Wilmington, N. C. 28403-3636

Re: Authorization to Conduct Stream
Monitoring of Wallace Creek, Camp
Lejeune, N. C. 28542-5001

Dear Mr. Wakild:

Approval is granted to conduct water quality monitoring as requested in your letter of February 8, 1986.

As you know, we are examining our ongoing monitoring efforts on New River in conjunction with the N.P.D.E.S. permit renewal and are preparing an updated monitoring proposal for your review. Mr. Bob Alexander, Marine Corps Base Environmental Engineer, will provide any additional assistance which you may need.

Sincerely,

R. A. TIEBOUT
Colonel, U.S. Marine Corps
Assistant Chief of Staff, Facilities
By direction of the Commanding General

Brigadier General J. B. Knotts, Commanding
United States Marine Corps
Camp Lejeune Marine Corps Base
Camp Lejeune, North Carolina 28542

Subject: Authorization to Perform Work
in Camp Lejeune
USMC - Camp Lejeune
Onslow County

Dear General Knotts:

The North Carolina Department of Natural Resources has become increasingly concerned with the degradation of water quality on the New River and its tributaries. I am requesting your permission to allow Mr. Dave Goodrich, of my staff, to enter Camp Lejeune to perform water quality sampling work. The work would be accomplished within one hour after entering the base. The sampling location would be Wallace Creek at River Drive. Samples would be taken once a month from June 1986 to September 1986.

I appreciate your attention to this matter. If you have any questions, please don't hesitate to call Mr. Dave Goodrich or myself at (919) 256-4161.

Sincerely,

MEMORANDUM FOR THE COMMANDING GENERAL
CHIEF OF STAFF

Subj: N.C. DIV OF ENVIRONMENTAL MANAGEMENT REQUEST FOR BASE
ACCESS TO CONDUCT STREAM SAMPLING

Ref: (a) NCDEM ltr dtd 8 Feb 86

Encl: (1) Proposed reply

1. Recommend approval of the request in the reference. The water sampling will help answer questions about which source of pollution has the greater impact on New River: point-source (sewage discharges) or nonpoint source (storm water runoff). Several years (3-5) of data must be taken by the State at this station to accurately reflect a trend in water quality conditions.
2. Our ongoing monitoring efforts at nine stations on New River are being reviewed by NCDEM and Base staff as part of the process of renewal of our sewage permit. NCDEM has suggested reducing the number of MCB sampling events, but increasing the number of compounds measured. We are evaluating the State's suggestion. Combined with the Wallace Creek data, the State and MCB can cooperatively assess the long-term impacts on New River water quality.
3. The enclosure is our proposed response to the State.

Very respectfully,

R. A. TIEBOUT
