COMPOSITION AND MISSION

Marine Corps Base, Camp Lejeune, the world's most complete Amphibious Training Base, is situated on the southeast coast of North Carolina with a twelve-mile ocean front extending from Bear Inlet to New River Inlet and encompasses approximately 170 square miles of land and water. Report period is for calendar years 1976, 1977 and 1978.

Established in 1941 and named in honor of Lieutenant General John A. Lejeune, the base houses four Marine Corps Commands and two Navy Commands: Marine Corps Base; 2d Marine Division, FMF; 2d Force Service Support Group (Rein), FMFLant; Marine Corps Air Station (Helicopter), New River; Naval Regional Medical Center; and Naval Regional Dental Center.

The mission of Marine Corps Base, Camp Lejeune, is as follows:

- a. Provide housing, training facilities, logistic support and certain administrative support for Fleet Marine Force units and other units as assigned.
- b. Conduct specialized schools and other training as directed.
- c. Receive and process personnel as assigned and conduct individual combat training as directed.

The present military population of Camp Lejeune is approximately 40,000 military personnel, augmented by approximately 4,000 civilian employees. Military dependents are in excess of 32,000 on and off base.

SUMMARY

The Environmental Quality Program for Camp Lejeune continues to progress with the implementation of the National Environmental Policy Act of 1969. In doing so, all practical means and measures to protect and enhance environmental quality at this facility are employed.

Air Pollution Control

All open burning has been suspended with the exception of prescribed burning under the forest management plan. In 1973, a boiler fuel conversion project was completed at the Central Heating Plant enabling the plant to burn 100% fuel oil (No. 6) and smoke detectors were installed in smoke stacks at all heating plants. A contract for installation of electrostatic precipitators at the Central Heating Plant has been awarded and upon completion ambient air standards will be met as 100% coal is burned.

Water Pollution Control

Sewage - NPDES (National Pollutant Discharge Elimination System) permits for all sewage treatment plants were issued by the Environmental Protection Agency (EPA) in 1974 and revised in 1978.

Oil Pollution - The Oil Spill Prevention, Containment and Countermeasure Plan was published to establish policy and procedures concerning oil pollution abatement. Since 1974 approximately 75 waste oil storage tanks have been installed at strategic locations throughout the base to be utilized at the unit level. Camp Lejeune has on hand 500 feet of oil containment boom and other equipment that can be used to contain and clean up oil spills.

Soil Erosion - Sedimentation caused by soil erosion can be a source of water pollution. To help control this sedimentation, tracked vehicles such as tanks and amphibian tractors are restricted to designated trails and training areas. In a cooperative agreement with the Marine Corps Base, the Soil Conservation Service made a survey of all soil conservation problem areas during 1974. Work on some of these problem areas has been accomplished. Other work is scheduled over the next seven years.

Noise Pollution Control

The Hearing Conservation Center of the Base Medical Department is responsible for establishing and maintaining a hearing conservation program. Objectives are to prevent hearing losses before occurrence. In the past three years, 70,000 hearing tests were conducted.

Solid Waste Management

All non-recyclable solid waste is placed in the sanitary landfill and covered daily. There is compaction equipment installed on board the base. This equipment compacts waste, thereby, reducing the need for dumpsters and resulting in better utilization of the sanitary landfill. The Onslow County Workshop of Coastal Opportunities celebrated it's second anniversary of operation of the Resource Recovery Plant on board under a contract awarded on 10 September 1976.

Toxic and Hazardous Materials

A new type ultra-low volume sprayer is being used for adult mosquito control. Use of these machines has resulted in the conservation of an estimated 45,000 gallons of fuel oil during the past three years. This also means the environment has been spared this 45,000 gallons of fuel oil.

Environmental Enhancement

3 Keeping Camp Lejeune beautiful requires the constant attention of all military and civilian personnel that live, work or visit on the base. The Landscape Maintenance Section of Base Maintenance Department has planted in excess of 5,000 flowering trees, shrubs, and flowers in the past three years.

Education and Training Programs

Guest speaking engagements, accompanied with color slides, have been very much in demand by units, school classes and civic organizations. In 1976, 1977 and 1978 a total of 109 presentations were made on local television wherein subjects related to the environmental program were discussed.

Further, approximately 3,500 Marines of the Motor Transport School Company, Montford Point have attended a slide/lecture presentation on the pollution abatement program.

SPECIFIC PROJECTS

1. Electrostatic precipitators at the Central Heating Plant are being installed.
2. In 1977 the Camp Geiger Sewage Treatment Plant was expanded and upgraded.
3. A MILCON project to eliminate miscellaneous discharges aboard base is in the design stage.
4. A new computer monitoring system is being used to monitor sump high level and power failure at 24 major sewage lift stations.
5. 126 pitch-in type litter containers have been installed.

ORGANIZATION

The Assistant Chief of Staff, Facilities exercises staff cognizance over all matters pertaining to environmental protection while the Base Maintenance Officer has direct responsibility for management of environmental affairs. Management is accomplished primarily through the Natural Resources and Environmental Affairs Division of the Base Maintenance Department. However, other divisions of Base Maintenance provide significant contributions. The Natural Resources and Environmental Affairs Division was organized in October 1972 and a further refinement has been restructured as depicted below.

*This section consists of advisory and coordinating personnel from Base Public Works Department and other divisions of Base Maintenance Department on a collateral duty basis.

NATIONAL ENVIRONMENTAL POLICY ACT

The National Environmental Policy Act (NEPA) establishes as federal policy the use of: "all practicable means and measures . . . to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony . . ." Further NEPA states: " . . . to the fullest extent possible . . . all agencies of the Federal Government shall (systematically balance environmental amenities and values with economic and technical considerations) . . . (and shall) include in every recommendation or report on proposals for legislation and other major Federal actions significantly affecting the quality of the human environment; a detailed statement by the responsible official on . . . the environmental impact of the proposed action . . ."

It is the policy of this base to comply with the spirit as well as the letter of the NEPA of 1969. In doing so all practical means and measures to protect and enhance environmental quality at this facility are employed. Every effort is made to plan, initiate and carry out actions in a manner to avoid or minimize adverse effects on environmental quality.

Base Order 11000.1 (Appendix A) implements environmental program requirements as required by NEPA and contains guidelines for action sponsors in the preparation of Environmental Impact Assessments (EIA). Action sponsors are required to prepare preliminary environmental impact assessments on proposed, planned, or ongoing projects. The assessments are reviewed by the Committee for Environmental Enhancement/Environmental Impact Review Board which is composed of the following members: Chairman (as appointed by the Commanding General); Base Training Facilities Officer; Representatives from - 2d Marine Division, FMF; 2d Force Service

Support Group, (Rein), FMFLant; Marine Corps Air Station (Helicopter), New River; President, Rod and Gun Club; Director, Natural Resources and Environmental Affairs Division; Base Wildlife Manager; Base Ecologist and Design Director, Public Works Department. Advisors to the committee are: Base Maintenance Officer; Base Forester; Base Game Protector; Base Veterinarian; Base Special Services Officer; Base Provost Marshal and Director, Environmental Health, Naval Regional Medical Center.

This committee, originally established in 1962, assists and advises the Commanding General on matters pertaining to environmental enhancement, conservation and management of natural resources. Responsibilities of the committee encompass general cognizance over any phase or facet of the Natural Resources and Environmental Program with recommendations provided to the Commanding General for implementation, instructions, procedures, regulations and programs. The committee reviews EIA's and determines if the potential for controversy or environmental impact is significant. The committee takes an official position on EIA's and makes recommendations to the Commanding General.

The following EIA's were reviewed by the committee in 1976 and 1977: EIA concerning the regular utilization of the offshore target and bombing area located at Camp Lejeune by tank and artillery units; the combining of Brown's Island and its offshore area into a single firing range; proposed AV8A Harrier Training Sites; MOOSE Project; Marine Corps Exchange at Marine Corps Air Station (H), New River; Mechanized Infantry Training Site and Joint Exercise Solid Shield. A number of minor construction and repair projects were also examined by the committee to determine the significance of their environmental impact.

AIR POLLUTION CONTROL

Air pollution at Camp Lejeune is not considered to be a serious problem as the base is adjacent to the Atlantic Ocean and is in a rural area with no large industry nearby.

Several heating plants are in operation aboard base, all of which utilize low sulfur fuels. As a fuel conservation measure, the Central Heating Plant has the capability of burning either coal or No. 6 fuel oil. Electrostatic precipitators have been designed for the Central Heating Plant and are scheduled for installation by the spring of 1979. When the electrostatic precipitators are installed, coal will become the primary fuel. By utilizing coal as the primary fuel, a great savings will be realized and a large volume of oil once used at Camp Lejeune will be available to other oil consumers.

All open burning at Camp Lejeune has been suspended except those fires used for fire training purposes and prescribed burning for forest management purposes. Prescribed burning is under criteria established by the North Carolina Department of Natural and Economic Resources.

In the event there is an air pollution emergency in the Camp Lejeune area, certain emergency measures are taken. Base Order 11090.2A (Appendix B) gives detailed instructions for air pollution emergencies.

ELECTROSTATIC PRECIPITATORS BEING INSTALLED

WATER POLLUTION CONTROL

SEWAGE TREATMENT

Secondary treatment is accomplished at all of the seven sewage treatment plants at Camp Lejeune. Construction of rotating trickling filters at each facility has provided the capability to process waste at a high state of purity, obtaining an efficiency of 90% in relation to the biological oxygen demand and suspended solids, thus assuring that the seven million gallons of wastewater that daily flows through the sewage treatment system will not degrade the quality of New River. During 1976-77 the Camp Geiger sewage treatment plant was upgraded to a tertiary treatment status. When the work was completed, the Marine Corps Air Station (H), New River sewage treatment plant was closed and the sewage generated at that activity is now pumped to the Camp Geiger sewage treatment plant. Continuous attention and control at these sewage plants by qualified personnel assure that effluents meet and exceed requirements of Environmental Protection Agency (EPA) and water quality standards established by the State of North Carolina. To help improve the qualifications of sewage treatment plant operators, all recently employed personnel are engaged in an intensive two-year on-the-job training program set up and administered by the Civilian Personnel Office. The final step of this training program requires the employee to pass the Wastewater Treatment Operator Examination (Grade II) administered by the North Carolina Department of Water and Air Resources. Thirty-one sewage treatment plant operators and helpers have passed examinations for certification with grades ranging from I to IV.

TAKING WATER SAMPLES (ABOVE) AND CHECKING THEM OUT (BELOW)

AN AERIAL VIEW OF THE HADNOT POINT SEWAGE TREATMENT PLANT WITH PART OF NEW RIVER IN THE BACKGROUND

TECHNICIAN PERFORMS BACTERIOLOGICAL TEST ON POTABLE WATER

On 18 January 1974, the EPA issued the National Pollutant Discharge Elimination System permits to Camp Lejeune authorizing the discharge of sewage effluent from all sewage treatment plants into receiving waters. Since 1 July 1974, sampling points established by the EPA have been used to monitor those water receiving effluent from base sewage treatment plants. The sampling analysis and subsequent reporting will meet requirements of the EPA and the State of North Carolina.

By checking the map on page 2, it is readily seen that New River is an important factor in the total environment of Camp Lejeune. It is the receiving stream for all effluent from seven sewage treatment plants while the eighth plant at Onslow Beach empties into the Intracoastal Waterway. In order to comply with State and EPA regulations on water quality standards, an intricate and comprehensive monitoring program is required. Water samples from nine established points on New River and the Intracoastal Waterway are taken monthly near the upstream and downstream side of the effluent outfall lines from all sewage treatment plants. In addition, samples are taken at a number of random sites including storm drains. These samples are tested for fecal coliform count, biological oxygen demand, dissolved oxygen pH, salinity, temperature and oil and grease. Water samples from the influent and effluent of each sewage treatment plant is also tested daily.

In 1975 during reorganization the Quality Control Laboratory function was shifted from the Utilities Division to the Natural Resources and Environmental Affairs Division, Base Maintenance Department. A chemist and four physical science technicians were assigned to the laboratory to accomplish monitoring and reporting requirements. The laboratory

performs certain support type work for other base organizations such as fluoridation tests for Naval Regional Dental Center and bacteriological tests for Preventive Medicine. The shift which consolidated the environmental program at Camp Lejeune enables a more efficient and credible monitoring program as sewage treatment plant personnel involved in EPA monitoring and reporting were returned to full time sewage treatment plant operator duties.

COMPUTERIZED MONITORING SYSTEM

The first increment of the new computerized Utility Control System at Camp Lejeune will automatically monitor sump high level and power failure at 24 major sewage lift stations at Camp Lejeune. This system should help eliminate potential sewage overflow problems and subsequent pollution at these stations since, upon issuance of a high sump or power failure alarm at the computer center, a serviceman can be quickly dispatched to the site to correct the problem.

BASE MAINTENANCE DEPARTMENT PERSONNEL CHECK OUT NEW COMPUTER MONITORING SYSTEM

OIL SPILL PREVENTION

A complete basewide survey conducted to determine the extent of oil pollution in maintenance areas, motor pools, etc. revealed some minor soil and water pollution was occurring; action was initiated immediately to correct the situation. In addition to a personal explanation of the necessity for preventing oil spillage, time was spent with each unit in these areas instructing in the preparation of oil drip pans for oil dispensing drums and discussing other methods for prevention and containment. In 1975-1978 approximately 75 waste oil storage tanks with capacities of 280 and 550 gallons were modified and installed at different locations for utilization at the unit level. Oil separators have been installed at eight washracks in the Hadnot Point Area and at Marine Corps Air Station (H), New River where motor vehicles and aircraft are washed. This equipment separates oil and grease from wash water at these facilities.

Base Order 11090.1A (Appendix C) was published implementing the base Spill Prevention, Containment and Countermeasure Plan for Oil and Other Hazardous Substances. This plan will be updated in 1979. Marine Corps Bulletin 6240 dated 3 April 1974 directed field activities to comply with EPA regulations contained in Federal Register, Volume 38, Number 237, Part II of December 1973, Subject: Oil Spill Prevention. To satisfy requirements of this Bulletin, an engineering investigation was conducted aboard base. A survey and inventory of petroleum storage facilities having an aggregated aboveground storage capacity of 1,320 gallons or more, or any single tank over 600 gallons, or underground storage capacity of 42,000 gallons or more, and non-transportation related facilities were made to identify potential oil spill sites. Fixes were proposed that will either eliminate the potential source or prevent any spill from entering navigable waters. The engineering

TEMPORARY WASTE OIL TANK BEING INSTALLED

WASTE OIL COLLECTION TRUCK EMPTYING INTO THE 272,000-GALLON STORAGE TANK

report prepared by Public Works Department updates Base Order 11090.1A. A contract was recently awarded to build dikes, erect fences, install lockable drain valves and make other corrections identified in the report. Oil contaminated soil has been replaced in various locations with new soil and reseeded. Further work is planned in the future to improve the appearance of the grounds around maintenance buildings, motor pools, etc. During 1978 an engineering firm revised and updated the Base Spill Prevention Containment and Countermeasure Plan. Recommendations are currently being incorporated in base regulations.

In the past, most of the waste motor oil collected at Camp Lejeune was used for dust control on unpaved roads and parking lots. This practice has been discontinued. Now, a 272,000-gallon tank is available for storing excess waste oil. In 1978 approximately 100,000 gallons of waste oil collected at Camp Lejeune was sold by the Defense Property Disposal Office to a Georgia based reclamation firm for 13¢ per gallon.

Marine Corps Bulletin 6240 of 28 August 1973 directed activities to have on hand certain oil containment and cleanup equipment to combat any possible oil spill. Camp Lejeune has a boat, oil skimmer, vacuum truck, sorbent mats, straw, oil containment boom and other equipment that can be used to contain and clean up oil spills. This equipment is located at Base Maintenance and, upon notification, can be transported to the site of an oil spill.

During the summer of 1976 and 1977, 500 feet of oil containment boom were deployed at Mile Hammock Bay for training purposes. Personnel from Base Maintenance Department and the Base Fire Department were involved in the training session. If deployment of the boom to contain an oil spill becomes necessary, the same base personnel involved in the training will be used to assemble and position the equipment on the water.

During 1978 five 20-foot sections of oil containment boom were purchased and installed across drainage canals and receiving discharges from Hadnot Point and Marine Corps Air Station. This precautionary action was taken to prevent any possible oil spill from navigable waters.

In the fall of 1976 an oil pollution survey which identified potential or actual oil spill situations was conducted at Marine Corps Base, Camp Lejeune and Marine Corps Air Station, New River by SCS Engineers, Reston, Virginia. The study was administered by Naval Facilities Engineering Command and covered all known areas of existing and potential oil spills and oily wastewater discharges. The report contains a brief description of the problems observed at each area that was visited and proposed solutions. The solutions are in accordance with the criteria for oil pollution prevention, control and containment facilities. Naval Facilities Engineering Command is currently designing a project to eliminate the situation addressed in the study.

OIL CONTAINMENT BOOM IS MANEUVERED DURING TRAINING SESSION

SOIL EROSION

The forces of nature (wind tide and wave action) cause some erosion at Onslow Beach and certain points along the banks of New River. Stone, concrete and masonry rubble from demolished buildings has been used to eliminate part of the New River bank erosion problem. This work has been approved by the District Officer, U. S. Army Corps of Engineers, Wilmington, North Carolina.

In a cooperative effort with North Carolina State University Extension Service, planting of marsh grass at two points along New River has been accomplished. The work is an experiment to determine if shoreline erosion can be controlled by establishing a marsh using native vegetation.

It is recognized that some damage or wear and tear occurs to inland areas due to the nature of military training. For example, natural vegetation is destroyed and soil disturbed, resulting in a potential soil erosion problem. To avoid unnecessary damage incidental to field training, track vehicles have been restricted to designated training areas and access trails.

The Soil Conservation Service, in a Cooperative Agreement with Marine Corps Base, made a survey of all soil conservation problem areas during the summer of 1974. Prescriptions were made for 230 different sites and information was incorporated into the Long Range Multiple-Use Natural Resource Management Plan. Work on some of the problem areas has been accomplished and several areas have been scheduled for treatment in FY-79.

MASONARY RUBBLE USED FOR SHORELINE STABILIZATION

GRADING AND SUBSEQUENT SEEDING BEING DONE TO CORRECT A SOIL EROSION PROBLEM

NOISE POLLUTION CONTROL

Sources of noise pollution are many and varied on base. In the Industrial Complex such areas as carpenter shops, metalworking shops, sand blasting, compressed air, heavy equipment, aircraft maintenance areas, and steam plants are sources of noise pollution. Areas and conditions under which military personnel in the field are subjected to noise pollution are: all types of gunfire, rockets, explosives, aircraft, tanks, heavy equipment, and motor vehicles. The Occupational and Preventive Medicine Service of the Naval Regional Medical Center is charged with the responsibility of establishing and maintaining a hearing conservation program in cooperation with the Base Safety Office. This responsibility is established in (Appendix D) Base Order 6260.2A, Subject: Hearing Conservation Program; administration of. The Occupational Medicine Branch tests and designates noise hazard areas and the Base Dispensary Hearing Conservation Center conducts approximately 20,000 hearing tests annually. The staff consists of two civilian industrial hygiene technicians in Occupational Health and five Navy audiometric technicians.

The objective of the Hearing Conservation Program is to prevent hearing loss before it becomes a problem. If, upon testing, it is found that machinery or equipment emits 90 decibels or more, signs are posted designating it to be a noise hazardous area and personnel in the area are required to wear hearing protective devices while in that area. Also, personnel who work regularly in noise hazardous areas are subjected to annual hearing tests. If it is determined that anyone has a hearing loss, he is tested more often and, if a loss continues, he is assigned work in an area where there is no noise hazard.

A recently completed noise control project was the acoustical treatment of the 2d Marine Division Band rehearsal area. Before treatment, the noise was well above the safe level. After treatment, tests showed a safe level of 86 decibels.

The Hearing Conservation Center has underway a special audio survey that will eventually involve a large number of personnel at Camp Lejeune. A hearing analysis data collection card will be established for about 25,000 personnel for data processing. This will greatly enhance the hearing conservation program by furnishing detailed hearing records and much needed hearing research data.

HEARING TEST BEING ADMINISTERED

RADIATION POLLUTION CONTROL

At the request of the Naval Regional Dental Center, a radiological survey of dental x-ray units at Building 15 was conducted. The Naval Regional Medical Center Inspectors conducted the survey and based on their findings recommended lead-lining of the x-ray room of 22nd Dental Company. A work request was submitted, and lead-lined walls and windows were installed in May 1976. The subject area now meets applicable standards.

No other known radiation problems exist aboard base as no military training, storage or testing involving these materials are conducted.

SOLID WASTE MANAGEMENT

In 1977 a solid waste management study was conducted at Camp Lejeune by a private A&E firm. The study was initiated as a result of considerable interest which has been generated in the Navy Department concerning the possibility of recovering resources (both energy and materials) from solid wastes generated at Naval activities. In conjunction with the US Environmental Protection Agency, Navy and Marine Corps directives encouraging resource recovery, the Navy has initiated an R⁴ Program (Recovery and Reuse of Refuse Resources). The study was a part of the R⁴ Program.

The purpose of the project was to develop long range solid waste management plans for Marine Corps Base, Camp Lejeune with particular emphasis on resource recovery. The Resource Conservation and Recovery Act of 1976, Marine Corps Bulletin 6240 and several guidelines promulgated by the Environmental Protection Agency require federal facilities to recover resources (where economically feasible) in lieu of disposal.

In addition to developing approaches to resource recovery, the refuse collection and disposal aspects of solid waste management were evaluated. Recommendations for improved efficiency and the adequate protection of the environment were made. Finally, several complete alternatives to solid waste management were developed for the base. These incorporated the improvements to collection and disposal as well as various combination of approaches to resource recovery (both material and energy).

As a result of the study, the base has implemented a program designed to extract useful materials from the solid waste generated at Camp Lejeune.

Solid waste is a laborious and expensive operation as approximately 750,000 cubic yards of garbage, trash and other waste must be disposed of at Camp Lejeune each year. Waste of all kinds, excluding that considered dangerous, hazardous or recoverable, is transported to the sanitary landfill for disposal. The sanitary landfill is located on a well-drained 40-acre site on the Sneads Ferry Road. The ramp method is used. An area approximately forty feet wide and twelve feet deep has been excavated to receive waste materials. A bulldozer is used to compact the refuse as it is placed on the slope. At the end of each work day, the filled area is covered with soil which eliminates insect attraction, fly breeding and rodent habitat.

Camp Lejeune was certified by Keep America Beautiful Incorporated into the Clean Community System on 29 March 1978. The Clean Community Systems Coordinator (CCSC) is the contact point for the solid waste disposal program. The CCSC oversees the operation of the anti-litter and recycling programs as well as coordinating with the Onslow Clean County Committee. It is the point where problems involving area police, litter, landfill, recycling, garbage and trash collection are sent for solution. Talk and slide shows are available for awareness training of individuals to solid waste litter problems on board Camp Lejeune.

Twenty-one compaction devices with a 10-to-1 compaction ratio has been installed in the base messhalls. Eight additional compaction devices with a 4-to-1 compaction ratio and a 45 cubic yard container have been installed at selected points aboard the base to compress cardboard boxes. Each compacter holds approximately 5-1/2 tons of cardboard.

There are 126 "pitch-in" containers installed along roadsides and areas with heavy pedestrian traffic aboard the base. These containers have

ANOTHER LOAD OF CARDBOARD IS READY FOR DELIVERY TO THE ONSLOW COUNTY WORKSHOP'S RECYCLING CENTER AT CAMP LEJEUNE

VEHICLE IS WEIGHED DURING SOLID WASTE MANAGEMENT STUDY

helped keep Camp Lejeune's roads and walkways clean by providing a place for the deposit of litter generated by motorist and pedestrian. The volume of trash being removed from these containers indicates heavy utilization.

BO 11014.8A, Appendix E, was revised on 6 July 1978. The order prohibits anyone from willfully placing, depositing or leaving any litter, trash, refuse, garbage, debris or waste material of any kind anywhere aboard base other than in a receptacle for that purpose or in a place specifically designated and authorized for that purpose.

A rather large volume of scrap wood is generated at Camp Lejeune which includes used lumber or boxes not required for the foreseeable needs of the generating activity or in such condition as to be unacceptable for further use. This material will be turned in and disposed of according to procedures set forth in Base Order 4570.1C of 28 January 1974, Appendix F.

Liquid garbage (produce and leftover food from messhalls, commissaries, etc.) is being handled by contract issued by the Defense Property Disposal Agency. A one-year contract was awarded a local hog farmer who pays the government \$180 per year for the garbage. Garbage is picked up by the farmer and transported off base where it is prepared and fed to swine. In addition to financial benefits, the contract also results in reduced usage of garbage disposal units and reduction of sewage treatment plant loads.

The Resource Recovery Program is set forth in Base Order 4100.8, Appendix G. This order covers the recycling of cardboard, newspaper, computer paper and tab cards. The Onslow County Workshop of Coastal Opportunities, a local non-profit sheltered workshop for mentally and/or

6 physically handicapped individuals, operates under contract the recycling plant. The workshop employs a varying number of handicapped persons in the last phase of a program of training prior to receiving employment in the outside community. This plant processed for sale 2,180,030 pounds of paper products this year. The plant is located in a renovated base facility equipped with the necessary machinery and to receive, sort, shread, bale and load for shipment corrugated and paper products generated on board the Marine Corps Base. The plant celebrated it's second anniversary of operation on board the base during ceremonies on 10 September 1978.

TOXIC AND HAZARDOUS MATERIALS MANAGEMENT

CHEMICAL DUMP

In the past, certain items of a chemical nature which could not be utilized, reconditioned for return to the supply system, sold, donated or transferred were buried in a specific area of the base. Close control of the burying is maintained, and during the past three years, only two items (polychlorinated biphenyl and approximately 100 pounds of mercury contaminated soil) have been buried in the chemical landfill. The polychlorinated biphenyl waste was generated when a contractor had an accident with a transformer containing the chemical. The contaminated soil was cleaned up and disposed of through encapsulation by concrete. An EPA representative inspected the spill site and approved the cleanup and disposal operation. The mercury waste was generated when a gauge at a swimming pool was accidentally broken. Records of items buried in the chemical landfill are maintained. All other chemicals generated at Camp Lejeune during the reporting period have been transported to Marine Corps Air Station, Cherry Point for treatment and disposal in a new Industrial Waste Treatment Plant.

HERBICIDE AND PESTICIDE SAFETY PRECAUTIONS

The base effected several changes in utilization of herbicides/pesticides in order to improve conservation techniques and comply with current regulations. The application of less persistent approved pesticides/herbicides is now practiced and applications are made based on insect count in specific areas rather than on a routine area basis. A vigorous training program for personnel in the Insect and Rodent Control Section of Base Maintenance Department has been conducted to ensure that all personnel,

including pest controllers and supervisors, are certified as competent.

Base Maintenance Officer is tasked with the responsibility of maintaining surveillance over the types of chemicals used, methods of application, formulation procedures and recommended strengths. All pesticides are stored in locked storage facilities and issued under strict controls. The District Entomologist, Naval Facilities Engineering Command, Norfolk, has been most cooperative in providing necessary technical expertise as required.

In the Summers of 1975-77, a new type ultra-low volume sprayer was used by the Insect and Rodent Control Section for adult mosquito control. This machine, which provides a direct spraying of undiluted insecticide, conserved an estimated 45,000 gallons of fuel oil during the past three years by eliminating its requirement as a dilutant. Two additional ultra-low volume sprayers are being used for cockroach treatment in messhalls and food handling facilities.

Pesticides used on base are listed below:

Botanical Pesticides

Pyrethrum SLN

Fumigants

Phostoxin Tablets
Paradichlorobensene Flakes

Rodenticides

Warfrin Anticoagulant

Chlorinated Hydrocarbon

Chlordane EC (limited for
termite and fire ant control)

Herbicides

2, 4-D
Hybar-X
Diquat

Natural Petroleums

Kerosene White Deodorized
No. 2 Grade Fuel Oil
Summer Oil Emulsion

Phosphorous Compounds

Diazinon 4E
Diazinon 4S
Malathion WP
Malathion EC
Dichlorovous EC
Abate EC
Cygon
Dursban

Carbamates

Sevin Carbaryl WP
Sevin Carbaryl Dust
Baygon Granular
Baygon EC

MOSQUITO POPULATIONS ARE DETERMINED BEFORE PESTICIDES ARE APPLIED

ULTRA-LOW VOLUME SPRAYER IN OPERATION

In February 1977, Insect and Rodent Control Section of Base Maintenance Department relocated to newer and more modern facilities. These facilities which were vacated by the disbanded Naval Medical Field Research Laboratory consist of segregated administrative areas, storage buildings and pesticide mixing facilities. Relocation has helped make the insect control operation environmentally acceptable.

PEST CONTROLLERS PREPARE FOR PESTICIDE APPLICATION AT NEW FACILITIES

ENVIRONMENTAL ENHANCEMENT

BASE ATTRACTIVENESS

Camp Lejeune, with its natural beauty and well-designed layout, has long been noted as one of the most attractive military bases in the United States. To keep it this way requires constant endeavor by the various military units and the Groundskeeping Section, Base Maintenance Department.

During the past three years, the Landscaping Maintenance Section of Base Maintenance has completed landscape projects throughout Marine Corps Base. This includes the Industrial Area, Paradise Point Housing Area, road intersections and the recreational area at Onslow Beach. There were approximately 5,000 shrubs, trees and flowering plants planted in these areas. General maintenance of plants was performed such as pruning, fertilizing, spraying, trimming and weeding to improve the visual looks and health of those plants. 190,000 American beachgrass plants were planted at Onslow Beach to help stabilize sand dunes by controlling wind erosion.

APPROXIMATELY 7,350 LINEAR FEET OF SNOW FENCE WAS INSTALLED AT ONSLOW BEACH DURING 1977 IN AN EFFORT TO CONTROL WIND EROSION

FOREST MANAGEMENT

It is the obligation of the Forestry Branch to manage for sustained-yield and multiple-use. This is to say that timber, wildlife, water, recreation, aesthetics and military resources all receive equal consideration during management decisions. There are approximately 69,040 gross forested acres of which 57,929 acres comprise the productive or net forest acreage. Streamside zones, roads, roadside zones, ranges, permanent wildlife openings and food plots account for the difference in gross and net acreage. These net forest acres are divided into 62 compartments. Each compartment is then divided into timber types or stands. These compartments are the basic management unit used in forest management. The recent acquisition of color aerial photographs will greatly enhance our ability to manage these forest resources. Each year a professional forester will enter six compartments and determine through field samplings the indicated silvicultural needs of each stand. His draft prescription will then be reviewed by the entire Natural Resources and Environmental Affairs staff. Any changes or revisions will be made, along with field examinations, if necessary. These indicated needs are then put into action.

FORESTER GATHERING STAND DATA FOR MAKING PROPER DECISIONS IN FOREST MANAGEMENT

Timber harvesting here is a highly mechanized operation and is closely observed by personnel of the Forestry Branch. The receipts and volumes for the three preceding calendar years are listed below.

TIMBER HARVEST FOR CALENDAR YEARS 1976-78

<u>1976</u>	<u>Product</u>	<u>Volume</u>	<u>Gross Income</u>
	Pine Sawtimber	3,337.560 MBF	\$284,729
	Pine Pulpwood	2,189.4 Cds	16,167
	Hardwood Sawtimber	56.541 MBF	2,435
	Pine Pulpwood	440.9 Cds	1,121
			<u>\$304,452</u>
<u>1977</u>	<u>Pine Sawtimber</u>	<u>2,730.883 MBF</u>	<u>\$227,076</u>
	Pine Pulpwood	4,439.7 Cds	32,540
	Hardwood Pulp	10 Cds	20
	Hardwood Sawtimber	729 MBF	29
			<u>\$259,665</u>
<u>1978</u>	<u>Pine Sawtimber</u>	<u>4,576.644 MBF</u>	<u>\$521,951</u>

TIMBER HARVESTING - SKIDDER PULLING TREE LENGTH LOGS TO THE DECK FOR LOADING

NATURAL REGENERATION ESTABLISHED AFTER SEEDTREE CUT AND PROPER SEEDBED PREPARATION

ROLLING CHOPPER BEING USED FOR SEEDBED PREPARATION PRIOR TO SEEDFALL

The base is recovering from a southern pine beetle infestation. All economically timber sale infested areas have been harvested. No major attacks have been observed during the past two years. A careful watch continues even though the beetle infestation has subsided. Normal sale procedures are in progress again.

Reforestation is accomplished by both artificial and natural means, with the latter being used more during the past three years. Natural regeneration requires less soil disturbance for site preparation and permits a saving of fossil fuel with less heavy equipment use required. Other advantages of well planned natural regeneration methods permit the forester to accomplish silvicultural treatments throughout the life of the stand that are more beneficial to a variety of wildlife species as well as maintaining vigorous tree growth. The purchase of a drum chopper has made it possible to make precommercial thinnings in overstocked stands to lessen competition, reduce fuels, create deer browse, permit prescribe burning at an earlier age and reduce the possibility of southern pine beetle attack by maintaining healthier trees.

Artificial regeneration is being done in stands where there are an insufficient number of genetically sound trees, beetle salvage, burned timber and other situations where natural regeneration methods are not considered adequate. Planting during the past three years has been accomplished by machine planting on an 8' x 12' spacing. Some use of temporary employees has also been used to plant seedlings on rough terrain. Acquisition and use of a bedding harrow has been employed which will increase the survival rate and growth rate of seedlings particularly on the poorly drained sites.

In 1978, a 2,352-acre tract of timberland was designated as a quail management area. This area is especially suited for quail and all forestry management practices will be modified to produce optimum quail habitat. Timber, which is primarily longleaf pine, is being thinned to basal areas most beneficial for quail. Prescribed burning will be done annually during middle or late winter to aid in the production of desirable vegetation to enhance quail habitat.

The quail management area was also set up as a work project for the Youth Conservation Corps (YCC). The YCC, in their first year at Camp Lejeune, trimmed small unmerchantable stems along the roads which greatly increased the aesthetics value of the area.

Prescribed burning is one of the most useful and economical tools which we have at our disposal. Each year approximately 12,000 acres are prescribed burned. Areas which are more beneficial to wildlife and could be damaged by fire, such as transition zones, hardwood types and key areas, are plowed out and not burned. Prescribed burning is accomplished during the winter months when most vegetation is dormant and as little damage as possible will be done. Prescribed burning serves several key functions such as rough reduction, improvement of wildlife habitat, control of undesirable vegetation, disease control and the improvement of training areas. The Division is also involved in a smoke management program with the State of North Carolina, Department of Natural and Economic Resources.

Wildfires at Camp Lejeune continues to receive the highest priority by forest management personnel. In the last three years 213 wildfires were suppressed by management personnel. The average acres burned per fire were held to 14.3 acres.

PRESCRIBED BURNING IS AN IMPORTANT TOOL IN BOTH FORESTRY AND WILDLIFE MANAGEMENT

A new fire weather station has been installed and put into operation. Conversion to the new National Fire Danger Rating System was started in February 1977. Forest fire severity ratings have been established and published in a revised Base Order. This same information with controls on training has been printed on the new training map.

The Division has purchased a 1,000-gallon helicopter water bucket to aid in the suppression of fires. The bucket was put into operation in March 1977 and has proven to be very successful on initial attack as well as support for conventional fire suppression equipment.

WILDLIFE MANAGEMENT

Camp Lejeune's wildlife management program is designed to provide optimum environmental conditions for all present wildlife species. Balanced ecological conditions through multiple land use operations is the long range goal which the wildlife program is striving to attain. Wildlife management practices are programmed to interpret population levels, habitat requirements in the faunal complex and to gauge the way the population will respond to habitat changes.

The forest at Camp Lejeune is divided into 15 wildlife units where a particular wildlife species is featured. Basically, wild turkey, **squirrel, deer and quail are the four principle species which are featured** in that order. All other game, nongame and endangered species receive due consideration within each wildlife unit. These wildlife units contain 62 forest compartments which are divided into separate stands of trees.

Wildlife management here is directed towards managing forest dwelling species. The management of forest dwelling species is mainly involved with the benefit derived through proper diversity within the plant community. It is essential that there be a compatible program when managing forest and wildlife resources.

The Base Wildlife Manager and Base Forester coordinate their management practices to harmonize the resource program for which they are responsible. Timber prescriptions, reforestation, prescribed burning, key wildlife areas and general habitat improvement receive maximum consideration through their coordinated efforts. Working together they are meeting established program goals and guidelines compatible with their respective programs.

A STRIP OF SHRUB LESPEDEZA IS INSPECTED BY A YOUNG MARINE ASSIGNED TO THE WILDLIFE MANAGEMENT BRANCH

THESE WILD TURKEYS ARE FEEDING ON DRUG-TREATED GRAIN PRIOR TO RELOCATION ON THE BASE

One hundred-nine wildlife openings totaling 366 acres have been established for suitable plants in the woodland edge for wildlife species. These openings provide supplements to the natural food supply and enhance cover conditions along the woodland edge. Perennial grasses, grains, and legumes are established in these openings.

Portions of the openings are left fallow and portions are planted through crop rotation to maintain the desired stages of plant regeneration. Such openings add diversity within the plant community and enhance the general aesthetics of the forest area. The clear vistas of the openings provide the user with the opportunity to view, study or photograph wildlife from concealed vantage points. Hunter success increases around openings since game regularly visit these diversified sites.

Seventy eight miles of forest access roads have been seeded to perennial grasses to stabilize the soil, reduce road maintenance, provide food for wildlife and improving the aesthetics of the woodlands.

Management for bobwhite quail has been intensified in the 2,352-acre tract managed primarily for this species. New one-fourth-acre strips of bicolor lespedeza have been established in reaching the goal of one strip per twenty acres. Nesting cover is being enhanced by discing transition bands around these areas left for protection from annual prescribed burning. These protected areas are located near bicolor strips and occur at the rate of one per twenty acres. This practice along with annual prescribed burning and thinning of longleaf timber is expected to provide quality quail hunting in the future.

A cooperative program for monitoring the plant community and censusing the quail population has been established with North Carolina State University. Initial plant sampling and population censusing has been

THIS ACTIVE ALLIGATOR NEST IS INSPECTED BY A NORTH CAROLINA WILDLIFE RESOURCES COMMISSION BIOLOGIST

THIS NESTING ATLANTIC LOGGERHEAD AT ONSLOW BEACH WEIGHED APPROXIMATELY 250 POUNDS

8] accomplished which will continue on an annual basis. Plant monitoring and population censusing is established for the quail management area as well as for a controlled area for comparison purposes.

A graduate student has completed a research project on habitat preference, breeding success and population status of the Eastern bluebird at Camp Lejeune. Two hundred nesting boxes were established in selected habitat types for enhancing the bluebird population and providing nesting facilities necessary for this study. Over 50% of these boxes were used for nesting during the past nesting season.

Twenty-two wild turkeys were trapped from areas with high populations, east of New River and released in the Verona area on the western shoreline. The birds were captured with drug-treated grain and released in good condition. Numerous broods of turkey poults observed during the past summer indicate success of these releases. The purpose for this relocation was the restoration of wild turkey which existed there prior to FY-74 when the population level suddenly declined.

Protection of endangered species is in accordance with the National Environmental Policy Act of 1969 and the Endangered Species Act of 1973. Principle threatened and endangered species on the national list which are found here are the red-cockaded woodpecker, loggerhead sea turtle and the American alligator. All known woodpecker sites are in the process of being mapped and marked for protection. Population censuses are being conducted to determine the status of both woodpeckers and alligators. The Atlantic loggerhead turtle nesting habitat at Onslow Beach is receiving protection. The Atlantic loggerhead has recently been placed on the National list of threatened species. Seventy-six individual nests were

protected from raccoon and fox depredation during FY-76-78. Thirty-three loggerheads were tagged during the same period. Turtle nesting surveys using helicopters were conducted during the peak nesting periods in July and August from New River Inlet to Cape Lookout. This is a cooperative project with the University of North Carolina Institute of Marine Sciences, Morehead City, North Carolina.

A new responsibility of the Wildlife Management Branch of Natural Resources is protection of archaeological resources. Sensitivity mapping of known sites has been completed. Two sites are considered significant for possible nomination to the National Listing of Important Archaeological Sites.

Protection of game, nongame and endangered species is a primary responsibility of the wildlife management program. Local, state and federal laws are adopted for insuring the protection of all present wildlife species. Four military billets are established for wildlife law enforcement duty which are augmented by six additional military billets during the hunting seasons. These personnel are also responsible for issuing permits, assignment of hunters and collection of public use information.

FISH MANAGEMENT

The fishery management program is designed to produce sustained annual crops of fish for recreational purposes. Thirteen freshwater ponds are currently under management totaling approximately 38 acres. Eight of these are natural and five are man-made all of which are stocked with warm water species. Management techniques consist of fertilization to promote plankton and other microscopic plant growth, liming to control pH factor and use of aquatic herbicide for weed control. Stocking is done on an as-necessary basis.

A wide variety of both freshwater and saltwater species inhabit the freshwater ponds and streams, saltwater bays and the Atlantic Ocean adjoining the base. The saltwaters provide commercial fisheries along the lower bays, Intracoastal Waterway and in the Atlantic Ocean. Extensive saltwater areas also produce bountiful supplies of shellfish for public use.

BASS (7 lbs 3/4 ozs) WAS TAKEN FROM POWERLINE POND 25 MARCH 1975

THE MARSH

There are approximately 3,326 acres of salt marsh at Camp Lejeune. The marsh area is a unique and invaluable ecosystem, upon which most marine species are directly or indirectly dependent. Some species live and spawn in the sea as adults but enter the marsh for development; others enter the protective waters to spawn or to feed; while other species spend an entire life span in the marsh. It is the home and feeding ground of countless waterfowl and small mammals in addition to many amphibians and reptiles. The salt marsh areas remain in the natural state in that no dredging or channelizing has taken place.

THIS SALT MARSH AND ESTUARINE AREA NOT ONLY CONTRIBUTES TO NATURAL BEAUTY BUT IS A VERY IMPORTANT PART OF THE MARINE ECOSYSTEM.

ENVIRONMENTAL EDUCATION AND TRAINING PROGRAMS

GUEST SPEAKER PROGRAM

In addition to conservation education programs concerning proper and safe handling of guns, water safety, sportsmanship and woodmanship conducted by base clubs and organizations, personnel of the Natural Resources and Environmental Affairs Division take an active part in guest speaking engagements.

One of the most popular methods of providing information to groups desiring knowledge in the conservation field has been the guest speaker program. Guest speaking engagements, accompanied with slides, have been very much in demand by units, school classes, and civic organizations. In 1976, 1977 and 1978 one hundred and nine presentations were made to a total of 12,000 people. In addition, seven appearances were made on local television stations wherein wildlife conservation, forestry management, and pollution abatement were discussed. It is believed that explanations of base plans and accomplishments in the conservation field are especially beneficial in fostering community relations and the exchange of ideas.

POLLUTION ABATEMENT EDUCATION

Beginning in January 1974, the educational process is being used in an effort to promote the pollution abatement program. Classroom time was granted for a slide/lecture presentation on the environment to be routinely included as a part of the Motor Transport School Company, Montford Point, student training program. The base ecologist gives the presentations with special emphasis being placed on oil pollution. By making each

more aware of environmental problems, it is hoped more desirable habits and attitudes will be developed, resulting in better Marines and better citizens. To date, approximately **3,500** students have attended the lecture.

BASE ECOLOGIST GIVES SLIDE PRESENTATION ON OIL POLLUTION TO STUDENTS OF MOTOR TRANSPORT SCHOOL COMPANY, MONTFORD POINT

COMMUNITY RELATIONS

During the Fall of 1972, Mutual Fire-fighting Assistance Agreements were entered into with the City of Jacksonville, North Carolina, Onslow County, and the US Department of Agriculture Forest Service. In addition, the existing agreement with the North Carolina Department of Natural and Economic Resources was updated. Under these agreements, mutual available fire fighting support is rendered when required.

Appropriate personnel attend wildlife, forestry and environmental meetings, training sessions, and symposiums sponsored by private, state and federal agencies in these fields. Professional personnel attend the meetings and conventions of the Society of American Foresters.

Under sponsorship of the Marine Corps Human Relations Program, approximately 100 Marines from 2d Force Service Support Group have voluntarily constructed nature trails and planted several hundred pine trees for several nearby public elementary schools during the past two years. The nature trails, located in wooded areas adjacent to the schools are proving invaluable to the school in teaching the basics of conservation. The pine trees were planted as borders around bare portions of school grounds.

BIOLOGY STUDENTS RECEIVE "ON THE SCENE" INFORMATION

Marines from 2d Marine Division have assisted Coastal Carolina Community College in clearing and establishing a nature trail for its Biology Department. The trail is located on a tract of land adjacent to and formerly a part of Camp Lejeune.

The general foreman and foreman of the sewage treatment plants, Utilities Division, Base Maintenance Department, are involved in a unique training program with the North Carolina Department of Air and Water Resources and the Coastal Carolina Community College, Jacksonville, North Carolina. Since 1973, the Camp Lejeune sewage treatment plant supervisors have been the instructors for a series of 13-week Wastewater Treatment Classes held at Coastal Carolina Community College. 200 students from throughout Eastern North Carolina have participated in the night classes since September 1975. Thirty-one base sewage treatment plant personnel have successfully completed all requirements of the course and each was awarded Sewage Treatment Plant Operator Grade I to IV Certification by the State of North Carolina. Most of the training was conducted on campus; however, base sewage treatment facilities were visited on several occasions for special instructions with the laboratory being utilized for the chemical analysis part of the course.

According to the Director of Operator Training for the North Carolina Air and Water Resources Board, the training program was the most successful completed in this field; a comment well received by Camp Lejeune.

Good relations are maintained with local, state and federal authorities in our efforts to foster the environmental enhancement program at Camp Lejeune.

COASTAL CAROLINA COMMUNITY COLLEGE STUDENTS DURING TOUR OF WASTE WATER TREATMENT FACILITIES AT HADNOT POINT

Disaster averted at CHB

By Sgt. Brenda Lanclos

The fast action of a combined force of personnel from the Marine Corps Engineer School, Base Maintenance and the Base Fire Department turned what was a potentially disastrous situation into a massive "clean up" here Feb. 28.

The incident occurred at 9:45 a.m. when a delivery fuel truck swung too wide at the turn into the Courthouse Bay Service Station. This caused 8,200 gallons of gasoline to shift to one side tipping the tanker into a covert.

The driver of the tanker kicked out the window and left the truck. He was later treated for minor injuries at the Courthouse Bay Dispensary and released.

Approximately 5,000 gallons of fuel was spilled into the ditch. Immediately, Marines from Engineer School were called in to

begin hand shoveling dirt to form a dam that would prevent seepage of the fuel into the outlying areas. They were summoned by Frank A. Hinton, assistant manager of the Service Station.

Shortly afterwards, the Base Fire Department, sprayed the

ditch with light-water which lowered the combustion level of the fuel, and began a mopping up exercise. Base Maintenance cleaned up the area and

uprighted the toppled tanker.

Mr. Julian I. Wooten, Base ecologist, praised the teamwork, stating "Because of the quick response, the fuel was prevented

from flowing into the Courthouse Bay Housing area, which could have caused a fire hazard and also lead to the pollution of New River."

Photo by Sgt. D.M. Sullivan

Saving historical Olde Towne Point

By SSgt. Tom Griggs

The town of Johnston, N.C., was destroyed by a severe storm 225 years ago. It was located at a site in Onslow County along the New River called Olde Towne Point, located on what is now Camp Lejeune. Today, the site itself is threatened by erosion.

Olde Towne Point is historically significant because the first Onslow residents settled there in 1705. And in 1741 Johnston was established, becoming the first Onslow County Seat. Camp Lejeune conservationists from the Natural Resources and Environmental Affairs Division, Base Maintenance, are determined to save the historical site.

Base ecologist Julian Wooten says four feet of the river's bank have eroded in the last six months at Towne Point. He points out natural forces have been the cause. "Wind and tide cause water to cut it away, especially in storm conditions, where there's much wave action," he says.

Steps already have been taken to halt the erosion. About 300 yards of the 1200-yard problem area are under treatment now. Wooten says the heavy equipment section of Base Maintenance is covering the bank with masonry rubble from old sidewalks and demolished buildings here.

The rubble isn't attractive, but Wooten says that will remedy itself. "After the bank has

SAVING THE POINT — Camp Lejeune base ecologist Julian Wooten looks over the first load of masonry rubble dumped on the bank of the New River at Olde Towne Point. The point - site of the first settlement in Onslow County - is being treated for erosion. (USMC photo by SSgt. Tom Griggs)

stabilized, natural vegetation will grow up around the concrete rubble, and eventually pine trees will grow," he explains.

While preserving the historical site and protecting the real estate are important, there's another vital reason for stopping the erosion, the ecologist says. "Soil

erosion is the largest form of pollution in the country, according to the Soil Conservation Service (SCS)," Wooten claims. "It results in sedimentation - particles of the soil being washed into the water - which can eliminate spawning areas for fish, wipe out oyster beds and require dredging, just to name a few."

The ecologist says the stabilization work at Towne Point had to be approved first by the U.S. Army Corps of Engineers. Lejeune was required to obtain a permit to place materials below the high tide line.

Erosion at Olde Towne Point was recognized by the Camp Lejeune Natural Resources Management Plan. Prepared jointly by the base and the Onslow Soil Conservation District, the plan identifies conservation problems throughout the base, including soil erosion. "It has provided us a schedule over a 10-year period for the treatment or correction of erosion problems," Wooten explains. "Each case is scheduled according to priority - or the worst first."

Assisting the Lejeune conservationists has been Danny Sharpe, the SCS District Conservationist. "We can call on him for expert opinion," Wooten says.

Olde Towne Point is located on the opposite side of New River from the Naval Regional Medical Center here. An historical marker has been placed there.

CONVEYOR — Virgil Whaley (left) and Oscar Wooten sort and break down part of the seven tons of cardboard waste processed daily at the Base Recycling Plant. (USMC photo by Sergeant Erny Richardson)

DISCARD ALL THE NEWSPAPERS — Workers from the Base Recycling Plant, prepare the first load of newspapers for recycling processing since the plant increased its service capabilities. The plant has processed and shipped more than 1,000 tons of cardboard paper since opening its doors last September. (USMC photo by Sgt. Wesley Goodloe)

Recycling helps local program

By Sgt. Erny Richardson

Seven tons of cardboard waste could be a lot of litter, but here at Lejeune it's helping develop a valuable natural resource—humans.

This development is one of the functions of the Base Recycling Plant, home of the Onslow County Workshop, a non-profit program run by Coastal Opportunities to aid handicapped persons in Onslow County.

The program began Sept. 10, 1976 and according to Jerome Freedman, plant foreman, it has been working well.

"I've 10 people working here and all have some sort of mental or physical disorder," he says. "Here, they are given, a job; taught how to give and take orders and build up their confidence in the process."

The plant is open Monday through Friday and processes about seven tons of cardboard and computer paper every day.

"We have 34 sites throughout the Camp Lejeune area where cardboard or computer paper can be placed for pick-up," said Freedman, "Twice daily, it's collected and brought to the plant."

This mountainous mass of paper is immediately attacked by several workers armed with a tractor, who load the piles of litter on a long conveyor belt running into a large green machine.

Other workers, standing along the belt, break large boxes into more manageable pieces and remove undesirable objects as cans and bottles. The machine then shreds the paper and compresses it into huge bales, each weighing half a ton.

"During a normal day we usually process 14 of these bales," explained Freedman. "They are loaded on railroad flatcars and shipped to a company in Richmond, Va., where they are reprocessed into boxes and the like."

One of the major problems the recyclers have is dumping the junk and trash collected with the cardboard.

"At the collection sites we have green dumpsters that have 'Cardboard Only' or 'Computer Paper' written on the sides," said Freedman. "Unfortunately, some people ignore this and dump bottles, can and even raw garbage in the dumpsters, making our job harder."

"Otherwise the program is working fine. It aids the Base by taking tons of waste off its hands and allows us to provide jobs and funds to keep the program going," he concluded. "The cooperation of the Marines in helping put this together has really been outstanding."

FOR NEWSPAPERS ONLY — Sgt. Glenn Proctor, a conservation conscious Marine deposits old newspapers in one of six specially marked containers placed around the base. The containers, painted red, white and blue are for 'newspapers only' and used here in a recycling program. They are located in parking areas at Tarawa Terrace shopping center, Midway Park Exchange, Golf House, the old outdoor theater, Berkeley Manor Seven-day store and the main fire station. (USMC photo by Sgt. Wesley Goodloe)

Recycling plant provides two-fold mission

By Sgt. Dave Smith

The Base Recycling Plant personnel here celebrated the second anniversary of the plant's opening September 15.

Since August 1976, handicapped people there have processed more than four million pounds of recyclable paper and cardboard products for resale.

"The money we receive in the sale of recyclable cardboard is used for the repayment of our equipment, paying wages and daily maintenance of the machinery," said Jerry Freeman, a retired Marine First Sergeant who has been the plant's manager since opening.

Coastal Opportunities, which started the project, is a local non-profit organization devoted to helping handicapped people in the Onslow County area become functional citizens in the community.

"Coastal Opportunities works with the county in helping physically or mentally handicapped people adjust to working in a competitive environment," said Freeman. "After they have worked here and progressed enough so that we are confident they can function in a competitive job market, we locate a job and get them placed."

One of the important things about the recycling plant is it is self-sufficient for funding.

"Recyclable paper and cardboard is worth \$40 a ton," said Freeman. "The people here produce an average of 10 bales of cardboard a day. A bale weighs approximately 1,100 pounds. But the daily figures vary, depending on how heavily contaminated the paper products are," he added.

"Our main problem stems from people mixing garbage and non-paper products into the dumpsters marked 'cardboard only,'" Freeman explained. "If people didn't do this, we could produce more bales per day."

But working at the plant has definite advantages. "We really appreciate the co-operation we receive from the various base and civilian organizations we deal with," said Freeman. "Yet the support doesn't end after the contracts are signed. The people working here take pride in their work. This is proved by the fact we trained and placed 11 people in regular jobs in the community since opening."

SORTING PROCESS — Virgil Whaley and Sabrina James, workers at the Base Recycling Plant, Camp Lejeune, N.C., sort and load cardboard products being pushed to them by co-worker Oscar Wooten onto the conveyor leading into the shredding machine inside. (USMC photo by Sgt. Dave Smith)

Marines Win Conservation Battle

by Nancy J. LaLuntas

Preservation of wildlife habitat and conservation education are two aspects of the conservation plan developed by Marines at Camp Lejeune.

Marines at Camp Lejeune, N.C., have an award-winning conservation program for wildlife and forestry management, maintenance of recreation areas, and improved grounds maintenance.

For the third time in recent years, the Marine Corps Base—in competition with military installations throughout the United States—has won the Secretary of Defense Natural Resources Conservation Award. The award is presented annually to the U.S. military installation which has demonstrated, over a 3-year period, the greatest progress in applying resource conservation measures to the land.

Camp Lejeune covers 170 square miles in Onslow County on the southeast coast of North Carolina. Conservation of natural resources there has been a continuing concern for more than 20 years.

In 1956, a cooperative agreement was signed with the Lower Neuse Soil and Water Conservation District (SWCD) asking for assistance in developing a long-term conservation plan for erosion control and grounds maintenance. The Soil Conservation Service, working through the local SWCD, completed the plan in June of that year. It included soils inventory

data, soil interpretations, and maintenance requirements for the base grounds.

More than two-thirds of the marine base is in forest, and in 1964, a 10-year forest management plan was developed by the base with assistance from SCS and the USDA's Forest Service. A complete forest inventory and soil survey were made, and the plan—which provides for scheduled timber harvest, prescribed burning and reforestation, erosion control, and wildlife management—is still in effect.

The 1975 Natural Resources Management Plan was prepared by the Marine Corps Base and the Onslow Soil and Water Conservation District (formerly part of the Lower Neuse SWCD) with technical assistance from SCS. The plan provides for multiple use of all lands except firing ranges and other hazardous areas. It also provides measures to combat erosion and poor drainage; water, soil, and air pollution; wildfires; forest insect and disease damage; unproductive wildlife habitat; and damage or loss of vegetative cover.

Preservation of wildlife habitat, especially for endangered species, is an integral part of the conservation plan. Dredging and military training are not permitted in salt marshes, for

example, because these areas serve as spawning grounds for many species of aquatic life. Endangered species habitat is clearly identified to insure maximum protection.

Fifty-six wildlife food plots supplement natural food supply and enhance brood range. Rye, wheat, and chufa are planted for fall, winter, and early spring grazing. The vegetation on each site is left standing for nesting and feeding throughout the summer.

Well-spaced clearings assure diversity of habitat for many wildlife species. Roads and open areas are seeded to Kentucky 31 fescue and bahiagrass. Autumn olive and other shrubs have been planted in the clearings.

The base has seen a marked increase in wildlife populations, especially deer, turkey, mink, quail, and black bear. Endangered species such as the alligator, osprey, red-cockaded woodpecker, dusky seaside sparrow, and American bald eagle have been sighted during the last several years.

Special efforts are being made to increase the numbers of nongame wildlife. Shrews, bats, jumping mice, and armadillo are among the many species receiving special protection

Military training using amphibious assault vehicles, tanks, and front-end loaders aggravated the soil erosion problem.

and care. A variety of birds flourish in the region, and they, too, are protected. Included are pelicans, herons, sandpipers, owls, tanagers, wood warblers, nuthatches, and wrens.

Conservation education is an important part of training at Camp Lejeune. The base ecologist has given presentations to more than 17,000 students at the Motor Transport School Company, for example, where special emphasis is placed on oil pollution.

Conservation education is also carried into the neighboring community. Under the sponsorship of the Marine Corps Human Relations Program, Marines have constructed nature trails and planted several hundred pine trees for nearby public elementary schools.

Marine Corporal LaLuntas is a writer for the Joint Public Affairs Office, Camp Lejeune, N.C.

Charles Peterson, Camp Lejeune's wildlife manager, and Steve Thomas, North Carolina Wildlife Resources Commission, band a wild turkey that was trapped on the base and will be released in a nearby national forest.

Bobcats are well distributed throughout the 69,312 acres of habitat available to them.

APPENDIX A
BASE ORDER 11000.1
ENVIRONMENTAL CONSIDERATIONS IN MARINE CORPS ACTIONS, CAMP LEJEUNE

UNITED STATES MARINE CORPS
MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA 28542

IN REPLY REFER TO
BO 11000.1
MAIN/CFR/th
23 Jan 1976
CH 1 - 1 Sep 76

BASE ORDER 11000.1 W/CH 1

From: Commanding General
To: Distribution List

Subj: Environmental Considerations in Marine Corps Actions, Camp Lejeune

Ref: (a) MCO P11000.8A
(b) BO 11015.2F

Encl: (1) Instructions for Preparation of Environmental Impact Statements

1. Purpose. To implement environmental program requirements as required (CH 1) by the National Environmental Policy Act (NEPA) and as provided by references (a) and (b).

2. Policy. It is the continuing policy of the Commanding General that:

a. All actions shall be planned, initiated and carried out in a manner to avoid adverse effects on the quality of the environment insofar as practicable.

b. At the inception of an action, an assessment of the probable environmental impact of the action shall be made by the action sponsor.

c. A candidate environmental impact statement shall be prepared and submitted to the Commandant of the Marine Corps (Code LFF) if the preceding assessment indicates a significant adverse environmental effect or potential for controversy.

3. Background

a. The NEPA establishes as Federal policy the use of: "all practicable means and measures . . . to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony . . ."

b. To this end, Section 102 of the NEPA states: ". . . to the fullest extent possible . . . all agencies of the Federal Government shall (systematically balance environmental amenities and values with economic and technical considerations) . . . (and shall) include in every recommendation or report on proposals for legislation and other major Federal actions

significantly affecting the quality of the human environment; a detailed statement by the responsible official on . . . the environmental impact of the proposed action . . ."

4. Definitions. For the purpose of this order, the following definitions are provided:

a. Action - Includes, but is not limited to, policies, regulations, projects, programs and continuing acts.

b. Environmental Impact Assessment (EIA) - An initial evaluation of any action's impact on the environment by the action sponsor.

c. Candidate Environmental Impact Statement (CEIS) - Those written assessments of actions considered by the sponsor to have potential either for significant effect on the environment or to be highly controversial with regard to environmental effects and which have been submitted to the Commandant of the Marine Corps.

d. Draft Environmental Impact Statement (DEIS) - Those candidate statements which have been:

(1) Reviewed by the Marine Corps Environmental Impact Statement Review Board.

(2) Approved by the Commandant of the Marine Corps and the Secretary of the Navy.

(3) Forwarded by the Secretary of the Navy to the CEQ and other appropriate agencies for review and comment prior to the completion of a final EIS.

e. Final Environmental Impact Statement - The completed statement which incorporates all pertinent comments and information and is submitted to the CEQ as an evaluation of environmental impact for a particular action.

5. Requirements

a. Action sponsors will:

(1) Prepare an environmental impact assessment on all proposed and ongoing actions with respect to environmental effects.

(2) Modify proposed or ongoing actions so as to reduce adverse environmental effects to the extent possible.

(3) Where potential for environmental impact or controversy is determined by the Environmental Impact Review Board, prepare a CEIS for submission to the Commandant of the Marine Corps (Code LFF), via Commanding General, Marine Corps Base, Camp Lejeune, North Carolina.

* (4) Maintain cost records directly related and identifiable to preparation and processing environmental impact assessments as directed by reference (a).

* (5) Will provide the Chairman of the Environmental Impact Review Board with a list of all environmental impact assessments to be prepared or under preparation.

* (6) Will complete assessments in a timely manner and forward same to the Chairman, Environmental Impact Review Board.

b. Procedures for preparation of environmental impact assessments and/or statements are contained in enclosure (1). Detailed information and assistance may be obtained from the Natural Resources and Environmental Affairs Division, Base Maintenance Department (telephone 5003).

c. The Environmental Impact Review Board, as established in reference (b), has the following responsibilities:

(1) Make available to the Commanding General the broad environmental guidance prescribed by NEPA and assist him in understanding the responsibilities assigned to him by law.

(2) Receives and reviews environmental impact assessments and determines if the potential for significant environmental impact or controversy exists.

(3) Minutes of the board meeting shall be maintained by the Chairman and copies of written assessments reviewed by the board shall be made a part of the minutes. If adverse environmental impact or controversy exists, appropriate additional action will be recommended to the Commanding General, Marine Corps Base.

d. Tenant commands and Marine Corps Air Station (H), New River will be considered as action sponsors and will utilize the Environmental Impact Review Board as provided herein.

* 6. Special Requirements - Military Construction (MCON) Line Items. A written assessment discussing points outlined by reference (a) will be prepared for review by the Environmental Impact Review Board for all MCON line items except for family housing projects and projects under sponsorship of other federal agencies on Marine Corps Base.

* 7. Responsibilities

a. Base Maintenance Officer

BO 11000.1
23 Jan 1976

(1) Provides and coordinates surveys and identification of pollution abatement deficiencies and interpretation of activity compliance with environmental standards.

(2) Reviews Navy Environmental Protection Support Service (NEPSS) reproduced pollution abatement reports and makes necessary changes.

b. Public Works Officer. Maintains a pollution abatement report file on active projects and prepares new project reports on planned pollution abatement projects and submits same to the Commandant of the Marine Corps.

c. Chairman, Environmental Impact Review Board. Responsibilities are established by reference (b).

8. Applicability. Having received the concurrence of the Commanding Generals, 2d Marine Division (Rein), FMF and Force Troops/2d Force Service Support Group, FMFLANT, and the Commanding Officers of Naval Regional Medical Center and Naval Regional Dental Center, this order is applicable to those commands. Since the Commander, Marine Corps Air Bases East likewise concurs, it is further applicable to the Marine Corps Air Station (H), New River, Jacksonville, North Carolina.

INSTRUCTIONS FOR PREPARATION OF ENVIRONMENTAL IMPACT STATEMENTS

The body of an environmental statement shall contain the following separable sections with the length of each being adequate to identify and develop the required information:

1. Introduction

a. Project Description. A description of a proposed action, a statement of its purposes, and a description of the environment affected, including information, summary technical data, and maps and diagrams where relevant, adequate to permit an assessment of potential environmental impact by commenting agencies and the public. Highly technical and specialized analyses and data should be avoided in the body of the impact statement. Such materials should be attached as appendixes with adequate bibliography references.

b. Existing Environment of Proposed Site. The statement should describe the environment of the area affected as it exists prior to a proposed action, including other Federal activities in the area affected by the proposed action which are related to the proposed action. The interrelationships and cumulative environmental impacts of the proposed action and other related Federal projects shall be presented in the statement. The amount of detail provided in such descriptions should be commensurate with the extent and expected impact of the action, and with the amount of information required at the particular level of decision-making (planning, feasibility, design, etc.). In order to ensure accurate descriptions and environmental assessments, site visits should be made, where feasible. Commands should also take care to identify, as appropriate, population and growth characteristics of the affected area and any population and growth assumptions used to justify the project or program or to determine secondary population and growth impacts resulting from the proposed action and its alternatives. In discussing these population aspects, consideration should be given to using the rates of growth in the region of the project contained in the projection compiled for the Water Resources Council by the Bureau of Economic Analysis of the Department of Commerce and the Economic Research Service of the Department of Agriculture (the "OBERS" projection). In any event, it is essential that the sources of data used to identify, quantify, or evaluate any and all environmental consequences be expressly noted.

2. Relationship of Proposed Action to Land Use Plans, Policies and Controls for the Affected Area. This requires a discussion of how the proposed action may conform or conflict with the objectives and specific terms of approved or proposed Federal, State, and local land use plans, policies, and controls, if any, for the area affected, including those developed in response to the Clean Air Act or the Federal Water Pollution Control Act Amendments of 1972. Where a conflict or inconsistency exists, the statement should describe the extent to which the command has reconciled

ENCLOSURE (1)

23 Jan 1976

its proposed action with the plan, policy, or control, and the reasons why they decided to proceed notwithstanding the absence of full reconciliation.

3. Probable Impact of the Proposed Action on the Environment

a. Assessment of the positive and negative effects of the proposed action as it affects both the national and international environment. The attention given to different environmental factors will vary according to the nature, scale, and location of proposed actions. Primary attention should be given in the statement to discussing those factors most evidently impacted by the proposed action.

b. Secondary or indirect, as well as primary or direct, consequences for the environment should be included in the analysis. Many major Federal actions, in particular those that involve the construction (e.g., new installations, joint use of an installation, etc.), stimulate or induce secondary effects, in the form of associated investments and changed patterns of social and economic activities. Such secondary effects, through their impacts on existing community facilities and activities through inducing new facilities and activities, or through changes in natural conditions, may often be even more substantial than the primary effects of the original action itself. For example, the effects of the proposed action on population and growth impacts should be estimated if expected to be significant and an evaluation made of the effect of any possible change in population patterns or growth upon the resource base, including land use, water, and public services, of the area in question.

4. Alternatives. Alternatives to the proposed action, including, where relevant, those not within the existing authority of the responsible command. A rigorous exploration and objective evaluation of the environmental impacts of all reasonable alternative actions, particularly those that might enhance environmental quality or avoid some or all of the adverse environmental effects, is essential. Sufficient analysis of such alternatives and their environmental benefits, costs, and risks should accompany the proposed action through the review process in order not to foreclose prematurely options which might enhance environmental quality or have less detrimental effects. Examples of such alternatives include the alternative of taking no action or of postponing action pending further study; alternatives requiring actions of a significantly different nature which would provide similar benefits with different environmental impacts; alternatives related to different designs or details of the proposed action which would present different environmental impacts (e.g. cooling ponds versus cooling towers for a powerplant or alternatives that will significantly conserve energy); alternative measures to provide for compensation of fish and wildlife losses, including the acquisition of land, waters, and interests therein.

5. Any Probable Adverse Environmental Effects which cannot be Avoided should the Proposal be Implemented. This should be a brief section summarizing in one place those effects discussed in paragraph three, preceding, which are adverse and unavoidable under the proposed action. Included for purposes of contrast should be a clear statement of how other avoidable adverse effects discussed in paragraph two, preceding, will be mitigated.
6. The Relationship Between Local Short-term Use of Man's Environment and the Maintenance and Enhancement of Long-term Productivity. This section should contain a brief discussion of the extent to which the proposed action involved tradeoffs between short-term environmental gains and the expense of long-term losses, or vice versa, and a discussion of the extent to which the proposed action forecloses future options. In this context, short-term and long-term do not refer to any fixed time periods but should be viewed in terms of the environmentally significant consequences of the proposed action.
7. Any Irreversible and Irretrievable Commitments of Resources that would be Involved in the Proposed Action should it be Implemented. In this section identify from a survey of unavoidable impacts in paragraph five, preceding, the extent to which the action irreversibly curtails the range of potential uses of the environment. Avoid construing the term "resources" to mean only the labor and materials devoted to an action. "Resources" also means the natural cultural resources committed to loss or destruction by the action.
8. Considerations that offset the Adverse Environmental Affects. Indicate the extent to which these stated countervailing benefits could be realized by following reasonable alternatives to the proposed action (as identified in paragraph four, preceding). In this connection, cost benefit analysis of proposed actions should be attached, or summaries thereof, to the environmental impact statement and should clearly indicate the extent to which environmental risks have not been reflected in such analysis.
9. Summary Sheet. The environmental statement shall be accompanied by a summary sheet which must provide the following information:
 - a. Indicate whether the statement is draft or final.
 - b. Give the name of the action and indicate whether it is an administrative or legislative action.
 - c. Provide a brief description of the action and indicate what geographical region (states and counties) is particularly affected.
 - d. Summarize the environmental impact and adverse environmental effects.
 - e. List alternatives considered.

ENCLOSURE (1)

BO 11000.1

Subj: Air Pollution Emergencies

Ref: (a) MCO P11000.8A
(b) Article 21 of Chapter 143, General Statutes of North Carolina (Rules and Regulations Governing the Control of Air Pollution)

Encl: (1) Definitions
(2) Episode Criteria and Action to be Taken

1. Purpose. To publish regulations to prevent the excessive buildup of air contaminants during air pollution episodes, thereby preventing the occurrence of an emergency due to the effects of these contaminants on the public health, in accordance with the instructions contained in references (a) and (b).
2. Cancellation. BO 11090.2.
3. Policy. It is the continuing policy of the Commanding General to actively participate in environmental pollution abatement and to take positive planning and programming action to prevent air pollution.
4. Responsibility. The Assistant Chief of Staff, Facilities is charged with the overall responsibility of coordinating the various measures of this Order.
5. Action. Cognizant officers will take the necessary action to ensure compliance with this Order.
6. Applicability. This Order is applicable to all Commands at Camp Lejeune and the Marine Corps Air Station (Helicopter), New River.

B. H. CURWEN, Jr.
Chief of Staff

DISTRIBUTION: "A"

DEFINITIONS

The North Carolina Water and Air Resources Board, under authority of Article 21 of Chapter 143 of the General Statutes of North Carolina, as amended, has adopted a regulation relating to air pollution emergencies. Some of the terms within this Act are provided as general information:

1. Ambient Air: Means that portion of the atmosphere outside of buildings and other enclosures, stacks, or ducts, and which surrounds human, animal or plant life, or property.
2. Combustible Material: Means any substance which, when ignited, will burn in air.
3. Dustfall: Means particulate matter which settles out of the air and is expressed in units of grams per square meter per 30-day period.
4. Garbage: Means any animal and vegetable waste resulting from the handling, preparation, cooking and serving of food.
5. Incinerator: Means a device designed and engineered to burn solid, liquid, or gaseous waste material.
6. Opacity: Means that property of a substance tending to obscure vision and is measured in terms of percent obscuration.
7. Open Burning: Means any fire wherein the products of combustion are emitted directly into the outdoor atmosphere and are not directed thereto through a stack or chimney, approved incinerator, or other similar device.
8. Particulate Matter: Means any material, except uncombined water, that exists in a finely divided form as a liquid or a solid at standard conditions.
9. Refuse: Means any garbage, rubbish and trade waste.
10. Rubbish: Means solid or liquid wastes from residences and dwellings, commercial establishments, and institutions.
11. Rural Area: Means any area which is primarily devoted to, but not necessarily limited to, the following uses: agriculture, recreation, wildlife management, state park, or any area of natural cover.
12. Smoke: Means small gas-borne particles resulting from incomplete combustion, consisting predominantly of carbon, ash and other burned or unburned residue of combustible materials that form a visible plume.

ENCLOSURE (1)

EPISODE CRITERIA AND ACTION TO BE TAKEN

1. Conditions justifying the proclamation of an air pollution alert, air pollution warning, or air pollution emergency shall be deemed to exist whenever the accumulation of air contaminants in any place is attaining, or has attained, levels which could, if such levels are sustained or exceeded, lead to a threat to the health of the public. The Assistant Director, Department of Natural and Economic Resources, Office of Water and Air Resources, State of North Carolina will, via the news media, radio, television, etc., inform the State as to such episodes and the area included. Normally, such announcements will be in conjunction with the National Weather Service Advisory that an atmospheric stagnation advisory is in effect or the equivalent local forecast of stagnant atmospheric conditions exist. Normally, these conditions will occur during the summer months, if at all, in this area.

2. The atmospheric stagnation advisories are:

- a. Air Pollution Alert - the first level of contamination.
- b. Air Pollution Warning - the second level, indicating conditions are continuing to degrade.
- c. Air Pollution Emergency - the third level, indicating that stagnation has become a public health hazard.

3. At such time as an atmospheric stagnation advisory is announced, the cognizant officers shall take such action as follows:

a. Air Pollution Alert. The alert level is that concentration of pollutant at which first stage control actions are to be taken.

(1) There shall be no open burning of waste, vegetation, refuse or debris in any form.

(2) The use of incinerators for the disposal of any form of solid waste shall be limited to the hours between 1200 and 1600.

(3) All unnecessary operations of motor vehicles shall be curtailed.

(4) Coal or oil-fired process steam generating facilities shall:

(a) Make maximum use of midday (1200-1600) atmospheric turbulence for boiler lancing and soot blowing.

(b) Substantially reduce steam load demands consistent with continuing plant operations.

ENCLOSURE (2)

b. Air Pollution Warning. The warning level indicates that air quality is continuing to degrade and that additional abatement actions are necessary. If announced first, carry out the instructions under Air Pollution Alert, and then the following:

(1) Persons operating motor vehicles shall minimize such use through car pools.

(2) All diesel burning vehicles shall cease to be operated; i.e., only nontactical vehicles burning gasoline will be operated.

(3) All firing of weapons shall cease, to include the Rifle Range operations, and such field firing exercises that may be in progress.

(4) Base Maintenance will prepare to close all steam valves except those providing steam to dining facilities; i.e., reducing steam plant operations to minimum requirements.

c. Air Pollution Emergency. The emergency level indicates that air quality is continuing to degrade to a level that should never be reached and that the most stringent control actions are necessary. If announced first, carry out those provisions of Air Pollution Alert/Warning, in addition to the following:

(1) The use of motor vehicles is prohibited, except in emergencies with the approval of the Commanding General, Marine Corps Base; the Commanding General, 2d Marine Division (Rein), FMF; the Commanding General, Force Troops/2d Force Service Support Group, FMFLant; the Commanding Officer, Marine Corps Air Station (H), New River; and the Commanding Officers, Naval Regional Medical Center and Naval Regional Dental Center, and then only with the approval of the local or state police.

(2) Coal or oil-fired process steam generation facilities will be reduced to absolute necessities consistent with preventing equipment damage, maintaining steam to dining facilities only.

(3) All construction work involving grading or other operations which generate dust shall cease.

(4) All Commissary, Marine Corps Exchange and Special Services facilities will be closed.

(5) All dependent elementary, secondary, high and service schools shall close.

(6) Complete elimination of the use of incinerators.

d. Termination. Once declared, any status reached by application of the above criteria will remain in effect until the criteria for that level is no longer met. At such time, the next lower status will be assumed.

APPENDIX C

BASE ORDER 11090.1A

SPILL PREVENTION, CONTAINMENT AND COUNTERMEASURE
PLAN FOR OIL AND OTHER HAZARDOUS SUBSTANCES

UNITED STATES MARINE CORPS
MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA 28542

BO 11090.1A
MAIN/JIW/th
31 Dec 1975

BASE ORDER 11090.1A

From: Commanding General
To: Distribution List

Subj: Spill Prevention, Containment and Countermeasure Plan for
Oil and Other Hazardous Substances

Ref: (a) MCO P11000.8A
(b) Engineering Report for SPCC Plan (NOTAL)
(c) BO 5100.13B
(d) NAVAIR 06-5-502 (NOTAL)
(e) TM-066 74A-15 (NOTAL)

Encl: (1) Spill Prevention and Containment Plan
(2) Contingency Spill and Countermeasure Plan

1. Purpose. To publish the Spill, Prevention, Containment and Countermeasure Plan for Oil and Other Hazardous Substances for Marine Corps Base, Camp Lejeune/Marine Corps Air Station (Helicopter), New River Complex and assist the Commanding General in the implementation of reference (a) with respect to pollution abatement.

2. Cancellation. BO 11090.1

3. Policy. It is the continuing policy of the Commanding General to actively participate in environmental pollution abatement and take positive planning and programming action to control petroleum products pollution from installations, equipment, vehicles and other Marine Corps facilities. This base and air station will conform to the provisions of the National Environmental Policy Act and the Oil Pollution Act of 1961, as amended, and the Federal Water Pollution Control Act, as amended, insofar as the acts prohibit the discharge of oil, regardless of whether the acts pertain specifically to naval vessels and shore activities. The intent of this policy is to carry out the various measures of references (a) and (b) and prohibit the discharge of all oil, oily mixtures and other hazardous substances except in designated areas by qualified personnel.

4. Responsibilities

a. Base Maintenance Officer is charged with the overall responsibility of carrying out the various measures of this order. Natural Resources and Environmental Affairs Director (telephone 5003) is responsible to the Base Maintenance Officer for the day to day monitoring, surveillance, and up-channel reporting of events concerning pollution caused by oil or other hazardous substance spills.

31 Dec 1975

b. Commanding Officers/Area Commanders are charged with the responsibility of preventing oil spills or other hazardous substances within their own areas and will develop local plans for containment in case of accidental spills.

c. Base Fire Chief or his senior representative will act as the On-Scene Coordinator (OSC). He will make the initial response to any contingency spill and will be in overall charge at the scene until relieved by the arrival of the Natural Resources and Environmental Affairs Director or his representative. The Crash Crew Officer or his senior representative will act as the OSC in spill areas aboard MCAS(H), New River in aircraft operating areas.

5. Action. Discharge of oils or other hazardous substances on the ground, into ditches, culverts, or receiving streams is prohibited. Special attention will be directed to areas where vehicles and equipment are serviced. Cognizant officers will take necessary action to assure compliance. Commanding Officers/Area Commanders shall conform to the standards and criteria as set forth in enclosures (1) and (2).

6. Applicability. Having received the concurrence of the Commanding Generals, 2d Marine Division, FMF and Force Troops/2d Force Service Support Group, FMFLANT, and the Commanding Officers of Naval Regional Medical Center, Naval Medical Field Research Laboratory, Naval Regional Dental Center, this order is applicable to those Commands. Since the Commander, Marine Corps Air Bases East likewise concurs, it is further applicable to the Marine Corps Air Station (H), New River, Jacksonville, North Carolina.

A. I. Fox

G. C. FOX
Chief of Staff

DISTRIBUTION: "A"

SPILL PREVENTION AND CONTAINMENT PLAN

1. Oil spill prevention is the responsibility of all organizations/activities. Each Area Commander will ensure all personnel are indoctrinated in order to make them thoroughly conscious and aware of the environmental impact of oil spills and other hazardous substance discharges.
2. All activities will guard against the creation of possible oil spills and hazardous substance discharge situations and necessary action shall be taken to assure containment.
3. Disposal of oil, gasoline, kerosene, lube grease, JP-4, JP-5, hydraulic fluid, paint thinner, organic solvents, deteriorated cleaning solutions, poisonous chemical waste and corrosive acids through any drainage system (either surface or subterranean) is prohibited. Waste oil, kerosene, JP-4, JP-5, hydraulic fluid and paint thinner will be disposed of in accordance with paragraph nine below. Lube grease will be collected and disposed of at the sanitary landfill. For disposal of contaminated gasoline contact Natural Resources and Environmental Affairs Director (telephone 5003). Other substances mentioned herein will be disposed of as outlined in reference (c).
4. Personnel wishing to change oil in privately owned vehicles will use facilities at Base Special Services Auto Hobby Shop, Building 1120, Hadnot Point or Special Services Auto Hobby Shop, Building 828, Marine Corps Air Station (H), New River or put the waste oil in one of the collection tanks found aboard base. At no time will oil be drained from a vehicle on the deck, into a storm drain or any other drainage system.
5. Disposal of empty or damaged containers of all types in wooded areas, drainage ditches, and other areas that might cause environmental damage is prohibited. All empty 55-gallon drums will be disposed of through Defense Property Disposal Agency Office Lejeune, Building 906. Other containers will be disposed of at the sanitary landfill, or prepared for recycling if practical.
6. Oil and gasoline storage tanks larger than 550-gallon capacity will be properly diked. The dike will be properly equipped with a drainage line and valve(s). Only authorized personnel will be permitted to open and close said valve(s). After each drainage, the valve(s) will be closed and locked.
7. From time to time organic tactical refueling systems are installed and used on base. Installation of this equipment must be approved by the Base Maintenance Officer. Fuel stored in these tactical refueling systems will be properly diked in accordance with reference (d) or (e).

ENCLOSURE (1)

8. Certain units aboard base and the air station use tankers for temporary storage of fuel. In the past spillage has occurred around these vehicles during recirculation operations and while transferring fuel. To help alleviate this problem hoses, nozzles, and other equipment will be checked for serviceability. Before recirculation operations begin, nozzles will be secured in the tanker. Pump or truck operators will stay with the vehicle while loading, unloading, or recirculating fuel. Catch buckets will be placed under hose connections to tank trucks before connecting or disconnecting hose to prevent minor spills. Tankers containing fuel will be parked in a position that will prevent any spilled fuel from entering ditches and storm drains.
9. Waste oil will be collected in a tank of at least 250-gallon capacity equipped with a funnel, strainer, and cover so as to prevent entrance of trash, water, and other foreign matter. When the container requires emptying, the officer in charge will call Base Maintenance Department (telephone 5909) and a truck will be dispatched to remove the oil. 55-gallon drums will be used for temporary storage of waste oil in emergency situations.
10. Waste petroleum products generated during field exercises will be stored in 55-gallon drums. For disposal instructions contact Natural Resources and Environmental Affairs Director, Base Maintenance Department (telephone 5003). At no time will these products be poured on the ground.

CONTINGENCY SPILL AND COUNTERMEASURE PLAN

1. Reporting. Spills, accidental or otherwise, of oil or other hazardous substances will be reported immediately to the Base Fire Department (on base - telephone 3333/off base - telephone 451-3333) giving location, substance spilled and approximate amount.
2. Response. Upon receiving a report of a significant oil or other hazardous substance spill, the Base Fire Department will dispatch a regular fire fighting unit to the scene. The Base Fire Chief or his senior representative will also report to the scene as soon as possible. Upon arrival, the Base Fire Chief or his senior representative will:
 - a. Assume the role of On-Scene Coordinator (OSC).
 - b. Take necessary steps to eliminate any fire hazard developed from the spill. If possible, take necessary steps to contain the spill.
 - c. Notify Natural Resources and Environmental Affairs Director (telephone 5003).
 - d. Evaluate the situation and request necessary logistic support from the Base Maintenance Officer to contain the spill and facilitate recovery or mopping up action.
 - e. Upon arrival at the scene, the Natural Resources and Environmental Affairs Director or his representative will assume command and will direct further containment and clean up activities.
3. Supplies and Materials. Base Maintenance Officer will provide the basic materials and equipment necessary to contain and mop up on-base spills. The U. S. Coast Guard will be contacted for equipment and assistance in the event of a major spill.
4. Reports. A report of oil spills and other hazardous substance discharges in the inland navigable waters of the United States and the coastal water including between 3 and 12 miles from the coast will be made immediately by the Natural Resources and Environmental Affairs Director or his representative to:
 - a. Base Maintenance Officer.
 - b. Assistant Chief of Staff, Facilities, Marine Corps Base.
 - c. Captain of the Port, Room 101, Federal Building, Wilmington, North Carolina 28401 (telephone 919 763-9435).

ENCLOSURE (2)

BO 11090.1A
31 Dec 1975

In every case, a report of the incident will be made to the Commandant of the Marine Corps (Code LFF). Incidents of a serious nature, which require urgent action at the Headquarters level, or may result in adverse news coverage or public relations, will be reported by message.

5. Small Spills. Occurrence of small gasoline and fuel oil spills on refueling aprons are very common. Gasoline and fuel oil spilled on refueling aprons will not be flushed into any ditch or storm sewer. To reduce the pollution and fire hazard, the spill will be covered with sand obtained from a nearby storage bin. As the sand absorbs the fuel, it will be taken up and returned to the storage bin after evaporation or placed into the sanitary landfill as required. Sand can be obtained by calling Base Maintenance Department (telephone 3001).

6. Restoration of Damaged Area. Grounds around grease racks and maintenance buildings that have been severely damaged by oil and grease will be restored to their natural state. If necessary, the contaminated soil will be removed and replaced with clean soil and reseeded.

ENCLOSURE (2)

APPENDIX D

BASE ORDER 6260.2A

HEARING CONSERVATION PROGRAM; ADMINISTRATION OF

UNITED STATES MARINE CORPS
MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA 28542

BO 6260.2A
ADJ/GJM/cac
22 Jun 1977

BASE ORDER 6260.2A

From: Commanding General
To: Distribution List

Subj: Hearing Conservation Program; administration of

Ref: (a) MCO 6260.1B
(b) BUMEDINST 6260.6B

Encl: (1) List of Approved Hearing Protection Devices
(2) Detailed Information on Audiometric Testing,
Noise Reduction and Noise Measurement
(3) List of Noise Hazardous Labels and Decals

1. Purpose. To provide guidance for the establishment and administration of a hearing conservation program, as required by references (a) and (b), for all military and civilian personnel at Camp Lejeune, North Carolina.

2. Cancellation. BO 6260.2.

3. Background. Potentially harmful noise levels are probably the most frequent occupational hazard encountered by military and civilian personnel. Noise at any level above 90dBA (decibels, "A" scale) is regarded as potentially dangerous to human hearing. Hearing loss may result from continuous or intermittent exposure to loud noises such as those created by aircraft, industrial activities, gunfire, rockets and other ordnance. The seriousness of these exposures cannot be over-emphasized. Hundreds of thousands of dollars are awarded each year in compensation for wholly preventable hearing loss in both civilian and military personnel.

4. Scope. The Hearing Conservation Program at Camp Lejeune shall consist of:

- a. Surveys to determine noise hazardous areas.
- b. Marking hazardous areas with appropriate noise hazard warning labels and decals.

c. Employment of Architectural and Engineering design methods of noise reduction; i. e., substitution of equipment, process or material; modification of noise sources.

d. Periodic audiometric evaluation of personnel employed in noise hazardous areas.

e. Protection of personnel through the use of personal sound attenuation devices; i. e., ear plugs, circumaural muffs or helmets.

f. Education of personnel in regard to the inherent operational (noise) hazards that may be associated with the equipment they work with daily, and the steps that may be taken to properly protect and reduce, to the greatest extent possible, exposure to these noise hazards.

g. The provisions of this Order are applicable to all military and civilian personnel employed and/or stationed at Camp Lejeune, North Carolina.

5. Action

a. Area Commanders and Commanding Officers

(1) Commanding Officers are responsible for keeping informed of all noise hazards within their area of responsibility and shall institute and/or enforce corrective measures for noise abatement and protection of personnel working in these areas.

(2) Effect liaison with the Commanding Officer, Naval Regional Medical Center (Attn: Occupational and Preventive Medicine Service) for noise measurement surveys of the working environment and recommendations regarding hearing conservation.

(3) Label areas and equipment which are designated as noise hazardous and enforce the mandatory requirement for the wearing of hearing protection devices for all personnel exposed to the noise hazard.

(4) Fund for and procure hearing protection devices as an organic supply item. Hearing protection devices available through supply channels are listed in enclosure (1).

(5) Insure proper sizing, fitting and issuance of permanent type hearing protection devices (insert type ear plugs) are done by qualified members of the local area medical department.

(6) Require that all personnel exposed to gunfire, blast and impulse type noises wear hearing protection devices during the entire length of the exposure.

(7) Ensure appropriate entries regarding size and date of initial issue of hearing protection devices are made in military member's health record and service record book.

(8) When the decision is made to assign a person to an area designated as noise hazardous, schedule them for a reference audiogram prior to their commencing work in the area. Follow-up audiometric tests will be scheduled three (03) months after they begin work in these areas and annually thereafter. Enclosure (2) provides more detailed information.

b. Commanding Officer, Naval Regional Medical Center

(1) Establish audiometric testing facilities throughout the Camp Lejeune complex commensurate with available personnel and resources.

(2) Conduct annual noise hazard surveys as required by reference (a) and provide assistance to unit commanders in the identification, evaluation, monitoring, documentation and surveillance of noise hazardous procedures and conditions existing throughout the Camp Lejeune complex and make recommendations for the reduction and/or elimination of noise hazards.

(3) Maintain liaison with, and provide support to, Area Commanders and Commanding Officers concerning hearing conservation matters which may affect employees and/or surrounding communities.

(4) Review plans for new facilities and modifications to existing facilities within the complex, to ensure that engineering and architectural designs properly consider and provide for adequate environmental controls for the elimination/reduction of noise hazards.

(5) Monitor the effectiveness of hearing protection equipment used in noise hazardous areas.

c. Civilian Personnel Officer

(1) Schedule audiometric tests on all civilian personnel receiving pre-employment and separation physical examinations.

(2) When the decision is made to assign civilian employees to an area designated as noise hazardous, schedule them for reference audiograms prior to beginning work, three (03) months after commencing work and annually thereafter.

d. Base Safety Officer. Ensure that all Base areas identified as noise hazardous are clearly labeled as noise hazardous. Labeling must indicate the mandatory use of hearing protection devices for all personnel exposed to the noise hazard. Enclosure (3) lists noise hazard warning labels available through the National Stock System.

6. Applicability. Having received the concurrence of the Commanding General, 2d Marine Division (Rein), FMF; the Commanding General, Force Troops/2d FSSG, FMFLANT; the Commanding Officer, MCAS(H), New River; the Commanding Officer, Naval Regional Medical Center; and the Commanding Officer, Naval Regional Dental Center, this Order is applicable to those commands.

B. H. CURWEN, Jr.
Chief of Staff

DISTRIBUTION: "A"

LIST OF APPROVED HEARING PROTECTION DEVICES

Hearing Protection Devices available through supply channels:

- (1) Plug, Ear, Noise protection, (sized), 24s ("EAR DEFENDER" U-51R TYPE)
 - (a) NSN 6515-00-442-4765 Extra Small (White)
 - (b) NSN 6515-00-467-0085 Small (Green)
 - (c) NSN 6515-00-467-0089 Medium (Int. Orange)
 - (d) NSN 6515-00-442-4807 Large (Blue)
 - (e) NSN 6515-00-442-4813 Extra Large (Red)
- (2) Plug, Ear Noise Protection, (sized), 24s, ("COMFIT", Triple flange type)
 - (a) NSN 6515-00-442-4821 Small (Green)
 - (b) NSN 6515-00-442-4818 Medium (Int. Orange)
 - (c) NSN 6515-00-467-0092 Large (Blue)
- (3) NSN 6515-00-133-5416 Plug, Ear, Hearing Protection Cylindrical, Disposable 200s, Non-hardening Silicone ("Silaflex")
- (4) NSN 6515-00-137-6345 Plug, Ear, Hearing protection, Universal size, Yellow, 200 pair, Foam Plastic Insert ("EAR" or "Decidamp")
- (5) NSN 6515-00-299-8287 Case, Ear, Plugs (this case holds one pair of any of the above mentioned ear plugs)
- (6) NSN 6515-00-392-0726 Plug, Ear, Hearing protection, Universal size, Headband, Earcaps, ("Sound-Ban")
- (7) Ear Muffs. Listed below are the ear muffs available through regular supply channels:
 - (a) NSN 4240-00-759-3290 Aural Protector, Sound, 372-9AN/2, Circumaural Muffs, ("Straightaway Muffs")
 - (b) NSN 4240-00-674-5379 Replacement Filter, Dome (for 372-9AN/2)
 - (c) NSN 4240-00-979-4040 Replacement Seal, Dome, (for 372-9AN/2)
- (8) Ear Sizing Device. Listed below is the measuring device used to properly fit insert type ear plugs:
 - (a) NSN 6515-00-117-8552 Gauge, Earplug

ENCLOSURE (1)

DETAILED INFORMATION ON AUDIOMETRIC TESTING,
NOISE REDUCTION, NOISE MEASUREMENT
(EXCERPTED FROM MCO 6260.1B and BUMEDINST 6260.6B)

1. Audiometric Hearing Tests

a. Entrance and Separation Examinations. All military and civilian personnel who enter into or terminate service shall, to the extent feasible, receive audiometric examinations as a part of their entrance and separation physical examination. Tests shall be given by qualified medical department personnel in accordance with BUMEDINST 6260.6 series. The results of the test and all subsequent tests shall become a permanent part of the individual's health record. In addition, each person (civilian or military) assigned to duty involving exposure to high-intensity noise shall have a reference audiogram on file. This audiogram shall be clearly labeled "reference audiogram" and shall be recorded as such on a Standard Form 600 which shall remain permanently in the individual's health records.

b. Periodic Examination. The hearing of personnel shall be checked at the time of assignment to a noise hazardous area (90 dBA or above) if more than one (01) year has elapsed since the test in 1.a. above. Hearing of personnel assigned to a noise hazardous area shall be checked at the end of three (03) months and then reexamined annually, or as necessary whenever significant increases in noise levels occur in the designated area.

c. Personnel Showing Hearing Loss. When, as a result of a periodic examination, a threshold shift in hearing greater than 10dB at 2000 Hz or below or 15dB at 3000 Hz or above is noted, the person shall be considered as prone to hearing loss. A check shall be made to ensure these people are properly fitted with both ear plugs and muffs for double protection, or the duration of noise exposure should be decreased. They shall be reexamined within three (03) months. If the re-check audiogram shows a continuing lowering of hearing acuity, they shall be reassigned to work in a less noise hazardous area. The disposition of personnel showing loss of hearing should be decided on an individual basis. In general, the following audiometric change may be used as a guideline:

(1) Personnel showing threshold changes in excess of 25 dBA at any frequency through 3000 Hz should be re-checked in accordance with BUMEDINST 6260.6B. If changes persist, consultation, recommendations and disposition of personnel

ENCLOSURE (2)

should be decided in accordance with BUMEDINST 6260.6B.

2. Noise Reduction Measures. Noise reduction involved in the hearing conservation program involves major procedures as follows:

a. Personnel Protective Equipment

(1) Insert-type ear plugs or stoppers or circumaural-type muffs shall be worn by all personnel working in noise hazardous areas found to exceed 90 dBA. Where no sound communication is essential to job performance, workers in noise hazardous areas may be protected against noise damage by ear plugs. Where sound communication is essential for personnel in noise hazardous areas, circumaural muffs or sound attenuation helmet shall be provided. When the noise level exceeds 120 dBA, a combination of insert ear plugs and circumaural muffs should be worn.

(2) Military personnel shall be issued hearing protection (insert ear plugs) for permanent retention. Ear plugs should be carefully fitted by qualified members of the Medical Department, to each prospective user to ensure hearing protection and to gain a more general acceptance by those requiring protection. Fitting for recruits shall be accomplished during the initial physical examination at the recruit depot with the size recorded in each medical record. All other personnel should be fitted for protection prior to their exposure to potentially hazardous noise levels.

(3) Organizations, units and activities shall issue, as organizational property, hearing protection devices to all civilian personnel who work in high noise level areas. The Occupational Health Nurse or her representative will properly size, fit, and instruct patients in the proper use of insert-type ear plugs.

b. Noise Source Elimination. Noisy areas should be isolated when possible. It is often possible to reduce sound intensity by the installation of inexpensive sound baffles or sound absorbent materials. Where machinery is the primary source of possible noise hazards it may be possible to substantially reduce the hazard by the replacement of worn defective parts. Whenever feasible, the attenuation of noise shall be accomplished by engineering methods applicable to design and location of facilities and operation of such equipment and facilities.

3. Noise Measurement

a. A noise-level meter, and if considered necessary, an octave band analyzer, shall be utilized to determine where noise hazards exist and the effectiveness of noise-reduction measures.

b. In general, when the noise level approaches 90 dBA it becomes difficult to hear a spoken voice at a distance of one foot. This, and complaints of muffled hearing or ringing in the ears after working in noisy areas, should be a signal for supervisory personnel to request a sound level survey. The noise environment shall be analyzed by persons competent to perform the task. Requests for sound level surveys should be addressed in writing to the Commanding Officer, Naval Regional Medical Center (Attn: Chief, Occupational and Preventive Medicine Service), Camp Lejeune, North Carolina 28542.

c. Noise of impact, or impulse noises such as gunfire, cannot be accurately evaluated with a sound level meter. However, all personnel exposed to gunfire in training, or test situations and artillery fire, under any circumstances, shall wear hearing protection devices, regardless of the length of exposure.

d. High noise level environments and devices, including mobile support equipment where the noise level exceeds 90 dBA shall be clearly labeled as a noise hazard. Labeling will indicate the mandatory use of ear protection devices for all personnel exposed to the noise hazard.

4. Funding. Costs of providing required facilities, instrumentation, and personnel protective equipment to implement this program is to be accomplished under regular operation and maintenance funds available to unit commanders involved.

ENCLOSURE (2)

LIST OF NOISE HAZARDOUS LABELS AND DECALS

1. NAVMED 6260/2 Hazardous Noise Warning Decal 8" X 10½", S/N 0105-212-6010, U/I pkg. of 25.
2. NAVMED 6260/2A, Hazardous Noise Labels (display on hand tools), 1" X 1½", S/N 0105-212-6020, U/I pkg of 25 sheets with 56 labels per sheet.

Available in Navy Supply System, in accordance with NAVSUP P-2001.

This is a COG "I" item.

APPENDIX E

BASE ORDER 11014.8A

PROHIBITION OF LITTERING ABOARD MARINE CORPS BASE

UNITED STATES MARINE CORPS
MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA 28542

BO 11014.8A
FAC:HOF:mkc
6 Jul 1978

BASE ORDER 11014.8A

From: Commanding General
To: Distribution List

Subj: Prohibition of Littering Aboard Marine Corps Base

Ref: (a) Manual for Courts Martial, 1969 (Revised)

1. Purpose. To prohibit littering anywhere aboard Marine Corps Base, Camp Lejeune by any person, military or civilian, to provide for punishment of violators, and to ensure enforcement by all commanding officers, officers in charge, and other responsible persons.
2. Cancellation. BO 11014.8.
3. Definition. Litter is any discarded, used or unconsumed substance or waste. Litter may include, but is not limited to any garbage, trash, refuse, debris, rubbish, grass clippings, tree and shrubbery trimming, and other lawn or garden waste, newspaper, magazines, glass, metal, plastic or paper containers or other packaging construction material, motor vehicle parts, furniture, oil, carcass of a dead animal, any nauseous or offensive matter of any kind, any object likely to injure any person or create a traffic hazard, or anything of an unsightly nature which has been discarded, abandoned or otherwise disposed of improperly.
4. Sources of litter
 - a. Improper household refuse putouts
 - b. Improper commercial refuse putouts
 - c. Improperly maintained loading docks
 - d. Construction, demolition sites
 - e. Uncovered trucks
 - f. Motorists
 - g. Pedestrians

5. Information. Persons who litter aboard Marine Corps Base can now be prosecuted in Federal Court under the Assimilated Crimes Act, Title 18, United States Code, section 13 for violation of the General Statutes of North Carolina, Chapter 14, sections 134.1 and 399. These statutes prohibit littering of another's land or water and littering of roads and highways. In addition, persons on active duty in the military can be court-martialed for an offense against Article 134, under the Assimilated Crimes Act, for violations of the North Carolina anti-littering statutes. Persons on active duty in the military who violate this Order may be punished in accordance with reference (a) nonjudicially under Article 15, UCMJ or may be court-martialed for violation of Article 92, disobedience of a general order.

6. Littering Prohibited.

a. No person shall dump, deposit, drop, throw, discard, or otherwise dispose of litter from any motor vehicle upon any road, highway, or property or upon any river, lake, pond, branch, creek or body of water on board Camp Lejeune, except in a receptacle for that purpose, or in a place specifically designated and authorized for that purpose, nor shall any person transport by any means garbage or refuse from any residence, barracks, training area, place of business, or other site to and deposit such materials in, around or on top of trash barrels or other receptacles placed along roads, sidewalks, highways and training or recreation areas. This prohibition is not applicable to:

(1) Cuttings of plant growth, leaves, pine cones, pine straw, etc., placed in an appropriate manner for removal.

(2) Occupants of government family quarters within their assigned quarters or on the property adjacent thereto assigned to them as their personal responsibility.

(3) The disposal of government and military property unless the person disposing thereof is provided by the government adequate means for disposal and the person fails to make use of the means provided.

b. No person will operate any vehicle upon any highway, road, waterway, recreation or training area within the Camp Lejeune Complex unless the cargo is in containers or covered by a tarpaulin in such a manner as to prevent any part of its contents from falling or being scattered upon any such highway, road, waterway, recreation or training area aboard Camp Lejeune.

7. Dissemination. Commanding officers, officers in charge, supervisors, and other responsible persons shall give this Order the widest dissemination as possible prior to its effective date and shall bring it to the attention of subordinate personnel as often as necessary to ensure compliance.

8. Applicability. This Order is applicable to all persons aboard the Base, both military and civilian. Having received the concurrence of the Commanding Generals of 2d Marine Division (Rein), FMF, and Force Troops/2d Force Service Support Group, FMF, Atlantic, and the Commanding Officers of the Marine Corps Air Station (H), New River, Naval Regional Medical Center and Naval Regional Dental Center, this Order is applicable to those Commands.

APPENDIX F
BASE ORDER 4570.1C
TURN-IN OF SCRAP LUMBER; PROCEDURES FOR

**UNITED STATES MARINE CORPS
MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA 28542**

BO 4570.1C
SUPS/DJO/jms
13 Jan 1978

BASE ORDER 4570.1C

From: Commanding General
To: Distribution List

Subj: Turn-in of Scrap Lumber/Disposal of Unsalable Scrap Lumber
Stored at the Base Sanitary Landfill; procedures for

Ref: (a) Department of Defense Disposal Manual 4160.21-M of June 1973

1. Purpose. To establish procedures for disposal of scrap lumber and to inform military and civilian personnel of the procedures to be followed in obtaining unsalable scrap lumber and boxes stored at the Base Sanitary Landfill (located on Sneads Ferry Road) for organizational and/or private use within the Camp Lejeune area.

2. Cancellation. BO 4570.1B.

3. Background

a. Chapter VI, paragraph 57, of the reference states that "used lumber or boxes not required for the foreseeable needs of the generating activity, or in such condition as to be unacceptable for further use, will be disposed of by retail or other sales method."

b. Experience has proven, however, that not all scrap lumber or boxes turned in to the disposal activity in the past was salable, therefore, it has become necessary to establish certain restrictions with respect to the turn-in of scrap lumber.

4. Action

a. Activities generating scrap lumber will process lumber in accordance with procedures listed below:

(1) Scrap lumber will be grouped into sizes, i.e., short (6-12), medium (12-14) and long (14 and above) linear feet.

(2) Useable pallets will be stacked.

(3) Scrap lumber, pallets and ammunition boxes will be delivered to Lot #203 Monday through Friday between 0830 and 1500. The generating activity will furnish a work party for the purpose of placing the sized lumber in designated areas.

BO 4570.1C
13 Jan 1978

(4) Scrap in sizes less than stated in subparagraph 4a(1) does not have resale value, therefore, such lumber will be delivered to the Base Landfill.

b. Pickup of unsalable scrap lumber and boxes for organizational and/or private use is permitted subject to the following procedures.

(1) Scrap lumber and boxes may be picked up between 0830 and 1600, Monday through Friday, by contacting the operator of the Landfill.

(2) Units or individuals desiring the scrap lumber or boxes assume responsibility for the loading and hauling thereof.

(3) Posted rules and regulations will be observed to ensure non-interruption of normal Landfill operations, such as the flow of traffic.

(4) Scavenging in the solid waste being buried in the Landfill trench is prohibited.

5. Applicability. Having received the concurrence of the Commanding Generals, 2d Marine Division (Rein), FMF; Force Troops/2dFSSG, FMF, Atlantic, and the Commanding Officers of Marine Corps Air Station (H), New River, and Naval Regional Medical Center, this order is applicable to those commands.

W. F. SHEEHAN
Chief of Staff

Camp Lejeune Field Office

APPENDIX G

BASE ORDER 4100.8

RESOURCE RECOVERY

UNITED STATES MARINE CORPS
MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA 28542

IN REPLY REFER TO
BO 4100.8
FAC:BKB:mkc
2 Nov 1977

BASE ORDER 4100.8

From: Commanding General
To: Distribution List

Subj: Resource Recovery

Ref: (a) MCO P11000.8A, Real Property Maintenance Manual, Vol V

Encl: (1) Instruction for the recovery of corrugated cardboard material
(2) Instruction for the recovery of newspaper material

1. Purpose. To publish implementing instructions by which selected waste materials will enter the resource recovery program, established by reference (a).

2. Background

a. As technology improves our standard of living, the volume of our material waste increases. However, waste material can be recycled to reduce the unnecessary depletion of natural resources.

b. Recoverable materials take many forms. A preliminary study reveals that sufficient quantities of waste materials are generated aboard Camp Lejeune so that a waste recovery program is feasible.

3. Information

a. Mixed waste is not usable in the recycling program, therefore, waste must be separated by category and deposited in the appropriate container.

b. Dumpster containers are provided at heavy use locations. The containers are painted a preselected color and have letters designating category of waste, i.e., "CORRUGATED ONLY," "NEWSPAPERS ONLY."

c. A recovery plant with a baler is operated in Building 738 by the Onslow County Workshop. The last local sorting of waste is done at this plant.

d. Enclosures (1) and (2) contain specific instructions for the recovery of waste materials. Instructions for the recovery of beverage containers and office wastes will be promulgated at a later date.

BO 4100.8
2 Nov 1977

4. Action

a. Commanding officers, officers in charge, and supervisors will give the contents of this Order the widest possible dissemination to ensure that recyclable materials are placed in the applicable containers, to the greatest extent practicable.

b. The Joint Public Affairs Officer will provide appropriate publicity for resource recovery on a continuing basis.

5. Applicability. Having received the concurrence of the Commanding Generals of 2d Marine Division (Rein), FMF and Force Troops/2d FSSG, and the Commanding Officers of the Naval Regional Medical Center and the Naval Regional Dental Center, this Order is applicable to those Commands. The Commander, Marine Corps Air Bases, Eastern Area has also concurred with this Order, which is applicable to units at Marine Corps Air Station (H), New River.

W. F. SHEEHAN
Chief of Staff

DISTRIBUTION: "A"

INSTRUCTION FOR THE RECOVERY OF CORRUGATED CARDBOARD MATERIAL

1. Definition. For the purpose of this Order, corrugated cardboard is that material used as shipping containers, generally used in shipping such items as mattresses, chests of drawers, lamps, etc., free of bonding and sealer material, such as tar. Corrugated cardboard containing a bonding/sealer material cannot be recycled.

2. Collection Containers. Containers for the purpose of collecting corrugated cardboard are painted green with yellow lettering stating "CORRUGATED CARDBOARD ONLY." These containers have been placed to provide the bulk users with convenient locations. Other users may deposit corrugated cardboard in these containers, or may deliver corrugated cardboard directly to the processing plant.

3. Collection Locations. Corrugated cardboard collection containers are located at the following locations:

Central Area	Hospital Point	Camp Johnson
Industrial Area	Paradise Point	Camp Geiger
Hadnot Point	Tarawa Terrace	MCAS(H), New River

4. Responsibility

a. Until otherwise directed, the Base Maintenance Officer will maintain the dumpster containers described above.

b. By prior agreement, the Onslow County Workshop will operate the processing plant at Building 738 for the purpose of baling corrugated cardboard and other recyclable waste materials.

ENCLOSURE (1)

INSTRUCTION FOR THE RECOVERY OF NEWSPAPER MATERIAL

1. Definition. For the purpose of this Order, newspaper is that material used in newsprint, free of magazine inserts and magazines.

2. Collection Containers. Containers for the purpose of collecting newspapers are painted red and blue with white lettering stating "NEWSPAPERS ONLY." These containers have been placed to provide convenient deposit-drops for users. Magazines cannot be used in newspaper recycling; therefore, magazines, and glazed paper inserts from newspapers, must not be deposited in these containers. Instructions for the recovery of magazines will be addressed in a separate enclosure at a later date.

3. Collection Locations. Newspaper collection containers are located in the following parking areas:

<u>No.</u>	<u>Location</u>	<u>Responsible Officer</u>
1	Tarawa Terrace Commissary	Store Manager
2	Midway Park Marine Corps Exchange	Duty Manager
3	Golf Course Clubhouse	Manager, Clubhouse
4	BOQ 2613	Director, BOQ/BSQ
5	Main Fire Station	Base Fire Chief
6	Seven-Day Store	Duty Manager
7	Package Store	OIC, CCMS

4. Responsibility

a. Until otherwise directed, the Base Maintenance Officer will maintain dumpster containers described above.

b. By prior agreement, the Onslow County Workshop will operate the processing plant at Building 738 for the purpose of baling newspaper and other recyclable waste materials.

c. For positive control in preventing unsightly accumulation of newspapers outside a full Dempster container, those persons designated "responsible officers", above, will dial the extension affixed thereon to notify the collecting agency of the need for waste removal.

ENCLOSURE (2)
