Subject: When the Wells came on line

Gentlemen,
We'll be meeting in Fac conf room on Monday at 10am to discuss CMC HQ's request.
V/R,
Neal

I'll be there if possible. I had planned on taking tomorrow afternoon off. If so, proceed without me. You guys know what needs to be done.

Alternatively, anytime after 9 am on Monday works for me. I'm tied up that afternoon.
Neal

SUGGEST WE MEET IN THE FAC CONFERENCE ROOM TOMORROW AT 1430 TO GO OVER ALL THE DATA. I'VE NOTICED SOME DIFFERENCES IN WELL DATA ALSO.

Fred, Neal: Carl already answered some of these questions already. Some of the data does not jibe with other documents I've seen however.

Jeremy,

The information you requested is provided in your original e-mail. I've reviewed several documents and pieced information together. Hopefully, it doesn't contradict any other data.

Carl

Subject: When the Wells came on line

Carl:

I anticipate that we may need the following information in the near future. Can you help me obtain the following answers?

1. What year were each of the VOC contaminated wells brought on line. I know that the mother of all contaminated wells, Well 652, was brought on line around 1973. Can you give me an opening date for the other VOC contaminated well shut down in 1985 (TT and Hadnot Point)?

See the attachment

<< **File: CONTAMINATION.xls** >>

Well 652 should read 651.

2. What years were the TT and Hadnot Point Plants brought on line?

1941 for both. Exact dates unknown.

3. Prior to 1973 and the opening of the Holcomb Boulevard Plant, what family housing areas were served by the Hadnot Point Plant?

Paradise Point, Berkeley Manor, and Midway Park.

Holcomb Boulevard plant was completed in Aug 1973

Thanks for your help.
