pool from derivatives and a 60 percent or greater share of revenue in interest rates, foreign exchange, equity and fund-linked derivatives. The United States leads only in commodity derivatives.

Short-term recommendations include improved guidance on Sarbanes-Oxley implementation, including the ability for small companies and foreign companies within certain "sophisticated" markets to opt out of some requirements as long as it is disclosed.

The report suggests that the S.E.C. use certain exemption powers to limit liability for foreign companies to securities-related damages and impose caps on auditors' damages. Like the Capital Markets Committee report in November, the latest study recommends that the S.E.C. allow companies to mediate conflicts through arbitration rather than litigation.

McKinsey interviewed 50 financial service chief executives and business leaders, received surveys from an additional 30 financial service chief executives and separately polled 275 other senior executives in the field.

The pace of job creation in London far outstripped that of New York City, the report says. From 2002 to 2005, London's financial services work force grew by 4.3 percent, to 318,000, while New York City's shrunk by 0.7 percent, or 2,000, to 328,400 jobs.

London has been gaining an edge in attracting the largest hedge funds. In 2002, London was home to only 3 of the largest 50 hedge funds, compared with 12 today. In that same period, New York had a decline: today 18 of the largest 50 hedge funds are based in New York, compared with 28 in 2002 (Connecticut has gained two over that period, from 6 to 8).

Reiterating oft-cited figures related to market share of global initial public offerings, the report highlighted that the United States controlled 16 percent of the global stock-offering volume, exceeding $1 billion, in 2006 (through the beginning of November) compared with 57 percent in 2001. Europe's share has leaped from 33 percent in 2001 to 63 percent through the beginning of November.

"Let's be clear: The financial services industry is one reason that the 20th century was the American century and that New York became the world's capital," Mr. Bloomberg said. "We've outlined a range of practical yet innovative steps to ensure the 21st century is just as bright."

A Busy Karl Rove Stays Out Of The Spotlight (NSWK)

Newsweek, January 22, 2007

Jan. 29, 2007 issue - Don't write Karl Rove's political obituary just yet. After the GOP's midterm thumping, President Bush's top aide fell out of the spotlight. But behind the scenes, according to administration officials (anonymous in order to discuss White House matters), Rove has been laying the groundwork for Bush's State of the Union address and mulling how the GOP can regain momentum in 2008. Earlier this month Rove showed up at a weekly meeting of influential D.C. conservatives, surprising attendees with his bubbly demeanor after weeks of rumors that he might be headed out.

"I think some people had given him up for dead, but he was good old Karl, upbeat and enthusiastic," says GOP activist Grover Norquist, who hosts the weekly sit-down. At the meeting Rove previewed Bush's final two years in office, saying Social Security reform was likely off the table and that Iraq and the economy would be the biggest issues for 2008. Rove offered a $5 bet to anyone in the room that Bush would not raise taxes during his final years in office. According to Norquist, two attendees took the bet. Norquist admits he's also skeptical about Rove's taxes claim. "I personally think it's going to happen," he tells NEWSWEEK. Rove has been busy trying to find common ground with Dems, organizing two meetings between Bush and the Blue Dog Democrats, a coalition of conservative lawmakers who offer the White House its best chance at compromise with the new Congress. Rove also sat in on many of Bush's meetings with members of Congress in recent weeks about Iraq; he didn't say much, according to one attendee who requested anonymity because the meeting was private. Still, the Architect, as Bush dubbed him after his 2004 re-election win, was notably absent from last week's Republican National Committee meetings in Washington, where last year he delivered a blistering attack on "cut and run" Dems. "I don't know anyone who holds him personally responsible for what happened to us in the election," said a GOP national committee member, who declined to be named talking about the inner circle. "But his stature isn't quite the same." The big question in D.C. now: Will Rove testify at Lewis (Scooter) Libby's criminal trial over the leak of a CIA officer's identity? Prosecutor Patrick Fitzgerald, who ruled out charges against Rove in the case, has said he won't call the top Bush aide, but Libby, Dick Cheney's former chief of staff, hasn't ruled it out.

Showdown Looms In Congress Over Drug Advertising On TV (NYT)

By Milt Freudenheim

The New York Times, January 22, 2007

DOJ_NMG_0119293

Drug advertising aimed at consumers, a fast-growing category that reached $4.5 billion last year, will face hard scrutiny in the new Congress, according to industry critics in both the House and Senate.

The consumer ads will be on the griddle early in this session at hearings on the user fees that manufacturers pay to speed the reviewing of new drugs by the Food and Drug Administration. The user fee law will die in the fall unless Congress acts to renew it.

The pharmaceutical industry, which often gets what it asks for from Congress and the executive branch, seeks to renew the law and add a new set of user fees that would be pay salaries for additional F.D.A. employees to evaluate all consumer drug ads, before they are shown on television.

Both the industry and its critics agree that there should be a pause before the advertising starts — to allow time for doctors to learn about a new drug. The companies want the delay to be left up to them, but critics say the F.D.A. should require a wait of up to two years. Criticism of direct-to-consumer advertising has intensified since 2004, after Merck withdrew Vioxx, a heavily advertised painkiller, after a clinical trial showed that it sharply increased the risk of heart attacks and strokes.

"From the beginning , everyone, including the company, agreed that not everybody ought to be getting Vioxx," said Helen Darling, president of the National Business Group on Health, an organization of large employers. "But the ads implied there was a widespread need for it."

Spending on consumer drug advertising, meanwhile, has been growing robustly, from $1.1 billion in 1997 to $4.2 billion in 2005, according to a recent report to Congress by the Government Accountability Office. In the first nine months of 2006, spending rose 8.4 percent to $3.29 billion, on track toward $4.5 billion for the year, according to TNS Media Intelligence, an advertising research firm.

Spending on the ads faltered in 2005 after soaring 27 percent in 2004, before Vioxx was withdrawn, said David Kweskin, a senior executive at the firm. "Now they are in a catch-up phase."

Two independent government watchdog groups sharply criticized consumer drug advertising recently, and a separate survey Jan. 9 commissioned by the PricewaterhouseCoopers accounting and consulting firm indicated that skepticism is widespread among the public, too. Only 1 in 10 consumers said the direct-to-consumer, or D.T.C., ads could provide useful information to a large audience, the survey said. (Consumer drug advertising is not permitted in most of the world, except New Zealand and the United States.)

The pharmaceutical industry itself acknowledges having an image problem.

"It would be naïve to not acknowledge the fact that D.T.C. advertising is also a lightening-rod in the health care debate in this country," said Billy Tauzin, the former congressman who is now president and chief executive of the Pharmaceutical Research and Manufacturers of America, in a speech to venture capitalists last spring. There is "one great problem" that the manufacturers face, he said: "in a word, it is trust."

"While individual patients find the information useful in discussions with their physicians," he added in his speech, "patients, physicians and consumers generally express unhappiness with D.T.C. advertising."

Mr. Tauzin's organization issued voluntary guidelines for consumer ads, which took effect last year. Under the guidelines, the companies have promised to hold off on consumer advertising of a new medicine for an unspecified "appropriate" period. That would allow time to tell doctors about risks and benefits, before television and Web site viewers see an ad and demand a prescription.

Twenty-seven members of the pharmaceutical manufacturers organization have endorsed the guidelines, but it is hard to figure exactly how long the delays in advertising will run. Bristol-Myers Squibb has said that it would delay for 12 months. Johnson & Johnson and Pfizer said they would wait six months. The manufacturers group cannot say how other companies have interpreted the guidelines, a spokesman said.

But according to TNS Media Intelligence, the companies have actually been waiting 15 months, on average, since the Vioxx debacle.

Critics say that even after F.D.A. approval, the full safety profile of a new drug cannot be known until it has been widely used for a number of years.

But the manufacturers' guidelines have to be voluntary, said Daniel E. Troy, a former chief counsel of the F.D.A., because the Supreme Court has "struck down restrictions on advertising of tobacco, alcohol, gambling and unapproved compounded drugs."

The agency sent 15 warning letters to drug companies regarding ads in 2005 and a total of 22 complaints last year.

The F.D.A. told AstraZeneca, for example, to "immediately cease" a "misleading superiority claim" in a 2005 TV commercial. The ad said AstraZeneca's Crestor was "clearly the best" in a "head to head" test with the three largest-selling cholesterol drugs.

DOJ_NMG_0119294

Emily Y. Denney, an AstraZeneca spokeswoman, said that by the time the letter was received, in March 2005, the ads were no longer running. The company defended its message in the advertising as "appropriate."

Another F.D.A. letter told Amgen, a biotechnology company, to stop running commercials for Enbrel, a treatment for the skin disease psoriasis, that the F.D.A. said minimized "serious risks" associated with the drug. Amgen immediately withdrew the commercial.

Last year, the company obtained F.D.A. approval of the contents of a new Enbrel television ad before showing it, David Polk, an Amgen spokesman said. Corporate lawyers say such advertising is protected by the First Amendment under a doctrine of commercial free speech. But some experts say the limits of the protection are murky.

The closest approach to clarity was in 2002 when the Supreme Court rejected, by a 5-to-4 vote, a federal restriction on advertising by pharmacists who make their own compounds.

"It is a giant game of chicken between the government and the industry," said R. Alta Charo, a law professor and bioethics specialist at the University of Wisconsin in Madison. "I don't believe either side really wants to see a definitive case go to the Supreme Court because neither side is willing to take the risk that they will lose."

Professor Charo was a member of a committee of experts of the Institute of Medicine, which examined drug safety issues at the request of the F.D.A. Last fall, the committee called on Congress to give the F.D.A. new authority over advertising, including the power to require a two-year moratorium on advertising before approving a new drug.

"I think the Congress has clearly indicated its strong interest and concerns about the F.D.A. and drug safety for consumers," said Sheila P. Burke, a longtime Republican health policy expert who headed the Institute of Medicine committee. "Broad-scale advertising can sometimes lead to a rapid increase in the use of a drug" that raises the risk of harm for patients, she said.

F.D.A. regulators would be granted the power to require moratoriums under a bill sponsored by Senators Edward M. Kennedy and Michael B. Enzi, the chairman and ranking Republican member of the Senate Health, Labor, Education and Pensions Committee.

"Patients deserve the best and most accurate information about the medicines they take," Senator Kennedy said in a statement. "An essential part of any drug safety proposal must be to give the F.D.A. the authority and resources it needs to oversee direct-to-consumer advertising, and to allow the F.D.A. to impose conditions or limits on that advertising, where needed to protect the public health."

Testifying for the pharmaceutical industry last year, Dr. Adrian Thomas, a vice president of Johnson & Johnson, insisted that "the important First Amendment issues that arise from banning truthful speech, even for a period of time, must be carefully considered before legislating in this area."

The Government Accountability Office said last November that the F.D.A. should be doing a better job of overseeing consumer drug ads. Now, the F.D.A. reviews only a small fraction of the advertising, picking and choosing without proper priorities, the G.A.O. said.

The G.A.O. report had been requested by three influential senators: Bill Frist, a doctor, before he stepped down as Republican leader of the Senate; Charles E. Grassley, now the ranking Republican on the finance committee, and Herb Kohl, a Democrat who heads an appropriations subcommittee that oversees the F.D.A.

Representative Henry A. Waxman, a California Democrat who is chairman of the House Oversight and Reform Committee, added a further criticism: that the F.D.A. had been slow to crack down on drug ads that included "false and misleading" claims, he said in a telephone interview.

F.D.A. officials said they had to deal with 54,000 drug promotions each year, aimed at both doctors and consumers.

"We are seriously considering all of the recommendations" of the Institute of Medicine report, said Thomas Abrams, director of the F.D.A.'s division of drug marketing, advertising and communications.

Support Grows To Make English Official (WT)

By Eric Pfeiffer

The Washington Times, January 22, 2007

The push to make English the nation's official language is building momentum, with a congressional bill on the horizon and seven states pushing legislation to make English the official language or to strengthen laws already in place.

"There's been such strong support," said Rep. Steve King, Iowa Republican. "And it's gaining momentum."

Mr. King is expected next month to reintroduce the English Language Unity Act, which seeks to make English the nation's official language. However, he said that timetable had been postponed until House Speaker Nancy Pelosi could complete the Democrats' "first 100 hours" agenda. "Nancy Pelosi has us under martial law," he said.

DOJ_NMG_0119295

"The states have been wonderful on this," said Jim Boulet Jr., executive director of English First, an organization that supports making English the official language. "The problem isn't getting bills passed, it's getting them enforced." Mr. Boulet described Mr. King's bill as "a good first step."

In the last session of Congress, Mr. King drafted similar legislation and counted 160 co-sponsors, placing the bill in the top 2 percent of co-sponsored legislation. Although control of Congress has switched hands, the bill's advocates say the issue has broad, bipartisan support. "We don't necessarily expect them to jump in and say they support this unanimously," said Rob Toonkel, spokesman for U.S. English Inc., a group that supports making English the official language.

The legislation would not bar private businesses or individuals from using multilingual material, but it does seek to prevent federal funds from being spent on such efforts.

Mr. King has long been an advocate of English-language laws. In 2002, as a state senator, Mr. King authored a successful bill making English the official language in Iowa. The bill was signed by then-Gov. Tom Vilsack, who is now a candidate for the Democratic presidential nomination in 2008.

Mr. King on Jan. 10 filed a lawsuit in state district court against Gov. Chet Culver and Secretary of State Michael Mauro, both Democrats, for violating Iowa's English-language law. The lawsuit accuses Mr. Culver, who served as secretary of state before running for governor, and Mr. Mauro of illegally placing voter-registration forms and absentee-ballot request forms on Iowa's secretary of state Web site in foreign languages.

Meanwhile, English-language laws have been introduced by state legislators in Georgia, Kansas, Kentucky, Mississippi, Missouri, New Jersey and Oklahoma. Similar legislation is expected to be introduced in other states before the end of the month. Culpeper County in Virginia and Cabarrus County in North Carolina have introduced their own English-language proposals as well.

Last month, voters in Arizona passed legislation making English the state's official language by a margin of more than 2-to-1. "The people have been well-ahead of the politicians on this one for a long time," Mr. Boulet said.

Although immigration legislation remains stalled in the halls of Capitol Hill, some supporters of making English the official language say that ambiguity has had unforeseen benefits. "[Immigration and Naturalization Service] had a record number of people applying for citizenship last year," Mr. Toonkel said.

The Department of Homeland Security's Citizenship and Immigration Services said there was an 18 percent increase in requests for citizenship applications during the first half of last year compared with 2005. Similar surges have followed a tightening of illegal-alien laws passed in states such as Arizona and California. After California passed its Proposition 187 in 1996, a total of 378,014 persons were naturalized. That was more than double the previous year's figure, when 136,727 persons were naturalized.

"This is the strongest push for official English legislation that I have seen in the last 15 years," said U.S. English Chairman Mauro E. Mujica. "I hope the jump-start that this issue has received will pay dividends in the near future by making English the official language and knocking down the linguistic barriers that divide our society."

In Troubling Times, Conservatives Head Out To Sea (WP)

By Al Kamen

The Washington Post, January 22, 2007

These are obviously not the best of times for Republicans. The House is gone. Ditto the Senate. President Bush's approval ratings are around 37 percent, and ratings on his conduct of the war are closer to 30 percent. The war itself grinds on. What's a beleaguered conservative to do?

It's time to regroup! And what better way to do that than to join the folks at the Weekly Standard, one of the last great bastions of war boosters, on a fun-filled week-long cruise in Alaska?

Yes, it's a week of sightseeing, partying and deep reflection with publisher Terry Eastland and top editors William Kristol and Fred Barnes aboard Holland America Line's ms Oosterdam this June. Other featured speakers include former Bush speechwriter Michael Gerson and military historian Fred Kagan.

One of the true highlights is just the chance to be "traveling with like-minded conservatives," the promo material says, and not having to listen to we-told-you-so rants from the liberals and leftists that you might find on other cruises.

There'll be a morning "Kaffee Klatsch" most days and panel discussions galore explaining how democracy eventually will sweep through the Middle East like wildfire, how to balance the budget and various other issues.

The ship's show lounge "features Las Vegas-style productions," and while the invitation doesn't mention it, the luxury ship does indeed have a fine casino.

DOJ_NMG_0119296

There will probably be cakewalk contests on the Lido deck each night, and spectacular Alaska each day, including a close view of the Hubbard Glacier, which, contrary to what radical-environmentalist, global-warming types would say, is "marching to the beat of a different drum . . . advancing while the rest of Alaska's ice rivers are receding rapidly."

There's a day in Ketchikan "in the heart of the Tongass National Forest." Maybe there'll be time for an optional anti-earmark pilgrimage to the proposed site of the famed "Bridge to Nowhere"? Weather permitting, there might even be a hunt for weapons of mass destruction. (Okay, okay, that was cheap.)

All this in your "penthouse suite w/verandah" for only $6,300 per person, double occupancy, or $4,500 per person in the deluxe suite. Single rooms in the cheapo category are only $2,600.

Do not miss the "photo/autograph session," where you can have your picture taken with Kristol, Barnes and Eastland. "Photos will be available for purchase," we're told. Priceless!

But hurry! There are only two penthouse suites available.Eyes on the White House, Mouth Shut

It was long a given that the key sign of whether Sen. Ted Kennedy (D-Mass.) was running for reelection was whether he was dieting. The key sign of whether Sen. Joe Biden (D-Del.) is serious about running for president is whether he can just shut up.

We know there is a "good Biden" and a "bad Biden," as he's told reporters, adding that he understands he has the capacity to "self-destruct." But when he announced his candidacy, he promised NBC's Tim Russert that "I'm going to be Joe Biden, and I'm going to try to be the best Biden I can be. If I can, I got a shot. If I can't, I lose."

Seems he's making a concerted effort to cut the rambling. Biden, of course, is the holder of the world indoor bloviation record for his spectacular 1,100-word question during Supreme Court Justice Ruth Bader Ginsburg's confirmation hearing in 1993.

But during his questioning of Secretary of State Condoleezza Rice at a recent hearing, Biden asked seven questions. The total number of words was 573, an average of only 82 words per question. The total includes his recitation of a lengthy quotation from Bush. One question was: "Are you confident?"

Could be he's serious about that presidential bid.Speaking of Bloviating . . .

Didn't seem that morale at the Agency for International Development could get much lower. Word is that a recent survey of Foreign Service officers there found about half the FSOs ranked morale as low to poor and only 12 percent said morale was good.

Probably didn't get better when employees found out last week that the annual employee awards ceremony for meritorious effort in 2006, scheduled for Wednesday, was postponed.

AID Administrator Randall Tobias, the official announcement said, will be joining Rice as "the second-ranking member of the U.S. delegation" to a gathering in Paris for donors helping Lebanon. The meeting date was only recently set, we're told.

Back in mid-November, Tobias told reporters he "might well lead the delegation" to the meeting, which he said was coming up in late January. Turns out the secretary of state will be the lead. Tobias will then go on to the all-important World Economic Forum in Davos, Switzerland, a compulsory gathering for important and self-important bloviators.

The awards ceremony was put off until sometime in early spring.

House Members Fight For Pay Parity (WP)

By Stephen Barr

The Washington Post, January 22, 2007

The annual jousting over federal pay has begun.

Nine Washington area House members, led by Majority Leader Steny H. Hoyer (D-Md.), plan to send a letter to President Bush today urging him to recommend equal pay raises for the civil service and the military in his fiscal 2008 budget.

The House members ask the president to "embrace the principle of pay parity," which the letter describes as a bipartisan approach that has been followed nearly every year for the past two decades.

Hoyer, in a statement released with the letter, said he was "very disappointed" by this year's "inadequate raise of only 2.2 percent, the lowest increase in nearly 20 years," and suggested that Bush propose a more generous raise for next year.

"I would hope the president plans to include in his fiscal year 2008 budget an increase that will make up for last year's unacceptably low pay adjustment," Hoyer said. "Not only do our federal employees deserve fair pay, but with an aging population and a looming human capital crisis, now is the time to deliver the message that this nation values its federal workforce and will commit to recruiting and retaining the best and the brightest."

The House members who joined Hoyer in signing the letter are Reps. James P. Moran Jr. (D-Va.), Thomas M. Davis III (R-Va.), Frank R. Wolf (R-Va.), John Sarbanes (D-Md.), C.A. Dutch Ruppersberger (D-Md.), Albert R. Wynn (D-Md.) and Chris Van Hollen (D-Md.) and Del. Eleanor Holmes Norton (D-D.C.).

DOJ_NMG_0119297

That list of lawmakers underscores that the raise is an important ingredient in the local economy. The Washington-Baltimore region is home to about 11 percent of the 1.8 million civil service workforce. The federal payroll was about $19.8 billion in the region last year, or about $76 million per day.

The Bush administration has balked at providing equal pay adjustments to the civil service and the military, contending that across-the-board raises fail to properly reward high-performing employees and hinder agencies that need to pay more for difficult jobs and specialized skills.

But Congress has mostly adhered to its pay parity tradition for the two segments. Some members of Congress have indicated that they prefer to see how the new civilian pay-for-performance systems work out at the Defense and Homeland Security departments before giving more discretion to federal agencies.

Congressional committees considered giving the civil service a 2.7 percent raise this year, but the proposal faded in late 2006 when the Senate could not resolve numerous disputes over fiscal 2007 spending bills. At the urging of the Pentagon, Congress approved a 2.2 percent raise for the military with higher raises permitted for mid-career officers and enlisted personnel in certain occupations. Bush later issued an executive order providing the civil service with a 2.2 percent raise this year.

The president's recommendation for next year's raise will come in his fiscal 2008 budget, which is scheduled to go to Congress on Feb. 5.

Under a 1990 federal pay law, government employees would be in line for a 2.5 percent raise next year. But the formula, based on data from the Labor Department's employment cost index, which measures wage growth, is not always followed by Congress or the White House.

The size of the 2008 raise may hinge on efforts in Congress to hold down spending and reduce the federal deficit. Still, some members of Congress may recommend a bigger raise than usual for the armed forces to recognize the toll that the Iraq fighting has taken on the troops and their families.

The decision on the raise, which usually comes late in the year as Congress wraps up appropriations bills, also will ripple across the area's nonprofit organizations and companies that use the federal raise as a benchmark when setting salaries.

In their letter, the House members said they see pay parity raises as key to keeping federal compensation as competitive as possible with the private sector. In addition, they said, an equal pay raise will send the message that all government employees are highly valued.

"As we fight the war on terrorism at home and abroad, both the armed forces and the federal civilian workforce are integral to fulfilling the role of government for the American people," the letter said.

Stephen Barr's e-mail address isbarrs@washpost.com.

Both Sides On Offense (WP)

By David S. Hilzenrath

The Washington Post, January 22, 2007

The defense of Franklin D. Raines has begun.

Two years after falling from the height of corporate power and political possibility, the former Fannie Mae chairman and Clinton budget director is waging an all-out legal battle to save his fortune and repair his battered reputation.

Accused of complicity in earnings manipulation, Raines last week escalated a counterattack against the federal agency that drove him from power and seeks to strip him of tens if not hundreds of millions of dollars. In an unconventional legal maneuver, Raines sought to move the case to federal court from the jurisdiction of that agency.

He has fielded a defense team that includes Kevin M. Downey of Williams & Connolly, the Washington law firm that represented such embattled figures as Oliver North and Bill Clinton, and Mark Fabiani, an advocate for Clinton during the Whitewater scandal.

Raines's camp had little to say publicly over the past two years during a series of drawn-out investigations of Fannie Mae's multibillion-dollar accounting misstatements. Raines has long declined requests for interviews from The Washington Post. But since regulators filed administrative charges against him in December, his advocates have filed a flurry of papers mapping out the beginnings of a strategy.

Part of it boils down to this: Turn the tables on the accuser.

The lead accuser is James B. Lockhart III, appointed last year by President Bush to head the small federal agency that oversees Fannie Mae. It is the Office of Federal Housing Enterprise Oversight, or OFHEO, that pushed Raines into premature retirement in December 2004, and it is the same agency that could decide whether he must give up a fortune in alleged ill-gotten gains plus penalties.

Attorneys for Raines have accused Lockhart of prejudging the facts and waging "an unrelenting campaign of disparagement" against him. Last week, Raines's attorneys filed a motion in U.S. District Court for the District of Columbia asking

the court to bar Lockhart from making the final judgment in the administrative proceeding. To achieve that, Raines wants the dispute moved from the administrative law arena to federal court.

The motion said Lockhart has made a host of critical comments about Raines, including a statement on "The Newshour" with Jim Lehrer that much of Raines's income while chief executive was "basically fraudulently attained." OFHEO has alleged that at least $52 million of the more than $90 million Raines received from 1998 through 2003 was tied to the company's earnings.

The duel between Raines and Lockhart pits a prominent Democrat against a longtime friend of Bush. Before Fannie Mae's accounting problems came to light, Raines was widely mentioned as a potential high-level player in a future Democratic administration. Lockhart and Bush attended prep school together, were fraternity brothers at Yale and overlapped for a year at Harvard Business School. But OFHEO's initial findings against Fannie Mae were issued under Lockhart's predecessor, a Democrat.

Raines is also defending himself in separate litigation brought by Fannie Mae investors, who allege that they lost money when Fannie Mae's stock price fell.

In filings in the shareholder case, Raines has accused OFHEO of sealing evidence that would contradict or undermine its public case against him. He is pressing to get the records made public.

For example, he contends that interviews OFHEO conducted with former Fannie Mae personnel are at odds with allegations that management set out to smooth earnings in applying a particular accounting rule and that he helped set a tone at the company that improperly focused on earnings. Among the interviews Raines wants unsealed is one with Lawrence M. Small, secretary of the Smithsonian Institution and Fannie Mae's former chief operating officer.

Asked last week about Raines's allegations, Lockhart said he thinks the agency has done a "very thorough and professional job."

"We're in the process of giving them all of the documents that it makes sense to give to them," Lockhart said.

OFHEO has argued that searching all its records for the kinds of documents Raines wants would take years and cost millions of dollars that aren't in the agency's budget. Responding to the document requests could divert the agency from its mission of overseeing Fannie Mae and rival Freddie Mac, "potentially putting at risk the housing and financial systems of the United States unless and until Congress appropriates additional funds," David A. Felt, OFHEO's deputy general counsel, said in a recent court filing.

Raines's attempt to move his case to federal court is not the first time he has sought to circumvent OFHEO. When the agency challenged Fannie Mae's accounting in 2004, Raines said the Securities and Exchange Commission should be the judge. That strategy failed when the SEC sided with OFHEO.

Lockhart has declined to bow out of the latest battle. OFHEO still chafes at what it describes as a history of ill-treatment by Fannie Mae under Raines. The agency has alleged that Fannie Mae made it corporate policy to undermine OFHEO and that Fannie Mae's management sought to constrain the agency to such a degree that the company "would essentially be regulated only by itself," according to a court filing.

Raines's camp has argued that OFHEO's current view of Raines contrasts with its pre-scandal assessments. For example, in its recent notice of charges against Raines, OFHEO alleged that he "failed to ensure a proper tone at the top." In a 2003 report, OFHEO said Fannie Mae's management "effectively conveys an appropriate message of integrity and ethical values."

Aligned with Raines in the fight are two other Fannie Mae veterans, former chief financial officer J. Timothy Howard and former controller Leanne G. Spencer. Lockhart has expressed "unbridled hostility" toward the three executives charged by OFHEO, and the agency's conclusions "are premised on a full scale distortion of the witnesses and documents," David S. Krakoff, an attorney for Spencer, wrote in a recent letter calling for Lockhart to recuse himself.

Under the terms of their employment with Fannie Mae, the company has been paying millions of dollars for the former executives' legal defense.

For Raines, the battle has largely replaced life in the boardrooms of major corporations. Since leaving Fannie Mae, he participated in the effort to bring baseball to Washington as a member of one of the losing groups in the competition for the Nationals franchise. He has also become a director of Revolution Health Group, a firm started by former AOL chief executive Steve Case to develop businesses in the health field.

"Frank remains the same person he was, with the degree of intellect and experience and drive and forcefulness, and he will reemerge in the business community and in the civic community as a constructive force," said Washington investor Frederic V. Malek, a former Fannie Mae director.

Stem Cells, The White House And Rankled Researchers (WP)

The Washington Post, January 22, 2007

DOJ_NMG_0119299

Harvard University researchers Kevin Eggan, Chad Cowan and Douglas A. Melton wrote members of Congress earlier this month to complain that the White House domestic policy office's report "Advancing Stem Cell Science Without Destroying Human Life" was a "misuse and misunderstanding" of their research. Excerpts:

"We are surprised to see our work on reprogramming adult stem cells used to support arguments that research involving human embryonic stem cells is unnecessary. On the contrary, we assert that human embryonic stem cells hold great promise to find new treatments and cures for diseases. . . .

"The work that we performed and that was cited in the White House policy report is precisely the type of research that is currently being harmed by the President's arbitrary limitation on federal funding for human embryonic stem cell research. . . .

"We feel that the President's restrictive policy has directly impeded research that provides a hope for cures for millions of Americans. . . .

"The White House has clearly gotten it wrong. The overwhelming consensus in the scientific and medical community is that embryonic stem cell research holds the greatest potential to cure diseases and end the suffering of millions."

The Truth About Clarence Thomas (WSJ)

By Jan Crawford Greenburg

The Wall Street Journal, January 22, 2007

Clarence Thomas has borne some of the most vitriolic personal attacks in Supreme Court history. But the persistent stereotypes about his views on the law and subordinate role on the court are equally offensive -- and demonstrably false. An extensive documentary record shows that Justice Thomas has been a significant force in shaping the direction and decisions of the court for the past 15 years.

That's not the standard storyline. Immediately upon his arrival at the court, Justice Thomas was savaged by court-watchers as Antonin Scalia's dutiful apprentice, blindly following his mentor's lead. It's a grossly inaccurate portrayal, imbued with politically incorrect innuendo, as documents and notes from Justice Thomas's very first days on the court conclusively show. Far from being a Scalia lackey, the rookie jurist made clear to the other justices that he was willing to be the solo dissenter, sending a strong signal that he would not moderate his opinions for the sake of comity. By his second week on the bench, he was staking out bold positions in the private conferences where justices vote on cases. If either justice changed his mind to side with the other that year, it was Justice Scalia joining Justice Thomas, not the other way around.

Much of the documentary evidence for this comes from the papers of Justice Harry Blackmun, who recorded the justices' votes and took detailed notes explaining their views. I came across vivid proof while reading the papers as part of my research for a book about how the Rehnquist Court -- a court with seven justices appointed by Republican presidents -- evolved into an ideological and legal disappointment for conservatives.

Justice Thomas's first term was especially interesting. He replaced legendary liberal icon Thurgood Marshall, and joined the court just a year after David Souter took William Brennan's seat. There appeared to be a solid conservative majority, with the court poised to finally dismember the liberal legacy of the Warren Court. But that year it instead lurched inexplicably to the left -- even putting Roe v. Wade on more solid ground.

Justice Thomas's first year on the job brought to life the adage that a new justice makes a new court. His entry didn't merely change the vote of the liberal justice he replaced. It turned the chessboard around entirely, rearranging ideological alliances. Justice Thomas acted as a catalyst in different ways, shoring up conservative positions in some cases and spurring others -- the moderate Justice Sandra Day O'Connor, in particular -- to realign themselves into new voting blocs.

Consider a criminal case argued during Justice Thomas's first week. It concerned a thief's effort to get out of a Louisiana mental institution and the state's desire to keep him there. Eight justices voted to side with the thief. Justice Thomas dissented, arguing that although it "may make eminent sense as a policy matter" to let the criminal out of the mental institution, nothing in the Constitution required "the states to conform to the policy preferences of federal judges."

After he sent his dissenting opinion to the other justices, as is custom, Justices Rehnquist, Scalia and Kennedy changed their votes. The case ended up 5-4.

Justice Thomas's dissents persuaded Justice Scalia to change his mind several times that year. Even in Hudson v. McMillan, the case that prompted the New York Times to infamously label Justice Thomas the "youngest, cruelest justice," he was again, initially, the lone dissenter. Justice Scalia changed his vote after he read Justice Thomas's dissent, which said a prison inmate beaten by guards had several options for redress -- but not under the Eighth Amendment's prohibition of "cruel and unusual punishment." * * *

From the beginning, Justice Thomas was an independent voice. His brutal confirmation hearings only enforced his autonomy, making him impervious to criticism from the media and liberal law professors. He'd told his story, and no one listened. From then on, he did not care what they said about him.

DOJ_NMG_0119300

Clarence Thomas, for example, is the only justice who rarely asks questions at oral arguments. One reason is that he thinks his colleagues talk too much from the bench, and he prefers to let the lawyers explain their case with fewer interruptions. But his silence is sometimes interpreted as a lack of interest, and friends have begged him to ask a few questions to dispel those suggestions. He refuses to do it. "They have no credibility," he says of critics. "I am free to live up to my oath."

But the forcefulness and clarity of Justice Thomas's views, coupled with wrongheaded depictions of him doing Justice Scalia's bidding, created an internal dynamic that caused the court to make an unexpected turn in his first year. Justice O'Connor -- who sought ideological balance -- moved to the left. With the addition of Chief Justice John Roberts and Associate Justice Samuel Alito, the court now is poised to finally fulfill the hopes of the conservative movement. As George W. Bush told his legal advisers early in his presidency, he wanted justices in "the mold of Thomas and Scalia." Interestingly, on President Bush's marquee, Justice Thomas got top billing.

Ms. Crawford Greenburg, legal correspondent for ABC News, is the author of "Supreme Conflict: The Inside Story for Control of the United States Supreme Court," published tomorrow by Penguin Press.

Washington Whispers (USNEWS)

By Paul Bedard

U.S. News and World Report, January 22, 2007

War Immersion for New Defense Boss

With a second trip to Iraq under his belt, new Defense Secretary Robert Gates has taken an immersion course in the war. Weeks after touring Iraq, he was in Afghanistan last week securing support for the U.S. mission from the allies he met with. But his was no luxury junket. Sure, he ate five-course dinners with heads of state, but mostly it was box lunches and warmed over meatloaf on military aircraft, says an aide. And the hours: One day lasted over 25 hours and included a stop at the Saudi king's hunting lodge outside Riyadh.

OTHER NEWS:

For Some Manufacturers, There Are Benefits To Keeping Production At Home (WSJ)

By Mark Whitehouse

The Wall Street Journal, January 22, 2007

NEW YORK -- It has long been an axiom that U.S.-made consumer goods such as TV sets and kitchen appliances can't compete in a world where cheaper labor can be found elsewhere. Like many axioms, though, it isn't entirely true.

Recent data from the Federal Reserve contained some surprises for anyone who thought U.S. companies don't make things for American consumers anymore. In its monthly update on factory output, the Fed reported that U.S. production of audio and video equipment surged about 2% in December and was up 23% for all of 2006.

That is a significant change from several years ago, when the numbers were negative as U.S. production moved overseas. Even output of appliances, though down for 2006, popped 5% in December.

The shift doesn't necessarily represent a renaissance. More likely, it reflects the fact that much of what can go abroad already has, leaving behind what can and should be made in the U.S. One area of strength: high-end goods like top-of-the-line $6,000 Sony Grand WEGA TV sets and $15,000 Sub-Zero PRO 48 refrigerators, which appeal to the affluent folks who have been driving much of the growth in U.S. consumer spending.

"It's the very high-end products," says Daniel Meckstroth, chief economist at Manufacturers Alliance, a trade group. "Manufacturers who have niche markets in high-end products have a very good outlook."

Such manufacturers account for only a tiny fraction of U.S. output and employment. Still, the numbers illustrate an important point about the physical and strategic limits of globalization: In just about any possible future, there will always be some business that is better done close to the customer. The obvious examples are home building and services such as restaurants, but the logic also can apply to certain types of manufacturing.

"If the thing being sold to the U.S. market is locally customized, delicate, or very large, chances are it'll continue to be produced in the U.S.," says Bruce Greenwald, professor of business and economics at Columbia University in New York. The same, he says, is true "if the manufacturing process itself involves almost no labor, like medical testing or like some very automated electronic-component manufacturing plants, chemical plants and metal-fabricating plants."

The dominant trend for the past couple decades, of course, has been the exodus of manufacturing from the U.S. to lower-cost locales such as China. Just about anything that can be mass-produced and shipped is made abroad and imported to the

DOJ_NMG_0119301

U.S., or soon will be. Imports account for about 90% of all the audio and video equipment sold in the U.S., 44% of household appliances and 38% of computers, according to Mr. Meckstroth, chief economist at Manufacturers Alliance, a trade group.

As a result, manufacturing has been declining as a share of the economy. In 2006, manufacturing accounted for about 12% of U.S. gross domestic product, a broad measure of economic activity. That is down from about 20% in 1980. More recently, slumps in the housing and auto sectors have sparked a drop in overall production as companies worked off unsold stockpiles of things such as furniture and auto parts. In the fourth quarter of 2006, U.S. industrial production fell at an annualized rate of 1.4%.

Many manufacturers, though, have managed to keep busy. Aside from producers of computers and business equipment, which logged double-digit growth in 2006 as companies made investments aimed at boosting efficiency, the fortunate ones include makers of consumer electronics and appliances that have set up shop in places typically associated with industrial decline.

Take, for example, Sony Corp., of Japan, which makes its Grand WEGA high-definition TV sets at a factory near Pittsburgh, a city better known for mothballed steel mills. The TV sets employ cutting-edge technology and tend to be large, with screens ranging from 42 to 70 inches. Their size and the sensitivity of their electronics make proximity to the consumer a meaningful advantage, as does the ability to react quickly to changes in tastes for high-end equipment.

"It is important for us to produce these sets close to most of our customers," says Stan Glasgow, president and chief operating officer of Sony Electronics Inc., a Sony unit that also assembles customized VAIO computers in San Diego. Proximity "gives us a distinct advantage with our retail partners across the country, as we have the ability to quickly fill the channel with specific products."

Over in Madison, Wis., Sub-Zero Freezer Co. makes a different kind of large and expensive product: High-end refrigerators and Wolf brand stoves. Michele Bedard, vice president of marketing, says the closely held company posted double-digit growth in 2006 despite the slump in the U.S. housing market -- a fact she attributes to people choosing to invest in renovations rather than selling their homes in a soft market. Sub-Zero is in the process of expanding its production space almost 40% to about 1.4 million square feet.

Ms. Bedard says Sub-Zero prefers to manufacture locally because it can better manage the process and make changes to models on short notice. "The pros of being in Wisconsin outweigh the pros of moving overseas," she says. "We can be very nimble and just be master of our own destiny."

More U.S.-produced TV sets and refrigerators, though, probably won't translate into more jobs in the U.S. Audio and video manufacturing, for example, accounts for only about 31,000 American jobs, and the number hasn't grown along with production. Despite its plans to increase capacity, Sub-Zero isn't planning to add to its 1,700-person work force.

Across the manufacturing sector, the picture is similar: To stay competitive, companies are doing everything they can to boost productivity -- that is, make more stuff with fewer people. "Manufacturing in the U.S. is headed toward plants that have no people in them," Prof. Greenwald says.

That is bad news for factory workers who must retrain or be cast aside. It could be better for the U.S. economy as a whole. The more the U.S. can produce for each hour worked, the wealthier the average American becomes. If, for example, output per hour rises an annual rate of 3%, the average inflation-adjusted wage will more than triple over 40 years.

"Manufacturing is contributing to the welfare of the economy in terms of standard of living, but it's not generating net new jobs," says Mr. Meckstroth. "The electronics sector is one of the areas where that's most visible."

Rush Of Entries Gives '08 Race Early Intensity (NYT)

By John M. Broder, Patrick Healy

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Two years before the next president is inaugurated and a full year before the first vote is cast, the contest for the White House is off to a breathtakingly fast start, exposing an ever-growing field of candidates to longer, more intensive scrutiny and increasing the amount of money they need to remain viable.

On Sunday, Senator Hillary Rodham Clinton, Democrat of New York, held her first campaign event, highlighting her focus on health care a day after declaring her plans to run. Another Democrat, Gov. Bill Richardson of New Mexico, entered the fray, the eighth member of his party to do so. And the day was not terribly different in its pace of activity from many others in recent weeks.

The scale and swiftness of the action has the potential to upset the traditional timetables and conventions of presidential campaigning.

DOJ_NMG_0119302

John Weaver, a senior adviser to Senator John McCain's presidential effort, said the intensified announcement season and compressed primary calendar would force campaigns to develop a strong national apparatus and well-organized field efforts state by state.

"It makes it nearly impossible for a dark horse candidate to break out of the pack and challenge the front-runner(s) and thus isn't healthy for the process," Mr. Weaver wrote in an e-mail message on Sunday. "All of these states, who are moving up early, want to play and have an impact. But oddly enough, it ultimately will limit the legitimate candidate choices for the nation at large in the primary process."

The candidates could be forced to move more quickly to take positions on big issues, stripping them of the chance to run on more gauzy platforms in the early stages and therefore exposing them to more direct criticism from rivals, interest groups and the news media. They will face earlier encounters with one another — New Hampshire and South Carolina are planning full-scale debates this spring — that will require them to display both policy expertise and a comfort level in front of the cameras.

They will be getting intensive scrutiny from opposition research operations, the news media and the public for that much longer, increasing the chances that a gaffe or position change could harm their campaigns. Deep into competition for experienced staff members, most candidates are already putting together operations in multiple states.

Kevin Madden, press secretary for the exploratory committee set up by former Gov. Mitt Romney of Massachusetts, a Republican, said his organization was already "beginning to put our teams together" for the early contests in New Hampshire, Iowa, South Carolina, Michigan and several states beyond. "It's happened at a very advanced pace," Mr. Madden said, "but you can't complain and wring your hands. You just have to work harder, faster."

Because they do not want competitors to be raising money unchallenged, more candidates are declaring their intentions earlier, which in turn means the entire field needs more money to sustain campaigns for a longer time.

There are now a dozen serious contenders from both parties competing in a presidential race that for the first time in more than half a century will not include an incumbent — either the president or the vice president — on the ballot or even a definitive front-runner.

"Crowded fields force early announcements," said Jennifer Palmieri, an adviser to John Edwards, the former senator from North Carolina who is seeking the Democratic nomination. "Candidates are concerned there will not be enough oxygen left for them if they wait too long. Having crowded fields in both parties has exacerbated this phenomenon."

Just hours after Mrs. Clinton made her candidacy official on Saturday, Senator Sam Brownback of Kansas joined the race for the Republican nomination. Last week, Senator Barack Obama, Democrat of Illinois, opened a presidential exploratory committee, emphasizing the wide-open nature of the race.

The early start of the presidential race may make it difficult for the new Democratic leaders in Congress to generate public support and media attention for their agenda. Seven sitting members of the House and Senate have declared their candidacies and several others are said to be considering it, distracting them from legislative business and drawing news coverage away from Congress and out onto the campaign trail.

John D. Podesta, a former chief of staff for President Bill Clinton and president of the Center for American Progress, said some of the early candidates surely recall the lesson of Gen. Wesley K. Clark, the Democrat who waited to jump into the last presidential race until the fall of 2003.

Given the lateness of his entry, and his limited resources, General Clark decided to skip the Iowa caucuses and focus on the New Hampshire primary. Iowa became an unexpectedly fierce contest, with John Kerry emerging as a winner and quickly rolling on to victories in New Hampshire and other early primary states.

"You need to get a foothold early and organize and get people to rally around you and your message," Mr. Podesta said, "and the need to build momentum is real."

The candidates and the early primary states are chasing each other in a mad circle, with two new states, Nevada and South Carolina, squeezing into the first weeks of the primary calendar. A number of other states, including California, New Jersey, Michigan and Illinois, are considering moving up their primaries so that they are not left out of the nominating process. With their expensive media markets, these states could quickly bankrupt candidates who have trouble raising money.

The intensity of the early action is fueled in part by President Bush's political weakness, brought on largely because of the unpopularity of the war in Iraq.

"If Bush were doing well and had a continuing ability to get things done and command the national stage, I think there would be far less focus on the campaign," said Robert Dallek, a presidential historian.

While presidential campaigns have been getting gradually longer over the past few decades, the acceleration in the 2008 cycle is particularly pronounced. The first President Bush announced his candidacy for the 1988 Republican nomination in October 1987; the eventual Democratic nominee in that election, Gov. Michael S. Dukakis of Massachusetts, had declared six months earlier.

DOJ_NMG_0119303

Bill Clinton formally announced his candidacy for the 1992 Democratic presidential nomination on Oct. 3, 1991, about three and a half months before the Iowa caucuses. George W. Bush announced his exploratory committee for the 2000 presidential race in March 1999 and began his campaign in June 1999.

By comparison, Mr. Edwards of North Carolina, the 2004 vice-presidential nominee, has traveled to Iowa 16 times since the beginning of last year, building his organization there in hopes of scoring an early triumph that carries him into the next contests.

"The earlier process will reward candidates who truly have a succinct, credible, authentic and passionate message which can sustain itself over the long nature of the campaign," said Matthew Dowd, the chief strategist for Mr. Bush's re-election campaign in 2004.

He also said that in 2007 candidates would be rewarded by scoring points in "nonvoting events" such as media attention, their standings in the polls and the size and response of crowds, because those sorts of factors will help winnow the field more than the primaries still a year away.

Despite the intense focus by most candidates on showing that they can raise the money to run a long and expensive campaign, having a big bank account, Mr. Dowd argued, may actually not be as important in the early stages of this presidential cycle as it was in previous ones.

"It's for two reasons: the early process will not involve paid media as much, and new technology allows little cost to talk directly to voters," he said. "And the early process will make it more important for a campaign to know how to respond to knowable and unknowable events in next 12 months."

Steve Elmendorf, a Democratic strategist who worked on the presidential campaigns of Representative Richard A. Gephardt in 2003 and Senator John Kerry in 2004, warned that candidates and their aides, no matter how tired they become, would have to stay on their toes because any misstep might be captured on tape and circulated on the Internet.

"Every move they make in Iowa and New Hampshire will be on YouTube," Mr. Elmendorf said. "The only certainty by January '08 is that people will be pretty tired."

Besides taking a toll on the declared candidates, the length and cost of current campaigns also deters potential entrants. Senator Evan Bayh of Indiana and former Gov. Mark Warner of Virginia were considered among the brightest Democratic prospects, but both declined to run. They cited the crowded field, the endless burden of fund-raising and the brutal personal cost of today's presidential campaigns.

Hillary Clinton Is "In" For '08, But Crowd Grows (CSM)

By Linda Feldmann

The Christian Science Monitor, January 22, 2007

Sen. Hillary Rodham Clinton enters the 2008 presidential race uniquely positioned to make a top-flight run at be-coming America's first woman president.

The Democrat from New York brings to the table 14 years of experience at Washington's highest political levels, as both a two-term first lady and now six years as a US senator. She appears set to raise all the funds she needs, enjoys near-universal name recognition, and has at her side one of the nation's most astute political operatives, her husband, former President Clinton.

But Senator Clinton, who launched her exploratory committee on Saturday with the declaration of "I'm in," faces serious hurdles to reaching her goal. Last week's entry of Sen. Barack Obama (D) of Illinois into the contest adds a charismatic, fresh persona to the mix, and makes Clinton's nomination far from a foregone conclusion. While Clinton has already withstood intense public scrutiny of her life and record, she will face questions again, in addition to charges that she is humorless and calculating. And as a Democratic woman seeking to become commander in chief at a time of war, she must prove her bona fides on defense as she seeks to distance herself from an unpopular war that she initially supported.

A crowded race to the White House

The field for both major parties has been growing almost daily, of late. This weekend alone, two other candidates announced: New Mexico Gov. Bill Richardson (D) and Sen. Sam Brownback (R) of Kansas. For the Democrats, a field that includes a woman, an African- American (Senator Obama), and a Hispanic (Governor Richardson) as contenders sends the message of diversity that the party has long cultivated.

Most noteworthy, perhaps, is that the Democrats can boast a woman and an African-American as their top two candidates. A Washington Post-ABC News poll taken Friday night showed Clinton with the support of 41 percent of Democrats and Obama with 17 percent. But with the first nominating contests still a year away, those numbers remain fluid. Political analysts note that the third candidate in the Post-ABC poll (with 11 percent), former Sen. John Edwards (D) of North Carolina, is well organized in the early states, and could upset the race with a strong finish in the first contest, the Iowa caucuses.

DOJ_NMG_0119304

In Clinton's announcement video, posted Saturday morning on her campaign website, www.HillaryClinton.com, the senator deployed a technique she used successfully in her first Senate campaign – a pledge to begin by listening. She did not roll out a series of policy prescriptions, but rather stated that she was "beginning a conversation." Starting Monday evening, for three nights in a row, Clinton will conduct live video Web discussions with voters.

Of the many issues she raised on her written Web statement, two will present particular challenges to her: "How do we bring the war in Iraq to the right end?" she asked. "How can we make sure every American has access to adequate health care?"

Iraq is the No. 1 issue for voters, and the liberal, activist base of the Democratic Party has long been frustrated by Clinton's centrist approach, beginning with her to decision in October 2002 to vote in favor of a congressional resolution authorizing US military action in Iraq. She has stepped away from that position, and last month said if she knew then what she knows now, she would not have voted yes. But she has not pushed her opposition to the Iraq war as far as other Democratic candidates, including Mr. Edwards and Rep. Dennis Kucinich of Ohio, who is also running again.

Last June, at a convention of liberal activists, Clinton was booed. In contrast, Obama was cheered by the same crowd, even though he has also hewed to the center on Iraq. Clinton's apparent status as a lightning rod of criticism may speak to her long tenure on the national stage and careful positioning on a range of issues that makes some progressives skeptical (though not unwilling to vote for her in the general election, many say, if she wins the nomination).

"Clinton fatigue?"

One of the many hurdles Clinton must face on the road to the White House has been dubbed "Clinton fatigue." Wrapped into that is her husband's turbulent eight years as president, including his marital infidelity and various investigations. In the White House, Hillary Clinton quickly established herself as the most powerful and controversial first lady in history, setting up shop in the West Wing and taking on the assignment of crafting a plan for national healthcare reform that failed to get off the ground.

Adding to the sense of fatigue is the years of speculation that Clinton may run for president herself some day. Now that she has jumped in, the political world can move to the next phase, an actual publicly announced campaign – as can she. But the arc of her effort may be hobbled by the fact that she is hardly a fresh face.

Then there's the family dynasty issue. Some voters may resist the idea of a succession of presidents that goes "Bush, Clinton, Bush, Clinton" – especially since the second Bush presidency has struggled so profoundly of late.

Still, Clinton brings the test of time to the equation. After 14 years in the national spotlight, the chances that she will wither or make a major mistake seem lower than with her chief rival, Obama. As senators, both must spend the entire next year casting each vote carefully just to remain viable for the nomination. Whoever wins the nomination then must do the same for the general election campaign.

If Sen. John McCain (R) of Arizona wins his party's nomination, he will face the same challenge. But if the nominee is one of the "formers" running on the GOP side – such as former New York Mayor Rudy Giuliani or former Massachusetts Gov. Mitt Romney – he will be free of the pressure to cast votes.

One dimension of the Clinton campaign that carries both risks and positives is her gender. A female nominee may make the already difficult South even harder to contest, with the exception of battleground state Florida. How the Mountain West, where the Democrats have made gains in recent elections, and the Midwest react to a woman nominee is an open question.

On the plus side for Clinton, she has a "very strong connection to the women's movement, which is an important base in the Democratic Party," says Andrew Polsky, a political scientist at Hunter College in New York.

Candidates Face New Test: Winning Netroots Primary (WSJ)

By Amy Schatz

The Wall Street Journal, January 22, 2007

WASHINGTON -- Soon after Sen. Hillary Rodham Clinton announced her bid for the presidency on the Internet, her campaign was boasting of its success in one of the most important new presidential battlefields: the Netroots Primary.

Within hours of launching her bid Saturday, her campaign Web site had attracted 10,000 messages of support, 2,200 submissions for its blog contest and had signed up people to its email list at the rate of 100 a minute, the campaign said.

Mrs. Clinton's decision to enter the presidential race online and conduct a "national conversation" in live video Internet chats before heading to campaign isn't the conventional route taken by presidential hopefuls. This year, however, candidates are making extra efforts to win the favor -- and money -- of keepers of Web logs, or bloggers, and other Internet activists.

Mrs. Clinton's embrace of the Internet shows how seriously candidates are taking the power of the online activist community. Bloggers and other Netroots activists didn't get Howard Dean elected in 2004 or Joseph Lieberman unelected in 2006, but they certainly played a big, vocal role in both races. Unlike other early primary contests, there is no set date to decide

DOJ_NMG_0119305

which candidate wins or loses the Netroots primary, but early support by the Internet community this year, at least for Democratic candidates, could help decide which candidate wins the party's nomination.

"It's a fact that in Democratic politics, [the Internet has] grown increasingly important and it's par for the course for candidates to pay attention and to communicate to this community," said Peter Daou, the Clinton campaign's Internet director and former head of blog outreach for the Kerry-Edwards 2004 presidential campaign.

Other Democrats are taking the Internet announcement route this year. Yesterday, New Mexico Gov. Bill Richardson took the presidential plunge online in a video recorded in English and Spanish. Last week, Illinois Sen. Barack Obama announced his bid online. Former North Carolina Sen. John Edwards went to New Orleans for his official announcement, but his Internet site posted a preannouncement video and subsequently posted several more.

While Democratic candidates appear hesitant to ignore online activists, Republicans hoping to win the 2008 nomination have been somewhat slower to embrace the online activist community. That may simply be because Republican candidates haven't experienced the sort of online uprising that led to Mr. Dean's early success in 2004 or Mr. Lieberman's primary loss last year.

When Republican Sen. Sam Brownback of Kansas announced his candidacy on Saturday, he did it at a rally in Topeka. The Internet sites of both Arizona Sen. John McCain and former New York Mayor Rudy Giuliani offer little more than a biography and links that enable supporters to sign up for more information or donate money.

Former Massachusetts Gov. Mitt Romney has poured more attention and money into his site. On the day he announced his exploratory committee, the campaign launched an Internet video feature dubbed "Mitt TV," and began an outreach effort to right-leaning bloggers.

On The Electronic Campaign Trail (WP)

By Chris Cillizza, Dan Balz

The Washington Post, January 22, 2007

By noon on Jan. 10, Matt Rhoades and Kevin Madden knew they had a problem.

The two men handle communications for former Massachusetts governor Mitt Romney's presidential exploratory committee and had been told about a video flying around the Internet that spliced clips from Romney's 1994 debate with Sen. Edward M. Kennedy (D-Mass.). In it, Romney (R), then running for the Senate in a losing campaign against Kennedy, voiced support for abortion rights and gay rights -- positions he has since renounced.

Romney's political inner circle, alerted to the threat, decided to strike back quickly. Less than eight hours after the attack appeared, a video of Romney rebutting the charges was being sent to his supporters and to Republican blogs.

"In a viral information age, a distortion of the record can quickly sink in as fact," Madden said. "It was very important to show that what was an anonymous attack eventually became a moment of strength for our campaign."

Not long ago, an anonymous video on the Internet would have elicited little more than amusement from the candidate under attack. But the 2006 midterm campaign -- in which then-Sen. George Allen (R-Va.) saw his hopes for reelection, not to mention the White House, torpedoed by his now-infamous "macaca" moment captured on a widely seen video -- changed the rules.

But if last year was the year of the rogue videographers, the already-underway 2008 presidential campaign is likely to be remembered as the point where Web video became central to the communications strategy of every serious presidential candidate.

Playing defense is only one use of Web video. Equally important, the candidates and their staffs see Web-based video as an inexpensive and potentially significant tool for telling their campaign story without the filters of the traditional media.

Call it the YouTube effect, and it is only growing. The video-sharing site, which less than a year after its founding was bought by Google for $1.65 billion, has revolutionized the transfer of information via video, spawned a number of imitators and forced candidates to recalibrate choices, from their announcement strategies to their staffing decisions.

Sen. Hillary Rodham Clinton (D-N.Y.), for example, is to participate in three live online chats starting tonight -- a rapid-fire follow-up to the announcement of her presidential ambitions via video Saturday. The campaign will solicit questions in advance, and Clinton will respond on her Web site.

Peter Dao, the campaign's Internet strategist, who worked on the 2004 presidential campaign of Sen. John F. Kerry (D-Mass.), said Clinton's team hopes to make her campaign as interactive as possible and said the opportunities today are far advanced over just a few years ago.

"I remember in 2003 and 2004 when you said 'blog,' most people didn't know what you meant or the significance of it," Dao said, adding that with the growth of blogs and social networking sites, "the ubiquity of it is so amazing . . . the sky's the limit."

DOJ_NMG_0119306

To be sure, the political establishment remains slightly behind the technological curve -- innovative video work for presidential campaigns is more likely to be done by 20-somethings than by more established media consultants -- but the times are clearly changing.

Take former senator John Edwards (D-N.C.). The night before he formally announced his presidential candidacy from New Orleans to a battery of cameras from the traditional media, his advisers posted a 2 1/2 -minute video on YouTube and Rocketboom.com in which the candidate outlined the themes of his campaign. To draw attention to that video, the campaign bought advertising on a variety of political blogs and e-mailed bloggers.

"Our goal was to have people go and watch that video so they could hear directly from John what this campaign was about," said Mathew Gross, chief Internet strategist for the Edwards campaign. "Within the first 48 hours or so, 50,000 people had watched that video. Now it is over 100,000 people who have seen it."

That was hardly the end of it for Edwards. Later that day he held a town hall meeting in Des Moines with more than 1,000 attendees. But the campaign streamed the session live on the Edwards Web site and, according to campaign officials, about 40,000 people tuned in to watch. The campaign used four cameras to cover the meeting, with a director shifting camera angles to increase the production values. "It was very much like live television," Gross said.

Since then, the campaign has edited the session into segments and posted them on YouTube, increasing the potential reach of what would have been a one-time event for a local audience.

Campaigns have added a position to their tables of organization: Several have decided to employ a videographer to track the moves -- public and behind the scenes -- of the candidate. "From a positive standpoint, it's providing that kind of backstage access that nobody else except the people on the campaign get to see," said Spencer Whalen, an e-campaign strategist for Sen. John McCain (R-Ariz.).

When Sen. Barack Obama (D-Ill.) set up his exploratory committee last week, his campaign sent an e-mail to supporters with a link to a video of the candidate describing why he was preparing to run for president -- a relatively inexpensive way to deliver a message, and one that was virtually unthinkable two campaigns ago.

"The evolution of the Internet as a means of organizing has been something that's grown exponentially," said David Axelrod, a media consultant for Obama. "McCain in 2000 spawned a lot of contributions on the Internet. The Howard Dean campaign in 2004 certainly was a quantum leap. As more and more people become wired to the Internet and fluent in it, it becomes a greater and greater tool for organizing the grass roots and the democratization of politics. It's not just a tool for delivering messages to people but a tool for people to deliver messages to you."

And it is a tool for attack. Other campaigns took note of how Romney responded to the anonymous video and said they will be on notice for similar tactics that could be used against them. "If you're able to create a good viral attack ad, not as a campaign but as an individual, that can really get out there and get going," said Gross, the Edwards staffer. "That Romney episode of responding was a very smart move."

But the video record also provides a potential shield. If a rival campaign takes a quote or a incident out of context and uses it as an attack, McCain's team will have the full record to rebut, if needed.

In the 2004 campaign, the group Swift Boat Veterans for Truth got huge attention for a relatively small media buy for an ad attacking Kerry. In that case, cable news magnified the ad's impact by airing it over and over. Kerry's failure to respond more quickly is now seen as a critical mistake that contributed to his defeat.

In this campaign, groups such as the Swift Boat Veterans will not need cable television's assistance. They can go straight to the Web via YouTube and let millions of Americans see ads on their own time. A television commercial paid for by MoveOn.org, a leading progressive advocacy group, attacking McCain for his support for sending more troops to Iraq began running last week in Iowa and New Hampshire as well as on some national cable stations. It was also posted on YouTube and by Friday was one of the most popular videos on the site -- greatly expanding its universe of viewers and its influence on the national conversation.

The accelerated use of campaign video is likely to continue throughout the 2008 campaign as technology opens new opportunities and challenges, with even more significant changes likely by 2012, when Internet Protocol television -- the equivalent of television channels based on the Web -- becomes more technically and financially feasible.

For now, the race is on to exploit today's technology and compete for attention not just against other campaigns but also against other Web sites. "You'll see a technology Internet primary with people trying to do interesting things and move the ball forward," Gross said. "There is so much creativity on the Internet, as a campaign, how do you reach that level of creativity and interest?"

Just $83.8 Million? No Thanks (LAT)

By Dan Morain

DOJ_NMG_0119307

The Los Angeles Times, January 22, 2007

For the first time since the nation launched its grand experiment with publicly financed presidential campaigns three decades ago, major party nominees in 2008 are expected to turn down all public funds.

The reason: The grant, expected to be $83.8 million, might not be enough to run a winning campaign.

Sen. Hillary Rodham Clinton (D-New York) is the first top-tier candidate to tip her hand that she intends to leave the public money on the table. Senior Clinton advisor Howard Wolfson said by e-mail Sunday that she would not take matching funds in the primary campaign or, if she wins the Democratic nomination, in the general election.

On her campaign website, Clinton is asking that donors give her $2,100 for the primary and another $2,100 for the general — a tangible sign that she won't seek matching funds in the general election. Candidates who take public money in the general election must forgo fundraising.

Using her contacts and those of President Clinton, Sen. Clinton raised nearly $40 million for her 2006 Senate race, showing she can tap moneyed interests in New York and California, two deep wells of Democratic money.

"She'll do fabulously" in the money race, said Sacramento lobbyist Darius Anderson, who helps Democrats raise money and is a business associate of one of Clinton's backers, Los Angeles billionaire Ron Burkle. "The Clinton network and the Clinton list is by far the most extensive of any Democrat."

Abandonment of the public financing system would threaten the survival of a Watergate-era reform that was supposed to limit the influence of big donors in presidential politics and enable more candidates to compete.

If major candidates walk away from public financing, "it really calls into question why it exists at all," said Robert D. Lenhard, chairman of the Federal Election Commission, a supporter of the system..

The current system is being rendered obsolete by escalating campaign costs, sophisticated fundraising techniques, tepid public support and big-foot candidates such as Clinton who could raise $100 million on their own before the first 2008 primary — and $500 million by election day.

There are efforts to revive the system. "It is a reversal, but not necessarily a fatal reversal," said Steven Weissman of the nonpartisan Campaign Finance Institute in Washington, among the groups pushing to rescue public financing.

But it remains to be seen whether the heavy spending forecast for 2008 will, as public-finance advocates predict, trigger public disgust and lead to new reforms.

Until then, "To be considered a top-tier serious candidate almost by definition means you're not going to be participating in the public financing system" in either the primary or general election campaigns, said Democratic consultant Chris Lehane of San Francisco, who worked in the White House during the Clinton presidency.

As originally envisioned, the matching funds system offered candidates a deal: In exchange for voluntarily limiting their spending, the federal government would provide them with tax money to defray primary campaign costs and relieve them of having to raise money in the general election.

Taxpayers pay for it all by checking a box on their income tax forms earmarking $3. But despite outcries against the influence of private money in politics, the concept has not caught on with the public. At its height in 1980, 28% of taxpayers marked the box. Now, not even 10% ask that part of their taxes be used for presidential campaigns.

It's a system that seems almost quaint in an age of Internet fund-raising and in the face of other laws that have the effect of opening the way for big campaign spending. While $83 million seems massive, it could pale by comparison with the sums that candidates could raise from private sources — increasing the likelihood that nominees would leave the public money on the table.

"It is mind-boggling," said Washington consultant Jeffrey Bell, a Republican who supports public financing.

A handful of candidates have previously turned down public money for primary campaigns rather than agree to limit their fundraising, a precondition for getting the taxpayer largess. Ross Perot and Steve Forbes didn't need it; they used personal wealth. In the 2004 primaries, President George W. Bush and Sen. John F. Kerry (D-Mass.) raised more money than would have been permitted had they used matching funds.

But in every general election campaign, beginning in1976 when Jimmy Carter beat President Ford, the nominees have accepted matching funds. In 2004, the FEC gave $75 million each to Kerry and Bush. With an inflation adjustment, the grant will exceed $80 million in 2008 — if anyone takes it.

"The nominees of both major parties are likely to turn down public money for the general election for the first time in history, and raise private contributions for both the primary and the general," FEC commissioner Michael E. Toner said in an interview.

The system has become obsolete for a variety of reasons. By law, the election commission raises the amount of matching funds based on inflation, but the cost of campaigning has far outpaced inflation. Toner predicts that major party nominees will raise $500 million each by election day — roughly double what Bush and Kerry raised in 2004.

DOJ_NMG_0119308

Fundraising itself has changed, aided by direct mail and the Internet. Legislation by Sens. John McCain (R-Ariz.) and Russell D. Feingold (D-Wis.) was intended to limit the influence of money in politics. But it also more than doubled the amount that individual donors could give to presidential candidates. That in turn has made it easier for candidates to raise yet more money.

The maximum that a single donor can give is $2,100 for a primary and another $2,100 for a general election, though the commission probably will raise that to $2,200 or $2,300 this year.

"Fundraising has changed so much that in order to ... get people to opt into the public funding system, you would have to dramatically increase the subsidy and the amount that a candidate could spend," said Anthony Corrado, a political scientist at Colby College in Maine and an expert on presidential campaign finances.

The law also provides candidates with millions of dollars for primaries — so long as they agree to restrict their spending. In 2008, the cap on spending would be about $50 million.

The demand for money for 2008 is heightened by the heavily front-loaded primary calendar. Democrats will hold caucuses in Iowa and Nevada and primaries in New Hampshire and South Carolina between next Jan. 14 and Jan. 29. (Republicans have not set their primary calendar.)

Campaign finance experts believe a candidate easily could spend $25 million in those four states, then face a crush of primaries in February, possibly including California's.

As of last month, Clinton had $14.4 million in her campaign account. Several experts said Clinton could amass $100 million by the end of 2007.

Sen. Barack Obama (D-Ill.), McCain, former New York Mayor Rudolph W. Guiliani, and former Massachusetts Gov. Mitt Romney could raise similar sums. By contrast, Bill Clinton had $3.3 million in 1991 as he headed into Iowa and New Hampshire.

"There is going to be a $100-million entry fee in this White House race," Toner said.

Aides to at least one other candidate talk openly about his plan to bypass federal funds.

"Our intention is to opt out, but we will not make a final decision until later this year," said consultant Roy Behr of Los Angeles, representing former Iowa Gov. Tom Vilsack, a Democrat running for the presidency.

Though not tipping his hand, McCain "believes the public financing system is not fulfilling its original goal and must be reformed," said McCain spokesman Danny Diaz.

Advocates say the money race of 2008 will underscore the need to salvage the federal system. The Campaign Finance Institute suggests raising the match, offering candidates $3 for each dollar they raise in small sums. A $100 donation could be leveraged into $400. Feingold is expected to re-introduce legislation to raise the subsidy, though experts say a fix could not be instituted by the 2008 campaign.

"The system has become outmoded and we need to fix it," said Fred Wertheimer, long a proponent of public financing and head of the nonpartisan group Democracy 21, which also is pushing for an overhaul. "All the fundraising is going to make our case. The story is going to demonstrate why the [public financing] system makes sense."

But others question whether the public will lament the demise of a system derided as "welfare for politicians."

Darry Sragow, a Democratic attorney and consultant in Los Angeles, said most voters see no benefit in spending tax money on politics.

"It is the height of irony, if not insult, to say to a voter: 'We're going to take your money and send you all that mail you hate, and produce all the negative ads that make you want to use the remote,' " he said.

Iraq Tinges Clinton, McCain (WSJ)

By Jackie Calmes

The Wall Street Journal, January 22, 2007

WASHINGTON -- New York Sen. Hillary Clinton's official entry into the 2008 presidential race, which she begins far out in front of a growing Democratic pack, doesn't just rattle the rivals in her own party. It also is underscoring new doubts among Republicans about how formidable their own front-runner, Arizona Sen. John McCain, might be against the woman they most love to hate.

The vulnerabilities of both front-runners start, above all, with their stances on the increasingly unpopular war in Iraq. As Mrs. Clinton's weekend announcement of her candidacy made clear, they are responding to that issue in opposite ways.

Mrs. Clinton has long been suspect among liberal Democratic activists for her 2002 vote approving President Bush's use of force in Iraq, and then for declining to disavow it. Saturday, she showed that she has changed course. In her online announcement of her candidacy, she trumpeted a plan she has presented to block Mr. Bush's proposed increase in U.S. troop strength. The announcement, timed to get a jump on the president's State of the Union address tomorrow night, seemed

DOJ_NMG_0119309

designed to address her main problem with her party's base, though it could feed a sense that she is too cautious and calculating.

By contrast, Mr. McCain continues to be the most prominent supporter of the war, the president and a military buildup. That remains a popular stand among Republican voters, polls show. But it has been eroding his popularity with the general public, which over time has admired his independence but now overwhelmingly opposes the war. A new Wall Street Journal/NBC News poll, conducted Jan. 17-20, shows Americans by 65% to 30% say Mr. Bush shouldn't go ahead with his proposed troop "surge" if Congress passes a nonbinding resolution against it.

Selling Point

Further McCain slippage in the polls, in turn, would undercut his top selling point among Republican voters long suspicious of his maverick ways and his past criticism of Christian conservative leaders: The belief that Mr. McCain is the Republican who is best able to beat their nemesis, Mrs. Clinton.

A number of Republican leaders privately have been making that case within the party, among them former party chairman Haley Barbour, now Mississippi's governor, and Mississippi Sen. Trent Lott, the second-ranking Senate Republican leader. As the mood about the war worsens, skepticism about Mr. McCain's national appeal is building. One pro-McCain Republican lobbyist says not only voters are at stake, but also the donors he needs: "The war is really hurting McCain with the finance types."

Predictably, supporters for other Republican aspirants -- among them former New York Mayor Rudy Giuliani, former Govs. Mitt Romney of Massachusetts and Mike Huckabee of Arkansas, and Kansas Sen. Sam Brownback, who also announced his candidacy over the weekend -- are fanning the questions about Mr. McCain. As a sign of the reassessments, several Republicans pointed to last week's news that prominent national strategist and former Minnesota Rep. Vin Weber, one of Mr. McCain's earliest supporters in 2000 against then-Gov. George Bush, has become Mr. Romney's policy chairman.

Mr. Weber, in an interview, declined to address Mr. McCain's war woes. But, anticipating that Democrats will choose Mrs. Clinton, he said, "Republicans are increasingly beginning to see that if Democrats are going to nominate the consummate insider, ... perhaps that gives us our ultimate opening -- a face from outside Washington. Maybe it's Romney, maybe it's Giuliani, maybe it's Huckabee. I think it's Romney. But nobody's made the sale yet. It's still early."

For its part, the McCain campaign argues the senator remains formidable, judging both by polls and Republican endorsements in states with early nominating contests. Advisers cite the recent "Battleground Poll" conducted by bipartisan pollsters for George Washington University, which suggested Mr. McCain could beat Mrs. Clinton by 10 points. (So could Mr. Giuliani, according to the poll, though his liberal social stances lead many Republicans to conclude he can't win their nomination.) Echoing Mr. McCain's recent remark that he would rather lose an election than a war, his backers also suggest he will get points for principled consistency on the war where others, not least Mrs. Clinton, have shifted.

"John McCain is doing what he believes is right for our troops and for our country," McCain spokesman Danny Diaz said yesterday. "This is a principled individual who is committed to seeing us achieve victory in Iraq and winning the war on terror."

Both Mrs. Clinton and Mr. McCain face questions about their electability, as evidenced by the expanding field of competitors in both parties. Mr. Brownback, a favorite of social-issue conservatives who opposes the troop increase, entered the Republican contest Saturday with a more traditional political rally of family and supporters in Topeka. Yesterday, New Mexico Gov. Bill Richardson, a former congressman and, in Bill Clinton's administration, both United Nations ambassador and energy secretary, joined the Democratic fray with a Web announcement.

Comedy Skit Captures Sentiment

Mrs. Clinton's emerging high profile as the Democratic-led Congress moves to stop a troop increase, and perhaps even seek to bring troops home, is likely to help her with party voters. Moreover, most Democratic contenders originally supported the war, with exceptions such as Illinois Sen. Barack Obama and Ohio Rep. Dennis Kucinich.

Still, her shift underscores what even some supporters say is a vulnerability -- a sense that her political calculations leave people uncertain where she stands. This sentiment was captured hours after her announcement, in the opening comedy skit on television's "Saturday Night Live." The Clinton character says that for every one-point increase in Mr. Obama's popularity, more troops would come home; if he craters, "the troops can stay in Iraq."

The Clinton camp hit the electability argument head on in its opening volley on the new campaign Web site. Pollster and chief strategist Mark Penn opened his "campaign memo" with the question, "People are always asking, can Hillary Clinton win the presidency? Of course she can."

He cited her 2000 election in New York, and her landslide re-election in November with increased support from traditionally Republican areas. To arguments that she is a divisive figure, Mr. Penn cited recent polls showing an increase in the number of Americans who view Mrs. Clinton favorably.

DOJ_NMG_0119310

While many Democrats worry that she is unpopular among white men, Mr. Penn wrote that, "Women constitute a huge 'X' factor in this upcoming election" since more than 54% of voters will be women, and younger voters especially "believe it is about time this country had its first woman president."

Defend Innocent Life (WT)

By Sam Brownback

The Washington Times, January 22, 2007

Each January from all corners of the nation, hundreds of thousands descend upon the nation's capital. They come -- often in freezing conditions -- for a most significant march on Washington. They come for the March for Life on the anniversary of the tragic Supreme Court decisions in Roe v. Wade and Doe v. Bolton that made abortion legal during all nine months of pregnancy.

Youth is the most remarkable feature of the gathered, peaceful crowd. Observing the sea of people, you see faces of all colors and creeds; you see the young and the old; you see hope; you see cheerfulness; you see energy. Most of all though, you see the youth. Such a sight will disabuse most anyone of the notion that old men or politicians are the leaders of this movement. The young are the driving force. They will not stop coming; they are paying attention to the actions of their elected leaders; and they want a change in policy.

The youth understand that a large number of their generation were aborted before they ever had a chance in life. Since the tragic 1973 Supreme Court cases of Roe and Doe, more than 40 million of their peers' lives have been snuffed out because of abortion.The youth know that one of those 40 million could have been their spouse, and, for some, they realize that they too came very close to being one of the 40 million.

Life is beautiful. One's value is not contingent upon external features, such as one's bank account, one's successes or one's lineage. A human being's value is intrinsic, not earned. Without this basic moral understanding, few of our laws would make much sense. Laws against murder, for instance, would fail to make sense if we did not deem human life to be intrinsically valuable and worthy of protection.

Rather than choose an arbitrary starting point for valuing human life, we should go to the point when life begins. For this, science gives us clear understanding of when a new human life begins. Science tells us that life begins at the moment of conception, when the combination of 23 chromosomes from each pronucleus results in the 46 chromosomes present in the zygote embryo. From the moment of conception onward, a new human being is present until that life is ended in a laboratory, by an abortionist, or at some point after birth. Sadly, our current life-related policy in the United States ignores science, choosing capricious points at which to protect innocent human life. Our current policy is inconsistent, defying both logic and decency.

In the past Congress, had Republicans come out of the gate on issues central to advancing the cause of life, there is little doubt that values voters would have been inspired. Instead, in November, Republican majorities in both houses of Congress were swept from power, in part, according to some commentators, by the fact that frustrated values voters were unmotivated. The election was not a repudiation of the values for which Republicans stand; it was a repudiation of Republican performance when it came to living up to those values. As one example, consider that in the Senate the first Republican-initiated vote on abortion did not take place until late in the Congress with passage of the Fetus Farming Prohibition Act in July 2006; and this was followed by a vote on commonsense parental-notification legislation right before the election. The voters are well-educated and it was obvious to them that the past Congress did not share their priorities, except when it was close to election time.

Americans are a life-loving people. They always have been. Whether Republicans are returned to power by the voters will in large part depend upon whether Republicans embrace a Culture of Life both philosophically and in practice. The voters are watching.

I have great confidence that the leadership of our party will embrace the culture of life more consistently, and I am hopeful that they will, even from the minority, help us chart a course to find ways to get pro-life policies enacted. These are policies that are embraced by the majority of Americans. This past election was a wake-up call for pro-lifers, and the extent to which Republicans act with constancy and integrity will determine when the pro-life party of Abraham Lincoln and Ronald Reagan is returned to the majority.

Sen. Sam Brownback, Kansas Republican, is the ranking member on the Joint Economic Committee, Financial Services Committee and General Government Appropriations Subcommittee. He also chairs the Senate Values Action Team and co-chairs the Human Rights Caucus.

The Religious Test (USAT)

By David E. Campbell, J. Quin Monson

USA Today, January 22, 2007

DOJ_NMG_0119311

Should Americans fear Mitt Romney because he is a Mormon? In spite of what some political pundits have recently argued, the answer is a resounding no.

Should Romney fear how some Americans will react to his religion? Unfortunately, recent polls say yes. But just like another Massachusetts politician who faced questions about his religion, namely John F. Kennedy, Romney can, and should, tackle uneasiness about his religion head-on — sooner rather than later.

Romney has not yet officially announced his plans to run for the Republican nomination, yet the darts have already begun to fly. In fact, some critics have argued that Romney should not be elected solely because of his membership in the Church of Jesus Christ of Latter-day Saints (LDS):

·Writing in Slate, columnist Jacob Weisberg says that if Romney truly believes in his religion, "I don't want him running the country."

·Damon Linker, in The New Republic, says voters should reject Romney on religious grounds. Echoing precisely the same concerns raised about Kennedy's Catholicism, Linker argues that a Mormon president would be controlled by his church's hierarchy. In his words, "would it not be accurate to say that under a President Romney, the Church of Jesus Christ of Latter-day Saints would truly be in charge of the country?" Actually, no, it would not be accurate, any more than it was accurate to say that Kennedy would take orders from the Vatican. And neither would it be accurate to accuse the LDS church of pulling the strings of other prominent Mormon politicians, such as Senate Majority Leader Harry Reid, D-Nev., Sen. Gordon Smith, R-Ore., the late Rep. Mo Udall, D-Ariz., and numerous others.

It is true that, like many religious groups, the LDS church occasionally makes policy pronouncements, as it did last June in support of a federal constitutional amendment banning gay marriage. However, this kind of political activity has not served to constrain Mormon elected officials. Reid, at the time the Senate minority leader, led the opposition to the amendment. In response to a reporter's question about his open opposition to the LDS church's public position, his press secretary Sharyn Stein said that the church had asked members to express their opinions on the issue, so her boss was doing so "loudly and repeatedly on the Senate floor."

A President Romney would have the same autonomy to speak and act independently of his church.

Romney's challenge, however, is to make this clear to the American public. It is here that the parallel to Catholicism is instructive.

John F. Kennedy was not the first Catholic to run for president. That distinction belongs to Gov. Al Smith, D-N.Y., who, after winning the Democratic nomination in 1928, faced outright hostility to his Catholicism and suffered an ignominious defeat at the polls. The anti-Catholic bigotry that Smith confronted was in the living memory of many Democrats as Kennedy began his bid for the presidency. In an era when primaries were non-binding and often ignored by the leading candidates, Kennedy entered the West Virginia primary to show that a Catholic could win in a heavily Baptist state and thus settle the "Catholic question." He won the primary and the nomination. But still doubts lingered in the minds of the electorate about his religion.

To put those doubts to rest, Kennedy marched into the proverbial lion's den and delivered a speech to Protestant ministers in Houston. That speech is a classic appeal for religious tolerance. In it, Kennedy declared, "I do not speak for my church on public matters, and the church does not speak for me."

Similarly, enough Americans have doubts about Romney's religion that he should not wait for the primaries to tackle the "Mormon question." Recent polls find that about four out of 10 Americans say that they are unwilling to vote for a Mormon. We suspect that many voters are simply reflecting the fact that Mormonism is unfamiliar to them; it is natural to be uneasy with the unknown. However, Romney's own election in Massachusetts as well as the elections of Gordon Smith, Rep. Ernest Istook, R-Okla. , and former U.S. Representative Richard Swett, D-N.H., demonstrate that voters outside the Mountain West, where Mormons are most heavily concentrated, can become comfortable with Mormon candidates from across the political spectrum.

The heavy scrutiny focused on presidential candidates, even this early in the campaign, and the unease of some voters with a Mormon president, means that Romney should do now what Kennedy waited until the fall of 1960 to do. Romney needs to take a page from the Kennedy playbook and address his religion forthrightly, in a high-profile venue.

At a time when religion and politics are increasingly intertwined, it would be an opportunity to remind all Americans why the wall between church and state has served the country well.

Whatever issues voters might have with Mormonism, it is wrong to reject Romney because of his faith, just as it was wrong to reject Kennedy for his, or to disqualify today's Catholic politicians, such as Sen. John Kerry, D-Mass., and House Speaker Nancy Pelosi, D-Calif., for theirs. It is no different from dismissing Sen. Hillary Clinton, D-N.Y., because of her gender or Sen. Barack Obama, D-Ill., because of his race.

This is not an endorsement of Romney — we leave it to the voters to decide whether he deserves to be president. Rather, we endorse the spirit of Article VI in the Constitution, which states that there should be no religious test for public office.

DOJ_NMG_0119312

Kennedy captured that spirit well in 1960 when he said: "While this year it may be a Catholic against whom the finger of suspicion is pointed, in other years it has been — and may someday be again — a Jew, or a Quaker, or a Unitarian, or a Baptist."

Or even a Mormon.

Richardson Enters Presidential Race (LAT)

By Ricardo Alonso-Zaldivar

The Los Angeles Times, January 22, 2007

WASHINGTON — New Mexico Gov. Bill Richardson jumped into the pack of Democratic White House hopefuls Sunday as a middle-of-the-road politician with a multifaceted resume who, if elected, would be the first president of Latino descent.

Richardson, 59, was born in Pasadena to a Mexican mother and an American father. Fluent in Spanish, he has courted and received Latino support over a career of more than 25 years in politics, while managing to avoid being pigeonholed as an ethnic politician.

"I believe the country would be ready for a woman president, an African American president, Hispanic president," Richardson said on ABC's "This Week," announcing the formation of an exploratory committee that enables him to begin raising money and hiring a campaign staff. "But I wouldn't run as a Hispanic candidate. I would run as an American, proud to be Hispanic, proud of my heritage."

Getting noticed will be his immediate challenge. Although Richardson's career in public service includes 14 years in the House and stints as United Nations ambassador and Energy secretary under President Clinton, he starts out in the back of a diverse pack, among the so-called second tier of Democratic candidates.

An ABC News/Washington Post poll, conducted Tuesday through Friday and published Sunday, gave Richardson 1% of Democrats surveyed, far behind Sen. Hillary Rodham Clinton of New York (41%), who announced her own exploratory committee Saturday; Sen. Barack Obama of Illinois (17%), who entered the race Tuesday; and former Sen. John Edwards, the party's 2004 vice presidential nominee (11%).

"I will outwork anybody," Richardson said. "I am a Westerner. I'm a governor."

Political insiders said it would be a miscalculation to dismiss Richardson's candidacy.

"In the course of a campaign, there are plenty of opportunities for a candidate with a compelling message, who is not as well-known, to go out there and gain support," said Democratic media consultant Anita Dunn. Democratic National Committee Chairman Howard Dean "at this point in 2004 had maybe 2%, 3%. Gov. Richardson clearly has an impressive resume; he's very smart, and works quite hard."

A case in point is when Richardson first ran for governor in 2002, pledging to shake 600 hands a day. According to the Almanac of American Politics, he wound up breaking Teddy Roosevelt's record of 8,513 by shaking 13,392 hands at the New Mexico State Fair and a tailgate party at the University of New Mexico on Sept. 16.

"He was not afraid to be an underdog at the beginning of his career, and he was successful," said Brian Sanderoff, an independent pollster in Albuquerque. "If in his mind he is thinking vice president, he's not sharing that with anybody. He's going for the win, whether it's realistic or not."

Said Richardson, who was reelected in November with 69% of the vote: "If I don't get the nomination, I'll come back and be governor."

On the Iraq war, Richardson supports a phased withdrawal of American troops, with diplomatic efforts to broker a peace among that country's warring ethnic and religious factions. He favors trying to talk to Iran and Syria to seek their help in ending the conflict. He supports redeploying American troops from Iraq to fight the Taliban in Afghanistan.

"What we're doing now is not working," Richardson said. "The American people are against it. The surge that the president wants is going to cause more sectarian violence."

Richardson has some experience dealing with recalcitrant foreign regimes. He negotiated with the North Koreans, the Cubans and the Sudanese, and with the Taliban when they held sway over Afghanistan.

On domestic issues, he is somewhat to the right of many Democrats. He gets the endorsement of the National Rifle Assn., for instance.

On immigration, Richardson supports an overhaul of current laws to provide a path to citizenship for longtime illegal residents who can prove they are otherwise law-abiding.

DOJ_NMG_0119313

Although he chided the Democratic Party for allowing President Bush to make strong inroads among Latino voters in the 2004 election, it's unclear to what extent Richardson would command a following outside of New Mexico.

"We have a very credible woman running and a very credible African American, and a very credible Latino, but I don't think any block of voters will go to any of these candidates based on gender and ethnicity," said Dunn, the media consultant. "I do think Gov. Richardson clearly has the opportunity to appeal to Hispanic voters' sense of history."

Latino voters have helped Richardson get elected at every stage of his political career, but he has usually pursued a broad agenda in office, appealing to diverse constituencies.

As governor, he pushed through tax cuts on income and capital gains backed by many in the business community. He also signed an executive order extending healthcare and other benefits to the domestic partners of gay and lesbian state employees. And he signed legislation cracking down on drunk drivers, a serious public safety problem in New Mexico.

As chief executive of a small state, Richardson has sometimes stepped on other politicians' toes, belying his easygoing image.

"He moves very fast, and very aggressively, and the devil is always in the details," said Sanderoff, the New Mexico pollster. "He sometimes has a lukewarm, if not cool, reception from fellow Democrats, who feel they are not consulted enough. He is seen as somebody who can be a bit of a bully."

Richardson's plans, which were widely known last week, were undercut somewhat by Clinton's announcement, and her candidacy was the focus of discussion on the Sunday talk shows. Another contender for the Democratic nomination, Sen. Joseph R. Biden Jr. of Delaware, described her on "Fox News Sunday" as "the odds-on pick right now," and Sen. Edward M. Kennedy (D-Mass.) told NBC's "Meet the Press" that she was "in a very strong position."

Potential Republican rivals used similar language, with Sen. John McCain of Arizona, on NBC, and former House Speaker Newt Gingrich of Georgia, on Fox, both calling her "formidable."

But Gingrich suggested that Obama's actions last week had "forced Sen. Clinton's hand by weeks. I mean, he has gained ground so rapidly that I think she sort of thought she had to remind her friends she was around."

Another Republican, Sen. Chuck Hagel of Nebraska, told C-SPAN's "Newsmakers" program Sunday that he also was considering a presidential bid, perhaps as an independent. He is a leading GOP critic of Bush's Iraq policy and is co-sponsoring a nonbinding resolution opposing an increase in U.S. forces there.

Richardson's Quest (ABQ)

By Kate Nash

Albuquerque Tribune, January 22, 2007

Gov. Bill Richardson jumped on the presidential bandwagon this morning, revealing in English and Spanish on his just-launched Web site that he's in.

The site was activated just as Richardson was telling ABC's George Stephanopoulos that he's the man for the job.

In an interview taped by the network last week in Santa Fe, Richardson said he'll outwork any other candidate, and trotted out a laundry list of his accomplishments.

"Most importantly, I can bring this country together. I'm a negotiator. I've brought countries together, closer, on peace treaties. I've rescued Americans, hostages and servicemen. What we have right now is an opportunity to deal with major issues that really are dividing this country. I have the experience, I've been in Iraq, I've negotiated with Saddam Hussein. I was secretary of energy, I increased energy efficient in our country," he said. "I've been a governor, I created 86,000 jobs in four years, I've cut taxes, I've brought economic growth to our state, I've made our schools better. I've got the strongest record on the environment and dealing with clean energy and fighting global warming," Richardson said.

"A lot of people give speeches on these issues. I've actually done it."

Even before the show aired, the secret was out: Just after 5 a.m local time, Good Morning America played a clip of an interview.

"Also, New Mexico Gov. Bill Richardson announcing today, he'll be on 'This Week,' that he wants to run. He would be the first Hispanic president of the United States if he won. I asked him about it."

Richardson told Stephanopoulos: "I believe this country is a very tolerant, positive country. I believe the country would be ready for a woman president, an African-American president, a Hispanic president, but I wouldn't run as a Hispanic candidate, I would run as American, proud to be Hispanic, proud of my heritage."

Richardson on Monday is expected to hold a news conference in Santa Fe and to file the papers to establish an exploratory committee. He would make an official announcement soon, according to his Web site.

On his the site, www.richardsonforpresident.com, Richardson talks about energy, the economy and the war.

DOJ_NMG_0119314

"The next president of the United States must get our troops out of Iraq without delay," he said. On 'This Week,' he was more specific, saying the United States should set a timetable for phased withdrawal that has U.S. combat troops out of Iraq by year's end. He also said troops should be redeployed to Afghanistan to wage the war on terrorism.

The bilingual governor was born in Pasadena but grew up in Mexico City until he was a teenager. His Mexican mother, Maria Luisa Lopez-Collada, still lives in Mexico. His father died in 1972.

The announcement ends months of murmurs about whether Richardson would run for the country's top job. Responding to a question from Stephanopoulos, Richardson said he had no interest in being anyone's vice president. "I've got a better job being governor of New Mexico. If I don't get the nomination (for president), I'll come back" to Santa Fe, he said.

Richardson, 59, joins several other Democrats who have also said they want to lead the United States, including most recently Sens. Barack Obama and Hillary Clinton. The most recent ABC poll gave Clinton a commanding lead among the potential Democratic contenders, with 41 percent. Obama was second at 17 percent, while Richardson was last on the list with 1 percent.

He now must persuade Democrats to make him the nominee against a Republican candidate for the 2008 election. He also must raise the minimum of $30 million that political observers say he'll need to make him competitive.

In November, the first-term Richardson was elected to a second, four-year stint along with Lt. Gov. Diane Denish.

After his swearing-in on New Year's Day, he held an extravagant bash at two Downtown Santa Fe hotels, to which he invited 7,000 people. The fiesta, dubbed the Boots and Bolos Inaugural Ball, even featured hundreds of jars of Gov. Bill Richardson Inaugural Salsa. Attendees were given plastic blue wristbands, with his and Denish's name on them, akin to the yellow bracelets made popular by cyclist Lance Armstrong.

Richardson, whose name doesn't have the same cache as Sen. Hillary Clinton, is nevertheless not an unknown in national politics.

He served in Congress from 1983-97, when then-President Bill Clinton tapped him to be the U.S. ambassador to the United Nations. A year later, Clinton appointed him as the secretary of the Department of Energy.

In the past year, Richardson has made several trips to the East Coast, New Hampshire in particular. He was in another early-primary state, South Carolina earlier this month.

Money from his re-election campaign has gone to Democratic candidates in places like Nevada, Wisconsin, Colorado, and Kansas.

During his career, he's negotiated with world leaders and travled to the farthest reaches of the world, including earlier this month to Sudan, Africa, to negotiate a cease-fire between government groups and rebel factions.

After he had returned and announced that he'd brokered a deal, one group, representatives of the Sudan Justice and Equality Movement rebuffed him, saying they had not agreed.

Richardson late last year also went to Sudan to secure the relase of journalist Paul Salopek, who was detained there for more than a month.

As governor, he's solidified his Democratic base, but also befriended Republicans with initiatives including tax cuts and economic development packages.

Richardson, if elected, would be the nation's first Hispanic president. His mother is Mexican and lives in Mexico. He was born in California and raised in both Mexico and Boston.

Already, he's made state history by raising the most money Í nearly $14 million Í for his 2006 gubernatorial race. He flew through his first term, pushing an increase in the state's minimum wage, a commuter train from Albuquerque to Santa Fe, a $250,000 life insurance policy for members of the National Guard.

This legislative session, he wants tax cuts, is still pushing a wage increase and wants a $250 million road improvement package.

Richardson's wife is Boston native Barbara Richardson. They live in the Governor's Mansion in Santa Fe and have no children.

Kansas Senator, N.M. Governor Join List Of Hopefuls (USAT)

By Jill Lawrence

USA Today, January 22, 2007

WASHINGTON — Three people in two days. That's how fast the field of would-be presidents grew over the weekend.

The latest entry is New Mexico Gov. Bill Richardson, a former congressman, U.S. Energy secretary and United Nations ambassador who aims to be the Democrats' first Hispanic nominee.

"Everybody gives speeches about how they're going to fix the country's major problems. I've actually done it in the positions that I've held," Richardson said in an interview Sunday.

Richardson's move was overshadowed by New York Sen. Hillary Rodham Clinton's jump into the Democratic race on Saturday. Another headlines casualty was Kansas Sen. Sam Brownback, who announced his bid for the Republican nomination Saturday in Topeka.

Richardson said he will form an exploratory committee today and make it official in two months when his state's legislative session concludes. He said he'll raise money Tuesday in California and campaign over the weekend in Nevada, site of an early nomination contest.

Clinton said she was forming an exploratory committee, which allows presidential hopefuls to raise money for a campaign. Her headline — "I'm in" — left little doubt she, too, is a full-fledged candidate. She'll be in Iowa this weekend and New Hampshire next month.

Today through Wednesday, as a counterpoint to President Bush's State of the Union address Tuesday, Clinton is holding live video chats each evening with people who sign up at hillaryclinton.com.

"No matter where you live, no matter what your political views, I want you to be a part of this important conversation right at the start," she said. "For three nights in a row, I'll sit down to answer your questions about how we can work together for a better future."

Brownback called himself a leader on issues important to economic, social and compassionate conservatives. "I've stood with them. I've pursued and pushed these issues. I've been aggressive," he said in an interview Sunday. "That gives me an advantage over the others looking at the field."

Brownback has worked to fight AIDS, poverty and genocide in Africa. He supports a constitutional amendment to ban gay marriage and overturning Roe v. Wade, the Supreme Court decision that legalized abortion nationwide. He proposes a personal tax code with a single rate and individual retirement accounts as voluntary alternatives to Social Security.

Richardson recently negotiated a 60-day cease-fire in Darfur, working with the Save Darfur Coalition and the State Department. He said he will formalize his candidacy after a New Mexico legislative session he hopes will produce a higher minimum wage, expanded health care coverage and increased use and sales of alternative energy.

On Iraq, Richardson opposes the president's plan to commit more troops and would cut off money for the increase. He supports a phased troop withdrawal and national reconciliation talks among Iraqis.

Richardson says his advantages include being a governor, a Westerner and Hispanic, and having hands-on experience in two critical areas: energy and foreign policy. Beyond his résumé, he said, "You have to have passion and vision. You have to be well organized. You have to be able to raise money. … I can hold my own" on all those.

The rush of weekend activity came several days after Illinois Sen. Barack Obama formed a committee to raise money for a virtually certain candidacy.

Talk shows on Sunday showcased no fewer than six people who are running for president or say they might: Richardson, Brownback, Arizona Sen. John McCain, Delaware Sen. Joseph Biden, Nebraska Sen. Chuck Hagel and former House speaker Newt Gingrich. That's about a quarter of two dozen prospects looking at the first contest in decades with no president or vice president running on either side.

Democratic Governor Of New Mexico Joins Race (NYT)

By Matthew L. Wald

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Gov. Bill Richardson of New Mexico said on Sunday that he intended to run for the Democratic nomination for president, joining a growing field that includes Senators Hillary Clinton of New York (since Saturday) and Barack Obama of Illinois (since Tuesday).

Mr. Richardson, elected to a second term as governor in November with a historic 69 percent of the vote, has a varied résumé. He was elected to Congress to represent the Santa Fe area eight times, and then was chosen by President Bill Clinton to be ambassador to the United Nations, and later, secretary of energy.

As governor, he has kept a hand in international politics, working to arrange a cease-fire this month between the government of Sudan and rebels in the Darfur region, and meeting several times with officials from North Korea to discuss nuclear weapons.

Mr. Richardson, 59, was born in Pasadena, Calif., and spent part of his childhood in Mexico City. His mother is from Mexico.

In an interview Sunday on the ABC program “This Week,” Mr. Richardson said: “I believe this country is a very tolerant, positive country. I believe the country would be ready for a woman president, an African-American president, Hispanic president.”

DOJ_NMG_0119316

He added, “But I wouldn’t run as a Hispanic candidate. I would run as an American, proud to be Hispanic, proud of my heritage.”

Video of his announcement appears on his Web site in English and Spanish.

Mr. Richardson also emphasized his experience as governor, dealing with budgets, health care, the environment, drunken driving and other issues. In his position as chairman of the Western Governors’ Association and at home in Santa Fe he has been a proponent of renewable energy sources.

Mr. Richardson is an enthusiastic campaigner. According to his campaign, the Guinness Book of World Records cites him as the politician who shook the most hands in one day — 13,392 — during his 2002 campaign for governor, beating President Theodore Roosevelt’s record of 8,515, set in 1909.

Perhaps more relevant to a national campaign, Mr. Richardson is also a strong fund-raiser. While chairman of the Democratic Governors Association, he raised more than $28 million for candidates for governor.

N.M. Governor Joins Presidential Race (WP)

By Chris Cillizza

The Washington Post, January 22, 2007

New Mexico Gov. Bill Richardson began a run for the Democratic presidential nomination yesterday, betting that his long rÃ©sumÃ© and Hispanic heritage will boost his chances in a field already stocked with better-known candidates.

"I am taking this step because we have to repair the damage that's been done to our country over the last six years," Richardson wrote in an e-mail to supporters. "Our reputation in the world is diminished, our economy has languished, and civility and common decency in government has perished." Richardson also announced his intentions -- in Spanish and English -- on his campaign Web site.

Richardson will file paperwork with the Federal Election Commission today to establish a presidential exploratory committee but will not formally announce his bid until New Mexico's legislative session ends in March.

His announcement comes just one day after Sen. Hillary Rodham Clinton (N.Y.) joined the Democratic race and less than a week after Sen. Barack Obama (Ill.) made his intentions clear. Polling done in early-voting states such as Iowa shows Clinton and Obama in the Democrats' top tier along with former North Carolina senator John Edwards.

Richardson joins a group running behind the top three that includes Sens. Joseph R. Biden Jr. (Del.) and Christopher J. Dodd (Conn.) as well as former Iowa governor Tom Vilsack.

Unlike the other second-tier candidates, Richardson is making history as he seeks to become the first Hispanic president of the United States. Although Richardson said his ethnicity is not a point of emphasis in the campaign, it could help his chances. Hispanics are the largest minority group in the United States and are becoming increasingly active and influential in national politics.

Acknowledging that he is not yet on the level of the front-runners, Richardson argued that he alone in the field has a record of creating solutions to tough problems. "I can talk the talk and walk the walk," Richardson said.

Richardson spent 15 years in Congress before being named U.S. ambassador to the United Nations by President Bill Clinton in 1997. A year later he was appointed energy secretary. Richardson returned to elected office in 2002, winning the gubernatorial race. Last fall he cruised to a second term with 69 percent of the vote.

Throughout his career in public life, Richardson has also served as a roving diplomat, dispatched to defuse crises in hot spots including North Korea and Iraq. He spent several days in Sudan last week before making his presidential intentions known.

On Iraq -- the issue which most animates Democratic primary voters -- Richardson has called for a phased withdrawal of U.S. troops to be completed by the end of this year. "There is no military solution," he said.

Regardless of the strength of his rÃ©sumÃ©, Richardson faces a rocky path to the nomination. In a recent Washington Post-ABC News poll, 1 percent of Democratic voters said they would support Richardson in a primary. By contrast, Clinton took 41 percent, Obama 17 percent and Edwards 11 percent.

Asked how he can compete with nationally known candidates such as Clinton and Obama, Richardson said: "I'll outwork them."

Meanwhile, Sen. Chuck Hagel (R-Neb.) declined to rule out an independent candidacy for president in 2008.

"I have not decided I am going to run for president, so maybe that'll be the next set of questions that you could ask after I decide what I'm going to do," Hagel said during an interview with C-SPAN.

Hagel has been perhaps the most vocal Republican critic of President Bush's handling of the war in Iraq -- a position that could make it difficult for the senator to make a serious run at the GOP nomination.

New Mexico Governor Joins '08 Fray (WT)

DOJ_NMG_0119317

By Eric Pfeiffer

The Washington Times, January 22, 2007

New Mexico Gov. Bill Richardson yesterday joined a crowded field of Democrats seeking their party's 2008 presidential nomination, citing his experience on foreign policy and as a Western state's chief executive.

"I will outwork anybody. I'm a governor," Mr. Richardson said during an appearance yesterday on ABC's "This Week." "Governors have good records in being elected presidents because we balance budgets, we deal with health care, with education."

John F. Kennedy's 1960 victory is the last White House triumph by a sitting senator.

Despite his deep resume, which also includes turns as a congressman, energy secretary and U.N. ambassador, Mr. Richardson's announcement was overwhelmed on yesterday's talk shows by the discussion focused on Saturday's presidential announcement by Sen. Hillary Rodham Clinton, New York Democrat.

"I believe I can be competitive in raising money," Mr. Richardson said when asked by host George Stephanopoulos whether he could compete with Mrs. Clinton's fundraising organization. "A lot of people give speeches about these issues. I've actually done it," he said.

Mr. Richardson also sought to play down speculation that he is secretly campaigning to run for vice president.

"I'm not interested in being vice president. I've got a better job as governor of New Mexico. If I don't get the nomination, I'll come back and be governor," he said.

The recently re-elected governor, who is one of the few members of his party to get an "A" rating from the National Rifle Association, said he thinks Democrats will warm to his candidacy once they get to know his issues, which include favoring a redeployment of American forces from Iraq.

"The surge that the president wants is going to cause more sectarian violence. And right now, we should be deploying those troops that America has in Iraq, we should redeploy them in Afghanistan, where the Taliban are a threat and terrorism is a threat."

Sen. Joseph R. Biden Jr., Delaware Democrat and a possible 2008 rival, said he sees Mrs. Clinton as his party's White House front-runner.

"I think she's incredibly formidable and has got to be the front-runner and the odds-on pick right now," the Senate Foreign Relations Committee chairman told "Fox News Sunday."

A Washington Post-ABC News poll of 1,000 released yesterday showed that Mrs. Clinton was the favorite of 41 percent of Democrats, far ahead of the 17 percent backing Illinois Sen. Barack Obama and the 11 percent who support former Sen. John Edwards of North Carolina. The poll was taken from Tuesday to Friday and has a 4 percentage point margin of error.

"But this is a marathon. There's a long way to go," said Mr. Biden, who already has announced his own presidential campaign. "We're a lifetime away."

Another potential candidate, former House Speaker Newt Gingrich, said yesterday he would run only "as a last resort." Mr. Gingrich had previously said he would seek the White House only if no other Republican had emerged as a clear front-runner by the fall.

"Fox News Sunday" host Chris Wallace told Mr. Gingrich that "you sound as if you think about running for president as a last resort, not as a first resort?"

"Exactly," Mr. Gingrich answered. "I mean, nobody's ever said it quite that way, but you're right."

Mr. Gingrich also praised Mrs. Clinton's political skills and dismissed claims that she is too polarizing a figure to win.

"I don't care what anyone else says -- she and her husband are the most formidable pair of politicians in America," the Georgia Republican said. "She is ahead in every poll. She can raise far more resources than any other Democrat. ... And you'd have to say, given those assets, that she has a six-out-of-10 chance or better of being the Democratic nominee."

For The Clinton Candidacy, A Soft Launch (WP)

By Anne E. Kornblut

The Washington Post, January 22, 2007

NEW YORK, Jan. 21 -- One day after declaring for president, Sen. Hillary Rodham Clinton (D-N.Y.) gave her first public glimpse of how she will run: as the mother of a daughter, as a serious student of policy and as a two-term senator from New York.

With minimal staff, no family members and not even a sound system to amplify her remarks, Clinton appeared on Sunday at a colorless community clinic in Manhattan to announce a piece of health-care legislation, her first real outing since launching her presidential bid online. Despite a media crush that overwhelmed the participants, Clinton treated the event like a routine stop, acknowledging only during a question period at the end that she had finally decided to run.

DOJ_NMG_0119318

"I am worried about the future of our country, and I want to help put it back on the right course, so that we can work together to meet the challenges that confront us at home and abroad in order to secure a better future for all," Clinton said when asked why she wants to be president, embracing the 2008 campaign after more than six years of frenzied speculation about her plans.

"I believe that I am in the best position to be able to do that," she said. And she repeated her latest mantra: "I'm in to win. And that's what I intend to do."

Instead of campaign rhetoric, Clinton focused on the specific theme of health care for children, locking hands with a little girl who joined her onstage. In so doing, she signaled that she will use her uniqueness as a woman -- and more specifically as a mother -- to stake out her ground in the crowded presidential field at a time when Democrats across the board are putting children at the center of their imagery and message.

Earlier this month, Rep. Nancy Pelosi (D-Calif.) made a vivid impression by assuming the House speakership surrounded by a squadron of young grandchildren. Sen. Barbara Boxer (D-Calif.) recently questioned whether Secretary of State Condoleezza Rice, not having family of her own, could understand the stakes in Iraq.

In the past, such gestures have raised fears among some Democrats of being perceived as the "Mommy Party" -- a party of seemingly soft domestic issues such as child care and government entitlement programs, in contrast to a Republican Party that stood for national security. But focusing on children's health care was a consistent move for Clinton, who began her career working for the Children's Defense Fund, championed health care as first lady in the early 1990s and authored the book "It Takes a Village," about the way children are handled in society.

Using her first appearance as a candidate to present her domestic side -- rather than the tougher side she has displayed as a member of the Senate Armed Services Committee and on her recent trip to war zones in Afghanistan and Iraq -- suggested that, at least initially, Clinton would like to strengthen her appeal to women, who make up a large part of both the electorate and the Democratic Party.

Even the location had meaning: The event was held at the Ryan Chelsea-Clinton Community Health Center, named for the Chelsea and Clinton neighborhoods whose needs it serves, and echoing the name of Clinton's daughter.

"We really are thrilled that this health center is named so appropriately," she said.

Chelsea Clinton, who now works for a hedge fund, played a minimal role in her mother's 2006 Senate reelection campaign, even skipping the state nominating convention because of a work conflict. Although she did not appear with her mother Sunday afternoon, campaign advisers have said they expect her to play a much more significant part in the presidential race, where there are already a number of photogenic children, including the young families of Sen. Barack Obama (D-Ill.) and former senator John Edwards (D-N.C.).

"If you're a mother or a grandmother, then you have an automatic connection with an enormous cross section of society," said Stephanie Cutter, a Democratic strategist who worked for Sen. John F. Kerry (D-Mass.) in 2004 but is not currently aligned with a candidate. "Women make up more than 51 percent of the voting electorate, and they show up at the polls more often than men. If you can authentically connect with them on a very personal level, then that's very important."

Arriving at Sunday's event more than half an hour later than planned, Clinton was, for all her understatedness, met with an explosion of flashbulbs and a crowd of bewildered families who had been invited to meet her.

Dozens of camera crews crammed the back of the overheated room. Japanese broadcasters did live shots from the crowd. Secret Service agents kept close watch as staff members corralled irritated photographers in a pen. Frantic members of the health center's staff tried to make room for the invited guests, who were pressed against the walls without seats. Small children squirmed and cried.

Two little girls, Olivia and Camilla Harden, were brought onstage as beneficiaries of the federal health-care system Clinton sought to promote. "You know, if there is any doubt in anyone's mind about why we need health insurance for every child, take a look at Camilla and her little sister Olivia," Clinton said, indicating the two playful girls.

Clinton announced that she and Rep. John D. Dingell (D-Mich.) will sponsor legislation to expand the Children's Health Insurance Program to include more middle-class families. Invoking her daughter and husband, she said all parents should be able to give their children the comprehensive health care that she and Bill gave Chelsea.

Though it was her first appearance as a presidential candidate, the occasion was organized by her Senate staff and announced through her Senate office, suggesting that she will not run away from her perch but rather use it to her advantage. None of the numerous campaign staff members she has hired (not even Howard Wolfson, a New York-based consultant and a close adviser) was in evidence.

Nothing prohibits sitting lawmakers -- or presidents -- from campaigning in office, and taxpayer money can be used for travel and organizing as long as there is a reason related to their official duties.

DOJ_NMG_0119319

If anything, Clinton seemed to be following the mold of her last Senate campaign, in which she worked methodically to raise money and build support. Throughout that campaign, which cost her more than $30 million to win 67 percent of New York, Clinton emphasized smaller appearances, especially upstate, appearing with groups of voters rather than at massive, flashy rallies.

Her event on Sunday felt like an extension of that campaign -- except for the context.

Clinton Confident In Her 2008 Prospects (AP)

By Beth Fouhy

AP, January 21, 2007

Sen. Hillary Rodham Clinton expressed confidence Sunday in her presidential prospects and said she awaits a spirited contest for the 2008 Democratic nomination.

"I'm looking forward to it. It'll be a great contest with a lot of talented people and I'm very confident. I'm in, I'm in it to win and that's what I intend to do," she said after her first public appearance since announcing her candidacy Saturday.

Clinton's comments came during a visit to a Manhattan community health clinic, where the New York senator was promoting a federal children's health-care program.

Clinton said she would introduce legislation to expand the Children's Health Insurance Program to all families who need it, regardless of income. Aides said Clinton was determined to attend to her Senate duties throughout the campaign.

Reflecting her new status as a leading presidential contender, the room was packed with media — some two dozen television camera crews jockeyed for position with scores of reporters from as far away as Germany. Photographers waited outside in chilly temperatures for over an hour to snap pictures of Clinton's arrival.

Clinton said she decided to run after talking to family, friends and supporters since her re-election in November.

"It was a thorough review for me about the problems we confront in the country, the particular strengths and talents I would bring — both to the race and the White House," Clinton said.

"I concluded, based on the work of my lifetime and my experience and my understanding of what our country has to confront in order to continue to make opportunity available to all of our citizens here and to restore our leadership and respect of America around the world, that I would be able to do that — to bring our country together to meet those tough challenges," she said.

The former first lady answered questions after promoting the CHIP legislation. She appeared onstage gripping the hands of 4-year old Olivia and 2-year old Camilla Harden, whose parents said they relied on CHIP for their daughters' health care. The girls looked bewildered as hundreds of flashbulbs popped and cameras whirred throughout the room.

"It's simply wrong for any child to lack health care in America. That's where we start," Clinton said.

Earlier Sunday, one of her White House rivals said Clinton is the favorite right now for the Democratic nomination but added that the party is a "lifetime" away from making its 2008 choice.

"I think she's incredibly formidable and has got to be the front-runner and the odds-on pick right now. But this is a marathon. There's a long way to go," said Sen. Joe Biden, D-Del.

The former first lady joined the race on Saturday, hoping to become the first female president.

A crowded field of Democratic candidates is led by Clinton, Illinois Sen. Barack Obama and 2004 vice presidential nominee John Edwards. New Mexico Gov. Bill Richardson jumped in Sunday.

A Washington Post-ABC News poll released Sunday showed Clinton was the favorite of 41 percent of Democrats, more than double the support of any of her rivals.

Clinton made her announcement on a video posted Saturday on her Web site. Obama said last week he was setting up a committee to raise money and gauge support for a run.

Former GOP House Speaker Newt Gingrich, who is considering a 2008 bid, said he thought Obama "forced Senator Clinton's hand by weeks. I mean, he has gained ground so rapidly that I think she sort of thought she had to remind her friends she was around."

Gingrich said Clinton "can raise far more resources than any other Democrat, probably raise more resources than all the other Democrats combined. And you'd have to say, given those assets, that she has a six-out-of-10 chance or better of being the Democratic nominee."

Biden appeared on "Fox News Sunday." Gingrich was on "Meet the Press" on NBC.

Clinton Opens Her Campaign With Health Insurance Plan (NYT)

By Patrick Healy

The New York Times, January 22, 2007

DOJ_NMG_0119320

With a 4-year-old girl clutching her hand, Senator Hillary Rodham Clinton began her newborn presidential campaign yesterday at a Manhattan health care clinic, announcing legislation that would significantly expand federal health insurance for Americans under age 18.

Mrs. Clinton said her husband, Bill, and their daughter, Chelsea, would play “support system” roles for her, and she pledged to continue protecting New York’s interests in Washington even as she campaigns in Iowa and New Hampshire.

She said she wanted to be president because she was “worried about our country” and wanted to “put it back on the right course.”

She made no reference to the other seven Democratic candidates, other than to say the race would be a great contest and that “a lot of talented people” were running.

The visit to Ryan/Chelsea-Clinton Community Health Center, which is just blocks west of Broadway (and is named after two neighborhoods it serves), was highly scripted political theater.

Reminiscent of the scene this month when Representative Nancy Pelosi became the first woman to be speaker of the House, children surrounded Mrs. Clinton and climbed over their parents in the audience. The event was intended to convey both her policy smarts and her warmer maternal side — a combination new to presidential primaries.

During most of the half-hour event, a 4-year-old girl named Camilla Harden, a beneficiary of the program, clutched Mrs. Clinton’s left hand. Eventually Camilla began scampering around with her sister, Olivia, 2. Every time Mrs. Clinton patted or tickled the girls, the photographers’ cameras clicked madly.

Mrs. Clinton’s proposed legislation would renew the Children’s Health Insurance Program, which provides money to states to cover Americans under age 18 whose families earn too much money to qualify for Medicaid. The 10-year-old program, which now covers four million children, is to expire this fall. Representative John D. Dingell, Democrat of Michigan, plans to introduce a similar bill.

Mrs. Clinton’s legislation would raise the income eligibility limit so that more children could enroll; in New York, a family of four earning $75,000 would qualify. And the bill would allow any family, as well as employers, to buy insurance.

“They’re trapped between the rising costs and the broken system, and we can help them get out of that trap,” Mrs. Clinton said.

Members of the senator’s staff said they were still working out the cost of the proposal. About 8.3 million Americans under 18 do not have health care, but about 70 percent of them are already eligible for Medicaid or for the program Mrs. Clinton seeks to expand.

Clinton's Camp Fires First Salvo (NSDY)

By Glenn Thrush

Newsday, January 22, 2007

WASHINGTON -- Sen. Hillary Rodham Clinton's pollster fired an opening salvo at Sen. Barack Obama and John Edwards yesterday, claiming their campaigns are "stalled or falling" -- and suggesting Obama isn't tough enough to withstand GOP attacks in 2008.

A day after Clinton announced she would run for president -- and win -- her campaign's chief strategist Mark Penn sent a memo to reporters intended to offset an avalanche of articles emphasizing Clinton's high disapproval ratings and questioning her electability.

"She is not just strong, but the strongest Democrat in the field," wrote Penn, referring to a new national poll showing Clinton with a commanding 20-plus-point lead over Obama and Edwards, the Democratic nominee as vice president in 2004.

In Manhattan yesterday, Clinton echoed that mantra, saying, "It will be a great contest with a lot of talented people and I'm very confident. ... I'm worried about the future of our country and I want to help put it back on the right course. I believe I am best-positioned to be able to do that and that's why I'm running."

She went on to say her daughter, Chelsea, and her husband, Bill, are "my greatest advisers."

But it was Penn who stated that no other Democrat is tough enough to beat back Sen. John McCain or former New York City Mayor Rudolph Giuliani.

In a clear reference to Obama's lack of political experience on the national stage, Penn wrote: "Some of the commentators look at the ratings of people who have not yet been in the cross-fire, and say they might have a better chance. Recent history shows the opposite."

He then set his sights on Sen. John Kerry and former Vice President Al Gore, who also might run in 2008. "The last two Democratic presidential candidates started out with high favorable ratings and ended up on Election Day -- and today -- far more polarizing and disliked nationally," said the pollster, who cut his teeth on President Bill Clinton's 1996 re-election campaign.

An Obama spokesman had no comment. Attempts to contact Edwards, Kerry and Gore weren't successful.

DOJ_NMG_0119321

Obama announced the formation of his exploratory panel Tuesday but didn't get a boost in the polls. Clinton now holds a commanding 41-17 percent lead over the Illinois senator among Democrats and Democrat-leaning Independents, according to an ABC News/Washington Post poll taken before her announcement, and after Obama's Jan. 16 campaign kickoff.

Strikingly, Clinton did even better among black Democratic voters, amassing a 26-point lead over Obama. "Hillary's Democratic primary support is climbing, while others are stalled or falling," crowed Penn.

Clinton isn't doing nearly as well in early primary and caucus states, particularly Iowa, where she trails Obama, Edwards and ex-Iowa Gov. Tom Vilsack.

Clinton is planning her first trip to that state next weekend, according to a news report.

Penn chalks up Clinton's poor showing in Iowa to her absence and lashed out at candidates who have made frequent stops in the state. "While some candidates have been in Iowa and New Hampshire for years, running as permanent presidential candidates, Hillary has been working hard as a senator for New York," Penn wrote.

Staff writer Reid J. Epstein contributed to this story.

Hillary Is In (WP)

The Washington Post, January 22, 2007

HILLARY RODHAM Clinton's announcement Saturday that she is entering the Democratic presidential race is not a surprise, but that doesn't take away from its significance. There has been a flurry of justifiable excitement over Sen. Barack Obama (D-Ill.), but Ms. Clinton's candidacy is equally momentous: Never before has there been a female presidential contender with such a strong prospect of winning the White House. As with Mr. Obama, that is a development to be welcomed by Americans of both parties.

Ms. Clinton enters the Democratic race as the immediate front-runner, with impressive experience in her husband's White House and on her own in the Senate and with an unmatched political operation. She is a disciplined campaigner with a broad grounding in domestic and foreign policy. She also has $14 million in the bank and the proven ability to harvest millions more.

But if Ms. Clinton begins with formidable assets, she also faces formidable challenges. One involves the Democratic base and its unhappiness with her position on the war in Iraq. Unlike Mr. Obama, who wasn't in the Senate at the time but made his opposition clear, Ms. Clinton voted to authorize the war; she has been more reluctant than some of her Democratic rivals, most notably the 2004 vice presidential nominee, John Edwards, to renounce that backing or to call for immediate departure of the troops. "I am cursed with the responsibility gene," Ms. Clinton told the New York Times in an interview upon returning from Iraq last week. "You've got to be very careful in how you proceed with any combat situation in which American lives are at stake."

More than a little self-serving, perhaps, but Ms. Clinton's approach is, in fact, more responsible than those of some of her opponents. While this is good policy, it could be risky politics, especially in states that hold early primaries. The trick for Ms. Clinton will be to navigate the primary process on the war and other issues in a way that attracts, or at least assuages, liberal voters while not casting her as a poll-driven panderer or locking her into positions that could complicate a general election campaign.

A second and somewhat contradictory issue for primary voters is the matter of Ms. Clinton's "electability": Is she such a polarizing figure, with such high negatives (44 percent in the latest Washington Post-ABC News poll, compared with 29 percent for Mr. Obama) that she would be at a disadvantage in the fall campaign? The question about Hillary Clinton may be not so much whether a woman can win the presidency but whether this woman can.

The Clinton campaign confronts this problem directly on its Web site. Chief strategist Mark Penn argues that the candidate's poll ratings are strong, that she has demonstrated in New York the ability to win over voters in Republican areas and that she is "the one potential nominee who has been fully tested." That may be true, but for Hillary Clinton, the toughest test is still ahead.

How Obama vs. Clinton Shapes Up (WP)

By E. J. Dionne Jr.

The Washington Post, January 22, 2007

Three differences and three similarities will define the contest between Hillary Rodham Clinton and Barack Obama.

The most important difference lies in where their respective political journeys began. After her early work as an advocate for children, Clinton came to political maturity in the South as part of her husband's efforts to rescue the Democratic Party from its low point in the 1980s. She was shaped by her party's need to win back moderate and conservative voters who had strayed to Ronald Reagan's banner.

DOJ_NMG_0119322

The resulting Clinton project was a brilliant top-down effort to shape new Democratic ideas that would appeal to Southern whites and the Northern working class. This explains why both Clintons were drawn to the centrist Democratic Leadership Council, far more an elite policy shop than a grass-roots organization.

In a 2002 speech, Clinton signaled her respect for this approach by praising Al From, the DLC's founder and chief executive, for understanding "from the very beginning . . . that the right ideas were more important even than improving technology, organization or fundraising." Both Clintons have employed Mark Penn, the premier New Democratic pollster who is incessant in his efforts to locate the political center.

Obama, by contrast, began his political life as a community organizer in inner-city Chicago. His earliest experiences were of a bottom-up politics mobilizing the poor and the marginalized. This had the paradoxical effect of giving some of his ideas a decidedly progressive and activist tilt and others a more conservative tinge.

Consider two statements he made in 1997, shortly after his election to the Illinois Senate. On the one hand, Obama noted that welfare recipients "generally are not represented down here in Springfield," the capital, and that his job was to stand up for them.

But the organizer's emphasis on local and community responsibility sounded quite traditional when he declared the same year that "though we may be lobbying for more school funding, it's also important for us to bring education into the homes and ensure parents are checking children's homework, turning off the television, teaching common courtesy."

In keeping with his grass-roots background, Obama's campaign for the 2008 Democratic presidential nomination kicked off with a sense that it was a national movement, while Clinton, from the moment she announced her intentions on Saturday, commanded a well-established, well-staffed and well-financed national organization.

This second contrast can be exaggerated, since Obama will have ample financing. But the feel of the two campaigns is palpably different, with Obama enjoying an advantage on passion and Clinton on organization and discipline.

There are warnings for both candidates from the 1984 Democratic primaries, when Walter Mondale, the clear favorite, was nearly upended by the bright young upstart, Gary Hart. The danger for Clinton is that her front-running campaign will develop the habits of a cautious, inflexible behemoth. The bad news for Obama is that the solid Mondale had staying power and ultimately prevailed, though he lost in November.

There are, however, limits to the 1984 comparison, as a Clinton supporter noted over the weekend. Obama has been built up into a party savior a full year before the primaries -- he will not enjoy Hart's element of surprise -- even as expectations for Clinton have been defined downward by the incessant speculation about whether she can win.

Thus the third difference: Clinton, more than any other Democrat, has been both scarred and toughened by the partisan warfare of the past 15 years, while Obama is unscathed and untested.

This contrast was reflected in their announcement speeches. Obama attacked a politics that "has become so bitter and partisan" and pledged himself to "our common interests and concerns as Americans." Clinton spoke proudly of her ability to take on partisan foes. "I have never been afraid to stand up for what I believe in or to face down the Republican machine," she said. "I know how Washington Republicans think, how they operate and how to beat them."

Yet if Clinton and Obama present different profiles, they are, in certain respects, very much alike.

Both have displayed an unusually sophisticated and apparently genuine understanding of the role of religious faith in American politics. Both pride themselves on their ability, proven in their home states, to win over political moderates and voters not tethered to ideology.

And the woman who would become the nation's first female president and the man who would become its first African American president know how important the men and women of the white middle class will be to the outcome of the next election. Such voters will probably determine if either of them gets to become a national trailblazer -- and also if any other Democrat can find a way to get in the middle of their fight.

Anyone But A Bush Or A Clinton (LAT)

By James Burkee

The Los Angeles Times, January 22, 2007

HAVING REFUSED a third term as president, George Washington offered the nation a farewell address in 1796, urging Americans to cherish the Union and to avoid the "baneful effects" of political partisanship. Successors such as Thomas Jefferson warned against the formation of an "unnatural" aristocracy of men who inherited great fortunes and political office.

Both of these warnings have been overlooked in the debate over Hillary Rodham Clinton's 2008 presidential run. But if she secures the Democratic nomination, wins and serves two terms, by 2017 the United States will have been governed by either a Bush or a Clinton for 28 years. That's three decades governed not just by the same two families but much of the same supporting staff. As Dick Cheney is a name familiar to both Bush presidencies (as George H.W. Bush's secretary of Defense and

DOJ_NMG_0119323

his son's vice president), so too may a Hillary Clinton presidency resuscitate familiar names such as Harold Ickes, Paul Begala and James Carville.

And it might not end there. Former Florida Gov. Jeb Bush, encouraged by Republican leaders and the current president (who said, "I would like to see Jeb run at some point"), has not ruled out a White House bid or a vice presidential slot on the ticket in 2012 or 2016.

If Washington's caustic, partisan atmosphere is to change, the era of Bushes and Clintons needs to end in 2008.

Three times in American history have close relatives of former presidents won the office. John Quincy Adams, son of John Adams, lost the popular vote to Andrew Jackson in 1824 but won in the electoral college amid charges of a "corrupt bargain." Benjamin Harrison, grandson of William Henry Harrison, lost the popular vote to Grover Cleveland in 1888 and also suffered as a "minority president" and mere figurehead. George W. Bush lost the popular vote to Al Gore in 2000.

Recent polls suggest that a significant body of Americans, perhaps 40%, will not vote for Hillary Clinton under any circumstances — so it is unlikely that she could enter the Oval Office with a strong electoral mandate. The ironic upshot is that such a Hillary Clinton presidency — weakened by low approval and beset by partisan sniping — would mirror George W. Bush's presidency.

That the Bush's administration has been consumed by political partisanship comes as no surprise to students of history. From the time of John Quincy Adams — whose term in office marked the end of the Era of Good Feelings — the children, grandchildren and spouses of presidents engender exceptional hostility when they seek office themselves. For all their personal capacities, the latter Adams, Harrison and Bush — like Hillary Clinton — inherited their claims to the presidency. George W. Bush would not be president today were his name not George Bush, nor Hillary a senator from New York absent the Clinton name. This nation's traditional commitment to meritocracy inclines many to reject these "unnatural" aristocrats, who never garner widespread popularity.

Minority and bare-majority presidents are weak leaders because nothing undergirds presidential power like an election mandate. The strongest post-World War II presidents — Dwight Eisenhower, Lyndon Johnson and Ronald Reagan — were also its most popular. (Eisenhower and Johnson won at least 55% of the vote; Reagan polled just over 50% in 1980 with independent John Anderson in the race, then 59% in 1984.) Presidencies enveloped by partisanship — Harry Truman, Jimmy Carter and Bill Clinton — were made of men who won office on the barest of majorities or pluralities (Truman won 49.6% of the popular vote in 1948; Carter won 50.1% in 1976; Clinton won 43% and 50% in 1992 and 1996).

Pundits compare 2006 to the late Nixon years, with a country disillusioned by war and a deep distrust of its political leadership. In one of his last interviews, former President Ford lamented the "extreme partisanship that exists in the nation's capital today," suggesting that partisanship is even worse than in the post-Watergate era he inherited.

The nation needs today, as it got in Ford then, a president respected by both Republicans and Democrats who can restore trust in politics. It needs new faces and new ideas if it is to confront advancing crises of war, debt and entitlement reform. And it needs a president who can assume office in 2009 swimming in the political capital that only a mandate can bring. The nation needs a candidate who can win 55% or more.

And that will not happen with a Bush or Clinton on the ballot.

Campaign Allegation A Source Of Vexation (WP)

By Howard Kurtz

The Washington Post, January 22, 2007

Days after Barack Obama jumped into the presidential sweepstakes, he was hit with a thinly sourced story from his past--39 years in his past, to be exact.

The allegation, by a conservative magazine, raised questions about whether the Illinois senator had been schooled in Islamic radicalism when he was all of 6 years old.

Insight, a magazine owned by the Washington Times, cited unnamed sources in saying that young Barack attended a madrassah, or Muslim religious school, in Indonesia. In his 1995 autobiography, Obama said his Indonesian stepfather had sent him to a "predominantly Muslim school" in Jakarta, after two years in a Catholic school -- but Insight goes further in saying it was a madrassah and that Obama was raised as a Muslim.

Fox News picked up the Insight charge on two of its programs, playing up an angle involving Hillary Clinton. The magazine, citing only unnamed sources, said that researchers "connected" to the New York senator were allegedly spreading the information about her rival for the Democratic presidential nomination.

The New York Post, which, like Fox, is owned by Rupert Murdoch, also picked up the article, with the headline: " 'OSAMA' MUD FLIES AT OBAMA."

DOJ_NMG_0119324

Thus, in the first media controversy of the 2008 campaign, two of the leading candidates find themselves forced to respond to allegations lacking a single named source.

"The allegations are completely false," says Obama spokesman Robert Gibbs. "To publish this sort of trash without any documentation is surprising, but for Fox to repeat something so false, not once, but many times is appallingly irresponsible. This is exactly the type of slash-and-burn politics the American people are sick and tired of." Obama, aides note, is a Christian and belongs to a Chicago church.

Clinton campaign officials were relieved that what they regard as an absurd allegation was not picked up more widely. "It's an obvious right-wing hit job by a Moonie publication that was designed to attack Senator Clinton and Senator Obama at the same time," says Clinton spokesman Howard Wolfson. Insight, like the Washington Times, is owned by a company controlled by the Rev. Sun Myung Moon. No one answered the phone at Insight's office yesterday and its editor did not respond to an e-mail request for comment.

On the morning show "Fox & Friends" on Friday, co-host Steve Doocy said that madrassahs are financed by Saudis and teach a radical version of Islam known as Wahhabism, though he said there was a question whether that was the curriculum in the late 1960s, when Obama attended the school. Another co-host, Gretchen Carlson, said that those on the show weren't referring to all Muslims, only "the kind that want to blow us up."

After the show, Obama aides complained to Fox about what the campaign deemed inflammatory language.

Bill Shine, Fox News's senior vice president for programming, says the "Fox & Friends" hosts "did say repeatedly, over and over, that they were getting this from Insight magazine." He says the show will provide a "clarification" today by including the comments of Obama campaign spokesmen. He says the morning program is "an irreverent show" on which the hosts sometimes express their opinions.

On Friday afternoon, John Gibson, host of Fox's "The Big Story," began a segment this way: "Hillary Clinton reported to be already digging up the dirt on Barack Obama. The New York senator has reportedly outed Obama's madrassah past. That's right, the Clinton team reported to have pulled out all the stops to reveal something Obama would rather you didn't know -- that he was educated in a Muslim madrassah."

Reportedly?

Gibson's guest, Republican strategist Terry Holt, a former Bush campaign spokesman, said that the effort could be "a despicable act by an absolutely ruthless Clinton political machine. We know that they are capable of doing this." But if the information wasn't linked to Clinton, Holt said, she should "disavow" it. There was no Democratic strategist on the segment, but Gibson did read an Obama campaign statement dismissing the article as false.

Gibson portrayed the controversy as an example of hardball politics: "Picture the commercial, 'Hi, I'm Barack Obama. Funny thing happened to me on my way to the White House, somebody discovered I didn't go to a kindergarten, I went to a madrassah.' This is how the big kids play politics."

Asked if Fox News was promoting unproven rumors about Obama and Clinton, as some liberal blogs have charged, Shine says: "Some on the left might think that. I don't think anybody should read anything into that."

There was a time when major media outlets refused to touch unsubstantiated allegations. When Gennifer Flowers sold her account of an affair with Hillary Clinton's husband to the Star tabloid in 1992 -- allegations that turned out to be true, at least in part -- some news organizations went with it and others shied away for days. These days, the time elapsed between a flimsy charge from some magazine or Web site and amplification by bigger media outlets is often close to zero.

Clinton, meanwhile, faces a longer-range problem with the media. Unlike Obama, whose out-of-nowhere candidacy has been celebrated by reporters and columnists alike, the former first lady has drawn skeptical coverage from the mainstream press, stemming from the battles of her husband's administration.

"She will have to show people that she is not the person her critics describe: radically liberal, ruthlessly ambitious, or ethically compromised," the New York Times said yesterday.

"She will also have to overcome her reputation for political calculation, an inconsistent stump presence and her intimate ties to the polarizing events of her husband's White House tenure," the Los Angeles Times said.

"Clinton is known for her upright bearing and her bare knuckles," the Chicago Tribune said. At this stage, at least, many journalists seem determined to take the Democratic front-runner down a peg or two.Don't Blog About Us!

London's Daily Telegraph has decided that this blogging thing is fine -- up to a point.

Hours before Saddam Hussein's execution, Toby Harnden, the paper's Washington correspondent, filed a story saying that the former Iraqi dictator "will spend the last moments of his life hooded" before he is hanged. Hussein declined the hood, but a rewritten Telegraph piece for the final edition repeated the erroneous detail.

In a blog posting on his paper's Web site earlier this month, Harnden responded to a reader who said, along with some unprintable words, that his story was "full of inaccuracies and made-up background."

DOJ_NMG_0119325

"You're right that writing about Saddam's hanging before it happened was not my finest hour. It was one of those tricky journalistic challenges . . . The doomed dictator remains forever hooded in the headline. Hey, ho," he wrote.

Harnden said nothing about the paper's management, except to praise "my industrious online colleagues" for updating his story. Still, the Telegraph responded by taking down the posting and warning its staff. According to the Guardian, the Telegraph's Web editor wrote: "Please avoid blogging about your relationship with your employer, whether the Telegraph Media Group as an entity, 'the desk,' or 'my boss,' even in jest. Such comments are frequently misconstrued and can easily backfire. Think carefully before blogging about journalists' 'tricks of the trade.' "

Says Harnden: "The whole episode was pretty unfortunate. I think some lessons have been learned about the nature of blogging and its relationship to traditional reporting as we all try to grapple with the new online world."

Michelle Obama: Reluctant Political Spouse (NSWK)

By Karen Springen And Jonathan Darman

Newsweek, January 22, 2007

Jan. 29, 2007 issue - Michelle Obama has always been a creature of discipline and decorum. As a young lawyer, she initially brushed off advances from her future husband, Barack Obama, because they worked at the same firm. A reporter, visiting her Chicago home in 2004, noticed a to-do list for her two daughters that included time for "play." She is in bed most nights by 9:30 and rises each morning at 4:30 to run on a treadmill. "She'll sacrifice the sleep so she can make sure she has that time," says Susan Page, a friend since Harvard Law School. "Once she has a plan, she goes for it."

Now, however, Michelle's once orderly life is tending toward the chaotic, in the form of a presidential campaign, and no amount of planning can stave it off. Last week her husband's name was on the lips of every Democrat from Boston to Berkeley after he announced he was forming a presidential exploratory committee. But Michelle was out of sight—the Obama campaign declined to make her available for this story—even as many Democrats wondered what she thought of her husband's big leap. After all, she has made no secret of her ambivalence about being a political spouse: "If politics were my passion," she told the Chicago Tribune in 2004, "I'd find out how to do it and make it work." In the weeks before his announcement, Obama seemed to stiffen when asked what his wife thought of a presidential run.

The hesitant spouse is a well-known character in presidential politics, and Michelle has never been quite as conflicted as some of her comments might suggest. From the earliest days of her marriage, she has provided crucial support to Barack's political life—introducing him to the Chicago neighborhood where he would make his political name and sharing his passion for work in that community. Her friends say Michelle has long seen great things in her husband's future. "If you say to Michelle, 'Are you surprised [by the attention]?' " says her friend Valerie Jarrett, "she would say, 'The American people are beginning to see what I always knew—he's an extraordinary man born to lead'."

To her friends, Michelle seems to manage public and private pressures with effortless poise. She is intimately involved with her husband's work, reading drafts of his major speeches and tweaking his big ideas and little punctuation choices alike. But she also works full time as vice president for community relations at the University of Chicago Hospitals and juggles the schedules of her two daughters, Malia, 8, and Natasha, 5. "Wherever we're at, people come up to her [and say], 'I love your husband'," says her friend Yvonne Davila. "She gives them hugs ... She makes it seem kind of flawless."

Michelle has long had a talent for making hard work look easy. Growing up in a working-class family on Chicago's South Side, she logged long hours practicing the piano, scrawled short stories in a spiral notebook and excelled in school, skipping the second grade. Her academic performance got her into Princeton, and friends can't recall her chafing at being one of a handful of African-Americans on campus. One spring break, she and her two roommates tagged along with a Jewish student group on a ski trip to Vermont. "We were three black women on a trip with all of these white Jewish kids," one roommate, Angela Acree, recalls. "We stuck out like sore thumbs. But we had a great time."

After college, Michelle entered Harvard Law School, and then joined the Chicago law firm Sidley & Austin. In 1988, she was charged with mentoring a summer intern named Barack Obama. Attraction was instant, but Michelle thought an office romance unseemly. Still, Barack pursued his blushing adviser. "I think it would be OK if you went to lunch with this guy," a Sidley colleague, Kelly Jo MacArthur, remembers telling Michelle.

Lunch they did, and before long they were partners in all things professional and personal. In Chicago, they quickly stood out as an attractive, talented couple. Inside, though, it was a time of turmoil for Michelle; the death of her father in 1990 and the sudden death of another college roommate, Suzanne Alele, at only 25, compelled her to take stock of her own life. She decided to turn her back on Sidley and its hefty salary: "I wanted to have a career where I was thrilled to wake up," she told a reporter in 2004.

Public service seemed like a good fit. In 1990, Michelle interviewed for a position under Jarrett, then the deputy chief of staff to Chicago Mayor Richard Daley. Jarrett offered her the job on the spot. Michelle was flattered but had one request: "I need

DOJ_NMG_0119326

you to meet with my fiancé," she said. "I'm making a huge career decision ... He's nervous and he wants to know who's looking out for me." (Jarrett passed the test.)

Meanwhile, Michelle was helping to open doors for Barack. The child of a Kenyan father and a white, Kansan mother, Obama has spoken openly about his struggle as a young man to identify with the black urban American experience. After marrying Michelle in 1990 and settling on the South Side, he gained entree to one of the strongest African-American enclaves in the country. "There are a lot of successful people who have a hard time working in the community because they're not from there," says John Rogers, a Chicago investment banker and a friend of Michelle and her brother, Craig Robinson, since college. "Craig and Michelle can do it because it's where they come from."

Michelle's community ties came in handy when Barack, by then a state senator, ran for the U.S. Senate in 2004. He faced a primary dominated by some of the Democratic Party's most formidable political families. Barack won the nod thanks to the support of influential African-American business leaders, some of whom had closer ties to Michelle than they did to him. As chair of the Chicago Stock Exchange, Jarrett, Michelle's old boss and close friend, was among the most powerful African-American women in Chicago and served as finance chair of the Obama campaign.

After Barack's election, Michelle fretted publicly over what all his time away in Washington would mean for their family. But friends say that, after an exhausting Senate campaign, she cherished the relative calm of life back home in Chicago. Even now, she is still trying to keep things low key. A day after her husband's announcement last week, she celebrated her 43rd birthday at home in Chicago over bowls of chili with a friend and each of their children. "I'm sure they'll try to shelter the girls as much as they can," says Jarrett, "but some level of spotlight is inevitable." No question.

Handling that spotlight will be a challenge. In the past, Michelle has occasionally played tough enforcer with Barack in interviews but, as Nancy Reagan and Hillary Clinton can attest, voters prefer First Ladies who use a soft touch. The campaign has a careful program for introducing the Obama family to the American public in the weeks before and after his official announcement on Feb. 10. Hesitant or not, Michelle will be smiling for the cameras. Once she has a plan, she goes for it.

Obama: A Race Away From The Past? (NSWK)

By Ellis Cose

Newsweek, January 22, 2007

Jan. 29, 2007 issue - When Jesse Jackson ran for president in 1984, he resembled Barack Obama in some striking respects. A charismatic and compelling figure in his early 40s, Jackson leapt into the contest and forced America to wrestle with questions of political access and equal opportunity. In many important ways, however, Barack Obama is no Jesse Jackson—and that is a key to Obama's political appeal. Whereas Jackson was a fully formed public figure—with all the baggage that entails—Obama is a work in progress who has the ability to embrace nearly whatever qualities he chooses.

Before setting his sights on the White House, Jackson had been a major presence on the national stage for nearly two decades. He was "bloodied up from the civil-rights battle," as he told me last week, and already had won the allegiance of many blacks and the enmity of many whites.

Obama, in contrast, "did not come up through the ranks in our community," says Jackson. Instead he "fell out of the sky in Boston," a reference to how Obama was thrust onto the national stage after an electrifying speech at the 2004 Democratic National Convention. Obama would not dispute this. He sees himself as a "post-baby-boom politician" who represents something different from those people—black, white, other—who came before him. But he acknowledges his debt to them. It is a "testimony to the sacrifices and struggles of previous generations," to people like Martin Luther King Jr. and Rosa Parks, he told me last year during an interview in Kenya, that he is where he is today.

That Obama is somewhat removed from the civil-rights struggle, is not well known to much of its leadership and—having been raised largely in Hawaii by his white mother and her parents—does not have a typical up-from-the-ghetto story has led some to wonder what to make of him. In a much-discussed column in New York's Daily News, Stanley Crouch commented: "When black Americans refer to Obama as 'one of us,' I do not know what they are talking about ... Obama makes it clear that, while he has experienced some light versions of typical racial stereotypes, he cannot claim those problems as his own—nor has he lived the life of a black American." Joseph Lowery, a former chairman of the Southern Christian Leadership Conference, the organization that King led, argues that Obama's history should not count against him. "As we move further and further into the new century, we are not going to always be able to have people running for high office who are directly connected to the civil-rights movement," he says. He describes Obama as a "a very impressive young man" about whom he doesn't know enough.

Like much of the rest of America, in other words, civil-rights veterans wonder: who is Obama, really? They are also intrigued about Obama-mania and whether it "heralds, perhaps, the birth of a new day for fuller inclusion of blacks in the body politic," says Wade Henderson, head of the Leadership Conference on Civil Rights.

DOJ_NMG_0119327

Much about America has changed since Jackson's first run. A new generation has reaped the fruits of the civil-rights revolution. That is all for the good, says Jackson, as long as "civil-rights beneficiaries see their connection to the benefactors."

Obama clearly understands that connection. At the same time, he cannot afford to be seen as one constantly catering to the civil-rights establishment. And he thinks black Americans know that. The black community, he observed during one conversation, is much more sophisticated than many people suspect. It has supported him, he pointed out, even though he speaks a "very universal language."

Obama certainly does not have a lock on the black vote. Many blacks have political ties to, or feel deep affection for, the Clintons, and will therefore tilt more toward Hillary than Obama. Al Sharpton also has his fans. If he runs again, as he's hinted he might, he could draw votes from Obama—though not very many, it seems. To win, Obama will have to put together the type of "universal" coalition no black politician has ever done at the national level. (According to the new NEWSWEEK Poll, voters give Obama a 46 percent to 44 percent edge over GOP Sen. John McCain; Hillary is up 48 to 47. Both Dems lose by a hair to Rudy Giuliani.) One thing that makes him so appealing is his bedrock faith that that is possible, that he does not need to pit one group against another, that politics can be a constructive and unifying force. Of course, we have heard that message before. Now we have to see if Obama can deliver on it.

Presidential Pickings (USNEWS)

By Michael Barone

U.S. News and World Report, January 22, 2007

The single most glaring defect in our mostly admirable political system is the presidential selection process. You can point to other defects—the equal representation of the states in the Senate, judicial usurpation of decision making on sensitive issues—but the downside risks are greater in the selection of the one official who is far more powerful than any other. So what's wrong with it?

It starts too early, takes too long, and ends too abruptly. Thirteen months from today—and 10 months before the general election—we will probably know the nominees of both parties. Some candidates have been busy running most of last year, and now they're busy announcing their exploratory committees. So anyone who doesn't want to devote two or three years to nonstop fundraising and campaigning is ruled out. That would have eliminated past candidates like Dwight Eisenhower.

Then the races for the nominations tend to end abruptly. Iowa caucusgoers and New Hampshire primary voters—fewer than 350,000 people in a nation of 300,000,000—effectively chose the Democratic nominee last time, a choice many Democrats now regret. In 2000, 573,000 South Carolina primary voters effectively chose George W. Bush over John McCain.

It excludes many serious candidates. There's an assumption that anyone who hasn't held elective office is ineligible, which means that almost no one with actual working experience in the White House runs. The exceptions for 2008 are Hillary Rodham Clinton and, if he runs, Al Gore. Talented White House veterans like Hamilton Jordan or James Baker aren't considered presidential timber; the exception to the rule was Colin Powell, but he didn't run. Instead there's an assumption that just about any U.S. senator, no matter how bereft of managerial experience, is eligible. John Edwards used the proceeds from a $25 million lawsuit to win a Senate seat and has spent most of his time since running for president. Barack Obama won a Senate seat over weak opponents and delivered a stirring speech at the 2004 Democratic National Convention, and now he is off and running, too. Edwards and Obama are, in different ways, mesmerizing speakers and may turn out to be good managers as well. But we have little way of knowing whether they will.

It gives too much power to Iowa and New Hampshire. For years I've thumbed through the Constitution, looking for the provision that says that Iowa and New Hampshire come first. I haven't found it yet. Neither state, as Michigan Sen. Carl Levin has pointed out, is remotely typical of the nation. For this cycle, Democrats are adding early contests in Nevada and South Carolina. They're not typical either: The Las Vegas unions are the big power bloc in Nevada, and about half of South Carolina's Democratic voters are black. A better system would be the Delaware plan, which Republicans considered briefly but rejected. It had four rounds of primaries, with the smallest states voting first, so that no one could clinch a nomination till the last round. But no politician with any thought of ever running for president (i.e., almost no politician) will risk dissing Iowa and New Hampshire.

It gives one person the power to determine who is vice president. We take it for granted that the presidential nominee, and he or she alone, selects his or her running mate. But that's crazy. Ever since Jimmy Carter delegated real work to Walter Mondale, the vice presidency has been a serious office. A vice president can become president anytime and usually becomes a serious presidential candidate. We devote all manner of time and trouble to selecting presidential nominees, then toss the choice of their possible successor to one person.

So what can we do? The best answer I come up with is: Muddle through. We are not going to have a national primary or the Delaware plan or an open convention. Voters should keep in mind that character as well as issue positions is important. They should study all available clues about the managerial abilities of candidates like Mitt Romney, whom they haven't seen in action

DOJ_NMG_0119328

(as they have seen Rudy Giuliani). This is the first election in 80 years in which it's clear that the incumbent president and vice president are not running. The system, for all its defects, has mostly given us pretty good presidents. Let's hope America's luck holds.

Schumer: How Dems Can Win White House (NSWK)

By Chuck Schumer

Newsweek, January 22, 2007

Jan. 29, 2007 issue - I am blessed. I love my job. I wake up every Monday morning excited about the week ahead. The one downside is how consuming it is. I don't have much time for leisure activities. So whenever I can, I fit in a nice bike ride through New York City. It's good exercise, it helps me relax, and it's a great time to noodle on difficult problems. In the fall of 2005, I somehow found time for a late-afternoon bike ride. It was just about halfway between the 2004 and 2006 elections. As I pedaled around Brooklyn and Queens, incognito behind my sunglasses and helmet, I was consumed by the question that Democrats in every part of the country are asked almost every day: What does the Democratic Party stand for? How can it help the middle class and those struggling to make it there?

From the Great Depression through the 1960s, the Democrats were the party of the middle class. We won by talking about the social safety net, neglected groups and a stronger federal government. In 1980, Ronald Reagan shifted that mantle to the Republicans. The country was focused on crime, taxes and America's place in the world. By 2005, Americans had new concerns. Technology had created a Brave New World: terrorism, global competition, longer life. Democrats sometimes had a difficult time speaking in a convincing way on these issues. Republicans didn't have that problem. They figured out specific issues that connected to their deeply held values, defined themselves clearly by those issues and then stood by them unequivocally. In 2004, they did it with eight words: War in Iraq. Cut taxes. No gay marriage. Those eight words sum up the reasons for George W. Bush's re-election.

"What are our eight words?" I thought.

Biking through New York's boroughs in 2005, I thought about some old friends, Joe and Eileen Bailey. Though they are imaginary, I frequently talk to them. To me, they represent the hardworking and often-ignored families who are not tuned in to special-interest newsletters or editorial pages, but want a little something more from their government and their leaders.

In 2006, Democrats did much better with people like Joe and Eileen, but only because of Bush's mistakes. We had our own eight words: No war in Iraq. No corruption. Bad economy. But these eight words did not describe our own vision; they were the negative image of the Republican message. In 2006, they helped us win back Congress. In 2008, we will need to do more to persuade the Baileys to again trust the Democratic Party.

As we head toward the election, the competition between the two parties is very close. As in 1932 and 1980, the electorate is up for grabs. Reagan Republicanism, which the middle class has supported since 1980, is under strain. The average middle-class person is looking to the government once again. Still, it won't matter if Democrats don't fill the void. We need our own eight words.

I know what you're thinking. "Hurry up, Schumer! What are the eight words that will save the Democratic Party?"

The truth is, the eight words are far more elusive than you might imagine.

Believe me, I've spent two years trying to find them. Slogans are easy. Empty promises, like "better health care," are easy. But they don't stand for anything; they're typical political b.s. To generate our words, we need concrete ideas that clearly and concisely communicate our values. It's not yet possible for Democrats to boil down our core ideology into eight words. That's not a knock on Democrats. It took Republicans years to develop theirs. The eight words are the end result, not the beginning of the process.

In part of my book, "Positively American," I try to start the process by presenting 11 goals, which I call "The 50 Percent Solution." Taken together, these ideas could help define what Democrats stand for. In the book, I explain each goal, how we can achieve it and why it is important to the Baileys. For example, Democrats should commit to increasing reading and math scores 50 percent by dramatically increasing federal involvement, and funding, in public schools. We should increase the number of college graduates by 50 percent. We should call for reducing illegal immigration by at least 50 percent and increasing legal immigration. We should cut our dependence on foreign oil by 50 percent, and reduce cancer mortality, abortions and childhood obesity each by 50 percent. We should increase our ability to fight terrorism by 50 percent. Sounds like a lot. It is. Together, we can do it—and more. Families, from Appleby to Bailey to Zutter, deserve no less.

How Deep A Distaste For Politicians Who Waffle? (WP)

By Shankar Vedantam

The Washington Post, January 22, 2007

When George W. Bush takes the podium tomorrow night to deliver his sixth State of the Union address, what are the chances he will say this? "The war in Iraq has been one gigantic mistake. I am sorry I got us into this mess. I am going to bring the troops home right away."

Even those who think anything is possible in politics would have to say the odds of such a speech are close to zero. Bush's position on Iraq has been unyielding, even as the original reasons for the war have been discredited and U.S. troops have become mired in a vicious sectarian struggle. Bush has held fast to his views even as public support for the war, and for him personally, has fallen to near-record lows.

All of this raises a puzzle: Through much of Bill Clinton's presidency and in the last presidential election, voters said they were turned off by leaders who waffled. Americans say they want consistency from their president, not someone who panders to them by checking opinion polls before taking a stance on important issues.

One of the most effective Republican ads in the 2004 election, in fact, showed Sen. John F. Kerry (D-Mass.) windsurfing back and forth across the TV screen as an announcer talked of how Kerry had changed his views on various topics. (For reasons that probably have to do with Internet mischief-makers, a Google search yesterday for the term "waffle" produced John Kerry's official Web site as the top link.) In Bush, Americans have found a leader who gives them consistency in spades. If people really admire consistency, how is it that Bush's ratings have fallen so low?

"It is nice in theory to admire someone's consistency, but if that person has the power to effect change and affect you, then you may not admire it so much," said Hillary Hoffman, a psychologist at the University of Miami.

Experiments that explore the effects of consistent and inconsistent political stands on voters have produced a range of results. But one theme that emerges is that people think they admire consistency more than they actually do.

Hoffman once asked groups of people whether they would vote for a politician named Johnson. One group was told Johnson supported private ownership of handguns, while the other was told he was for gun control. The groups were later asked to rate the politician after a statement he supposedly made six months later. Some volunteers were told Johnson had reversed his position, while others were told he had been consistent.

The psychologist found that it mattered less to both pro-gun and anti-gun volunteers whether Johnson was consistent than whether he agreed with the volunteers' own views about guns.

When voters say they want consistency from a politician, in other words, they may really mean they want a leader who consistently agrees with them.

"Holding fast to an unpopular position . . . will gain a politician virtually nothing in the eyes of the public," concluded Hoffman and her colleague Charles Carver. "Personal respect for consistency appears very unlikely to translate into votes."

Psychologist Kevin McCaul at North Dakota State University said it is possible that people evaluate consistency differently depending on whether an issue is emotional. On a hot-button subject such as Iraq, for example, he said consistency probably matters less than whether the politician's final stance matches voters'.

"If you waffle on issues which people don't care about, then they don't care where you end up, they just care that you are waffling," McCaul said. But if voters are passionate about some topic -- abortion, for example -- then they primarily care about where a politician stands on that topic now. On issues we care about deeply, in other words, we are less interested in whether a leader's views are authentic and more interested in the bottom line -- what the leader is going do about that issue now.

But didn't Kerry pay a price in the last presidential election for waffling on the hot-button issue of the war in Iraq? McCaul argued that Kerry lost not because he was waffling but because the country was bitterly divided over the war in 2004. Had public opinion then been as sharply critical as it is now, McCaul said voters would have ignored Kerry's waffling -- or even welcomed it -- because most voters would have agreed with Kerry's critical stance on the war.

If the psychologist is right, Sen. Hillary Rodham Clinton (D-N.Y.) is unlikely to pay a political price in the 2008 presidential election for strongly supporting the Iraq war early on and for being critical of it now, so long as public opinion remains against the conflict.

One study McCaul conducted showed North Dakota voters and legislators thought consistency in a politician was very important. But this study and several others, McCaul and his colleagues concluded, "simply fail to support the intuitive views of many voters and politicians alike that the average voter values, above all, the politician who 'sticks to his guns.' "

None of this means consistency does not matter. Politicians who change their minds every other week will leave voters unsure of what they will actually do. But it appears we are willing to forgive inconsistency in politicians if they switch their views once -- as long as the change brings their stance into alignment with our views.

After listening to McCaul, I told him I still thought consistency was very important in a leader.

The psychologist thought for a moment: "I am going to go out on a limb and say, 'no you don't. You just think you do.' "

DOJ_NMG_0119330

Before The Flood (opinion) (NYT)

By Jacques Leslie

New York Times, January 22, 2007

San Francisco

WHEN the 40-foot-high Kaloko dam collapsed on the Hawaiian island of Kauai last March, its reservoir released a 70-foot-high, 200-foot-wide, 1.6-million-ton wave that carried away 16 cars, hundreds of trees and a cluster of houses, drowning all seven occupants. At least two bodies were swept three-quarters of a mile to the ocean; four were never recovered.

It is tempting to dismiss Kaloko's collapse as an isolated event, but given the perilous state of the nation's dams, it is more likely a harbinger. In 2005, the American Society of Civil Engineers gave United States dams a D, a grade that is still justified two years later.

For starters, the nation's dam stock is rapidly aging. Most dams need major repairs 25 to 50 years after they're built, and most United States dams are at least 25 years old; some, like the 116-year-old Kaloko, were built more than a century ago.

As dams age, their danger increases. This is a matter of not just advancing decrepitude, but "hazard creep" — the tendency of developers to build directly downstream from dams, in the path of floods that would follow dam failures. The result is that even though Americans now build few dams, more and more dams threaten people's lives. Chiefly for this reason, the number of dams identified in one estimate as capable of causing death and in need of rehabilitation more than doubled from 1999 to 2006, from around 500 to nearly 1,400. The civil engineers' 2005 report placed the number of unsafe dams much higher, at more than 3,500.

On top of that, dam safety officials are so overworked that in most states, they don't come close to carrying out all the inspections required by law. According to the engineers' society, the average state dam inspector is responsible for 268 dams; in four states the number exceeds 1,200. It is no coincidence that even though Hawaiian law requires dam inspections every five years, Kaloko was never inspected.

We don't even know how many dams the country possesses. Using one set of criteria, the National Inventory of Dams, maintained by the Army Corps of Engineers, places the number at 79,777, while the sum of dams inventoried by the states is more than 99,000. Even that number is questionable, since it includes suspiciously low counts from several states. In addition, state officials are constantly discovering previously uncounted dams during routine inspection trips. And if the definition of dams is broadened to include the smallest ones, the estimates are as high as several million.

Unlike, say, waterways and sanitation plants, a majority of dams — 56 percent of those inventoried — are privately owned, which is one reason dams are among the country's most dangerous structures. Many private owners can't afford to repair aging dams; some owners go so far as to resist paying by tying up official repair demands in court or campaigning to weaken state dam safety laws.

When the Kauai public works department ordered Kaloko's owner to stop grading a hilltop next to the reservoir in 1997, the local mayor interceded, instructing the responsible county engineer not to interfere; an investigation by a Hawaiian deputy attorney general published on Jan. 8 found that the owner then covered the earthen dam's emergency spillway with dirt, in the process weakening the dam's defenses.

Thousands of dams have been abandoned by their owners, and over time, title to them has become obscure — 12 percent of the dams in the Army Corps of Engineers' inventory have no known owner. As these dams become dilapidated, the states are left with the expensive task of repairing or dismantling them. Privatization advocates, take heed: this is a cautionary tale.

Climate change will also make dams more dangerous by increasing precipitation in many parts of the country, thus undermining the flood assumptions that underlie dam designs. Consider that in October 2005 and last May, two strong but hardly cataclysmic New England rain storms caused the overtopping or breaching of more than 400 dams in three states; a much fiercer storm would compromise far more dams, worsening flooding and potentially endangering thousands of people.

Dams are ranked according to the danger they pose — "high hazard" dams threaten human life if they fail; "significant hazard" dams threaten property; and "low hazard" dams threaten neither. But many dams are inaccurately ranked — the Kaloko dam, for instance, was rated low hazard.

In addition, in most states the rankings do not take into account the potential impact of toxic chemicals from factories, agricultural runoff and mines that gather in sediment behind dams, even though their sudden release can poison humans, wildlife and vegetation far downstream. When a coal tailings dam near Inez, Ky., failed in October 2000, 250 million gallons of coal sludge were sent into the Big Sandy River and its tributaries, killing aquatic life in the streams.

More sobering still, about half the dams in the Corps' inventory, including many high-hazard ones, do not have emergency plans in case of failure. When these plans are properly executed — by identifying structures likely to be inundated and keeping up-to-date records of residents' phone numbers — they save lives. But the plans that do exist are often inaccurate, and many of

DOJ_NMG_0119331

the people they're intended to protect have no idea of the potential peril they face. California is the only state that even requires property buyers to be informed of potential jeopardy from an upstream dam.

The American Society of Civil Engineers estimated in 2005 that repairing dams threatening human life would cost $10.1 billion, while a 2003 study by the Association of Dam Safety Officials placed the cost of repairing all non-federally owned dams in the national inventory at $36.2 billion. In the last session Congress considered legislation to repair dams at a rate of $25 million a year for five years, but even that feeble gesture didn't make it out of committee.

Americans are easily persuaded to spend hundred of billions of dollars combating debatable terrorist threats from outside the United States, while failing to notice that inside the country, the infrastructure is crumbling. True, outside forces from time to time topple established regimes, but usually not before their insides have started to rot.

Jacques Leslie is the author of "Deep Water: The Epic Struggle Over Dams, Displaced People and the Environment."

Virginia's Republican Hams (WSJ)

The Wall Street Journal, January 22, 2007

Virginia was once a solidly conservative Republican state, but in recent years it has tilted Democratic. A big reason for the shift is the GOP's recent love affair with higher taxes. In the 1990s Republican Governors George Allen and Jim Gilmore won sweeping victories running as tax cutters. Then in 2004 Richmond Republicans enacted the largest tax increase in the commonwealth's history -- a $1 billion hike in sales and tobacco taxes. Now they are flirting with another tax hike even though the state has a Blue Ridge Mountain-high $900 million budget surplus.

Why? The hot political issue in northern Virginia is traffic congestion. Though the state budget has doubled in 10 years, road building hasn't kept pace with population. "Not a penny of the 2004 tax increase went to fund the state's highest need, roads," fumes GOP state Senator Ken Cucinelli.

The Republican plan would spend $1 billion more for roads and cost-inefficient transit programs and pay for it through borrowing, raising taxes and fees on cars and trucks, and giving local governments authority to raise their assessments.

To be fair, these are nickel and dime fees compared to the $600 million in new taxes that Democratic Governor Tim Kaine is seeking. Democrats in the legislature, who pretend they want to fix the traffic problem, are cynically obstructing any solution so that Republicans take a fall. But if the GOP raises taxes yet again, Mr. Kaine is let off the hook and Republicans forfeit their brand identity as the anti-tax party.

Only 10 years ago the Virginia GOP was riding high after Jim Gilmore was elected Governor on a wildly popular message: "End the Car Tax." Now the Virginia Republicans want to raise car taxes. Have they learned nothing from the party's implosion in Washington?

A Tiptoe Budget (WP)

The Washington Post, January 22, 2007

.

MARYLAND GOV. Martin O'Malley (D) didn't waste any time stashing his lofty talk about bold initiatives and great programmatic leaps. That's all right, because the fat years have ended; the governor inherited a $400 million shortfall for the coming fiscal year and is staring at a projected budget gap of $1.3 billion for the following year. Until Mr. O'Malley comes up with a serious revenue plan -- and that seems to be in his bulging wait-till-next-year file for the legislature -- there's trouble ahead.

To patch things for now, Mr. O'Malley would snatch nearly $967 million from the state's "rainy day" reserve fund, leaving $674 million, the minimum required by state guidelines. That's a one-time grab; what will next year bring? To his credit, Mr. O'Malley has done some fiscal shaving and shifting to bring down spending, which will disappoint various constituencies but makes sense in the short run. His $30 billion plan would increase state spending by a modest 2.5 percent, a smaller figure than in nine of the past 10 years. Spending increased by 12 percent in the last budget of Gov. Robert L. Ehrlich Jr. (R).

Mr. O'Malley proposes a record amount of money for school construction. In providing funds to meet the separate demands of the 2002 Thornton education plan, the governor wisely held back $94.7 million from the Geographic Cost of Education Index, which would have steered additional money to Montgomery and Prince George's counties. Mr. Ehrlich never funded it. A reasonable case can be made that Montgomery could absorb the cost and that Prince George's should drop its TRIM -- Tax Reform Initiative by Marylanders -- tax cap before passing the hat for help from Annapolis. The governor's proposal to freeze tuition at public universities will draw cheers, but, again, how long can a freeze stay in place?

In his budget submission letter, Mr. O'Malley raved that his initial budget "begins to rise to our perils and possibilities." But if he doesn't get cracking on the revenue front, those "perils" will dominate. The governor must produce a full-fledged revision of Maryland's tax system, which hasn't undergone significant repair in about 50 years. Corporate income tax shelters ought to be eliminated. The gas tax, not raised in 15 years, must be increased, and a tax on services is long overdue.

DOJ_NMG_0119332

The Democratic legislature won't roll over and endorse all that the new governor seeks, but he should seize the honeymoon moment to take on some of the big issues with proposals for this session.

Rice Flirts With New Ideas In Search For Mideast Peace (AFP)

By Sylvie Lanteaume

AFP, January 22, 2007

US Secretary of State Condoleezza Rice embarks on a high-profile campaign to revive Israeli-Palestinian peace talks next month, but with no signs Washington is ready for a radical break with an approach that has proved fruitless for the past six years.

Pushed to take a greater role in peacemaking by European and Arab allies and under intense pressure for a foreign policy success in light of the Iraq quagmire, Rice announced during her recent Middle East tour that she will broker a rare summit meeting between Israeli and Palestinian leaders in February.

Washington will also host a meeting on February 2 of the so-called Quartet of Middle East mediators whose 2003 "road map" for achieving Palestinian statehood and peace with Israel has languished since its inception.

Rice said during a week-long trip to the Middle East and Europe that her aim was to "accelerate" implementation of the three-phase road map put forward by the United States, European Union, United Nations and Russia.

The parties never made it past the map's first stage which, reflecting the post-September 11 US war on terrorism, required the Palestinians to halt militant attacks on Israel while requiring the Jewish state to freeze settlement activity -- neither of which happened.

Rice has indicated a new US willingness to move beyond the road map's strict sequencing, which gave radical militants an effective veto power over progress since attacks on Israel were enough to bring the process to a halt.

"Everybody understands the obligations in it, but we'd gotten to a place that it was stalled, because if they weren't making progress on the first phase of the road map, then you couldn't talk about the end of the road map and what might lead to the establishment of a Palestinian state," she said.

Instead, Washington has expressed a willingness to deal simultaneously with the confidence-building measures embodied at the start of the road map and talks on end-game issues like the shape and institutions of a Palestinian state.

The revised approach reflects in part a 2002 Saudi peace plan centered on Arab states recognizing Israel in exchange for Israel withdrawing to its pre-1967 borders.

But Rice, whose immediate focus is on bringing together the moderate Palestinian president, Mahmud Abbas, and Israeli Prime Minister Ehud Olmert to advance a possible deal, has sidestepped tough questions about each man's political weakness.

Abbas and his secular Fatah party are locked in a power struggle with the radical Islamic movement Hamas, which controls the Palestinian government and has refused to recognize Israel.

Olmert's popularity has plummeted since Israel's perceived mishandling of a July-August war against Lebanon's Islamic militia, Hezbollah.

While showing in interest in exploring some peacemaking ideas that President George W. Bush has previously shunned, Rice made clear over the past week that she was not ready to break the administration's taboo on engaging directly with Syria and Iran over their support for the Islamic radicals.

She also insisted she would not follow her predecessors in the kind of shuttle diplomacy used by past US administrations in their efforts to broker an Israeli-Palestinian peace deal.

"You don't build the possibility for breakthroughs on something as intractable as the Israeli-Palestinian conflict by five months of shuttle diplomacy," she told reporters accompanying her on the recent tour.

"There has to be a process of laying groundwork and I think we've been laying groundwork and we'll see if we've laid enough groundwork to actually produce a breakthrough," she said.

"I do think there's already been progress," she added.

Rice argued that a realignment of forces in the Middle East caused by moderates on all sides seeing their common interest in countering the spread of Iranian-backed Islamic radicalism has created new possibilities for peace.

"You sense that the tectonic plates underneath this conflict have shifted," she said.

US Aims To Trump Skeptics With Mideast Push (AFP)

By Stephen Collinson

AFP, January 21, 2007

The United States is promising an "intense" diplomatic drive in the Middle East, hoping to buck regional skepticism and its own weakened position by cracking open the Israeli-Palestinian deadlock.

DOJ_NMG_0119333

With US troops mired in Iraq after nearly four bloody years, the White House turning up the heat on Iran and Syria, and Lebanon on a political knife edge, the prospect of peace dawning anywhere in the region appears slim.

But US Secretary of State Condoleezza Rice last week declared that earthshaking events like the Israeli war with the radical Shiite Hezbollah militia in Lebanon in mid-2006 had ushered in a turning point.

"A lot has happened in the Middle East in the last several years, and a lot has clarified in the Middle East," Rice said in London after a swing through the region last week.

That supposed shakedown is seen by US administration officials as exposing a divide between supposedly disruptive, radical influences such as Iran and Syria and their affiliated radical groups, and the United States's moderate Arab allies.

Rice argued the new atmosphere could provide a new chance for Israelis and Palestinians to thrash out what a future Palestinian state might look like, after years of violence which stalled the "roadmap" to peace.

"With that shift in alignment, I think you now have a chance to perhaps make progress in this issue in ways which you didn't before," she said.

But critics of President George W. Bush's administration say the idea that there has been some kind of fundamental geopolitical reordering is fanciful.

"I find this rhetoric is becoming almost Soviet in its distance from reality," said Anatol Lieven, a scholar at the New America Foundation think tank.

Critics accuse Bush of wasting US leverage by failing to make any serious effort to mediate the Arab-Israeli conflict during six years in power -- especially through his rejection of the late Palestinian leader Yasser Arafat.

After its struggles in Iraq, and with no sign of an exit that would not risk sparking regional chaos, the administration is also charged with presiding over a dangerous weakening of US prowess in the region.

Wayne White, a retired veteran of the State Department's Bureau of Intelligence and Research, who joined Lieven at a forum organized by the Middle East Policy Council on Friday, said the only clear sign from the region was that US policy was failing.

"If there is a moment of clarity with respect to Iraq and the Israeli-Palestinian issue, it is that the situation in Iraq could not be worse," he said.

Rice's comment on the Israeli-Palestinian situation flew in the face of even US expectations for progress, he argued.

"I found those remarks rather perplexing, to say the least."

Skeptics often argue that the deepening abyss in Iraq has had the simple effect of emboldening and strengthening America's sworn enemy, Iran.

The US refusal to talk to foes in Tehran and Damascus also contributes to a deepening sense of regional crisis, they say.

Bush upped the ante against Iran earlier this month, as he announced a last-ditch troop "surge" designed to finally pacify Baghdad.

He warned US troops would chase down Islamic Republic operatives in Iraq, and dispatched a second aircraft carrier battle group to the Gulf, while offering Patriot missile defenses to US allies.

But Rice is arguing that from the eye of the storm, diplomatic progress is possible on the Israeli-Palestinian track, promising an "intense" couple of weeks which will see a string of high-profile visits to Washington, including talks of the Middle East Quartet, made up of the United States, Russia, the United Nations and the European Union.

She plans to return to the region in February, and has pledged to host a three-way summit with Israeli Prime Minister Ehud Olmert and Palestinian president Mahmud Abbas on February 2 in Washington.

"I think there are still really, really hard issues here. But you sense that the tectonic plates underneath this conflict have shifted," Rice said.

But doubters point out that Olmert and Abbas may not be in a position to convince their respective people of any hard compromises on the road to peace.

Olmert's popularity plummeted after Israel failed to crush Hezbollah in the summer conflict. Abbas has struggled for months to seal a unity government pact with the radical Islamic movement Hamas.

Quartet Upbeat On Mideast Peace Drive (FT)

By Harvey Morris

Financial Times, January 22, 2007

Senior officials of the international “quartet” have begun talking up the prospects of reviving stalled Middle East peace efforts in the coming weeks, although an unsettled political outlook in both Israel and the Palestinian Authority threatens to damp their optimism.

DOJ_NMG_0119334

Members of the quartet – the US, European Union, United Nations and Russia – are proposing to leapfrog the step-by-step approach of the moribund "road map" they published in 2003 and move the parties towards direct talks on a final resolution of the conflict.

"There's an emerging consensus that the period of crisis management is over and that we must move to the political phase and, within a reasonable time, define the framework," said Javier Solana, the EU's foreign policy chief, who was in the region at the weekend.

His visit followed close on the heels of a tour by Condoleezza Rice, US secretary of state, to the Middle East and Europe.

On her final stop, in Germany, she said that initial talks she planned to hold jointly with Ehud Olmert, the Israeli prime minister, and Mahmoud Abbas, PA president, could take place by mid-February.

"We're not yet at the point where I think we can determine what we would do about formal negotiations," Ms Rice conceded. "It is really a time to try to get the parties into more of a confidence-building phase and we will see what comes after that."

The quartet is expected to meet in early February for its first high-level meeting in months. Angela Merkel, chancellor of Germany, which now holds the rotating EU presidency, left for Moscow on Sunday for talks with Vladimir Putin, Russian president. Her spokesman said the Middle East and a revival of the quartet's efforts would be an important topic raised.

The switch in emphasis towards final status talks came after Mr Abbas pre-empted an expected call from Ms Rice to accept proposals to establish a transitional Palestinian state with interim borders, a half-way solution the Palestinians feared would leave the most contentious issues of refugees and final frontiers unresolved.

The ill-fated road map proposed a performance-based route towards Palestinian statehood that would start with a halt to violence and end with a permanent settlement, for which the deadline was 2005.

The document referred to a provisional state with temporary borders in stage two of the plan. Palestinian officials, however, noted that this was only presented as an option by the quartet.

"We don't want to see a state with temporary borders," Mohamed Dahlan, the PA's former Fatah security chief, told reporters in Ramallah on Friday. "In the past 10 years we wasted too much time on interim solutions."

Mr Dahlan said he did not believe the present Israeli government was interested in peace or that the current political uncertainty in Israel allowed for a resumption of the peace process.

The Olmert government is hard-pressed with other issues at the moment, following the announcement of a criminal investigation into the prime minister that might lead to corruption charges and after the sudden resignation of Dan Halutz, chief of staff, over last year's war in Lebanon.

Quartet officials noted, however, that there appeared to be support in the Labour party, Mr Olmert's coalition partner, for a move towards final status talks with the Palestinians. They said some of Labour's views were also shared by Tzipi Livni, foreign minister, and a member of Mr Olmert's Kadima party.

"Mr Olmert is faced with the option of doing nothing or moving to final status negotiations," said a senior quartet official. "There has not been a moment that this has been more likely since Camp David," the official said, referring to the abortive 2000 Palestinian-Israeli summit hosted by Bill Clinton, former US president.

Mr Abbas was on Sunday making a final effort to reach agreement with the PA's ruling Hamas party to establish a government of national unity.

During a visit to Damascus, he held a much-anticipated meeting on Sunday with Khaled Mashaal, the exiled Hamas leader, and there were reports of progress on choosing cabinet posts.

But the PA president also insists that a new government must accept existing agreements with Israel, a condition that would mean Hamas for the first time in effect recognising Israel's existence.

If the Damascus talks fall through, Mr Abbas has said he will go ahead with his plan to hold new parliamentary and presidential elections, a move that could bring fresh factional turmoil and dent the apparent mood of optimism within the quartet.

Palestinian Leaders Begin Unity Talks (NYT/AP)

The New York Times/AP, January 22, 2007

DAMASCUS, Syria, Jan. 21 (AP) — The Palestinian Authority president, Mahmoud Abbas of the Fatah faction, and Khaled Meshal, the exiled chief of the rival Hamas faction, met Sunday but failed to resolve an increasingly bloody dispute between their movements and form a unity government.

But the two men said in a statement that they had "achieved major progress" in the meeting, their first since July 2005, and that they hoped to resume talks within two weeks.

"There are still points of disagreement, but we will try to resolve them through a national dialogue until we form a national unity government," Mr. Meshal said during a news conference with Mr. Abbas in the Syrian capital, Damascus.

DOJ_NMG_0119335

The two sides emphasized that recent Palestinian infighting, which has killed at least 62 people, was unacceptable.

"We stress that dialogue is the only language allowed for solving our differences," Mr. Meshal said.

Unity Deal Eludes Palestinian Leaders (WT/AP)

By Zeina Karam

The Washington Times/AP, January 22, 2007

DAMASCUS, Syria -- Palestinian Authority President Mahmoud Abbas and the exiled chief of the rival Hamas faction failed last night to resolve their differences over forming a unity government, dashing hopes for a quick end to deadly clashes between their supporters.

But Mr. Abbas and Hamas leader Khalid Mashaal said they "achieved major progress" during the meeting -- their first since July 2005 -- and hoped to resume talks within two weeks.

"There are still points of disagreement, but we will try to resolve them through a national dialogue until we form a national unity government," Mr. Mashaal said at a press conference with Mr. Abbas in Syria's capital, Damascus.

The two sides stressed that recent Palestinian fighting, which has killed at least 62 persons since May, was unacceptable and pledged to exert efforts to avoid political friction.

"Palestinian bloodshed was considered totally prohibited, and we must exert all efforts to avoid frictions and internal clashes," Mr. Abbas said.

The two men had been scheduled to meet Saturday evening, but that session was canceled.

Officials from both sides had cautioned against expecting immediate results from yesterday's meeting.

Both sides said differences remained, without providing details. The thorniest issues have been control of the two factions' security forces and Hamas' refusal to recognize Israel or commit to previous accords signed between Israel and the Palestinian Authority.

An official of Mr. Abbas' Fatah party in the Gaza Strip was optimistic about the meeting, saying Mr. Abbas and Mr. Mashaal had agreed to let an independent run the Interior Ministry, though they did not agree on who should lead the powerful security wing.

"I think some things were accomplished. Some issues were resolved, and others remain problematic. That would need continuation of dialogue here in Gaza and mediation in Damascus," said Abdel Hakim Awad, Fatah's spokesman in Gaza.

He said differences also remained over the wording of the official document laying out the new government.

The deputy head of Hamas' political bureau, Moussa Abu Marzouk, who attended part of yesterday's talks, said the one sticking point was the conditions under which Mr. Abbas would name a new prime minister for the unity government.

Despite the lack of agreement, he said the meeting "will send a message to the Palestinian people that the two sides are committed to continue dialogue."

The militant group Hamas, which controls the Palestinian parliament and Cabinet, and Mr. Abbas' more moderate Fatah movement have been stuck in political deadlock since Hamas' victory in legislative elections last year. Mr. Abbas was elected president separately.

The refusal of Hamas to recognize Israel's right to exist led to Western sanctions, which have paralyzed the Palestinian economy.

Rice's Rhetoric, In Full Retreat (WP)

By Jackson Diehl

The Washington Post, January 22, 2007

Eleven months ago Secretary of State Condoleezza Rice held a joint news conference with Egyptian Foreign Minister Ahmed Aboul Gheit to report on their talks in Cairo. After Aboul Gheit summed up the topics, Rice pointed out that he had forgotten one: "Iran. You missed Iran." She then spent most of her time on Egypt's progress -- or lack of it -- "as it faces questions of democracy and reform."

Last week Aboul Gheit and Rice again appeared side by side, this time in the Egyptian tourist capital, Luxor. Once again each offered a summary of the talks -- which this year, unlike last, included President Hosni Mubarak. This time Iran loomed large in their discussions, as did Iraq. But it was Rice who neglected to mention something: "democracy and reform." During the course of her visit to Egypt, and her latest tour through the Middle East, the words never publicly crossed her lips.

The reversal this represents is staggering -- especially to Egyptians who have closely tracked Rice's visits to their country. After all, her first notable act on moving to the State Department two years ago was to cancel a visit to Egypt in order to signal U.S. displeasure with the arrest of one of the country's leading liberal democratic politicians, Ayman Nour. Thanks in part to

DOJ_NMG_0119336

Rice's gesture, Nour was released and Mubarak announced a multicandidate election for president in which Nour was eligible to participate.

When Rice did get to Cairo, in June 2005, she delivered a speech at the American University that was a clarion call for democracy across the Middle East. She opened her joint news conference with Aboul Gheit by saying, "we look to the Egyptians and the Egyptian people to also take a major role in leading reform in this region." And she warned Mubarak against using fraud and thuggery to manipulate the promised elections.

"The Egyptian government must put its faith in its own people," she said. "The day must come when the rule of law replaces emergency decrees, and when the independent judiciary replaces arbitrary justice. The Egyptian government must fulfill the promise it has made to its people, and to the entire world, by giving its citizens the freedom to choose."

In the succeeding months, Mubarak did the opposite. He did use fraud and violence to control the presidential and parliamentary elections. After they were over, Nour was again arrested, and he was sentenced to prison on patently bogus charges. So when Rice appeared alongside Aboul Gheit last February, she talked about "disappointments and setbacks."

"We have talked candidly about those," she said. "We want to see an Egypt that is fully developing politically and along the lines of reform as well. And so we've discussed the future of reform. We will continue to discuss the future of reform."

Only things got worse. Mubarak canceled scheduled parliamentary elections. His security forces violently broke up protest demonstrations. Opposition leaders, from members of the Muslim Brotherhood to pro-democracy bloggers, were arrested and tortured. Nour's appeals were denied.

Before Rice arrived in Cairo this time, the city was buzzing about Internet videos -- not of Saddam Hussein but of Egyptian police who had been captured torturing innocent citizens. Mubarak had just announced a series of constitutional amendments that would exclude serious opposition candidates from future elections and curtail independent judicial monitoring of balloting. Nour is still in jail.

About all this, Rice said nothing. Instead, she praised the "important strategic relationship" with the 78-year-old Mubarak. In Rice's new parlance, Egypt has suddenly become part of a "moderate mainstream" in the Middle East, which, the secretary hopes, will stand with the United States and Israel against the "extremists" -- Iran, Syria, Hezbollah and Hamas.

Rice has made no real attempt to explain the somersault in her policy, which comes across as a feckless attempt to simplify the increasingly chaotic and dangerous situation across the region. But her latest duet with Aboul Gheit made me wonder if she still remembered that day at the American University. She took questions; one man pointed out that the United States had supported dictatorships in the Middle East for 60 years.

"Yes," conceded Rice, "there's 60 years when we didn't -- we were not outspoken about the need for democracy in this part of the world."

"Things have changed. We had a very rude awakening on September 11th, when I think we realized that our policies to try and promote what we thought was stability in the Middle East had actually allowed, underneath, a very malignant, meaning cancerous, form of extremism to grow up underneath, because people didn't have outlets for their political views." She didn't need to add that al-Qaeda was founded, in large measure, by Egyptians.

Five-and-a-half years after Sept. 11, the cancer is still growing in Egypt, and elsewhere in the "moderate mainstream." But Rice and her president, it seems, have gone back to sleep.

From Bad To Worse (USNEWS)

By Mortimer Zuckerman

US News and World Report, January 29, 2007

Is your journey really necessary? That was the slogan on the old World War II poster intended to encourage Americans to save energy. With her recently completed journey to the Middle East, Condoleezza Rice wasted both time and energy—and badly dented America's diplomatic credibility.

The secretary of state's intention was to revive the "road map" plan to settle the Israeli-Palestinian conflict. It is a worthy but misconceived idea. The conflict that must be settled once and for all—before anyone attempts anything like the plan envisioned in the road map—is the conflict among the Palestinians, which is now verging on outright civil war. In Gaza, Hamas and Fatah gunmen have been killing and kidnapping each other with increased ferocity since unknown gunmen killed three young sons of a Fatah security official. In reprisal attacks, the prime minister, Hamas's Ismail Haniyeh, and the foreign minister were attacked. Hamas operatives also murdered an imam who had the temerity to condemn the movement. In the past year, the number of Palestinians murdered has increased 50 percent.

Behind all the carnage is a call for early elections by the president, Fatah's Mahmoud Abbas, who wants to replace the ineffective Hamas government. Polls show more than half the Palestinian population is fed up with Hamas; 86 percent of those in

DOJ_NMG_0119337

Gaza say their lives have worsened since Hamas took over. Why? Because Hamas refuses to recognize Israel and renounce terrorism, international sanctions have intensified unemployment and poverty among Palestinians.

Hamas sees the call for elections as an absolute casus belli against Fatah, so both seek outside help as they rearm. Hamas has received a reported $250 million from Iran, which wants to see Hamas as militarily strong as its puppet Hezbollah in southern Lebanon.

Shooting galleries. Israeli Prime Minister Ehud Olmert, meanwhile, has conceded a lot to Abbas. Palestinians, he says, could eventually have an independent state in the West Bank and Gaza if they turn away from violence, recognize Israel's right to live in peace, and give up their demands for refugees from the 1948 Mideast War to return. Olmert's substantive offerings to date include the release of $100 million of Palestinian tax revenues so Abbas can pay salaries, the removal of security roadblocks, permission for troops loyal to Abbas to enter the Palestinian territories from Jordan, and for Fatah to receive weapons through Egypt. If all that weren't enough, Olmert is also putting a hold on military action in northern Gaza in return for the deployment of Palestinian Authority security forces to prevent rocket attacks against Israeli towns—a critical requirement as the lethal Kassams become increasingly accurate. No country can allow its cities to become shooting galleries where merely crossing the street and going to the grocery are the daily equivalent of russian roulette. The weapons, instead, just keep on coming: Egypt has utterly failed to prevent arms and explosives for Hamas from crossing its border to Gaza.

The roadblock to peace is Hamas. Prime Minister Haniyeh is just back from Tehran, where he declared time and again that his organization will never recognize Israel, will not honor any of the existing agreements between Israel and the Palestinians, and will continue its jihad until Jerusalem is liberated and "the face of the Zionist state would disappear," according to the Economist. Hamas seeks constant combat against Israelis in the hope of wearing them down morally, physically, and psychologically.

Tehran Announces More Tests Of Missiles (WT/AP)

By Nasser Karimi

The Washington Times/AP, January 22, 2007

TEHRAN -- Determined not to budge under pressure, Iran announced new tests of short-range missiles yesterday, and hard-line President Mahmoud Ahmadinejad dismissed criticism that the country's economy has been hurt by U.N. sanctions imposed over its nuclear program.

The missile tests come as the U.S. Navy is sending a second aircraft carrier to the volatile Persian Gulf. U.S. officials said the USS John C. Stennis, which will arrive in the region within weeks, is meant to be a warning to Iran.

The deployment appeared to alarm some in Iran's hard-line leadership, including a member of a powerful cleric-run body who warned last week that Washington plans to attack, possibly by striking Iranian nuclear facilities.

U.S. officials have long refused to rule out any options in the face-off with Tehran, but they say military action would be a last resort.

Stressing Iran's preparedness, state television said the Revolutionary Guards planned to begin three days of testing the short-range Zalzal and Fajr-5 missiles yesterday. It could not be confirmed whether the exercise had begun near Garmsar, a city about 60 miles southeast of Tehran.

"The maneuver is aimed at evaluating defensive and fighting capabilities of the missiles," the report quoted an unidentified Guards commander as saying.

Last year, Iran held three large-scale military exercises to test what it called an "ultra-horizon" missile and the Fajr-3, a rocket that it says can evade radar and use multiple warheads to hit several targets simultaneously.

Though U.S. officials suggest Iran exaggerates its military capabilities, Washington is concerned about Iranian progress in developing missiles. Some of its missiles are capable of hitting U.S.-allied Arab nations and Israel, which Mr. Ahmadinejad has said should be wiped off the map.

The United States, which led military maneuvers of its own in the Persian Gulf in October, also accuses Iran of supporting militants in Iraq's sectarian bloodshed and is trying to rally Arab allies to isolate the Tehran regime.

Iran's new maneuvers are the first since the U.N. Security Council imposed sanctions last month over Mr. Ahmadinejad's defiance of its demand that Tehran suspend uranium enrichment. The sanctions ban selling materials and technology that could be used in Iran's nuclear and missile programs.

The United States and its allies accuse Iran of secretly developing atomic weapons in violation of its treaty commitments. Tehran has repeatedly denied that, saying its program is solely for the purpose of developing nuclear technology to generate electricity.

Mr. Ahmadinejad has remained defiant, saying Iran has the right to conduct uranium enrichment, a process that can produce fuel for nuclear reactors but also provide material fuel for atomic bombs.

DOJ_NMG_0119338

The president's tough talk has come under criticism from both ends of Iran's political spectrum. Some reformists and conservatives have accused Mr. Ahmadinejad of focusing too much on fiery anti-Western rhetoric and not enough on domestic issues, including the economy.

Iran's Leader Stands By Nuclear Plans; Military To Hold Exercises (NYT)

By Nazila Fathi

The New York Times, January 22, 2007

TEHRAN, Jan. 21 — Iran's internal battle over President Mahmoud Ahmadinejad's defiant rhetoric on Iran's nuclear program continued to simmer on Sunday, with the president repeating his vow to ignore international sanctions and a moderate daily newspaper warning of Iran's increasing isolation.

Speaking to reporters in Parliament, Mr. Ahmadinejad described the United Nations Security Council sanctions resolution as "a rusty instrument" that "has no effect."

"The resolution was born dead," he said. "Even if they issue 10 more such resolutions it will not affect Iran's economy and politics."

He promised to continue Iran's nuclear program, saying other countries "should know that the nuclear program is our red line," the television news reported.

He made those comments days after two hard-line daily newspapers close to Iran's supreme religious leader, Ayatollah Ali Khamenei, called on Mr. Ahmadinejad to distance himself from the nuclear issue, a sign that the president's his political capital may be declining as his country comes under increasing international pressure. The newspapers accused him of using inflammatory language.

On Sunday, a third newspaper, the daily Kargozaran, which represents the views of moderate forces in the country, warned that international opposition against Iran was reaching an alarming level.

"It appears that the pressure against Iran is increasing, and, unlike an optimistic view, there is a tangible tendency among the countries in the region and in the international community toward America's policies against Iran," Jalal Khoshchehreh, the foreign editor, wrote.

The Security Council passed a sanctions resolution on Dec. 23 intended to curb Iran's uranium enrichment and missile programs. The United States and some European nations have said that Iran's nuclear program is for creating nuclear weapons. Iran contends that the program is peaceful.

In what appears to be a response to increasing Western military pressure, the Revolutionary Guards will test-fire missiles in a three-day military exercise expected to begin Monday, state-run television said. The military will fire Zelzal and Fajr-5 missiles near Garmsar, 60 miles southeast of Tehran.

The maneuvers, the first since the resolution was passed, followed the recent American decision to deploy a second aircraft carrier in the Persian Gulf, effectively doubling the United States presence there, and to extend deployments of Patriot antimissile defense systems in Kuwait and Qatar. The British Navy is also sending more ships to the gulf.

Also on Sunday, Mr. Ahmadinejad proposed a budget for the next year of the Iranian calendar, which begins on March 21, based on a significantly lower price of oil. Iran's budget is heavily dependent on oil revenues, and Mr. Ahmadinejad's budget last year was based on a price of $44 a barrel.

The budget he presented to Parliament on Sunday reduces the price to $33, allowing a wide cushion in case oil prices continue to fall from their current level of about $52 a barrel.

"It is signal to our enemies, saying, 'We are ready, and we will manage the country even if you lower the oil prices,' " Mr. Ahmadinejad said.

State TV: Iran Conducts New Tests Of Short-range Missiles (USAT)

USA Today, January 22, 2007

Iran's elite Revolutionary Guards on Sunday were to begin three days of testing short-range Zalzal and Fajr-5 missiles, state television reported.

The announcement came days after the United States said it was sending a second aircraft carrier to the Persian Gulf. The maneuvers would be the first since the United Nations Security Council imposed sanctions last month on Iran for continuing to enrich uranium, which can be used to make bombs or fuel for nuclear power plants. "Ten more similar resolutions will not affect our economy and our policy," President Mahmoud Ahmadinejad said. Iran says its nuclear program is to produce electricity.

Palestinian leaders hit impasse on coalition government

DOJ_NMG_0119339

Palestinian President Mahmoud Abbas and exiled Hamas leader Khaled Mashaal failed to agree on a unity government during their meeting in Damascus, Syria. Despite the impasse, the two leaders said in a statement that they "achieved major progress" in their first meeting since July 2005 and that they hoped for another round of talks within two weeks.

Hamas and Abbas' more-moderate Fatah movement have been deadlocked since Hamas won parliamentary elections a year ago.

Earthquakes rattle Indonesia; no severe damage reported

A powerful earthquake shook Indonesia's northeastern Sulawesi province Sunday, and two smaller quakes hit the eastern Papua province today. There were no reports of deaths or severe damage. The U.S. Geological Survey pegged Sunday's quake at magnitude 7.3.

A tsunami alert was issued Sunday, but there were no destructive waves. In December 2004, an earthquake off Indonesia's Sumatra island triggered a tsunami that left nearly 230,000 people dead or missing.

U.S. envoy: North Korea nuclear talks may resume

Talks aimed at persuading North Korea to give up nuclear weapons are likely to resume within two weeks, Assistant Secretary of State Christopher Hill said in Beijing. Hill, the chief U.S. envoy to six-nation talks hosted by China, met with Wu Dawei, the Chinese vice foreign minister. The talks began in 2003; the latest round ended in December without progress. The other countries in the talks are Russia, Japan and South Korea.

Military Surplus Parts Illegally Find Their Way To Iran, U.S. Officials Say (WP/AP)

By Sharon Theimer, Associated Press

The Washington Post, January 22, 2007

Fighter-jet parts and other sensitive U.S. military gear seized from front companies for Iran and brokers for China have been traced in criminal cases to a surprising source: the Pentagon.

In one case, federal investigators said, contraband purchased in Defense Department surplus auctions was delivered to Iran, a country President Bush has branded part of an "axis of evil."

In that instance, a Pakistani arms broker convicted of exporting U.S. missile parts to Iran resumed business after his release from prison. He purchased Chinook helicopter engine parts for Iran from a U.S. company that had bought them in a Pentagon surplus sale. U.S. Immigration and Customs Enforcement agents say those parts reached Iran.

Sensitive military surplus items are supposed to be demilitarized or "de-milled" -- rendered useless for military purposes -- or, if auctioned, sold only to buyers who promise to obey U.S. arms embargoes, export controls and other laws.

Yet the surplus sales can operate like a supermarket for arms dealers.

"Right Item, Right Time, Right Place, Right Price, Every Time. Best Value Solutions for America's Warfighters," the Defense Reutilization and Marketing Service says on its Web site, calling itself "the place to obtain original U.S. Government surplus property."

Federal investigators are increasingly anxious that a top priority on Iran's shopping list is within its easy reach: parts for the precious fleet of F-14 Tomcat fighter jets the United States allowed Iran to buy in the 1970s when it was an ally.

In one case, convicted middlemen for Iran bought Tomcat parts from the Defense Department's surplus division. Customs agents confiscated them and returned them to the Pentagon, which sold them again -- customs evidence tags still attached -- to another buyer, a suspected broker for Iran.

"That would be evidence of a significant breakdown, in my view, in controls and processes," said Greg Kutz, the Government Accountability Office's head of special investigations. "It shouldn't happen the first time, let alone the second time."

A Defense Department official, Frederick N. Baillie, said his Pentagon unit followed procedures.

"The fact that those individuals chose to violate the law and the fact that the customs people caught them really indicates that the process is working," said Baillie, the Defense Logistics Agency's executive director of distribution and revitalization policy. "Customs is supposed to check all exports to make sure that all the appropriate certifications and licenses had been granted."

Taking Iran Down A Notch (USNEWS)

By Thomas Omestad

U.S. News and World Report, January 29, 2007

The battlefield, so far, remains confined to Iraq. But the war, in some sense, is growing wider—and more dangerously unpredictable.

The Bush administration's military campaign in Iraq—and its broader approach to the Middle East—are morphing into a head-on struggle against Iran's growing influence. The shift portends either peril or promise. Critics fear President Bush has

DOJ_NMG_0119340

made another dangerous gamble that is more likely to expand the conflict than to bring Iran to heel. The clarifying focus on Iran, officials counter, offers an opportunity to block the region's leading provocateur from fomenting extremism and pursuing nuclear weapons.

Call the revised strategy "pushback," if you like. The aim is to raise the price for Iranian actions on a range of fronts—from its bank—rolling of militants in Lebanon and the Palestinian territories to its alleged supplying of weapons to anti-U.S. Shiite militias in Iraq to its defiant nuclear programs. "We are clearly upping the ante and sending a powerful message to Iran," Nicholas Burns, the under secretary of state for political affairs, said in an interview last week. "They have to understand that there are consequences for their actions. This is a concerted strategy, no doubt about it."

Seek and destroy. One piece of that strategy, U.S. News has learned, is the creation of a military special operations task force to move against Iranian agents in Iraq. Task Force 16, as it is known, demonstrates the high priority assigned to the administration's new anti-Iranian drive. Its structure is modeled after the units set up to hunt for Saddam Hussein and kill Iraqi al Qaeda chief Abu Musab Zarqawi. The special ops effort is part of President Bush's newly announced pledge to "seek out and destroy the networks providing advanced weaponry and training to our enemies in Iraq." In recent weeks, U.S. forces have conducted at least two raids that captured Iranians said to be officers of the Revolutionary Guard Corps' al-Quds Brigades. Five Iranians are still being detained despite Iran's claim that they are diplomats with legal protection and have been "kidnapped."

A consensus within the administration sees Iran as emboldened by its surging oil revenues, the insurgent and sectarian violence bogging down U.S. forces in Iraq, the tenacity of its ally Hezbollah in surviving Israeli attacks in Lebanon, and the rising power of the radical Palestinian Hamas movement. "The threat that Iran represents is growing; it's multidimensional," Vice President Dick Cheney said on Fox News. U.S. intelligence czar John Negroponte says Iran now casts a "shadow" across the region. Adds Defense Secretary Robert Gates, "The Iranians clearly believe that we are tied down in Iraq ... that they are in a position to press us in many ways."

The U.S. get-tougher approach on Iran starts with Iraq, but it extends far more broadly. The administration has moved quietly on some fronts—perhaps to avoid alarming countries like Russia and China that oppose a more confrontational approach. But taken together, the various pieces point to an integrated strategy to counter Iran. "It's a shift in U.S. policy to rolling back Iranian influence," says Vali Nasr, an Iran expert at the Council on Foreign Relations. "The administration sees dealing with Iran as key to these other issues." Adds Michael Rubin, an American Enterprise Institute analyst who dealt with Iran issues at the Pentagon in Bush's first term, "a critical mass of information" about Iranian activities in Iraq and beyond forced the administration's hand. "It's a moment a long time in coming," he says.

U.S. Officials Try To Interpret China's Silence Over Satellite (NYT)

By David E. Sanger And Joseph Kahn

The New York Times, January 22, 2007

WASHINGTON, Jan. 21 — Bush administration officials said that they had been unable to get even the most basic diplomatic response from China after their detection of a successful test to destroy a satellite 10 days ago, and that they were uncertain whether China's top leaders, including President Hu Jintao, were fully aware of the test or the reaction it would engender.

In interviews over the past two days, American officials with access to the intelligence on the test said the United States kept mum about it in hopes that China would come forth with an explanation.

It was more than a week before the intelligence leaked out: a Chinese missile had been launched and an aging weather satellite in its path, more than 500 miles above the earth, had been reduced to rubble. But protests filed by the United States, Japan, Canada and Australia, among others, were met with silence — and quizzical looks from officials in The Chinese Foreign Ministry, who seemed to be caught unaware.

The mysteries surrounding China's silence are reminiscent of the cold war, when every case of muscle-flexing by competing powers was examined for evidence of a deeper agenda.

The American officials presume that Mr. Hu was generally aware of the missile testing program, but speculate that he may not have known the timing of the test. China's continuing silence would appear to suggest, at a minimum, that Mr. Hu did not anticipate a strong international reaction, either because he had not fully prepared for the possibility that the test would succeed, or because he did not foresee that American intelligence on it would be shared with allies, or leaked.

In an interview late Friday, Stephen J. Hadley, President Bush's national security adviser, raised the possibility that China's leaders might not have fully known what their military was doing.

"The question on something like this is, at what level in the Chinese government are people witting, and have they approved?" Mr. Hadley asked. He suggested that the diplomatic protests were intended, in part, to force Mr. Hu to give some clue about China's intentions.

DOJ_NMG_0119341

"It will ensure that the issue will now get ventilated at the highest levels in China," he said, "and it will be interesting to see how it comes out."

The threat to United States interests is clear: the test demonstrated that China could destroy American spy satellites in low-earth orbit (the very satellites that picked up the destruction of the Chinese weather satellite).

Chinese military officials have extensively studied how the United States has used satellite imagery in the Persian Gulf war, the wars in Iraq and Afghanistan, and in tracking North Korea's nuclear weapons program — an area in which there has been some limited intelligence-sharing between Chinese and American officials. Several senior administration officials said such studies had included extensive analysis of how satellite surveillance could be used by the United States in case of a crisis over Taiwan.

"This is a wake-up call," said Robert Joseph, the under secretary of state for arms control and international security. "A small number of states are pursuing capabilities to exploit our vulnerabilities."

As a result, officials said, the Chinese test is likely to prompt an urgent new effort inside the Bush administration to find ways to counter China's antisatellite technology. Among the options are efforts to "harden" vulnerable satellites, improve their maneuverability so that they can evade crude kinetic weapons like the one that destroyed the Chinese satellite and develop a backup system of replacement satellites that could be launched immediately if one in orbit is destroyed.

American officials noted that the United States and Russia had not conducted such tests for two decades, and that the international norm had changed, in part because so many private satellites had been launched by many nations. "The Chinese seem out of step on this one, and we don't know why," one official said.

But the more immediate mystery about the destruction of the satellite revolves around China's prolonged silence — and what it says about the commitments President Hu and President Bush have made concerning increasing their communication, and diminishing the secrecy around China's military buildup.

Chinese leaders often hesitate to engage with foreign officials on matters of military secrecy. It took days to get the Chinese to respond in the first foreign policy crisis to confront the Bush administration — the forcing down, on Chinese territory, of an American spy plane in 2001. Eventually the plane's crew was returned, unharmed, but the prolonged silence unnerved American officials.

In this case, the communication blackout raised the possibility that top Chinese officials were either trying to anger the United States or that the test was conducted without the full involvement of the one official who has authority to coordinate the military and civilian bureaucracies: President Hu. American officials said they believed that the Foreign Ministry — the one department that deals daily with the rest of the world — was left in the dark.

"What we heard, in essence, was, 'We'll get back to you,' " said a senior American diplomat. "It was unclear they even knew what was going on."

Chinese political and military analysts, who would not speak on the record about an issue the Chinese government still regards as secret, said they considered it unlikely that the army's Second Artillery forces, in charge of its ballistic missiles, would conduct a test of a sophisticated new weapon without approval from the highest levels.

But they suggested that the test might have been approved in principle, with little advance preparation for the diplomatic fallout in the event it was successful. That entails not just new military worries; the destruction of the weather satellite left debris in space that could damage satellites from other nations.

"It's the kind of silence that makes you wonder what's happening inside the country," said another senior American official who has been monitoring the case. "I'm sure the Chinese leadership knew there were tests under way, in a general sort of way. But they don't seem to have been prepared for a success, and they clearly had not thought about what they would say to the world."

The timing is significant. Chinese officials have hinted in recent months that they are prepared to grant an American request to establish a military-to-military hot line that may be used to enhance communication. But China has moved slowly to establish the link, which is based on the cold war hot line to Moscow, and there is little evidence that Chinese military officers would have offered an explanation for the antisatellite test if it had been set up.

President Bush and Mr. Hu hold regular phone conversations about continuing issues, including how to manage North Korea's nuclear program. But Mr. Hu and Mr. Bush never developed the kind of close ties that Mr. Bush's aides forecast once the pragmatic-sounding Mr. Hu, who is close to Mr. Bush's age, took office.

Their relationship suffered during an awkward trip by Mr. Hu to Washington last spring, when Mr. Bush declined to hold a state dinner for him — there was a working lunch instead — and the arrival ceremony was marred by a mistaken announcement that the anthem that would be played would be for the Republic of China, the formal name for Taiwan.

Sen. Biden Warns Against Space Arms Race (AP)

By Desmond Butler
AP, January 22, 2007

The Senate Foreign Relations Committee chairman warned on Sunday against fostering an arms race in space after China was reported to have conducted an anti-satellite weapons test.

Sen. Joe Biden, D-Del., said the test was provocative, but that the United States had ways to combat the threat posed by it.

"I don't think we should be overly worried about this at this point," Biden said. "We have ways to deal with that ability."

The U.S. said China conducted the test earlier this month in which an old Chinese weather satellite was destroyed by a missile.

Biden, who is running for president in 2008, said President Bush's policy on weapons in space need to be reviewed.

"One of the things we have to talk about is whether or not the, sort of, ideological base notion about how we deal with space and weapons in space and the use of weapons from space is something that is a path we should continue to follow," he said.

In October, Bush signed an order asserting the United States' right to deny adversaries access to space for hostile purposes. As part of the first revision of U.S. space policy in nearly 10 years, the update said the U.S. would oppose the development of treaties or other restrictions that seek to prohibit or limit America's access to or use of space.

"This is not the direction we want to go, in escalating competition in space. And we should be talking about it," Biden said.

Analysts said China's weather satellites would travel at about the same altitude as U.S. spy satellites, so the test represented an indirect threat to American defense systems.

The Chinese foreign ministry has denied knowledge of the test.

Biden appeared on "Fox News Sunday."

Foreign-Aid Program May Be Hamstrung By Budget (WSJ)

By Michael M. Phillips
The Wall Street Journal, January 22, 2007

WASHINGTON -- President Bush's signature foreign-assistance program is likely to run out of money this year, leaving in the lurch several poor countries that have labored to meet its strict eligibility standards, according to aid officials.

Mr. Bush introduced the Millennium Challenge program in 2002 as a new approach to fix the perceived failures of overseas-development assistance.

The grants would be large enough to transform the recipient nations' economic fortunes, he said then, and the money would go only to countries that met quantitative standards for honest government, free-market policies and generous social spending.

Now the program's budget is expected to fall short of its projected needs by $400 million to $1 billion, depending on the outcome of congressional negotiations over the coming weeks. The crunch comes at a time when Morocco, Tanzania, Mozambique and several other developing nations are nearing agreements on huge aid packages.

"At a lower level of funding, [the program] will need to turn away countries that have developed sound proposals designed to assist millions of the poor -- such as microfinance programs that help women, and water, irrigation, and transportation systems that enable poor farmers to participate in the local economy," said John Danilovich, chief executive of the Millennium Challenge Corp., which implements the aid effort.

When the program was launched, the president promised to secure $5 billion a year from Congress for his plan.

Instead, he has consistently asked lawmakers for less than that, and lawmakers have consistently provided less than he requested.

The Republican-led Congress failed to complete fiscal 2007 spending bills before this month's hand-over to the Democrats. It appears likely that the Democrats will hold this year's spending largely to 2006 levels and focus instead on the fiscal 2008 budget, which takes effect Oct. 1.

"The Republicans' failure to get the job done will unfortunately leave a number of agencies in a situation that is less than ideal," said Rep. Nita Lowey, New York Democrat and chairwoman of the subcommittee that funds the aid effort.

The squeeze will likely provide the aid program with between $1.14 billion and $1.75 billion this year, compared with the $3 billion Mr. Bush had requested. The president again plans to ask Congress for $3 billion for the program when he presents his 2008 budget next month, according to two people familiar with the proposal. \Antipoverty advocates are lobbying furiously on the Hill to ensure that request is fully funded.

The Millennium Challenge Corp. was still struggling to get off the ground and facing stiff congressional criticism when Mr. Danilovich, a former oil-shipping executive and Republican activist, took over in late 2005.

DOJ_NMG_0119343

He accelerated its grant-giving, and the agency now boasts 11 aid agreements totaling $3 billion, including a $461 million package for Mali and an equivalent deal for El Salvador.

Mr. Danilovich has met with scores of lawmakers to plead the agency's case. The program's demanding eligibility standards, he says, have given countries from Lesotho to Georgia an incentive to crack down on corruption and other impediments to economic growth.

Still, many lawmakers worry that the Millennium Challenge Corp., which is barred by Congress from employing more than 300 people, is paying more attention to signing deals than it is to ensuring that they are implemented well enough to actually promote growth and reduce poverty.

"There are very few champions [on Capitol Hill] and, I think, dwindling support," said Sheila Herrling, senior policy analyst at the nonpartisan Center for Global Development think tank in Washington.

Ms. Herrling said that some key lawmakers want to steer Millennium Challenge aid away from roads, airports and other infrastructure projects and toward health, education and other social programs.

North Korea Talks Should Resume Soon: US Envoy (AFP)

AFP, January 22, 2007

Six-nation talks on North Korea's nuclear programme should resume as soon as possible, the chief US envoy to the negotiations said after holding discussions with host nation China.

"I have had lengthy discussions with (Chinese Vice Minister) Wu Dawei and we have agreed to the need to get the six-party talks going as soon as possible," US Assistant Secretary of State Christopher Hill told journalists.

"I would hope the Chinese government will be able to announce soon the start-up of the six-party talks."

Hill made the comments before flying back to the United States, wrapping up a whirlwind trip to brief South Korea, Japan and China on his rare one-on-one talks with North Korea's nuclear envoy Kim Kye-Gwan in Berlin last week.

Kim met with his counterpart in Russia, the sixth member nation of the diplomatic forum that began in 2003, while Hill briefed his six-party counterparts in Seoul, Tokyo and Beijing.

International concern has intensified since North Korea, one of the most isolated and impoverished countries in the world, tested a nuclear weapon in October last year.

The test led to UN sanctions and even condemnation from China, Pyongyang's most important ally.

Washington subsequently redoubled efforts to implement a six-party deal reached in September 2005 to verifiably dismantle North Korea's nuclear programme in exchange for diplomatic recognition and food and energy aid.

Six-nation talks in December, the first since the nuclear test, failed to result in any tangible progress as North Korea, emboldened by the detonation, demanded an end to the UN sanctions.

The reclusive state also insisted that US financial sanctions implemented in late 2005 be lifted.

Hill said the US Treasury Department would resume separate bilateral talks with North Korea soon, which focus on Macau's Banco Delta Asia, accused of laundering money on behalf of the impoverished state.

"We have not determined where they (financial talks) will be held but that will not be a problem," Hill said.

"They will probably be held before or at the same time as the six-party talks."

Hill expressed the hope that the next round of six-party negotiations would be more fruitful than the last round.

"Based on all the consultations we've had in the last week or so I think we have a basis for getting together as soon as possible in the six-party talks and making progess," Hill said before departing Beijing for Washington.

During his talks with Wu, Hill said he briefly discussed a surprise January 11 Chinese missile test that destroyed a satellite, resulting in worldwide concern that China could trigger an arms race in space.

"We had some private discussion, but let me allow the defense department and state department to speak on that issue," Hill said, refusing further comment.

South Korea's nuclear envoy Chun Young-Woo will visit Beijing this week to discuss the resumption of the six-party talks, Hill said.

U.S. Envoy Sees Potential In Korea Talks (AP)

By Alexa Olesen

AP, January 22, 2007

The U.S. envoy to talks on North Korea's nuclear disarmament said Monday he believed there was potential for progress in the next round of negotiations and China would soon announce a start date.

The comments follow pledges by the key players, Washington and Pyongyang, to strive for progress in the slow-moving negotiations.

DOJ_NMG_0119344

The Chinese-organized international talks took on added urgency after North Korea alarmed its neighbors in October by testing a nuclear bomb. But the latest round ended in December in Beijing with no breakthroughs.

U.S. Assistant Secretary of State Christopher Hill told reporters that Washington was disappointed with the lack of progress in the last round but that he believed there was "a basis for making progress" when negotiators meet again. He did not elaborate.

Hill said that in talks Sunday with his Chinese counterpart, Wu Dawei, the two sides agreed the high-level negotiations should start again "as soon as possible."

"We hope that the Chinese government will be able to announce soon the start up of the talks," he said.

Meanwhile, South Korean media reported that North Korea has agreed to discuss the disarmament of its nuclear weapons when talks resume, which would mark a shift in the North's stance.

North Korea agreed to directly address moves to disarm when Hill and the North's chief nuclear envoy, Kim Kye Gwan, met in Berlin last week, the Yonhap news agency reported, citing unidentified diplomatic sources.

A South Korean newspaper reported Monday that at the Berlin meeting, North Korea and the United States came close to an agreement for the communist state to freeze its nuclear activity and allow international monitoring in exchange for aid.

Chosun Ilbo newspaper, citing unidentified officials in Seoul and Beijing, said Kim offered to halt the operation of the five-megawatt reactor at the North's main nuclear complex and other nuclear activity while allowing monitoring by the International Atomic Energy Agency, the U.N. nuclear watchdog.

In return, Kim demanded the United States provide the impoverished North with economic and energy aid and show "sincerity" in efforts to resolve a dispute over Washington's imposition of financial restrictions against Pyongyang, the report said.

Hill responded positively to Kim's request for aid, the paper said. But the report did not say how the U.S. diplomat reacted to the North's request over the financial dispute.

South Korean officials were not immediately available for comment.

Previously, Pyongyang said it would not discuss nuclear disarmament unless the United States first lifted financial restrictions imposed for the North's alleged counterfeiting and money laundering.

Separate talks between the U.S. and North Korea on the financial sanctions issue were also expected to resume soon, but no date or location had been fixed yet, Hill said.

"I think they will be very soon, probably the same time or before the six party talks," he said.

The participants in the six-party talks are North Korea, the United States, Japan, South Korea, China and Russia.

U.S. Envoy Upbeat About New Korea Talks (NYT)

New York Times, January 22, 2007

BEIJING, Monday, Jan. 22 — The chief American envoy to talks on North Korea's nuclear weapons program said Monday morning that he hoped a new round of six-nation negotiations would get under way shortly, and he expressed cautious optimism about prospects for reaching a settlement.

The envoy, Christopher R. Hill, an assistant secretary of state, told reporters after consultations with the Chinese in Beijing that he felt there was a new "basis for making progress." He said China, the host of the talks, may announce the start date for a new session shortly.

His relatively upbeat assessment came after he had a rare bilateral meeting with his North Korean counterpart in Berlin last week.

The last round of talks in December began with a burst of optimism, but ended in stalemate.

A South Korean newspaper, the Chosun Ilbo, reported Monday that North Korea had offered to halt the operation of the five-megawatt reactor at its main nuclear complex while allowing monitoring by the international weapons inspectors.

It said that in return, the United States agreed to provide the North with economic and energy aid and show "sincerity" in efforts to resolve a dispute over Washington's imposition of financial restrictions.

U.N. Left Out Of Plans For Korea (WT)

By Andrew Salmon

The Washington Times, January 22, 2007

SEOUL -- Planning for a handover of military command to South Korean forces has failed to provide for a small but vital U.N. force, jeopardizing the allied deterrent on the Peninsula, the U.S. commander said.

Gen. Burwell B. Bell, joint head of the Combined Forces Command, warned that the problem must be resolved because a crisis on the Peninsula could "almost instantaneously lead to combat operations."

In that case, "there could be no time to make changes in our command structure while crisis escalates," Gen. Bell told reporters. Unless the problem is addressed, "this situation will make it impossible to credibly maintain the armistice."

DOJ_NMG_0119345

Combined Forces Command, led since the Korean War by a U.S. general, has operational wartime control over about 29,000 U.S. troops and more than 600,000 South Korean troops.

At the request of the government of President Roh Moo-hyun, that command will be dissolved, and the South Korean forces would serve under South Korean command. The change is set to go into effect in the next two to five years.

However, Gen. Bell warned, no adequate planning has been done for the parallel U.N. Command, a largely administrative body that oversees the 1953 armistice that ended the Korean War.

The unit has only 60 soldiers, but it provides the legal framework for the mobilization of reinforcements from the 16 U.N. member states that fought in the Korean War if another conflict breaks out.

"It allows sending states to return forces to Korea without further [U.N.] resolutions," said Dave Oten, spokesman for U.S. Forces Korea. "The legal authority is already there."

Gen. Bell, in a meeting with foreign journalists late last week that was also attended by senior diplomats from the 16-nation U.N. coalition, warned that clarity in command structures will be essential during the coming transition to Korean command.

"The inactivation of Combined Forces Command and the transfer of Republic of Korea forces wartime [operational command] to an independent ROK military command will create a military authority-to-responsibility mismatch for the United Nations Command," he said, using the acronym for Republic of Korea.

He noted that the U.N. commander would no longer have "immediate access" to South Korean troops, a situation that would undermine the military deterrent.

Traditionally, the commander of U.S. forces in Korea also serves as U.N. commander. Gen. Bell said he expects that arrangement to continue and that the U.N. commander will maintain operational control of all U.N. forces in Korea.

One ambassador at the conference confirmed that his country was paying close attention to the way the U.N. Command will be structured during the transition.

The United States and South Korea are at odds over the timing of the transition of the Combined Forces command. Although the Korean government proposed the change, it is in less of a hurry than the American side is.

Seoul expects to be ready to take full control after 2012, but Washington is pressing to make the switch as early as 2009.

Gen. Bell said that he hoped a definite date would be ironed out through bilateral negotiations by this summer.

It was the general's second press conference this year. Two weeks ago, he spoke about issues bedeviling the U.S.-Korea alliance, particularly budgetary disagreements and reported Korean moves to delay the redeployment of American troops from their central Seoul base to a less intrusive garrison near the city of Pyeongtaek, 40 miles south of the capital.

The frank nature of the general's comments surprised some analysts.

"Bell is expressing his frustration. the Korean side doesn't want to make difficult decisions, and it is leaving Washington frustrated," said Peter Beck, a Seoul-based analyst with the International Crisis Group.

"There is not even a master plan for Pyeongtaek that both sides can agree on. Korea wants control, but doesn't have the means of pulling it off on their own."

The alliance has been strained by mass anti-American protests aimed at U.S. troops, the rise in South Korea of a new generation of liberal politicians who are critical of Washington and the Bush administration's suspicion toward Seoul's attempts to engage North Korea.

LETTERS (WSJ)

Wall Street Journal, January 22, 2007

U.N.'s Program for the Poor of North Korea Strives to Forestall Corruption

In response to Melanie Kirkpatrick's Jan. 19 editorial-page commentary "United Nations Dictators Program" and the accompanying editorial "U.N. Cash for Kim" about the United Nations Development Program's work in North Korea, I would like to offer some important context and relevant facts.

Here are the facts: There is no reason to believe that our programs were subverted to fund nuclear activities in North Korea, and the most recent audits conducted in 1999, 2001 and 2004 did not raise this concern. We would also welcome an independent and external audit of our operations in North Korea. Moreover we strongly support the secretary-general's call to have an inquiry into the operations of the U.N.'s funds and programs world-wide to ensure there are no misperceptions about our activities in North Korea or elsewhere.

UNDP operations in North Korea are in accordance with decisions of the 36 countries on its board, which includes the U.S., and with resolutions passed recently by the Security Council. They are also in accordance with UNDP's board-approved financial regulations. All of UNDP activities in North Korea have been and continue to be subject to regular audits and controls.

Here is the context: Operating a development agency in North Korea is a complex business. To give an example, operating in North Korea entails an unavoidable transfer of foreign currency. Either we pay our local staff and contractors directly in Euros

DOJ_NMG_0119346

or we exchange euros for North Korean won via the central bank. In light of the current context, we are taking all possible steps to reduce to an absolute minimum of hard-currency transactions and have decided that direct recruitment of staff is pre-requisite for our continued cooperation in the DPRK. The only way to prevent all hard currency from finding its way into North Korea would be to cease operations there.

Our organization works in North Korea because the member states of the U.N. and UNDP's board have made it very clear that they want us there. UNDP and its sister U.N. agencies have helped the North Korean people cope with a devastating famine in the 1990s and continue their assistance to improve the lives of North Korea's impoverished people. If the member states of the U.N. and UNDP's board were to decide that our presence there were no longer useful, we would leave immediately.

House Call: Doctor-Patient Bond

As a primary care internal medicine physician who has made house calls for the past 27 years, I found your report "Green Thumb: Finding Doctors Who Will Make House Calls" (Money & Investing, Jan. 13) to be factual and interesting, but missing one critical point that affects both doctors and patients. It isn't the physical event of a house call that is so greatly helpful for many ailing patients; it is much more often the presence of a trusted doctor at the bedside who can help the patient and family make the right decisions.

A hired-gun house call will produce a spur-of-the-moment physician of uncertain credentials, a doctor with litigation concerns, a physician with no prior knowledge about medical history or a doctor-businessman looking for payment for the time spent driving and talking. Often, the final result may be a call to 911 for the patient to be transported to an emergency room where expensive tests may clarify a diagnosis and where life-sustaining procedures may be brought to an elderly person who had been ready for the end of life.

I have found that when a patient reaches out from his or her bed, clutching my hand with a grip that is often surprisingly strong, the payment for the doctor and the value for the patient isn't financial but is instead an intangible that comes from deep within the souls of both the doctor and the patient.

Roger C. Dunham, M.D.
Santa Barbara, Calif.

There is no way an insurer can adequately compensate for a house call, and I am embarrassed to charge a patient what I think the visit is really worth. So, I usually don't charge the patient or the insurance carrier anything. I am sure that other primary-care doctors also do the house call as an act of charity, particularly when they visit the elderly sick. The visit gives the doctor a chance to better understand the dynamics of the home situation and strengthen their relationships with their patients. Whether or not to charge for house calls is a very personal matter, but at least for the elderly, it seems that charging takes away from the physician's satisfaction. In an inexplicable way, I think it also lessens the physician's effectiveness.

Edward J Volpintesta, M.D.

The FICA Life

In regard to "No New Taxes" by Mike Pence, editorial page, Jan. 13: The fear of a Republican Social Security tax increase is so great in some quarters that opponents are throwing everything they can find at it in their march toward an America that contributes as little as possible to anything: The "poor" middle-class working Americans struggling to make ends meet and earning more than $94,200 a year will be exploited beyond belief and, no doubt, will be forced to sell their homes and withdraw their children from college. It won't amount to a hill of beans to the rest of us who earn average wages and see FICA as a way of life.

Yarmouthport, Mass.

Antediluvian Outlook

Attempting to discredit free trade, Sen. Byron Dorgan resorts to tired rhetorical tricks (Letters, Jan. 18). For example, he complains about the loss of manufacturing jobs. In fact, though, most of these job losses are due to automation that increases workers' productivity. As economies advance, the loss of manufacturing jobs is no more surprising or regrettable than was our loss over the past few centuries of agricultural jobs or our earlier loss of hunter-gather jobs.

Sen. Dorgan calls free-traders "blind." It is much closer to the truth to call protectionists antediluvian.

Oil, Gas Investments Vital to Our Security

The Bush administration's decision to lift oil and natural gas drilling bans in areas of the Gulf of Mexico and Bristol Bay, Alaska, is a step in the right direction to improving American energy security ("U.S. Is Raising Gulf Royalties for Oil and Gas," Jan. 10). But the administration is sending a mixed message by raising the royalty rates on new offshore deep-water federal oil and gas leases, effectively steering capital away from future American energy investment and increasing our dependence on foreign energy sources.

In evaluating deep-water projects, independent producers perform a careful cost-benefit analysis, factoring in lease bonus payments and royalties. Under the administration's proposed increases, royalty rates will discourage high bonus payments and potentially discourage many American energy projects. Higher royalty rates almost always lead to less resources being developed.

Oil and natural gas are essential components of America's energy supply for the foreseeable future. Policies that reduce investments in American oil and gas production are a threat to American energy security.

(The IPAA represents companies holding 80% of Gulf of Mexico shallow-water leases and 75% of deep-water leases.)

Freely Traded Yuan Is Worth Rooting For

When it comes to the U.S. trade imbalance, the only exchange rate that really matters is the rate between the dollar and the Chinese yuan ("Why U.S. Should Root for Dollar to Weaken More," The Outlook, Jan. 8). With most of our trading partners, exchange rates act to naturally adjust trade imbalances; however, as long as the yuan isn't floating freely, a weakening dollar, relative to other world currencies, won't have the desired effect of reducing our trade imbalance in any significant way. The deficit will remain high because Chinese imports, which make up the bulk of the deficit, will remain cheap. Exports to other countries from the U.S. won't make up the difference because an artificially weak yuan hurts the competitiveness of those other economies. Furthermore, even if the dollar weakens, the loss of the U.S. manufacturing base, especially over the past 20 years and especially to China, means that there are fewer goods to export. Exporting, therefore, has a diminished ability to affect the trade balance.

Rather than "rooting" for a weakening dollar around the world, we should be insisting on a freely traded yuan or imposing tariffs on all Chinese goods to make up for the existing artificial valuation.

Vision Of Rebuilding Lebanon Wanes (NYT)

By Hassan M. Fattah
The New York Times, January 22, 2007

BINT JBAIL, Lebanon, Jan. 16 — In August, Mohammed al-Seyed watched with some pride as tractors driven by Hezbollah men rolled in to begin scooping away the rubble and debris of a month of war with Israel, while engineers and others set to work.

This Hezbollah stronghold would soon rise again, the leaders of both the town and the militant group's building arm, Construction Jihad, said defiantly.

More than five months later, however, with winter here and Lebanon's government enmeshed in political crisis, the tractors are gone, the army of men has disappeared and Bint Jbail's town center still resembles Dresden after World War II.

"They told us everything was going to be rebuilt soon," Mr. Seyed said Tuesday, speaking of town leaders. "They're not doing anything now. We want to build but they won't let us. They promise to pay us, but they don't. All we want is our homes back and they won't even let us have them!"

There may be as many excuses for the slowdown in rebuilding in the south as there are political factions in this nation. Some people blame the weather; some say residents living abroad are just taking their time; some officials cite disagreements over the amounts paid to those who have lost their homes. In one rare admission, a senior Construction Jihad official said his group was overwhelmed by the destruction.

"Our goal initially was to work with our own hands, but we soon realized we weren't enough, so we decided to begin reimbursing people," said Abou Ali Bayloun, regional director for Construction Jihad in the southern port town of Tyre. "It is natural that the workers in the area will not be enough in the area. It needs a lot of workers to do this."

DOJ_NMG_0119348

But politics is at the heart of the problem. Hezbollah and its supporters point fingers at the government of Prime Minister Fouad Siniora; the government reflects the accusation back at Hezbollah. Residents now blame both sides.

Ultimately, some analysts say, neither side wants to take responsibility for the task of reconstruction. The government avoids direct involvement on the ground, trying to avoid blame for inefficiency, while Hezbollah has also reduced its activities and is capitalizing on residents' frustrations for the lack of action.

"One side doesn't want to be accused of slowing things down," said Habib Debs, professor of urban planning at the American University of Beirut. "The other side wants to blame the government for not doing anything. So nothing is being done and both are happy that that neither is doing anything."

Certainly, the two sides lack coordination and cooperation, which alone is a serious barrier to reconstruction. Fear, too, plays a role: residents who could begin building have hesitated, fearing further conflict with Israel or, worse, civil war.

"People are terrified," said Ali Eid, deputy mayor of the town of Srifa, one of the few southern towns witnessing major construction. "They know that if there's problem in Beirut, it will spread and spread south. We've started because we had to. But Bint Jbail is closer to any war that may happen."

The political wrangling unleashed in the war's aftermath, culminating in the walkout by six Hezbollah-aligned ministers in November and six weeks of unbroken demonstrations in Beirut by Hezbollah and its new allies — including Christian and Druse groups that were once its mortal enemies — has raised sectarian tensions, especially between Sunnis and Shiites.

Officials of the Siniora government insist that they have done what they could for the Shiite-dominated and Hezbollah-friendly south, but that the political crisis has prevented major decisions from being made.

"Hezbollah has been part of all the committees," said Mohammad Safadi, minister of public works and transportation. "They are part of the decision-making process so they are as much to blame." Mr. Safadi said that up to 40,000 households had received government payments of up to $40,000 each to rebuild their homes and could proceed at will.

But officials in Bint Jbail and other southern towns accuse the government of adding red tape and withholding aid to punish them. Bint Jbail's leaders say that electricity service worsened after Mohammad Fneish, the minister of electricity and water resources, resigned with the other Shiite-aligned ministers. They say that telephone service is still spotty because the minister of telecommunications is Marwan Hamadeh, an ally of the Druse leader Walid Jumblat, an outspoken critic of Hezbollah.

"The whole south is in the same situation as us," said Haitham Bazzi, who heads a committee on reconstruction for the old section of Bint Jbail. "They have forgotten us, despite the war and everything we went through. That's why many people here are fed up and want the government out even before the politicians do."

The town — which has 6,000 full-time residents and almost 30,000 living abroad, most in the United States — was adopted by the government of Qatar, which promised to finance the reconstruction. But many villagers feared that residents would take the payments and abandon the village, so Ali Bazzi, the mayor, lobbied to get the Qataris to hire a construction company to rebuild the whole area and preserve its historic nature.

He outlined big dreams for his decimated town in August. It was to become a model city in the south, with new apartment blocks, wider streets and modern infrastructure. A group of local residents and college professors stepped in with its own competing plan, which would rebuild the historic homes, preserving the town's character while leaving the high rises at the town's periphery. The debate, local residents say, continues.

Now the reconstruction plan is moving in stages, said Hussein Saad, a member of the city council. The first stage, now complete, entailed reimbursements of up to several thousand dollars for reparable damage to homes. The second will pay up to $40,000 for rebuilding demolished homes. And finally a third will rebuild homes in the historic older district. The foundations of a temporary market are in place, to house stores and stalls until the bombed-out market is rebuilt.

But city officials say that much of the process has been stalled as they wait for approvals from the Department of City Planning, a branch of the Ministry of Public Works and Transportation in Beirut. Mr. Safadi, the minister, acknowledged the delay but said he had found a way to work around the problems.

The cabinet has drafted new legislation allowing all residents of the south to expedite construction, but said the legislation would normally have to be passed by Parliament. Instead, the cabinet has encouraged city governments to move ahead.

"We simply can't wait for Mr. Berri to hold a session of Parliament any more," Mr. Safadi said, speaking of Nabih Berri, the speaker of the Parliament who has backed the opposition and has refused to convene Parliament. "We can no longer hold the people ransom."

In the rubble of Bint Jbail on Tuesday, Mr. Seyed's voice continued to rise. "I am going to pitch my tent in the center of town and stage my own protest," he said. "We'll bring down the city government. We'll bring down the whole damn show."

An Israeli Ross Perot (NSWK)

By Kevin Peraino

DOJ_NMG_0119349

Newsweek, January 29, 2007

Officially it was only a Chanukah party, but the blowout that billionaire Arkady Gaydamak threw a few weeks ago in Tel Aviv was also one hell of a political rally. Hundreds of outsize candles and scores of plasma televisions cast a flickering glow on banks of tulips and orchids that had been flown in for the occasion—as was the evening's star entertainer, Enrique Iglesias. Fashion models in low-cut dresses mingled with septuagenarian rabbis and top-tier politicians like Benjamin Netanyahu. The guest list was so tight that the uninvited son of a cabinet minister was caught trying to push his way in through the kitchen. "Half the guests were there out of genuine appreciation for Mr. Gaydamak," says David Nitzani, the event's organizer. "And then there were a bunch who just wanted to be seen."

A $2 million bacchanal is hardly the traditional way to observe the Jewish "festival of lights." But Gaydamak has no patience for stodgy ritual, and the 54-year-old Moscow-born financier is just about the only one in Israel who feels like celebrating. After last summer's punishing war with Hizbullah and a rash of political scandals this winter, Israelis are fed up with their current crop of leaders. Military Chief of Staff Lt. Gen. Dan Halutz has resigned after a series of investigations found that his forces had mishandled the Lebanon war. Prime Minister Ehud Olmert faces 14 percent approval ratings—and now a criminal investigation into his role in the sale of one of Israel's largest banks while he was Finance minister. One of his top aides has already been placed under house arrest in a fraud investigation involving the state's Tax Authority. (Both Olmert and his aides deny any wrong-doing.) A recent poll by Israel's Dahaf Institute found that 85 percent of Israelis considered their political leaders to be corrupt. "There's a [power] vacuum," says Shlomo Avineri, a political scientist at Jerusalem's Hebrew University. "And that's when these sorts of oligarchs step in."

Gaydamak styles himself as a sort of Israeli Ross Perot—an eccentric electoral outsider with the bank account and business acumen to fill the gap. During last summer's war, Gaydamak paid about $14 million to house 6,000 Israeli refugees in two tent cities along the Mediterranean. In November he sent 2,000 residents of Sderot, an Israeli village near the Gaza border that has been hammered by rocket attacks, for a weeklong vacation at a Red Sea beach resort. Critics view Gaydamak as more of a Citizen Kane—an awkward tycoon desperately trying to buy friends and build a political base. "Give me three months, and half the Knesset will be mine," Gaydamak told the Israeli daily Yediot Ahronot late last year. A poll last year in the same newspaper predicted that a party led by Gaydamak could win eight out of 120 Knesset seats in a snap election—enough to make him a behind-the-scenes kingmaker. (Gaydamak tells NEWSWEEK he has no current plans to run for office.)

His past could be a problem. After emigrating from the Soviet Union in 1972, Gaydamak built a fortune on oil deals and the Russian stock market. In 2000 he relocated to Israel from France, where he is wanted for alleged tax evasion. (He denies any impropriety.) A 2002 study by the nonprofit Center for Public Integrity in Washington, D.C., concluded that Gaydamak "epitomized the business of war in the post-Cold War era—an entrepreneur with global ties to arms smuggling, resource exploitation and private military companies." For his part, Gaydamak says: "I was never involved in any arms sales, deals—nothing. It's a complete lie."

Despite his political liabilities, mainstream politicians aren't taking chances. Earlier this month a Knesset committee debated a measure nicknamed the "anti-Gaydamak law," which would require any candidate to count large philanthropic gifts as campaign expenses, making them subject to spending limits already on the books. Still, even the measure's author, Ran Cohen, doubts it will ever become law. "He has enough money to buy other politicians," says Cohen. "I'm not sure I'll win."

To many Israelis, Gaydamak's murky reputation outweighs his apparently good intentions. Mordechai Eleasi, a 38-year-old Sderot resident, spent a weekend this past November relaxing with his wife and three kids at a luxury hotel in Eilat on the tycoon's tab. But Eleasi says he has no intention of voting for Gaydamak. "He's a nice guy, we thank him, but that's all," says Eleasi, with the cool indifference of an underwhelmed prom date. "I never really thought about him as anything more than that." Gaydamak's money can buy influence, gratitude—possibly even votes. It still can't buy love.

In Somalia, New Government Faces Old Problem: Clans (NYT)

By Jeffrey Gettleman

The New York Times, January 22, 2007

MOGADISHU, Somalia, Jan. 18 — Fifteen men and one woman sat on the floor of a sunlit room. It was hot. Many people were sweating. The elders of the Ayr clan had called a political meeting, and very quickly it was clear that their attitudes toward the nation's newly empowered transitional government were unanimous — and bitter.

"The government is weak," said Mohammed Abdi, an Ayr elder. "We can't support it."

Somalia, which has been an archetype of Africa's ills for so long, has waited 16 years for this government. The United Nations has invested millions of dollars into propping it up. American officials are so intent on it succeeding that, in the interests of regional stability and counterterrorism, American forces have ventured onto Somali soil for the first time in more than a decade to hunt down the last of the Islamist leaders who held a firm grip on much of the country until just a few weeks ago.

DOJ_NMG_0119350

But whether Somalia pulls itself together now or explodes into bloodshed again depends not on American troops, foreign peacekeepers, investment or aid. It depends on clans. "Clannism," said Ali Mahdi Mohammed, an influential clan leader and once a contender for president, "is our national cancer."

It was clan animosities that tore down Somalia's last government in 1991, clan militias that humiliated American troops in 1993, bringing a troubled aid mission to a hasty end, and clan warfare that has consumed countless lives and reduced Mogadishu, Somalia's once-beautiful capital by the sea, into a pile of bullet-pocked bricks.

The government, which took the capital for the first time last month, is trying to address the clan problem head-on. It is using a mathematical formula based on rough estimates of the population (the last census was in 1975) to allocate parliamentary seats and ministerial posts on a clan basis, and plans to govern like that until the next elections, which are proposed for 2009.

But that approach is hardly original — and it does not have an encouraging history. It is the 14th attempt since 1991 to form a clan-based government; all the others have disappeared into a vortex of suspicion and violence.

The Green Line in Mogadishu, a blasted-out boulevard with blackened buildings on each side, is a monument to fratricide. It is the dividing line between two clans, the Haber Gedir and the Abgal, which are actually part of the same family.

Somalia's main clans are divided into a dizzying number of subclans, sub-subclans and even sub-sub-subclans, and the term clan is loosely used for large family networks, like the Hawiye, and smaller ones, like the Ayr.

There is no definitive clan chart, with different clans disputing how they are interrelated, and Somalis argue over whether they have physical differences. But all clans are based on ancient genealogies. You cannot join a clan. You are born into one.

The Islamists, who seized power six months ago, had their own solution for this. They tried to submerge clan identities under the blanket of Islam, the one thing, besides language, that all Somalis share. They delivered more stability to Mogadishu in their short reign than the city had seen for a decade and a half.

But then they made an enormous mistake. In December, the Islamists tried to seize all of south-central Somalia, including Baidoa, the seat of the transitional government. Their attacks provoked a crushing response from neighboring Ethiopia, which commands one of the most powerful militaries in Africa and viewed the Islamists as a regional threat. Within a week, the Ethiopian forces, with approval from American officials, annihilated the Islamist army.

Now many Somalis wonder what would have happened to the Islamist ideology if the Ethiopians had never stormed in. "Islam was probably the best answer for us," said Hassan Gedi Roble, a chief of the Dir clan. "A government of clans is only going to create clan competition." The Islamists have gone underground, vowing to wage a guerrilla war.

And already the resistance in the capital is beginning to work along clan lines, with attacks against government troops concentrated in neighborhoods that were Islamist strongholds. Government soldiers are so frightened of driving through Tawfik, dominated by the Ayr, that they change out of their uniforms into street clothes before they enter. In other areas not far away, like Sinai, inhabited by many Abgal, shopkeepers pump their fists in the air and cheer when they see the government troops.

Clans have been the bedrock of Somali identity since the first bands of nomads fought over water holes.

"Out there, you needed to belong to someone," said Yusuf Mohammed Ali, a shipping magnate and respected figure among the Suleiman clan.

The same is true today on Mogadishu's chaotic streets. In a place that has teetered so long with no government, no police forces, few institutions and great uncertainty, clans function as a safety net, a social network — most people marry within their clan — a justice system and, most importantly, as protection.

The factionalism makes government a tricky affair. Somalia's infamous warlords, like Muhammad Qanyare Afrah, are essentially clan leaders with their own clan armies.

Everybody in Mogadishu calls Mr. Qanyare a warlord, but he prefers "M.P."

"We are members of Parliament," he said, referring to a group of fellow militia leaders who were given positions in the government in an attempt to bring peace. "We are not street boys."

Mr. Qanyare, who is from the Mursade clan, laid out the long history of conflict between the Haber Gedir (which includes the Ayr) and the Darod, the clan of the transitional president, Abdullahi Yusuf Ahmed.

Relations with the Ayr seem especially combustible: it is one of the largest clans in Mogadishu; many of the Islamist leaders were Ayr; and government officials have accused Ayr elders of backing the insurgency. Ayr elders say they have been cut out of the new administration.

American officials are urging the government to reconcile with all clans, and they are becoming increasingly alarmed about the authoritarian streak of the government, which has already declared martial law and briefly shut down radio stations.

Senator Russell D. Feingold, Democrat of Wisconsin and chairman of the Senate's subcommittee on Africa, said at a conference in Washington this week that President Yusuf's government was "already running the risk of missing a critical window to establish itself as a credible, transparent and representative government."

DOJ_NMG_0119351

The transitional government says security begins with disarmament, but so far disarmament has been mostly a farce. Mr. Qanyare and a few other militia leaders turned in some rusty guns this month.

But military grade firepower is still everywhere. Somalia was a cold-war dumping ground for arms, and then it exploded into every-clan-for-itself anarchy. That combination created such a gun glut that high-powered assault rifles are openly sold for $15 at a Mogadishu market called Sky Shooters (a place where shoppers test the goods by unleashing a stream of lead into the sky).

Many of Mogadishu's residents, even those who resented the Islamists' draconian decrees — no Western music, no cigarettes, no high-heeled shoes — said they felt safer a few months ago. That annoys Abdirizak Adam Hassan, the president's chief of staff.

"This government is constrained by rules," he said. "Unlike the Islamists, we can't just go around lashing people."

One obvious problem is the transitional government's reliance on Ethiopian muscle. Ethiopian troops may have been willing to vanquish the Islamist army, but they are not willing to work as policemen.

The Ethiopian military is now threatening to leave altogether in a matter of weeks, apparently trying to pressure the United Nations and the African Union to quickly assemble a peacekeeping force to fill the vacuum. Only a small portion of the necessary troops have been committed, and it is not clear how the Somalis will receive them.

The best hope is that Mogadishu's residents are so exhausted by war that they will not turn on the foreign peacekeepers the way they did in 1993 when they attacked American and United Nations soldiers who had come to help feed them.

Mr. Mahdi, the former presidential contender, said the government had about three months to pull things together. "After that," he said, "Mogadishu will be ungovernable."

Already, more than a dozen people have been killed in insurgent strikes. On Thursday, thousands of flyers mysteriously appeared across the city warning people to stay away from government soldiers.

Abdi Fatah, a former Islamist fighter who clipped his beard and swapped his robes for polo shirts and slacks, said, "The Ayr guys are meeting every night."

The Ayr elders denied they were fueling the insurgency.

But when asked if the government had as much grass-roots support as the Islamists, their meeting room suddenly grew quiet.

"That was a joke, right?" one man asked. And then the room burst into derisive laughter.

From Marine To Warlord (LAT)

By Edmund Sanders, Times Staff Writer

The Los Angeles Times, January 22, 2007

A Somali who once lived in West Covina now has hopes of becoming president of his homeland.

MOGADISHU, SOMALIA — The Planning Department clerk from West Covina was mapping bike routes and San Bernardino Freeway overpasses when two U.S. Marines drove up in a white Chevrolet and took him away.

The night before, on Oct. 3, 1993, Hussein Mohammed Aidid had watched in horror as television conveyed images of a disastrous U.S. military mission against a Mogadishu warlord. After two Black Hawk helicopters crashed, an ensuing gunfight left 18 American servicemen dead, and rioting Somalis dragged some of the bodies through the streets.

"Hell is coming," he recalled thinking before turning off the TV in disgust.

Perhaps no one in the world was more conflicted than Aidid, a Somalian immigrant who settled in Southern California as teenager. He had served with the U.S. Marines in Mogadishu for four months that year as part of Operation Restore Hope, and the death of the U.S. Rangers "was like a black hole inside of me."

But his father, Mohammed Farah Aidid, was the warlord the U.S. was targeting.

The next morning, at the U.S. Marine base at Camp Pendleton, a commander asked Aidid to send a letter to his father, pleading for the release of a captured U.S. pilot. He said he didn't hesitate.

"I felt almost as if I could have been in that conflict and died," he said.

Three years later, however, Aidid would abandon his job and his military ties in America to return home after the death of his father. Aidid assumed control of his father's militia, inherited a vast swath of territory and became one of Somalia's most powerful warlords himself.

Today Aidid, 44, is trying to change mantles again. As interior minister for Somalia's struggling transitional government, he is the man charged with restoring security to Mogadishu. After routing Islamic fighters from southern Somalia last month with the help of Ethiopian troops, the government is trying to bring order after 16 years of chaos and clan wars.

Described by critics as a wily opportunist who switches alliances easily, Aidid makes no secret of his desire to one day become president. Despite anger by some Somalis over the recent U.S. airstrike against suspected terrorists in the country, Aidid said his U.S. background is an asset, not a liability.

DOJ_NMG_0119352

"People say to me: 'You are our connection to the world. You understand that world. Be that bridge,' " he said.

Over the years, Aidid has struggled to emerge from the shadow of his famous father. Both are still vilified in some parts of the country for using ruthless tactics to crush opponents. Even political allies groan at his occasional blunders, such as his recent suggestion that Somalia and archrival Ethiopia might one day merge into a single country.

"He's a lightweight," said Ken Menkhaus, Somalia scholar at Davidson College in North Carolina. "He's never had the gravitas of his father."

But even those who scoff at Aidid as immature or unstable warn against counting him out. His family and clan connections, encyclopedic memory and track record for political survival guarantee his spot as a power broker in Somalia's future.

Supporters praise Aidid as the first to make the transition from warlord to politician. They say his push for reconciliation, including forgiving the clan that killed his father in a 1996 battle and giving up land for peace, fostered an environment that enabled the current government to form.

"He's fresh and young and doesn't have a black record," said Abdirasak Farah Ahmed, a taxi driver from Aidid's clan. "He was the main one who got rid of the warlords. He is the only one who can unite the people."

In the sitting room of his rented Mogadishu house, Aidid remains a clash of U.S. and African cultures. He wears a dark Western suit and power tie, with bare feet. He acknowledges two wives and seven children, though an aide counts four wives and 20 kids.

He can dance and feast in a cow field during an all-night clan festival, but still retains some of his old military habits, such as jotting down tasks and thoughts in a small notebook. He speaks so rapidly at times, for example rattling off the "Seven Habits of Highly Effective People," that it seems his mouth can scarcely keep pace with his brain.

Aidid enjoyed a comfortable upbringing as son of a military guard until his father was jailed in 1969 on suspicion of plotting a coup against then-dictator Mohamed Siad Barre. In 1975, Aidid's father was released from prison and rejoined the resistance. He sent Aidid to the U.S. His mother and other siblings would soon join.

"We moved into exile so my father could do the opposition work he had to do," Aidid said. When he graduated from Covina High School, he said, joining the Marines was a natural choice. "I come from a military family," he said. "My hero was my father. I felt I must do something for my new country." His interest in science and math led him to specialize in computers and programming, studying the inner workings of MX missiles and artillery.

After serving in Iraq in the 1991 Persian Gulf War, Aidid's unit was tagged for a four-month mission in Mogadishu to deliver food and humanitarian support. Siad Barre had been ousted in 1991 in a revolution led by Aidid's father, but his clan had become engaged in a power struggle that was destabilizing the country.

It was a personal journey for Aidid, who briefly reunited with the father he had not seen for several years. After Aidid and his unit returned to California in March 1993, his father's relations with the United States unraveled further, and Somalia unraveled with them.

During the following two years, Aidid resumed his old life, living in Diamond Bar, driving around in a Mazda RX-7 and eating at Chinese restaurants. When he returned to Somalia in 1995 to introduce his fiancee, a Somali also living in California, to his father, the elder Aidid tapped his son to be his successor.

Just one year later, Mohammed Aidid was fatally shot in battle. The clan elected the younger Aidid to take over as head of a coalition of clans and warlords known as the Somali National Alliance.

"It was the hardest decision," he said. "My life [in the U.S.] was set. I knew that system. I didn't know anything about Somalia." Ultimately, he said, he felt obliged to fulfill a promise to his father to one day take over.

Aidid reconnected with his Somalian roots. He started another family in Mogadishu. He began referring to the Oct. 3 U.S. helicopter crash as a "gloomy day for the aggressors" and a "victorious day for the Somalis." But Aidid said he never developed the taste for the life of a warlord.

"My father was a general," he said. "He did things by action. I reversed. I flipped the coin. I did things through reconciliation."

Analysts confirm that the younger Aidid was among the first to seek reconciliation in Mogadishu, though they noted that at times he also boycotted peace conferences. He reached a power-sharing agreement with other Mogadishu warlords. But fighting soon resumed. And Aidid, who began with a huge expanse of southern Somalia, including Mogadishu, Baidoa and Kismayo, had retrenched by 1999 into Mogadishu's presidential palace, a small but symbolic holding.

"Sometimes a lion delivers a cat," said one Somalian clan leader, drawing a disparaging comparison between father and son.

Aidid continued his father's bloody campaign to hold Baidoa against an Ethiopian-supported resistance. Thousands of civilians were killed in the fighting, and Aidid's militia was accused of human rights abuses, such as killing the wives of rebels and shooting residents lined up for food.

DOJ_NMG_0119353

"He's a criminal," said Abdulaziz Mohamed Omar, 22, who said he lost three cousins to Aidid's fighters.

Aidid blamed the violence on Baidoa's rebels and defended his record. His goal, he said, was never to control land or make money.

"We didn't remove Siad Barre to become another dictator," he said.

He said he started a process that eventually weakened warlords, including himself, and brought all sides to the negotiating table.

"The objective was to create a democratic society, to reconcile with warlords and put them into parliament," he said. "And that strategy worked."

Experts say Aidid's version of history is a bit revisionist.

"His father, and to some extent the son, contributed to the instability and chaos in Somalia," said Ted Dagne, analyst at the Congressional Research Service.

Aidid said his standing in Somalian politics stems from popular support. "We survived here for so many years because we are with the people and their hearts," he said.

Aidid said he hoped to extend reconciliation to the U.S. by forging a closer relationship with the country he said offered him so much. Memories of Oct. 3 are never far from his mind, and he said he'd like to build a memorial in Mogadishu for those who died that day. As a reminder, Aidid said he still holds the dog tags of the captured U.S. pilot he helped release.

"I'm keeping them for him," Aidid said. "I want to give them to him when I see him."

Murder Of Outspoken Journalist Tests Turkey's Democratic Gains (CSM)

By Yigal Schleifer

The Christian Science Monitor, January 22, 2007

The murder Friday of a prominent and outspoken Armenian journalist has sent shock waves throughout Turkey and raised questions about whether a recent nationalist upsurge in the country has taken a violent turn. It also presents the government with what many say is a serious challenge to its already embattled democratization and reform efforts.

The journalist, Hrant Dink, was a vocal critic of Turkey's treatment of its religious minorities and had been particularly outspoken against the government's policy of rejecting claims that the mass killings of Armenians by the Ottoman Turks in 1915 was genocide. He was shot in broad daylight just outside the offices of the bilingual Turkish-Armenian newspaper Agos, where he served as editor.

"A bullet has been fired at democracy and freedom of expression. I condemn the traitorous hands behind this disgraceful murder," Prime Minister Tayyip Erdogan said on television soon after Mr. Dink was murdered. "This was an attack on our peace and stability."

The past few years have seen Turkey engaged in a deep internal struggle. On the one hand, the country's drive toward European Union (EU) membership has resulted in significant political reforms, particularly regarding democratization and human rights, and the freeing up of the debate on what had previously been taboo subjects, such as the Armenian question.

On the other hand, the EU-related reforms have been met with a strong nationalist backlash.

Nationalist lawyers and prosecutors, for example, have been able to use a law, known as Article 301, to charge writers and journalists like Dink and Nobel Laureate Orhan Pamuk with the crime of insulting Turkish identity as a way of stifling the emerging debates and putting the brakes on Turkey's EU bid.

Dink was tried under this article, and in 2005 was convicted and handed a suspended six-month prison sentence.

"In a sense, both sides have been sharpening their axes, thinking that the EU question is the final intellectual battle in Turkey," says Ali Carkoglu, a professor of political science at Istanbul's Sabanci University. "It touches on everything that is salient in Turkish politics: the Islam versus secularism debate, democratization, and the extent to which individual human rights are to be protected."

For many Turks, the killing of Dink harks back to the turbulent '70s and '80s, when journalists and intellectuals were frequently the victims of ideologically inspired violence. Although Turkey has moved forward, some wonder whether Dink's murder is an indication that the political gains made over the past few years have yet to be consolidated.

"In a way, he took too many risks, he underestimated his opponents," says Rifat Bali, an Istanbul-based researcher who studies Turkey's minority communities. "Some of the ultranationalist core of Turkey has not changed. It is a militant core that is ready, if necessary, to murder its ideological opponents," he says.

Unlike in the past, however, Turkey's government was quick to respond to the murder, sending top officials to oversee the investigation. The quick arrest of the suspect – teenager Ogun Samast – is also seen as a positive sign, since in the past perpetrators of such crimes were rarely caught.

DOJ_NMG_0119354

"Those who created nationalist sentiment in Turkey have fed such a monster that there are many youngsters on the streets who do not find the ... state nationalist enough and are ready to take the law into their own hands," wrote Ismet Berkan in his daily column in Radikal, one of Turkey's main dailies. Extreme nationalism in Turkey is divided into secular and religious camps, although what unites both is non-Muslim minorities.

Experts here say the murder poses a major challenge for the Turkish government, led by the moderately Islamic Justice and Development Party (AKP).

With its EU bid already suffering – negotiations with Brussels have been partially suspended since December – the killing of a journalist who had already been the target of legal proceedings strongly condemned by the EU will only increase the pressure on Ankara and further tarnish its image in Europe.

"The image problem was already bad and this can only make it worse. Turkey will be seen as a country not only curtailing freedom of expression but the country that can also produce people who will assassinate writers and thinkers," says Suat Kiniklioglu, director of the German Marshall Fund's office in Turkey.

"The atmosphere that created this person to go after Hrant Dink with a gun was really the result of the atmosphere created by the trials brought on by Article 301," he says. "In that respect, the government will need now to really take article 301 seriously."

Outside the offices of Agos, an Armenian word that refers to a place where a seed is growing, a makeshift memorial has been created near the spot where Dink was gunned down, with crowds gathering to light candles and lay down flowers.

Dink, who founded the paper in 1996, used his last few columns to write about his legal woes.

"For me, 2007 is likely to be a hard year," he wrote in one column. "The trials will continue, new ones will be started. Who knows what other injustices I will be up against."

In his final column, Dink wrote about the increasing amount of hate mail he was getting, including one letter that scared him enough that he went to the local prosecutor to ask for protection, although without any luck.

"I don't know anyone else like him who raised his voice for minorities and democracy in Turkey," says Murat Celikkan, a veteran Turkish journalist and human rights activist.

"Intellectually he was a very important figure for Turkey. We don't have anyone else like him."

The Murder Of Hrant Dink (WSJ)

By Elif Shafak

The Wall Street Journal, January 22, 2007

ISTANBUL -- "I feel like a pigeon," Hrant Dink wrote in his last article. "Like a pigeon I wander uneasily amidst this city, watching my back constantly, so timid and yet, so free." That pigeon was gunned down Friday by a young Turkish fanatic on one of the most crowded streets of Istanbul.

Few people can inspire a whole nation in their lifetime, fewer still with their death. Hrant Dink did both. He was a prominent journalist, the editor of the Armenian weekly Agos, an outspoken intellectual, a peace activist, a true citizen of Istanbul and a dear friend. When the news of his assassination broke, thousands poured into the streets, chanting, "We are all Hrant Dink, we are all Armenian!" People slept in front of his office, guarding the spot where he'd fallen with candles and flowers.

The next day, all the main Turkish papers, left or right, spoke in a chorus of outrage on their front pages. Even more hard-line writers sincerely mourned his loss, asking where things had gone wrong. His death shattered the country and the grief cut across all sorts of ideological and social divides. His funeral will be attended by people from all religions, ethnicities and political inclinations. For Hrant Dink was a man impossible not to love, and far from "denigrating Turkishness," the crime which an Istanbul court convicted him of (under the anti-free-speech Article 301), for talking about the killings of Armenians in the closing days of the Ottoman Empire, he truly loved this land.

That his death was interpreted by some beyond Turkey as proof that Turks don't belong in the European Union would have upset Hrant. Without close ties to the EU, and the West as a whole, he worried that the country will become less democratic and more insular. His Turkey is a tapestry, a place where conflicting voices coexist. His best friends, companions and colleagues were Muslim Turks.

Yet Hrant Dink was, since his early childhood, used to discrimination. As he was getting ready to appeal his six-month sentence (eventually suspended) to the European Court of Justice, he wrote that, "I had no other option left. Why is it that although everyone tried under Article 301 has been acquitted one way or another, I have been sentenced to prison? Is it because I am Armenian and they wanted to intimidate me, teach me my limits?" Hrant knew the price to be paid for being in the political and ethnic minority, and still refused to withdraw into a glass ghetto.

Surrounded with friends and family, Hrant Dink was in many ways a lonely man. As critical as he was of Turkish ultranationalism, he had little time for Armenian ultranationalism. At his talks in the U.S., Europe and Australia to Armenian

DOJ_NMG_0119355

groups, he never played to the gallery. The biases and generalizations about Turkey and Turks in the Armenian diaspora frustrated him. "There is a big difference between Armenians in the diaspora and Armenians in Turkey," he once said. "You guys are Armenian one day a year, on the 24th of April" -- the commemoration of the 1915 massacres and deportations -- "whereas we are Armenian every day of the year but on that one."

Hrant opposed a French bill last year that sought to criminalize denial of the Armenian genocide, as well as a similar law now under discussion in the U.S. Congress. "If they pass the law in France, I will go there," he said, "and though I believe the opposite, I will openly say that there was no genocide." As a genuine supporter of freedom of expression, Hrant believed that it should be up to people, Turks and Armenians together, to find the means to reconcile, not to politicians to pass judgment on that history.

Many people asked Hrant why he didn't leave Turkey for Europe or America. The answer he gave was the inspiration for one that a Turkish-Armenian characters in my last novel, "The Bastard of Istanbul," offers.

"But why would I want to do that? This city is my city. My family's history in this city goes back at least 500 years. Armenian Istanbulites belong to Istanbul, just like the Turkish, Kurdish, Greek and Jewish Istanbulites do. We have first managed and then badly failed to live together. We cannot fail again."

Ms. Shafak is the author of "The Bastard of Istanbul" (Viking, 2007).

Pressure Builds On Blair Over Weapons Probe (CSM)

By Mark Rice-Oxley

The Christian Science Monitor, January 22, 2007

Britain is facing stinging international criticism for smothering a corruption inquiry into arms deals with Saudi Arabia, a decision that appears to sacrifice probity and rule of law for the sake of security and commercial relations.

Prime Minister Tony Blair, who took responsibility for the move to pull the plug on a two-year inquiry into the multibillion-dollar Al-Yamamah deals, argued that persisting with the probe would jeopardize the struggle against terrorism.

His chief law officer, Attorney General Lord Goldsmith, has indicated that lives were at stake. The government's argument is that the corruption inquiry, which was pursuing allegations that Saudi middlemen received tens of millions of pounds in bribes for "facilitating" the arms deals, was becoming so uncomfortable for the Saudis that it was jeopardizing cooperation on security.

But the move has generated furious condemnation. Domestically, critics are seeking a legal ruling to overturn the decision. And internationally, the Organization for Economic Cooperation and Development (OECD) says it suspects Britain is in breach of an anticorruption convention and has given London until March to come up with some answers.

"This is unprecedented," says Helen Fisher, an OECD spokeswoman. "It's a huge issue at the OECD. The committee makes it very clear that [bribery] is not a part of doing business, that there has to be a level playing field. When dealing with developing countries, bribery does massive damage."

When it was signed in the mid-1980s, the Al-Yamamah arms deal was trumpeted as a breakthrough moment for Britain's defense industry. The initial deal provided for the sale of 200 Tornado fighter jets to the Saudis, and was won from under the noses of French and US rivals. A second phase followed in the 1990s. Altogether the deal has already earned the now-private defense firm BAE Systems more than £40 billion ($79 billion), according to most estimates.

But there were soon whispers of bribery, allegations of perks lavished on Saudi dealmakers, accusations that senior figures in the Saudi royal and family may have benefited from bribes worth as much as £60 million ($120 million). An inquiry by Britain's National Audit Office examined the deal in 1992. Its report was unprecedentedly suppressed.

The Serious Fraud Office (SFO) took up the case in November 2004. Its deliberations reportedly threatened the third phase of Al-Yamamah under which Britain will supply Saudi Arabia with 72 Eurofighter aircraft for around £70 million ($140 million). BAE has denied any wrongdoing.

The government said the commercial aspect, though considerable, was not the reason for ordering the SFO to call off the hunt. Mr. Blair said last week that proceeding with the SFO probe "would have been devastating for our relationship with an important country with whom we cooperate closely on terrorism, on security, on the Middle East peace process."

Blair's case has been undermined somewhat by reports that MI5 and MI6, the security services, could not confirm that there were any explicit threats by the Saudis to discontinue cooperation if the investigation ran its full course.

But several security experts say that the case highlights the awkward dilemma facing Blair.

"The UK does have security problems and the Saudis can help," says Rodney Wilson, a Middle East expert at Durham University. "It comes down to names and flows of funding and people who are Al Qaeda sympathizers in the UK, activists," says Professor Wilson. "It's important information."

He says Britain had to balance international flak "with the possibility of getting blown up.... International criticism is one thing, but the job of the government is to protect citizens here and abroad and this information does help that."

DOJ_NMG_0119356

For others, the scramble to keep the Saudis on board, however, is less understandable. MJ Gohel, a terrorism expert at the London-based Asia-Pacific Foundation, says Saudi cooperation in the war on terror has been "half-hearted." The Saudi government has not done enough, he says, to stop terrorist finance, and its domestic crackdown is aimed more at antiroyalty elements rather than at anti-Western ones.

"They buy a lot of arms from Britain, so on a trading and financial level it's important, but on a strategic and intelligence level, the advantages of this alliance are quite dubious," he says.

Critics at home and abroad can continue to embarrass Blair on the issue. Britain is a signatory to the OECD's convention on corruption. Article 5 says the prosecution of bribery "shall not be influenced by considerations of national economic interest, the potential effect upon relations with another state or the identity of the natural or legal persons involved."

The 29 other nations in the OECD, along with six observer nations, said last week they all had "serious concerns" that Britain was in breach of the convention. "To argue that the public interest was more important than the rule of law is an incredible reversal of 1,000 years of political struggle to enshrine the public interest in the law," says Lawrence Cockcroft, chairman of the British branch of Transparency International.

He says the affair will now make it harder for London to lecture others about corruption, weakening at a stroke the international consensus that has been building in the past decade to tackle graft.

US And EU Near Agriculture Trade Deal (FT)

By Eoin Callan And Alan Beattie

Financial Times, January 22, 2007

Trade negotiators from the US and European Union are edging towards a deal that could restart stalled world trade talks, according to people familiar with the discussions.

The progress follows a meeting of high-level officials that finished at the weekend and constant cabinet-level contact between Washington and Brussels in the run up to the World Economic Forum meeting in Davos, Switzerland, this week, officials said.

The proposed outline of an agreement between the world's two largest trading blocs includes politically explosive concessions that are already causing rifts in Europe and alarm in the US farm lobby.

The fragile deal that is starting to emerge has yet to be finalised and comes amid tremendous uncertainty about whether negotiators can get the political backing to achieve a breakthrough in the Doha round of trade talks.

The deal that has been taking shape behind closed doors includes a proposal by Brussels to cut barriers to foreign agricultural products by an average of at least 54 per cent and a conditional offer by the US to lower the ceiling on its domestic farm subsidies to close to $17bn (€13.1bn, £8.6bn).

This tentative pact represents a significant advance beyond entrenched battle lines over farm policy that have impeded wider trade talks for years. Both sides have also explored yet deeper cuts to tariffs and subsidies, according to people familiar with the dialogue.

An official said: "We are trying to get to the absolute limit of what is politically feasible without falling off a cliff."

The latest round of transatlantic talks began four days ago and included detailed technical discussions about ways to narrow differences over exemptions for so-called sensitive products such as beef and dairy produce. A senior EU trade official said the talks were "constructive but not definitive".

Both sides are also keenly aware that the deal taking shape is meeting active resistance from Paris, which has demanded that the farm talks in Doha be put on the agenda of the meeting of EU agriculture ministers next Monday.

This hostile political environment makes the progress in negotiations all the more remarkable and has prompted Brussels to seek the support of Angela Merkel, the chancellor of Germany.

While Germany has traditionally played a key role in persuading Paris to accept trade deals, the poor state of Franco-German relations suggests that while Berlin might find it easier to push for a deal, France might feel freer than before to block it.

The Bush administration has also met key figures on Capitol Hill who will shape policy on agriculture and trade under the new Democratic leadership of Congress. But it is likely to take weeks to establish whether Congress would consider renewing President George W. Bush's trade promotion authority – which expires in six months and is needed to complete a deal.

These approaches included an appeal to Collin Peterson, the influential chairman of the agriculture committee in the House of Representatives, to tone down his opposition to the renewal of trade promotion authority.

The congressman said after the meeting that he remained deeply critical of US trade policy but was not determined to wreck a Doha deal that included meaningful benefits for US farmers.

Mr Bush is also likely to use his State of the Union speech on Tuesday to address growing public and political concerns about the economic disruption caused by trade.

DOJ_NMG_0119357

But this is unlikely to quash scepticism at the World Trade Organisation about the political mandate of US and EU negotiators, or cure the breakthrough-fatigue shared by participants and observers of the Doha round.

Any agreement is also contingent on reciprocal concessions by Brazil and India on lowering barriers to trade in industrial goods and services – which are still under negotiation.

Brazil has been negotiating separately with the US and EU and dispatched a senior diplomat to Delhi over the weekend to try to broker a common position ahead of talks planned for Davos. A US trade official said the Swiss forum would allow for important meetings to take place but would not produce any public statement on a "breakthrough".

But there was sufficient expectation that fresh political impetus would emerge from the forum that the G20 group of developing nations was mobilising to hold multilateral talks next week in Geneva.

Merkel Energizes Western Links To Russia (WSJ)

By Marcus Walker

The Wall Street Journal, January 22, 2007

After a meeting with German Chancellor Angela Merkel, Russian President Vladimir Putin pledged to ensure smooth natural-gas and oil supplies to Europe just weeks after Russia shut down an oil pipeline to the European Union during a dispute with neighboring Belarus.

The announcement after yesterday's meeting in Sochi, on Russia's Black Sea coast, underscored Ms. Merkel's growing role as the linchpin in Europe's troubled relationship with Russia, its dominant energy supplier, at a time when concerns about Russia's clout and direction are growing.

In an interview with The Wall Street Journal last week ahead of her Russia visit, Ms. Merkel made it clear she had no illusions about a relationship that has split the EU between countries that believe the EU should take a tougher line with Moscow and those that favor a more pragmatic approach. "Irritations like those that have occurred should not be repeated," she said of this month's oil-supply interruption, which hit Germany, Poland, Hungary, Slovakia and the Czech Republic. But she added, "The fact remains that we won't be able to manage without Russian gas and oil in Europe, and we don't want to either." (Read an edited transcript of the interview.)

With U.K. Prime Minister Tony Blair and French President Jacques Chirac both in the final months of their terms, Ms. Merkel, a physicist by training from the former East Germany, is growing into a role as the go-to person in Europe and for other major international partners as well.

Last week, Secretary of State Condoleezza Rice stopped in Berlin to talk with Ms. Merkel on her way back from a trip to the Middle East. The trip came shortly after Ms. Merkel had visited Washington and called for a revived effort by the "quartet" of America, Russia, the EU and the United Nations to secure peace in Israel's occupied territories. Also last week, U.S. and North Korean diplomats chose Berlin for rare bilateral talks aimed at resolving the standoff over Pyongyang's nuclear-weapons program.

Ms. Merkel's status as Europe's most influential political actor is partly due to timing -- she holds the EU's rotating presidency and this year's chairmanship of the Group of Eight leading nations. But her combination of plain speaking and bridge building has won her admirers on the international stage. In addition, Germany's revived economy has restored the country's status as the EU's economic powerhouse. Ms. Merkel earned respect last year by solving a rancorous EU budget dispute between Britain and France and by mending German-American fences, severely damaged when her predecessor, Gerhard Schröder, fell out with President Bush over the Iraq war.

In Sochi, Mr. Putin said that to improve security of supply to the EU, Russia would seek to cut its dependence on transit routes through neighboring states such as Belarus. Mr. Putin also said Russia would speed up work on building a gas pipeline to Germany under the Baltic Sea. The Baltic pipeline project, however, has caused divisions between Germany and others in Europe, particularly Poland, precisely because it seeks to bypass Poland, Belarus and other transit countries. Poland fears it would then become more vulnerable to political pressure from Moscow, because turning off the gas or oil to Warsaw would no longer also mean switching off the supply to Berlin and Paris.

In the Belarus case earlier this month, Russia shut the oil supply because Belarus imposed transit fees in response to a pricing dispute with Moscow. A year ago, a Russian-Ukrainian pricing dispute also led to shortfalls in Europe's gas supply, triggering a storm of concern over the EU's dependence on Russian energy. The EU gets 25% of its natural gas, representing 44% of its natural-gas imports, from Russia.

In Thursday's interview, Ms. Merkel said she wanted to "build a distribution network within the EU, so that we can help each other in an emergency," an offer designed to ease Polish fears over the Baltic pipeline project. At the same time, she said the EU should aim to further diversify its sources and suppliers of energy.

DOJ_NMG_0119358

Ms. Merkel said she wanted to write a Russian commitment to stable energy supplies into the EU's 10-year-old cooperation treaty with Russia, which is due for renegotiation. "Regulating it by treaty in this way offers an opportunity to build trust," said Ms. Merkel, adding, "It's important to remember that, apart from these irritations, Russia has been a stable energy supplier in Europe over many decades, also during the Cold War."

Negotiations on a new so-called Permanent Co-operation Agreement with Russia were supposed to start late last year. However, Poland has blocked the EU side from starting talks, demanding that Moscow first end a yearlong ban on meat imports from Poland. Russia says there are continuing problems with Poland's meat-certification system. Poland says the ban is political.

This week, Ms. Merkel heads to Davos, Switzerland, for the annual meeting of the World Economic Forum, where she will present an ambitious agenda for the G-8 this year. Items include global warming, Africa's economic development and EU-U.S. economic cooperation. On her trip to Washington, Ms. Merkel delivered a set of proposals on how to reduce nontariff barriers between Europe and the U.S.

She said in the interview that she still hopes the stalled Doha Round of world trade talks will succeed, and that she prefers multilateral trade liberalization to a web of bilateral trade deals. She stressed that she doesn't want her proposal for better-functioning trans-Atlantic trade to be seen as a rival proposal to a world trade deal.

"Doha is concerned with tariffs, with trade barriers," she said, while her proposals for trans-Atlantic trade are designed to reduce regulatory hurdles to trade. She cited financial-market regulations, patent rules and auto-emission standards as instances where "we inflict an unbelievable amount of costs on each other in accessing the American market and the European market."

The fact that past proposals for a trans-Atlantic single market got nowhere doesn't deter her. "Business has a very great interest in this," she said. "This is a big project -- you can't get through it in half a year. ... But I want to establish it on the agenda at the EU-U.S. summit, and then we can take on points step by step."

Russia To Cut Use Of Energy Transit Countries (FT)

By Neil Buckley And George Parker

Financial Times, January 22, 2007

Russia's President Vladimir Putin said on Sunday that Moscow would reduce its dependence on transit countries, such as neighbouring Belarus and Ukraine, to help guarantee security of energy supplies to Europe.

His comments came as Angela Merkel, the German chancellor, chided Russia for failing to warn Europe before it briefly cut oil supplies through a pipeline across Belarus this month, and said Russian-EU communications on energy needed to improve.

Energy security dominated talks on Sunday between the two leaders at Mr Putin's residence near the southern Russian city of Sochi, although they also discussed the Middle East and Kosovo, the breakaway province of Serbia. Mr Putin reiterated a warning that Moscow would only support a solution for the province that satisfied both the Kosovan population and Belgrade.

The meeting was the first between the two leaders since Russia cut oil supplies without warning for three days through the Druzhba pipeline amid a dispute over transit tariffs with Belarus.

Mr Putin told reporters after the meeting that Russia would "develop our transportation network in the most active way, so we have the capacity to supply our raw materials directly to our main customers".

"We will speed up our work on building a pipeline system to the coast of the Pacific Ocean, [and] we will broaden our capacity to transport hydrocarbons in the north, including in north-west Russia, to reduce our dependence on transit states," he added.

His comments were in part a reference to the controversial Nordstream pipeline, which a consortium led by Gazpro, the state-controlled energy group, is building under the Baltic Sea from Russia to Germany, bypassing countries including Poland. Mr Putin and Ms Merkel are understood to have discussed ways of bringing other countries into the pipeline projects.

Dmitry Peskov, a spokesman for Mr Putin, said more European countries were expressing interest in becoming involved.

"When we have this project we will have the capacity to ensure the reliable and stable flow of energy resources to Europe," he said. "We will not be dependent on the will of any transit countries."

But the inclusion of other partners risks causing further anger in Poland, unhappy about the Nordstream project because it bypasses its territory and the deal was signed over its head by Berlin and Moscow.

Ms Merkel suggested an improved mechanism for energy communications could form part of a new partnership and co-operation agreement on which Russia and the EU are due to start negotiations. Those remain frozen, however, after the two sides failed to secure a breakthrough in a dispute over Russia's long-standing ban on imports of Polish meat, prompting Warsaw to maintain a veto on new EU-Russia talks.

"I told Mr Putin that [energy] communication has to be improved and Mr Putin confirmed that, so that we could avoid any worries," Ms Merkel said.

DOJ_NMG_0119359

Mr Peskov admitted that the recent oil shutdown had caused concern in the west and the dispute might have been handled better.

He said the dispute had been “an emergency”, but admitted “it would have been better had we informed” European customers of the imminent supply halt.

Investors Credit Putin As They Pile Up Profits (WSJ)

By Guy Chazan

The Wall Street Journal, January 22, 2007

MOSCOW -- In Western capitals, Vladimir Putin has an image problem. Politicians in the U.S. and Europe routinely accuse him of squelching domestic dissent, strong-arming foreign oil companies and using Russia's vast energy resources to blackmail neighbors.

One constituency, however, has a strikingly different take on the Russian president. To many investors, Mr. Putin is a hero. The reason: the Russian stock market's spectacular rally during his seven years of rule.

When Mr. Putin took office in January 2000, the country's publicly traded stocks were valued at $74 billion. Their value now exceeds $1 trillion. Russia's benchmark RTS index rose 71% in 2006, the fourth year under Mr. Putin that the market has returned more than 50%.

"He's done a helluva of a job," says Mark Mobius, an emerging-market guru and managing director of Templeton Asset Management Ltd. "The country has made tremendous strides in the time we've been there, and you've got to give Putin credit for that."

Many money managers are betting the rally will continue this year -- even with lofty valuations, falling oil prices and rising political uncertainty in the run-up to Russian presidential elections in March 2008, when Mr. Putin is obliged by term limits to stand down.

To be sure, some investors agree with Western criticism of Russia's spotty human-rights record and of Mr. Putin's moves to undermine the independence of Russia's courts and parliament. They concede that in the long run democratic institutions are crucial for healthy market economies. But for the time being, concern about the state of Russian democracy isn't driving share prices.

Events that shape the West's political stance toward Russia, like the unsolved murder in London last November of Alexander Litvinenko -- the former KGB agent who on his deathbed accused Mr. Putin of having him poisoned -- barely register on most investors' radar screens.

The Kremlin has denied any responsibility for Mr. Litvinenko's death and answers broader Western criticism by saying that Russia is pursuing its own path to democracy.

Huge Strides

Many investors argue that critics don't give Mr. Putin enough credit for the huge strides Russia has made under his presidency. Though he has created mammoth state-run national champions that dominate the oil and gas industry, they say there is plenty of competition in other sectors. And in sharp contrast to the spendthrift populism of Venezuela's Hugo Chávez, Mr. Putin has kept tight control of Russia's purse strings, despite the oil boom.

"Two key factors in any emerging market are economic predictability and political stability," says Chris Weafer, chief economist at Alfa Bank in Moscow. "Russia has the first thanks to oil, and the second thanks to Putin."

Oil is the cornerstone of Russia's rebound. The world's second-biggest crude exporter after Saudi Arabia, Russia has reaped huge dividends from the commodity boom over the past five years. The inflow of oil dollars has lifted the value of stocks and real estate here to unprecedented highs.

But bankers and investors say Mr. Putin's contribution has been crucial. He inherited a country that defaulted on its debt in 1998, reducing itself to a pariah in international financial circles, and repaired its tottering public finances. He also bolstered the central government's waning power. "He did a lot of positive things in a very short period of time," says Mr. Mobius, who oversees $32 billion in emerging-market assets, 5% of which is invested in Russia.

Indeed, Russia now boasts the biggest foreign-exchange reserves outside Asia, huge budget surpluses and an $89 billion rainy-day fund created as a hedge against falling oil prices. It has also paid off most of its foreign debt.

Even among investors, however, Mr. Putin has his detractors. Some were outraged by the Kremlin's politically motivated campaign against billionaire Mikhail Khodorkovsky and his company OAO Yukos, the blue-chip oil giant that was Russia's most popular stock among Western investors until the Kremlin partially renationalized it in 2004. Mr. Khodorkovsky ended up in prison on fraud and tax-evasion charges.

Others shrink from his aggressive brand of state capitalism. Many took exception, for example, to the way Royal Dutch Shell PLC was forced to sell control of the huge Sakhalin energy project to the government-run natural-gas monopoly OAO

DOJ_NMG_0119360

Gazprom last month after Russian regulators suddenly discovered a raft of environmental violations. Shell acknowledged some lapses but said it had been working to fix them.

Western investors also frequently cite widespread corruption and a lack of transparency as major obstacles to doing business in Russia. Last year the country shared 121st place in watchdog group Transparency International's annual corruption perceptions index with Third World countries like Rwanda, Benin and Honduras. Some businessmen complain that corruption has got worse under Mr. Putin.

"In general, Putin's been a good leader, though former Yukos shareholders and current Shell executives may beg to differ," says Samuel Oubadia, co-manager of the ING Russia fund, which has $940 million in assets under management and was up 67.5% last year, the best 2006 return among U.S.-based emerging-market funds.

Though the Yukos case cost investors around $45 billion in lost value, the Kremlin followed up with investor-friendly moves that did much to restore market confidence: the removal of restrictions on foreign ownership of shares in Gazprom, and the sale of stock in the state oil company OAO Rosneft last summer.

As a result, the RTS has delivered a 250% return since its lows at the depths of the Yukos crisis in July 2004. Shares in Gazprom have nearly quadrupled over the same period: It is now one of the world's largest companies, with a market capitalization of $239 billion, and is showing up in portfolios all over the world. Fidelity Investments is a big shareholder and U.S. mutual-fund manager T. Rowe Price Group Inc. says Gazprom is among the top 10 holdings of two of its retail emerging markets funds.

Meanwhile, Western corporate giants, such as General Motors Corp., Citigroup Inc. and Toyota Motor Corp., unfazed by the Kremlin's heavy-handed treatment of companies like Shell, have poured into the country to get a piece of Russia's consumer boom. Foreign direct investment, though still low in proportion to the size of the country's economy, doubled last year to $30 billion. Major U.S. investment banks like Goldman Sachs Group Inc. and Morgan Stanley have ramped up their Moscow operations, drawn there by the emergence of strong, cash-rich Russian companies looking to list overseas and buy assets abroad.

Against that backdrop, the market is ready to indulge Mr. Putin. When Bill Browder, one of Russia's biggest foreign investors and once a staunch defender of the Kremlin's policies, was refused entry into the country in November 2005 as a "threat to national security," the initial reaction was disquiet: Over the ensuing months, investors pulled hundreds of millions of dollars out of his fund, Hermitage Capital Management. But the outflows stopped last summer, and Mr. Browder's fund, which has $3.4 billion in assets under management, was up 39% last year.

Mr. Browder says he is still "selectively bullish" about Russia, though he is less likely these days to give Mr. Putin all the credit for the country's turnaround. "My logic is that it's a liquidity-driven market, and the forces driving liquidity are still there," says Mr. Browder.

Highly Vulnerable

Skeptics warn that with a stock market dominated by natural-resource companies, Russia remains highly vulnerable to swings in commodity prices. So far this year, a fall in the price of crude has helped push the RTS down 5.7%

"If we get oil prices in the region of $45 per barrel this year, I wouldn't be surprised to see the market trading at around 1200," or roughly a third from its record end-of-2006 close, says John-Paul Smith, global strategist at Pictet Asset Management, which has around $11 billion invested in emerging markets assets.

Part of the problem is that Mr. Putin has made little headway diversifying Russia's economy and lessening its dependence on energy exports. "In the past, investors were able to give Russia the benefit of the doubt because its assets were so cheap," says Mr. Weafer, the Alfa Bank economist. "Now they need to know where the long-term growth is going to come from."

Politics is another potential danger. Though there is little doubt that Mr. Putin's preferred candidate -- he hasn't said who that is -- will win the 2008 elections, uncertainty about the succession could still spook the market, some analysts warn.

But betting against Mr. Putin has been a losing proposition for investors in the past. "I've said at the start of every year there's no way we can get more than 30% out of Russia," says Alexander Schwarzkopf of Altima Partners, which has $2.5 billion in assets under management, a quarter of it in Russia. "Every time I'm proved wrong."

Serbia Poll Points To Victory For Nationalist Hardliners (FT)

By Neil Macdonald

Financial Times, January 22, 2007

Hardline nationalists won the largest share of votes again in Serbia's parliamentary elections on Sunday, in a result that will keep "democratic forces" on the defensive for another four years.

DOJ_NMG_0119361

Vojislav Kostunica, the nationalist-leaning prime minister, looks well placed to keep his job at the head of a new coalition government, although his new partners could push harder for reviving European Union pre-accession talks.

But the election result could further obstruct western efforts to award independence to Kosovo, the disputed province of Serbia governed by the United Nations since 1999.

The extreme nationalist Radical party has won 81 seats in the 250-seat legislature, about the same as it has held since the last parliamentary elections, in 2003.

The centre-left Democrats, led by Boris Tadic, the country's staunchly pro-EU president, increased their share less than they had hoped, winning only 65 seats, according to results announced by independent monitors after polls closed.

The Democrats, who stayed out of Mr Kostunica's last government, are expected to take over key economic portfolios, but probably in return for accepting him as head of the cabinet.

Mr Kostunica's electoral list has won only 47 seats, making it the third largest bloc in the 250-seat legislature. However, the Radicals and Democrats have categorically refused to work together, giving him considerable bargaining clout.

The elections are the south-eastern European country's first under a new constitution following Montenegro's exit from a dysfunctional state union last year, ending the last tie between former Yugoslav republics. But Serbia still wrestles with losing Kosovo, its southern province, which was placed under UN administration in 1999 and could be transferred to EU supervision this year.

Martti Ahtisaari, chief UN mediator in the dispute, has waited until after the se elections to present his proposal, thought to call for ending Serbia's sovereignty over the mostly ethnic Albanian -territory.

While all the main parties agree that Kosovo should remain part of Serbia, the prime minister has also blamed the EU for pressure to arrest Ratko Mladic, the fugitive Bosnian Serb war leader wanted for genocide.

Mr Kostunica prevaricates about co-operating with the UN tribunal in The Hague, although he said his government was unable to locate and capture General Mladic. However, he promises to "integrate" the deeply polarised country and press ahead with legal and economic reforms.

G17 Plus, a free-market party led by Mladjan Dinkic, who recently resigned as finance minister, with 19 seats would be the other obvious choice for a coalition government. However, post-election bargaining will be intense and could be complicated if the announcement over Kosovo inflames nationalist passions.

The Democrats named their own candidate, Bozidar Djelic, as a more EU-friendly alternative for prime minister after Mr Kostunica refused to rule out a coa-lition with the Radicals.

China Shift On Reserves Isn't Likely To Hit Dollar (WSJ)

By James T. Areddy

The Wall Street Journal, January 22, 2007

SHANGHAI -- China's decision to make greater use of its $1.06 trillion in foreign-exchange reserves could fuel uncertainty about the dollar but is unlikely to result in any immediate selling of the U.S. currency by the world's fourth-biggest economy.

In a speech Saturday at the end of a key financial working conference, Premier Wen Jiabao said China would "actively explore and expand the channels and methods for using foreign-exchange reserves," according to the official Xinhua news agency. The comment was the highest-level confirmation yet that China is thinking actively about how it can use the reserves, which have increased by more than six times since 2000 and made China one of the largest holders of U.S. Treasury bonds.

Mr. Wen's comment on reserves was part of a broader strategy outlined at the two-day national financial work conference, held every five years. The strategy aims to strengthen the financial system and reduce the economy's dependence on exports and investment. Among its main points is Beijing's intention to restructure the financial system in rural areas, where most Chinese live. U.S. officials and others have urged such efforts, saying China's mounting currency reserves -- which are fueled by huge trade surpluses -- show it hasn't done enough to develop its domestic economy.

The framework Mr. Wen outlined in his speech was extremely broad. The pattern set by past conferences suggests more specific policies will emerge in coming months.

Global financial markets are likely to zero in on what the weekend meeting means for China's dollar policy. Mr. Wen said nothing about selling dollars, but currency traders are hypersensitive to any signs Beijing is losing its appetite for the U.S. currency. Wang Qing, an analyst at Bank of America in Hong Kong, said the message of the conference is twofold: Beijing intends to encourage imports in a bid to erode its currency reserves, and it is planning to create an entity that will invest a portion of the reserves. For markets, "this might rekindle this talk of diversifying the reserves" away from dollar-denominated assets such as U.S. Treasurys, Mr. Wang said.

Beyond Mr. Wen's vague comment about expanding the use of the reserves, Xinhua cited the premier as saying China would take measures to bring balance to China's international payments, where the country has much more money coming in

DOJ_NMG_0119362

than going out. He also reiterated that China would continue to steadily advance its exchange-rate overhauls aimed at making the yuan more flexible.

China already has used portions of its currency reserves to recapitalize big state-owned banks. In recent months, analysts have debated the possible use of the reserves for other purposes including investment in natural resources. But the reserves, which are held and managed by China's central bank, don't comprise cash that the government can simply spend as it wants.

One thing Beijing could do to erode its reserves, or at least slow their growth, is encourage Chinese companies to import more oil and other commodities. That would require them to repurchase dollars from the central bank sold to it by exporters. China also could shift a portion of the reserves into a new entity, like ones operated by the South Korean and Singaporean governments, that invest in companies on behalf of the government. Bank of America's Mr. Wang said that whatever it does, Beijing will be eager not to rattle financial markets with its plans.

Another possible use of the currency reserves would be to inject some of them into Agricultural Bank of China, which lends primarily to rural borrowers and is the only one of China's four big state banks that hasn't yet received this kind of bailout. Mr. Wen said Beijing has decided to restructure Agricultural Bank into a stock-holding company, a move that could lead to an eventual listing of the weak institution.

Only 60% of China's 120 million rural families have access to financial-system offerings such as loans, according to Xinhua, making it difficult to replicate in its hinterland the economic growth China has seen in coastal cities.

Chavez To U.S.: 'Go To Hell, Gringos!' (AP)

By Christopher Toothaker, Associated Press Writer

AP, January 22, 2007

President Hugo Chavez told U.S. officials to "Go to hell!" on his weekly radio and TV show Sunday for what he called unacceptable meddling after Washington raised concerns about a measure to grant Venezuela's fiery leftist leader broad lawmaking powers.

The National Assembly, which is controlled by the president's political allies, is expected to give final approval this week to what it calls the "enabling law," which would give Chavez the authority to pass a series of laws by decree during an 18-month period.

On Friday, U.S. State Department deputy spokesman Tom Casey said Chavez's plans under the law "have caused us some concern."

Chavez rejected Casey's statement in his broadcast, saying: "Go to hell, gringos! Go home!"

Chavez, who was re-elected by a wide margin last month, has said he will enact sweeping reforms to remake Venezuela into a socialist state. Among his plans are nationalizing the main telecommunications company and the electricity and natural gas sectors.

The president's opponents accuse him of using his political strength to expand his powers.

Relations between Caracas and Washington have been tense since Chavez was briefly ousted in a 2002 coup that he claimed the U.S. played a role in. The Bush administration has repeatedly denied being involved, although it recognized an interim government established by coup leaders.

Since then, Chavez has consistently accused the U.S. of conspiring to oust him and often asserts the CIA is working to destabilize his government. U.S. officials have denied trying to overthrow Chavez, but they have labeled him a threat to democracy.

Criticizing excessive consumption and self-indulgence, Chavez also announced plans in his broadcast to raise domestic gasoline prices and approve a new tax on luxury goods such as private yachts, second homes and extravagant automobiles.

He did not give details on the gas price hike, which he said would not affect bus drivers who provide public transportation, or the luxury tax. He said revenue from the new measures would be put toward government social programs.

Venezuela is one of the world's leading petroleum exporters and gasoline now costs as little as 12 cents a gallon due to government subsidies.

In typical style, Chavez spoke for hours Sunday during his first appearance on the weekly program in five months. He sent his best wishes to the ailing Cuban leader Fidel Castro, his close ally and friend who has been sidelined since intestinal surgery last summer.

Chavez also remarked on the hanging of former Iraqi President Saddam Hussein: "They took out Saddam Hussein and they hanged him, for good or worse. It's not up to me to judge any government, but that gentleman was the president of that country."

Venezuela's Revenue Push Comes With Big Risks (WSJ)

DOJ_NMG_0119363

By José De Córdoba

The Wall Street Journal, January 22, 2007

In a move that may hint at growing economic problems in Venezuela, the country's president, Hugo Chávez ordered his telecommunications minister to seize control of a Verizon-controlled telecommunications company before paying compensation to its U.S. owners.

Mr. Chávez's announcement threw further doubts on whether Verizon Communications Inc. would receive fair compensation for its stake in Compañia Anónima Nacional Teléfonos de Venezuela, known as CANTV. It also raises questions about the health of the Venezuelan economy as the price of oil that Venezuela depends on continues to fall -- and Mr. Chávez shows no signs of cutting his rate of spending.

By seizing CANTV before paying its owners, Mr. Chávez would boost the state's revenues immediately. In other revenue-raising measures, Mr. Chávez announced that Venezuela would boost the price of gasoline charged by the state-owned oil company at domestic gas stations.

Venezuelans have long paid just pennies per gallon for gasoline. Mr. Chávez said the increases, which he didn't specify, wouldn't affect the poor because they don't drive cars. But in the past, such increases in the price of fuel have proved to be political dynamite. In 1989, hundreds died in riots in Caracas when transport companies passed along a rise in their fuel costs to consumers.

Earlier this month, Mr. Chávez announced Venezuela would nationalize CANTV as well as the country's private power companies. At the time, Venezuelan officials said the companies would receive fair compensation. In a statement, Verizon said that while the process Venezuela plans to follow in nationalizing the company hasn't been fully defined, "we support efforts to adopt a proper process."

Mr. Chávez addressed the CANTV issue during his weekly television show. "CANTV was practically given away when it was privatized," he said, and then he urged his telecommunications minister to take over the company quickly.

With about $50 billion of reserves, Venezuela has sufficient funds to purchase the companies, which Robert Bottome, the publisher of VenEconomia, a leading Caracas financial journal, estimates are worth around $4 billion.

But a New York investment banker who closely follows Venezuela says the point of nationalizing companies is for countries to get access to their cash flow. If Venezuela pays for CANTV upfront, it would be laying out more money initially than it was collecting for the telecom firm. Delaying the payment to CANTV shareholders would produce a cash gain for the Chávez government from the start, and probably drive down the ultimate price it would pay.

Mr. Chávez's moves come as world oil prices have continued their downward spiral. Friday, the price of the Venezuelan mix of crudes was down to about $46.87, about $15 below highs of around $60 last year. Meanwhile, inflation has escalated to more than 20%, according to private economists.

Even while the price of oil has fallen, Mr. Chávez, who won a landslide re-election in December, and has vowed to remake Venezuela into a socialist state, has continued a spending spree, increasing domestic subsidies and promises of foreign aid.

Rwanda Suspects Seek Asylum (WT)

By Jim McElhatton

The Washington Times, January 22, 2007

Three Rwanda citizens who faced death sentences in the 1999 kidnapping and slaughter of two Americans in Uganda are seeking political asylum now that U.S. authorities have moved to drop the charges.

Francois Karake, Leonidas Bimenyimana and Gregoire Nyaminani, reputed members of the Liberation Army of Rwanda who have been detained in the D.C. Jail for nearly four years, were charged in the bludgeoning deaths of Robert Haubner and his wife, Susan Miller, of Portland, Ore.

The couple, on a safari vacation to see rare mountain gorillas, were killed with six other tourists from New Zealand and Britain when men with guns, axes and machetes raided their camp in a national park in Uganda on March 1, 1999. Authorities said the killings were meant to erode U.S. support for Rwanda's government. The men were brought to the U.S. to face trial in 2003.

However, prosecutors earlier this month filed a motion to drop felony murder charges after a federal judge last year threw out the defendants' confessions, citing evidence that the men were tortured while imprisoned by Rwandan officials.

With a dismissal pending, the defendants are seeking asylum in the U.S. because of "fear of persecution" if they go back to Rwanda, according to recently filed court records.

Defense attorneys disclosed the applications for asylum last week in a memo to U.S. District Judge Ellen S. Huvelle.

"This will assure that once charges are dismissed, the defendants will not be at risk for being taken from the country without the opportunity to address their fear of persecution, which would await them when they return," the memo stated.

DOJ_NMG_0119364

It is not clear whether the three men, whom authorities have called terrorists, could live in the United States. A spokesman for the U.S. attorney's office said that once charges are dropped the men would be handled "as would any other person or persons who do not have legal immigration status to remain in the U.S."

But efforts to deport them would be complicated if the men have completed applications seeking political asylum, said a specialist on the issue.

With a completed application, "no action can be taken to deport you" until authorities decide whether to grant asylum, said Christopher D. Candland, a political science professor at Wellesley College who has testified as an expert witness in political asylum cases.

However, Mr. Candland said U.S. Citizenship and Immigration Services officials almost certainly would detain the defendants after the criminal charges are dropped.

Defense attorneys, who have declined to comment on the case, stated in recent legal filings that they want Judge Huvelle to postpone deciding whether to dismiss charges until after Department of Homeland Security officials provide formal notice that they are reviewing the asylum applications.

Without such notice, the attorneys argue, the defendants risk being sent back to Rwanda as soon as the criminal charges are dropped.

Judge Huvelle's opinion in August stated that the defendants' confessions were "extracted only after countless hours of repetitive questioning over a period of many months, during which time they were subjected to periods of solitary confinement ... torture and repeated physical abuse."

Prosecutors said the men were among a band of about 100 that invaded the Bwindi Impenetrable Forest National Park, a remote rainforest in the southwestern region of Uganda known for the presence of rare mountain gorillas.

The group attacked the park's guards and sentries, killing four, one of whom was burned alive. Three women were raped before being killed. And some of the victims, including Mr. Haubner, were beaten to death with axes.

Family members of Mr. Haubner and his wife could not be reached for comment yesterday. Last year, Mr. Haubner's sister, Deanne Haubner, told the Oregonian newspaper that the confessions should have been admitted as evidence even if the defendants were tortured because "so were Rob and Susan and all the people they killed."

"So I'm afraid I don't feel sorry for them if they were tortured," she said.

Darfur: Aid Workers Are The New Targets (NSWK)

By Rod Nordland

Newsweek, January 29, 2007

Last Sept. 11 was a momentous day in Darfur, too. After unidentified militiamen attacked aid workers from the Nobel Prize-winning Médecins sans Frontières at a roadblock on that date, most of the international aid groups ministering to Darfur's 6 million people stopped using the roads. On Dec. 18, in the southern town of Gereida, unrelated gunmen attacked the compounds of Oxfam and Action Contre la Faim. More than 70 aid workers subsequently pulled out of the refugee camp there—Darfur's largest, with 130,000 people—leaving only 10 Red Cross employees behind. Yet at the time no one revealed what had really sparked the dramatic pullbacks. In both cases, international staff, including three French aid workers, were either raped or sexually assaulted in territory controlled by the Sudanese government and its allies.

Rape as a weapon has become depressingly commonplace in Darfur, where 200,000 Africans have been killed and a third of the population have been sent fleeing into camps in three years of war. But the attacks on international aid workers herald a dramatic and dangerous new trend—the deliberate targeting of those helping to keep Darfur's millions of refugees alive. A dozen staffers from foreign NGOs have been killed in just the past six months, more than in the previous two years. There are an estimated 14,000 aid workers in Darfur now, the majority of them Sudanese, working for foreign NGOs and U.N. agencies and delivering $1 billion a year in aid. Just a few more horrific attacks could throw that massive operation into jeopardy. Last week 14 U.N. agencies working in Darfur issued a stark warning that "the humanitarian community cannot indefinitely assure the survival of the population in Darfur if insecurity continues."

Médecins sans Frontières country director Jean Vataux confirms that two MSF staffers, a Sudanese and a European, were subjected to a serious sexual assault on Sept. 11 after being forced out of their vehicle near Zalingei, in an area under government control. While the women were not raped, Vataux says, "there was a clear desire to hurt and humiliate." The women were badly beaten as well. Vataux says MSF reported the incident to Sudanese authorities, who promised to investigate but so far have not reported any outcome. Action Contre la Faim's country director Philippe Conraud confirms that two Frenchwomen working for ACF in Gereida were raped by armed men, but would not provide details. In the Gereida attack, aid agencies' compounds were systematically looted, numerous vehicles stolen and staff terrorized at gunpoint for six hours.

DOJ_NMG_0119365

The two incidents add to a pattern of increased violence since a peace agreement was signed last May between the government and some rebels. After that, rebel factions splintered further. In some areas, the government is working with rebel signatories; in others, it's fighting them, and in some places the rebels are fighting one another. The version of the conflict that has seized the imagination of the world—and that prompted former secretary of State Colin Powell to describe the killing there as "genocide"—involved marauding Arab militiamen known as Janjaweed, often backed up by Sudanese military forces, laying waste to scattered villages. Now as many as 12 different groups are at each other's throats, tussling over control of huge refugee camps or angling for their share of promised government compensation. On Jan. 10, New Mexico Gov. Bill Richardson announced he had brokered a 60-day ceasefire; so far, it has yet to start. "The ceasefire?" says a senior officer with the African Union peacekeepers in Darfur, who asked to remain anonymous for fear of offending Sudanese authorities. "That's like the peace. We haven't seen either."

Assaults on aid organizations have wide repercussions. After a Dec. 8 attack on the International Committee of the Red Cross compound in Kutum, in northern Darfur, all but three of the international staff pulled out. Villagers driven from their homes by Janjaweed have since dispersed rather than seek refuge in the camp there. "We don't know where 30,000 people are," says Rebecca Dale of the International Rescue Committee. "Only about two or three thousand have shown up."

Khartoum has pledged to give aid agencies unfettered access to Darfur, and has frequently boasted of its cooperation with the international community. Yet the NGOs say their workers, especially those from Western countries, are frequently denied visas and travel permits, while key equipment and supplies are held up in Sudanese Customs. And they cannot complain too loudly. "We can't afford to be kicked out," says Dawn Blalock, spokesman for the United Nations' Office for the Coordination of Humanitarian Affairs. The stakes are too high: Blalock points out that the aid groups have managed to lower the overall malnutrition rate in Darfur below the emergency level of 15 percent. Without them, no one knows how bad it could get.

Those who speak out have paid a price. The Norwegian Refugee Council, serving 250,000 displaced Darfurians, was expelled in November to hardly a murmur from the United Nations. Late last year the U.N. secretary-general's representative to Sudan, Jan Pronk, the highest U.N. mission official there, was thrown out by Khartoum after he complained publicly about continued Janjaweed attacks. He has yet to be replaced, leaving the U.N. mission leaderless. "The international community have been taken for a ride," says Pronk. And yet again, the ones suffering most are the people of Darfur.

Ban's Reform Call (WSJ)

The Wall Street Journal, January 22, 2007

U.N. Secretary-General Ban Ki Moon has been on the job for less than a month, but with a 26-word announcement Friday he did more to reform that international body than anything ever attempted by predecessor Kofi Annan.

"The Secretary-General will call for an urgent, system wide and external inquiry into all activities done around the globe by the U.N. funds and programs." So said Mr. Ban's spokesman after the Secretary-General met with Ad Melkert, associate administrator of the United Nations Development Program. The key word here is "external." Concerns about corruption in the U.N.'s Oil for Food program bubbled for years before Mr. Annan finally agreed to set up the independent Volcker Commission.

The proximate cause for Friday's meeting between Messrs. Ban and Melkert, and for Mr. Ban's clean-house announcement, was Melanie Kirkpatrick's op-ed article in these pages Friday detailing irregularities in the UNDP's programs in North Korea and citing U.S. concerns that tens of millions of dollars in hard currency have been funneled to dictator Kim Jong Il.

The UNDP must have got Mr. Ban's memo. We publish today a letter1 from the agency's Mr. Melkert, responding to Ms. Kirkpatrick's article and our accompanying editorial. "We . . . welcome an independent and external audit of our operations in North Korea," he writes. And, "If the member states of the U.N. and UNDP's board were to decide that our presence there were no longer useful, we would leave immediately."

Kim Jong Il is about as likely to change the way he does business as he is to move to Hollywood to pursue his avocation as a movie buff, so a UNDP pullout from North Korea is the right policy. The Pyongyang government won't even permit U.N. officials to visit the sites of some of the projects that their agency is funding. There's no way of knowing whether the "battery factory" paid for with U.N. money actually exists or is just a vehicle for funding Kim's regime.

In a statement posted on its Web site Friday, the UNDP asserts that it can account for all but $337,000 of its recent expenditures in North Korea. Of the $6.5 million spent in 2005-2006, it says, only $337,000 went to projects directly managed by the North Korean government. The agency now manages most of its projects in North Korea directly.

If oversight has improved in the past two years, so much the better. In any case, any investigation ought to go back at least to the late 1990s, when an internal audit turned up shenanigans and much more money was spent, and ideally all the way back to 1979, when the program began.

We also couldn't help but notice the second-day story by the Washington Post's Colum Lynch, whose reporting is known to speak for the U.N. bureaucracy. He said some in the U.N. consider the U.S. questions to be an attempt to discredit Mark Malloch

DOJ_NMG_0119366

Brown, who ran UNDP from 1999-2005 before becoming Mr. Annan's chief of staff. We hadn't mentioned Mr. Malloch Brown in our Friday editorial, but now that Mr. Lynch does we agree his tenure at UNDP should also be looked at.

Meanwhile, the UNDP's executive board meeting this week should be lively as members consider the U.S.-led motion to defer UNDP programs in North Korea pending an investigation. The 36-member board is composed of 18 "rich" countries and 18 "poor" ones, which means those that provide the money and those that spend it. It would be quite a spectacle if the poor countries side with fellow board member North Korea.

The ultimate sanction is money, and there's already movement in Congress to withhold the U.S. contribution to the UNDP, which last year constituted 11.4% of the agency's core budget. Unlike dues to the U.N., contributions to the UNDP and other agencies are voluntary. New Jersey Republican Scott Garrett plans to introduce a bill this week to cut off U.S. funding for the UNDP pending a full accounting and an investigation into its program in North Korea. Ileana Ros-Lehtinen, ranking Republican on the International Relations Committee, said Friday that she "and other members" are determined to apply "pressure."

In the absence of a U.N. leadership that demanded transparency and accountability, Congress and various U.S. Administrations have been trying to reform the organization for years. If Secretary-General Ban follows through on his call for "external" audits of all U.N. programs, it will be a refreshing change at Turtle Bay.

TERRORISM NEWS:

UK MPs Urge International Community To Deal With Guantanamo Detainees. BBC.com (1/21) reports, "MPs who have visited Guantanamo Bay have called on Britain and the international community to do more to help the US close the camp. Seven Foreign Affairs Committee members visited the detention centre for 'enemy combatants' in Cuba in September. In a report they were critical of the conditions there, but said many inmates posed a threat and the world needed to find a 'longer term solution'. Opposition MPs and human rights groups called the report 'disappointing.'" The AP (1/21, Stringer) says the report "called for an overhaul of the Geneva Conventions and suggesting Prime Minister Tony Blair lead efforts to update the international standards to reflect the challenge of terrorism."

WPost, NYTimes Encourage Congress To Pursue Investigation Of Wiretapping Program. The Washington Post (1/21, B6, 690K), in an editorial, writes, "when the Bush administration announced that it had belatedly put its warrantless wiretapping program under court supervision, its attitude was like that of a traffic officer trying to hurry along bystanders at an accident scene: 'Move right along, folks, nothing to look at here.' The administration would like Congress, under its new management, to abandon its efforts to dislodge details about the program's operations or to craft legislation to provide a legal framework. Lawmakers don't seem inclined to simply go away, nor should they."

The New York Times (1/21, WK11, 1.16M) editorializes, "By now, this is a familiar pattern: First, Mr. Bush and his aides say his actions are so vital to national security that to even report on them — let alone question them — lends comfort to the terrorists. Then, usually when his decisions face scrutiny from someone other than a compliant Republican Congress, the president seems to compromise. Behind this behavior are at least two dynamics, both of them disturbing. The first is that the policies Mr. Bush is trying so hard to hide have little, if anything, to do with real national security issues — and everything to do with a campaign, spearheaded by Vice President Dick Cheney, to break the restraints on presidential power."

More Commentary. The Sacramento Bee (1/21) editorializes, "The Senate Judiciary Committee surely had something else in mind when Attorney General Alberto Gonzales dropped by last Thursday to talk about the state of affairs at the Justice Department. … Gonzales provided more details about the department's prosecution of the 'Girls Gone Wild' video series than he did about warrantless surveillance. His testimony leaves more questions than it answers and should be considered only Round One of the oversight process on surveillance." The Bee continues, "After last week's hearing, we still don't know whether the warrants sought by the administration from the FISA court are for surveillance of known phone numbers or known persons, or for dragnet-style data-mining operations of hundreds or thousands of individuals. Normally, the government would seek a FISA warrant for surveillance of a particular suspect's phone calls or e-mails. A congressional staffer told the New York Times that the FISA approvals appear to be for a hybrid of individual warrants and broader approval, whatever that means. Gonzales offered no information or documents to clarify the matter." The Bee adds, "Clearly, Congress still has a lot to do to determine whether the spying program follows the 1978 law and the Constitution. And Congress and the president will have to be open to negotiating possible adjustments to the 29-year-old law to reflect developments in technology, surveillance and the new realities of terrorism. But this should be non-negotiable: Congress cannot let the president get away with disregarding or rewriting the law and the Constitution at his whim."

The Grand Rapids Press (MI) (1/21) editorializes, "After resisting for more than a year, the Bush administration is putting its controversial domestic wiretapping program under the jurisdiction of the secret court set up to govern such cases. It's a good course correction. Concerns about terrorism shouldn't give federal intelligence agencies license to eavesdrop on citizens' phone calls and e-mails without court approval or congressional oversight. … U.S. Attorney General Alberto Gonzales says the Justice Department has worked out an 'innovative' arrangement to bring the surveillance program under FISA jurisdiction. He wouldn't elaborate on the specifics to members of the Senate Judiciary Committee this week, so questions remain about what form

DOJ_NMG_0119370

the new compliance takes. Congressional leaders shouldn't be left in the dark about this new arrangement. … The issue is not about whether to monitor the communications of suspected terrorists but doing it legally and with proper checks and balances. We all should want that."

The Wilmington (DE) News Journal (1/21) editorializes, "So apparently there is a way to do surveillance of intelligence suspects with court oversight after all. For a year, the Bush administration insisted that wartime justified secrecy and executive privileges, regardless of a 1978 law setting up review through a Foreign Intelligence Surveillance Court. … Now, after months of rebuffing congressional negotiations and the threat of investigation, the Justice Department has a method for going to designated judges when it wants to monitor international e-mail and telephone calls given a probably terrorism link." The Journal adds, "Skepticism is rife in the Capitol and among civil libertarians, and rightly so. There is only a vague outline of what the new ground rules are that prompted the administration's turn-around. … The Justice Department also is to go before federal court in Cincinnati on Jan. 31 for more arguments on the constitutionality of the Bush's earlier policy. … Congress should look into exactly what is going on. Given this administration's resistance to judicial checks on presidential authority, this adaptation may well be too good to be true."

The Hartford Courant (1/21) reports, "President George W. Bush has substituted one controversial spying program with another. … The old program eavesdropped on American and foreign al-Qaida suspects without the legally required court oversight. The new program? Well, it eavesdrops on the same targets, but now with the required warrants." The Courant adds, "On Wednesday, the Bush administration announced it had dismantled the fiercely criticized program and started applying for court approval for wiretaps - but under new orders and opinions issued by the FISA court. The administration's turnabout was supposed to be welcome news. But the new FISA orders are so wrapped in mystery that no one outside the Bush administration and the spy court knows what they say. .. .The presiding judge has no objection to releasing them, but the Justice Department refuses to do so or to give even the bare outlines on how the new program works. … Without those details, it's impossible for lawmakers to judge whether their 1978 law is protecting privacy rights as well as public safety."

The Houston Chronicle (1/21) editorializes, "After operating an electronic surveillance program for five years outside legally mandated oversight by a secret federal court, President George W. Bush has seemingly bowed to legal and congressional pressure. … While lawmakers and officials of civil liberties groups welcomed the development, they also want more information on whether the FISA court will review each surveillance request individually or whether it has simply given blanket approval for the activities by the National Security Agency." The Chronicle adds, "In a visit with the Chronicle Editorial Board last year, U.S. Attorney General Alberto Gonzales justified the surveillance program as a legal extension of presidential authority in wartime and a congressional resolution supporting military action against terrorists. … In testimony before the Senate Judiciary Committee on Thursday, Gonzales refused to explain why the administration had reversed its previous position that court oversight was too restrictive to effectively combat terrorism." The Chronicle concludes, "Americans need to be reassured that their constitutionally guaranteed rights against illegal government surveillance are being safeguarded as mandated by the FISA legislation. … If the chief jurist of the relevant court sees no harm in explaining how it will oversee the program, the administration should assent to providing a thorough explanation to lawmakers and the public."

The Akron (OH) Beacon Journal (1/21) editorializes, "For more than a year, the Bush White House has publicly claimed the right to conduct electronic surveillance, without first seeking a court warrant, of Americans suspected of terrorist ties. It vigorously defended the program, which started after the Sept. 11 attacks, at congressional hearings and in legal briefs, denying it violated the constitutional protections of citizens. The president insisted the war on terrorism made speedy, warrantless wiretaps a national security imperative. … After all the contention, it is encouraging that the president has reversed course, the Justice Department announcing on Wednesday the program will be under the oversight of the court created by the 1978 Foreign Intelligence Surveillance Act. It is the right decision, a welcome return to checks and balances." The Journal concludes, "In Senate hearings Thursday, a tight-lipped Attorney General Alberto Gonzales did little to ease worries whether the new 'innovative arrangements' with the FISA court would merely provide the program a blanket cover to conduct wiretaps. Congress would do well to press hard for clarification."

The Las Vegas Sun (1/21) reports, "One day before the Senate Judiciary Committee was to begin hearings on President Bush's warrantless domestic eavesdropping program, Bush administration officials announced that such surveillance would now be subject to judicial review. … The decision was a reversal for Bush, who has stubbornly insisted that forcing the National Security Agency to adhere to a 1970s-era law - which requires the agency to seek warrants in a secret court before monitoring Americans' communications - hindered the government's ability to track terrorist activity. Bush started domestic surveillance without warrants after the Sept. 11, 2001, attacks." The Sun continues, "The timing of this apparent reversal in policy doesn't help to quell suspicions, as Bush often makes grand

DOJ_NMG_0119371

public promises to deflect criticism. And it is unclear how much the process will change. Attorney General Alberto Gonzales, citing security concerns, refused to tell the Judiciary Committee whether eavesdropping requests will be reviewed one at a time or in groups. … The Bush administration's history of secrecy and deceit by omission runs deep, and it is hard to believe that this seeming change of heart is anything more than an attempt to avoid scrutiny by a Congress that is now run by Democrats."

The Orange County (CA) Register (1/21) editorializes, "The announcement… is welcome at first blush. It may prove to be an unalloyed benefit. But questions remain, and there are details the American people should be able to know about what government is doing in their name." The Register continues, "An obvious question: If this program was considered legal and utterly essential a year ago, why is there no need to continue it? At a Senate Judiciary Committee hearing last Thursday, Attorney General Alberto Gonzales said the administration had worked out procedures for more "swift and agile" consideration by the FISA court, but did not provide details. … It is also valid to wonder whether this switch was done to avoid judicial scrutiny in three cases challenging the program that are before the courts and might now be moot. … On balance, however, this is a welcome development. Checks and balances don't always prevent abuse, but they are essential to the American system."

The Miami Herald (1/21) editorializes, "It would be nice to believe that the Bush administration's reversal of policy on its secret wiretapping program -- allowing a measure of judicial oversight for the first time -- represents a change of attitude regarding the balance between civil liberties and executive power. But that's hardly the case. … This administration has a consistent pattern of ignoring fundamental rights such as privacy and habeas corpus in order to extend the reach of the 'unitary executive.' Congress has a duty to find out more about the program and determine whether this change is merely a tactical shift designed to preserve the questionable authority of the president to decide which of those rights can be overlooked or denied in the name of national security." The Herald adds, "It is vital for Congress to learn the answers to these and other questions about who is secretly listening to the conversations of Americans and under what rules. Courts are supposed to determine when there is probable cause to suspect that the target of the wiretap is connected to terrorism. Without oversight, even the most well-intended prosecutor or federal agent can step across the line that protects our freedoms. … Whether the administration likes it or not, this is part of the bedrock system of checks and balances that has preserved the civil liberties that Americans cherish."

In a column for the Chicago Tribune (1/21), Steve Chapman writes, "Is President Bush surrendering in the war on terror? For more than a year, the administration has insisted that preserving its 'terrorist surveillance program,' which involves unfettered and unauthorized wiretapping of Americans suspected of communicating with Al Qaeda operatives abroad, was, in the words of former White House press secretary Scott McClellan, 'a vital tool' for us 'to stay a step ahead of a deadly enemy that is determined to strike America again.' Now, Atty. Gen. Alberto Gonzales says the program will not be renewed." Chapman continues, "This about-face must be causing massive cognitive dissonance within the administration and among conservatives who regard any check on executive power as a favor to Al Qaeda. From the moment the secret National Security Agency program was revealed by The New York Times in 2005, Republicans treated its critics as foolish appeasers. … Never mind that it apparently violated the law, and never mind that it let the government spy on Americans right here at home, without bothering to get the search warrants that are normally required. Issues of legality, constitutionality and privacy cut no ice with the administration and its supporters. Either you were for the program, or you preferred to expose us to catastrophe." Chapman concludes, "Maybe we were misled before, or maybe we're being misled now. But the next time the president tries to sell us on the idea that some expansion of executive power is critical to fighting terrorism, I hope he'll throw in the Brooklyn Bridge."

HOMELAND RESPONSE:

Travel Industry Analysts Concerned By New Passport Requirement. The Washington Times (1/21, Price, 88K) reports on its front page, "Some travel-industry officials say they fear a passport bottleneck when new federal regulations take effect Tuesday requiring Americans to show a passport to re-enter the United States after traveling to countries in the Western Hemisphere. But officials at the State and Homeland Security departments, which are implementing the changes, say most travelers who need passports to comply with the new rules already have them."

New Orleans Population May Not Return To Pre-Katrina Levels. The New York Times (1/21, A1, Nossiter, 1.16M) reports, "some economists and demographers are beginning to wonder whether New Orleans will top out at about half its prestorm population of about 444,000, already in a steep decline from its peak of 627,525 in the 1960 Census. At the moment, the population is well below half, and future gains are likely to be small. … The new doubts, surprisingly, are largely not based on the widespread damage caused by the flood. Rather, crippling problems that existed long before Hurricane Katrina are

DOJ_NMG_0119372

mostly being blamed for the city's failure to thrive. In this view, the storm was merely a grim exclamation point to conditions decades in the making. Before the storm, some economists say, New Orleans may have had more people than its economy could support, and the stalled repopulation is merely reflecting that."

WAR NEWS:

Bush "Held To Plan" On Iraq Strategy. In a front page report headlined "Embattled, Bush Held To Plan to Salvage Iraq," the Washington Post (1/21, Abramowitz, Baker, 690K) details President Bush's path to his eventual strategy on Iraq: "A reconstruction of the administration's Iraq policy review, based on more than a dozen interviews with senior advisers, Bush associates, lawmakers and national security officials, reveals a president taking the lead in driving the process toward one more effort at victory -- despite doubts along the way from his own military commanders, lawmakers and the public at large." Bush "seems uninfluenced by the electorate on Iraq and headed for a showdown with the new Democratic Congress." However, "some Bush advisers believe they misjudged the politics that would greet Bush's Jan. 10 unveiling of the new plan," not expecting "near-universal opposition by Democrats and visceral anger even among some Republicans. . ... On Dec. 13, Bush went to the super-secure 'tank' at the Pentagon to listen to his top generals, only to walk away convinced that some of them were trying to manage defeat rather than find a way to victory."

More Than Two-Thirds Oppose Surge In New Poll. NBC Nightly News (1/20, story 4, Seigenthaler, 9.87M) reported, "Iraq was on the agenda today for President Bush when he met with his Secretary of State and new Secretary of Defense, while a new poll indicates a large majority of Americans oppose the President's new plan for Iraq." NBC (Yang): "Secretary of State Condoleezza Rice and Defense Secretary Robert Gates came here to brief President Bush on their just completed trips to the Middle East. President Bush's top foreign policy and military advisors arrived at the White House early facing intense pressure on Iraq; the President discussed the situation for about an hour before leaving with the First Lady for Camp David. It came as a new 'Newsweek' poll showed 68% of Americans oppose President Bush's plan to send more troops to Iraq. All-time low for the poll."

Administration Warns Iraqi Government To Honor Bargain. The New York Times (1/21, A6, Cooper, Sanger, 1.16M) reports, "President Bush and his top advisers, after nine days of unrelenting criticism from Congress, are warning the Iraqi government that continuing funding for an American troop increase and other elements of Mr. Bush's new Iraq strategy will be contingent" on Prime Minister Nouri al-Maliki's "delivery on promises to quell violence, senior administration officials said in recent interviews." Administration officials, "who have carefully avoided declaring outright that the American commitment in Iraq would be cut back if Mr. Maliki fails, are using the open hostility of most Democrats and the skepticism of many Republicans as a way to underscore to the prime minister that the White House plan represents a last chance for him." After intense criticism from Democrats, Republicans, and retired Gen. Joseph Hoar, "some members of the administration are already discussing what one called 'Plan C,' even as the administration publicly expresses support for Mr. Maliki. Some senior officials, insisting on anonymity, are discussing alternative leadership for the Iraqi government."

Vietnam Enters Discussion Of Iraq War. The Los Angeles Times (1/21, Levey, 850K) reports, "On the floors of the House and Senate, in committee hearings and news conferences since the president's Jan. 10 announcement, lawmakers on both sides of the aisle and both sides of the war debate have repeatedly invoked America's longest war. Opponents use the vocabulary of the Vietnam War as they talk of opposing an escalation that they consider as divisive as those pushed by Presidents Johnson and Nixon in the 1960s and early 1970s. And supporters of the president warn of repeating other mistakes of that conflict by withdrawing support for American soldiers while they remain in harm's way."

History Lesson Seen For Bush In Algerian War. The Boston Globe (1/21, 413K) editorializes, "At Henry Kissinger's recommendation, President Bush is reading 'A Savage War of Peace,' the classic account of the Algerian war of independence, 1954-1962." The Globe sees many differences between Algeria and Iraq, for example, the "brutal realism" of Charles deGaulle when "he uttered the fateful words, 'self-determination,' which meant independence. Today President Bush has yet to show this degree of flexibility in Iraq. ... Perhaps the lesson of 'A Savage War of Peace' is that, however painful withdrawal and defeat may be, continuous bloodshed and stalemate are worse."

More Commentary On Bush Iraq Strategy. New York Times (1/21, WK12, 1.16M) columnist Frank Rich writes, "Our failure to check the administration when it rushed into Iraq in 2003 will look even more shameful to history if we roll over again for a reboot in 2007. ... This time we must do what too few did the first time: call the White House on its lies. Lies should not be confused with euphemisms like 'incompetence' and 'denial.'"

In his Washington Post (1/21, B7, 690K) column, David Broder writes optimistically that Gen. David Petraeus "has a realistic appraisal of the people he is dealing with in Baghdad and is quite willing to lean hard on them. ... The challenge is

DOJ_NMG_0119373

immense, but for a change, there is a chance to get the full weight of our government pulling in the same direction."

More Than 20 US Troops Killed In Iraq War's Third-Deadliest Day. NBC Nightly News (1/20, story 3, 2:00, Seigenthaler, 9.87M) reported, "It's been a deadly day for Americans in Iraq, one of the deadliest of the war so far. In the last 24 hours, more than 20 Americans have been killed, 13 in a helicopter crash near Baghdad." NBC (Boettcher): "What caused this crash? That is important if it was shot down, and according to witnesses at the scene they said the helicopter was on fire. Late tonight the military is saying it appears there were mechanical problems with the helicopter and that is all we know." Seigenthaler: "There was another serious attack in Iraq today, right?" Boettcher: "Absolutely. This is the one that is worrying, John. This occurred south of Baghdad, five US soldiers were killed and according to the US military it was illegally armed militias. ... this is a very serious issue. There could have been high ranking officers at this meeting who were killed."

The CBS Evening News (1/20, story 3, 2:10, Attkisson, 7.66M) reported, "This has been the worst day in almost two years for US troops in Iraq. The death toll rose by at least 21. The military announced five soldiers were killed in an attack by militia fighters in Karbala. Three other Americans died in separate attacks. But in the worst incident, 13 service members were killed when their Blackhawk helicopter crashed northeast of Baghdad." ABC World News (1/120, story 3, 1:50, Berman, 8.78M) reported, "The US military says one of its helicopters went down northeast of Baghdad, killing 13 on board. The news comes amid growing resistance to President Bush's plan to send thousands more troops to the war zone." ABC (Morrell): "According to the website icasualties.Org, this is the 44th deadly helicopter crash since the war began nearly four years ago. In all, 198 US and coalition forces have been killed in those crashes."

The Washington Post (1/21, Londono, 690K) says on its front page that Saturday's deaths "made the day the third-deadliest for U.S. service members in Iraq since the war began." The bloodshed "came as the Bush administration was extending the tours of some troops in Iraq and sending additional ones for a buildup that has met strong resistance in Congress." The New York Times (1/21, A6, Cave, 1.16M) called it "one of the deadliest days for United States forces since the Iraq war began." Of a gun battle in Karbala, the Times reports, 'Iraqi state television reported that at least two dozen gunmen assaulted the building, getting inside, and drawing a response from American troops who were dropped by helicopter onto the roof. ... The attack nonetheless seemed to be the latest in a series of power struggles in the south among a patchwork of Shiite tribes and political parties." The Washington Times/AP (1/21, A1, Mroue) reports, "The crash and other deaths came as a brigade of the U.S. 82nd Airborne Division arrived in Baghdad and prepared for deployment in early February the first of the 21,500-troop buildup ordered by President Bush."

The Los Angeles Times (1/21, A1, Daragahi, 850K) reports, "The surge in fatalities just days before President Bush's State of the Union address was likely to inject a note of urgency into the debate over his Iraq policy. ... A witness said he saw ground fire bring down the [helicopter], and an insurgent group claimed responsibility for the attack in an Internet posting that could not be authenticated." In addition, "American troops raided the capital's main emergency hospital Saturday morning, seizing the weapons of security guards believed to be linked to Sadr's Al Mahdi militia, hospital and police officials said. ... One hospital employee said the Americans searched the hospital for a person who allegedly belongs to the Al Mahdi army."

US Brigade Soon Ready For Baghdad. The AP (1/21, Hurst) reports, "A newly arrived brigade of the U.S. 82nd Airborne Division, the first of the 21,500-troop buildup ordered by President Bush, will be ready to join the fresh drive to quell sectarian violence in the capital by the start of next month, the American military said Sunday. ... The announcement came a day after at least 20 U.S. service members were killed in Iraq on Saturday, the highest daily toll in two years for American forces." The AP continues, "Prime Minister Nouri al-Maliki has pledged to put an about equal number of Iraqi troops on the streets and has vowed they will target both Sunni insurgents and Shiite militia fighters. Maliki has promised he will no longer block action against the Mahdi Army militia ... Since Bush and Maliki announced the planned drive against militants, U.S. and Iraqi special forces have regularly killed or captured a number of Mahdi Army commanders. The drive against Sunni insurgents has increased as well."

Kurdish Troops Deserting To Avoid Baghdad Service. The Boston Globe (1/21, Fadel, Taha, 413K) reports, "As the Iraqi government attempts to secure a capital city ravaged by conflict between Sunni and Shi'ite Muslim Arabs, its decision to bring a third party into the mix may cause more problems than peace. Kurdish soldiers from northern Iraq, who are mostly Sunnis but not Arabs, are deserting the army to avoid the civil war in Baghdad, a conflict they consider someone else's problem." In interviews, Kurdish "soldiers in Sulaimaniyah expressed loyalty to their Kurdish brethren, not to Iraq. Many said they'd already deserted, and those who are going to Baghdad said they'd flee if the situation there became too difficult."

US Finds Success In Once-Dangerous Iraqi Town. The Los Angeles Times (1/21, Perry, 850K) reports

DOJ_NMG_0119374

that two years ago, the Iraqi town of Husaybah "was considered too dangerous even for a quick tour by a U.S. general in his armored Humvee. ... In a country studded with areas where the U.S. has either failed or made only limited progress toward stabilization, Husaybah and the surrounding Qaim region stand out as a success, officials said." The Times adds, "The effort has combined U.S. military and economic power, backed by help from the municipal and tribal leadership." Marines "launched a massive effort to find weapons caches and confront insurgent sanctuaries," while economic projects include "a 10-lane port of entry from Syria that should provide an economic boost. Marines are assisting the health clinic and hospital, and the U.S. is funding construction of a jobs center and vehicle registration site."

Army Says Colonel's Orders Led To Deaths Of Four Iraqis. The New York Times (1/21, A10, Von Zielbauer, 1.16M) reports, "Army investigators say that Col. Michael D. Steele, a decorated combat veteran and brigade commander in Iraq, issued improper orders to his soldiers that contributed to the deaths of four unarmed Iraqi men during a raid in May, according to military documents." Two Pentagon officials said last week that Steele "was formally reprimanded in the summer by Lt. Gen. Peter W. Chiarelli, the former commander in Iraq, for not reporting the deaths and other details of the raid."

Iraqi TV Betrays Sectarian Tensions. The Washington Post (1/21, A18, DeYoung, 690K) reports on an angry exchange between Shiite and Sunni politicians on Al Jazeera: "The exchange between two middle-aged men in suits was an up close and personal look at the religious and ethnic divides -- Sunni Muslim vs. Shiite Muslim, Arab vs. Persian -- that President Bush now cites as the main impediments to peace in Iraq. Widely circulated on the Internet in recent weeks, the video clip has fueled sectarian jeers and cheers in chat rooms throughout the Middle East. ... The Bush administration has long charged that mainstream Arab networks such as al-Jazeera provide a platform to terrorists. But communications technology now allows the warring parties in Iraq direct access to audiences in Iraq and beyond."

Banned Station Broadcasts Voices Of Sunni Insurgents. The New York Times (1/21, A8, Santora, Cave, 1.16M) reports about the banned Al Zawra TV station's broadcast of footage of an American soldier being shot, "Such tapes, along with images of victims of Shiite militias and unflattering coverage of Shiite leaders, are beaming across Iraq and much of the Middle East 24 hours a day, broadcast by a banned Iraqi satellite television station that has become a major information center for the Sunni insurgency — and the focus of a cat-and-mouse hunt that has exasperated and infuriated American and Iraqi forces. Making the situation even more galling for the authorities, American and Iraqi officials say that money stolen from the United States probably helps pay for the station."

Rice Says Talks With Iran, Syria Would Not Aid US In Iraq. AFP (1/20) reports Secretary of State Condoleezza Rice has "reiterated Washington's opposition to talking to Syria or Iran to get their help in easing unrest in Iraq." In a German interview to be published tomorrow, Rice said that, "to believe that Damascus or Tehran would suddenly be ready to help stabilise Iraq, simply because the United States would talk to them, is false." AFP notes she further indicated that "Syria and Iran's 'only motivation' in entering into such talks would be to draw some advantage for themselves, adding that this was not diplomacy but blackmail. Damascus would expect some goodwill from Washington over its Lebanon policy while Tehran would want room for manoeuvre on its nuclear programme, Rice said."

Ahmadinejad's Hold On Power Said To Be Increasingly Uncertain. In an op-ed in today's Los Angeles Times (1/21, 850K), professor Dariush Zahedi and journalist Omid Memarian say the "clock may be ticking" on the tenure of Iranian President Mahmoud Ahmadinejad. Recent events "have pushed conservatives inside Iran to further distance themselves from" him, and "there have also been reports that Iran's supreme leader, Ayatollah Ali Khamenei, has given a green light to parliament to criticize the president's performance." Last month's election results "emboldened his opponents," and Ahmadinejad's attempt "to return the Islamic revolution toward what he views as its essence — anti-Zionism and populism -- has riled the country's pragmatic and traditional conservatives." Noting that he may grow as a target for criticism because "blaming a single individual who can easily be restrained or even removed for all that ails Iran could avert a legitimacy crisis for the system," Zahedi and Memarian say Ahmadinejad "is no doubt praying that the U.S. will not be satisfied with Iran's diplomatic and economic isolation and will launch military strikes against" its nuclear sites. Such a move "would surely give new life to Ahmadinejad's militant faction, enabling him to rally the masses behind the flag, compel his conservative critics to close ranks behind him and crush the remnants of Iran's liberal civil society and democratic movement."

Columnists Challenge Bush's "Impatience" On Iran. In his Washington Post (1/21, B7, 690K) column, Jim Hoagland writes, "President Bush once again risks confusing his destiny with that of the nation. His presidency is running out of time. The United States is not. An all-or-nothing confrontation with Iran that has to be resolved before Bush leaves office is an artificial concept that will deepen American problems abroad. ... The 'hurry-up' offense that works

DOJ_NMG_0119375

beautifully for the New England Patriots at game's end is far too dangerous when the stakes are war and peace." Hoagland suggests, "The Saudis have enough reserve production capacity to swing OPEC prices up and down at will. ... So a broad, sustained campaign of economic sanctions is perhaps the most effective way to bring pressure to bear on an Iranian regime that has failed to deliver on its grandiose promises of prosperity to a restive population."

New York Times (1/21, WK13, 1.16M) columnist Nicholas Kristof writes, "One of the most worrying parts of President Bush's Iraq strategy doesn't have anything to do with Iraq. It's the way he's ramping up a confrontation with Iran." Bush is "increasing the risk that he will drag the U.S. into a third war in an Islamic country in six years. Instead of disengaging from war, he could end up starting another." Kristof continues, "Unfortunately, Mr. Bush's military pressure may end up making Iraq bloodier than ever. Instead of being cowed, Iran may use its proxies in Iraq, Afghanistan, Lebanon and elsewhere to kill more American officials and troops. Or even ordinary Americans here at home." In addition, pressuring Iran could help "Iranian hard-liners crush Iran's democracy movement."

Pakistan Denies Its Intelligence Services Protect Key Taliban Leaders. The New York Times (1/21, A1, Gall, 1.16M) examines the role Pakistani intelligence services might play along the Afghan-Pakistani border. "The government of Pakistan vehemently rejects the allegation and insists that it is fully committed to help American and NATO forces prevail against the Taliban." However, experts "say that Pakistani intelligence agencies -- in particular the powerful Inter-Services Intelligence and Military Intelligence -- have been supporting a Taliban restoration, motivated not only by Islamic fervor but also by a longstanding view that the jihadist movement allows them to assert greater influence on Pakistan's vulnerable western flank." The Times says its investigation "leaves little doubt that Quetta is an important base for the Taliban, and found many signs that Pakistani authorities are encouraging the insurgents, if not sponsoring them." Several analysts believe that "Pakistan has long seen jihadi movements like the Taliban as a counter to Indian and Russian influence next door in Afghanistan, and as a way to provide Pakistan with 'strategic depth,' or a friendly buffer on its western border."

Under the headline, "Pakistan Denies It Harbors Taliban," the Washington Post (1/21, A20, Constable, 690K) notes, "Faced with new charges that Pakistan is harboring Islamic insurgents, including fugitive Taliban leader Mohammad Omar, Pakistani officials this weekend denied such allegations and defended their efforts to curb cross-border insurgent attacks in Afghanistan as sincere if not totally successful." The Post adds, "Afghan officials have long charged that Omar and other Taliban leaders operate from Quetta, and senior U.S. officials have recently begun echoing those accusations, saying Pakistan has not done enough to curb Taliban attacks although it continues to be a valuable ally in the broader fight against Islamic terrorism."

Afghan Women's Gains Are Endangered. The Los Angeles Times (1/21, Rubin, 850K) reports in a 2,700 word article, "Five years after the end of the Taliban era, there are new opportunities for women in Afghanistan, and notable efforts are underway to make their daily lives better, especially in Kabul, the capital. Improving the status of women has been a core goal of U.S. policy here ... But conversations with dozens of women suggest that each step forward has been a struggle. Afghan society remains deeply uncomfortable with the idea of women gaining independence and authority. The Taliban's resurgence has reversed incremental gains, particularly in the south. If the Taliban incursions spread, more women are likely to lose ground. Families in the south that recently began allowing their daughters to go to school and wives to enroll in vocational programs have pulled them out because of Taliban attacks."

DOJ:

Senate Urged To Curb US Attorney Dismissals. The Roanoke (VA) Times (1/21) editorializes, "The administration's forced resignations among U.S. attorneys tell the tale of the corrupting influence of unchecked power. … It is a new old story, about one of those 'little-noticed' provisions in complex legislation that draws attention only when it starts to stink." The Times continues, "The complex law is the Patriot Act. The smelly provision -- one of many, but a noticeable one of late -- is an innocuous-seeming change in the way the executive branch makes interim appointments of U.S. attorneys. … In effect, the change allows the attorney general to replace federal prosecutors without Senate approval." The Times adds, "The Bush administration seems to be using this new power, in part, to rid the Justice Department of prosecutors deep into political corruption investigations and to put political hacks in their place. … Congress should act quickly to strip the law of a provision so ripe for abuse." The Times notes, "U.S. attorneys are appointed by the president and approved by the Senate. When appointees leave, voluntarily or not, the attorney general can make an interim appointment that is not subject to a Senate vote. … Feinstein and Leahy have filed a bill to restore the district court's authority to make interim appointments. Gonzales' protestations of high principle do not persuade. The senators should press on."

DOJ_NMG_0119376

CORPORATE SCANDALS:

Prosecutor In Apple Options Case Joins Firm.

Bloomberg (1/21, News) reports, "Christopher J. Steskal, a lead prosecutor of a federal task force investigating the backdating of stock options at Apple Inc. and other companies, is leaving his San Francisco post to join a law firm, the United State Attorney's office in San Francisco confirmed late Friday. … Mr. Steskal's decision follows the recent resignation of his boss, United States Attorney Kevin V. Ryan." Bloomberg continues, "Mr. Steskal also was the lead prosecutor in the government's case against Gregory L. Reyes, the former chief executive of Brocade Communications Systems. … Mr. Steskal, who was to try Mr. Reyes's case in June in San Francisco, is the second of five assistant United States attorneys on the task force to leave since its formation in July. He said he would join the San Francisco office of Fenwick & West within 30 days." Bloomberg adds, "William J. Portanova, a criminal defense attorney and former federal prosecutor, said that he believed that the Brocade case would not suffer, no matter who is picked to succeed Mr. Steskal. … Luke Macaulay, a spokesman for the United States Attorney's office in San Francisco, said that one of two prosecutors the office is planning to hire would replace Mr. Steskal on the task force."

The San Francisco Chronicle (1/21, Page F - 1, Guynn) reports, "The abrupt resignations last week of U.S. Attorney Kevin Ryan, the Justice Department's top law enforcement official in Northern California, and Assistant U.S. Attorney Chris Steskal, the lead prosecutor on the task force investigating stock-option backdating, raise questions about the fate of Bay Area technology companies under investigation." The Chronicle continues, "Ryan gained a national profile for his aggressive stance on the controversial issue, becoming the first prosecutor to file backdating charges -- against two former executives of Brocade Communications Systems Inc. for allegedly violating securities laws by backdating stock options without properly accounting for them. … But it is the loss of Steskal, who is leaving to head the white-collar crime unit at Fenwick & West, headquartered in Mountain View, that could dramatically slow the pace of the criminal probes. Steskal was the office's resident expert on backdating, overseeing a dozen probes into suspect options grants, the highest-profile of which was Apple Computer Inc. He also was the lead prosecutor in the case against Brocade. … 'Any time a line prosecutor leaves an investigation, there's clearly a loss of momentum because that person is invested, knows the cases and has spent all the time with the cases,' said Thomas Carlucci, a San Francisco lawyer who represents former Apple attorney Wendy Howell, a potential target of the federal probe. 'So there is undoubtedly going to be a momentary hiccup given that Chris has been the lead in all of the stock-option cases and in particular in the Apple case.'"

Enron Survivor Hunts Riches In New Guinea.

The New York Times (1/21, Duhigg) reports, "The South Pacific islands of Papua New Guinea, where canned mackerel occasionally serves as currency and cannibalism was once on the menu, are a long way from the corporate jungles where Enron was born. … Yet amid the wreckage of Enron, the energy giant that went bankrupt in 2001, is a leftover sliver of the company that is still doing business in Papua New Guinea: an oil refinery near the country's capital, Port Moresby, that was shipped there from Alaska and in which Enron continues to hold a small stake." The Times continues, "In November, the relatively obscure Houston company that owns most of that refinery, the InterOil Corporation, made the kind of announcement investors crave: explorations near the refinery had uncorked a vast pool of natural gas potentially larger than the United States' total residential consumption of the fossil fuel in 2005. The size of the discovery was so large, Phil E. Mulacek, InterOil's chairman and chief executive, informed an analyst, that simply controlling its output 'was sort of like trying to stop the Mississippi.'" The Times adds, "Just a few years ago, such proclamations — and the executives who made them — might have been viewed as curiosities, if they were noticed at all. Energy prices were so low that many natural-gas discoveries were burnt off so that drilling rigs could extract precious oil deposits further below. And rattled investors might have been wary of any company linked to Enron, especially one like InterOil that was boasting of possible treasures unearthed in remote jungles. … But that was then. This is now. … After a lengthy dormant spell, the global search for gas and oil has reignited with a fervor that is transforming companies like InterOil into Wall Street darlings. 'The gold rush is back on,' said Andrew V. Boland, an energy analyst at Peters & Company, a Canadian investment firm. 'It's like the wild, wild West, all over again.'"

Study Finds Backdated Options May Be Contagious.

The New York Times (1/21, Hulbert) reports, "Directors of corporations often form a tight-knit community, serving at more than one company and creating what are known as interlocking boards of directors. As a result of this chumminess, corporate practices that otherwise might remain confined to just a few companies can spread quickly. … That appears to have been the case with the backdating of stock options, according to a new statistical study of publicly traded American companies." The Times continues, "The study's authors are two finance professors, John M. Bizjak of Portland State University in Oregon and

DOJ_NMG_0119377

Michael L. Lemmon of the University of Utah, as well as one of Professor Lemmon's graduate students, Ryan J. Whitby. … Options backdating, of course, involves retroactively granting options to executives and directors on dates when a company's stock price was lower. The practice has favorable monetary, accounting and tax consequences for the companies themselves, as well as for the recipients. It isn't necessarily illegal, but it must be disclosed under federal securities law. Federal prosecutors and the Securities and Exchange Commission are investigating numerous companies in connection with options backdating. … How did the practice become trendy in boardrooms across America? According to the study, a big part of the answer may be found in interlocking boards, which the researchers describe as the biggest conduit for transferring information about options backdating." The Times notes, "The study looked at publicly traded companies that granted options at any point from 1996 through 2002, and it particularly examined those that began to engage in options backdating during this time. The researchers found that the probability that a company would start the practice rose by a third to a half if one of its directors was also on the board of a company that was already backdating options. The range in these probabilities depended on various factors, including the number of directors who served on other companies' boards. … The researchers would not have been able to reach statistically meaningful results based only on the 120 or so companies that regulators have publicly identified as under investigation for possible options backdating. As a result, the sample was expanded to include other companies where the odds of having engaged in the practice were overwhelming, according to the researchers."

CRIMINAL LAW:

Libby Trial Opening Statements Begin Tuesday. ABC World News (1/20, story 4, 2:20, Berman, 8.78M) reported, "In Washington this week, the beginning of a trial that reaches the highest levels of power. Former White House aide Lewis 'Scooter' Libby is being tried on five felony counts stemming from the investigation over who outed an undercover CIA agent. The case involves weighty issues of national security and could send a man to prison. For many in Washington, it has all the makings of a good thriller." ABC (Marquez): "The Libby trial is quickly becoming Washington's favorite parlor game with a juicy plot and a who's-who of characters. … At the top of the witness list, Vice President Dick Cheney, Scooter Libby's former boss. Also NBC's Tim Russert and the Washington Post's Bob Woodward. The plot reads like a whodunit it novel, with the Bush administration at the center. … In what can only be called bad timing, opening statements in the Libby trial begin Tuesday, yhe same day as the President's State of the Union address."

Area In California Tops In Child Porn Arrests. The Fresno Bee (1/21, Ellis) reports, "When it comes to fighting child exploitation, no part of the nation has put up statistical numbers like the federal law enforcement zone centered on Fresno and Sacramento." The Bee continues, "Over the past two fiscal years — including the one that ended Sept. 30 — the Eastern District of California has indicted more people for child pornography, molestation and related crimes than any other federal law enforcement zone in the nation. … In the fiscal year that ended Sept. 30, the number was 71. In the one that preceded it, the total was 67. … 'It's something we're very proud of,' said McGregor W. Scott, U.S. Attorney for the Eastern District of California." The Bee notes, "Proud, but also surprised. Such information, Scott said, isn't published regularly, and for the most part the various federal districts around the nation are unaware of any statistical crime totals from outside their own region. … This particular recognition came last month, during a Washington, D.C., conference on Project Safe Childhood. During a speech, Associate Attorney General Bill Mercer — who holds the No. 3 position at the Justice Department — singled out the Eastern District of California, which runs from Kern County to the Oregon border, as the national leader in child exploitation indictments. … Assistant U.S. Attorney David Gappa, who specializes in child exploitation cases in Fresno's federal courthouse, said, 'We're always just looking for a way we can do a case, rather than ways we can't do it.'"

Violent Crime Down Sharply In Providence, RI. The Providence Journal (1/21, Smith) reports, "With a crew of streetworkers calming gang feuds and a gun task force invading criminal haunts, the frequency of murder has fallen to a historic low in Rhode Island's capital city. … The number of slayings fell by half last year and violent crime overall declined sharply, Police Chief Dean M. Esserman said, as improved law enforcement strategy and tactics such as the streetworkers and gun task force had a cumulative effect." The Journal continues, "While 22 people were killed in 2005, that fell to 11 in 2006, which Esserman said last week is the fewest in 31 years. … Violent crimes decreased by 18.6 percent last year, according to preliminary figures in a police document obtained by The Providence Journal. The number of such crimes — homicide, rape, robbery and aggravated assault — fell from 1,145 to 932, a decrease of 213." The Journal adds, "Mayor David N. Cicilline and the chief are scheduled to announce final numbers for 2006 tomorrow, including figures for property crime and total crime. Excepting murders, the final figures for violent crime may vary slightly from the preliminary figures. … Killings in Providence, the

DOJ_NMG_0119378

second most-populated city in New England, peaked at 30 in 2000, then declined to 23 in 2001 and 2002, to 20 in 2003, and then to 18 in 2004. The next year there was a spike, to 22, but then the number plummeted last year. … Esserman has no explanation for what he called 'a blip' in killings and violent crime in 2005. But since he became chief in January 2003, he contends, a disciplined, dedicated and properly staffed Police Department has brought down both violent and property crimes."

Trial Casts Shadow Over DeVecchio's Retirement Years. The Sarasota Herald Tribune (1/21, Lee) reported, "By the time R. Lindley DeVecchio settled in Sarasota, his days at the FBI had become gangland lore. … Having sealed up a 33-year career with the FBI, DeVecchio bought a courtyard-style home set among hammocks of palms in virtually crime-free Palmer Ranch. … And then he got indicted for murder. The supervisory special agent who helped bring down the leaders of New York City's five organized crime families now faces four 25-years-to-life prison sentences in what a prosecutor at the Brooklyn District Attorney's Office has called 'one of the worst cases of law enforcement corruption in the history of this country.'" The Herald Tribune notes, "DeVecchio, who declined to speak publicly about his pending trial or his life in Sarasota, pleaded not guilty to all four counts of second-degree murder at his March 30 arraignment in Brooklyn State Supreme Court. And a 1994 internal Justice Department investigation into similar accusations" that DeVecchio had leaked information to the mob "found he had done nothing wrong." The Herald details DeVecchio's career and the allegations of criminal activity and adds, "Here, he blends in as a typical retiree. … But for DeVecchio, the trial looms."

ANTITRUST:

Black Seen As Potential Savior Of Seattle Post-Intelligencer. The Seattle Times (1/21, Pryne) reports, "Could David Black save the P-I? … With a decision looming in four months that might spell the beginning of the end for the smaller of Seattle's two daily newspapers, some speculate Black could ride to the Post-Intelligencer's rescue." The Times continues, "He kept an endangered daily alive before under similar circumstances, they note, in Honolulu. … Liz Brown, administrative officer for the Pacific Northwest Newspaper Guild, said she mentioned the possibility to Don Kendall, who heads Black Press' new King County operations, at a meeting last month. … 'I told him, "You could save the day again," ' said Brown, whose union represents workers at both Seattle papers. … But Kendall said he's never discussed buying or printing the P-I with Black. What's more, he added, Seattle isn't Honolulu." The Times adds, "The P-I has pretty much been only a newsroom since 1983. That's when its owner, The Hearst Corp., entered into a federally sanctioned joint operating agreement (JOA) with The Seattle Times Co. … The Times prints, circulates and sells the advertising for both papers. In return, it gets most of the proceeds. But it has maintained in recent years that it is losing money under the arrangement and moved in 2003 to trigger an escape clause in the contract. … Hearst has said the P-I couldn't survive outside the JOA. It also says The Times' loss claims aren't valid. … After years of litigation, the companies agreed last spring to submit their dispute to binding arbitration. The arbitrator is scheduled to rule by May 31. … If The Times wins, the agreement calls for Hearst to shut down the P-I in six to 12 months. In return, it would get 32 percent of The Times' profits until 2083, when the JOA expires." The Times notes, "To comply with antitrust laws, however, the U.S. Justice Department or federal judges almost certainly would require Hearst to put the P-I up for sale before closing it. That's what happened in Hawaii in 2000."

ENVIRONMENT/INDIAN AFFAIRS:

Plans To Restore Yosemite End Up In Court. The San Francisco Chronicle (1/21, A1, Squatriglia) reports, "When the Merced River overran its banks and scoured Yosemite National Park a decade ago, many saw an unprecedented opportunity to restore the iconic park and cede more of the Yosemite Valley to nature. … A plan by the National Park Service to reinvent the valley and another to protect the Merced River drew broad support from environmentalists, the public and the government. Years of acrimonious debate over how to manage a crown jewel of America's national park system gave way to a consensus that the Park Service had finally gotten it right. … Yet 10 years after the flood, both plans remain tied up in court, challenged by a small but passionate group of activists who argue that the Park Service would render Yosemite an exclusive resort. A federal judge has rejected the river plan, the future of the valley plan is uncertain and, with several projects planned for the valley brought to a halt, frustrated park officials worry they'll be told to begin the planning process anew. … But many of the environmentalists who championed the plans have moved on to other issues. Public, not to mention governmental, priorities have shifted. There is mounting concern that the broad support for remaking Yosemite is gone." The Chronicle adds, "Californians, too, overwhelmingly approved of the plans, according to a statewide poll commissioned by the defense council shortly after the plans were announced. .. But two small environmental organizations, Friends of Yosemite Valley and Mariposans for

DOJ_NMG_0119379

Environmentally Responsible Growth, opposed the plans. They sued, arguing that the Merced River Plan was hastily written, used flawed data and favored development. … U.S. District Judge Anthony Ishii agreed and rejected the plan in July. He ordered the Park Service to draft a new plan, a process the Park Service says will take 33 months. In October, Ishii shut down several construction projects until the new plan is drafted. … The U.S. Justice Department is expected to announce it will appeal Ishii's rulings, but now finds itself defending the Yosemite Valley Plan as well."

Families Concerned About Unsolved Tribal Cases. The Yakima (WA) Herald Republic (1/21, Ferolito) reports, "Authorities still have no clue about what happened to Donnie Sampson. … The 71-year-old Yakama tribal official left early Oct. 30, 1994, for the Wilson Charlie-Dry Creek area, one of his favorite hunting spots near Mount Adams." The Republic continues, "Three days later, authorities found his 1992 four-wheel drive pickup in more than a foot of snow near the mouth of Holdaway Meadows north of Mount Adams in the closed area of the Yakama reservation. … A rifle, pickup keys, extra clothing and a sack lunch were found inside his truck, but no trace of Sampson, a member of the Yakama Nation Code of Ethics Committee, a watchdog board of tribal government." The Republic adds, "His disappearance puzzled family and tribal authorities. A massive search involving helicopters, snowmobiles, dogs and nearly 100 people found no trace of him, and seven years later he was presumed dead, according to the Yakima County Coroner's Office. … His disappearance isn't the only grief his family suffers. Two years earlier, the body of Sampson's 30-year-old daughter, Shari Dee Sampson Elwell, was found strangled and sexually mutilated in an area not far from where her father later disappeared. … The family hadn't seen her for weeks before a group of hunters found her body." The Republic notes, "Her death, which remains unsolved, capped a decade-long string of mysterious deaths involving at least a dozen women -- all but two were tribal members -- on the 1.2-million-acre Yakama reservation. … Those cases are just two of an unknown number involving either unsolved deaths or missing tribal members here. … It's hard to say just how many unsolved cases exist because case files are dispersed among tribal, federal, state and county law enforcement agencies, says Yakama tribal police Chief Davis Washines. … How cases are classified on the reservation often determines which jurisdiction they fall under, he says. … If it's classified a homicide on tribal land, it goes to the FBI. If it's a missing tribal member or accidental death, tribal police take it. If it's a death caused by an auto accident, either the Washington State Patrol or Yakima County Sheriff's Office could take it."

NYTimes Blasts Administration Over Failure To Finance Global Warming Research. The New York Times (1/21, WK11, 1.16M) editorializes, "At a time when concerns about global warming are rising, the Bush administration is sharply reducing the number of satellites that can measure the impact of rising temperatures and a host of other environmental trends. The administration's hypocrisy is stunning. For years, the president and top officials have justified their refusal to grapple seriously with global warming by insisting that more research is needed. Now, after pledging that such research would be the centerpiece of a new climate change strategy, the administration is underfinancing some of the most important efforts to gather data."

FBI/DEA/ATF/USMS:

US Officials Hail Extradition Of Mexican Drug Kingpins. The Washington Post (1/21, A15, Roig-Franzia, 690K) reports, "The extradition to the United States of four major drug traffickers, including Osiel Cardenas Guillen, head of the powerful Gulf cartel, was hailed Saturday by U.S. officials as a signal of a new era of cooperation." Attorney General Alberto Gonzales "called the extraditions 'unprecedented.' … For years, U.S. officials have criticized Mexico as a sometimes-difficult partner in the war against drugs because of its reluctance to extradite top drug lords to the United States. Mexico has long refused to extradite suspects who might face the death penalty. In 2001, Mexico's Supreme Court also barred extraditions of suspects facing possible life sentences, which were considered 'cruel and unusual punishment' here. But the court reversed itself in November 2005, clearing the way for higher-profile extraditions. The ruling did not affect death penalty cases." The Washington Times (1/21, Adams, 88K) reports U.S. Ambassador Tony Garza "said the latest extradition demonstrated the 'courage and conviction' of Mexico's president, attorney general and law enforcement officers."

The New York Times (1/21, A15, McKinley, 1.16M) reports Cárdenas Guillén "was among the 21 people flown under heavy armed guard to the United States on Friday night and handed over to federal authorities. He is under indictment in Texas for trafficking in marijuana and threatening to kill three law enforcement agents. The Mexican government also turned over Ismael and Gilberto Higuera Guerrero, brothers who were high-ranking members of the Arellano-Félix cartel in Tijuana, as well as Hector Palma Salazar, a former leader in the Sinaloa cartel. All face racketeering and drug trafficking charges in Southern California.

DOJ_NMG_0119380

The Dallas Morning News (1/21, Iliff, Corchado, 500K) reports, "In a prepared statement, the Mexico attorney general's office blamed the drug lords for 'generating a wave of violence and social decomposition in our country, in addition to damaging the health of thousands of Mexicans by turning them into prisoners of their drug addiction.'" The Los Angeles Times (1/21, Tobar, 850K) reports, "Even inside their Mexican prisons, the kingpins were known for outrageous behavior. Cardenas treated 17,000 people to a Day of the Child party at a baseball stadium in the border city of Reynosa last year."

The San Diego Union-Tribune (1/21, Hall) reports, "Mexico's extradition of 15 reputed drug lords and violent criminals, four of whom have ties to San Diego, drew praise from the U.S. attorney general yesterday and signaled its new determination to keep traffickers from running their cartels from inside prison walls. … 'The actions overnight by the Mexican government are unprecedented in their scope and importance,' U.S. Attorney General Alberto Gonzales said in a statement yesterday." The Union-Tribune continues, "Osiel Cárdenas, the alleged Gulf cartel leader who was believed to be running his gang from prison in Mexico, was sent north late Friday along with 14 others wanted by the United States after their appeals against extradition ran out, the office of Mexico's attorney general said. … Four of those extradited had been indicted years ago in San Diego. They include the reputed former leader of the Sinaloa drug cartel and three men connected to the Arellano Félix drug cartel. They will be transported to San Diego 'relatively soon,' perhaps within weeks, to answer the charges against them, Justice Department spokesman Dean Boyd said." The Union-Tribune adds, "All of the suspects are being held in Houston and are expected to appear in court there early this week. .. Gonzales applauded 'the bold stance' of Mexican President Felipe Calderón and his government 'in targeting the drug-related violence and corruption that affects both our nations.'"

The AP (1/21, Stevenson) reports, "Osiel Cardenas, the alleged Gulf cartel leader thought to be running his gang from prison in Mexico, was sent north late Friday along with 14 others wanted by the U.S. after their appeals against extradition ran out, the office of Mexico's attorney general said. … The Mexican attorney general's office said the extraditions were also aimed in part at cracking down on turf battles between Mexican drug cartels, which have cost hundreds of lives in recent months in states such as Michoacan, Guerrero, Baja California and Sinaloa." The AP adds, "Recently, the government has sent thousands of soldiers and police to try to stem the drugfueled violence. … 'This changes the rules, as far drug traffickers' impunity and the potential punishment they face,' said Oscar Aguilar, a political-science professor at Mexico City's Iberoamerican University. 'Before, the capos could say, "Well, if they ever do catch me, I'll be in Mexico, my family and associates can visit me whenever they want, and I can keep running the business" ' from prison. … Mexican officials have said that Cardenas and top members of the Tijuana cartel forged an alliance while locked up at a maximum-security prison just west of Mexico City, where they organized to fight turf wars against rival drug lords."

CONGRESS-ADMINISTRATION:

Bush State Of The Union Address To Focus On Health Care, Energy Policy. The Washington Times (1/21, Dinan, 88K) reports the White House "has told Republicans on Capitol Hill that Tuesday's address will make the most news on health care and energy policy. Aides have said the speech will forgo the usual laundry list of new programs and instead focus on those two areas and three others: the war on terrorism, immigration and education. 'President Bush will outline issues where he believes we can find common ground with the new Congress,' spokeswoman Dana Perino said."

Bush Health Care Initiative Includes New Tax On Some Insurance Plans. The Washington Post (1/21, A4, Fletcher, 690K) reports Bush "will propose a deep tax break for Americans who purchase their own medical insurance and would finance it with an unprecedented tax on a portion of high-priced health-care plans that workers receive from their employers, according to the White House. The initiative, which the president briefly previewed in his radio address yesterday, has a dual purpose: It would create a financial incentive for the estimated 46 million to 48 million Americans who lack health insurance to buy it. And it would rein in the soaring cost of health insurance by encouraging workers in high-priced plans to seek more modest coverage." According to the Post, the proposal "marks a sharp departure for a president who has been criticized for advocating tax cuts that disproportionately benefit higher-income Americans," though Administration officials "refuse to characterize the plan as a tax increase because it raises no new money for the federal government. Instead, it would add a new tax on employer-provided health-care plans worth more than $15,000 to subsidize those who buy modestly priced plans out of their pockets. In addition, they say, the plan is consistent with the president's idea of increasing access to health insurance through the private market while encouraging people to be more cost-conscious as they purchase medical-care coverage."

The Washington Times (1/21, Dinan, 88K) reports that in his weekly radio address Bush "said his plan will treat health insurance like a mortgage. … The changes will require congressional action and Mr. Bush, now facing a Democratic

DOJ_NMG_0119381

majority in Congress, ruled out raising taxes or 'creating a new federal entitlement program' as possible options for expanding health care." The AP (1/20) reports that "a Bush administration official familiar with the proposals" would not "disclose the amount of the proposed deduction or the top amount of coverage from employer-sponsored plans that would remain free of income and payroll taxes."

The Los Angeles Times (1/21, Alonso-Zaldivar, 850K) reports, "Bush's proposal is a combination of carrots and sticks — and, if enacted, would create new winners and losers in the health insurance arena. It is likely to run into opposition in the Democratic-led Congress but could serve as a key element of a broader package dealing with rising healthcare costs and shrinking coverage. The carrot in Bush's plan is the creation of a health insurance tax deduction that all taxpayers would receive — $7,500 a year for individuals and $15,000 for families. … Bush's plan may seem like a startling move from a president who has repeatedly vowed not to raise taxes. People with generous healthcare coverage would face the higher taxes, although they could avoid the hit by switching to a standard policy. Family coverage costs an average of $11,500 to $13,000 a year, according to industry surveys."

Rangel Claims Bush Would Raise Taxes On Middle Class. The New York Times (1/21, Stolberg, Pear, 1.16M), in a front-page article titled, "Bush To Urge New Tax Plan For Health Care Coverage," describes Bush's plan as a "one-two punch: tax breaks to help low-income people buy health insurance and tax increases for some workers whose health plans cost significantly more than the national average. … The basic concept is that employer-provided health insurance, now treated as a fringe benefit exempt from taxation, would no longer be entirely tax-free." The proposed plan "is a startling move for a president who has repeatedly vowed not to raise taxes. And it is certain to run into opposition from business groups, labor unions and, most of all, the Democrats who now run Capitol Hill. … Critics say it would, in effect, tax people with insurance to provide coverage to those without it." Rep. Charles Rangel is quoted as saying, "It's a bad policy. …. We are trying to bring tax relief to the middle class. The president is trying to increase their tax liability."

Webb's State Of The Union Response Expected To Draw More Attention Than Usual. In an "Editorial Observer" piece for the New York Times (1/21, WK11, 1.16M) Francis X. Clines writes, "Normally, no one pays much attention to the opposition's rebuttal to a State of the Union address. But the capital's mood as the war spirals downward is palpably, if not desperately, expectant of some change, somehow. And in Washington, fresh rhetoric must be invested to feed any chance of change." Sen. Jim Webb, "whose upset victory was fueled by stinging, uninhibited criticism of the Bush administration's bungling of its war, clearly has something closer to a glinting riposte in mind than some boilerplate response for the record."

WPost Says "Independence" Ought Not Be Goal Of US Energy Policy. The Washington Post (1/21, 690K), in an editorial, notes that energy policy "is likely to be featured in President Bush's State of the Union address; a variety of energy bills have been proposed in Congress; and this year's reauthorization of the farm program may repackage agricultural handouts as ethanol-promoting energy policy. But there is a danger in the way political leaders are framing this issue. 'Energy independence' is more elusive and less rewarding than is commonly perceived. … If the United States replaced all oil imports with domestically produced fuel, how much more secure would it be? Well, a Venezuelan or Iranian oil embargo could still hurt U.S. motorists and oil-consuming industries. An embargo would create a global scarcity of oil, and fuel prices would jump -- including the price of fuel in the United States." The Post concludes, "Bush and Congress should focus their energy policy on mitigating climate change and accept security gains that may flow from that as a welcome byproduct."

LATimes Concerned By Bush's "Lack Of Stature" Internationally. The Los Angeles Times (1/21, 850K), in an editorial, writes, "Bush will be with us for another two years, and this Tuesday, with the State of the Union address, he will attempt to begin engineering a fourth-quarter comeback. Iraq will remain at the forefront, of course, but Bush desperately needs to find ways to remain relevant on the domestic front as well. Comprehensive immigration reform would be one way to do that, and perhaps Bush will embrace environmentalism in the same way that Ronald Reagan improbably embraced arms control in his last years in office. Regardless of the issue, the most worrisome aspect of the Bush administration at this point is the president's lack of stature. It sounds corny, but the president of the United States remains the leader of the free world, and it's essential for him to command respect and authority on the global stage. The unsettling question about Bush in his fourth quarter is whether anyone will take him seriously the next time he identifies a crisis — especially if, and when, it's a real crisis."

Bolten Credited With Creating More Pragmatic White House. In the New York Times (1/21, WK3, 1.16M) Jim Rutenberg writes about "an emerging pragmatism inside the West Wing." According to Rutenberg, "In the last few months, the new White House chief of staff, Joshua B. Bolten, has switched out longtime Bush loyalists with a handful of so-called policy realists — and their appointments have cast a famously ideological White House inner circle in a more pragmatic light. And they have expressed a willingness

DOJ_NMG_0119382

to deal with a new Democratic Congress. But Washington being Washington, there is skepticism. Just how pragmatic will they be on issues they hold dear? … In fact, the administration's decisions in the last few weeks could be seen as a move to compromise now to avoid more serious setbacks to his agenda later. In other words, it is pragmatism at gunpoint. Take, for instance, the administration's agreement last week to submit the wiretap program to judicial review. Opponents of the program said the administration had finally folded," however "the administration may also have deflated Congressional plans to move against the program. In effect, critics say, the White House was trying to duck for now a debate on a crucial balance of power question."

Parties Struggle To Find Common Ground On Social Security Reform. The New York Times (1/21, A21, Toner, 1.16M) reports President Bush "is renewing his call for a bipartisan effort on Social Security, but few other issues so clearly highlight the limits of bipartisanship these days, the mistrust and ideological division just barely below the surface. … Efforts have been made: Treasury Secretary Henry M. Paulson Jr. has talked to crucial lawmakers, including" Rep. Charles Rangel, the chairman of the Ways and Means Committee, "'encouraging everyone to bring all their ideas to the table, and hoping that some kind of consensus can emerge,' as Michele Davis, the assistant Treasury secretary, puts it. Mr. Rangel said he had also been talking about the possibility of action on Social Security with the ranking Republican on his committee, Representative Jim McCrery. And in the Senate, [Sen. Judd] Gregg and Senator Kent Conrad, the chairman of the Budget Committee, have proposed a bipartisan working group to explore broad entitlement and fiscal issues. But the old fault lines have quickly re-emerged. Vice President Dick Cheney, in an interview with Fox News last week, said Mr. Paulson's openness to all ideas did not indicate that the administration was open to any increase in the payroll tax that supports Social Security." Sen. Conrad "said that after those comments, his effort to move forward with his working group 'is on life support.'"

New Congress Seen As "Hostile" To Business Interests. The Washington Post (1/21, F2, 690K) reports, "For almost a year, business interests have had an inkling that their days of calling the shots in Washington were about to come to an end. But last week, as the clocked ticked down on the symbolic first 100 hours of the 110th Congress, it was becoming pretty clear how hostile the political environment had become after 12 years of Republican rule. It wasn't just that key business lobbyists were no longer invited to the weekly meeting to set the agenda, plan strategy and coordinate the talking points. Or that much of the promised legislation was hostile to their interests, such as House passage last week of an energy bill that wiped out tax breaks and raised royalty fees for the oil industry and cut subsidies to banks and others making college loans. Or that, in pushing through their first six bills, House Democrats were able to get an average of 62 votes from the once-united Republican caucus. More troubling for business interests was the fact that nearly every day seemed to bring news of some fresh new offensive -- a hostile hearing or a special new committee or some calculated retreat by the Bush administration, leaving them surprised and exposed."

Will Notes Frank's Views On Federal Reserve's Independence. In his Washington Post (1/21, B7, 690K) column, George Will writes that Rep. Barney Frank, chairman of the House Financial Services Committee, "mildly says that Congress should 'pay a little more attention' to the seven governors of the Federal Reserve system, all of whom are confirmed by Congress. The Fed, says Frank less mildly, should not be considered 'above democracy': 'We can debate whether Terri Schiavo's life should be recognized as over' and other fundamental questions of existence, 'but God forbid anybody in elected office should talk about whether or not we need a 25-basis-point increase' in interest rates. 'Somehow that's sacrosanct. No, it isn't. It's public policy.'" Frank "wants the Fed to emphasize full employment as well as protect the currency as a store of value -- restraining inflation."

Congressional Democrats Approach Abortion Debate Cautiously. The Washington Post (1/21, A5, Murray, 690K) reports, "Eager to avoid a resumption of the culture wars, the new Democratic leaders are trying to tiptoe around the abortion issue by promoting legislation to encourage birth control and assist women who decide to proceed with unwanted pregnancies. Democrats acknowledge that they alienated many social conservatives and churchgoing voters during years of combat with Republicans over the explosive issue of reproductive rights, and they want to change their emphasis to woo some of those voters back into the fold." Democrats are reaching out to "religious moderates who support, in principle, the Roe v. Wade Supreme Court decision that legalized abortion nationwide but who are morally squeamish about terminating pregnancies."

Sanders Continues To Embrace Socialism. The New York Times Magazine (1/21, Leibovich) profiles Sen. Bernie Sanders, noting that Sanders "has always been an easier fit in Vermont than in Washington. Being a Socialist in the seat of two-party orthodoxy will do that. While he has generally championed liberal Democratic positions over the years — and the Democratic Senatorial Campaign Committee endorsed his Senate campaign — Sanders has

DOJ_NMG_0119383

strenuously resisted calling himself a Democrat. And he has clung to a mantle — socialism — that brings considerable stigma, in large part for its association with authoritarian communist regimes (which Sanders is quick to disavow). But he does little to airbrush the red 'S' from his political profile."

Brooks Offers Guarded Praise For New Congress. In his New York Times (1/21, WK12, 1.16M) column, David Brooks writes, "We're in bipartisan nirvana. Bills are passing through the House 356 to 71 and through the Senate 96 to 2. Nancy Pelosi is aglow, and this week President Bush will trot out a State of the Union speech so conciliatory in tone it'll sound like Gandhi on Quaaludes. The question is, What is all this good cheer accomplishing? It's time to render judgments on the substance of all this legislation coursing through the Democratic Congress." According to Brooks, Congress "hasn't tried anything big. It has a weakness for showy symbolism and middle-class subsidies. Still, at least it hasn't humiliated the nation the way the last Congress did, and it looks set to do some modest good."

Bush's SCOTUS Picks Examined. In an op-ed for the Washington Post (1/21, B1, 690K) Jan Crawford Greenburg, legal correspondent for ABC News, writes, "The departures of [Justices] O'Connor and Rehnquist produced a titanic conflict over their successors, one that turned allies into enemies, damaged reputations and reopened old wounds. Yet, after bizarre missteps and strategic brilliance at the highest levels, Bush engineered lasting change in the court, succeeding where past Republican presidents -- including his own father -- had failed. And in so doing, he provided some redemption for the conservative movement, so dismayed by watching Republicans in the political branches flout ethics laws, expand government and indulge in runaway spending. If nothing else, they would get their court.

OTHER NEWS:

States Get Ahead Of Congress With Populist Proposals. The Washington Post (1/21, A12, Russakoff, 690K) reports, "Paying heed to voters' economic anxieties, governors of both parties and in all regions opened legislative sessions with proposals such as eliminating sales taxes on groceries, providing public kindergarten for low-income children, targeting tax relief to low- and moderate-income families and investing state dollars in job training for a new economy. Stepping ahead of the Democratic-controlled House in attending to the growing gap between rich and poor, lawmakers in 17 states are moving to raise the minimum wage sooner or more than Congress proposes, or to tie it to inflation so it continues to rise. … And California Gov. Arnold Schwarzenegger (R) was hardly the sole governor calling for universal health insurance. His counterparts in Kansas, Illinois and Colorado did the same, while governors in Arizona, New Mexico, Indiana, New York and elsewhere called for covering hundreds of thousands of low-income, uninsured families."

Clinton Says "I'm In" Race For Democratic Presidential Nomination. Sen. Hillary Clinton's formal entry into the 2008 presidential race dominates the news, leading all three broadcast network newscasts and appearing on the front page of newspapers across the US. The reports are generally laudatory, calling Clinton's candidacy history-making, as she becomes the most serious female presidential candidate to date, and the first spouse of a former president to seek the presidency. While Clinton announced the creation of an exploratory committee, most reports paint her candidacy as official, with many stories and headlines prominently noting that Clinton declared, "I'm in." Clinton's announcement came two years to the day before the next presidential inauguration.

ABC World News (1/20, lead story, 2:30, Berman, 8.78M) reported, "It was just two words, but they were two words that sent tremors across the political landscape: 'I'm in.' … A new ABC News/Washington Post poll just out tonight shows Sen. Clinton with a huge lead in her own party. Other polls show her running strongly against her likely Republican opponents. However you slice it, Sen. Clinton is shaping up as the woman to beat." But as ABC's Kate Snow added, "Even within her own campaign, there are concerns that some Democratic voters think Sen. Clinton is not electable. Critics are eager to exploit her husband's past and public life as First Lady. Some political watchers believe Clinton was under pressure to get in the race, particularly after Sen. Barack Obama's announcement this week. … Today, Senator Obama welcomed Clinton to the race, calling her a friend. Many Republicans say they would rather face Obama than Clinton. She has more experience with campaigns. She's a prolific fund-raiser." Following that lead report, George Stephanopoulos said on ABC World News (1/20, story 2, 2:10, 8.78M), "The Clinton people were going for the political equivalent of shock and awe. And that's exactly what they got. We've already seen she's way ahead in the Democratic primaries right now, but this is going to solidify it. The machine is behind it. She's going to dominate news coverage for the next several days around the President's State of the Union."

The CBS Evening News (1/20, lead story, 2:15, Attkisson, 7.66M) reported, "The pack of 2008 presidential hopefuls got even bigger today. After months, even years of speculation," Clinton "joined the Democratic race for the

DOJ_NMG_0119384

White House, while Kansas Sen. Sam Brownback announced his bid for the Republican nod." Clinton "threw her hat into the ring on line." CBS (Chen): "Not that there ever was much doubt, but today the waiting game ended. … In her Web-only announcement, Clinton revealed herself as a gracious on-line hostess with sharp political elbows. … As the first former presidential spouse to try to return to the White House on her own merits," Clinton's candidacy "was certainly going to draw a buzz, and let's remember, this is not just any former First Lady." The CBS Evening News (1/20, story 2, 3:25, Attkisson, 7.66M) also examined the race to date, with political correspondent Gloria Borger asked if "we assume one of those two candidates," Clinton or Obama, "will be the Democratic nominee." Borger said, "I don't think we can assume anything yet. … They're very well known, they're very attractive candidates, and they're sucking all the oxygen out of the room. But anything can happen in a presidential campaign, and there are lots of people who believe that these two could cancel each other out and eventually make room for a second-tier candidate like John Edwards or Joe Biden."

NBC Nightly News (1/12, lead story, 2:30, Seigenthaler, 9.87M) led by reporting, "Sen. Hillary Clinton made history today. She is running for president, the first First Lady to ever take that step." NBC (Reid): "In a webcast, Hillary says she is exploring a run for President but on the screen it says 'I am in. And I am in to win,' leaving little doubt that she is running directly at President Bush." Clinton: "After six years of George Bush, it is time to renew the promise of America." Political journalist John Harwood said on NBC Nightly News (1/20, story 2, 2:20, 9.87M), "She is the favorite, but not an overwhelming one. If neither one of the candidates make a mistake, Barack Obama will win, but her experience in Bill Clinton's campaign and presidency makes it much less likely she will make a mistake."

On CNN (1/20), correspondent Candy Crowley said, "It's amazing…that something so expected could generate excitement and a little bit of surprise. But nonetheless, there you have it. … We are told by some that she decided to get in at this point because she wanted to untie her hands. She was in that limbo of between everyone believing she was a candidate and yet every time she went up to the cameras, she would get asked the question. So, getting in now unties her hands, it also gives Barack Obama a little run for his money when it comes to marquee names in the race."

The Washington Post (1/21, Balz, 690K) says on its front page that Clinton made her Web announcement "early in the morning, and then spent the day at her Washington home making calls to supporters, donors and friends. Her announcement was deliberately timed to come shortly before President Bush's State of the Union address on Tuesday night, campaign advisers said, so she can draw a contrast with the administration's record and help focus attention on the office of the presidency." The New York Times (1/21, Healy, Zeleny, 1.16M), also on the front page, focused on the money race, saying Clinton is "immediately squaring off against" Obama and the rest of the field "in what is effectively the party's first primary, the competition for campaign donations." Another New York Times (1/21, A27, Healy, 1.16M) story says Clinton advisers "said that they chose Jan. 20 as the target date for an announcement during a meeting in mid-December, and that Mrs. Clinton was 'raring to go' on Friday."

The Los Angeles Times (1/21, Braun, Hook, 850K) called Clinton's move "long-anticipated," saying she is "aiming to make history as the first woman elected to the White House after an audacious and turbulent political journey from first lady to a New York Senate seat." Clinton "sets out with strong advantages -- national name recognition, a command of the major issues, a crack campaign staff and a brimming war chest. But she will also have to overcome her reputation for political calculation, an inconsistent stump presence and her intimate ties to the polarizing events of her husband's White House tenure." A Washington Times (1/21, Hurt, 88K) front-page report calls Clinton "a front-runner even before she entered the contest." This week's announcements "set up a historic race that will include Mrs. Clinton, who would be the first female president if elected; Mr. Obama, who would be the first black president;" and Gov. Bill Richardson, "who would become the first Hispanic president." The Dallas Morning News (1/21, 500K) says the "sizable field of candidates underscores the belief that, for all of Mrs. Clinton's experience and credentials, there are Democrats who question whether she can win a general election." The New York Daily News (1/21, DeFrank, 729K) says Republicans "have been lying in wait for Clinton for months, honing their attack strategy."

The Chicago Tribune (1/21, Zuckman, 617K) leads its report by saying Clinton called "for a national conversation to undo what she sees as the damage wrought by President Bush" in a "polished videotaped announcement. … With massive resources and a worldwide profile, she instantly became the most serious woman candidate ever to run for president." The Boston Globe (1/21, Milligan, 413K) says Clinton, "seated on a living room couch and speaking as though she were addressing a small gathering instead of millions of voters," promised to "begin a 'conversation' with Americans to solicit views on how to end the war in Iraq and deal with issues including energy independence, health care, and the federal deficit." Newsday (1/21, Thrush) calls the Clinton candidacy "a historic and hyped bid." The AP (1/20) said in New York, "Democrats in New York offered up whoopees while Republicans had scolding 'we-told-you-so' reminders" as Clinton got in the race.

DOJ_NMG_0119385

One of the more negative headlines is on the front page of the San Francisco Chronicle (1/21, Marinucci, Wildermuth, 384K), which says "Candidate Clinton Faces Tough Battle For Nation's Favor." But the story's lead focuses on the fact that Clinton's entry "sets up a high-priced, high-profile political melee that could make California, working to move its primary up to February, the decisive contest in the campaign for the Democratic nomination." The New York Times/AP (1/21, A16) says California may move its primary to February 5.

The AP (1/20, Fouhy) called it the start of a "trailblazing campaign for the White House" by Clinton, and BBC.com (1/20, Greene) says "all thoughts will now turn to whether the New York Democrat really has what it takes to become the first woman president of the United States." CNN.com (1/20) and the Web site of The Hill (1/20, Marre) also reported on Clinton's entry.

Two major newspapers examine Clinton's use of the Internet to launch her campaign. The Washington Post (1/21, D1, Hornaday, 690K) says if a "Democratic primary were held on sheer production values," Clinton "would win in a landslide. … Unlike other candidates (coughBarack Obamacough), whose videos might have been produced by a guy with a cellphone camera, Clinton's announcement was a veritable showpiece of Hollywood-style set design, lighting and cinematography." The Los Angeles Times (1/21, Gosselin, 850K) says on its front page that "in choosing the Internet to announce she intends to run," Clinton "bowed to the burgeoning political power of the medium and offered a preview of how she hopes to harness it to her purposes." The Washington Post (1/21, A2, Cillizza, Murray, 690K) also looks at how candidates "carefully craft first impressions."

Additional stories examine variables that will impact Clinton's hopes. The Washington Post (1/21, A6, Romano, 690K) looks at the issue of gender -- the Washington Post (1/21, D3, Argetsinger, Roberts, 690K) "Reliable Source" column calls Clinton the "first woman who maybe, kinda, has a chance of getting elected U.S. president," and the New York Post (1/21, 631K) says "feminist leaders" said a "successful Hillary Clinton campaign would not just be a win for her, but for women everywhere" -- while the Chicago Tribune (1/21, Tackett, 617K) examines the nation's strong feelings about Clinton and her husband. In addition, the Washington Post (1/21, A6, 690K) runs down the roster of the Clinton campaign team.

Clinton Said To See Nomination Contest As Bigger Challenge Than General Election. The New York Times (1/21, A27, Healy, 1.16M) says that of the Democratic contenders, Clinton "is the most battle-tested, has the biggest fund-raising network and can walk into the job with a unique set of skills and perspectives gleaned from eight years in the White House as first lady. Yet none of that guarantees Mrs. Clinton will steamroll her opponents, or manage and master the issues that have long vexed her, like the war in Iraq and universal health insurance. Far from it: she has told friends that she is more worried about winning the Democratic nomination than winning a general election against a Republican." A front-page Washington Post (1/21, Murray, Baker, 690K) story examines the "tough choices" top Democrats face in deciding whom to support, saying "Clinton, Obama and the other Democratic presidential contenders already are squaring off in what might be called the Rahm Primary, an early contest to win over the movers and shakers" of the party like Rep. Rahm Emanuel.

McAuliffe Predicts "Tough Campaign," But Says "Strong" Clinton Can Prevail. Clinton adviser Terry McAuliffe said on CNN (1/20, Whitfield), "We all know that she has all the characteristics to be a great president. She has character strength and she's strong. She can reach out to so many different people. … This is going to be a tough campaign. I think we have the best Democratic field that we have ever had in the history of our party. … And she's going to be in there with the rest of them, laying out their vision for the future of the country. But, as I say, this is historic and she is going to bring all her talents. And you look at her eight years as first lady and all of the people she knows all around the world, we're looking for new leadership in this country. And Hillary is going to provide us with that leadership." The Times of London (1/21, Baxter) headlines a report "Hillary Runs For The White House As 'New Thatcher,'" saying that McAuliffe compared Clinton and former British Prime Minister Margaret Thatcher. McAuliffe said, "Their policies are totally different but they are both perceived as very tough."

Clinton Iowa-Bound Next Weekend. The AP (1/20) reports Clinton "will make her initial foray into Iowa next weekend, aides said Saturday. Details of the upcoming campaign swing were still being finalized."

Brownback Enters Race For GOP Presidential Nomination. Coverage of Sen. Sam Brownback's formal entry into the presidential race is in marked contrast to the coverage of Sen. Hillary Clinton's announcement. Brownback stories do not make the front pages, and some headlines do not even mention him by name. Under the headline "Kansas Senator Announces Bid For Presidency," the New York Times (1/21, A27, Swarns, 1.16M) reports Brownback, "declaring himself a proud conservative before a crowd of cheering supporters waving American flags," announced his candidacy in Topeka. Brownback, "an evangelical Protestant turned Roman Catholic and a former Kansas agriculture secretary, said he would focus on reviving faith and families in America; combating abortion, poverty and wasteful government spending; opposing same-sex marriage; and revamping Social Security and the federal tax system."

DOJ_NMG_0119386

The Washington Post (1/21, A8, Mosk, 690K) says the "son of a rural Kansas farmer" has "become a leader among religious conservatives in Congress." He "acknowledged being little known beyond his home state. A Washington Post-ABC News poll released yesterday shows he is supported by 1 percent of Republicans and Republican-leaning independents. He was also unlucky to announce his candidacy on the same day" as Clinton. The Los Angeles Times/AP(1/21) reports says the "favorite of the religious right" is "now in a battle against better-known rivals for the GOP nomination." CNN.com (1/20, Johnson) and the Web site of The Hill (1/20, Marre) also reported on Brownback's candidacy.

On CNN (1/20), correspondent Candy Crowley said, "Talking to locals around here and indeed talking to the senator, they said, look, he's been in some races where we have totally written him off, and the fact of the matter is he's come back, including 1996, when he ran for Bob Dole's seat. So he's seen uphill battles before. He sees this as just another one. He's a conservative. He says he believes most of the country is. He thinks this will be a competition of ideas. We all like to think that when we're starting out. So nonetheless, he is on the road, and believes he's got a shot at it."

McCain Faces Trouble From Arizona Conservative Foes. The Arizona Republic (1/21, Nowicki) reports, "On the national stage, Sen. John McCain is a political star and a front-runner for the 2008 Republican presidential nomination. But back home, he faces some vocal critics in his own party who seem determined to derail his White House chances." McCain supporters such as Arizona GOP Chairman Matt Salmon "are fuming about the latest stunt to embarrass McCain: a presidential 'straw poll' that found McCain coming in fourth." Rep. Duncan Hunter, "a little-known congressman," won, followed by Mitt Romney and Newt Gingrich. Straw polls "at political events are a fairly common way to informally gauge support for a candidate or an idea. Some Republicans called this one a sham orchestrated to hurt McCain. Others acknowledged irregularities with the way the survey was conducted but defended it as a legitimate expression of grass-roots dissatisfaction with McCain."

Florida Journalist Says 2008 Jeb Bush Presidential Bid Still Possible. In an op-ed for the Washington Post (1/21, B1, 690K) S.V. Dáte, Tallahassee bureau chief for the Palm Beach Post and author of "Jeb: America's Next Bush," considers that if Jeb Bush has been elected president in 2000, "Tuesday would have marked his sixth State of the Union address -- and it might have been his best yet. The nation is in great shape, President Jeb Bush would have reported: record tax cuts propelling the economy to greater heights; a revolutionary school-vouchers program for the first time granting low-income parents real education choices; and, five years after the capture of Osama bin Laden, the final 20,000 U.S. troops returning home from Iraq." Dáte adds, "I've covered Jeb Bush for eight years as a state capital reporter, and I'm convinced that he remains the GOP conservative wing's best hope for a post-Iraq comeback. And his own political ambitions burn as brightly as ever. Perhaps 2012 or 2016 or -- why not? -- maybe even 2008, if things break right. … Should John McCain or Rudolph W. Giuliani or Mitt Romney fail to build a dominating presence by mid-summer, there is probably only one Republican who could come in at such a late date and still build an effective organization and a powerful fundraising machine in a matter of weeks: Jeb Bush."

Possible GOP Senate Retirements In 2008 Considered. The Washington Post (1/21, A2, 690K) takes a look at Republican senators in addition to Wayne Allard who are "contemplating calling it quits" in 2008. The Post says "the betting" is that Thad Cochran, Larry Craig, and Elizabeth Dole will run, and that Pete Domenici and Chuck Hagel will retire. On Sen. John Warner, the Post pegs the betting as "slight tilt to retire."

Clinton, Carter Establishing Alternative Baptist Coalition. The Washington Post (1/21, A3, Cooperman, 690K) reports former presidents Jimmy Carter and Bill Clinton "are leading an effort to forge dozens of small and medium-size, black and white Baptist organizations into a robust coalition that would serve as a counterweight to the conservative Southern Baptist Convention. The giant SBC "has long dominated the political, theological and social landscape among Baptists" and "has also been closely aligned with the Republican Party. The new coalition, which is Carter's brainchild, would give moderate Baptists a stronger collective voice and could provide Democrats with greater entree into the Baptist community. But Carter and other organizers are trying to walk a fine line, insisting that the alliance is not directly political while touting its potential to recast the role of religion in the public square."

"Safe" Correspondents' Dinner Pick Provokes Minor Controversy. The Washington Post (1/21, D1, Farhi, 690K) reports, "The White House press corps last week found itself embroiled in controversy -- a controversy over its efforts to avoid controversy at an event whose guests include President Bush. Stung by criticism that comedian Stephen Colbert went too far last year in his remarks at the White House Correspondents' Association annual dinner, the group announced last week that it had lined up a different kind of

DOJ_NMG_0119387

entertainer for its next dinner on April 21: impersonator Rich Little. The choice elicited two general reactions: Who? And why?"

Ex-Senator Smathers Dies. The Washington Post (1/21, C7, 690K) reports, "George A. Smathers, 93, a former Democratic senator from Florida who forged friendships with presidents, waged war against communism, resisted civil rights legislation and was an early voice warning against Fidel Castro's rise to power in Cuba, died Jan. 20. … Mr. Smathers was among a new breed of congressmen -- including John F. Kennedy and Richard M. Nixon -- who arrived on Capitol Hill in the late 1940s and were shaped by their experience in World War II. Mr. Smathers used his during more than two decades in Washington to focus on international issues and to fight communism."

Key Palestinian Unity Meeting Delayed. The AP (1/21, Karam) reports, "Key talks on forming a Palestinian unity government and ending deadly infighting were canceled Saturday night, dimming expectations for a planned meeting between" President Mahmoud Abbas and Hamas leader Khaled Mashaal. One Hamas leader "said further preliminary negotiations were needed to resolve differences over forming a coalition government before [Abbas and Mashaal] could meet. He did not elaborate." The AP says "there had been hopes that the meeting — the first between Abbas and Mashaal since July 2005 — could end the yearlong political deadlock," and adds, "The thorniest issues are control of the two factions' security forces and Hamas' refusal to recognize Israel's right to exist."

"Charismatic" Fatah Lawmaker Profiled. Under the headline, "Lawmaker's Tough Talk Rouses Fatah Faithful, the Los Angeles Times (1/21, Ellingwood, 850K) profiles Mohammed Dahlan. "The former Palestinian security chief gained a reputation for having an iron hand during a crackdown against Hamas a decade ago. Now he again is at the forefront of his Fatah movement's conflict with the radical Islamist group." His "tough talk generated an exhilarating shiver among many members of the once-dominant Fatah movement, still struggling to regain its balance a year after losing parliamentary elections to Hamas, and renewed speculation among Palestinians over Dahlan's ambitions." He "dismisses" the "speculation" about seeking the presidency, "even though he has helped fuel it by assuming a higher profile after many months in the background. Poised and always impeccably groomed, Dahlan lately has appeared nearly inseparable from Palestinian Authority President Mahmoud Abbas, also of Fatah, with whom he has had an up-and-down relationship."

UN Boosts Protection In Kosovo For Today's Serbian Election. The Washington Times (1/21, Phillips, 88K) reports the US "has moved troops to northern Kosovo to protect the Serbian minority ahead of elections today in Serbia." Two American platoons, one Austrian, and one Georgian platoon "were deployed in late December for a month to a NATO camp at Leposavic, close to the border with Serbia." That "redeployment was part of NATO's plan for rapid intervention aimed at providing security for about 100,000 Serbs living in Kosovo." The Times adds, "After the election, Kosovo is expected to be offered limited independence from Belgrade."

Under the headline, "Kosovo Looms Over Serbian Vote," the Los Angeles Times (1/21, Rubin, 850K) links the impending UN decision on Kosovo's final status to today's vote. "The imminent loss of the province has been a central issue in the parliamentary campaign. Serbian politicians, intent on proving their loyalty to the country's traditional identity, have pulled out the stops to convince the world that the province should remain within their nation's borders." Describing modern Kosovo, the Times notes, "Landlocked, poor and now populated mostly by ethnic Albanians hostile to Serbs, it nonetheless has become a symbol of Serbia's image of itself as a righteous nation, a beacon of the Orthodox Christian world."

Czech Premier Says US Seeks Missile Defense Radar Base. The AP (1/20, Janicek) carries a statement by Czech Prime Minister Mirek Topolanek that "the United States has asked the Czech Republic to host a radar base that would be part of a global missile defense system, drawing a warning from Russia of retaliatory actions." The Bush Administration "declined comment" on the remarks, but the US "has been negotiating with Poland and the Czech Republic, both former communist states now in NATO, as it explores setting up missile defense sites in Eastern Europe." The AP adds, "The U.S. request that the Czech Republic host only an X-band radar facility could indicate Washington is considering putting launchers for anti-missile missiles in Poland."

Arrest Made In Turkish Journalist's Murder. The New York Times (1/21, Arsu, 1.16M) and other media report the arrest of Ogun Samast, a Turkish teenager, in the Friday assassination of Turkish-Armenian newspaper editor Hrant Dink. Samast "was captured in Samsun, a Black Sea port, after his father recognized his images from the surveillance video and notified the police in Trabzon, their hometown." Police reports indicate Samast admitted murdering Dink. Prime Minister Recep Tayyip Erdogan "praised the efforts of the security forces Saturday and

DOJ_NMG_0119388

expressed satisfaction that an arrest had been made before Mr. Dink's funeral on Tuesday."

Chinese Test Said To Embolden Critics, Supporters Of US Space Weapons. In its "Week in Review" section, the New York Times (1/21, WK3, Broad, 1.16M) analyzes domestic US reaction to China's test of an anti-satellite missile. "The nation's star warriors, frustrated that their plans to arm the heavens went nowhere for two decades despite more than $100 billion in blue-sky research, felt a shiver of hope last week with news" of the test. "Having long warned of the Chinese threat, they now said their fears were vindicated and expressed optimism for their own projects." However, the Times notes, "the prospect of a new arms race in space is also energizing an opposition, including arms control supporters and fiscal conservatives alarmed at the rising costs of the Iraq war." Opponents believe that "an unfettered arms race could hurt the United States more than any other nation," but "that logic has not persuaded the Star Wars advocates, who say the United States needs to protect its huge investment in space satellites by being ahead of anyone else in shooting such devices out of the sky."

Vatican's "Measured" Statement Said To Open Door To Chinese Relations. The New York Times (1/21, A8, Fisher, 1.16M) notes the Vatican "issued a measured statement on Saturday on its future relations with China, saying it wanted a 'respectful and constructive dialogue' to rebuild diplomatic ties but still noting the 'suffering' of Chinese Catholics." Vatican leaders have been engaged in "high-level talks…on rebuilding relations with China." The Times says Pope Benedict XVI and "Chinese officials have expressed a desire to restore diplomatic ties broken in 1951 when the Communist government took over. But any concrete steps were frozen after the official Chinese church, which answers to the government, appointed several bishops last year without the Vatican's consent." Yesterday's statement "was even in its tone," and the Times adds the "reconciliatory tone seemed aimed at encouraging more talks with the government." The Washington Times (1/21, Phillips, 88K) has a report on Vatican politics on its front page.

Hong Kong Acts To Stem Births By Mainland Chinese. The New York Times (1/21, A3, Bradsher, 1.16M) describes the impact of "an influx of mainland Chinese women who go to great lengths to make sure that their babies are born in Hong Kong." Beginning February 1, "pregnant women from the mainland will have to pay $5,000 for their hospital care before they are even allowed to enter Hong Kong… Under rules the government announced Tuesday evening, immigration officers will be instructed to turn back any mainlander who appears to be at least seven months pregnant and has not paid." The Times says that "policy is expected to produce tearful showdowns at border points, and is already provoking an acrimonious debate in Hong Kong over what it means to be a citizen of" the territory.

Thai Authorites Arrest 15 In Bombing Probe. The New York Times (1/21, A12, Mydans, Fuller, 1.16M) carries Thai police statements that authorities "detained 15 people, including some military officers, in connection with a string of bombings that killed three people and disrupted celebrations on New Year's Eve." The operation involved "nearly 100 police officers and soldiers" searching "18 locations in and around the capital," and the Times notes the "arrests were made under martial law imposed after a coup four months ago that ousted Prime Minister Thaksin Shinawatra." Also yesterday, Thaksin "said that he did not want to return to Thailand if his presence would cause division or unrest and that he had no plans to become involved in politics."

Key Somali Warlord Backs Interim Government. The Washington Post (1/21, A21, 690K) notes "feared" Somali rebel leader Mohamed Dheere, "the last major warlord to withhold support from Somalia's government, surrendered his weapons and militiamen on Saturday -- a boost for a fledgling leadership that still faces threats of guerrilla attacks from the Islamic movement that fled the capital." Dheere "gave the army chief 23 trucks mounted with heavy weapons and ordered 220 of his fighters to report for training at government camps." The Post notes that "fears of an Islamic insurgency grew following an ambush Saturday morning on a convoy of Ethiopian troops in Mogadishu. The Ethiopians returned fire, killing a man and a woman on the side of the road."

Botswana Court Ruling Allows Bushmen To Live Inside Kalahari Reserve. The Washington Post (1/21, A15, Timberg, 690K) examines the initial impact of a Botswana court ruling that gives traditional Bushmen access to their ancestral homes within a protected game park. The "landmark court ruling" grants "the traditional hunter-gatherers rights to land they and their ancestors occupied for thousands of years." The government announced Friday "that all Bushmen, whether named in the suit or not, were free to enter the game reserve while the government developed a new permanent policy on the issue."

Paramilitary Alliance Scandal Could Implicate Colombia's Uribe. The New York Times (1/21, A15, Romero, 1.16M) reports the Colombian government, "the largest recipient of American aid outside the Middle East, has found itself ensnared in a widening scandal as revelations

DOJ_NMG_0119389

surface of a secret alliance" between some of President Alvaro Uribe's "most prominent political supporters and paramilitary death squads." Two recent revelations "have injected fresh detail into a slow-burning scandal that has caused Colombia's elite political class to shudder in recent weeks." Sen. Alvara Araujo, the brother of Foreign Minister Maria Consuelo Araujo, is "under investigation for collaborating with militias," and one paramilitary leader's testimony claims "that militias pressured people to vote for the president in 2002, when Mr. Uribe was first elected." The Times adds, "Although the scandal has emerged as the most pressing political challenge to Mr. Uribe's presidency, his approval ratings remain high."

Brazilian Pipeline Projects Said To Seek Economic, Social Balance. The New York Times (1/21, A14, Rohter, 1.16M) examines the challenges of extracting gas and oil from Brazil's Amazon. "Over the years, Petrobras, Brazil's state-controlled oil company, has invested more than $7 billion in Amazon exploration and development, and in 1986 it made a major find here. But only now — after a seemingly endless sequence of geographic, logistical, environmental and political challenges were overcome — is the first in what is intended as a series of pipelines finally being constructed." Noting that "there was initially strong resistance to the pipeline from local people, environmental and indigenous groups and archaeologists," the Times says, "rather than steamrolling the opponents and skeptics," Petrobras "chose to woo them. The two million residents of Amazonas State have been promised economic benefits that have contributed to the project's $1.15 billion price, and scientists and environmentalists were consulted about how to minimize damage to the jungle that blankets the state." One pipeline project "is being built with a requirement that two-thirds of the labor force be hired from the population already in the region." Also, that pipeline "will include spurs to seven smaller towns on its way to" its terminus, meaning "diesel fuel will no longer have to be sent in by boat for local consumption, blackouts will diminish and businesses can be promised regular supplies of cheap, clean energy."

WASHINGTON'S SCHEDULE

Today's Events In Washington.

White House:

PRESIDENT BUSH — No public schedule. President and Mrs. Bush will overnight at Camp David.
VICE PRESIDENT CHENEY — No public schedule.

US Senate: Not in session.

US House: Not in session.

Other: O'CONNOR CONFERENCE _ The eighth annual Cardinal O'Connor Conference on Life will be held at Georgetown University. The event gathers more than 500 high school and college students from around the country in advance of the annual March for Life demonstration on the National Mall each January. Location: Healy Hall's Gaston Auditorium, Georgetown University. Contacts: Bridget Bowes, 412-965-4993

ROE V. WADE ANNIVERSARY EVENTS _ Highlights: 8 a.m. - 5 p.m. The American Life League holds a series of briefings with pro-life leaders. Holiday Inn on Capitol Hill. Contact: Amber Dolle, 540-903-9572 9 a.m. Prayer and demonstration. In front of the Supreme Court. Contact: Amber Dolle, 540-903-9572. 1:30 p.m. - 5 p.m. Second session of the March for Life Convention. Hyatt Regency Hotel on Capitol Hill, 400 New Jersey Ave. NW. Contact: 202-543-3377

TRANSPORTATION RESEARCH BOARD _ The Transportation Research Board holds its 86th Annual Meeting at three Washington hotels. Some 10,000 transportation professionals from around the world are expected to attend. Location: Marriott Wardman Park, 2660 Woodley Road NW; Omni Shoreham, 2500 Calvert St. NW; and Washington Hilton, 1919 Connecticut Ave. NW. Contacts: Russell Houston, 202-334-3252

Headlines From Today's Front Pages 22

Washington's Schedule
Today's Events In Washington 22

TERRORISM NEWS:

UK MPs Urge International Community To Deal With Guantanamo Detainees. BBC.com (1/21) reports, "MPs who have visited Guantanamo Bay have called on Britain and the international community to do more to help the US close the camp. Seven Foreign Affairs Committee members visited the detention centre for 'enemy combatants' in Cuba in September. In a report they were critical of the conditions there, but said many inmates posed a threat and the world needed to find a 'longer term solution'. Opposition MPs and human rights groups called the report 'disappointing.'" The AP (1/21, Stringer) says the report "called for an overhaul of the Geneva Conventions and suggesting Prime Minister Tony Blair lead efforts to update the international standards to reflect the challenge of terrorism."

WPost, NYTimes Encourage Congress To Pursue Investigation Of Wiretapping Program. The Washington Post (1/21, B6, 690K), in an editorial, writes, "when the Bush administration announced that it had belatedly put its warrantless wiretapping program under court supervision, its attitude was like that of a traffic officer trying to hurry along bystanders at an accident scene: 'Move right along, folks, nothing to look at here.' The administration would like Congress, under its new management, to abandon its efforts to dislodge details about the program's operations or to craft legislation to provide a legal framework. Lawmakers don't seem inclined to simply go away, nor should they."

The New York Times (1/21, WK11, 1.16M) editorializes, "By now, this is a familiar pattern: First, Mr. Bush and his aides say his actions are so vital to national security that to even report on them — let alone question them — lends comfort to the terrorists. Then, usually when his decisions face scrutiny from someone other than a compliant Republican Congress, the president seems to compromise. Behind this behavior are at least two dynamics, both of them disturbing. The first is that the policies Mr. Bush is trying so hard to hide have little, if anything, to do with real national security issues — and everything to do with a campaign, spearheaded by Vice President Dick Cheney, to break the restraints on presidential power."

More Commentary. The Sacramento Bee (1/21) editorializes, "The Senate Judiciary Committee surely had something else in mind when Attorney General Alberto Gonzales dropped by last Thursday to talk about the state of affairs at the Justice Department. … Gonzales provided more details about the department's prosecution of the 'Girls Gone Wild' video series than he did about warrantless surveillance. His testimony leaves more questions than it answers and should be considered only Round One of the oversight process on surveillance." The Bee continues, "After last week's hearing, we still don't know whether the warrants sought by the administration from the FISA court are for surveillance of known phone numbers or known persons, or for dragnet-style data-mining operations of hundreds or thousands of individuals. Normally, the government would seek a FISA warrant for surveillance of a particular suspect's phone calls or e-mails. A congressional staffer told the New York Times that the FISA approvals appear to be for a hybrid of individual warrants and broader approval, whatever that means. Gonzales offered no information or documents to clarify the matter." The Bee adds, "Clearly, Congress still has a lot to do to determine whether the spying program follows the 1978 law and the Constitution. And Congress and the president will have to be open to negotiating possible adjustments to the 29-year-old law to reflect developments in technology, surveillance and the new realities of terrorism. But this should be non-negotiable: Congress cannot let the president get away with disregarding or rewriting the law and the Constitution at his whim."

The Grand Rapids Press (MI) (1/21) editorializes, "After resisting for more than a year, the Bush administration is putting its controversial domestic wiretapping program under the jurisdiction of the secret court set up to govern such cases. It's a good course correction. Concerns about terrorism shouldn't give federal intelligence agencies license to eavesdrop on citizens' phone calls and e-mails without court approval or congressional oversight. … U.S. Attorney General Alberto Gonzales says the Justice Department has worked out an 'innovative' arrangement to bring the surveillance program under FISA jurisdiction. He wouldn't elaborate on the specifics to members of the Senate Judiciary Committee this week, so questions remain about what form the new compliance takes. Congressional leaders shouldn't be left in the dark about this new arrangement. … The issue is not about whether to monitor the communications of

DOJ_NMG_0119393

suspected terrorists but doing it legally and with proper checks and balances. We all should want that."

The Wilmington (DE) News Journal (1/21) editorializes, "So apparently there is a way to do surveillance of intelligence suspects with court oversight after all. For a year, the Bush administration insisted that wartime justified secrecy and executive privileges, regardless of a 1978 law setting up review through a Foreign Intelligence Surveillance Court. … Now, after months of rebuffing congressional negotiations and the threat of investigation, the Justice Department has a method for going to designated judges when it wants to monitor international e-mail and telephone calls given a probably terrorism link." The Journal adds, "Skepticism is rife in the Capitol and among civil libertarians, and rightly so. There is only a vague outline of what the new ground rules are that prompted the administration's turn-around. … The Justice Department also is to go before federal court in Cincinnati on Jan. 31 for more arguments on the constitutionality of the Bush's earlier policy. … Congress should look into exactly what is going on. Given this administration's resistance to judicial checks on presidential authority, this adaptation may well be too good to be true."

The Hartford Courant (1/21) reports, "President George W. Bush has substituted one controversial spying program with another. … The old program eavesdropped on American and foreign al-Qaida suspects without the legally required court oversight. The new program? Well, it eavesdrops on the same targets, but now with the required warrants." The Courant adds, "On Wednesday, the Bush administration announced it had dismantled the fiercely criticized program and started applying for court approval for wiretaps - but under new orders and opinions issued by the FISA court. The administration's turnabout was supposed to be welcome news. But the new FISA orders are so wrapped in mystery that no one outside the Bush administration and the spy court knows what they say. .. .The presiding judge has no objection to releasing them, but the Justice Department refuses to do so or to give even the bare outlines on how the new program works. … Without those details, it's impossible for lawmakers to judge whether their 1978 law is protecting privacy rights as well as public safety."

The Houston Chronicle (1/21) editorializes, "After operating an electronic surveillance program for five years outside legally mandated oversight by a secret federal court, President George W. Bush has seemingly bowed to legal and congressional pressure. … While lawmakers and officials of civil liberties groups welcomed the development, they also want more information on whether the FISA court will review each surveillance request individually or whether it has simply given blanket approval for the activities by the National Security Agency." The Chronicle adds, "In a visit with the Chronicle Editorial Board last year, U.S. Attorney General Alberto Gonzales justified the surveillance program as a legal extension of presidential authority in wartime and a congressional resolution supporting military action against terrorists. … In testimony before the Senate Judiciary Committee on Thursday, Gonzales refused to explain why the administration had reversed its previous position that court oversight was too restrictive to effectively combat terrorism." The Chronicle concludes, "Americans need to be reassured that their constitutionally guaranteed rights against illegal government surveillance are being safeguarded as mandated by the FISA legislation. … If the chief jurist of the relevant court sees no harm in explaining how it will oversee the program, the administration should assent to providing a thorough explanation to lawmakers and the public."

The Akron (OH) Beacon Journal (1/21) editorializes, "For more than a year, the Bush White House has publicly claimed the right to conduct electronic surveillance, without first seeking a court warrant, of Americans suspected of terrorist ties. It vigorously defended the program, which started after the Sept. 11 attacks, at congressional hearings and in legal briefs, denying it violated the constitutional protections of citizens. The president insisted the war on terrorism made speedy, warrantless wiretaps a national security imperative. … After all the contention, it is encouraging that the president has reversed course, the Justice Department announcing on Wednesday the program will be under the oversight of the court created by the 1978 Foreign Intelligence Surveillance Act. It is the right decision, a welcome return to checks and balances." The Journal concludes, "In Senate hearings Thursday, a tight-lipped Attorney General Alberto Gonzales did little to ease worries whether the new 'innovative arrangements' with the FISA court would merely provide the program a blanket cover to conduct wiretaps. Congress would do well to press hard for clarification."

The Las Vegas Sun (1/21) reports, "One day before the Senate Judiciary Committee was to begin hearings on President Bush's warrantless domestic eavesdropping program, Bush administration officials announced that such surveillance would now be subject to judicial review. … The decision was a reversal for Bush, who has stubbornly insisted that forcing the National Security Agency to adhere to a 1970s-era law - which requires the agency to seek warrants in a secret court before monitoring Americans' communications - hindered the government's ability to track terrorist activity. Bush started domestic surveillance without warrants after the Sept. 11, 2001, attacks." The Sun continues, "The timing of this apparent reversal in policy doesn't help to quell suspicions, as Bush often makes grand public promises to deflect criticism. And it is unclear how much the process will change. Attorney General Alberto Gonzales, citing security concerns, refused to tell the Judiciary Committee whether eavesdropping requests will be reviewed one at a time or in groups. … The Bush

DOJ_NMG_0119394

administration's history of secrecy and deceit by omission runs deep, and it is hard to believe that this seeming change of heart is anything more than an attempt to avoid scrutiny by a Congress that is now run by Democrats."

The Orange County (CA) Register (1/21) editorializes, "The announcement… is welcome at first blush. It may prove to be an unalloyed benefit. But questions remain, and there are details the American people should be able to know about what government is doing in their name." The Register continues, "An obvious question: If this program was considered legal and utterly essential a year ago, why is there no need to continue it? At a Senate Judiciary Committee hearing last Thursday, Attorney General Alberto Gonzales said the administration had worked out procedures for more "swift and agile" consideration by the FISA court, but did not provide details. … It is also valid to wonder whether this switch was done to avoid judicial scrutiny in three cases challenging the program that are before the courts and might now be moot. … On balance, however, this is a welcome development. Checks and balances don't always prevent abuse, but they are essential to the American system."

The Miami Herald (1/21) editorializes, "It would be nice to believe that the Bush administration's reversal of policy on its secret wiretapping program -- allowing a measure of judicial oversight for the first time -- represents a change of attitude regarding the balance between civil liberties and executive power. But that's hardly the case. … This administration has a consistent pattern of ignoring fundamental rights such as privacy and habeas corpus in order to extend the reach of the 'unitary executive.' Congress has a duty to find out more about the program and determine whether this change is merely a tactical shift designed to preserve the questionable authority of the president to decide which of those rights can be overlooked or denied in the name of national security." The Herald adds, "It is vital for Congress to learn the answers to these and other questions about who is secretly listening to the conversations of Americans and under what rules. Courts are supposed to determine when there is probable cause to suspect that the target of the wiretap is connected to terrorism. Without oversight, even the most well-intended prosecutor or federal agent can step across the line that protects our freedoms. … Whether the administration likes it or not, this is part of the bedrock system of checks and balances that has preserved the civil liberties that Americans cherish."

In a column for the Chicago Tribune (1/21), Steve Chapman writes, "Is President Bush surrendering in the war on terror? For more than a year, the administration has insisted that preserving its 'terrorist surveillance program,' which involves unfettered and unauthorized wiretapping of Americans suspected of communicating with Al Qaeda operatives abroad, was, in the words of former White House press secretary Scott McClellan, 'a vital tool' for us 'to stay a step ahead of a deadly enemy that is determined to strike America again.' Now, Atty. Gen. Alberto Gonzales says the program will not be renewed." Chapman continues, "This about-face must be causing massive cognitive dissonance within the administration and among conservatives who regard any check on executive power as a favor to Al Qaeda. From the moment the secret National Security Agency program was revealed by The New York Times in 2005, Republicans treated its critics as foolish appeasers. … Never mind that it apparently violated the law, and never mind that it let the government spy on Americans right here at home, without bothering to get the search warrants that are normally required. Issues of legality, constitutionality and privacy cut no ice with the administration and its supporters. Either you were for the program, or you preferred to expose us to catastrophe." Chapman concludes, "Maybe we were misled before, or maybe we're being misled now. But the next time the president tries to sell us on the idea that some expansion of executive power is critical to fighting terrorism, I hope he'll throw in the Brooklyn Bridge."

HOMELAND RESPONSE:

Travel Industry Analysts Concerned By New Passport Requirement. The Washington Times (1/21, Price, 88K) reports on its front page, "Some travel-industry officials say they fear a passport bottleneck when new federal regulations take effect Tuesday requiring Americans to show a passport to re-enter the United States after traveling to countries in the Western Hemisphere. But officials at the State and Homeland Security departments, which are implementing the changes, say most travelers who need passports to comply with the new rules already have them."

New Orleans Population May Not Return To Pre-Katrina Levels. The New York Times (1/21, A1, Nossiter, 1.16M) reports, "some economists and demographers are beginning to wonder whether New Orleans will top out at about half its prestorm population of about 444,000, already in a steep decline from its peak of 627,525 in the 1960 Census. At the moment, the population is well below half, and future gains are likely to be small. … The new doubts, surprisingly, are largely not based on the widespread damage caused by the flood. Rather, crippling problems that existed long before Hurricane Katrina are mostly being blamed for the city's failure to thrive. In this view, the storm was merely a grim exclamation point to conditions decades in the making. Before the storm, some economists say, New Orleans may have had more people than its economy could support, and the stalled repopulation is merely reflecting that."

DOJ_NMG_0119395

WAR NEWS:

Bush "Held To Plan" On Iraq Strategy. In a front page report headlined "Embattled, Bush Held To Plan to Salvage Iraq," the Washington Post (1/21, Abramowitz, Baker, 690K) details President Bush's path to his eventual strategy on Iraq: "A reconstruction of the administration's Iraq policy review, based on more than a dozen interviews with senior advisers, Bush associates, lawmakers and national security officials, reveals a president taking the lead in driving the process toward one more effort at victory -- despite doubts along the way from his own military commanders, lawmakers and the public at large." Bush "seems uninfluenced by the electorate on Iraq and headed for a showdown with the new Democratic Congress." However, "some Bush advisers believe they misjudged the politics that would greet Bush's Jan. 10 unveiling of the new plan," not expecting "near-universal opposition by Democrats and visceral anger even among some Republicans. . ... On Dec. 13, Bush went to the super-secure 'tank' at the Pentagon to listen to his top generals, only to walk away convinced that some of them were trying to manage defeat rather than find a way to victory."

More Than Two-Thirds Oppose Surge In New Poll. NBC Nightly News (1/20, story 4, Seigenthaler, 9.87M) reported, "Iraq was on the agenda today for President Bush when he met with his Secretary of State and new Secretary of Defense, while a new poll indicates a large majority of Americans oppose the President's new plan for Iraq." NBC (Yang): "Secretary of State Condoleezza Rice and Defense Secretary Robert Gates came here to brief President Bush on their just completed trips to the Middle East. President Bush's top foreign policy and military advisors arrived at the White House early facing intense pressure on Iraq; the President discussed the situation for about an hour before leaving with the First Lady for Camp David. It came as a new 'Newsweek' poll showed 68% of Americans oppose President Bush's plan to send more troops to Iraq. All-time low for the poll."

Administration Warns Iraqi Government To Honor Bargain. The New York Times (1/21, A6, Cooper, Sanger, 1.16M) reports, "President Bush and his top advisers, after nine days of unrelenting criticism from Congress, are warning the Iraqi government that continuing funding for an American troop increase and other elements of Mr. Bush's new Iraq strategy will be contingent" on Prime Minister Nouri al-Maliki's "delivery on promises to quell violence, senior administration officials said in recent interviews." Administration officials, "who have carefully avoided declaring outright that the American commitment in Iraq would be cut back if Mr. Maliki fails, are using the open hostility of most Democrats and the skepticism of many Republicans as a way to underscore to the prime minister that the White House plan represents a last chance for him." After intense criticism from Democrats, Republicans, and retired Gen. Joseph Hoar, "some members of the administration are already discussing what one called 'Plan C,' even as the administration publicly expresses support for Mr. Maliki. Some senior officials, insisting on anonymity, are discussing alternative leadership for the Iraqi government."

Vietnam Enters Discussion Of Iraq War. The Los Angeles Times (1/21, Levey, 850K) reports, "On the floors of the House and Senate, in committee hearings and news conferences since the president's Jan. 10 announcement, lawmakers on both sides of the aisle and both sides of the war debate have repeatedly invoked America's longest war. Opponents use the vocabulary of the Vietnam War as they talk of opposing an escalation that they consider as divisive as those pushed by Presidents Johnson and Nixon in the 1960s and early 1970s. And supporters of the president warn of repeating other mistakes of that conflict by withdrawing support for American soldiers while they remain in harm's way."

History Lesson Seen For Bush In Algerian War. The Boston Globe (1/21, 413K) editorializes, "At Henry Kissinger's recommendation, President Bush is reading 'A Savage War of Peace,' the classic account of the Algerian war of independence, 1954-1962." The Globe sees many differences between Algeria and Iraq, for example, the "brutal realism" of Charles deGaulle when "he uttered the fateful words, 'self-determination,' which meant independence. Today President Bush has yet to show this degree of flexibility in Iraq. ... Perhaps the lesson of 'A Savage War of Peace' is that, however painful withdrawal and defeat may be, continuous bloodshed and stalemate are worse."

More Commentary On Bush Iraq Strategy. New York Times (1/21, WK12, 1.16M) columnist Frank Rich writes, "Our failure to check the administration when it rushed into Iraq in 2003 will look even more shameful to history if we roll over again for a reboot in 2007. ... This time we must do what too few did the first time: call the White House on its lies. Lies should not be confused with euphemisms like 'incompetence' and 'denial.'"

In his Washington Post (1/21, B7, 690K) column, David Broder writes optimistically that Gen. David Petraeus "has a realistic appraisal of the people he is dealing with in Baghdad and is quite willing to lean hard on them. ... The challenge is immense, but for a change, there is a chance to get the full weight of our government pulling in the same direction."

More Than 20 US Troops Killed In Iraq War's Third-Deadliest Day. NBC Nightly News (1/20, story 3, 2:00, Seigenthaler, 9.87M) reported, "It's been a deadly day for Americans in Iraq, one of the deadliest of the war so far.

DOJ_NMG_0119396

In the last 24 hours, more than 20 Americans have been killed, 13 in a helicopter crash near Baghdad." NBC (Boettcher): "What caused this crash? That is important if it was shot down, and according to witnesses at the scene they said the helicopter was on fire. Late tonight the military is saying it appears there were mechanical problems with the helicopter and that is all we know." Seigenthaler: "There was another serious attack in Iraq today, right?" Boettcher: "Absolutely. This is the one that is worrying, John. This occurred south of Baghdad, five US soldiers were killed and according to the US military it was illegally armed militias. ... this is a very serious issue. There could have been high ranking officers at this meeting who were killed."

The CBS Evening News (1/20, story 3, 2:10, Attkisson, 7.66M) reported, "This has been the worst day in almost two years for US troops in Iraq. The death toll rose by at least 21. The military announced five soldiers were killed in an attack by militia fighters in Karbala. Three other Americans died in separate attacks. But in the worst incident, 13 service members were killed when their Blackhawk helicopter crashed northeast of Baghdad." ABC World News (1/120, story 3, 1:50, Berman, 8.78M) reported, "The US military says one of its helicopters went down northeast of Baghdad, killing 13 on board. The news comes amid growing resistance to President Bush's plan to send thousands more troops to the war zone." ABC (Morrell): "According to the website icasualties.Org, this is the 44th deadly helicopter crash since the war began nearly four years ago. In all, 198 US and coalition forces have been killed in those crashes."

The Washington Post (1/21, Londono, 690K) says on its front page that Saturday's deaths "made the day the third-deadliest for U.S. service members in Iraq since the war began." The bloodshed "came as the Bush administration was extending the tours of some troops in Iraq and sending additional ones for a buildup that has met strong resistance in Congress." The New York Times (1/21, A6, Cave, 1.16M) called it "one of the deadliest days for United States forces since the Iraq war began." Of a gun battle in Karbala, the Times reports, 'Iraqi state television reported that at least two dozen gunmen assaulted the building, getting inside, and drawing a response from American troops who were dropped by helicopter onto the roof. ... The attack nonetheless seemed to be the latest in a series of power struggles in the south among a patchwork of Shiite tribes and political parties." The Washington Times/AP (1/21, A1, Mroue) reports, "The crash and other deaths came as a brigade of the U.S. 82nd Airborne Division arrived in Baghdad and prepared for deployment in early February the first of the 21,500-troop buildup ordered by President Bush."

The Los Angeles Times (1/21, A1, Daragahi, 850K) reports, "The surge in fatalities just days before President Bush's State of the Union address was likely to inject a note of urgency into the debate over his Iraq policy. ... A witness said he saw ground fire bring down the [helicopter], and an insurgent group claimed responsibility for the attack in an Internet posting that could not be authenticated." In addition, "American troops raided the capital's main emergency hospital Saturday morning, seizing the weapons of security guards believed to be linked to Sadr's Al Mahdi militia, hospital and police officials said. ... One hospital employee said the Americans searched the hospital for a person who allegedly belongs to the Al Mahdi army."

US Brigade Soon Ready For Baghdad. The AP (1/21, Hurst) reports, "A newly arrived brigade of the U.S. 82nd Airborne Division, the first of the 21,500-troop buildup ordered by President Bush, will be ready to join the fresh drive to quell sectarian violence in the capital by the start of next month, the American military said Sunday. ... The announcement came a day after at least 20 U.S. service members were killed in Iraq on Saturday, the highest daily toll in two years for American forces." The AP continues, "Prime Minister Nouri al-Maliki has pledged to put an about equal number of Iraqi troops on the streets and has vowed they will target both Sunni insurgents and Shiite militia fighters. Maliki has promised he will no longer block action against the Mahdi Army militia ... Since Bush and Maliki announced the planned drive against militants, U.S. and Iraqi special forces have regularly killed or captured a number of Mahdi Army commanders. The drive against Sunni insurgents has increased as well."

Kurdish Troops Deserting To Avoid Baghdad Service. The Boston Globe (1/21, Fadel, Taha, 413K) reports, "As the Iraqi government attempts to secure a capital city ravaged by conflict between Sunni and Shi'ite Muslim Arabs, its decision to bring a third party into the mix may cause more problems than peace. Kurdish soldiers from northern Iraq, who are mostly Sunnis but not Arabs, are deserting the army to avoid the civil war in Baghdad, a conflict they consider someone else's problem." In interviews, Kurdish "soldiers in Sulaimaniyah expressed loyalty to their Kurdish brethren, not to Iraq. Many said they'd already deserted, and those who are going to Baghdad said they'd flee if the situation there became too difficult."

US Finds Success In Once-Dangerous Iraqi Town. The Los Angeles Times (1/21, Perry, 850K) reports that two years ago, the Iraqi town of Husaybah "was considered too dangerous even for a quick tour by a U.S. general in his armored Humvee. ... In a country studded with areas where the U.S. has either failed or made only limited progress toward stabilization, Husaybah and the surrounding Qaim region stand out as a success, officials said." The Times adds, "The effort has combined U.S. military and economic power, backed by help from the municipal and tribal leadership." Marines "launched a massive effort to find

DOJ_NMG_0119397

weapons caches and confront insurgent sanctuaries," while economic projects include "a 10-lane port of entry from Syria that should provide an economic boost. Marines are assisting the health clinic and hospital, and the U.S. is funding construction of a jobs center and vehicle registration site."

Army Says Colonel's Orders Led To Deaths Of Four Iraqis. The New York Times (1/21, A10, Von Zielbauer, 1.16M) reports, "Army investigators say that Col. Michael D. Steele, a decorated combat veteran and brigade commander in Iraq, issued improper orders to his soldiers that contributed to the deaths of four unarmed Iraqi men during a raid in May, according to military documents." Two Pentagon officials said last week that Steele "was formally reprimanded in the summer by Lt. Gen. Peter W. Chiarelli, the former commander in Iraq, for not reporting the deaths and other details of the raid."

Iraqi TV Betrays Sectarian Tensions. The Washington Post (1/21, A18, DeYoung, 690K) reports on an angry exchange between Shiite and Sunni politicians on Al Jazeera: "The exchange between two middle-aged men in suits was an up close and personal look at the religious and ethnic divides -- Sunni Muslim vs. Shiite Muslim, Arab vs. Persian -- that President Bush now cites as the main impediments to peace in Iraq. Widely circulated on the Internet in recent weeks, the video clip has fueled sectarian jeers and cheers in chat rooms throughout the Middle East. ... The Bush administration has long charged that mainstream Arab networks such as al-Jazeera provide a platform to terrorists. But communications technology now allows the warring parties in Iraq direct access to audiences in Iraq and beyond."

Banned Station Broadcasts Voices Of Sunni Insurgents. The New York Times (1/21, A8, Santora, Cave, 1.16M) reports about the banned Al Zawra TV station's broadcast of footage of an American soldier being shot, "Such tapes, along with images of victims of Shiite militias and unflattering coverage of Shiite leaders, are beaming across Iraq and much of the Middle East 24 hours a day, broadcast by a banned Iraqi satellite television station that has become a major information center for the Sunni insurgency — and the focus of a cat-and-mouse hunt that has exasperated and infuriated American and Iraqi forces. Making the situation even more galling for the authorities, American and Iraqi officials say that money stolen from the United States probably helps pay for the station."

Rice Says Talks With Iran, Syria Would Not Aid US In Iraq. AFP (1/20) reports Secretary of State Condoleezza Rice has "reiterated Washington's opposition to talking to Syria or Iran to get their help in easing unrest in Iraq." In a German interview to be published tomorrow, Rice said that, "to believe that Damascus or Tehran would suddenly be ready to help stabilise Iraq, simply because the United States would talk to them, is false." AFP notes she further indicated that "Syria and Iran's 'only motivation' in entering into such talks would be to draw some advantage for themselves, adding that this was not diplomacy but blackmail. Damascus would expect some goodwill from Washington over its Lebanon policy while Tehran would want room for manoeuvre on its nuclear programme, Rice said."

Ahmadinejad's Hold On Power Said To Be Increasingly Uncertain. In an op-ed in today's Los Angeles Times (1/21, 850K), professor Dariush Zahedi and journalist Omid Memarian say the "clock may be ticking" on the tenure of Iranian President Mahmoud Ahmadinejad. Recent events "have pushed conservatives inside Iran to further distance themselves from" him, and "there have also been reports that Iran's supreme leader, Ayatollah Ali Khamenei, has given a green light to parliament to criticize the president's performance." Last month's election results "emboldened his opponents," and Ahmadinejad's attempt "to return the Islamic revolution toward what he views as its essence — anti-Zionism and populism -- has riled the country's pragmatic and traditional conservatives." Noting that he may grow as a target for criticism because "blaming a single individual who can easily be restrained or even removed for all that ails Iran could avert a legitimacy crisis for the system," Zahedi and Memarian say Ahmadinejad "is no doubt praying that the U.S. will not be satisfied with Iran's diplomatic and economic isolation and will launch military strikes against" its nuclear sites. Such a move "would surely give new life to Ahmadinejad's militant faction, enabling him to rally the masses behind the flag, compel his conservative critics to close ranks behind him and crush the remnants of Iran's liberal civil society and democratic movement."

Columnists Challenge Bush's "Impatience" On Iran. In his Washington Post (1/21, B7, 690K) column, Jim Hoagland writes, "President Bush once again risks confusing his destiny with that of the nation. His presidency is running out of time. The United States is not. An all-or-nothing confrontation with Iran that has to be resolved before Bush leaves office is an artificial concept that will deepen American problems abroad. ... The 'hurry-up' offense that works beautifully for the New England Patriots at game's end is far too dangerous when the stakes are war and peace." Hoagland suggests, "The Saudis have enough reserve production capacity to swing OPEC prices up and down at will. ... So a broad, sustained campaign of economic sanctions is perhaps the most effective way to bring pressure to bear on an Iranian regime that has failed to deliver on its grandiose promises of prosperity to a restive population."

New York Times (1/21, WK13, 1.16M) columnist Nicholas Kristof writes, "One of the most worrying parts of

DOJ_NMG_0119398

President Bush's Iraq strategy doesn't have anything to do with Iraq. It's the way he's ramping up a confrontation with Iran." Bush is "increasing the risk that he will drag the U.S. into a third war in an Islamic country in six years. Instead of disengaging from war, he could end up starting another." Kristof continues, "Unfortunately, Mr. Bush's military pressure may end up making Iraq bloodier than ever. Instead of being cowed, Iran may use its proxies in Iraq, Afghanistan, Lebanon and elsewhere to kill more American officials and troops. Or even ordinary Americans here at home." In addition, pressuring Iran could help "Iranian hard-liners crush Iran's democracy movement."

Pakistan Denies Its Intelligence Services Protect Key Taliban Leaders. The New York Times (1/21, A1, Gall, 1.16M) examines the role Pakistani intelligence services might play along the Afghan-Pakistani border. "The government of Pakistan vehemently rejects the allegation and insists that it is fully committed to help American and NATO forces prevail against the Taliban." However, experts "say that Pakistani intelligence agencies -- in particular the powerful Inter-Services Intelligence and Military Intelligence -- have been supporting a Taliban restoration, motivated not only by Islamic fervor but also by a longstanding view that the jihadist movement allows them to assert greater influence on Pakistan's vulnerable western flank." The Times says its investigation "leaves little doubt that Quetta is an important base for the Taliban, and found many signs that Pakistani authorities are encouraging the insurgents, if not sponsoring them." Several analysts believe that "Pakistan has long seen jihadi movements like the Taliban as a counter to Indian and Russian influence next door in Afghanistan, and as a way to provide Pakistan with 'strategic depth,' or a friendly buffer on its western border."

Under the headline, "Pakistan Denies It Harbors Taliban," the Washington Post (1/21, A20, Constable, 690K) notes, "Faced with new charges that Pakistan is harboring Islamic insurgents, including fugitive Taliban leader Mohammad Omar, Pakistani officials this weekend denied such allegations and defended their efforts to curb cross-border insurgent attacks in Afghanistan as sincere if not totally successful." The Post adds, "Afghan officials have long charged that Omar and other Taliban leaders operate from Quetta, and senior U.S. officials have recently begun echoing those accusations, saying Pakistan has not done enough to curb Taliban attacks although it continues to be a valuable ally in the broader fight against Islamic terrorism."

Afghan Women's Gains Are Endangered. The Los Angeles Times (1/21, Rubin, 850K) reports in a 2,700 word article, "Five years after the end of the Taliban era, there are new opportunities for women in Afghanistan, and notable efforts are underway to make their daily lives better, especially in Kabul, the capital. Improving the status of women has been a core goal of U.S. policy here ... But conversations with dozens of women suggest that each step forward has been a struggle. Afghan society remains deeply uncomfortable with the idea of women gaining independence and authority. The Taliban's resurgence has reversed incremental gains, particularly in the south. If the Taliban incursions spread, more women are likely to lose ground. Families in the south that recently began allowing their daughters to go to school and wives to enroll in vocational programs have pulled them out because of Taliban attacks."

DOJ:

Senate Urged To Curb US Attorney Dismissals. The Roanoke (VA) Times (1/21) editorializes, "The administration's forced resignations among U.S. attorneys tell the tale of the corrupting influence of unchecked power. … It is a new old story, about one of those 'little-noticed' provisions in complex legislation that draws attention only when it starts to stink." The Times continues, "The complex law is the Patriot Act. The smelly provision -- one of many, but a noticeable one of late -- is an innocuous-seeming change in the way the executive branch makes interim appointments of U.S. attorneys. … In effect, the change allows the attorney general to replace federal prosecutors without Senate approval." The Times adds, "The Bush administration seems to be using this new power, in part, to rid the Justice Department of prosecutors deep into political corruption investigations and to put political hacks in their place. … Congress should act quickly to strip the law of a provision so ripe for abuse." The Times notes, "U.S. attorneys are appointed by the president and approved by the Senate. When appointees leave, voluntarily or not, the attorney general can make an interim appointment that is not subject to a Senate vote. … Feinstein and Leahy have filed a bill to restore the district court's authority to make interim appointments. Gonzales' protestations of high principle do not persuade. The senators should press on."

CORPORATE SCANDALS:

Prosecutor In Apple Options Case Joins Firm. Bloomberg (1/21, News) reports, "Christopher J. Steskal, a lead prosecutor of a federal task force investigating the backdating of stock options at Apple Inc. and other companies, is leaving his San Francisco post to join a law firm, the United State Attorney's office in San Francisco confirmed late Friday. … Mr. Steskal's decision follows the recent resignation of his boss, United States Attorney Kevin V. Ryan." Bloomberg continues, "Mr. Steskal also was the

DOJ_NMG_0119399

lead prosecutor in the government's case against Gregory L. Reyes, the former chief executive of Brocade Communications Systems. … Mr. Steskal, who was to try Mr. Reyes's case in June in San Francisco, is the second of five assistant United States attorneys on the task force to leave since its formation in July. He said he would join the San Francisco office of Fenwick & West within 30 days." Bloomberg adds, "William J. Portanova, a criminal defense attorney and former federal prosecutor, said that he believed that the Brocade case would not suffer, no matter who is picked to succeed Mr. Steskal. … Luke Macaulay, a spokesman for the United States Attorney's office in San Francisco, said that one of two prosecutors the office is planning to hire would replace Mr. Steskal on the task force."

The San Francisco Chronicle (1/21, Page F - 1, Guynn) reports, "The abrupt resignations last week of U.S. Attorney Kevin Ryan, the Justice Department's top law enforcement official in Northern California, and Assistant U.S. Attorney Chris Steskal, the lead prosecutor on the task force investigating stock-option backdating, raise questions about the fate of Bay Area technology companies under investigation." The Chronicle continues, "Ryan gained a national profile for his aggressive stance on the controversial issue, becoming the first prosecutor to file backdating charges -- against two former executives of Brocade Communications Systems Inc. for allegedly violating securities laws by backdating stock options without properly accounting for them. … But it is the loss of Steskal, who is leaving to head the white-collar crime unit at Fenwick & West, headquartered in Mountain View, that could dramatically slow the pace of the criminal probes. Steskal was the office's resident expert on backdating, overseeing a dozen probes into suspect options grants, the highest-profile of which was Apple Computer Inc. He also was the lead prosecutor in the case against Brocade. … 'Any time a line prosecutor leaves an investigation, there's clearly a loss of momentum because that person is invested, knows the cases and has spent all the time with the cases,' said Thomas Carlucci, a San Francisco lawyer who represents former Apple attorney Wendy Howell, a potential target of the federal probe. 'So there is undoubtedly going to be a momentary hiccup given that Chris has been the lead in all of the stock-option cases and in particular in the Apple case.'"

Enron Survivor Hunts Riches In New Guinea. The New York Times (1/21, Duhigg) reports, "The South Pacific islands of Papua New Guinea, where canned mackerel occasionally serves as currency and cannibalism was once on the menu, are a long way from the corporate jungles where Enron was born. … Yet amid the wreckage of Enron, the energy giant that went bankrupt in 2001, is a leftover sliver of the company that is still doing business in Papua New Guinea: an oil refinery near the country's capital, Port Moresby, that was shipped there from Alaska and in which Enron continues to hold a small stake." The Times continues, "In November, the relatively obscure Houston company that owns most of that refinery, the InterOil Corporation, made the kind of announcement investors crave: explorations near the refinery had uncorked a vast pool of natural gas potentially larger than the United States' total residential consumption of the fossil fuel in 2005. The size of the discovery was so large, Phil E. Mulacek, InterOil's chairman and chief executive, informed an analyst, that simply controlling its output 'was sort of like trying to stop the Mississippi.'" The Times adds, "Just a few years ago, such proclamations — and the executives who made them — might have been viewed as curiosities, if they were noticed at all. Energy prices were so low that many natural-gas discoveries were burnt off so that drilling rigs could extract precious oil deposits further below. And rattled investors might have been wary of any company linked to Enron, especially one like InterOil that was boasting of possible treasures unearthed in remote jungles. … But that was then. This is now. … After a lengthy dormant spell, the global search for gas and oil has reignited with a fervor that is transforming companies like InterOil into Wall Street darlings. 'The gold rush is back on,' said Andrew V. Boland, an energy analyst at Peters & Company, a Canadian investment firm. 'It's like the wild, wild West, all over again.'"

Study Finds Backdated Options May Be Contagious. The New York Times (1/21, Hulbert) reports, "Directors of corporations often form a tight-knit community, serving at more than one company and creating what are known as interlocking boards of directors. As a result of this chumminess, corporate practices that otherwise might remain confined to just a few companies can spread quickly. … That appears to have been the case with the backdating of stock options, according to a new statistical study of publicly traded American companies." The Times continues, "The study's authors are two finance professors, John M. Bizjak of Portland State University in Oregon and Michael L. Lemmon of the University of Utah, as well as one of Professor Lemmon's graduate students, Ryan J. Whitby. … Options backdating, of course, involves retroactively granting options to executives and directors on dates when a company's stock price was lower. The practice has favorable monetary, accounting and tax consequences for the companies themselves, as well as for the recipients. It isn't necessarily illegal, but it must be disclosed under federal securities law. Federal prosecutors and the Securities and Exchange Commission are investigating numerous companies in connection with options backdating. … How did the practice become trendy in boardrooms across America? According to the study, a big part of the answer may be found in

DOJ_NMG_0119400

interlocking boards, which the researchers describe as the biggest conduit for transferring information about options backdating." The Times notes, "The study looked at publicly traded companies that granted options at any point from 1996 through 2002, and it particularly examined those that began to engage in options backdating during this time. The researchers found that the probability that a company would start the practice rose by a third to a half if one of its directors was also on the board of a company that was already backdating options. The range in these probabilities depended on various factors, including the number of directors who served on other companies' boards. … The researchers would not have been able to reach statistically meaningful results based only on the 120 or so companies that regulators have publicly identified as under investigation for possible options backdating. As a result, the sample was expanded to include other companies where the odds of having engaged in the practice were overwhelming, according to the researchers."

CRIMINAL LAW:

Libby Trial Opening Statements Begin Tuesday. ABC World News (1/20, story 4, 2:20, Berman, 8.78M) reported, "In Washington this week, the beginning of a trial that reaches the highest levels of power. Former White House aide Lewis 'Scooter' Libby is being tried on five felony counts stemming from the investigation over who outed an undercover CIA agent. The case involves weighty issues of national security and could send a man to prison. For many in Washington, it has all the makings of a good thriller." ABC (Marquez): "The Libby trial is quickly becoming Washington's favorite parlor game with a juicy plot and a who's-who of characters. … At the top of the witness list, Vice President Dick Cheney, Scooter Libby's former boss. Also NBC's Tim Russert and the Washington Post's Bob Woodward. The plot reads like a whodunit it novel, with the Bush administration at the center. … In what can only be called bad timing, opening statements in the Libby trial begin Tuesday, yhe same day as the President's State of the Union address."

Area In California Tops In Child Porn Arrests. The Fresno Bee (1/21, Ellis) reports, "When it comes to fighting child exploitation, no part of the nation has put up statistical numbers like the federal law enforcement zone centered on Fresno and Sacramento." The Bee continues, "Over the past two fiscal years — including the one that ended Sept. 30 — the Eastern District of California has indicted more people for child pornography, molestation and related crimes than any other federal law enforcement zone in the nation. … In the fiscal year that ended Sept. 30, the number was 71. In the one that preceded it, the total was 67. … 'It's something we're very proud of,' said McGregor W. Scott, U.S. Attorney for the Eastern District of California." The Bee notes, "Proud, but also surprised. Such information, Scott said, isn't published regularly, and for the most part the various federal districts around the nation are unaware of any statistical crime totals from outside their own region. … This particular recognition came last month, during a Washington, D.C., conference on Project Safe Childhood. During a speech, Associate Attorney General Bill Mercer — who holds the No. 3 position at the Justice Department — singled out the Eastern District of California, which runs from Kern County to the Oregon border, as the national leader in child exploitation indictments. … Assistant U.S. Attorney David Gappa, who specializes in child exploitation cases in Fresno's federal courthouse, said, 'We're always just looking for a way we can do a case, rather than ways we can't do it.'"
