Re: Disposal of Asbestos at Camp Lejeune

Dear Mr. Pierce:

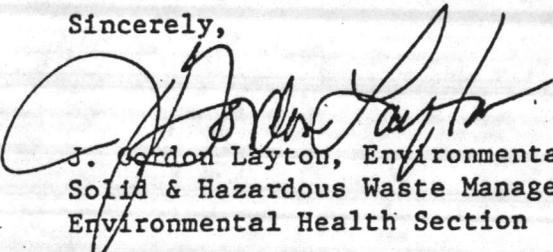

The Division of Health Services has no objection to disposal of asbestos waste in permitted sanitary landfills if performed in accordance with 40 CFR Part 61. The following procedures should be followed:

1. Permission from the owner/operator of the landfill should be obtained prior to delivery since the owner/operator has the right to deny acceptance of any waste.
2. A copy of this letter should accompany the waste at time of disposal.
3. The waste is placed wet into plastic bags and securely sealed to prevent an airborne condition during handling.
4. The operator shall be notified that the waste is to be covered immediately with sufficient amounts of dirt or other waste so as to prevent an airborne condition during final disposal.
5. The operator shall place the waste as far from the top of the landfill as possible, but in no case within ten (10) feet of the landfill surface.

The preparation of the asbestos and delivery should comply with OSHA and DOT standards.

If you have questions concerning this matter, please advise.

Sincerely,

J. Gordon Layton, Environmental Engineer
Solid & Hazardous Waste Management Branch
Environmental Health Section
