Paul,

The following comments are forwarded in response to questions received on the subject project;

1. As per telcom with Stanley Miller on 6-22-94, the following wells are presently in operation;

- HP-606
- AS-106
- AS-4150

2. The following wells were closed under previous contract(91-B-7605);

- HP-637
- HP-639
- HP-652
- HP-655
- TC-504
- TC-901

3. Well HP-649 caved in on 4-29-93 and same was reported to this office on 22 June 94. I have recommended it be closed under subject project. The contract is already out to bid, but Lt. Carlson thinks it can be added later.

4. Well HP-636 was recommended for inclusion in subject project as per Landfill Project P-948 requirements as set forth at 22 June 94 Landfill Progress Meeting. Lt. Carlson informed me it has already been added to contract.

5. Well HP-610 was reported as contaminated with TCE in Jan. 94 Well Head Monitoring Study. It is presently off-line and is recommended for closure under this project.

6. Neither EPD or Stanley Miller has any record of Well TC-329.

V/R
Dennis
