**Cc:** Landman Kate H. (E-mail)  
**Subject:** Answers to Sept 11 letters

This is IRDs response to the questions posed in the 2 letters from Maj. Townsend dated 11 Sept 2000. I am only addressing the questions that pertain to IRD.

The first question deals with IRDs comments on LANTDIVs handling of the Administrative Record (AR). LANTDIV is the appointed administrators of the AR. They have complete cognizance over the AR and its availability. They have undertaken a project to put this information on the internet earlier this year. Due to the sheer volume of information contained in this record and trying to get it uploaded and searchable, it is with little doubt that there will be some minor glitches to be worked out. Ultimately the AR on the internet will provide a greater number of people access to the documents contained.

The second letter requests two documents from IRD. The first document requested was prepared by the USGS and titled "Groundwater Resources of the Camp Lejeune Marine Corps Base Water Use Data, A preliminary Geohydrologic Framework and Water Level Data" dated 6/2/1987. IRDs only copy of this document was delivered to Capt Crouch soon after the 8 Aug 2000 request was received.

The second document requested was "Hadnot Point Characterization Study Report". Exhaustive searches have turned up no records under this title. The closest document we have been able to locate is the "Characterization Step Report For Hadnot Point Industrial Area" dated March 1988 prepared by ESE. We located this document in the AR. This is the same document that Maj. Townsend requested from LANTDIV. LANTDIV is preparing to send him this document.

Please let me know if you require additional information
