IN REPLY REFER TO:
114:MBW
6280

19 JUL 1979

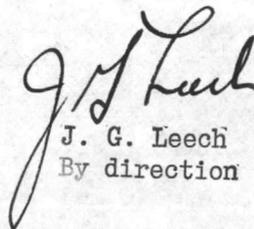

From: Commander, Atlantic Division, Naval Facilities Engineering Command
To: Commanding General, Marine Corps Base, Camp Lejeune

Subj: PCB Spill Prevention

Ref: (a) MARCORB CAMP LEJEUNE ESR U9002 of Oct 1978; Requested Technical Assistance to Prevent PCB Spillage

1. A substantial number of transformers, capacitors and switch gear at Navy and Marine Corps activities utilize polychlorinated biphenyls (PCBs) as an insulating fluid. PCBs disposal is regulated by the U. S. Environmental Protection Agency under the Toxic Substances Control Act, P. L. 94-469. As a result, NAVFACENGCOM contracted with Versar, Inc., to develop transformer/capacitor evaluation procedures, cost data, and engineering alternatives which can be used to select the most effective method to achieve regulatory compliance. Results of this study will be used to develop a response to reference (a).

2. The Versar report, originally scheduled for completion in mid-summer, has now been rescheduled to late September 1979. Accordingly, the ESR completion date has been changed to October 1979. This Command will expedite completion of this ESR once results of the Versar study are available. The point of contact for this ESR is Mr. M. White, AUTOVON 690-7313.
