EAST COAST REGIONAL REVIEW BOARD

Protection of Archaeological and Historical Sites

- Controls on training activities for protection of these sites are likely to increase in coming years.
- Discovery in 1981 of prehistoric Indian and historic colonial habitation continue to be investigated.
- A 1981 survey found six sites needing protection due to possible eligibility for listing in the National Register of Historic Places.
- At one of these sites, TLZ Bluebird, a \$50,000 study was required before we could replace the expeditionary airfield runway at Camp Lejeune.
- The 1981 survey identified potentially sensitive zones for locating cultural resources which include a portion of all MCB training areas nearest to water.
- A Cultural Resources Management Plan (CRMP) will be completed in 1985-86 with assistance of the National Park Service.
- The CRMP will serve two purposes: Identify site protection needs for compliance with the law and avoid undue restriction on training lands.

EAST COAST REGIONAL REVIEW BOARD

Pollution Abatement:

- Requirements for pollution abatement are growing at MCB due to the delegation of federal environmental programs by EPA to various North Carolina agencies.
- Additional resources (funding and manpower) have been required including funding of pollution controls to avoid restrictions in accomplishing the training mission.
- Incorporation of pollution controls at vehicle washracks and erosion controls during range construction has enhanced the operation of many facilities and reduced long-term maintenance costs.
- Protection of groundwater supply sources from contamination by hazardous substances has been shown as a critical concern by the NACIP program.
- A computer-aided mapping and land scheduling system for land use management known as LUMS will be installed at MCB in 1985-86.
- HW management requirements are significant for military commanders at all levels of command.
- All commanders must have adequate internal controls to ensure proper management and disposal of hazardous and toxic materials and wastes.

EAST COAST REGIONAL REVIEW BOARD

Beaches: Private Development and Public Recreational Demands

- Because of this area's climate and unspoiled beaches, resort communities to the east and south of the base are growing rapidly.
- Heated controversy is building between developers, local governments, recreational interests and conservationists regarding development and public access to the beaches of both Onslow and Carteret Counties.
- As competition increases between developers and the public for access to the beaches, both parties may begin looking to Camp Lejeune for the use of Onslow Beach.
- This pressure is perceived locally as a future constraint on the use of Onslow Beach for amphibious military training.
