Re: Reconnaissance of proposed training area
northwest of 310n138, Camp Lejeune, Onslow County

Dear Colonel Tiebout:

There are no known archaeological sites within the proposed project area. Based upon the results of a recent reconnaissance conducted by staff archaeologist B. L. Oliver, it is unlikely that any archaeological resources which may be eligible for inclusion in the National Register of Historic Places will be affected by the project construction. We therefore recommend that no archaeological investigation be conducted in connection with this project.

For your information and to avoid future concern, observations made during the reconnaissance indicate that the noticeable distributions of shell and fragments of prehistoric pottery found along both sides of the access road to TLZ Bluebird are the result of modern redeposition, not aboriginal activities. It is likely that these materials were derived from the prehistoric site component at 310n138 (TLZ Bluebird) and were employed as road fill during the construction of the present access road to TLZ Bluebird.

The above comments are made pursuant to Section 106 of the National Historic Preservation Act of 1966, the Advisory Council on Historic Preservation's Regulations for Compliance with Section 106, codified at 36 CFR Part 800, and to Executive Order 11593, "Protection and Enhancement of the Cultural Environment."
